The proposed development in Audley and surrounding villages will increase the traffic on it's already struggling roads. The average cars per household in the UK is 1.2 however this figure may well be higher in Audley due to the rural nature of the area and limited public transport; the proposed 213 extra dwellings in Audley alone would generate at least 255 more cars. The main route through Audley and Bignall End is the B5500. The stretch of B5500 from The Plough (Ravens Lane) to the Roundabout at Alsager road cannot support any more traffic due to parked cars at frequent points due to terraced housing. This cannot be altered due to the nature of the housing on the street. The road integrity at the Mini Roundabout at BB5500 Nantwich/Alsager Road is already struggling with heavy use and has many potholes.

This is before even considering the additional dwellings proposed in neighbouring areas such as 530 dwellings at Red Street (CT1). It is to be expected that people will use the B5550 in Audley as a cut through rather than using the congested stretch of A500 between the A34 at Talke and M6 Junction 16.

Audley AB12 site alone has a proposed 125 dwellings with at least 150 extra cars (more realistically at least 250 due to the rural nature of the site) trying to access the housing estate. The proposed vehicular access route via Diglake Street cannot support the extra traffic due to parked cars on both sides of the street (see attached photos). The road is so narrow that residents have to park on the pavement which blocks pedestrian access. Pedestrians are required to walk on the road, which is already unsafe considering disabled access and access for families/young children, but the additional traffic will make this very dangerous. The proposed solution is a car park included in the AB12 site for existing local residents but this is just not fair or practical to expect disabled residents or those with young children to park so far from their homes. AB12 had previously been marked as 'unsuitable' for housing back in 2022 reports for this reason. The junction into Diglake Street from the B5500 is also only a few metres away from a nursery (Pear Tree) and is also used as the walking route for local families to and from the local primary school (Ravensmead). The school have already expressed concerns regarding the access/parking issues:

https://www.facebook.com/story.php?story_fbid=838955951783401&id=100070070118788

The alternative proposed emergency entrance into AB12 from Ravens Lane is on a bend where the road is a heavily congested area of single file traffic due to parked cars (terraced properties) and with the increased traffic from employment sites AB2 on this route this is only going to get worse.

For these reasons AB12 is not a deliverable site and has not been positively prepared and is therefore not sound.

	[Admin Note. A number of photographs were included in this representation highlighting car parking and highways concerns on the B5500 Junction with Chapel Lane / Diglake Street and B5500 Ravens Lane].

Title	Policy AB12 Land East of Diglake Street
Consultee Family Name	Wood
Consultee Given Name	Alma
Q4 Part of document	Policy
Q4 Policy	AB12
Q5 Sound	No
Q6 Details	<p>The site has limited access especially considering the large size of construction vehicles. There is no access from Great Oak Road and the only access points are from Diglake Street and a farm track next to 104 Ravens Lane. The track from Ravens Lane is only 4,3 meters wide and is limited by the boundaries of the properties on either side, which make it impractical for construction or emergency vehicles. The potential access at the bottom of Diglake Street is approximately 20 meters wide. The street it is heavily congested with residents cars which are forced to park on either side of the street making access virtually impossible. The construction of a new estate may require the demolition of existing properties to gain access from Diglake Street or the purchase of land from the properties either side of the track off Ravens Lane. It is relevant to note that Ravens Lane also has a high level of traffic and in some areas residents have to park on both sides of the road as it has a large number of terraced houses. Given these issues AB12 is undeliverable and ineffective.</p> <p>Notes on general housing need:</p> <p>The points below also apply to the AB15 and AB33 all of which are unsound as far as the Local Plan is considered.</p> <p>The perceived population growth in the Borough for the period 2023-2040 is quoted as 5,460 in the Housing and Economics Needs Assessment Update (ED001, April 2024), given the average number per household of 2.4 these can be accommodated in 2,275 new dwellings. This means that annually we will only need 134 new homes per annum. However, the 'standard method' states that 347 houses will be needed which is based on the 2014 population projections. These figures are based on the 2011-2021 census, invalidating the 2014 projections as the population within the Borough has decreased by 0.5% and this downward pressure may also be reflected nationally given the new Labour Governments election pledge. If a modest growth is called for it should be on Brownfield sites first and use sites that have already been purchased, some have even got footings already in place and left (Land Banking). Like AB2 this would make building on AB12 and other green belt/ green field sites unnecessary.</p>
Q7 Modification	<p>The draft local plan proposed as transformation of Audley and Bignall End which is unjustified by local need. The lack of effectiveness and unjustified nature of AB2 weakens the reason for house building on local green belt parcels. Therefore, the proposed sites of AB2, AB12, AB15 and AB33 should be removed from the local plan.</p> <p>These proposals seem to go against paragraph 4.3 of the local plan which states it "will have respected and improved the character and distinctiveness of our market towns, villages and other rural areas" On the contrary, these proposals will destroy the rural village character of Audley and Bignall End, completely urbanizing the entire surrounding area. The local plan is therefore inconsistent. The majority of residents of Audley and Bignall End are strongly against these proposals and wish to see them removed from the local plan. It is hoped that the points made will be sufficient to render AB2, AB12, AB15 and AB33 unsound as they are not justified or effective. I request that all the proposals should be removed from the local plan.</p>

Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>The site is located in Greenbelt land and the planned extensive building will destroy the the rural character of Bignall End. The current views enjoyed by the residents of Ravens Lane, Diglake Street, Hope Street and Bignall End Road will be decimated. This, in turn, will substantially devalue the properties.</p> <p>The utilisation of the Greenbelt land for building will also destroy natural habitats for the local wildlife. In the first draft of the Local Plan, the site was classified as being a strong case for remaining as Greenbelt. This seems to have now been disregarded.</p> <p>Diglake Street is narrow and completely unsuitable to take the additional traffic for accessing the site. Alternative access from Ravens Lane would exacerbate already problematic traffic on Ravens Lane.</p> <p>The volume of houses proposed is out of proportion to the housing need. Between 2011 and 2021, the population for Newcastle-Under-Lyme has decreased. Whilst some additional housing is required, there is no evidence to support a need for so many new houses.</p> <p>The current infrastructure is unable to support so many additional residents. The local primary school are close to full capacity and Audley Health Centre is already struggling to meet the needs of the local population. Roads are barely coping with the existing levels of traffic and on-street parking is becoming a hazard. The area is poorly served by Public Transport. It is also doubtful that the local sewerage and rainwater drains as well as the sewage treatment works could cope with the increase in volumes.</p> <p>AB12 has significant drainage issues. The site suffers from a high water table, possibly due to the flooding of the Diglake mining works following the mining disaster some years ago.</p> <p>I don't believe that the Borough Council has fully considered all of the above factors in coming to their decision regarding this site.</p>
Q7 Modification	Remove or substantially reduce the size of the site as there is no justification for such a large housing complex at the location.
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)

Q6 Details	<p>Notes on AB12</p> <p>Item 10: The proposal related to flooding risk and says that any run-off from the developed site will be towards Brierly Brook to the North, this however will affect the agricultural quality of the field immediately north of the site. Brierly Brook eventually finishes at the treatment plan on Alsager Road but it is unclear if it has the capacity to cope with any potential flash flooding from AB12</p> <p>Item 12: Will the financial cost of contributions for increased schools and health facilities be forthcoming from the Borough Council? Over recent years quite a few houses (i.e. Pump Court, Coalfield Close etc.) have already been built in the area with no extra funding being made available. These have already increased the traffic in the area which contributes to the road congestion, noise and pollution</p>
Q7 Modification	<p>The draft local plan proposed as transformation of Audley and Bignall End which is unjustified by local need. The lack of effectiveness and unjustified nature of AB2 weakens the reason for house building on local green belt parcels. Therefore, the proposed sites of AB2, AB12, AB15 and AB33 should be removed from the local plan.</p> <p>These proposals seem to go against paragraph 4.3 of the local plan which states it "will have respected and improved the character and distinctiveness of our market towns, villages and other rural areas" On the contrary, these proposals will destroy the rural village character of Audley and Bignall End, completely urbanizing the entire surrounding area. The local plan is therefore inconsistent. The majority of residents of Audley and Bignall End are strongly against these proposals and wish to see them removed from the local plan. It is hoped that the points made will to be sufficient to render AB2, AB12, AB15 and AB33 unsound as they are not justified or effective. Title	Policy AB12 Land East of Diglake Street
Consultee Family Name	Wood
Consultee Given Name	Alma
Q4 Part of document	Policy
Q4 Policy	AB12
Q6 Details	<p>This is my objection to the proposed draft local plan for the area of Audley Parish and many more in surrounding areas. In writing this response, I am aware of the alleged need to adopt a local plan in order for local authorities to maintain democratic control of development in the area. In writing this I am indebted to the objection document submitted by Dr. J. C. Austin for his invaluable research and relevant information for an objection on a wider scale but nevertheless relevant to the local area. As he states the democratic control referred to by the council seems to be a “symptom of the subsection in the NPPF titled “The presumption in favour of sustainable development” (paragraphs 11-14)”, I totally agree with him that to residents it seems that “this gives the impression that local authorities must demonstrate a willingness to develop a particular area in order to avoid it being developed”, and “seems to be a commitment to eventual development even if it is not needed”, which is extremely worrying on many levels for the community. These proposed new developments would, in the view of many residents, have a devastating impact on our rural area, which is part of the Designated Conservation Area of Audley (1976, information listed on the Council’s Local Plan 2011).</p> <p>In particular, I believe it would result in the following problems:</p> <ul style="list-style-type: none"> • Loss of light or overshadowing • Increased risk of flooding due to ‘run-off’ (there is already some flooding in the area) • Loss of visual amenity • Limitations to physical activity (There are many public footpaths in the area, cyclists, horseriders etc. all use the area on a regular basis) • Generation of extra traffic, overloading already busy local roads resulting in extra noise, pollution, disturbance and danger to humans, livestock and wildlife. • Loss of trees and other biodiversity – bats, lizards, newts etc. • Loss of natural carbon capture • Decrease in food production capacity, look at the current threat posed by the reduction of grain from Ukraine and the shortages created by the recent COVID Lockdown for example. We need to grow more of our own food, not destroy prime farmland and rely on imports. Sustainability here is the key message! • Increased local population placing further pressure on local schools, GP’s surgeries (the one in Audley has already stated that it will be unable to cope), dentists and other services which are already oversubscribed. <p>As Dr. Austin has stated there appears to be an “overdevelopment which threatens nature and the already depleted biodiversity we see in this country”. This is true both nationally and locally and the local populous feel that their opinions are disregarded on all political levels and by politicians of any political persuasion. It has been stated on national television that a large proportion of younger people and children are very worried about the effects of climate change and identifying areas of green belt to be built on will only enhance the problem. Allowing developers to destroy existing farmland, green spaces and mature woodland is short-sighted to say the least, it takes decades for a habitat to establish itself and support wildlife and replacing these with saplings will not solve the problem, therefore these proposals cannot be regarded as sustainable development at all. Do we really need all these new houses to combat the so-called housing shortage or is it really, as Dr. Austin states, “little more than a myth propagated by the construction industry and related interests”?</p> <p>Therefore, I agree with his analysis that “locally there are strong grounds for objections to development of the sites”</p> <ul style="list-style-type: none"> • AB12(p74) • AB15(p75) • AB32(p75) • AB33(p75). <p>Furthermore, I agree with Dr. Austin when he says that “both local and national authorities would do well to remember that they have a responsibility to the people they represent and not to the commercial viability of developers, the construction industry or overseas investors”. As he has pointed out the commercial developments mooted for the AB2 and TK30 sites locally are not needed and I believe that the developers normal cry of “it will create jobs” is misleading to say the least and proposes far more land use than the councils own recently published assessment document of housing and economic needs suggests! Would the council please explain why they are intending to ignore their own document! Moreover, the proposal seems to be mainly for agricultural land, which once lost would be virtually impossible to recover. We need to be more sustainable in feeding ourselves and not relying on overseas imports whether they are from Europe or the wider world. It should also be noted that the country, as a whole, needs to stop foreign investing in building homes which the local populous can neither afford to buy or rent (there are countries in the world which will not allow non-native individuals/companies from buying/building houses – Thailand is a case in point). This would certainly enhance the prospects for affordable homes.</p> <p>In summary, I would like to ask the council, and the government would they really like to be remembered as the politicians who made the local area and the UK as a whole a ‘concrete</p>

Q4 Part of document	Paragraph
Q4 Paragraph number	Policy AB12 Land East of Diglake Street - paragraph 2, 3 & 12
Q5 Legally compliant	No
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>Proposed entry/exit off Diglake Street would cause both Albert Street & Diglake Street to be the thoroughfare for est. 200-220 additional vehicles.</p> <p>Access to the site would be extremely restrictive, even when factoring in the provision of parking for existing residents of Diglake Street. Road is narrow. Proposed access to the new development is also awkward. Road is quite elevated compared to the field, and it would be a tight corner turning in whether coming from Diglake Street, or Albert Street.</p> <p>With regards to the proposed parking, I don't think the existing residents would be happy.</p> <p>Eg. residents at No. 4 & 6 Diglake street, who currently park outside their homes would be required to park roughly 180m away from their property. I don't think this is fair, so may fall foul of Duty to Co-operate.</p> <p>As this would be single entry/exit to est 120 homes, new residents in the furthest corner of the proposed new estate would be 400m as a straight line from the exit. This may fall foul of being Sound in design for a new development.</p> <p>Entry to the development would also have to factor in emergency vehicles which I believe would be problematic with Diglake Street/Albert Street. Junction for Albert Street is already unusual, and vehicles manoeuvring into Albert Street from Ravens Lane already have to cross Chapel Street. Visibility to the left looking down Chapel Street is restricted when turning in, and drivers already have to be very cautious. This may fall foul of being Legally compliant.</p> <p>Proposed alternative entrance off Ravens Lane would also be problematic. This would require compulsory purchase of 1 or more properties. However the corner on Ravens is already a pinch-point for traffic heading east due to parked cars all the way up Ravens Lane, restricting visibility of oncoming traffic, and traffic frequently pausing to allow passing of vehicles. Adding a junction here for 200 additional vehicles would cause further a bottle-neck and could be hazardous. This may fall foul of being Legally compliant.</p> <p>With regards to improvements in the capacity of local schools, Ravensmead Primary School and Pear Tree Nursery are the only schools within the surrounding areas, and are already at capacity. There doesn't seem to be any provisions on the Local Plan to physically extend the schools. Fields directly behind Ravensmead are not a part of AB12.</p> <p>There is no land for Pear Tree to extend as this is on the corner of Ravens Lane/Chapel Street.</p> <p>One of the "lollipop-crossings" on Ravens Lane for the pupils walking to the schools is currently near the Ravens Lane/Chapel Street/Albert Street junction. Increased traffic around rush-hour due to the proposed development would be hazardous to the children walking to school.</p>

Q7 Modification	Removal of AB12 from the local plan, as either proposed access points to the development could be hazardous and may fall foul of being legally compliant with highway laws
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)

Title	Policy AB12 Land East of Diglake Street
Consultee Family Name	Hoban
Consultee Given Name	Che
Q4 Part of document	Policy
Q4 Policy	AB12
Q6 Details	<p>I wish the Planning Inspectorate to consider my following representations in response to the Newcastle -Under-Lyme Borough Council – Final Draft Local Plan Consultation (Regulation 19)</p> <p>I wish the Planning Inspectorate to remove all policies from the plan which involve any development on Green Belt Land.</p> <p>The specific policies are: -</p> <ul style="list-style-type: none"> • AB2, AB33, AB15 & AB12 – Audley Ward • BW 1 – Bradwell Ward • CT 1 – Crackley Bank & Red Street Ward • KL13 & KL 15 -Keele Ward • SP11(2) & SP11(3) – Silverdale Ward • TK 10, TK 27 & BL18 – Talke & Butt Lane Ward <p>All of these developments impact green belt land, are unsound and should be removed from the plan.</p> <p>They will all have a negative effect on the Net Biodiversity gain of each local area. Which in turn has a knock-on effect across the Borough. Open spaces are essential for the environment by absorbing carbon dioxide from our atmosphere, which helps reduce climate control. They also provide habitats for a wide range of plants and animals. Open spaces are also important to human health as they can reduce stress, improve mental health, and assist in people sleeping better. They provide areas for physical activity which improve both physical and mental health. Removal of green belt will decrease the air quality within that area, increase respiratory issues for humans and wildlife, and also increase noise pollution.</p>

	<p>With specific reference to policies AB2, AB33, AB15 and AB12. I ask the Planning inspectorate to remove policies based on the following justifications:</p> <ul style="list-style-type: none"> AB2 - It is simply the case that the small village of Audley and its surrounding countryside lanes could not cope with the large increase of traffic caused by these policies. The large number of HGV's travelling to the proposed AB2 site would definitely increase the traffic within the Audley area due to the daily traffic jams along the A500 and at M6 Junction 16. Traffic will spill on to local roads e.g. A5500, increasing Noise and air pollution AB12 - Proposed access to site AB12 via Diglake Street is untenable. This street is small and it is already difficult to drive down due to parked cars on both sides of the terraced street. A new development of houses would make it virtually impassable causing gridlock, increased air pollution, increased noise pollution and limiting access for the emergency services. <p>The proposed new car park for residents in Diglake Street due to the proposed AB12 policy would be detrimental to Blue badge Holders, People with mobility issues and Carers of babies and children.</p> <p>AB12 will not be close to any amenities with little or no access to a regular bus route.</p> <ul style="list-style-type: none"> AB33 – Primary Vehicular access to Park Lane is unsound. This is an already busy junction. AB33 will not be close to any amenities with little or no access to a regular bus route. Creating more traffic therefore noise pollution and air pollution. With an increased danger to pedestrians. <p>With poor access to health care and education.</p> <ul style="list-style-type: none"> AB15 – The proposed site at AB15 is unsound because of the poor access to health care, education, local amenities and public transport. <p>I therefore would like the Planning inspectorate to remove Policies AB2, AB12, AB33 & AB15 from the plan.</p>

Consultee Family Name	Horne
Consultee Given Name	Fiona
Q4 Part of document	Policy
Q4 Policy	AB12
Q6 Details	<p>Site AB12 Land East of Diglake Street</p> <p>An additional 125 houses on this greenbelt land would increase the existing flooding issue. The access points on Diglake Street and adjacent to 104 Ravens Lane cannot be viable. It will be chaos - terraced housing with everyone parking on either side of the road leaving room for only one vehicle to navigate the street.</p> <p>The proposal for a Car Park on AB12 cannot be viable. How can people be expected to park up the road and away from home? Are residents really expected to transfer babies/small children, pushchairs from their car to their home along with shopping etc? An additional 250 cars using Diglake Street and Albert Street and then on to Ravens Lane (a busy road which already suffers inconsiderate (though unavoidable due to many families owning multiple cars) parking on both sides of the road causing congestion). The volume of additional cars emerging from these terraced streets onto Ravens lane will impact hugely on the already over used route and will potentially endanger the lives of families using the nearby Nursery & School routes? This is not deliverable and therefore unsound.</p> <p>The Local Plan does not propose to build schools, therefore how are the educational needs of the additional children moving into these new homes going to be met? I feel this proposal is unsound for the reasons stated above and wish for this site to be removed from the Local Plan.</p>

Title	Policy AB12 Land East of Diglake Street
Consultee Family Name	Brown
Consultee Given Name	Jane
Q4 Part of document	Policy
Q4 Policy	AB12
Q6 Details	<p>Local Plan</p> <p>Policy AB12 Land East of Diglake Street</p> <p>The development of this land is unjustified because it is productive farmland. The UK wants to become more self-sufficient in its food production and it is vital to maintain farming in order to do this. The high water table makes the land liable to flooding and if developed with the proposed additional housing, the run off would be into Brierly Brook leading to flooding on other agricultural land. This would remove climate mitigation and contributions to our food security. Access to the site is completely inadequate with narrow roads and sharp turns at both proposed access points. The car park allocated for Diglake Street residents is much too small and would reduce the independence of elderly and disabled residents who would struggle to walk to the car park from their homes. The pavements are narrow and there would be a danger to pedestrians including children attending the nearby primary school. Construction vehicles will find it very difficult to access the site causing traffic problems and danger to residents during the</p>

	<p>building. Already the local schools, doctors and dentists are at capacity and there is just not the infrastructure to cope with these additional houses. The recent census showed a need locally for affordable housing and both starter and retirement housing. The proposed housing on AB12 does not meet this requirement. AB12 currently represents a high quality contribution to the Green Belt, if this proposal were to go ahead it would ruin the nature of this rural community as well as destroying the Green Belt habitats of many wild animals and plants.</p> <p>For the above reasons I believe the Local Plan to be unsound and I am asking that this site be removed from the Local Plan.</p> <p>The above statements in the most part also apply to:</p> <p>Policy AB33 Land off Nantwich Road and Park Lane.</p> <p>Policy AB15 Land North of Vernon Avenue.</p>

Title	Policy AB12 Land East of Diglake Street
Consultee Family Name	Cunningham
Consultee Given Name	Helena
Q4 Part of document	Policy
Q4 Policy	AB12
Q6 Details	<p>F.A.O Planning Policy Team</p> <p>I write to strongly object to proposals within the Local Plan in particular the allocations for sites, AB2, AB2A, AB12, AB15 and AB33 and do not believe it has been completed in a lawful way.</p> <p>I do not believe the Borough Council have taken into account any feedback that they have been given since the first round of consultations and have ploughed ahead with a Local Plan that is not fit for purpose.</p> <p>The sites within this allocation fall within greenbelt land and the Council is yet to exhaust all brownfield sites and have vacant buildings within the borough that have stood empty for years.</p> <p>The release of greenbelt land for the sites AB2 and AB2A do not make strategic sense due to location and the impact that it will have on the rural parish of Audley. Again, there are vacant sites within the Newcastle under Lyme boundary that can be utilized without the need to release greenbelt land (e.g the old Makro site and other unit within the Chesterton/Waterhayes area)</p> <p>Whilst some housing may be needed, I do not believe that greenbelt land should be released for this within the parish as there are better options elsewhere within Newcastle under Lyme.</p> <p>My main objection with the housing developments is for site AB33, placing houses on this site will lead to further issues for the community. This site is agricultural land and is in use currently (see attached photo). You state the site is not in use, yet the photos contradict this, you also say that it is surface water flooding, yet the flood has been there for a significant length of time, which indicates it is more than surface water. I believe that the new housing would have a detrimental impact on local services, the roads/footpath infrastructure is already poor. There is double parking throughout the village, people with prams/wheelchairs are often forced into the roads and to suggest building further housing will only exacerbate the issues.</p> <p>To build an access road onto Nantwich Road is a huge cause for concern, this road is continually busy with traffic with users often travelling above the speed limit of the road. The road acts as a cut through from those heading both north and south for work etc. Park Road also does not have the infrastructure in place to do this.</p> <p>Newcastle under Lyme should be acting more strategically and resurrect a joint Local Plan with Stoke on Trent Council. The Councils should be working in partnership to develop a plan that will bring life back to the City and in turn make people want to visit and settle here. I do not believe that there is sound evidence the housing numbers or development numbers that you have put forward.</p> <p>I believe that the Local Plan is poor, is full of contradictions and does not adhere to local or national policy. It is simply not fit for purpose and should not be progressed in its current state when you have received so much negative feedback at all stages of the process.</p> <p>Regards</p>

Q6 Details	<p>The village infrastructure, Schools, Doctors, Dentists etc is full to capacity, financial contributions to expand are pointless as without taking more greenbelt in the village there is nowhere to expand to. The school premises would have to lose recreation an playground space and therefore impact on health and wellbeing</p> <p>The doctors already you have to wait to get in, there is no more room to expand what is already a relatively modern development which can not cope with any more patients, certainly not another 1000 people</p>

Q6 Details	<p>I am writing to object to the above proposal as this would cause significant damage to our villages eco system, roads and increase pollution. We are a rural community and the access to this site is limited at best. If this were to go ahead it would put added pressure on the roads. Increase the number of patients to doctors overstretched surgeries, as well as more pupils to our already full schools. We want to keep our village rural and not full of houses. We have a lovely stream and wildlife area that's this would destroy.</p>

Q5 Sound	No
Q6 Details	<p>AB12 Objection Page 111 (clause 2 & 3) The AB12 site has been allocated for 125 homes. However, the site has poor access through Diglake Street and the B5500. The use of Diglake Street will negatively affect residents, particularly elderly or disabled individuals and mothers with small children who rely on close vehicle access. Increased vehicle movement on the narrow street poses serious road safety issues. Offsite parking presents security concerns and challenges for charging vehicles.</p> <p>Considering the ever-increasing traffic through Bignall End, serious congestion is likely at the Diglake Street entry and exit during peak times . It is disturbing that Newcastle-under-Lyme Borough Council (NULB) has chosen to ignore the concerns of Diglake Street residents and expert opinions provided by Staffordshire County Council Highways . Despite these concerns, NULBC continues to cite Diglake Street as suitable access to the AB12 site. The submission from Staffordshire Highways as detailed below taken from the Regulation 18 Consultation Report was apparently ignored. This final draft of the local plan still promotes Diglake Street as preferred option for access to AB12 .</p> <p>Relevant text form The 2018 Consultation Report Sec 47, page 111 Land east of Diglake Street</p> <p>"Staffordshire County Council - The Highway Authority would raise concern with the outlined access strategy. I can confirm that the site has sufficient road frontage on Diglake Street to create an access however there are off site access issues that will need to be fully addressed in regard to on street parking on Diglake street and intensification of use of the Diglake St/B5500 junction. Access to the field is presently</p>

	<p>taken from the B5500, however it is of insufficient width in its current form to serve the proposed development unless it can be improved. Preference would be for the development to be served via the higher order road (B5500)"</p> <p>The site AB12 is unjustified in its current form due to inappropriate access requirements and quality of life impact to residents on the residents of Diglake street .</p> <p>The continued inclusion of Diglake Street as a suitable access to AB12 and apparent dismissal of Staffordshire County Council Highway Recommendation is not a sound inclusion in the local Plan.</p>

Q6 Details	<p>In response to the Local Plan consultation, we would like to object to the parts pertaining to Audley & Bignall End. Building around 250 extra houses in the area will considerably change the nature and character of the village, going against particularly SOIV, to reduce the carbon footprint, promote sustainability and harness opportunities for carbon sequestration. It also goes against SOVI, to promote and sustain villages and their character. The road infrastructure will not cope with the increase in traffic that this will bring. In many places along the routes in & through the village the houses open directly onto the road with no off-road parking. This results in parked vehicles restricting the carriageways and causing congestion. This will be made worse with the increase in cars that the extra housing will bring. There is no mention in the plan of any provision for healthcare or schools for the increased population. The medical practice in Audley is already at capacity and increasing the population will put increased strain on the health services and risk diminution of care to the existing patients of the practice. The current proposals also go against the direction of travel for government policy with the need to keep most development within urban areas as far as possible, with optimisation of densification of properties to make best use of public transport and greener travel. Green belt land should be protected. The National Planning Policy Framework 2021 already indicates the need to protect green belt land and that rural development should support local services, not overwhelm them.</p>

Q4 Part of document	Policy
Q4 Policy	AB12
Q5 Sound	No
Q6 Details	<p>I consider the proposal to build 125 houses on the site known as AB12 to be unsound for the following reasons:-</p> <p>1)The proposed site is currently Green Belt and good agricultural land that contributes to the well-being of the local population. It is able to absorb rain water and helps mitigate any adverse local climate change issues. The building of 125 houses and all the road infrastructure associated with such a development will have an adverse affect on flooding plus additional road traffic to an already congested area.</p> <p>2)Access to the proposed site is along Diglake Street and via a "track off Ravens Lane", neither of which are considered workable without causing disruption to the existing residents by banning them parking cars outside their own houses. This is not considered to be a right and fair way to encourage cooperation between neighbours.</p> <p>3)The proposed additional 125 houses will no doubt add to the vehicle count in the area and contribute to more congestion in an already busy area. The road through Bignall End is a 'rat run' for commuters traveling between Crewe/Audley into the Potteries as they try to avoid the congestion on the A500. I have witnessed major disruption to bus services at all times of the day due to vehicles parked on both sides restricting the width of the carriageway and I see the proposed site will only make the situation worse.</p> <p>4)The extra 125 houses would probably overstretch the existing Schools, Doctor and Dentist surgeries and car parks unless additional resources are put in place as a condition of the plan up front.</p>
Q7 Modification	The Planning Inspectorate should delete the proposed building of 125 houses in site AB12 as completely unsound.

Q5 Sound	No
Q6 Details	<p>Access via Diglake Street and B5500 is not safe or sound for the building of an additional 125 dwellings on AB12</p> <p>Diglake Street is a narrow road built, built in the 1800's not intended for the use of motor vehicles, there are already problems using this road due to parked vehicles on both sides of the roads, also issues for pedestrians who sometimes cannot pass on the pavement due to parked cars being mounted on the and they have to walk in the road. Recently, the fire service and the Bin Wagons have been unable to access the road fully due to parking and the width of the road.</p> <p>Then the next issue why this fails to be sound is entering and exiting the B5500, new road/ ravens lane is extremely busy and this is a difficult junction to get out of due to the parked cars on ravens lane and again the width of the toad. There have been 2 car accident by the junction of Diglake street in just a few months which involved cars hitting parked cars and in one of the incidents the road had to be shut. I fail to understand how approximately another 250 cars will be able to use this road as access safely.</p> <p>Pedestrian and emergency vehicle access via B5500 junction on the bend of Ravens Lane is also not sound, this is a very busy stretch of the road and one of the pinch points for congestion, not only at peak times but throughout the day, how anyone hasn't been knocked down here already is beyond me.</p> <p>Potentially another 300+ people using this as access onto a busy pinch point on a main road is not safe. Emergency vehicles would struggle to turn here efficiently at peak times die to congestion and as the road is narrow and has parked cars both sides then there would be nowhere for cars to move out of the way to let emergency services through</p> <p>Impact of construction vehicles throughout the course of the build would again cause chaos as the road infrastructure is not suitable</p>

Q6 Details	<p>Good afternoon,</p> <p>In addition to the objection just lodged against the unnecessary warehouse of AB2, I would also like to lodge objections about</p> <p>AB12 land east of Diglake Street</p> <p>AB15 land north of Vernon Avenue</p> <p>AB12 land east of Diglake Street</p> <p>Diglake Street – there is no suitable access to this site, either from the bad bend on Raven's Lane, nor at the bottom of Diglake street.</p> <p>There is also flooding of the field from Brieley Book. I understand cottages on the corner of Great Oak Road & Bignall End Road already suffer from flooded cellars, as do houses in Hope Street, Diglake street, Edward Street & Albert Street.</p> <p>Diglake Street & Albert Street are already over parked & very narrow. The use of these roads during construction is not feasible, neither is the use of the roads for additional cars if houses were to be built.</p> <p>The same applies to the bend on Ravens Lane, which was also suggested as an entrance to the site.</p> <p>There is no capacity to extend the GP Practice, or the schools, all of which are at capacity.</p> <p>The village of Audley has limited car parking, and a problem with car parking on the yellow lines & the zigzag white lines at the zebra crossings. Adding hundreds of new homes, more people & more cars will make this problem worse, not better.</p> <p>I did not see any feasible plans to deal with the inevitable traffic issues should any houses be built.</p> <p>The surrounding villages all have similar issues with parked cars & limited passing room.</p> <p>Pinch points are</p> <p>Bignall End - Ravens Lane (all the way from the top, at the shops all the way down)</p> <p>Bignall End - Great Oak Road/Hullocks Pool Road & Cross Lane – lanes that all have large sections of single width road, making it very difficult/dangerous to pass</p> <p>Audley – Church Street (around the shops, parking on the road, double yellows, zigzags)</p> <p>Audley - Chester Road, no room/very limited room to pass due to parked car</p> <p>Audley - Wereton Road, no room to pass due to parked cars (nearly always have to reverse to allow passing)</p> <p>Miles Green – Heathcote Road & Station Road junction</p> <p>Alsagers Bank – High Street, at the top (near the Gresley Arms pub & to the Scot Hay Road) & then most of the way down the bank (to the Railway Pub)</p> <p>If more houses are built, more people will be on these roads, making difficult roads more dangerous for drivers, pedestrians & cyclists.</p> <p>Alsager & Sandbach have both had recent mass house building projects, and both now have an issue with traffic.</p> <p>Houses have been built, but no infrastructure put in place to deal with the extra cars.</p> <p>These are both towns I now avoid.</p> <p>I object to these two sites & think they should be removed from the local plan.</p>

Q4 Policy	AB12
Q6 Details	<p>I am writing to state my views on proposed development areas in the Audley Parish area.</p> <p>AB12: It is quite frankly difficult to understand the rationale of building a proposed 150 homes in this green belt area. The access to this site will cause considerable difficulties for the residents on the access area, and the passage of perhaps 300 vehicles to and from the proposed homes will cause an already congested area to become substantially more so, and at times gridlocked.</p> <p>Given the location, the proposed homes would house commuters. The access to conurbations and employment areas would be via already congested roads, as well as rural areas, causing substantial pollution as well as substantial damage to wildlife and the environment, not to say danger to pedestrians.</p> <p>I appreciate that there might be a need for some house building in the area, but it is the scale of what is proposed which does not appear at all rational or logical. It is my understanding that the land on which the proposed housing is to be built is owned by a Local Authority, which might be a reason for even considering such a substantial and ruinous proposal to concrete over yet more of the countryside.</p>

Q4 Part of document	Policy
Q4 Policy	AB12
Q6 Details	<p>AB12 – Land off Diglake Street, Bignall End</p> <p>We oppose the inclusion of AB12 in Newcastle under Lyme's Local Plan on the following grounds.</p> <p>Access</p> <p>The Primary access to this site on Diglake street isn't just unsuitable but dangerous. Diglake Street is just 5.47m wide, it is lined either side by terraced housing and there are cars parked on both sides. The same is also true of Edward and Albert Street and I have included pictures of all. The access point is currently used as a parking spot for two vans and at least two cars daily, if planning is approved these vehicles will need to move and add to the congestion on already busy street. All three streets are completely blocked on a daily basis by the delivery of online orders, there isn't enough room for them to pull in so they generally need to park in the middle of the road to unload.</p> <p>The suggestion to mitigate this by adding parking for existing residents to the site means that there is an unreasonably detrimental effect on the day to day lives of the people who live in Diglake Street in particular, the houses at the top of the street have no access to the site via the rear of their properties they would need to walk to the parking area and the only access would be at the bottom of the street, this is also the case for all those on the opposite side of the road.</p> <p>The member of staff at the consultation meeting was unable to explain how this would actually work, only that issues would be looked at during the planning stage. In a telephone conversation with Councillor Nick Crisp on 28th September he revealed that planning staff admitted to him that even they don't see it as feasible, the land is included because Staffordshire County Council want to sell it not because it delivers any benefit to the plan.</p> <p>Traffic would need to enter/exit either Diglake or Albert Street to/from the B5500 in order to access the primary entrance. Albert Street adjoins Chapel Street which is also terraced with cars parked along the whole road, visibility is limited at all times due to cars parking on corners. Diglake Street adjoins Ravens Lane and Chapel Street, again with cars parked severely blocking visibility, it is also the spot that the crossing warden for Ravensmead Primary stands in order to cross the children, only this week the school raised concerns for children's welfare due to traffic. The addition of another 200 (minimum) cars using these junctions daily is an accident waiting to happen. I have included pictures of all these areas as the planners at the consultation meeting stated that it had only been inspected during work hours, whilst this wouldn't give a true idea of the scale of the issues it is hard to believe that any expert looking at these streets at any time of day could possibly believe that it is workable, this is especially true at peak times when roads in Bignall End are already beyond capacity</p> <p>Greenbelt/Farmland</p> <p>The land is currently productive farmland which sits within the greenbelt. It has been recently rented to a farmer who has invested in improving the grass and fencing in order to use it for livestock. This is Staffordshire County Council farmland which has conditions placed upon it for very good reason. The land must be used for agricultural purposes within the councils own regulations on the land, this was implemented on land across the UK in order to protect the nation's food supply. Again not only is this</p>

	<p>greenbelt land but of importance as farmland too. The proposed development does not meet any criteria to over-ride this very important principal.</p> <p>We regularly see a number of birds of prey hunting in the fields, there are also hedgehogs there, I feed them in my garden and witness them regularly walking into the hedges you propose to destroy for access. The hedges and berries from brambles on the access are also a valuable food source and home for birds and insects. During a time when our eco system is facing collapse due to the decimation of habitat we should be protecting these areas as much as possible not destroying them.</p> <p>Flooding</p> <p>There is a high risk of flooding should the land be developed. There is a high water table and at the bottom of the proposed site is Brierly Brook, currently the land absorbs run off from Ravens Lane, Diglake and Albert Street, should this change the water would head straight into the brook causing substantial difficulties for adjoining agricultural land. This again would impact food production, exacerbating the damage the site causes.</p> <p>Improper scrutiny</p> <p>Members of the Council were not given sufficient time to scrutinise large amounts of the plan before a vote.</p> <p>During a consultation meeting I asked Cllr Nick Crisp how he felt that the access onto Diglake Street would work, he was very surprised to learn that access was even suggested there. After further questioning it became apparent that Mr Crisp hadn't actually read any of the Plan before he voted on it. This was witnessed by numerous members of the public and I have to wonder how much the ruling party's members really understand the limitations of the proposed sites given that they simply voted as instructed.</p> <p>Conclusions</p> <p>*The removal of the land from the Greenbelt is unjustified, it is valuable agricultural land and would impact the surrounding farmland due to inevitable flooding issues.</p> <p>*The removal of available parking for existing residents is unreasonably detrimental to the lives of existing residents.</p> <p>*The main pedestrian access to Ravensmead Primary for the people of Bignall End is at the top of Diglake Street. The danger this poses due to increased traffic is great, this renders the proposal unsound.</p> <p>*The site is fundamentally undeliverable, the council planning officers themselves don't know how access would work.</p> <p>*The inclusion of the site is driven by a wish to asset strip Staffordshire County Council rather than the site being appropriate for development.</p> <p>*In order for the Local Plan to be considered sound this site must be removed.</p>

Q4 Policy	AB12
Q6 Details	<p>Dear Newcastle-under-Lyme Brough Council,</p> <p>I the undersigned, as residents of Audley, wish to object to the proposals of four housing sites and a large employment site in the council's draft local plan for Audley. My objections are about both the proposals for Audley in general and also specifically about site AB15 which is at the back of my home where I live and would significantly and detrimentally impact my life.</p> <p>My objections to the proposals for Audley in general are an additional 250-270 homes with a further 1000 residents and a large employment site of over 170 acres warehouses will destroy the character of our</p>

	<p>beautiful village. As I sit here writing this letter to you, I can hear birds singing and am looking out on a beautiful green field with cows grazing which is a very healthy way to live, considering the fact that where I live has been so important in restoring my mental health if your proposals go ahead that will totally damagingly affect my life, the downward spiral mental health of so many residents and the quaint, picturesque village of Audley.</p> <p>In this regard, if only or mostly green belt sites are available in the Audley area, the Council does not have to build the number of houses it says it must, because government figures are only advisory. It therefore seems that the Council is choosing to build on green belt sites when it doesn't have to.</p> <p>Furthermore, it also seems that the number of houses proposed to be built on AB15 and around Audley is excessively weighted to this area compared to the rest of the Borough as a whole and are mostly on green-belt sites. Why have you not planned to deliver housing in the urban centre with amenities and infrastructure of a town already. Instead, your plan overloads an already overloaded infrastructure area.</p> <p>The Junction with the A500 already has capacity constraints and development in this area could exacerbate this without appropriate justification. The proposed additional housing for the Audley area in general would cause already inadequate roads to become impossibly congested and to deteriorate even further. Connected to this, given that the current schooling and health facilities in the village are not enough to cope with a sudden increase in population, would further development and therefore more land be needed to build more schooling and medical facilities?</p>

Q4 Part of document	Policy
Q4 Policy	AB12
Q5 Sound	No
Q6 Details	<p>The policy is unsound for the following reasons:</p> <p>Agricultural land.</p> <p>We have a government that talks about nett zero and yet we import much of our food from overseas. The Draft Plan is at odds with government policy, which is, that the UK is most reliant on imports of fruit and vegetables, producing 17% and 55% respectively of supply. A significant proportion of UK fresh fruit and vegetable consumption is either exotic or out of season, and supply can be affected where imports are from countries vulnerable to climate change and extreme weather. With this in mind, the UK Government and devolved governments are supporting increased domestic production, particularly of UK fruit and vegetables, to strengthen our food security (Source: UK Food Security Index Updated 11th July 2024)</p> <p>Congestion.</p> <p>The roads in this area are already inadequate even on normal days, with regularly slow moving traffic. Cars are routinely illegally parked, on pavements, outside the Londis convenience shop and opposite continuous white lines, on a blind bend, with impunity. Policing this already poor state of affairs is wholly inadequate and will not improve. School buses, public transport buses, heavy wagons, large tractors and SUV's regularly bully their way through our Victorian road system, creating an extremely unsafe environment, especially for our children. We have Ravensmead Primary School in Chapel Street with parents regularly taking them to school in their SUV's, and parking illegally on pavements when they pick them up. If there were an increase in the number of pupils to accommodate new arrivals this situation would, of course, deteriorate further. Adding an additional access point will further exacerbate an already bad state of affairs.</p> <p>Lack of a suitable infrastructure.</p> <p>The local primary school is a Victorian building with little room to expand. The access for vehicles to pick up/drop off children safely in a narrow street is severely limited and already represents a significant risk. Nursery places for pre-school children too is limited. Parking for vehicles in modern "rabbit hutch" style housing is already causing problems nationwide with 36% of households having more than one car (Source: National Travel Survey 2020 Gov.UK). This will be further exacerbated if "electrification" increases as currently projected. Opportunities to create additional parking in an area surrounded by Victorian Streets.</p> <p>I want the Planning Inspector to remove the site from the Local Plan.</p>

It has been recently rented to a farmer who has invested in improving the grass and fencing in order to use it for livestock. This is Staffordshire County Council farmland which has conditions placed upon it for very good reason. The land must be used for agricultural purposes within the councils own regulations on the land, this was implemented on land across the UK in order to protect the nation's food supply. Again not only is this greenbelt land but of importance as farmland too. The proposed development does not meet any criteria to over-ride this very important principal.</p> <p>We regularly see a number of birds of prey hunting in the fields, there are also hedgehogs there, I feed them in my garden and witness them regularly walking into the hedges you propose to destroy for access. The hedges and berries from brambles on the access are also a valuable food source and home for birds and insects. During a time when our eco system is facing collapse due to the decimation of habitat we should be protecting these areas as much as possible not destroying them.</p> <p>Flooding</p> <p>There is a high risk of flooding should the land be developed. There is a high water table and at the bottom of the proposed site is Brierly Brook, currently the land absorbs run off from Ravens Lane, Diglake and Albert Street, should this change the water would head straight into the brook causing substantial difficulties for adjoining agricultural land. This again would impact food production, exacerbating the damage the site causes.</p> <p>Improper scrutiny</p> <p>Members of the Council were not given sufficient time to scrutinise large amounts of the plan before a vote.</p> <p>During a consultation meeting I asked Cllr Nick Crisp how he felt that the access onto Diglake Street would work, he was very surprised to learn that access was even suggested there. After further questioning it became apparent that Mr Crisp hadn't actually read any of the Plan before he voted on it. This was witnessed by numerous members of the public and I have to wonder how much the ruling party's members really understand the limitations of the proposed sites given that they simply voted as instructed.</p> <p>Conclusions</p> <ul style="list-style-type: none"> *The removal of the land from the Greenbelt is unjustified, it is valuable agricultural land and would impact the surrounding farmland due to inevitable flooding issues. *The removal of available parking for existing residents is unreasonably detrimental to the lives of existing residents. *The main pedestrian access to Ravensmead Primary for the people of Bignall End is at the top of Diglake Street. The danger this poses due to increased traffic is great, this renders the proposal unsound. *The site is fundamentally undeliverable, the council planning officers themselves don't know how access would work. *The inclusion of the site is driven by a wish to asset strip Staffordshire County Council rather than the site being appropriate for development. *In order for the Local Plan to be considered sound this site must be removed.

Title	Policy AB12 Land East of Diglake Street
Consultee Family Name	Colclough
Consultee Given Name	Mark
Q4 Part of document	Policy
Q4 Policy	AB12
Q6 Details	<p>To whom it may concern, I wish to register my strong objection to the planning proposal AB12 at Bignall End.</p> <p>This proposal has not taken into consideration the pressure this will cause on the local road network, schooling, and healthcare. Not to mention the effect on wildlife, and mental health.</p> <p>As a resident of (redacted by admin) for my entire life I can tell you that the road infrastructure is already at capacity, with Ravens lane, and New Road already difficult to pass, as is Diglake street, a proposed access I believe.</p> <p>The building of over 120 houses will make this a living nightmare for local residents.</p> <p>These are small villages where dirt tracks progressed to thin tarmac roads, not really wide enough for car parking, and access to this site would be very difficult.</p> <p>The local primary school at Ravensmead also doesn't have any capacity for this many extra pupils either, as my wife commented, (redacted by admin).</p> <p>We want our villages to remain just that, villages. Countryside and the fact that this is a rural village is why I have remained here.</p> <p>The outlook of residents, and losing greenbelt is a big factor in mental health, and I urge anyone involved to scrap this proposal.</p>

Q4 Part of document	Policy
Q4 Policy	AB12
Q5 Sound	No
Q6 Details	<p>AB12 I believe that the plan for 125 houses will accessibility from Diglake Street to be unsound living on that street but also feel like much of the following applies to both AB12, AB33, AB15. The road is already congested and has very limited accessibility. At peak times it is hard to park cars and get cars and people safely down the street. The roads are too narrow and the junctions onto the main road are already extremely busy and dangerous without the additional traffic from 125 houses, utilising both Diglake Street and Albert Street and Chapel Street, with Ravensmead School just a few minutes down the road. The increase traffic would also cause more danger to those children travelling to school and living on the streets surrounding the new development.</p> <p>Pedestrian and cyclist access through the park is also a concern given that the majority of people down the street have families and small yards the park used by families in the area, taking parts of it away and again the increased traffic is a concern and unjust.</p> <p>A car park will not solve these issues and restricts residents on being able to park outside their houses to unload shopping, those with small children or with disabilities.</p> <p>The reason we chose this house was due to the views from our rear garden fields, the greenbelt and views to the monument with this development you are seriously affecting the views from our house and also potentially the sale value of our home. Given that we have had sheep in this field also I am concerned into yet more farmland being destroyed and the impact on our environment taking yet more of our greenbelt. Given the flooding in nearby Brierly Brook I feel that this development would also affect that as well as the surrounding fields and farmland.</p> <p>Traffic flow through Bignall End in general is already at a maximum increasing traffic both through AB33 and AB12 this would be further increase this beyond capacity. I also fear of the effect this will have on the GP, local schools etc. With all of this what is being proposed is just not justified or needed and is unsound and should not go ahead and should be removed from the local plan.</p> <p>In relation to AB2 there is no evidence that this will give people within the local area jobs and or attract people to the local area and again taking from our greenbelt. There are already significant levels of traffic at the M6 junc 16 and accidents at that junction regularly and already heavy impact on the A500 this is just going to exasberate this further and there is no evidence to say it will do what the council are saying.</p>
Q7 Modification	The best way to modify this is to remove AB12, AB33, AB15 AB2 they are unsound and unjustified.
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)

Title	Policy AB12 Land East of Diglake Street
Consultee Family Name	Myatt
Consultee Given Name	Julie
Q4 Part of document	Policy
Q4 Policy	Policy AB12 Land East of Diglake Street
Q5 Legally compliant	No
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>There is no evidence to support the need for further housing at this point in time based on the demographics for the area whereby the local population has decreased not increased and therefore this should definitely not be at the expense of our greenbelt land which makes the area what it is - rural. The rural nature of the area is what attracts most residents to Bignall End and Audley. Once this greenbelt is destroyed there is no going back and this will be the tip of the iceberg as the initial proposal might be for 125 houses but the builders will keep going back to extend this to a higher number as has happened in Alsager.</p> <p>The current road infrastructure is not designed to cope with an increased volume of traffic which 125 new homes will bring. The proposed site accesses, firstly off Diglake Street or for emergencies via Ravens Lane / B5500 are totally inadequate especially for heavy lorries during the construction phase and for the higher volume of traffic after construction.</p> <p>Additional traffic pulling out of Diglake Street is likely to lead to increased road traffic accidents involving both vehicles and pedestrians, especially as it is near a major crossing point for pupils walking to and from Ravensmead Primary School. This also increases the risk of possible fatalities, particularly as the increased volume of traffic (especially heavy construction vehicles) will cause more potholes for cars, motorcycles and bikes to contend with.</p>
Q7 Modification	<p>These proposals appear to conflict with the local plan which states that it "will have respected and improved the character and distinctiveness of our market towns, villages and other rural areas". How is this happening in practice ? These proposals will destroy the character and distinctiveness of Bignall End which will change from rural to urban. They definitely do not respect nor improve it's rural nature nor it's character and distinctiveness. Therefore I think that this policy should be reviewed and the proposed site withdrawn to be retained as agricultural land / greenbelt as there are plenty of brownfield sites which could be explored before using this greenbelt site.</p>

Q4 Policy	AB12
Q5 Legally compliant	No
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>Please note the contents of the attached letter which sets out the Council's comments in this regard. Please do not dilute the comments in any officer reports as the document needs to be read in context alongside the previous responses made.</p> <p>Sites AB12, AB15 and AB33 are all within Audley Parish. APC accepts that some housing growth is needed to meet local housing need, including small (one bedroom) and family (4 bedroom) accommodation and homes suitable for older people and those with limited mobility. The sites are close to existing settlements and do not create coalescence between settlements. APC would emphasise that green belt release should only occur in exceptional circumstances, but accepts that there are no alternative sites that would not involve green belt release.</p> <p>The new housing would help to ensure that existing shops and other facilities in Audley and Bignall End remain viable. The increase in population would place more pressure on health, education and other facilities and this one of the main concerns for many residents. The provision of a safe and adequate access would be essential for all sites.</p>
Q7 Modification	As above
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)

Q9 Hearing reasons	As set out in this response and the previous 2 responses - the Parish Council has strong objections in particular to the inclusion of AB2.

Consultee Family Name	Livingston
Consultee Given Name	Susanna
Q4 Part of document	Policy
Q4 Policy	AB12
Q6 Details	<p>Policy AB12 Land East of Diglake Street</p> <p>I think this policy is unsound due to a variety of reasons.</p> <ol style="list-style-type: none"> 1. The main access route planned at the bottom of Diglake Street could possibly mean there are up to 250 extra vehicles journeying up and down the street at peak times. This street is already very difficult to traverse at peak times and often cars have to reverse and wait for vehicles to pass. 2. This would be building on greenbelt site. Are there not lots of empty properties and brownbelt sites in the area which could be used? 3. It is already dangerous when exiting Diglake Street onto the Main Street as cars are often parked close to the corners, meaning cars have to pull right out onto the main street to be able to see them. 4. The school has not got capacity for extra children from 125 houses. 5. The main street through Bignall End again is already dangerous with parked cars on both sides, resulting in one way traffic and a queue to go the other way. 6. This area is known for the Wedgewood Monument which can be viewed easily from one side of Diglake street and the countryside views are why some people wanted to live here. This will block views and take more of the countryside which is where a lot of local people enjoy relaxing, walking, taking dogs out, and playing. 7. This would be dangerous as on Diglake Street, cars park on both sides of the street, making it single passageway through and with children or any pedestrians crossing the street, this makes it extra dangerous. <p>I would like the planning inspector to remove the sites from the Local Plan.</p>

Title	Policy AB12 Land East of Diglake Street
Consultee Family Name	Heath
Consultee Given Name	Lisa
Q4 Part of document	Paragraph
Q4 Paragraph number	3
Q5 Sound	No
Q6 Details	<p>Access to the proposed AB12 site for a 125 dwellings is not in any way sound or safe. The main access via Diglake street is on a narrow terraced housing road with cars currently parked on both sides of the pavement, making it just about passible for one vehicle to pass through. Building an additional 125 houses on AB12 will lead to around 250 extra vehicles passing through Diglake street, causing additional congestion on Diglake street itself, not to mention the time to pull out of Diglake street onto new road or Ravens lane and vice versa the traffic congestion waiting for additional cars to pull into Diglake will have a major impact on the traffic on New road and Ravens lane especially at peak times. Due to the narrowness of Diglake street most cars needs to part park on the pavement, sometimes making it difficult for pedestrians, particularly those with Prams and wheelchairs/scooter to pass on the pavement, leading them to have to use the road, this will be a safety issue for pedestrian's with additional cars using this road. On several occasions, services such as the Bin Lorry and emergency services have been unable to get down Diglake street due to the width of the road and parked cars. With regards to Emergency and pedestrian access via Ravens lane, where the access is planned is probably the worst stretch of this road, its on a bend which already backs up heavily with traffic in both directions and is often blocked with traffic, How an emergency vehicle would be expected to get into that turning at Peak times is beyond me, that main B5500 again is a narrow road with parked cars on each side, only allowing in general one car in each direction, hence the tailbacks at peak times. Where pedestrian access is proposed, there is a blind spot due to the number of parked cars on the bend, in order to cross safely here there would need to be some form of pedestrian crossing, which would have an even greater impact on the traffic. Over the last 6 months there has been 3 significant RTA's on the B5500. 2 of which were right by the entrance to Diglake street, where a car driving up the road has crashed into parked cars, writing one off to which the Police were called and the road closed off. An accident on the B5500 in June saw 2 vehicles collide right on the bend where the proposed pedestrian and emergency access is proposed, Olwitnessed</p>

	this accident and had I have been walking the dog 30 seconds earlier would have been hit by these vehicle's. Finally on this point I am concerned about the Plan and construction vehicles needed at AB12 to build 125 houses, this will have a severe impact on traffic in the Village and beyond The road is not suitable for HGV vehicles, it's bad enough when the tractors are Farming and drive through the village causing delays, i also fear that a lot of the parked cars will be damaged as
Q7 Modification	I struggle to think what modifications to the plan would make both of these proposed access points sound or safe for AB12. It would potentially have to be a mini roundabout at the top of Diglake which would have a huge impact on both the traffic long-term, this is a very busy road at peak times and the whole road gets congested, in the short term changing the road structure to incorporate a mini roundabout would have severe impact on the traffic and the bus route. I also feel that measures to reduce the speed of the traffic would need to be installed by the pedestrian access on the bend of the B5500 again impacting the traffic through the village. At peak times or when there is delays on the A500 the B5500 is snaggd up with HGV vehicles I feel that this road should be restricted to 7.5tonne due to the width of the road and additional cars using the road

Q4 Part of document	Policy
Q4 Policy	AB12
Q6 Details	<p>In response to the Local Plan consultation, we would like to object to the parts pertaining to Audley & Bignall End. Building around 250 extra houses in the area will considerably change the nature and character of the village, going against particularly SOIV, to reduce the carbon footprint, promote sustainability and harness opportunities for carbon sequestration. It also goes against SOVI, to promote and sustain villages and their character. The road infrastructure will not cope with the increase in traffic that this will bring. In many places along the routes in & through the village the houses open directly onto the road with no off-road parking. This results in parked vehicles restricting the carriageways and causing congestion. This will be made worse with the increase in cars that the extra housing will bring. There is no mention in the plan of any provision for healthcare or schools for the increased population. The medical practice in Audley is already at capacity and increasing the population will put increased strain on the health services and risk diminution of care to the existing patients of the practice. The current proposals also go against the direction of travel for government policy with the need to keep most development within urban areas as far as possible, with optimisation of densification of properties to make best use of public transport and greener travel. Green belt land should be protected. The National Planning Policy Framework 2021 already indicates the need to protect green belt land and that rural development should support local services, not overwhelm them.</p>
Comment ID	NULLP444
Order	149
Title	Policy AB12 Land East of Diglake Street
Consultee Family Name	Maddock
Consultee Given Name	Paul
Q4 Part of document	Policy
Q4 Policy	AB12
Q5 Sound	No
Q6 Details	<p>I would like to put forward a number of points as to why I believe the Local Plan is unsound, with the focus upon plans for the village of Audley, the proposed strategic employment site of AB2 and the proposed housing sites of AB12, AB15 and AB33, which are all on Green Belt land but do not meet the requirements of exceptional circumstances for the removal from the Green Belt.</p> <p>AB12</p> <p>The biggest of the housing plots has no representation in the ED008 Green Belt Review Report part 4 presented by ARUP. Here, the biggest concern is access to such a large plot from very narrow access roads. The surrounding area is approached by terraced house streets with no off road parking so drivers park on the pavements. I can be dangerous now but with increased traffic, it could be lethal. To remove this area from the Green Belt, does this represent exceptional circumstances? I feel it doesn't and that there are far more suitable sites within the Borough.</p> <p>AB12, AB15, AB33 and AB2 and the impact upon the village.</p> <p>The impact upon the village's infrastructure will be catastrophic. Building in these locations will, without doubt, bring in a serious amount of traffic to the village which will mean extensive development of new roads to be created to cope with inevitable traffic that will need to access the proposed developments. Audley village, with two small car parks, is already suffering the impact of increased car ownership by residents already living here, with many people forced to park on double yellow lines and in turn hampering safety. Audley has recently lost some of its bus service, which means more cars and taxis will be on the roads. Then there is the impact on the facilities like, the doctors' and dentists' surgeries etc. The primary and secondary schools are at full capacity. With the advent of the proposed 213 new houses to be built in the Audley Parish, where will the children of these new households go to school? The local schools are at full capacity. I am an ex school governor so I am aware of the situation locally. Will the newly refurbished sewage works be able to cope with the additional houses on the plan? I am reliably informed it will not.</p>
Q7 Modification	<p>AB12, AB15 and AB33 if built upon, creating 213 extra houses will have a catastrophic impact on the infrastructure of the village of Audley. The removal of this land from the Green Belt must be justified and only done in exceptional circumstances. It is obvious that this land would be attractive to developers as is all agricultural land that is removed from the Green Belt and designated for building, but this should not be a driver for this decision. In Section 6 above, I have highlighted my concerns in relation to village infrastructure, flooding and excessive traffic. It is on these grounds I feel these proposed sites AB12, AB15 and AB33 are unsound and should be removed from the Local Plan</p>
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)
Comment ID	NULLP1253
Order	149
Title	Policy AB12 Land East of Diglake Street
Consultee Family Name	Gilmour
Consultee Given Name	John

Q4 Part of document	Policy
Q4 Policy	AB12
Q5 Sound	No
Q6 Details	<p>Policy AB15/AB12/AB33</p> <p>I oppose this because it is too many houses for Audley Parish , it is not justified to lose so much greenbelt, there are not exceptional circumstances, therefore it is unsound. The roads that run through Audley/Bignall End, are country B5500 roads with cars parked either side.</p> <p>AB12:</p> <p>Also the access is down a very narrow street , single track road with cars parked in both sides. Rows of terraced houses</p> <p>Again this and AB33 are Staffordshire county council land, why put in strong contributors to greenbelt when there were moderate contributors to the greenbelt. Is it because it is staffs county council land?</p> <p>AB12/15/33</p> <p>The main reason is the amount of traffic that will be generated through the narrow roads. Already the B5500 and Alsager road to the A500 are rat runs and throughout the day articulated vehicles HGV, OGV1&2 use this road as a cut through to avoid M6 junction 16 and Talke roundabout. In 2 hours on three occasions I counted between 1350-1750 vehicles using the mini roundabout at the junction of B5500 & Alsager road. The larger vehicles have damaged the roundabout many times and only this year have had it re tarmace'd after having huge potholes for over 12 months.</p> <p>If there is an accident or breakdown on the A500 or M6 near j16, the amount of traffic must double, the traffic is queuing along B5500 with hgvs and commercial vehicles blocking the roads.</p>

Title	Policy AB12 Land East of Diglake Street
Consultee Family Name	Gibson
Consultee Given Name	Catherine
Q4 Part of document	Policy
Q4 Policy	AB12
Q6 Details	<p>I write to you in relation to the Newcastle Borough Council Local Plan – sites within Audley Rural Parish which includes AB2 – Employment Site, AB33 – Land off Nantwich Road/Park Lane, AB12 – Land east of Diglake Street and AB15 – Land north of Vernon Avenue.</p> <p>In essence I don't think any of the sites are justified or sound and should all be removed from the local plan.</p> <p>Reasons against all sites:</p> <ul style="list-style-type: none"> - More people into the area, with very little public transport there will be more cars on very small roads. - More cars is more pollution, we have enough air pollution coming into this area from Walleys Quarry landfill in Silverdale, the landfill air pollution is worse in the winter, which is also when traffic pollution would increase as well. - Parking is already a problem, there are local car parks in Audley itself but much of the surrounding area has cars parked on both sides of the road due to no off road parking. Visibility is non-existent much of the time around Miles Green and Halmer End, you often proceed and hope nothing is coming in the opposite direction. - We have narrow Victorian streets in much of the parish which were not designed for the number of cars already here. There are many accidents to both parked and moving cars because of the amount of traffic and the speed of traffic through the narrow roads. This is only going to get worse if more vehicles and quite possibly bigger vehicles are added into the area. - Two of the sites are council owned farm facilities, there are young farmers wanting farms but unless you are from a farming family then this is not going to be possible with fewer/no farms to rent to get started in farming. - There is a bigger and bigger national population and if farmland is going to be built on then how are we going to feed the bigger population? Farmland is being built on all across the country, not just the proposed in Staffordshire. - Our local services such as schools, doctors and dentists are full. More housing is going to put more pressure on already stretched services. - There are empty warehouses in the local area but they fall under different councils. Why can't the area work together and consider the land regionally for housing and warehousing rather than each council needing to have a certain amount? Some areas of land are going to be better suited to different developments and much of these proposed sites are greenbelt and good agricultural land. Therefore the sites are not justified. <p>Reasons against AB2:</p>

	<ul style="list-style-type: none"> - Site is a huge area, 198 acres of good agricultural land in the greenbelt, this site alone is four times bigger than NULBC have said is needed, and is a bigger area than all our villages. - More jobs, more people into the area, no public transport so more cars on very small roads. - Proposed new bus routes will not fit all shift patterns so people will more likely use their cars than buses increasing traffic on the narrow roads, and cycling is unlikely as the area is all hills. We do not cycle for this reason and we haven't just done a 12 hour warehouse shift. - More jobs may well create pressure for more housing in the future, more loss of greenbelt near to the warehousing. - There are always accidents on the M6 along this stretch, we never use between junction 15 and 16 for this reason and avoid the M6 if we can go another route. Accidents always put more pressure on the surrounding local roads, our area leads to the A34 as a parallel route to the M6. - Emergency exits from the planned site are along single track roads with blind corners along them, not easy with current traffic, add any more along with people who don't know the roads and it is going to cause many more accidents. <p>Reasons against AB33:</p> <ul style="list-style-type: none"> - This site floods, ducks are seen on the water in the field. - More traffic on roads that are narrow, often congested and with turns on difficult to see corners, such as turning in and out of Church Street Audley. <p>Reasons against AB12:</p> <ul style="list-style-type: none"> - Loss of currently productive farmland on greenbelt. - Potential flood risks if developed, either on new development or passed further down, there are many big puddles on Bignall End Road after a bit of rain, if AB12 is developed this can only cause further floods on a much used local road to Talke and Kidsgrove. - Access and more traffic past both a nursery and a primary school. I travel (redacted by admin) during the day and it is one way traffic between the parked cars then, further cars are not going to be safe in the middle of the day let alone at school drop off and collection times. - Is this land being sold off by SCC being considered rather than more appropriate land? <p>Reasons against AB15:</p> <ul style="list-style-type: none"> - This site floods, ducks are seen on the water in the field. <p>So to conclude, I don't think any of the sites are justified or sound for the current residents, services or wildlife and should all be removed from the local plan.</p>

Title	Policy AB12 Land East of Diglake Street
Consultee Family Name	Moreau
Consultee Given Name	Jan
Q4 Part of document	Policy
Q4 Policy	AB12
Q5 Sound	No
Q6 Details	<p>I do not understand why AB12 was not included in the ED008 Green Belt Review Report Part 4 presented by ARUP, however, I do wish to object to AB12 being included in the Final Local Plan for the following reasons:-</p> <p>This site is part of the green belt and belongs to Staffordshire County Council and has been rented out to farmers for many, many years and is still being farmed to this day.</p> <p>In NULBC evidence Site Selection Report ED029 this site is described as "strong" for the green belt yet it has been chosen over and above sites which are "moderate" or "weak" – why might this be?</p> <p>It saddens to me to say this but this is just seen as asset stripping by the Borough Council and should not be allowed. Audley has a high water table and this site is prone to flooding and not just in the winter months and if this site is developed, this will increase the risk of flooding on the roads and the nearby stream of Brierley Brook which will then flood adjoining farmland and prevent it from being farmed appropriately. I know of properties in the area that already flood – building 125 houses will just increase these incidents. The main access point to AB12 is going to be at the bottom of Diglake Street and it is proposed to provide off street parking for the current residents on the new site. There are about approximately 110 homes without car parking in Diglake Street, Edward Street and Albert Street – the majority of which have cars which they park outside their homes, part way on the pavements so that a single car can drive down the middle.</p> <p>The above photo (see attachment) shows Diglake Street to the right, Edward Street across the top and Albert Street down the left hand side. How can all the residents of these houses be expected to park in this car park when many are elderly or are young families with pushchairs etc and some of them are disabled.</p> <p>How is it realistic or appropriate to expect people to park their second most expensive possession away from the security of their homes and out of sight and then have to carry heavy shopping etc to their homes, unload pushchairs and sort out children. Just not practical. 125 dwellings will probably result in at least 125 additional cars using Diglake Street etc and the junction where Diglake Street & Albert Street meet Ravens Lane and is a difficult junction to navigate, particularly at peak school times with a primary</p>

	school and nursery in the locality and children being escorted on foot but being dropped off by car, making it even more dangerous. AB12 is This site is unrealistic/not justified and therefore unsound
Q7 Modification	<p>The Final Local Plan is based on a High Growth Scenario yet there is no justification of why this might be.</p> <p>The last census showed a reduction in population, our birth rate is lower than our death rate, our unemployment is low – Newcastle under Lyme does not follow the rest of the UK so I feel we do have exceptional circumstances to justify a reduction in NULBC housing targets but they have not listened. Can you also refer to Pages 4 & 9 of Appendix B which was my response to Regulation 18 for more figures to back this point up. I honestly believe this Local Plan is not sound – the housing figures are still too high. The previous consultation (Regulation 18) didn't follow the Gunning Principles – see Audley Rural Parish response and this consultation has had various set-backs including mis communication with the public – we were initially informed that email submissions would not be allowed but then after several weeks, we were informed that emails were allowed. See official notice from NULBC below. The Portal for both consultations has caused much frustration amongst residents. There were complaints about the Portal during Regulation 18 yet the same problems of not being able to access it, not being able to add comments continues. NULBC did not listen to residents and improve the Portal At the Audley consultation event for Regulation 18, Cllr McEmeny was heard to say that this AB2 WILL be going ahead – this is gross predetermination. For Regulation 19 several evidential reports were not made available in time for either the Special meeting of the Economy & Place Scrutiny Committee on 11th July 2024 nor the Full Council Meeting on 24th July 2024 – certain councillors actually lied at the Full Council and said that they were available – they were not! We have the proof that they weren't – see below</p> <p>How do councillors make crucial decisions as to whether the draft Local Plan should be progressed without having the opportunity to view and digest information? In any event, in order to make this Final Local Plan sound you need to remove the following sites from this the Final Local Plan AB2/AB2a AB12, AB15 & AB33</p>
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)
Q9 Hearing reasons	Although I do not wish to speak at the public hearing – I would like to be in the public gallery if at all possible. I am unsure whether this will be possible.

Title	Policy AB12 Land East of Diglake Street
Consultee Family Name	Godwin
Consultee Given Name	Anthony
Q4 Part of document	Policy
Q4 Policy	AB12
Q6 Details	<p>Please find below my further objection to the planned development of green belt land east of Diglake Street (AB12).</p> <p>It is my belief that the site should be removed from the local plan for the following reasons:</p> <p>Traffic and Parking</p> <ul style="list-style-type: none"> - The planned development will see a huge increase in traffic through Bignall End, and especially through Diglake Street - areas where (redacted by admin) will now become the transit route for lorries and heavy machinery. - The proposal for a parking area to clear Diglake Street of cars is ludicrous at best and manipulative at worst. How are the residents meant to receive food and fuel deliveries? What will the impact be to the adjacent streets when the proposed parking area is either full or completely ignored owing to it being an inconvenience to residents? Having already had conversations with some of the elderly residents of Diglake Street, I can also say that this is already having a detrimental impact on the health and wellbeing of those who will be affected. <p>Green Belt and Rural Protection</p> <ul style="list-style-type: none"> - The land is greenbelt; productive greenbelt. It recently had livestock on it, and it is now currently covered in hay bales - it is not wasteland, degraded land or "grey belt" land. It should remain as greenbelt land, otherwise what is the point in having a greenbelt? The current proposals would destroy productive land, endanger food security and further destroy wildlife, not to mention the increase in light pollution. - Building on this greenbelt land is going to exacerbate the risk of flooding in the local area, and well as flooding to the current residents who already have to deal with a high water table. It is also going to vastly increase the risk of pollution entering the local brook which runs adjacent to the site. <p>Local Concerns</p> <ul style="list-style-type: none"> - Bignall End is a village, but these plans will destroy the rural character of the village. They will overload our services and ruin the village. - The roads in the village are already hard to navigate with the current amount of traffic. Introducing potentially hundreds more vehicles into the village is going to be incredibly detrimental. - The local services will not be able to absorb hundreds of new residents.

	<p>- The local infrastructure is already below standard. There are regular mini power cuts, and many full power cuts. Adding more housing to an evidently overloaded grid is going to make things worse.</p> <p>- The development of land (redacted by admin), and the reclassification of the street as pedestrian is going to vastly reduce the value of my property, and could potentially push myself and others into negative equity. This is completely unacceptable.</p> <p>Conclusion</p> <p>It is my belief that the points listed above highlight that the planned proposal for AB12 is unsound and that AB12 should be rejected by the planning inspector as a candidate for development.</p>

Title	Policy AB12 Land East of Diglake Street
Consultee Family Name	Hopkins
Consultee Given Name	Sheila
Q4 Part of document	Policy
Q4 Policy	AB12
Q6 Details	<p>I am responding to the following site plans.</p> <p>Plan: AB2 I OBJECT TO THIS PLAN. This junction is already at capacity & can't cope with the sheer weight of traffic. If a massive warehouse is built, which incidentally is on good farming greenbelt land providing milk/beef etc and giving jobs to locals, the environmental impact will be catastrophic. We should be producing food IN this country rather than creating air miles by importing food/drink/fuel etc. It is already a bottle neck at Junction 16, M6 & A500, causing many accidents. This results in vehicles, many of which are HGV's, causing them to congest country lanes around Audley & surrounding villages. These narrow roads are not built to withstand this amount of heavy traffic. The proposed Emergency exits onto Park Lane & Barthomley Road are very narrow one car width lanes without footpaths or street lighting. These lanes could equally be used by employees of the proposed factory to avoid queuing on the A500 & making it a'ratrun' adding to noise pollution.</p> <p>Plan: AB12 I OBJECT TO THIS PLAN. The access point to this site is proposed to be on Diglake Street. Have any of the planners ever been up this street? It is lined with terraced houses with all the residents parking on both sides of the road which leaves only room for one vehicle to navigate the street at a time. The idea of having a carpark for these residents is ludicrous, is someone seriously asking them to park away from their house & bring shopping/carry children etc back to their house so these new homes can have the luxury of parking on their drive? If any of the residents are disabled will they expected to be wheelchaired back from the carpark in the rain/ice? There will be an additional 250 extra cars pulling out of/into Diglake Street & Albert Street via Ravens Lane which is the main Nursery & Primary School route. There is a children's play area at the end of Albert Street which would be become dangerous with the proposed amount of traffic passing it. . It is already a dangerous junction without all this extra traffic. The Site AB12 is prime agricultural valued greenbelt land & should remain as this, we need to be using this land to feed our country & not polluting the atmosphere by importing food stuffs. If this land is developed it will have a high potential to flood making it unsound. The flood water run off will end up in Brierly Brook with the potential of flooding the surrounding agricultural fields. This land belongs to Staffordshire County Council, it is currently in use & being farmed.</p> <p>Plan: AB33. I OBJECT TO THIS PLAN. The proposal to build 55 houses on this site is unviable firstly because of the access onto Park Lane which is as it says is a 'lane' so very narrow and single track. Two HGV's would be unable to pass anywhere & there's limited passing places for cars. There is no footpath so walking down there when this site is built would be impossible as it would be too dangerous. The proposed field is a flood area, so building on it will push the water on to neighbouring properties causing them to flood.</p>

Title	Policy AB12 Land East of Diglake Street
Consultee Family Name	Nix
Consultee Given Name	Ruth
Q4 Part of document	Policy
Q4 Policy	AB12
Q5 Sound	No
Q6 Details	<p>There is very poor accessibility for this development - local roads are past capacity at peak times already, being very narrow and difficult to access. It would be well high impossible to deliver. So unsound</p> <p>This area is prone to flooding already and this would be exacerbated by this development on to greenbelt high quality land. That would affect climate quality and contributions to local food production. The area would be impossible for extra parking and dangerous for children and other pedestrians.</p> <p>The capacity of our local schools, health centre and dentists etc would be stretched even further. This is not justified, so is unsound.</p>
Q7 Modification	To render the local plan sound, remove this allocation from the local plan.

Q4 Part of document	Policy
Q4 Policy	AB12
Q6 Details	<p>In respect of the above I have the following comments as to why the proposed sites within the Audley Rural Parish are not viable, and please note this is a rural parish, which would not be the case anymore if any of the proposed sites are allowed!</p> <p>AB12</p> <p>This really is a ridiculous site! The proposed access is on bend where parked cars are either side of the road, and people driving up and down have to give way and pull in to let traffic past, and the access from Diglake Street isn't viable either because of the on street parking for the current residents of Diglake Street. This makes the proposal unsound, and that is before we look at the actual site which is green belt land with any development of that land having a potential impact not only on infrastructure, which is currently at breaking point with no proposals for improvement, but also on an environmental aspect. There is a small stream to the site, development could lead to flooding, the area has been used, as are neighbouring fields, for farming, so would take away from food contributions locally. I know some of the local residents undertook a traffic survey and would question have the authority, as if they had then they would know the issues that there are now, nevermind if 125 houses were added.</p> <p>I would question the Councils decision making if they consider any of the above sites to be justifiable and all of them to be unsound with very little consideration given to the community and residents of Audley and Bignall End. Whilst I accept that there has to be a need for housing and industry they need to be built in areas that can cope with all that they bring with infrastructure already in place, the infrastructure is not something that can be added at a later date! At the start of my email I mentioned this is a Rural Parish, and that is what it should remain. The surrounding country side and the sites themselves are of benefit to the local ecology and as such is as valuable as any housing or warehousing would be.</p>

Q4 Part of document	Policy
Q4 Policy	AB12
Q6 Details	<p>Re: Policy AB33 land off Nantwich Road/Park Lane and AB12 and AB15</p> <ul style="list-style-type: none"> • My primary objection to the sites chosen for housing – AB33, AB12 and AB15, is that they are on the green belt. I am aware that there are many brownfield sites around the borough, including Audley, that could be cleaned up and developed. I recognise that developers would prefer green belt sites as it makes the project cheaper and faster, but this does not make it right.. • Our village infrastructure is not designed nor large enough to take extra traffic from places of work and/or large housing estates. Indeed the current poor state of the road surfaces will only be made worse from increases in traffic volume. There will also be extra demand on village amenities such as schools, shops and GP surgery, which currently are running at very high capacity with seemingly little capability to increase. <p>I would like to state that I, along with many others, recognise the need for good, low cost housing throughout the borough, and that includes Audley. I believe that we should accommodate new houses, so that younger people who have grown up in this location, together with people who wish to move here, have a chance to own their own their own homes or rent suitable properties in good condition.</p> <p>The proposed changes to our rural village of Audley would seem to fail on many fronts, but the use of green belt and the necessary changes, even if possible, would alter the character and functioning of a small, relatively quiet place.</p> <p>It is for these reasons that we wish the planners to remove sites AB2, AB15, AB12 and AB33 from the local proposal.</p>

Order	149
Title	Policy AB12 Land East of Diglake Street
Consultee Company / Organisation	United Utilities
Consultee Family Name	Leyssens
Consultee Given Name	Andrew
Q4 Part of document	Policy
Q4 Policy	AB12
Q7 Modification	<p>Policy AB12 Land East of Diglake Street</p> <p>We request that an additional criterion is added to this policy which states:</p> <p>'All development being located an appropriate distance from the sewers that run through the site with appropriate access for repair, maintenance and replacement.'</p> <p>In respect of this site, we wish to note that there is a record of modelled sewer flood risk. As such we request that paragraph 13.32 is amended as follows:</p> <p>'13.32 The site is located within Flood Zone 1 but some areas within the site are affected by surface water flooding and at risk of flooding from the public sewer. Two sewers also run through the site adjacent to its western boundary. This will need careful assessment and consideration in the detailed design, masterplanning and drainage details for the site. Applicants should engage with the relevant provider to consider the detailed design of the site and drainage details and ensure that development is not located in an area at risk of flooding from the public sewer. Applicants should consider site topography and any exceedance flow paths. Resultant layouts and levels should take account of such existing circumstances. In accordance with national and local plan policy, an effective drainage strategy will be established, and a sequential approach applied within the site directing development to areas of lowest flood risk. Applicants must demonstrate that the proposed development would be safe and not lead to increased flood risk. Applicants should not assume that the sewers can be diverted, or that any levels can change on top of the sewers, as such proposals can negatively affect hydraulic performance and increase or displace flood risk. The risk of sewer flooding could affect the developable area of the site and the detail of the design. Careful consideration will need to be given to the approach to drainage including the management of surface water; the point of connection; whether the proposal will be gravity or pumped; the proposed finished floor and ground levels; the management of exceedance paths from existing and proposed drainage systems and any appropriate mitigating measures to manage any risk of sewer surcharge.'</p>

Title	Policy AB12 Land East of Diglake Street
Consultee Company / Organisation	Bignall End
Consultee Family Name	Willard
Consultee Given Name	Gerald
Q4 Part of document	Policy
Q4 Policy	AB12
Q5 Sound	No
Q6 Details	<p>Policy AB12 Land East of Diglake Street</p> <p>The draft policy says:</p> <p>Access to the development being via Diglake Street (with emergency access via Raven's Lane / B5500) and pedestrian access provided via Raven's Lane / B5500, Diglake Street and the Albert Street play area.</p> <p>This is not considered to be a suitable and safe access to the site. It is critical in making such allocations which are tantamount to Permissions in Principle to ensure that safe and secure site access can be formed. This is not the case with this proposal. As such there is an objection both to this clause and to the whole allocation as it stands.</p> <p>Site AB75 (Land West of Bignall End Road) has at present been overlooked by the council. It shares a common boundary with AB12 and could be developed contingent with it. Importantly site AB75 has the potential to form a main vehicular access sufficient to serve itself and the adajacent site AB12.</p>
Q7 Modification	<p>An extension to the allocation to say the following would be supported. Policy AB12 Land East of Diglake Street together with Site AB75(Land West of Bignall End Road)</p> <p>With regard to access the revised policy could read: "Vehicular access to the development (AB12 ad AB75) must be via Great Oak Road and pedestrian access provided via both Great Oak Road, Bignall End Road Raven's Lane / B5500, Diglake Street and the Albert Street play area to maximise permeability. Note Your attention s drawn to the attached Technical Note prepared by SCP (Appendix A)</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	In seeking the following modifications to the plan, I do consider it necessary to participate in examination hearing session(s) in order advise the inspector of my clients concerns and to respond to any questions that the inspector may have.

Q4 Part of document	Policy
Q4 Policy	AB12
Q5 Sound	No
Q6 Details	<p>NOTE: All my responses are in Blue Reg19 and related Evidence Documents are in Black</p> <p>Reference to site AB12,AB15 & AB33 and related issues that arise including interface with other development in the Local Plan REG19 and associated Evidence documents have been used for comments below.</p> <p>General:</p> <p>Population growth figures (Census 2021 & ONS figures) suggest only a 6.9% increase in population, variable student figures do skew this slightly but this is a mobile population.</p> <p>The area of Audley has a population that is mixed but contains quite a few older residents and a younger people who wish to stay if affordable housing (1-2 Bedrooms) was available</p> <p>Employment is high although a need for better education and up skilling the workforce is required.</p> <p>Some small growth is required for these populations. However building on green belt land would open the floodgates for excessive development, Especially if AB2 was to go ahead. The risk of over development to chase possible jobs would happen. The risk of over development with surrounding conurbations is high. Note the (NPPF) the borough has already exceeded its recent housing targets. Where is the evidence we need so many more?</p> <p>The projected models would result in many high cost homes with few if any affordable housing for locals. Also these housing numbers do not really match the requirements and exceed them by quite a margin. Are we creating a need for AB2 that does not warrant it based upon inflated employment figures for the economic zones such as AB2/AB2a</p> <p>The vast majority of AB2 site employees would come from the surrounding districts by car, (with generally only outside high income earners in the affordable properties in jobs not related to the economic Zones AB2).</p> <p>Most of these new homes could easily be incorporated in areas of brown field sites (opposite TK30 etc and along the A500 corridor.</p> <p>Regarding building sites it is noted that the employment sites AB2/Ab/2a is on Green Belt flat open easy build terrain(accepted) and TK30 is on Green Belt hilly, mine, and scrap yard site (rejected).</p> <p>Bus services are dismal for they area and providing a reasonable service appears unviaile to most bus operators. New employment sites AB2 would only provide services from Newcastle or Stoke. The report also stresses the difficulties of funding and operators clearly.</p> <p>Traffic from the M⁴/J16 & A500 would cause great congestion if a problem occurred on the Highway system as it does now with traffic taking short cut from Crewe and traffic for school runs etc. The traffic survey does not really address this and any mitigation would be years away.</p> <p>How much funding would S106 and other measures contribute towards infrastructure (eg a £100000 s106 would not pay for a school (around 15000000 to £200000) let alone the cost of water, and services for a community on top of that. Can the borough afford such investment??</p> <p>Loss of Greenbelt is a serious issue as any mitigation is a poor replacement for nature and habitat and really needs to be a last resort based on sound evidence not economic requirements. It is also grade 1-2-3 Agricultural land.</p> <p>AB12</p> <p>Location: Green Belt would break and allow further unchecked expansion at a later date. Some livestock use the land regularly</p> <p>Drainage : site has areas of poor drainage or flooding potential that will cause problems for new and existing structures</p> <p>Access: Very poor access given the planned amount of dwelling on this site and the need to reduce traffic on Diglake street which is very narrow. The overflow of parking would be felt right across the area.</p> <p>Traffic: Traffic flow increase would also cause problems through the village</p> <p>Number of dwellings: very large number on site with currently no idea of type or number of each type (3 story town house, 5 bedrooms or 1-2 bedroom small house).</p> <p>AB15</p> <p>Location: Green Belt would break and allow further unchecked expansion at a later date</p> <p>Drainage : site has areas potential poor drainage or flooding potential that could cause problems for new and existing structures</p> <p>Poor access: potential access, but would cause parking problems</p>

	<p>Traffic: high volume of traffic in very narrow streets</p> <p>Number of dwellings: very large number on site with currently no idea of type or number of each type (3 story town house, 5 bedrooms or 1-2 bedroom small house). AB15 may allow for the required readjusted small amount of housing required for Audley if it is affordable for young people and older residents (being near the centre)</p> <p>AB33</p> <p>Location: Green Belt would break and allow further unchecked expansion at a later date. It also has working agricultural activity and is on good soil. Livestock use the surrounding land also Therefore its loss would not easily be replaced and harm the environment.</p> <p>Drainage : site has areas poor drainage and flooding potential that could cause problems for new and existing structures . New building would cause extra problems too.</p> <p>Poor access: small country lane with associated width of road and junction problems with volumes of traffic.</p> <p>Traffic: as above</p> <p>Number of dwellings: very large number on site with currently no idea of type or number of each type (3 story town house, 5 bedrooms or 1-2 bedroom small house).</p> <p><i>Reading through all the documents including supporting evidence documents has taken a great deal of time by any individual. Few people including councillors would have a full understanding of all the points contained let alone a non- expert. I believe these documents became available for the full council on July 16th 2024, ready to be passed for scrutiny on the 24th July 2024.</i></p> <p><i>Having some experience of technical documents in industry the following is of concern.</i></p> <ol style="list-style-type: none"> <i>a) The time scale given between release and scrutiny as many people involve would not have been aware of all the details from all parts of the final document/s even those who would have been involved in aspects of it. The time scale to fully check (1000,s of pages across numerous documents) given that councillors have other tasks and duties in my view is insufficient to arrive at a full rounded decision based on evidence.</i> <i>b) Many of the supporting evidence documents are produced by consultants. What assurance do we have to confirm they are fully independent from development involvement bias?</i> <i>c) The public consultations I have attended have only provided very vague answers. To find more out you have to dig much deeper, hence above notes). Within the consultation timescale many members of the public wish to respond but find the task very confusing, intimidating and with day to day lives hard to complete or do simple not have the skills or equipment to respond. Reg. 18 for me was extremely difficult to complete online despite phone calls, but I did manage it (I think!).</i> <p><i>From above on AB12, AB15 & AB33 I am not sure currently given the information seen that the selection of these site and the Local Plan (reg19) clearly demonstrates soundness in this regard due to the issues noted in all above sections</i></p>
Q7 Modification	<p><i>To hold review of the facts surround AB12, AB15, AB33 the local plan Reg19. This review that would need to look at the real number of dwellings, linked to a more reasonable review of employment and sites required (see above section on AB2/AB2a, TK30 ,KL15)</i></p> <p><i>It may on the surface appear expensive and unnecessary as appears to have been sorted out and decided However a pause and a review would be much cheaper in the long run and potentially save millions not to mention good green belt. To provide affordable homes to a local population rather than large homes for outside investment would be a better policy as a small number of dwells are required in the right place would allow a slower development pace and time to reflect and react on trends in a more accurate manner.</i></p> <p><i>From above on AB12, AB15 & AB33 I am not sure currently given the information seen that the selection of these site and the Local Plan (reg19) clearly demonstrates soundness in this regard due to the issues noted in all above sections</i></p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	To gain an understanding of the processes involve in coming to a final decision based upon the technical evidence.

Consultee Family Name	Humphreys
Consultee Given Name	Kevan
Q4 Part of document	Policy
Q4 Policy	AB12
Q6 Details	<p>These comments are in relation to the Audley Ward, which is my area of experience given that I live there.</p> <p><u>HOUSING</u></p> <p>Firstly, must state I'm not a "NIMBY"; I fully accept that we need more housing nationally, however ...</p> <p>I wish to strongly object to the proposed construction of new housing in previously undeveloped land in the Audley area (AB12, AB15, AB33). This is because:-</p>

	<p>The existing local infrastructure is simply unable to support any further developments – the village is already blighted with crowded and potholed roads (the illegal parking in the village has to be seen to be believed) – so is already a danger to drivers and pedestrians. The additional traffic from any new developments will make this much, much worse.</p> <p>Also, there is already a stark lack of access to facilities - such as doctors / dentists / schools / shops / buses etc. – and the planned developments will undoubtedly have a devastating effect on local wildlife and rural land, including erosion of green belt, higher levels of pollution and even more congestion (as any recent survey / examination must show, levels of pollution and congestion in the centre is already appreciably higher than expected for a 'village'). So the factors above would have a major long-term detrimental effect on the physical health and mental wellbeing of existing residents.</p> <p>My understanding is that government policy states that development of greenbelt should only be considered in "exceptional circumstance"? What are the exceptional circumstances? Surely it can't be that there are no other locations within the area where brown field land cannot be used? A journey through our city reveals many areas of abandoned and derelict land, including former industrial and domestic uses (as one drive from Junction 16 to15 of the M6 via the A500 will confirm).</p> <p>To reiterate, I'm genuinely not a 'NIMBY', but the proposed number of houses in this area would have a devastating effect for local residents and wildlife.</p> <p>So I therefore strongly object to the proposals for AB2, AB12, AB15 and AB33.</p>

Q4 Policy	AB12

Q6 Details	<p>To whom it may concern,</p> <p>As with all previous responses I sincerely hope that all comments are read in full, and are truly taken into consideration in respect of proposed plans. I fear this is just a tick box exercise and that decisions have already been made.</p> <p>What makes this more difficult is, I like many people who have responded numerous times just wonder is there any point.</p> <p>Unlike the last response I sent I have not had the time to view the full and extensive document, therefore, this will be bullet points of objections/concerns and suggestions of how we can better make use of this land if it needs to be 'developed' at all.</p> <p>These proposed residential sites are in greenbelt, rather than destroying these areas we should be encouraging open spaces for wildlife and the health and wellbeing of existing residents.</p> <p>These sites especially AB12 will only put more pressure on the small main road (Ravens lane) that is already populated with too many cars-now parked on both sides of the road as the elderly members of the community move (varied reasons) from terraced houses to be replaced by families with as many as 3 or 4 cars-making it difficult for large farm machinery and HGV to pass, destroying roads which are rarely repaired.</p> <p>This will alter the very fabric of our community putting extra pressures on already stretched local services: doctors, dentists, village parking, schools and public transport- NB a major link route being discontinued only in the last couple of years - reducing the access to wider services for many.</p> <p>Whilst I understand and appreciate there is a need for more housing as the population rises, however, maybe we need to consider as a country better management of our borders and who we accept into the country - possibly using a well structured and practiced method such as Australia.</p> <p>Also when building new houses anywhere there needs to be more thought and space allocated to off road parking.</p> <p>There are many brownfields sites around Newcastle & Stoke that could be effectively utilised if only councils worked together.</p> <p>A suggestion of how we as a community could instead work towards being fit for the future and carbon neutral; these identified resident areas could instead be large charging parks for electric vehicles that could be accessed and used by all local residents to conform with government plans moving forward.</p> <p>There are so many terraced houses it will be impossible to manage this locally in the future if solutions are not considered now!</p> <p>In respect of AB2 surely there can be no further requirement for 'warehousing' - just look around the area.</p> <p>This would destroy access to the country side, significant wildlife areas and turn Stoke into warehouse central.</p> <p>Instead; wind turbines or solar fields would mean that the area could still be used but would benefit the national grid.</p> <p>I understand the final date for submission of comments is tomorrow 7/10.</p> <p>Please confirm receipt of comments.</p> <p>Regards, Mrs S L Rhodes (redacted by admin)</p>

Title	Policy AB12 Land East of Diglake Street
Consultee Company / Organisation	Protect Audley Parish Green Belt Group
Consultee Family Name	Roberts
Consultee Given Name	Gary
Q4 Part of document	Policy
Q4 Policy	AB12
Q5 Sound	No
Q6 Details	<p>1.0 INTRODUCTION</p> <p>1.1 Audley Community Action Group (PAPG) is a community interest company. The CIC exists to protect and enhance the Green Belt in the civil parish of Audley, with over 1,300 supporters.</p> <p>1.2 We strongly object to the high number of houses planned for the borough. Also, the allocation of sites AB12, AB15 and AB33 in the Local Plan. We do not believe the overall housing figures, nor the site selections are sound, they can neither be justified nor is it likely to be effective. The grounds for the exceptional case for removing the land from the Green Belt have not been met.</p> <p>2.0 PSD1</p> <p>2.1 The housing target is too high and will negatively impact on the weaker housing markets in the borough and nearby settlements. It will also reduce the amount of valuable agricultural land in the green belt.</p> <p>2.2 The following tables, with numbers taken from ONS, show that both population growth and households growth are historically low in the borough :</p> <p>(TABLES ATTACHED IN FILE)</p> <p>2.3 The Local Plan has set a target of 8,663 new dwellings over a two decade period. Council tax records indicate that there are 57,627 dwellings in the borough, so the target is for a 15% increase over a two decade period. This will undermine the weaker housing markets in the borough and nearby settlements</p>

	<p>2.4 The cost of housing in the borough is low by national standards (ONS figures for 2023 show that the average earnings/house prices ratio is 5.52 in the borough and 4.12 in Audley. This compares to the national figure of 8.14).</p> <p>2.5 ONS figures comparing 2011 to 2021 show that the earning/house price ratio has been rising much slower in the borough compared to region and England:</p> <p>(TABLE ATTACHED IN FILE)</p> <p>2.6 Looking at some demographic data (which is ignored in the consultants reports) we can begin to understand why the population is not increasing. The table below shows the data taken from Nomis. For the years 2018 to 2021 the table shows live births and the issuance of national insurance numbers (NINOs), usually to migrants and the number of deaths. This shows that in 2020 and 2021 deaths outstripped births easily and hence population growth has been driven overwhelmingly by inward migration.</p> <p>(TABLE ATTACHED IN FILE)</p> <p>2.7 In the borough, there is a problem of under occupation (with an aging population) and empty properties. Adding more homes is only likely to worsen the over-supply and to draw in better off residents from Stoke-on-Trent, undermining the city's regeneration policies.</p> <p>3.0 AUDLEY RURAL PARISH</p> <p>2.1 The infrastructure of the parish is not adequate for the level of extra housing envisaged. There are existing problems with rat running through the villages and the local highways are struggling to accommodate the strain of the traffic. There is a severe parking problem in the centre of Audley and more cars will make this worse. No impact assessment has been made for these combined sites. This problem will be even greater if site AB2 remains in the Local Plan.</p> <p>2.2 There are flooding issues throughout the parish and the existing sewage system is inadequate, as shown by United Utilities records</p> <p>(TABLE AND MAP ATTACHED IN FILE)</p> <p>3.0 AB12</p> <p>3.1 At regulation 18, United Utilities noted "various sewer assets and associated combined sewer overflow pass through this site which will be a constraint to development." However, no assessment has been made to ascertain how this site will impact on the sewer system.</p> <p>3.2 At regulation 18, Staffordshire County Council noted concerns about the access. It stated "Wide enough access to Diglake Street but issues regarding on street parking and increased traffic. Preferred access is B5500 but existing access is of insufficient wide in its present form."</p> <p>3.3 LP para 13.27 has not sufficiently addressed this problem unless. Whilst there is provision for off street parking on site AB12, most residents do not like parking their cars out of site. How will they be induced to use this parking area? The suspicion is that it is intended to force residents from parking outside their homes in Diglake Street, possibly by the introduction of double yellow lines? We strongly object to a Local Plan site that creates a problem, then disadvantages existing residents in order to remedy the problem that the Local Plan has made. Surely, this dilemma shows that the site is not appropriate for housing?</p> <p>3.4 We are also astounded that a site judged to provide a strong contribution to the Green Belt has been chosen over sites that provide a moderate contribution.</p> <p>3.5 We are also disappointed that good agricultural land forming part of a County Council starter farm is being lost.</p> <p>4.0</p> <p>4.1 At regulation 18, United Utilities noted that a "sewer passes through site which will need to be taken into consideration." However, no assessment has been made to ascertain how this site will impact on the sewer system.</p> <p>4.2 At regulation 18, Natural England noted that the site is "adjacent to a traditional orchard and this should be taken into consideration." This site is not mentioned in the Local plan. How was it taken into consideration?</p> <p>4.3 This site is at the bottom of a hill and there is a steep gradient from the site to village facilities. This is likely to reduce active travel.</p> <p>4.4 We are also disappointed that good agricultural land is being lost.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	<p>6.0 EXAMINATION IN PUBLIC</p> <p>6.1 We wish to be represented and speak at the examination in public.</p> <p>6.2 To illuminate the issues raised by further explaining our concerns, the reasons for them and what we would like changed.</p>

Q4 Policy	AB12

Q6 Details	<p>I wish to lodge the objections listed below. They are relative to the Newcastle Under Lyme Local Plan with particular reference to the site allocations in Audley Parish. I feel that the local plan in these areas is not justifiable and is not sound.</p> <p><u>Site AB 2 – Land at junction 16 of the M6, Proposed strategic employment site.</u></p> <p>This site is proposed at 80HA – the local plan says the council are looking to allocate 22HA so why is this quadruple the size needed and all in one area and all on high quality green belt land. To allocate something that is four times what is needed, makes this element not justifiable.</p> <p>There will be a lot of work required around a new junction should this site be granted, where is the funding to come from for this? I cannot see any reference to the funding for this so feel this in itself is unsound.</p> <p>I expect there will be an increase in volume of traffic in the local area should this site be allowed, increasing air and noise pollution is not in the best interests of people living in the area and causing greater traffic volume on already busy local roads. I cannot see any justification for this development at all given that there is much warehousing lying empty in other parts of the county.</p> <p>The council appear to be adopting a high growth strategy and I would like to know where the evidence for this strategy is? I think this approach without evidence makes the plan unsound.</p> <p>I strongly believe that this site needs to be removed from the local plan as it is not a justifiable development and goes against what the council themselves say is needed for employment in the local area.</p> <p><u>Site AB12 – Land east of Diglake Street</u></p> <p><u>Site AB15 – Land north of Vernon Avenue</u></p> <p><u>Site AB 33 land off Nantwich Road/Park Lane, Audley</u></p> <p>I believe all these sites should be removed from the local plan as they are unjustifiable and unsound for the following reasons.</p> <p>AB12 – Access and egress on narrow roads that are already congested and not sustainable over time</p> <p>AB12 Areas prone to flooding and not sustaining climate control</p> <p>All areas on high quality green belt land</p> <p>Audley and Bignall End are small rural villages – losing the identity of both areas is unsound</p> <p>Additional 200 to 400 cars on the roads that are already congested, where parking problems are a major concern</p> <p>The pressure on local services that cannot manage now, I cannot get an appointment to see my GP due to demand and yet nothing presented on how this will be addressed</p> <p>Small local school, over capacity would then lead to more people travelling out of the area for school and creating further congestion</p> <p>All the suggested allocations for the area are on the green belt and would change the landscape of the local area for ever. More sustainable sites should be found and all the above should be removed from the local plan as unjustifiable and unsound.</p>

Q4 Policy	AB12
Q6 Details	<p>To Whom it May concern,</p> <p>I write to express my comments regarding the AB12 proposed development in Bignall End and wish to share the following points against this development:</p> <ul style="list-style-type: none"> * The local schools do not have enough places for potential pupils from an additional and unnecessary development * the local Health Centre does not have the capacity to take on board the potential population from an additional estate. * the traffic on Ravens Lane is already very busy at all times and the new estate would add to the current congestion * There is already regular flooding on the AB12 site adjacent to a river making it unsuitable for proposed development * there is a bat population that circles through the field when feeding; the development would disrupt this important and endangered species. In the flooded area at the top end of the field there has always been a population of newts and frogs. * (redacted by admin) as other properties on (redacted by admin) has rear access via the road between (redacted by admin) This right of way is on my property's deeds of which a copy can be provided upon request and has been used by me and other residents for rear property access; for me this has been since 2010 when we moved into the property. This was on my deeds and the prior owner also used this as right of way. * we have a loft conversion and large balcony area at the rear of our house which we use as a garden. The proposed development will overlook our private space and our bedroom. Sitting on our balcony will put us in full view of all of the homes that may be built.

	I look forward to your response to the above points.

Title	Policy AB12 Land East of Diglake Street
Consultee Family Name	Hopkins
Consultee Given Name	Rachel
Q4 Part of document	Policy
Q4 Policy	AB12
Q6 Details	<p>The proposals AB12, AB2 and AB33 sites are unsound and should not be included in the local plan.</p> <p>Especially AB12, this should not be considered for housing as an area of greenbelt, and the local plan should place greater emphasis on developing brownfield sites in high density areas, like vacant town centre buildings, rather than extending the sprawl of properties on already crowded main roads through our villages.</p> <p>On daily walks through the parish, and sitting in our garden, we are inundated with birdsong, the sounds of nature and free wildlife. Especially in the evenings, owls can be seen and bats flap freely through the air. Destroying our rural landscape will tear away the identity this parish has cultivated.</p> <p>PLAN: AB12 I OBJECT TO THIS PLAN. We moved into our house (redacted by admin) The blind bend coming down the bank (redacted by admin) causes a daily issue leaving our drive and turning right towards Bignall End, or left towards Audley. We have to wait, with our car window down, to have a chance to hear if a vehicle is coming down the bank. We have had a number of near misses. The current level of traffic on this road, and the number of illegally parked cars means that leaving our drive safely is a challenge. Measures are required to leave the drive safely. Illegally parked cars have been reported to the police and council. See attached images for the current level of cars parked illegally and the level of difficulty we have exiting our drive safely.</p> <p>When reading the local plan, and finding that the proposed entrance to the AB12 site would be placed in the middle of this blind bend, my thoughts went straight to the safety of road users and the increase of traffic down an already busy road. The placement of the entrance will mean anyone leaving the site will have no view up or down the bank, due to the parked cars and level of traffic. The access road suggested does not appear wide enough to support safe entrance or exit from the site, and the access road cannot be widened due to the houses directly adjacent. What if an ambulance needs to access the houses, but due to the small access road and increase in local traffic, it cannot navigate the bottle neck of Ravens Lane? Take into account that Ravens Lane is also a popular diversion route when the M6 or A500 become blocked at peak times. This causes an increase in HGV and large vehicle traffic, which bottle necks on the bend by the AB12 site. Therefore, this proposed site for housing does not in any way feel suitable just based upon the safety of road users. The proposal on this site using unsuitable access roads feels like a desperate attempt to squeeze in houses, regardless of the safety implications on roads. Using an access road on Diglake Street would not be suitable. The road is narrow, the footpaths even narrower. Children and families walking to school or nursery would be at risk on a daily basis. The current level of traffic is already too much for the road to handle.</p>

Q4 Part of document	Policy
Q4 Policy	AB12
Q6 Details	<p>I have attended the ongoing NULBC meetings regarding proposed development of the green belt in Audley Parish.</p> <p>As someone who lives in the parish, and particularly in the area affected by development rear to Raven's Lane, I would like to express my grave concern.</p> <p>The area to the top of Albert Street, where Chapel Street meets New Road bus shelter, is already fraught with danger and near misses, particularly worse at times of Ravensmead School Drop offs. This is made worse by large vehicles tending to park at the junction and block off views for emerging vehicles and crossing pedestrians at Albert Street. Already Albert Street - Edward Street - Diglake Street traffic is fraught with difficulty: Diglake Street is very narrow and busier of the two and already difficult to navigate. If things here aren't bad enough there are 2 semi-detached houses now at the corner with drives to navigate - these houses are not even occupied yet.</p> <p>Raven's Lane is increasingly difficult to navigate too. Increasing number of vehicles - particularly works vehicles parking on both side making one way access often the norm. No time is this more difficult than when M6/A500 HGV traffic diverts from the A500.</p> <p>Speaking of diverted traffic from M6/A500, this is the daily norm via Nantwich Road and Balterley. I hear that there may be access via this road for the warehouse development at Kent Hills. There is talk of a roundabout at Park Lane. Park Lane is a minor narrow road with access to properties and farms and is rarely used. How can this really be a viable option for the 100's of large vehicles which will be using this?</p> <p>I will support other villagers who have general concerns about the loss of greenbelt and overwhelming the current village infrastructure too.</p>

Q5 Sound	No
Q6 Details	<p>I object to the the following planning:</p> <p>AB12, AB2, AB15 and AB33</p> <p>1. NuLBC are applying a high growth strategy. They present no evidence that this will transpire. In the village of audley and surrounds there are small pockets of land that are being developed appropriately and proportionately to the surrounds. Larger scale housing is not required, therefore I feel this is unjustified and unsound.</p> <ol style="list-style-type: none"> 1 AB12 (125 dwellings): This site has very limited accessibility. Proposed access points are at the bottom of Diglake Street and via the track adjacent to 104 Raven's Lane. These points are too narrow for long term access, especially given that local roads are beyond capacity at peak times. This is not deliverable making it ineffective. Therefore, it is unsound. Planning for this site proposes a car park which would not be appropriate of the residents who live here, particularly the elderly and disabled. 2 AB12 represents a high quality contribution to the green belt. Building 125 homes here would exacerbate flooding into the nearby Brierley Brook. This would take away climate mitigation and contributions to our food security, not just from this site but also from neighbouring fields that will be affected by flooding. This site is therefore not justified and consequently unsound. <p>1 All allocations in the Audley and Bignall End area for housing are in the green belt.</p> <p>Moreover, as proposed developments they would increase traffic flow well beyond the capacity of the current road system as well as placing added pressure on local schools and GP's surgeries etc. These allocations are therefore not justified, hence unsound.</p> <p>I would further like to add a personal note. Being a mother (REDACTED BY OFFICERS), I want to stress the importance of our community here, our children "go outside to play" these green spaces are invaluable.</p>

	At a time where mental health in young people is a pandemic problem let's not allow this to happen to our children, who won't be children forever. We want everyone to enjoy this wonderful village, this generation and many more to come. The wildlife in our village is amazing, from owls and bats to badgers and hedgehogs. We WANT to keep it this way. Trees are nature's carbon catchers, it is vital that these green belt areas are protected and cherished. Staffordshire County council should be utilising brown field sites over green belt.

Title	Policy AB12 Land East of Diglake Street
Consultee Family Name	Clewes
Consultee Given Name	Martine
Q4 Part of document	Policy
Q4 Policy	AB12
Q6 Details	<p><u>Site AB12 – Land east of Diglake Street</u></p> <p><u>Site AB15 – Land north of Vernon Avenue</u></p> <p><u>Site AB 33 land off Nantwich Road/Park Lane, Audley</u></p> <p>I would like the local council to remove the following development sites from the local plan and consider looking at low infill areas rather than large developments that will damage the local area, put pressure on infrastructure that is already struggling with demand and change the character of the village that can never be regained should these developments occur.</p> <p>There is a large development proposed at Red Street which is a short distance from Audley and the amount of traffic pollution that would be caused across both these areas is ill advised. At peak times in the village the traffic can back up due to double parked cars in an already overcrowded area. The village can, at times become impassable and leads to people seeking short cuts around high pedestrian areas. The local roads cannot sustain the additional traffic that extra housing will bring, potentially 200 to 300 cars plus the direction of traffic when problems occur on M6/A500 when the village becomes a diversion route.</p> <p>The proposed access site to AB12 – Via Diglake Street, a typical terraced street with cars parked on either side is unsustainable and dangerous. The expectation of residents of Diglake Street to park on a small car park at one end is ridiculous and unfair. Families with children and shopping, disabled people expected to walk due to this proposed access is unreasonable and unfair to these residents. To expect all new and old residents to access this site via this entrance is not safe and will cause noise and pollution within the area and equally there is potential for accidents as a lot of school children use this route walking to and from school daily. There is a children's playground next to the proposed construction site and this would have impact on the local population and their right to have access to such areas for physical and emotional development. I cannot understand why any sensible surveyor would consider this a sensible access point as they are extremely narrow for any long term, sustained access and will exacerbate the already existing traffic problems in the village. This proposal ineffective and unsound.</p> <p>Audley and Bignall End is a small rural village and does not have the necessary infrastructure to support and sustain these new developments and become to all intents and purposes a town. Currently, it is very difficult to get a GP/Dentist appointment and further residents will add to that strain. There is one primary school with limited space so people would need to travel out of the area to access schools, again adding to the congestion and adding to the environmental pollution.</p> <p>The main road – Ravens Lane is already congested, cars park on either side and it is difficult to pass when buses/tractors/larger goods vehicles are on the road, an additional 200 to 300 cars will add to these pressures and there is a real fear that road traffic accidents and incidents will rise.</p> <p>AB12 is high quality greenbelt and is close to an area that is prone to flooding, additional housing in this area would exacerbate flooding and impact on food security in this and other areas that will be affected by flooding. This site is not justified and consequently unsound.</p> <p>I have fears that the village, feelings of the residents, the local heritage is all being ignored. The fact that council members did not have time to look at all the relevant paperwork prior to voting this plan through speaks volumes, it is almost like it does not matter what we say, it will just be done to us anyway.</p> <p>Words fail me when thoughts turn to the removal of large swathes of greenbelt in one area, the proposed developments will increase the traffic on roads that are not able to cope with current volume and therefore are not justified. These sites need to be removed from the local plan as they are unjustifiable and hence unsound.</p>

Q6 Details	<p>just can not see how this will work,with the parking situation at the moment with diglake street,, edward street and albert street. these streets are full in the evening and weekends with parked cars and passing other vehicles is awkward. it has been suggested that there is parking to be provided for the residents of diglake street/ edward street in the north/west corner of AB12 to esae parking, but just can't see how this will work. it will push move vehicles to park on to B5500 road. the junction of diglake street/B5500 and albert street/B5500 are dangerous to pull out of as visability is very restricted with the parking situation at the moment.</p> <p>i have attached 2 photos showing how busy the street of diglake street is.</p> <p>after going to the nulbc drop in and speaking to a couple of councilors they were unawre of the access point being via diglake street, and after speaking to councillor nickolas crisp who again was unawre of this being the access point, but he still agreed to the plan! advised that he would look in to this a little more. He arranged a phone call with my neighbour on the 28th september and he advised that even the planning officers think its strange that traffic will come up diglake street, they still put it in as they want to sell it with planning.</p> <p>staffordshire county council -the highways authority have already rasied concerns with diglake street being the access point.</p> <p>the fields on AB12 are classed as strong greenbelt and at the moment are being rented to a local farmer who wishes to keep on renting the fields for future use.</p>
Q7 Modification	AB12 should be removed from the local plan.

Q6 Details	<p>I really do not think your future plans for the village of Audley are of any benefit to the local people. When there is any trouble on the A500 or M6 the extra traffic is a nightmare. We have enough problems with the speed of some cars and heavy lorries. I feel with all your proposals will only increase more for our village. I always know when the speed camera van is around as everyone keeps within the speed limit. Thank you</p>

Q6 Details	<p>Dear Inspector,</p> <p>Newcastle Under Lyme needs a local plan, to allow structured development of housing across the Borough and secure sites that are in green belt land.</p>

However, I feel that the local plan we see being put forward has sites in , that are not just unpopular but also have real infrastructure concerns and based on assumptions that I feel cannot be substantiated.

Having attended various resident group meetings , I have found that they are very knowledgeable and who knows better than local residents , the problems that they face now and how the new developments will affect them and not against a local plan but sites that are in the plan.

The main sites that I have concern over AB2, AB33,AB12,AB15, CT1, BL8,BL18,BL32, TK6,Tk17 and TK27.

These are in Audley , Red Street and Butt Lane /Talke , areas that I have links with and know well.

Documents are now accessible, but residents and councillors have by timings of release , which in some cases have not allowed proper time for scrutiny and meaningful consultation.

All these sites have traffic issues already and note recommendations regarding A500 , Talke Interchange, A34 ,A527 , which will need major financial assistance .

I believe all the sites listed have questions about infrastructure and would question how sound the reasoning and financial constraints of the projects to be deliverable.

I would like to mention two sites in particular , which are AB2 and CT1.

AB2 is a 80-hectare project for warehousing /factory that is not in keeping with the rural area , with only 22 hectares needed for warehouse , the rest is for lorry car park and substation.

Having experienced problems in my Ward , Holditch and Chesterton , with warehouse now occupied by Boughey Distribution I believe this is not a sound proposal.

Residents constantly complain about traffic and noise , plus air quality.

When it was built people complained , before it was even occupied residents about construction, and we also had problems concerning getting Road adopted by Staffordshire County Council .

Without this happening , warehouse contract would not have been signed , and quite possibly would still be empty now .

AB2 in Audley , is potentially 3 times bigger than Chesterton warehouse , and have grave reservations regarding the soundness of this development plus I believe that there may be another more appropriate alternative.

CT1 Red Street has been scaled down but worth noting , that area has a history of being used for mining , as well as this mentioned in the report doctors which closed and now a dentist.

Due to the problems with documentation being available for consultation , and real reservations about infrastructure and financial viability , I would ask you to consider if this plan is sound and complaint.

Consultee Given Name	Martyn
Q4 Part of document	Policy
Q4 Policy	AB12
Q5 Sound	No
Q6 Details	<p>The proposals AB12, AB2 and AB33 sites are unsound and should not be included in the local plan.</p> <p>Especially AB12, this should not be considered for housing as an area of greenbelt, and the local plan should place greater emphasis on developing brownfield sites in high density areas, like vacant town centre buildings, rather than extending the sprawl of properties on already crowded main roads through our villages.</p> <p>On daily walks through the parish, and sitting in our garden, we are inundated with birdsong, the sounds of nature and free wildlife. Especially in the evenings, owls can be seen and bats flap freely through the air. Destroying our rural landscape will tear away the identity this parish has cultivated.</p> <p>PLAN: AB12 I OBJECT TO THIS PLAN. We moved into our house (directly opposite the proposed entrances off Ravens Lane for the AB12 site) in April 2022. The blind bend coming down the bank past our property causes a daily issue leaving our drive and turning right towards Bignall End, or left towards Audley. We have to wait, with our car window down, to have a chance to hear if a vehicle is coming down the bank. We have had a number of near misses. The current level of traffic on this road, and the number of illegally parked cars means that leaving our drive safely is a challenge. Measures are required to leave the drive safely. Illegally parked cars have been reported to the police and council. See attached images for the current level of cars parked illegally and the level of difficulty we have exiting our drive safely.</p> <p>When reading the local plan, and finding that the proposed entrance to the AB12 site would be placed in the middle of this blind bend, my thoughts went straight to the safety of road users and the increase of traffic down an already busy road. The placement of the entrance will mean anyone leaving the site will have no view up or down the bank, due to the parked cars and level of traffic. The access road suggested does not appear wide enough to support safe entrance or exit from the site, and the access</p>

	<p>road cannot be widened due to the houses directly adjacent. What if an ambulance needs to access the houses, but due to the small access road and increase in local traffic, it cannot navigate the bottle neck of Ravens Lane? Take into account that Ravens Lane is also a popular diversion route when the M6 or A500 become blocked at peak times. This causes an increase in HGV and large vehicle traffic, which bottle necks on the bend by the AB12 site. Therefore, this proposed site for housing does not in any way feel suitable just based upon the safety of road users. The proposal on this site using unsuitable access roads feels like a desperate attempt to squeeze in houses, regardless of the safety implications on roads. Using an access road on Diglake Street would not be suitable. The road is narrow, the footpaths even narrower. Children and families walking to school or nursery would be at risk on a daily basis. The current level of traffic is already too much for the road to handle.</p>
Q7 Modification	I wish the local councillor to remove sites AB12, AB2 and AB33 from the local plan.

Q6 Details	<p>I write to express my comments and objections regarding the AB12 proposed development in Bignall End and wish to share the following points against this development:</p> <ul style="list-style-type: none"> * The local schools do not have enough places for potential pupils from an additional and unnecessary development * the local Health Centre does not have the capacity to take on board the potential population from an additional estate. * the traffic on Ravens Lane is already very busy at all times and the new estate would add to the current congestion * There is already regular flooding on the AB12 site adjacent to a river making it unsuitable for proposed development * there is a bat population that circles through the field when feeding; the development would disrupt this important and endangered species. In the flooded area at the top end of the field there has always been a population of newts and frogs. * my property [redacted by admin] as well as other properties on Ravens Lane has rear access via the road between [redacted by admin] Ravens Lane. This right of way is on my property's deeds of which a copy can be provided upon request and has been used by me and other residents for rear property access; for me this has been since 2010 when we moved into the property. This was on my deeds and the prior owner also used this as right of way. * we have a loft conversion and large balcony area at the rear of our house which we use as a garden. The proposed development will overlook our private space and our bedroom. Sitting on our balcony will put us in full view of all of the homes that may be built. <p>Finally, I am shocked that the wrong email address was given out to residents. One may feel this was done on purpose to prevent local residents from having their voice heard. The address on the attached document is clearly wrong.</p>

Q4 Part of document	Policy
Q4 Policy	AB15
Q5 Sound	No
Q6 Details	<p>We agree some housing needs to be built, but are the housing target needs accurate, is old information being used? The figures used predicted the population would increase, predictions were wrong – population levels have decreased. We DO NOT agree to large storage units being built, why is greenbelt land being suggested? when brownfield sites exist in the county. Is it because developers do not like to use brownfield sites due to the additional costs of preparing the land? greenbelt land is cheaper to build on – creating more profits. As you travel around there are many large empty storage units in and around the Newcastle/Stoke area. How many local people are expected to be employed by the proposed storage units or will the labour be from outside the parish? Greenbelt land is a carbon storage capture area and a O2 producer, soil and trees are the biggest collectors of carbon so concreting these areas will increase the carbon footprint. Where will the water go from millions of square meters of roofing, nature drains the land naturally. Areas in the Parish now flood which have never done in the past, due to changes in the global weather patterns. There will be disruption in the local area during and after construction with noise and light pollution also poor air quality due to the pollution created by more large vehicles.</p> <p>Audley Parish has contributed to the industrial past with sacrifices made by the land and its people. Audley Parish was built on a Victorian footprint to facilitate its industrial past, roads in the area were not designed to take the present traffic levels, so any increase in additional traffic would cause gridlock! Local services will not be able to cope with more people and utility services will be stretched to supply these new developments. Audley Parish would lose its identity, as a collection of small individual villages which have established over many centuries.</p> <p>The world is on a knife edge with climate change – lots of these little takes of greenbelt land are mounting up to be larger worldwide problems. These developments will lead to further climate change, thus changing the quality of our environment forever. Greenbelt land is there for everyone to enjoy when they want. Monitoring cameras were installed over one weekend to register the footfall using the public footpaths across the land. This small snapshot would not have given a true record of the usage and therefore should be dismissed as evidence when the developers present their case. Once greenbelt has been taken, there is no going back!</p> <p>If a small number of houses must be built then building affordable housing for local people is important, but developers don't like building these as there is very little profit to be made. Larger houses attract bigger profits for developers, but large housing attracts people from outside the area, who do not contribute to our local economy. They will use the easy access to the A500 and M6 to travel to work in the larger conurbation areas. If local people cannot afford the property being built, they will move away, thus destroying the future fabric of the local community.</p> <p>Remember: You don't want history saying you were the ones who destroyed the local area and left nothing for our children and grandchildren. Don't let your legacy be that you contributed to the increase of global warming!</p> <p>LIFE IS MORE IMPORTANT THAN PROFIT</p>

Q6 Details	<p>OBJECTING TO REGULATION 19 – FINAL LOCAL PLAN.</p> <p>I can only imagine the mountain of paperwork you will have to peruse in relation to these proposed developments, but please spare a thought for those of us who are unable to respond in the well informed, articulated manner you would prefer, but nonetheless, as a resident of Bignall End for over 50 years, my concerns are real and I feel should be seriously considered when making your final decision – thank you.</p> <p>POLICY AB15 – LAND NORTH OF VERNON AVENUE</p> <p>I cannot argue against the fact that AFFORDABLE new dwellings are needed; this is a countrywide problem!</p> <p>The issue here is that this is an area that has already accommodated new housing and I believe that a further development is not feasible; a further 33 homes would bring the same problems as the other proposed developments, such as:-</p> <p>In the first instance, Vernon Avenue services the Wereton estate and already has its own traffic/parking problems.</p> <p>Audley's roads are small, as you would expect from a village, and congestion is already an issue - not only with their own residents, but residents from the surrounding villages.</p> <p>I don't pretend to understand the impact such a development will have on the sewer systems, the flood plains, natural habitats of the plants and animals nor the various Assessments that will need to be presented and scrutinised. But I do understand the need for adequate Doctors, Dentists, Hospitals, Social Services and Facilities, Bus Services, etc – which I believe are currently non-existent or severely stretched to their limits, even without the addition of more housing.</p> <p>The infrastructure needed is not there and I don't believe adequate contributions from the developers would be forthcoming – quite naturally it is taken as a given that the developers are profit driven – and I believe the funds needed to improve roads, health-care, schools, nurseries, hospitals, etc., etc would simply not make it a viable project for them.</p> <p>At the risk of repeating myself, in the Chesterton area there are new builds currently in progress. Some are being built on land that previously contained dwellings; some are being built on vacant, un-used commercial land. All have existing roads which will accommodate this increase in dwellings.</p> <p>My point being that suitable land is available, but it just doesn't make sense, on any level, to propose this site – it simply isn't a viable option.</p>

Q6 Details	<p>Dear Sir/Madam</p> <p>I am writing to oppose the local plan for Audley with regard to development sites. Whilst some may deem it necessary to enlarge the footprint of the village I would personally disagree. If you lived here you would know that the proposed access routes to these areas are already overstretched with roads being too narrow and littered with parked vehicles that make it difficult and dangerous to see round to pull out of junctions.</p> <p>There is also the issue of facilities, these are already fully stretched in Audley, the doctors is full as is the dentist and schools. There is also the issue of parking in the village which at times is ridiculous. Many times I have tried to park and been unable to as everywhere was full so I've had to go elsewhere to shop. Also if there are problems on the motorway or A500 the village becomes a rat run for people trying to avoid hold ups so the added lorries and cars using the proposed development sites would only make it more difficult for the residents.</p> <p>Audley is full and doesn't have the infrastructure to support these planned developments we don't have enough facilities as it is so by building more houses people would just go further afield and the village would die anyway.</p> <p>Yours faithfully Amanda Moody</p>

Q6 Details	<p>Dear sir</p> <p>Far beit from me to deny people having their own homes. However I feel that there are a few things that need to be done first.For instance in Audley there is limited parking space even parking on the medical centre is difficult at times. No parking in Bignall End except on pavements. Streets such as Albert, Diglake, Hope and Tibb Streets plus all the way up Ravens Lane are all double parking making it difficult for all traffic and emergency vehicles to get through.In Bignall End where elderly people, mothers with prams and disabled people and children have to try and cross a very busy road therfore a very urgent need for a pedestrian crossing.Quite recently I went to catch a bus only to find 2 cars parked by the bus stop and I have a photo to prove it.So there needs to be a painted sign on the road as is on the other side.I do feel that there is a lot of things to consider before building 200 houses which equates to 400 people plus children plus cars and lighting the country side with warehouses which will only make the current situation worse.</p> <p>Looking forward to your reply</p> <p>Yours sincerely Roy Cooper (redacted by admin)</p>

Q6 Details	<p>Morning I am a local resident and would like to put my views across, don't know if i have come to the page or not but, I can not express enough how much Newcastle Under Broughy planning to building on houses, warehouses ect this is up setting and unsettling this is for our area! As me my family old generations and new generations have grown up around!</p> <p>2024 and 2025 and the furniture up and coming generations is a scary world to live in today. (Kinfe crime, bullying, break in ect...!)</p> <p>I get that you like to build to bright and beautiful future for people but come on the is a green environment area for people to enjoy! And your taking that all away form us.</p>

	<p>I am coming into my 50 and I listen to people talk about the younger generations dare not even come out there houses, the young generations moving, schools due to all of the above or even up rooting everything but sad to go (). Has the surroundings Audley, Wood Lane, Bignall end areas all been a safe place to live!</p> <p>The roads are compacted with congestion of cars, lorry's especially when the A500 is shut off due to accidents on the locale junctions from 18 right down to 15.</p> <p>We have now double parking no the main road in Bignall End predictions are unfortunately can not get passed on the pavements, parking on the bends an accident waiting to happen. It will only a child or animals to run out, as drives are unable to see around.</p> <p>Our local School have no wear to park their cars they take to the main roads too and you want to add more! Thanks.</p> <p>I myself is scared for my own safety growing old now around these araea as your will not listen to people, you will not listen to people, you will not even read this and take it into consideration. When Labour were voted in I listened, to what was said that you wanted to create job, home's ect. But nothing on people feelings. I heard on the radio the other day your building on green belt what have been build on before! What a load of(redacted by admin) excuses my language as these places your building on have never been build on before! Green belt stands for a reason why take it away from us.</p> <p>Any how I a normal person whome, enjoyed playing out around our local area day to day when I was younger Wood Lane, Bignall End and Audley.</p> <p>I've worked since age 14, age 18 driving to work and back, listening to people's concerns from friends and family. Watching the traffic as I go. Going into my 50s soon wanting to stay in this area old and safe. Contributing to this community and countryside when I old and retired.</p> <p>Witch I will not see future generations doing as they are to sacred to go out side in today's world. Please don't take this away from us.</p> <p>If you read this then thank you for listening like I said I just a normal person whome placed my vote, witch was not Labour by the the way as I knew what was coming our way if they got in. Not wrong hey! And I want to have my say!</p> <p>Kind Regards Lisa Owen</p>

Q4 Part of document	Policy
Q4 Policy	AB15
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>i am objecting the proposals to develop on sites AB2, AB33, AB15 and AB12 because I believe it is unsound. Firstly, the local area of which the proposed sites are located are specifically intended to be a rural area. For example, the parish council is titled Audley Rural Parish Council. On this note, the local schools, health centre and public services are only equipt to handle a small village population. The primary schools in particular are at capacity, and many residents struggle to get appointments at Audley Health Centre (myself and my family included).</p> <p>Secondly, the proposed sites are agricultural land which is of significant natural beauty. The residents surrownding the sites (Eg. Diglake Street, Ravens Lane etc.) overlook beautiful views, which largely contribute to their property values. If developement were to go ahead, the values of their properties would plummet, which would largely impact the lives of many long-term residents.</p> <p>Above all, it is not within my interests or any local residents interests to have houses built here. The AB2 industrial employment site exceeds the employment land target, which therefore means there will be a future demand for more housing when people move to work here. These are only a few points that I could make, but I think I have made my point clear and I hope many other local residents will share my deep concerns.</p>
Q7 Modification	There would be a need for new schooling facilities, healthcare facilities, and public services to meet the demand of the new residents of the parish. This also means for parking and suitable roads. However, my primary suggestion is to not develop on these sites whatsoever. Make the AB2 site smaller as it currently exceeds employment land targets. Build elsewhere, outside of the area.
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)
Q9 Hearing reasons	I hope many others will be able to attend this to speak on behalf of my views

Q4 Policy	AB15
Q5 Sound	No
Q6 Details	<p>The factors that limit the justification of AB12 apply equally well to AB15. Other factors specific to AB15, which may limit effectiveness as well as justification, are listed below.</p> <p>In item 4 it is claimed that "...structures are designed to ensure they are not intrusive in significant views from the surrounding area...". However, this is already an open space where views from the properties backing onto Barleyfields and Chester Road, will be obstructed by any structures built there. Therefore, this claim is false.</p> <p>In item 9, mention is made of financial contributions for increased capacity of schools and health facilities. These costs are likely to consume much of the anticipated revenue that NuLBC hopes to gain from such developments. Knock on effects such as extra traffic will also contribute to already congested roads and more noise/pollution.</p> <p>In paragraph 13.38 of supporting information, it is said that AB15 is within walking distance of local services including schools and the health centre. However, these services are already at capacity and there are no specific measures specified as to how these services will be enhanced.</p> <p>In paragraph 13.39, it is noted that this area does have a flood risk. It is also a well-established fact that building on green fields exacerbates further flooding due to run-off. The properties and farm buildings to the northwest of the site will be most at risk due to them being at the lowest point on the site.</p> <p>In paragraph 13.41, required contributions to the Newcastle North Primary Care Network are identified. But there is no clear plan as to how the resulting increased population will benefit. Will some residents need to be registered with a GP's surgery elsewhere in the borough? If so, then this will lead to further traffic on already congested roads. Therefore, this is not sustainable.</p>
Q7 Modification	<p>In this draft local plan, the Borough are proposing an unprecedented transformation to the character of the Audley and Bignall End. One which is completely unjustified as far as local need is concerned. Due to these considerations, and lack of effectiveness in some instances, especially the unjustified nature of AB2, the proposed sites AB2, AB12, AB15 and AB33 should be removed from the local plan.</p> <p>Just as it is likely that an employment site at AB2 will create an employment/residential imbalance, it will boost the demand for further housing over and above what is already proposed. Conversely, it is also the case that the removal of AB2 from the plan would eliminate the need for housing at AB12, AB15 and AB33.</p> <p>These proposals here go completely against the essence of paragraph 4.3 of the local plan, dealing with "The Strategic Objectives for the Borough" (page 10), which "...will have respected and improved the character and distinctiveness of our market towns, villages, and other rural areas with a particular focus on broadening our network of Neighbourhood Plans." On the contrary therefore, the proposals here will completely destroy the character of the Audley and Bignall End as rural villages; the entire surrounding</p>

	<p>area having been completely urbanised. On this point at least the local plan can be considered wholly inconsistent.</p> <p>Many of the arguments against these proposals apply equally well to proposed green field developments elsewhere in the borough. It is hoped that the examiner will bare these in mind when considering other such proposals in this draft local plan.</p> <p>I am not sure whether the examiner will consider these points legitimate as far is planning is concerned. Most of the residents have no knowledge or experience of planning law. However, he/she can be assured that the majority of the residents of Audley and Bignall End are desperate to see these wholly destructive proposals removed from the local plan. The points made in this representation should be sufficient to render AB2, AB12, AB15 and AB33 unsound due to not being justified or effective. Therefore, I ask that these proposals be removed entirely from the local plan.</p>
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)

Newcastle under Lyme draft local plan – regulation 18: Consultation response

Dear Sir/Madam,

The following is a robust objection to all developments on green field sites covering all the proposals within Audley Parish and many more elsewhere as recommended in the draft local plan. In writing this response, I am aware of the need to adopt a local plan in order for local authorities to maintain democratic control of development in the area. This requirement appears to be a symptom of the subsection in the NPPF titled “The presumption in favour of sustainable development” (paragraphs 11-14). However, from a resident’s point of view, this gives the impression that local authorities must demonstrate a willingness to develop a particular area in order to avoid it being developed. This is, in essence, a commitment to eventual development even if it is not needed. And this is a source of great anxiety amongst residents that undesirable development is out of control, a situation clearly being fuelled by the existence of paragraphs 11-14. On this basis therefore, this subsection of the NPPF needs to be challenged.

This response may differ from others in that it comments on local planning within a strategic context. As I see it, there are three main types of development, which are likely to blight the future generations in the UK: (i) infrastructure (example, HS2), (ii) commercial (examples, AB2 and TK30 in the NuLBC local plan) and (iii) residential (example, recent housing developments either side of the A513, Beaconside, Stafford). Infrastructure is within the remit of Westminster rather than local authorities, so that is not a particular concern here. My main focus is encroachment of developments, both residential and commercial, in green spaces allowed for in the draft local plan. And any new developments in rural areas will, at the very least, result in:

- Loss of light or overshadowing

- Increased risk of flooding due to ‘run-off’

- Loss of visual amenity

- Limitations to physical activity

- Generation of extra traffic, overloading already busy local roads

- Extra noise, pollution, disturbance and danger from increased traffic

- Loss of trees and other biodiversity – bats, lizards etc.

- Loss of natural carbon capture

- Decrease in food production capacity

Increased local population placing further pressure on local schools, GP’s surgeries and other services, which are already oversubscribed.

The United Kingdom as a whole is currently gripped by a pandemic of overdevelopment, which threatens nature and the already depleted biodiversity we see in this country. And it has now reached the stage where it should be considered a national emergency. I for one, do not feel that I have any influence over the shape of our surroundings. There are numerous drivers for this trend many of which are not being addressed by government at any level. At the heart of this is a significant disconnection between the opinions of politicians and public as to what is actually needed. There appears to be cross-party support for activities driving economic growth at all costs, irrespective of the consequences to the natural environment. Aggravating this divide is the aforementioned paragraphs 11-14 of the NPPF. At a local level, what is not in doubt, is that whenever there is land removed from the green belt there is rarely, if ever, an equivalent area so returned, so the process is irreversible. And in the absence of any agreed lower limit on the area of protected green spaces within the UK, no release of green belt land, or development on green spaces, can be considered sustainable. Unless, of course, the use of agricultural land for just that purpose is also considered “developed”, i.e. it has an economic and sustainable use. And the local plan does appear to acknowledge this¹, so why not include agricultural use into the local plan implying no change in particular areas? If this is not the case, we are committed to a process where the end point is a UK completely covered in tarmac and concrete. Anyone arguing against this interpretation needs to state and justify precisely where that end point is. If they cannot, this renders the term ‘sustainable development’ an oxymoron.

One particular trend of major concern is the growing UK population. At the time of writing this stands at just under 69 million, and is set to reach 74 million before 2050. Studies in the US (Pimental and Giampietro, 1994; Lal, 1989) suggest that comfortable/sustainable living requires 0.5 Ha (1.2 acres) per capita. If we are generous, sustainable living in the UK was possible with a population of 57 million, a figure I remember from the late 1960s. With a total area of the UK at just over 60 million acres, a land area of one acre per capita for sustainable living in the UK seems feasible. As we have seen, anything more puts a strain on the environment as a whole. On this basis therefore, the UK is currently overpopulated by about 15%, and there appears to be no initiatives to address this issue. On this point, Westminster appears to be in a state of denial, thus fuelling the current avalanche of overdevelopment nationwide. Residential developments have a knock on effect by requiring other types of development to provide infrastructure, services and employment. Notwithstanding overpopulation, this gives the impression that there is not enough housing stock to accommodate the current population. Recent data, in the form of an infographic (“Housing crisis fact check”) from the Community Planning Alliance², convincingly shows that this is far from the case. In short, what is perceived as the current “housing shortage” is little more than a myth propagated by the construction industry and related interests. This is justified by item 3 on the infographic stating that “there are 1.5 million more dwellings than households” in England and Wales alone^{3,4}. On this basis therefore, no further house building is needed in the UK subject to efforts addressing projected population growth. In other words, what we have at present is a substantial housing surplus. Therefore, locally there are strong grounds for objections to development of the sites

AB12(p74)

AB15(p75)

AB32(p75)

AB33(p75).

Ignoring the 1.5 million surplus dwellings nationwide, the current (regulation18) draft of the local plan quotes a minimum housing requirement of 7160 in the Borough over the period 2020-40, of which 1206 are already completed. Of these, only 40% are to be 'affordable' (1-2 bedroom dwellings). Therefore, of the minimum requirement, only 2864 dwellings will be affordable. If we assume that those already built are affordable (they probably aren't) then the borough will only need 1658 homes built between now and 2040. This is because, due to being beyond affordability, most locals will be unable to buy or rent the other 60%. Therefore, they are not needed, and the proposed mix is entirely incompatible with general affordability. Given the surplus dwellings throughout England and Wales however, it is likely that none will be needed, especially considering the imminent removal of mandatory housing targets by the DLUHC under Michael Gove MP, and any specific affordable housing needs can be catered for by using brownfield sites only. All of the green areas in the local plan could therefore be planned in for their present use.

Infographic from the Community Planning Alliance summarising UK housing stock in relation to the population.

Another statistic from the infographic is that nationwide we could build up to 1.2 million homes on brownfield sites (item 2)2,5. And like any other local authority, NuLBC is legally obliged to and does keep a register of its brownfield sites, although it is likely that some may slip through the net.

If there is an imperative, it is to increase further democratic control of the development process both locally and nationally. And both local and national authorities would do well to remember that they have a responsibility to the people they represent and not to the commercial viability of developers, the construction industry or overseas investors. In short, no new housing development is required, especially given that the borough has exceeded its housing targets in recent years. This calls into question the need for housing developments outside Audley Parish mentioned in the local plan. These include

BL18 (p75)

CT1 (p76, 750 dwellings)

RC8 (p76, 6 dwellings, potential flood risk.)

KS3 (p77)

LW53 (p77)

MD29 (p78, 150 dwellings, likely to conflict with HS2 construction?)

NC13 (p78)

NC77 (p78)

SP11 (p78, 900 dwellings, former Keele golf course)

SP12 (p79)

SP23 (p79)

TB19 (p79)

TB23 (p79, 124 dwellings, adjacent to Walley's Quarry.)

TK10 (p80)

TK17 (p80)

TK27 (p80).

Other sites which may also be questioned are

KS17 (p77, would include loss of playing fields and other village amenities. This may be classed as infill.)

KL13 (p77,93, part built already within the grounds of Keele University Campus).

The other class of developments locally is commercial. All too often we hear in the news from both local and Westminster sources, the mantra that economic growth is the imperative. But the actual imperative is stability, and we have reached the point where growth at any cost has become toxic, especially given the impossibility of unrestrained growth in a land of finite area. Have our political masters never heard of the circular economy?

Since the beginning of deindustrialisation in the 1980s, the diversity of employment opportunities has declined. We have seen an unhealthy move away from manufacturing/production of goods that we need as a nation, to one entirely reliant on trade with overseas partners, leaving us open to blackmail and the current spike of rampant imported inflation. Look what happened during lockdown. Over recent decades this has led to the demolition of old factories for residential developments and the rise of logistics centres (warehousing) for the temporary storage of imported goods, which will ultimately be operated by robots and AIs leading to even less employment. The problem with warehousing of course is its large consumption of land area. My question is, what is the driver for the proposed "big box" developments on AB2 and TK30 locally? Both of these proposals lie entirely within the greenbelt, although the TK30 land has already been quarried in parts. Neither of these proposals is either desirable or needed. However, if we are forced to accept one or the other then TK30, being about 5% smaller, is the lesser of two evils. With the green light given to the development of the 44 Ha Chatterley Valley site on Peacock Hay Road, and the numerous empty warehouses existing across the potteries, North Staffordshire and Cheshire East. It is dubious to say the least to claim that either AB2 or TK30 are needed. These sites are 70 Ha and 66 Ha respectively. However, in the recently published "Housing and Economic Needs Assessment Update", the borough as a whole only needs a maximum of 34 Ha6. So why are we saddled with 154 Ha total covered by AB2, TK30 and KL15?

If the local plan caters for agricultural developments, AB2 and TK30 could be planned for their existing use. The majority of the area covered by these sites is high grade (3a) agricultural land. In the case of TK30 the quarried areas could be reclaimed for agriculture or, if this proves difficult, used in other ways to enhance biodiversity. If the land in question is council owned, and the motivation is to sell off council assets, then once sold, they cannot be sold again, and any control is lost. Moreover, once farmland is developed for other purposes then it is near to impossible for it to be reclaimed later for that use – and so the ratchet inexorably turns. On this

	<p>basis therefore, I would urge the LPA to remove the warehousing proposals AB2 and TK30 from the local plan.</p> <p>The purpose of this consultation is to supply feedback to the Borough Council. Another question is, does Westminster similarly consult with local authorities on planning issues, or is there any other mechanism where local councils can supply feedback to Westminster, providing a better feel for the mood of the nation? If so, why do we not see a root and branch reform of the NPPF rather than the tinkering around the edges approach seen in the July 2021 version? Most especially, there should be a removal of paragraphs 11-14 and its supporting statements elsewhere in the document, which is tantamount to a developer's charter. And there should be more flexibility within the NPPF allowing local plans to include parcels of land for their current purpose, given that there is almost none in this country that is not currently in use. As far as I can see this plan is nowhere near compatible with efforts required to address the current climate crisis. Moreover, given their scale, the proposed developments represent too greater shock to the environment and local communities over the short 20-year period suggested for their completion. And with the sufficient housing and unused commercial sites we already have, there is no need for any encroachment into our green spaces.</p> <p>Yours sincerely Jim Austin</p> <p>Notes</p> <ol style="list-style-type: none"> 1. Q4 Policy	AB15
Q5 Sound	No
Q6 Details	<p>Many factors that should limit building on AB12 are also relevant to AB15. Other factors specific to AB15 are listed below.</p> <p>Item 4: States that structures will not significantly block views of the surrounding area is erroneous as properties which back onto Barleyfields and Chester Road will have their view obstructed.</p> <p>Item 9: The prospective financial contributions will be unlikely to fund improvements to school and health facilities and extra traffic will make congested roads, noise and pollution and health problems worse.</p> <p>Paragraph 13:39: the risk of flooding to farm buildings and properties to the northwest of the site will be exacerbated due to building on green fields because of run-off.</p>
Q7 Modification	<p>The draft local plan proposed as transformation of Audley and Bignall End which is unjustified by local need. The lack of effectiveness and unjustified nature of AB2 weakens the reason for house building on local green belt parcels. Therefore, the proposed sites of AB2, AB12, AB15 and AB33 should be removed from the local plan.</p> <p>These proposals seem to go against paragraph 4.3 of the local plan which states it "will have respected and improved the character and distinctiveness of our market towns, villages and other rural areas" On the contrary, these proposals will destroy the rural village character of Audley and Bignall End, completely</p>

	urbanizing the entire surrounding area. The local plan is therefore inconsistent. The majority of residents of Audley and Bignall End are strongly against these proposals and wish to see them removed from the local plan. It is hoped that the points made will be sufficient to render AB2, AB12, AB15 and AB33 unsound as they are not justified or effective. I request that all the proposals should be removed from the local plan.

Q6 Details	My view is that this site is a prime location and a logical choice for development considering its setting within the village of Audley. The site is already surrounded on the majority of its boundary by housing and if developed the site would not go beyond the overall boundary of existing housing. The only concern that I have is that the council have reduced the number of plots on the site to 33 and I feel that by doing this the potential of the site has been compromised. It has been demonstrated to me by several developers that the site could accommodate 42 to 52 plots and still provide generous areas of open space and green areas. Please consider these comments before the final decision is reached.

Q6 Details	<p>This is my objection to the proposed draft local plan for the area of Audley Parish and many more in surrounding areas. In writing this response, I am aware of the alleged need to adopt a local plan in order for local authorities to maintain democratic control of development in the area. In writing this I am indebted to the objection document submitted by Dr. J. C. Austin for his invaluable research and relevant information for an objection on a wider scale but nevertheless relevant to the local area. As he states the democratic control referred to by the council seems to be a "symptom of the subsection in the NPPF titled "The presumption in favour of sustainable development" (paragraphs 11-14)", I totally agree with him that to residents it seems that "this gives the impression that local authorities must demonstrate a willingness to develop a particular area in order to avoid it being developed", and "seems to be a commitment to eventual development even if it is not needed", which is extremely worrying on many levels for the community. These proposed new developments would, in the view of many residents, have a devastating impact on our rural area, which is part of the Designated Conservation Area of Audley (1976, information listed on the Council's Local Plan 2011).</p> <p>In particular, I believe it would result in the following problems:</p> <ul style="list-style-type: none"> • Loss of light or overshadowing • Increased risk of flooding due to 'run-off' (there is already some flooding in the area) • Loss of visual amenity • Limitations to physical activity (There are many public footpaths in the area, cyclists, horseriders etc. all use the area on a regular basis) • Generation of extra traffic, overloading already busy local roads resulting in extra noise, pollution, disturbance and danger to humans, livestock and wildlife. • Loss of trees and other biodiversity – bats, lizards, newts etc. • Loss of natural carbon capture • Decrease in food production capacity, look at the current threat posed by the reduction of grain from Ukraine and the shortages created by the recent COVID Lockdown for example. We need to grow more of our own food, not destroy prime farmland and rely on imports. Sustainability here is the key message! • Increased local population placing further pressure on local schools, GP's surgeries (the one in Audley has already stated that it will be unable to cope), dentists and other services which are already oversubscribed.

As Dr. Austin has stated there appears to be an “overdevelopment which threatens nature and the already depleted biodiversity we see in this country”. This is true both nationally and locally and the local populous feel that their opinions are disregarded on all political levels and by politicians of any political persuasion. It has been stated on national television that a large proportion of younger people and children are very worried about the effects of climate change and identifying areas of green belt to be built on will only enhance the problem. Allowing developers to destroy existing farmland, green spaces and mature woodland is short-sighted to say the least, it takes decades for a habitat to establish itself and support wildlife and replacing these with saplings will not solve the problem, therefore these proposals cannot be regarded as sustainable development at all. Do we really need all these new houses to combat the so-called housing shortage or is it really, as Dr. Austin states, “little more than a myth propagated by the construction industry and related interests”? Therefore, I agree with his analysis that “locally there are strong grounds for objections to development of the sites”

- AB12(p74)
- AB15(p75)
- AB32(p75)
- AB33(p75).

Furthermore, I agree with Dr. Austin when he says that “both local and national authorities would do well to remember that they have a responsibility to the people they represent and not to the commercial viability of developers, the construction industry or overseas investors”. As he has pointed out the commercial developments mooted for the AB2 and TK30 sites locally are not needed and I believe that the developers normal cry of “it will create jobs” is misleading to say the least and proposes far more land use than the councils own recently published assessment document of housing and economic needs suggests! Would the council please explain why they are intending to ignore their own document! Moreover, the proposal seems to be mainly for agricultural land, which once lost would be virtually impossible to recover. We need to be more sustainable in feeding ourselves and not relying on overseas imports whether they are from Europe or the wider world. It should also be noted that the country, as a whole, needs to stop foreign investing in building homes which the local populous can neither afford to buy or rent (there are countries in the world which will not allow non-native individuals/companies from buying/building houses – Thailand is a case in point). This would certainly enhance the prospects for affordable homes.

In summary, I would like to ask the council, and the government would they really like to be remembered as the politicians who made the local area and the UK as a whole a ‘concrete wasteland’?

Q6 Details	In response to the Local Plan consultation, we would like to object to the parts pertaining to Audley & Bignall End. Building around 250 extra houses in the area will considerably change the nature and character of the village, going against particularly SOIV, to reduce the carbon footprint, promote sustainability and harness opportunities for carbon sequestration. It also goes against SOVI, to promote and sustain villages and their character. The road infrastructure will not cope with the increase in traffic that this will bring. In many places along the routes in & through the village the houses open directly onto the road with no off-road parking. This results in parked vehicles restricting the carriageways and causing congestion. This will be made worse with the increase in cars that the extra housing will bring. There is no mention in the plan of any provision for healthcare or schools for the increased population. The medical practice in Audley is already at capacity and increasing the population will put increased strain on the health services and risk diminution of care to the existing patients of the practice. The current proposals also go against the direction of travel for government policy with the need to keep most development within urban areas as far as possible, with optimisation of densification of properties to make best use of public transport and greener travel. Green belt land should be protected. The National Planning Policy Framework 2021 already indicates the need to protect green belt land and that rural development should support local services, not overwhelm them.

Q6 Details	<p>I wish the Planning Inspectorate to consider my following representations in response to the Newcastle -Under-Lyme Borough Council – Final Draft Local Plan Consultation (Regulation 19)</p> <p>I wish the Planning Inspectorate to remove all policies from the plan which involve any development on Green Belt Land.</p> <p>The specific policies are: -</p> <ul style="list-style-type: none"> • AB2, AB33, AB15 & AB12 – Audley Ward • BW 1 – Bradwell Ward • CT 1 – Crackley Bank & Red Street Ward • KL13 & KL 15 -Keele Ward • SP11(2) & SP11(3) – Silverdale Ward • TK 10, TK 27 & BL18 – Talke & Butt Lane Ward <p>All of these developments impact green belt land, are unsound and should be removed from the plan.</p> <p>They will all have a negative effect on the Net Biodiversity gain of each local area. Which in turn has a knock-on effect across the Borough. Open spaces are essential for the environment by absorbing carbon dioxide from our atmosphere, which helps reduce climate control. They also provide habitats for a wide range of plants and animals. Open spaces are also important to human health as they can reduce stress, improve mental health, and assist in people sleeping better. They provide areas for physical activity which improve both physical and mental health. Removal of green belt will decrease the air quality within that area, increase respiratory issues for humans and wildlife, and also increase noise pollution.</p> <p>With specific reference to policies AB2, AB33, AB15 and AB12. I ask the Planning inspectorate to remove policies based on the following justifications:</p> <ul style="list-style-type: none"> • AB2 - It is simply the case that the small village of Audley and its surrounding countryside lanes could not cope with the large increase of traffic caused by these policies. The large number of HGV's travelling to the proposed AB2 site would definitely increase the traffic within the Audley area due to the daily traffic jams along the A500 and at M6 Junction 16. Traffic will spill on to local roads e.g. A5500, increasing Noise and air pollution • AB12 - Proposed access to site AB12 via Diglake Street is untenable. This street is small and it is already difficult to drive down due to parked cars on both sides of the terraced street. A new development of houses would make it virtually impassable causing gridlock, increased air pollution, increased noise pollution and limiting access for the emergency services. <p>The proposed new car park for resident's in Diglake Street due to the proposed AB12 policy would be detrimental to Blue badge Holders, People with mobility issues and Carers of babies and children.</p> <p>AB12 will not be close to any amenities with little or no access to a regular bus route.</p> <ul style="list-style-type: none"> • AB33 – Primary Vehicular access to Park Lane is unsound. This is an already busy junction. AB33 will not be close to any amenities with little or no access to a regular bus route. Creating more traffic therefore noise pollution and air pollution. With an increased danger to pedestrians. <p>With poor access to health care and education.</p> <ul style="list-style-type: none"> • AB15 – The proposed site at AB15 is unsound because of the poor access to health care, education, local amenities and public transport. <p>I therefore would like the Planning inspectorate to remove Policies AB2, AB12, AB33 & AB15 from the plan.</p>

Q6 Details	<p>Local Plan</p> <p>I believe the process of the local plan is generally unsound from an accessibility perspective. The plan was only available in braille from 25th September, giving little time for anyone who required braille to read through the whole plan. This documentation was only printed in braille following my request 8th August 2024 and no foresight had been made to make a copy generally available at the Newcastle library.</p> <p>At meetings, held by the council, there was no interpreter available, so anyone deaf would have had to rely on friends/family. The posters at the meeting used small fonts making it difficult to read the information.</p> <p>There was also no provision for an easy-read translation, despite this being requested.</p> <p>It was mentioned by Councillor Fear at a Council meeting that the local plan was accessible to all but as mentioned above, the reality shows that it wasn't.</p> <p>I also put in a Freedom of Information request to Newcastle Borough Council on the number of people registered blind in the area. The response was that they didn't know. This would suggest that there was little consideration to how the Council were going to engage with members of the public who have a disability/learning difficulties so they could be included in responding to the plan.</p> <p>Site AB2 'Land at Junction 16 of the M6'</p>

I consider the local plan is unsound in proposing it.

The site put forward is significantly bigger than initially stated as required in the document. AB2 is 80 hectares of land but only 22 hectares of land is required for employment. The proportions would put the housing/employment land ratio out of balance and could result in further housing being required in the small village of Audley.

AB2 would sit on a heavy section of the M6 which is prone to high numbers of accidents. Typically the stretch between Junction 14 to Junction 18 bottlenecks frequently due to high numbers of traffic and high numbers of accidents occurring. Junction 16 roundabout and the approaches from the A500 are traffic-heavy and it can often take over 10 minutes to join the motorway from Audley (a distance of a mile).

There is no easy access to AB2 currently, except from Park Lane, a narrow single-track country road. In the plan, it mentions that this would still be used as an emergency exit/entrance, the road is unsuitable for multiple, large vehicles.

There is no public transport that goes near to AB2. There is limited public transport to Audley Village centre, a good mile or so from the site. This would mean increased traffic in the area, increasing CO emissions and noise pollution. AB2 is a strong green belt contender with established vegetation trapping CO emissions and noise pollution from the M6.

Less than a mile away from AB2, in a neighbouring council area (Cheshire East) are two large areas being made into warehouses. One is currently under construction (million square feet) and one was constructed with 5 warehouses currently sitting empty due to no electricity. Within Newcastle-under-Lyme warehouses are sitting empty, there was one in Talke that sat empty for over 10 years, it was taken on eventually by JCB but will now be empty again. Some other sites/locations would be less disruptive and retain this area of green belt.

Site AB15 'Land North of Vernon Avenue'

I consider the local plan is unsound in proposing it.

Vernon Avenue has already seen growth on the road with the addition of Barleyfields, planning permission granted for 2 additional buildings and then just off Vernon Avenue, 3 bungalows. All this has had a significant impact on an already busy road that provides access to Vernon Close, Meadowside Avenue and Westfield Avenue.

With cars parked on either side of the road, the road can at times be narrow to drive down and is often treated as a rat run. During 2021 a child was knocked down and injured and I am surprised the numbers aren't higher.

The site is proposed to have 33 homes built on it. That would mean a potential increase of at least 50 extra cars to an already busy housing estate. It is located at the bottom of a hill meaning there isn't easy access to the village. In the Sustainability Appraisal on page J9 it mentions site assessments presented in Appendix H indicate poor access across indicators for health and transport and accessibility

In the Sustainability Appraisal, Page 120, it confirms that AB15 lies outside the 800m sustainable distance for access to primary school. This could result in increased traffic in the village with parents taking their children to school.

In the Sustainability Appraisal, page 19 it quotes "AB15 is situated within an area of 'high' sensitivity and has a 'moderate' overall contribution to the purposes of the Green Belt according to the LSCA and Green Belt assessment"

In the supporting evidence, Green Belt Assessment Part 4 Page D-3 it mentions that AB15 is a Moderate Contribution to Green Belt "The site falls within 250m of the Audley Conservation Area, therefore the site makes a moderate contribution to preserving the setting and special character of towns" On Page F-6 from the same report, there is a question regarding is the site in active use with a response of No. It is used every year from April to October housing 6 young cows. Local children love to come and see the cows.

I would like to ask why other weaker sites weren't put forward to the local plan,

Audley is a thriving busy village with schools and doctors at capacity. The local sewage works site is also at capacity. Adding 250 new homes to a small rural village would change the very nature and characteristics of the village. There are currently applications for other sites proposing 5-bedroom executive homes, these are neither affordable nor required housing for the housing needs of the village. Audley is an ex-mining village, with predominantly terraced houses. The elderly are requiring bungalows and the younger generation are requiring affordable housing (which does not include Shared Ownership). Sadly, the types of properties that could be built can't be defined.

Thank you for taking the time to read my comments, I urge the council to review the sites in question.

Title	Policy AB15 Land North of Vernon Avenue
Consultee Family Name	Ashmore
Consultee Given Name	Michelle
Q4 Part of document	Policy
Q4 Policy	AB15
Q6 Details	<p>Dear Newcastle-under-Lyme Brough Council,</p> <p>I the undersigned, as residents of Audley, wish to object to the proposals of four housing sites and a large employment site in the council's draft local plan for Audley. My objections are about both the proposals for Audley in general and also specifically about site AB15 which is at the back of my home where I live and would significantly and detrimentally impact my life.</p> <p>My objections to the proposals for Audley in general are an additional 250-270 homes with a further 1000 residents and a large employment site of over 170 acres warehouses will destroy the character of our beautiful village. As I sit here writing this letter to you, I can hear birds singing and am looking out on a beautiful green field with cows grazing which is a very healthy way to live, considering the fact that where I live has been so important in restoring my mental health if your proposals go ahead that will totally damagingly affect my life, the downward spiral mental health of so many residents and the quaint, picturesque village of Audley.</p> <p>In this regard, if only or mostly green belt sites are available in the Audley area, the Council does not have to build the number of houses it says it must, because government figures are only advisory. It therefore seems that the Council is choosing to build on green belt sites when it doesn't have to.</p> <p>Furthermore, it also seems that the number of houses proposed to be built on AB15 and around Audley is excessively weighted to this area compared to the rest of the Borough as a whole and are mostly on green-belt sites. Why have you not planned to deliver housing in the urban centre with amenities and infrastructure of a town already. Instead, your plan overloads an already overloaded infrastructure area.</p> <p>The Junction with the A500 already has capacity constraints and development in this area could exacerbate this without appropriate justification. The proposed additional housing for the Audley area in general would cause already inadequate roads to become impossibly congested and to deteriorate even further. Connected to this, given that the current schooling and health facilities in the village are not enough to cope with a sudden increase in population, would further development and therefore more land be needed to build more schooling and medical facilities?</p> <p><u>SITE AB15</u></p>

	<p>I totally object to site AB15 being proposed for development for the following reasons:</p> <p>The roads leading to AB15 are Chester Road and Vernon Avenue which are already very congested, in parts very narrow, with built up housing and residents parking their cars along them which already creates dangerous and hazardous driving conditions. The roads are inadequate already for the current residents and even more so if there is additional traffic and houses, they will deteriorate even further with additional houses and cars.</p> <p>I am very concerned about road safety with regards to children walking to school, lots of older residents and dog walkers and additional cars will impact pedestrians and create more likelihood of accidents. Already getting in and out of driveways is dangerous.</p> <p>The local schools and medical facilities are already at full capacity, to the point where you have to wait for over an hour for calls to be answered, and unless it's a medical emergency day's to see a doctor, and then never the same GP which does not go hand in hand in living in a rural village, where do you propose additional or existing residents go? The dentist practice in the village is unable to take any additional NHS patients as it is already at its maximum. I along with other residents are already registered with a medical practice's and dentist's out of the area, as the current health provisions are stretched to capacity.</p> <p>When I, along with neighbours and other residents bought our properties it was due to the beautiful environment that surrounded them which was so important for us and our family. Wonderous green field's, which are green belt. One of which AB15 where you are proposing to build is behind the properties along Chester Road and Vernon Avenue, which will totally destroy the wellbeing of myself, my neighbours and village community. Currently the residents of Chester Road look out on a beautiful green meadow with gentle cows grazing, mature trees which are home to birds and bats that fill our day and night with sweet natural sounds and hedgerows which contain a huge array of wildlife complete our view, and help to maintain our mental health. I am concerned that I, along with other residents will become very ill if your proposal goes ahead. The loss of habitat, such as the mature trees and hedgerows with wildlife in them will affect our wellbeing and I am very concerned how this will impact not only me, but my neighbours, and residents who have become friend's. I cannot express how the loss of the rural aspect where we live would be devastating. I, along with all residents with properties along Chester Road and Vernon Avenue often sit out our secluded gardens to continue to enjoy the landscape and maintain our mental health, both in the day where we will be visited by lots of birds and squirrels, and during the evening as the sun is setting, where bat's often swoop, your proposed development could cause them to be lost. The loss of this beautiful open space, which is currently agricultural land and what I was led to believe outside of development boundary would be visually damaging the landscape of our rural community. The loss of our visual amenity and environmental changes would be devastating and damage caused in our charming rural village from introduction of many more vehicles and houses would never recover this would affect us all.</p> <p>I also would like to comment on how challenging this process to object has been and how no information has been sent to our homes regarding your proposals. I have talked to friend's who are neighbour's and along with other residents who have found this process overwhelming and for many totally impossible, certainly for older residents who are not online, I don't feel this is acceptable. How are you helping these people in our community?</p> <p>I am greatly concerned on the impact on our mental health for myself, my neighbours, my friends and my community. A significant change in the environment will adversely affect us all. The change from green space to buildings would cause detrimental hard this cannot be underestimated.</p> <p>Thank you for reading this, I await your response to my letter of objection.</p>

Title	Policy AB15 Land North of Vernon Avenue
Consultee Family Name	Maddock

Consultee Given Name	Paul
Q4 Part of document	Policy
Q4 Policy	AB15
Q5 Sound	No
Q6 Details	<p>I would like to put forward a number of points as to why I believe the Local Plan is unsound, with the focus upon plans for the village of Audley, the proposed strategic employment site of AB2 and the proposed housing sites of AB12, AB15 and AB33, which are all on Green Belt land but do not meet the requirements of exceptional circumstances for the removal from the Green Belt.</p> <p>AB15</p> <p>My property in (redacted by admin), backs onto this site and I have lived here for 35 years so I know the land well. The wildlife on the land includes a parliament of rooks, foxes and buzzards hunt in the field. According to ED008 Green Belt Review Report part 4 presented by ARUP -</p> <p>The site is considered to be available as it was promoted by the owner and is not in active use.</p> <p>Yet cattle are grazing there and have been all year (time stamped images available). Also according to this document, AB15 is in Flood Zone 1 and does flood in the lower areas in rainy months. Building here does cause concern for nearby residents as the water table is high at this lower point of the village. Developing on land and fields reduces the area that rainfall can be absorbed and increases the risk of flooding. The roads around Audley already flood when there is a heavy downpour. Reducing the green belt will increase the amount of flooding. Destroying green belt actually increases our carbon footprint. Green belt actually captures carbon, provides space for water to prevent flooding, and protects the water supply. Removing fields and oxygen giving trees will also have an impact on air quality. To remove this area from the Green Belt, does this represent exceptional circumstances? I feel it doesn't and that there are far more suitable sites within the Borough.</p> <p>AB12, AB15, AB33 and AB2 and the impact upon the village.</p> <p>The impact upon the village's infrastructure will be catastrophic. Building in these locations will, without doubt, bring in a serious amount of traffic to the village which will mean extensive development of new roads to be created to cope with inevitable traffic that will need to access the proposed developments. Audley village, with two small car parks, is already suffering the impact of increased car ownership by residents already living here, with many people forced to park on double yellow lines and in turn hampering safety. Audley has recently lost some of its bus service, which means more cars and taxis will be on the roads. Then there is the impact on the facilities like, the doctors' and dentists' surgeries etc. The primary and secondary schools are at full capacity. With the advent of the proposed 213 new houses to be built in the Audley Parish, where will the children of these new households go to school? The local schools are at full capacity. I am an ex school governor so I am aware of the situation locally. Will the newly refurbished sewage works be able to cope with the additional houses on the plan? I am reliably informed it will not.</p>
Q7 Modification	<p>AB12, AB15 and AB33 if built upon, creating 213 extra houses will have a catastrophic impact on the infrastructure of the village of Audley. The removal of this land from the Green Belt must be justified and only done in exceptional circumstances. It is obvious that this land would be attractive to developers as is all agricultural land that is removed from the Green Belt and designated for building, but this should not be a driver for this decision. In Section 6 above, I have highlighted my concerns in relation to village infrastructure, flooding and excessive traffic. It is on these grounds I feel these proposed sites AB12, AB15 and AB33 are unsound and should be removed from the Local Plan</p>
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)

Order	151
Title	Policy AB15 Land North of Vernon Avenue
Consultee Family Name	Gibson
Consultee Given Name	Catherine
Q4 Part of document	Policy
Q4 Policy	AB15
Q6 Details	<p>I write to you in relation to the Newcastle Borough Council Local Plan – sites within Audley Rural Parish which includes AB2 – Employment Site, AB33 – Land off Nantwich Road/Park Lane, AB12 – Land east of Diglake Street and AB15 – Land north of Vernon Avenue.</p> <p>In essence I don't think any of the sites are justified or sound and should all be removed from the local plan.</p> <p>Reasons against all sites:</p> <ul style="list-style-type: none"> - More people into the area, with very little public transport there will be more cars on very small roads. - More cars is more pollution, we have enough air pollution coming into this area from Walleys Quarry landfill in Silverdale, the landfill air pollution is worse in the winter, which is also when traffic pollution would increase as well. - Parking is already a problem, there are local car parks in Audley itself but much of the surrounding area has cars parked on both sides of the road due to no off road parking. Visibility is non-existent much of

the time around Miles Green and Halmer End, you often proceed and hope nothing is coming in the opposite direction.

- We have narrow Victorian streets in much of the parish which were not designed for the number of cars already here. There are many accidents to both parked and moving cars because of the amount of traffic and the speed of traffic through the narrow roads. This is only going to get worse if more vehicles and quite possibly bigger vehicles are added into the area.
- Two of the sites are council owned farm facilities, there are young farmers wanting farms but unless you are from a farming family then this is not going to be possible with fewer/no farms to rent to get started in farming.
- There is a bigger and bigger national population and if farmland is going to be built on then how are we going to feed the bigger population? Farmland is being built on all across the country, not just the proposed in Staffordshire.
- Our local services such as schools, doctors and dentists are full. More housing is going to put more pressure on already stretched services.
- There are empty warehouses in the local area but they fall under different councils. Why can't the area work together and consider the land regionally for housing and warehousing rather than each council needing to have a certain amount? Some areas of land are going to be better suited to different developments and much of these proposed sites are greenbelt and good agricultural land. Therefore the sites are not justified.

Reasons against AB2:

- Site is a huge area, 198 acres of good agricultural land in the greenbelt, this site alone is four times bigger than NULBC have said is needed, and is a bigger area than all our villages.
- More jobs, more people into the area, no public transport so more cars on very small roads.
- Proposed new bus routes will not fit all shift patterns so people will more likely use their cars than buses increasing traffic on the narrow roads, and cycling is unlikely as the area is all hills. We do not cycle for this reason and we haven't just done a 12 hour warehouse shift.
- More jobs may well create pressure for more housing in the future, more loss of greenbelt near to the warehousing.
- There are always accidents on the M6 along this stretch, we never use between junction 15 and 16 for this reason and avoid the M6 if we can go another route. Accidents always put more pressure on the surrounding local roads, our area leads to the A34 as a parallel route to the M6.
- Emergency exits from the planned site are along single track roads with blind corners along them, not easy with current traffic, add any more along with people who don't know the roads and it is going to cause many more accidents.

Reasons against AB33:

- This site floods, ducks are seen on the water in the field.
- More traffic on roads that are narrow, often congested and with turns on difficult to see corners, such as turning in and out of Church Street Audley.

Reasons against AB12:

- Loss of currently productive farmland on greenbelt.
- Potential flood risks if developed, either on new development or passed further down, there are many big puddles on Bignall End Road after a bit of rain, if AB12 is developed this can only cause further floods on a much used local road to Talke and Kidsgrove.
- Access and more traffic past both a nursery and a primary school. I travel (redacted by admin) during the day and it is one way traffic between the parked cars then, further cars are not going to be safe in the middle of the day let alone at school drop off and collection times.
- Is this land being sold off by SCC being considered rather than more appropriate land?

Reasons against AB15:

- This site floods, ducks are seen on the water in the field.

So to conclude, I don't think any of the sites are justified or sound for the current residents, services or wildlife and should all be removed from the local plan.

Title	Policy AB15 Land North of Vernon Avenue
Consultee Family Name	Pustkowski
Consultee Given Name	Naomi
Q4 Part of document	Policy
Q4 Policy	AB15
Q6 Details	<p>I am emailing to object to the proposed development on site AB15.</p> <p>I do not believe that the plan is sound or justifiable, for the below reasons.</p> <p>The overall NULBC housing numbers cannot be justified: The population of the Borough is falling (a 0.5% drop from 2011 to 2021) which suggests a lower Household forecast.</p>

The number of new dwellings built in the Borough in excess of the targets in previous years (32% over the target from the 2018-19 year to the 2020-21 year) and the excess in neighbouring authorities. People from Kildsgrove will live in new builds in Golden Hill, even though it's technically in Stoke, people from Audley will live the new builds in Alsager, even though it is in Cheshire East and people from Baldwins Gate & Loggerheads will live in new builds in Market Drayton, even though it's in Shropshire.

Housebuilding has exceeded the increase in households over the past 10 years in the Borough.

The Local Plan should also place greater emphasis on developing brownfield sites at higher densities, reusing vacant town centre buildings and tackling the waste of resources that is long term empty homes.

We shouldn't be building on good quality, carbon soaking, agricultural land that forms the beautiful countryside that our residents enjoy in their leisure time.

(redacted by admin) the AB15 site, this land is currently using for farming. And the field is extremely waterlogged, (redacted by admin) has been flooded on numerous occasions due to this. I do not feel that this land is suitable to build new homes on. I fear that it would only exacerbate the flooding issue as the new builds have on barleyfields Audley. A number of residents have commented on how flooding has since become an issue for them since these new builds next to their homes have been built. I do not wish for the same issue for us, whenever it rains the back of our garden becomes flooded, as does the field (redacted by admin). Building on this field would impact (redacted by admin) even further causing more flooded lawn and garden. (Photos attached).

There is also protected wildlife living on this land, we have seen a few hedgehogs over the years living in the hedgerows bordering the field. I have also spotted hares at dusk. It is vital that we protect our wildlife and not destroy their homes, especially protected species.

In addition our village cannot take the extra traffic that would come with this many new homes. There are no traffic calming measures, and the village is already massively overrun with vehicles especially at peak times. Church street in particular is too busy already and has become dangerous. With cars parked on double yellows, all car parks full and pedestrians trying to cross the roads with people driving too quickly and vision impaired by illegally parked cars. This would be worse with more people living in the local area using the same amenities. We have lived (redacted by admin) and in 10 years the traffic I feel has already doubled, it is much busier and much more dangerous than it was (redacted by admin)

I fear that the added pressure on our doctors and dentist would also have a negative impact. We are already having to wait longer for appointments at the doctors, this would be much worse with more residents using the same health centre. There are residents in alsager waiting more than 4 weeks for an appointment, I do not wish for the people of Audley parish to be in the same situation.

The dentist is already at capacity and not taking on new customers, they are also very difficult to get an appointment with.

The traffic coming in and out of the village is dangerous, with many collisions and near misses coming on and off the a500. This again would be made much worse with more residents living in the parish.

I strongly disagree building on green belt land, this green space provides a safe haven for nature and wildlife to thrive. It is our duty to protect our wildlife and their habitats. It is also good for mental well-being to have ample green spaces around us. We chose to (redacted by admin) here due to the green spaces available, the fresh air and the opportunity to exercise in the countryside and to teach (redacted by admin) about nature. To have green spaces ruined for housing that isn't actually needed would be devastating for both the wildlife and the residents who have the right to enjoy the countryside around us. There are ample sites in the surrounding areas which can be built on, with permission already granted. I would strongly urge the council to look in to those sites before destroying precious green space.

The village is a semi rural village, and we take pride (redacted by admin), Audley and bignall end should be kept this way for all of the reasons mentioned above. Our small village really could not cope with increase in housing on top of the proposed warehouse space too. It simply does not have capacity to accommodate this.

The local schools are also very busy too, and with only 1 nursery local to our parish I also fear that the pressure on these will be too high. They will not be able to keep up with the amount of children needing a place.

We should also be supporting our local farmers and encouraging farm land to continue. I am astonished that this isn't something that the council would be putting as a priority. Sustainable farming whilst supporting the wildlife is far more important than building homes that are not needed.

With the reasons the listed I would like to ask for the planning inspector to please remove this site from your local plan.

Consultee Family Name	Council
Consultee Given Name	Audley Parish
Q4 Part of document	Policy
Q4 Policy	AB15
Q5 Legally compliant	No
Q5 Sound	No
Q5 DTC compliant	No

Q6 Details	<p>Please note the contents of the attached letter which sets out the Council's comments in this regard. Please do not dilute the comments in any officer reports as the document needs to be read in context alongside the previous responses made.</p> <p>Sites AB12, AB15 and AB33 are all within Audley Parish. APC accepts that some housing growth is needed to meet local housing need, including small (one bedroom) and family (4 bedroom) accommodation and homes suitable for older people and those with limited mobility. The sites are close to existing settlements and do not create coalescence between settlements. APC would emphasise that green belt release should only occur in exceptional circumstances, but accepts that there are no alternative sites that would not involve green belt release.</p> <p>The new housing would help to ensure that existing shops and other facilities in Audley and Bignall End remain viable. The increase in population would place more pressure on health, education and other facilities and this one of the main concerns for many residents. The provision of a safe and adequate access would be essential for all sites.</p>
Q7 Modification	As above
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	As set out in this response and the previous 2 responses - the Parish Council has strong objections in particular to the inclusion of AB2.

Title	Policy AB15 Land North of Vernon Avenue
Consultee Family Name	Cunningham
Consultee Given Name	Helena
Q4 Part of document	Policy
Q4 Policy	AB15
Q6 Details	<p>F.A.O Planning Policy Team</p> <p>I write to strongly object to proposals within the Local Plan in particular the allocations for sites, AB2, AB2A, AB12, AB15 and AB33 and do not believe it has been completed in a lawful way.</p> <p>I do not believe the Borough Council have taken into account any feedback that they have been given since the first round of consultations and have ploughed ahead with a Local Plan that is not fit for purpose.</p> <p>The sites within this allocation fall within greenbelt land and the Council is yet to exhaust all brownfield sites and have vacant buildings within the borough that have stood empty for years.</p> <p>The release of greenbelt land for the sites AB2 and AB2A do not make strategic sense due to location and the impact that it will have on the rural parish of Audley. Again, there are vacant sites within the Newcastle under Lyme boundary that can be utilized without the need to release greenbelt land (e.g the old Makro site and other unit within the Chesterton/Waterhayes area)</p> <p>Whilst some housing may be needed, I do not believe that greenbelt land should be released for this within the parish as there are better options elsewhere within Newcastle under Lyme.</p> <p>My main objection with the housing developments is for site AB33, placing houses on this site will lead to further issues for the community. This site is agricultural land and is in use currently (see attached photo). You state the site is not in use, yet the photos contradict this, you also say that it is surface water flooding, yet the flood has been there for a significant length of time, which indicates it is more than surface water. I believe that the new housing would have a detrimental impact on local services, the roads/footpath infrastructure is already poor. There is double parking throughout the village, people with prams/wheelchairs are often forced into the roads and to suggest building further housing will only exacerbate the issues.</p> <p>To build an access road onto Nantwich Road is a huge cause for concern, this road is continually busy with traffic with users often travelling above the speed limit of the road. The road acts as a cut through from those heading both north and south for work etc. Park Road also does not have the infrastructure in place to do this.</p> <p>Newcastle under Lyme should be acting more strategically and resurrect a joint Local Plan with Stoke on Trent Council. The Councils should be working in partnership to develop a plan that will bring life back to the City and in turn make people want to visit and settle here. I do not believe that there is sound evidence the housing numbers or development numbers that you have put forward.</p> <p>I believe that the Local Plan is poor, is full of contradictions and does not adhere to local or national policy. It is simply not fit for purpose and should not be progressed in its current state when you have received so much negative feedback at all stages of the process.</p> <p>Regards</p>

Consultee Family Name	Humphreys
Consultee Given Name	Kevan
Q4 Part of document	Policy
Q4 Policy	AB15
Q6 Details	<p>These comments are in relation to the Audley Ward, which is my area of experience given that I live there.</p> <p><u>HOUSING</u></p> <p>Firstly, must state I'm not a "NIMBY"; I fully accept that we need more housing nationally, however ...</p> <p>I wish to strongly object to the proposed construction of new housing in previously undeveloped land in the Audley area (AB12, AB15, AB33). This is because:-</p> <p>The existing local infrastructure is simply unable to support any further developments – the village is already blighted with crowded and potholed roads (the illegal parking in the village has to be seen to be</p>

	<p>believed) – so is already a danger to drivers and pedestrians. The additional traffic from any new developments will make this much, much worse.</p> <p>Also, there is already a stark lack of access to facilities - such as doctors / dentists / schools / shops / buses etc. – and the planned developments will undoubtedly have a devastating effect on local wildlife and rural land, including erosion of green belt, higher levels of pollution and even more congestion (as any recent survey / examination must show, levels of pollution and congestion in the centre is already appreciably higher than expected for a 'village'). So the factors above would have a major long-term detrimental effect on the physical health and mental wellbeing of existing residents.</p> <p>My understanding is that government policy states that development of greenbelt should only be considered in "exceptional circumstance"? What are the exceptional circumstances? Surely it can't be that there are no other locations within the area where brown field land cannot be used? A journey through our city reveals many areas of abandoned and derelict land, including former industrial and domestic uses (as one drive from Junction 16 to 15 of the M6 via the A500 will confirm).</p> <p>To reiterate, I'm genuinely not a 'NIMBY', but the proposed number of houses in this area would have a devastating effect for local residents and wildlife.</p> <p>So I therefore strongly object to the proposals for AB2, AB12, AB15 and AB33.</p>

Title	Policy AB15 Land North of Vernon Avenue
Consultee Family Name	Walker
Consultee Given Name	Robert
Q4 Part of document	Policy
Q4 Policy	AB15
Q5 Legally compliant	No
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>Policy AB2 is unsound as the warehouses and employment site will never be used as is the case with large parts of Newcastle-under-lyme and recently Alsager, where warehouses and employment buildings stand empty. This is a purely an illogical approach as in the present and foreseeable future businesses are shutting down due to the economical recession. My suggestion would be to reduce AB2 considerably by not building an employment zone or warehouses.</p> <p>Policy AB15 is unsound as creating new unaffordable houses (government and many councils are delusional in thinking builders will sell their properties at anything less than the area asking prices) will create more traffic problems increase stress on the infrastructure ie schools, hospitals, power, sewage which are already overstretched. My suggestion would be to halve the amount of houses to 16.</p> <p>Policy AB33 the same comment as for policy AB15 with the same suggestion reducing the houses by half to 27.</p>
Q7 Modification	<p>AB2 just build the lorry park I guarantee the warehouses and employment buildings will remain empty for at least 10 to 20 years.</p> <p>AB15 reduce the houses by half to 16.</p> <p>AB33 reduce the houses by half to 27.</p>
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)
Comment ID	NULLP509

Q4 Part of document	Policy
Q4 Policy	AB15
Q5 Sound	No
Q6 Details	<p>AB12 I believe that the plan for 125 houses will accessibility from Diglake Street to be unsound living on that street but also feel like much of the following applies to both AB12, AB33, AB15. The road is already congested and has very limited accessibility. At peak times it is hard to park cars and get cars and people safely down the street. The roads are too narrow and the junctions onto the main road are already extremely busy and dangerous without the additional traffic from 125 houses, utilising both Diglake Street and Albert Street and Chapel Street, with Ravensmead School just a few minutes down the road. The increase traffic would also cause more danger to those children travelling to school and living on the streets surrounding the new development.</p>

	<p>Pedestrian and cyclist access through the park is also a concern given that the majority of people down the street have families and small yards the park used by families in the area, taking parts of it away and again the increased traffic is a concern and unjust.</p> <p>A car park will not solve these issues and restricts residents on being able to park outside their houses to unload shopping, those with small children or with disabilities.</p> <p>The reason we chose this house was due to the views from our rear garden fields, the greenbelt and views to the monument with this development you are seriously affecting the views from our house and also potentially the sale value of our home. Given that we have had sheep in this field also I am concerned into yet more farmland being destroyed and the impact on our environment taking yet more of our greenbelt. Given the flooding in nearby Brierly Brook I feel that this development would also affect that as well as the surrounding fields and farmland.</p> <p>Traffic flow through Bignall End in general is already at a maximum increasing traffic both through AB33 and AB12 this would be further increase this beyond capacity. I also fear of the effect this will have on the GP, local schools etc. With all of this what is being proposed is just not justified or needed and is unsound and should not go ahead and should be removed from the local plan.</p> <p>In relation to AB2 there is no evidence that this will give people within the local area jobs and or attract people to the local area and again taking from our greenbelt. There are already significant levels of traffic at the M6 junc 16 and accidents at that junction regularly and already heavy impact on the A500 this is just going to exasberate this further and there is no evidence to say it will do what the council are saying.</p>
Q7 Modification	The best way to modify this is to remove AB12, AB33, AB15 AB2 they are unsound and unjustified.
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)

Q4 Part of document	Policy
Q4 Policy	AB15
Q6 Details	<p>These comments are in relation to Audley, as I'm a (REDACTED BY OFFICERS)</p> <p><u>HOUSING</u></p> <p>I wish to strongly object to the proposed construction of new housing in previously undeveloped land in the Audley area (AB12, AB15, AB33). This is because:-</p> <p>The existing local infrastructure is simply unable to support any further developments – the village is already blighted with crowded and potholed roads (the illegal parking in the village has to be seen to be believed) – so is already a danger to drivers and pedestrians. The additional traffic from any new developments will make this much, much worse.</p> <p>Also, there is already a stark lack of access to facilities - such as doctors / dentists / schools / shops / buses etc. – and the planned developments will undoubtedly have a devastating effect on local wildlife and rural land, including erosion of green belt, higher levels of pollution and even more congestion (as any recent survey / examination must show, levels of pollution and congestion in the centre is already appreciably higher than expected for a 'village'). So the factors above would have a major long-term detrimental effect on the physical health and mental wellbeing of existing residents.</p> <p>My understanding is that government policy states that development of greenbelt should only be considered in "exceptional circumstance"? What are the exceptional circumstances? Surely it can't be that there are no other locations within the area where brown field land cannot be used? A journey through our city reveals many areas of abandoned and derelict land, including former industrial and domestic uses (as one drive from Junction 16 to15 of the M6 via the A500 will confirm).</p> <p>The proposed number of new houses in this area would have a devastating effect for local residents and wildlife.</p>

Consultee Company / Organisation	United Utilities
Consultee Family Name	Leyssens
Consultee Given Name	Andrew
Q4 Part of document	Policy
Q4 Policy	AB15

Q6 Details	<p>Policy AB15 Land North of Vernon Avenue</p> <p>We request that criterion 8 is amended as follows:</p> <p>'8. Development layout will consider proximity to sewers within the site and adjacent to the boundaries of the site and provide for access for maintenance, repair and replacement and appropriate offset distances away from such the assets.'</p> <p>We request that paragraph 13.43 is amended to take account of records of sewer flooding having occurred in the wider area.</p> <p>'13.43 The site is located within Flood Zone 1 but some areas within the site are affected by surface water flooding. In accordance with national and Local Plan policy, an effective drainage strategy will be established, and a sequential approach applied within the site directing development to areas of lowest flood risk. There are flood incidents from the public sewer in the wider area. Applicants must engage with United Utilities to consider the detailed design of the site and drainage details. Applicants should not assume that the sewers can be diverted, or that any levels can change on top of the sewers, as such proposals can negatively affect hydraulic performance and increase or displace flood risk. Any risk of sewer flooding could affect the developable area of the site and the detail of the design. Careful consideration will need to be given to the approach to drainage including the management of surface water; the point of connection; whether the proposal will be gravity or pumped; the proposed finished floor and ground levels; the management of exceedance paths from existing and proposed drainage systems and any appropriate mitigating measures to manage any risk of sewer surcharge.'</p>

Q4 Part of document	Policy
Q4 Policy	AB15
Q6 Details	<p>Hello</p> <p>I am emailing to object to the proposed development on site AB15.</p> <p>I do not believe that the plan is sound or justifiable, for the below reasons.</p> <p>The overall NULBC housing numbers cannot be justified: The population of the Borough is falling (a 0.5% drop from 2011 to 2021) which suggests a lower Household forecast.</p> <p>The number of new dwellings built in the Borough in excess of the targets in previous years (32% over the target from the 2018-19 year to the 2020-21 year) and the excess in neighbouring authorities. People from Kidsgrove will live in new builds in Golden Hill, even though it's technically in Stoke, people from Audley will live the new builds in Alsager, even though it is in Cheshire East and people from Baldwins Gate & Loggerheads will live in new builds in Market Drayton, even though it's in Shropshire.</p> <p>Housebuilding has exceeded the increase in households over the past 10 years in the Borough.</p> <p>The Local Plan should also place greater emphasis on developing brownfield sites at higher densities, reusing vacant town centre buildings and tackling the waste of resources that is long term empty homes.</p> <p>We shouldn't be building on good quality, carbon soaking, agricultural land that forms the beautiful countryside that our residents enjoy in their leisure time.</p> <p>(redacted by admin) this land is currently using for farming. And the field is extremely waterlogged, our garden has been flooded on numerous occasions due to this. I do not feel that this land is suitable to build new homes on. I fear that it would only exacerbate the flooding issue as the new builds have on barleyfields Audley. A number of residents have commented on how flooding has since become an issue for them since these new builds next to their homes have been built. I do not wish for the same issue for us, whenever it rains the back of our garden becomes flooded, as does the field behind our fence. Building on this field would impact our land even further causing more flooded lawn and garden. (Photos attached).</p> <p>There is also protected wildlife living on this land, we have seen a few hedgehogs over the years living in the hedgerows bordering the field. I have also spotted hares at dusk. It is vital that we protect our wildlife and not destroy their homes, especially protected species.</p> <p>In addition our village cannot take the extra traffic that would come with this many new homes. There are no traffic calming measures, and the village is already massively overrun with vehicles especially at peak times. Church street in particular is too busy already and has become dangerous. With cars parked on double yellows, all car parks full and pedestrians trying to cross the roads with people driving too quickly and vision impaired by illegally parked cars. This would be worse with more people living in the local area using the same amenities. We have lived in Audley since 2013 and in 10 years the traffic I feel has already doubled, it is much busier and much more dangerous than it was when we first came to live here.</p> <p>I fear that the added pressure on our doctors and dentist would also have a negative impact. We are already having to wait longer for appointments at the doctors, this would be much worse with more residents using the same health centre. There are residents in alsager waiting more than 4 weeks for an appointment, I do not wish for the people of Audley parish to be in the same situation.</p>

	<p>The dentist is already at capacity and not taking on new customers, they are also very difficult to get an appointment with.</p> <p>The traffic coming in and out of the village is dangerous, with many collisions and near misses coming on and off the A500. This again would be made much worse with more residents living in the parish.</p> <p>I strongly disagree building on green belt land, this green space provides a safe haven for nature and wildlife to thrive. It is our duty to protect our wildlife and their habitats. It is also good for mental well-being to have ample green spaces around us. We chose to live in Audley and raise a family here due to the green spaces available, the fresh air and the opportunity to exercise in the countryside and to teach our children about nature. To have green spaces ruined for housing that isn't actually needed would be devastating for both the wildlife and the residents who have the right to enjoy the countryside around us. There are ample sites in the surrounding areas which can be built on, with permission already granted. I would strongly urge the council to look in to those sites before destroying precious green space.</p> <p>The village is a semi rural village, and we take pride in where we live, Audley and Bignall end should be kept this way for all of the reasons mentioned above. Our small village really could not cope with increase in housing on top of the proposed warehouse space too. It simply does not have capacity to accommodate this.</p> <p>The local schools are also very busy too, and with only 1 nursery local to our parish I also fear that the pressure on these will be too high. They will not be able to keep up with the amount of children needing a place.</p> <p>We should also be supporting our local farmers and encouraging farm land to continue. I am astonished that this isn't something that the council would be putting as a priority. Sustainable farming whilst supporting the wildlife is far more important than building homes that are not needed.</p> <p>With the reasons the listed I would like to ask for the planning inspector to please remove this site from your local plan.</p>

Title	Policy AB15 Land North of Vernon Avenue
Consultee Family Name	Barber
Consultee Given Name	Peter
Q4 Part of document	Policy
Q4 Policy	AB15
Q5 Sound	No
Q6 Details	<p>NOTE: All my responses are in Blue</p> <p>Reg19 and related Evidence Documents are in Black</p> <p>Reference to site AB12,AB15 & AB33 and related issues that arise including interface with other development in the Local Plan REG19 and associated Evidence documents have been used for comments below.</p> <p>General:</p> <p>Population growth figures (Census 2021 & ONS figures) suggest only a 6.9% increase in population, variable student figures do skew this slightly but this is a mobile population.</p> <p>The area of Audley has a population that is mixed but contains quite a few older residents and a younger people who wish to stay if affordable housing (1-2 Bedrooms) was available</p> <p>Employment is high although a need for better education and up skilling the workforce is required.</p> <p>Some small growth is required for these populations. However building on green belt land would open the floodgates for excessive development, Especially if AB2 was to go ahead. The risk of over development to chase possible jobs would happen. The risk of over development with surrounding conurbations is high. Note the (NPPF) the borough has already exceeded its recent housing targets. Where is the evidence we need so many more?</p> <p>The projected models would result in many high cost homes with few if any affordable housing for locals. Also these housing numbers do not really match the requirements and exceed them by quite a margin. Are we creating a need for AB2 that does not warrant it based upon inflated employment figures for the economic zones such as AB2/AB2a</p> <p>The vast majority of AB2 site employees would come from the surrounding districts by car, (with generally only outside high income earners in the affordable properties in jobs not related to the economic Zones AB2).</p> <p>Most of these new homes could easily be incorporated in areas of brown field sites (opposite TK30 etc and along the A500 corridor.</p>

	<p>Regarding building sites it is noted that the employment sites AB2/Ab/2a is on Green Belt flat open easy build terrain(accepted) and TK30 is on Green Belt hilly, mine, and scrap yard site (rejected).</p> <p>Bus services are dismal for they area and providing a reasonable service appears unviaable to most bus operators. New employment sites AB2 would only provide services from Newcastle or Stoke. The report also stresses the difficulties of funding and operators clearly.</p> <p>Traffic from the M⁴/J16 & A500 would cause great congestion if a problem occurred on the Highway system as it does now with traffic taking short cut from Crewe and traffic for school runs etc. The traffic survey does not really address this and any mitigation would be years away.</p> <p>How much funding would S106 and other measures contribute towards infrastructure (eg a £100000 s106 would not pay for a school (around 15000000 to £200000) let alone the cost of water, and services for a community on top of that. Can the borough afford such investment??</p> <p>Loss of Greenbelt is a serious issue as any mitigation is a poor replacement for nature and habitat and really needs to be a last resort based on sound evidence not economic requirements. It is also grade 1-2-3 Agricultural land.</p> <p>AB12</p> <p>Location: Green Belt would break and allow further unchecked expansion at a later date. Some livestock use the land regularly</p> <p>Drainage : site has areas of poor drainage or flooding potential that will cause problems for new and existing structures</p> <p>Access: Very poor access given the planned amount of dwelling on this site and the need to reduce traffic on Diglake street which is very narrow. The overflow of parking would be felt right across the area.</p> <p>Traffic: Traffic flow increase would also cause problems through the village</p> <p>Number of dwellings: very large number on site with currently no idea of type or number of each type (3 story town house, 5 bedrooms or 1-2 bedroom small house).</p> <p>AB15</p> <p>Location: Green Belt would break and allow further unchecked expansion at a later date</p> <p>Drainage : site has areas potential poor drainage or flooding potential that could cause problems for new and existing structures</p> <p>Poor access: potential access, but would cause parking problems</p> <p>Traffic: high volume of traffic in very narrow streets</p> <p>Number of dwellings: very large number on site with currently no idea of type or number of each type (3 story town house, 5 bedrooms or 1-2 bedroom small house). AB15may allow for the required readjusted small amount of housing required for Audley if it is affordable for young people and older residents (being near the centre)</p> <p>AB33</p> <p>Location: Green Belt would break and allow further unchecked expansion at a later date. It also has working agricultural activity and is on good soil. Livestock use the surrounding land also Therefore its loss would not easily be replaced and harm the environment.</p> <p>Drainage : site has areas poor drainage and flooding potential that could cause problems for new and existing structures . New building would cause extra problems too.</p> <p>Poor access: small country lane with associated width of road and junction problems with volumes of traffic.</p> <p>Traffic: as above</p> <p>Number of dwellings: very large number on site with currently no idea of type or number of each type (3 story town house, 5 bedrooms or 1-2 bedroom small house).</p> <p><i>Reading through all the documents including supporting evidence documents has taken a great deal of time by any individual. Few people including councillors would have a full understanding of all the points contained let alone a non- expert. I believe these documents became available for the full council on July16th 2024, ready to be passed for scrutiny on the 24th July 2024.</i></p> <p><i>Having some experience of technical documents in industry the following is of concern.</i></p> <ol style="list-style-type: none"> <i>a) The time scale given between release and scrutiny as many people involve would not have been aware of all the details from all parts of the final document/s even those who would have been involved in aspects of it. The time scale to fully check (1000,s of pages across numerous documents) given that councillors have other tasks and duties in my view is insufficient to arrive at a full rounded decision based on evidence.</i> <i>b) Many of the supporting evidence documents are produced by consultants. What assurance do we have to confirm they are fully independent from development involvement bias?</i> <i>c) The public consultations I have attended have only provided very vague answers. To find more out you have to dig much deeper, hence above notes). Within the consultation timescale many members of the public wish to respond but find the task very confusing, intimidating and with day to day lives hard to complete or do simple not have the skills or equipment to respond. Reg. 18 for me was extremely difficult to complete online despite phone calls, but I did manage it (Ithink!).</i> <p><i>From above on AB12,AB15 & AB33 I am not sure currently given the information seen that the selection of these site and the Local Plan (reg19) clearly demonstrates soundness in this regard due to the issues noted in all above sections</i></p>
Q7 Modification	<p><i>To hold review of the facts surround AB12,AB15, AB33 the local plan Reg19. This review that would need to look at the real number of dwellings, linked to a more reasonable review of employment and sites required (see above section on AB2/AB2a, TK30 ,KL15)</i></p>

	<p><i>It may on the surface appear expensive and unnecessary as appears to have been sorted out and decided However a pause and a review would be much cheaper in the long run and potentially save millions not to mention good green belt. To provide affordable homes to a local population rather than large homes for outside investment would be a better policy as a small number of dwells are required in the right place would allow a slower development pace and time to reflect and react on trends in a more accurate manner.</i></p> <p><i>From above on AB12,AB15 & AB33 I am not sure currently given the information seen that the selection of these site and the Local Plan (reg19) clearly demonstrates soundness in this regard due to the issues noted in all above sections</i></p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	To gain an understanding of the processes involve in coming to a final decision based upon the technical evidence.

Title	Policy AB15 Land North of Vernon Avenue
Consultee Family Name	Page
Consultee Given Name	Diane
Q4 Part of document	Policy
Q4 Policy	AB15
Q6 Details	<p>In response to the Local Plan consultation, we would like to object to the parts pertaining to Audley & Bignall End. Building around 250 extra houses in the area will considerably change the nature and character of the village, going against particularly SOIV, to reduce the carbon footprint, promote sustainability and harness opportunities for carbon sequestration. It also goes against SOVI, to promote and sustain villages and their character. The road infrastructure will not cope with the increase in traffic that this will bring. In many places along the routes in & through the village the houses open directly onto the road with no off-road parking. This results in parked vehicles restricting the carriageways and causing congestion. This will be made worse with the increase in cars that the extra housing will bring. There is no mention in the plan of any provision for healthcare or schools for the increased population. The medical practice in Audley is already at capacity and increasing the population will put increased strain on the health services and risk diminution of care to the existing patients of the practice. The current proposals also go against the direction of travel for government policy with the need to keep most development within urban areas as far as possible, with optimisation of densification of properties to make best use of public transport and greener travel. Green belt land should be protected. The National Planning Policy Framework 2021 already indicates the need to protect green belt land and that rural development should support local services, not overwhelm them.</p>
Comment ID	NULLP1255
Order	151
Title	Policy AB15 Land North of Vernon Avenue
Consultee Family Name	Moreau
Consultee Given Name	Jan
Q4 Part of document	Policy
Q4 Policy	AB15
Q5 Sound	No
Q6 Details	<p>Again, this site AB15 is good quality agricultural land in the green belt and has been grazed for a number of years and is still in use, contrary to what the Local Plan has to say. There is photographic evidence to prove this which will be submitted if required. There is a high water table in Audley and it doesn't take much precipitation before the field floods and the roads cascade with water. The sewers are from the Victorian era and just can't cope. Building 15 homes on this plot of land will just exacerbate the problem.</p>
Q7 Modification	<p>The Final Local Plan is based on a High Growth Scenario yet there is no justification of why this might be.</p> <p>The last census showed a reduction in population, our birth rate is lower than our death rate, our unemployment is low – Newcastle under Lyme does not follow the rest of the UK so I feel we do have exceptional circumstances to justify a reduction in NULBC housing targets but they have not listened. Can you also refer to Pages 4 & 9 of Appendix B which was my response to Regulation 18 for more figures to back this point up. I honestly believe this Local Plan is not sound – the housing figures are still too high. The previous consultation (Regulation 18) didn't follow the Gunning Principles – see Audley Rural Parish response and this consultation has had various set-backs including mis communication with the public – we were initially informed that email submissions would not be allowed but then after several weeks, we were informed that emails were allowed. See official notice from NULBC below.</p> <p>The Portal for both consultations has caused much frustration amongst residents. There were complaints about the Portal during Regulation 18 yet the same problems of not being able to access it, not being able to add comments continues. NULBC did not listen to residents and improve the Portal At the Audley consultation event for Regulation 18, Cllr McEmeny was heard to say that this AB2 WILL be going ahead</p>

	<p>– this is gross predetermination. For Regulation 19 several evidential reports were not made available in time for either the Special meeting of the Economy & Place Scrutiny Committee on 11th July 2024 nor the Full Council Meeting on 24th July 2024 – certain councillors actually lied at the Full Council and said that they were available – they were not! We have the proof that they weren't – see below</p> <p>How do councillors make crucial decisions as to whether the draft Local Plan should be progressed without having the opportunity to view and digest information? In any event, in order to make this Final Local Plan sound you need to remove the following sites from this the Final Local Plan AB2/AB2a AB12, AB15 & AB33</p>
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)
Q9 Hearing reasons	Although I do not wish to speak at the public hearing – I would like to be in the public gallery if at all possible. I am unsure whether this will be possible.

Consultee Family Name	Gilmour
Consultee Given Name	John
Q4 Part of document	Policy
Q4 Policy	AB15
Q5 Sound	No
Q6 Details	<p>Policy AB15/AB12/AB33</p> <p>I oppose this because it is too many houses for Audley Parish , it is not justified to lose so much greenbelt, there are not exceptional circumstances, therefore it is unsound. The roads that run through Audley/Bignall End, are country B5500 roads with cars parked either side.</p> <p>AB12/15/33</p> <p>The main reason is the amount of traffic that will be generated through the narrow roads. Already the B5500 and Alsager road to the A500 are rat runs and throughout the day articulated vehicles HGV, OGV1&2 use this road as a cut through to avoid M6 junction 16 and Talke roundabout. In 2 hours on three occasions I counted between 1350-1750 vehicles using the mini roundabout at the junction of B5500 & Alsager road. The larger vehicles have damaged the roundabout many times and only this year have had it re tarmace'd after having huge potholes for over 12 months.</p> <p>If there is an accident or breakdown on the A500 or M6 near j16, the amount of traffic must double, the traffic is queuing along B5500 with hgvs and commercial vehicles blocking the roads.</p> <p>Policy : AB15</p> <p>Has historic tunnels running through the field. Development here will affect the village main street greatly. There isn't enough parking in the village now and many park over the double yellow lines. The additional traffic coming via Vernon avenue will lead onto the church street. With parking on the pavements and double yellow lines, there will be hold ups all the time. There needs to be a traffic assessment for church street, which would identify the need for the street to be widened, but it isn't possible, therefore it is unsound.</p> <p>For all these reasons, the greenbelt should not be proposed for development and an alternative planned on lesser quality land like BW1&2 which was a contender site but not carried forward to reg 19, is this because it's staffs county council wanting to see their land. There are moderate contributors to the greenbelt but this Local Plan has decided on Strong contributions to the greenbelt, again, why, again is it Staffordshire county council wanting to sell. That should not be considered when there is lesser quality grow available. The plan is unsound.</p>

Q6 Details	<p>Sarah Thorrington</p> <p>(redacted by admin)</p>

	<p>Dear Planning Policy Team</p> <p>I am a resident of Audley, residing at the address above. I am writing with my response to the current local neighbourhood plan for our area.</p> <p>I strongly object to the proposals for Audley parish and consider the plans not to be sound with the inclusion, in particular, of sites AB2, AB2a and AB15.</p> <p>Objections to site AB15 'Land north of Vernon Avenue'</p> <p>I object to this proposed site as I believe that there would be extremely negative impact on traffic in the area. The site is likely to generate a significant increase in road-based traffic. I believe this increase will negatively impact the safety of our local roads and will cause higher congestion and more difficulty parking in our already severely congested village.</p> <p>In addition, I object to the development of this site as I believe that 33 more houses will mean an increase in population that would lead to pressure on health, education and other facilities. I do not believe that there is a case to introduce this pressure as our local population has not grown in proportion to the new housing recently completed in the area.</p> <p>I do not believe this proposed site is sound or justified and I would request that it be removed from the local plan.</p>

Title	Policy AB15 Land North of Vernon Avenue
Consultee Family Name	Montague
Consultee Given Name	Marjorie
Q4 Part of document	Policy
Q4 Policy	AB15
Q6 Details	<p>I wish to lodge the objections listed below. They are relative to the Newcastle Under Lyme Local Plan with particular reference to the site allocations in Audley Parish. I feel that the local plan in these areas is not justifiable and is not sound.</p> <p><u>Site AB 2 – Land at junction 16 of the M6, Proposed strategic employment site.</u></p> <p>This site is proposed at 80HA – the local plan says the council are looking to allocate 22HA so why is this quadruple the size needed and all in one area and all on high quality green belt land. To allocate something that is four times what is needed, makes this element not justifiable.</p> <p>There will be a lot of work required around a new junction should this site be granted, where is the funding to come from for this? I cannot see any reference to the funding for this so feel this in itself is unsound.</p> <p>I expect there will be an increase in volume of traffic in the local area should this site be allowed, increasing air and noise pollution is not in the best interests of people living in the area and causing greater traffic volume on already busy local roads. I cannot see any justification for this development at all given that there is much warehousing lying empty in other parts of the county.</p> <p>The council appear to be adopting a high growth strategy and I would like to know where the evidence for this strategy is? I think this approach without evidence makes the plan unsound.</p> <p>I strongly believe that this site needs to be removed from the local plan as it is not a justifiable development and goes against what the council themselves say is needed for employment in the local area.</p> <p><u>Site AB12 – Land east of Diglake Street</u></p> <p><u>Site AB15 – Land north of Vernon Avenue</u></p> <p><u>Site AB 33 land off Nantwich Road/Park Lane, Audley</u></p> <p>I believe all these sites should be removed from the local plan as they are unjustifiable and unsound for the following reasons.</p> <p>AB12 – Access and egress on narrow roads that are already congested and not sustainable over time</p> <p>AB12 Areas prone to flooding and not sustaining climate control</p> <p>All areas on high quality green belt land</p> <p>Audley and Bignall End are small rural villages – losing the identity of both areas is unsound</p> <p>Additional 200 to 400 cars on the roads that are already congested, where parking problems are a major concern</p> <p>The pressure on local services that cannot manage now, I cannot get an appointment to see my GP due to demand and yet nothing presented on how this will be addressed</p> <p>Small local school, over capacity would then lead to more people travelling out of the area for school and creating further congestion</p> <p>All the suggested allocations for the area are on the green belt and would change the landscape of the local area for ever. More sustainable sites should be found and all the above should be removed from the local plan as unjustifiable and unsound.</p>

Title	Policy AB15 Land North of Vernon Avenue

Consultee Family Name	Rhodes
Consultee Given Name	Mrs
Q4 Part of document	Policy
Q4 Policy	AB15
Q6 Details	<p>To whom it may concern,</p> <p>As with all previous responses I sincerely hope that all comments are read in full, and are truly taken into consideration in respect of proposed plans. I fear this is just a tick box exercise and that decisions have already been made.</p> <p>What makes this more difficult is, I like many people who have responded numerous times just wonder is there any point.</p> <p>Unlike the last response I sent I have not had the time to view the full and extensive document, therefore, this will be bullet points of objections/concerns and suggestions of how we can better make use of this land if it needs to be 'developed' at all.</p> <p>These proposed residential sites are in greenbelt, rather than destroying these areas we should be encouraging open spaces for wildlife and the health and wellbeing of existing residents.</p> <p>These sites especially AB12 will only put more pressure on the small main road (Ravens lane) that is already populated with too many cars-now parked on both sides of the road as the elderly members of the community move (varied reasons) from terraced houses to be replaced by families with as many as 3 or 4 cars-making it difficult for large farm machinery and HGV to pass, destroying roads which are rarely repaired.</p> <p>This will alter the very fabric of our community putting extra pressures on already stretched local services: doctors, dentists, village parking, schools and public transport- NB a major link route being discontinued only in the last couple of years - reducing the access to wider services for many.</p> <p>Whilst I understand and appreciate there is a need for more housing as the population rises, however, maybe we need to consider as a country better management of our borders and who we accept into the country - possibly using a well structured and practiced method such as Australia.</p> <p>Also when building new houses anywhere there needs to be more thought and space allocated to off road parking.</p> <p>There are many brownfields sites around Newcastle & Stoke that could be effectively utilised if only councils worked together.</p> <p>A suggestion of how we as a community could instead work towards being fit for the future and carbon neutral; these identified resident areas could instead be large charging parks for electric vehicles that could be accessed and used by all local residents to conform with government plans moving forward.</p> <p>There are so many terraced houses it will be impossible to mange this locally in the future if solutions are not considered now!</p> <p>In respect of AB2 surely there can be no further requirement for 'warehousing' - just look around the area.</p> <p>This would destroy access to the country side, significant wildlife areas and turn Stoke into warehouse central.</p> <p>Instead; wind turbines or solar fields would mean that the area could still be used but would benefit the national grid.</p>

Title	Policy AB15 Land North of Vernon Avenue
Consultee Company / Organisation	Protect Audley Parish Green Belt Group
Consultee Family Name	Roberts
Consultee Given Name	Gary
Q4 Part of document	Policy
Q4 Policy	AB15
Q5 Sound	No
Q6 Details	<p>1.0 INTRODUCTION</p> <p>1.1 Audley Community Action Group (PAPG) is a community interest company. The CIC exists to protect and enhance the Green Belt in the civil parish of Audley, with over 1,300 supporters.</p> <p>1.2 We strongly object to the high number of houses planned for the borough. Also, the allocation of sites AB12, AB15 and AB33 in the Local Plan. We do not believe the overall housing figures, nor the site selections are sound, they can neither be justified nor is it likely to be effective. The grounds for the exceptional case for removing the land from the Green Belt have not been met.</p> <p>2.0 PSD1</p> <p>2.1 The housing target is too high and will negatively impact on the weaker housing markets in the borough and nearby settlements. It will also reduce the amount of valuable agricultural land in the green belt.</p> <p>2.2 The following tables, with numbers taken from ONS, show that both population growth and households growth are historically low in the borough :</p> <p>(TABLES ATTACHED IN FILE)</p> <p>2.3 The Local Plan has set a target of 8,663 new dwellings over a two decade period. Council tax records indicate that there are 57,627 dwellings in the borough, so the target is for a 15% increase over a two decade period. This will undermine the weaker housing markets in the borough and nearby settlements</p>

	<p>2.4 The cost of housing in the borough is low by national standards (ONS figures for 2023 show that the average earnings/house prices ratio is 5.52 in the borough and 4.12 in Audley. This compares to the national figure of 8.14).</p> <p>2.5 ONS figures comparing 2011 to 2021 show that the earning/house price ratio has been rising much slower in the borough compared to region and England:</p> <p>(TABLE ATTACHED IN FILE)</p> <p>2.6 Looking at some demographic data (which is ignored in the consultants reports) we can begin to understand why the population is not increasing. The table below shows the data taken from Nomis. For the years 2018 to 2021 the table shows live births and the issuance of national insurance numbers (NINOs), usually to migrants and the number of deaths. This shows that in 2020 and 2021 deaths outstripped births easily and hence population growth has been driven overwhelmingly by inward migration.</p> <p>(TABLE ATTACHED IN FILE)</p> <p>2.7 In the borough, there is a problem of under occupation (with an aging population) and empty properties. Adding more homes is only likely to worsen the over-supply and to draw in better off residents from Stoke-on-Trent, undermining the city's regeneration policies.</p> <p>3.0 AUDLEY RURAL PARISH</p> <p>2.1 The infrastructure of the parish is not adequate for the level of extra housing envisaged. There are existing problems with rat running through the villages and the local highways are struggling to accommodate the strain of the traffic. There is a severe parking problem in the centre of Audley and more cars will make this worse. No impact assessment has been made for these combined sites. This problem will be even greater if site AB2 remains in the Local Plan.</p> <p>2.2 There are flooding issues throughout the parish and the existing sewage system is inadequate, as shown by United Utilities records</p> <p>(TABLE AND MAP ATTACHED IN FILE)</p> <p>4.0</p> <p>4.1 At regulation 18, United Utilities noted that a "sewer passes through site which will need to be taken into consideration." However, no assessment has been made to ascertain how this site will impact on the sewer system.</p> <p>4.2 At regulation 18, Natural England noted that the site is "adjacent to a traditional orchard and this should be taken into consideration. " This site is not mentioned in the Local plan. How was it taken into consideration?</p> <p>4.3 This site is at the bottom of a hill and there is a steep gradient from the site to village facilities. This is likely to reduce active travel.</p> <p>4.4 We are also disappointed that good agricultural land is being lost.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	<p>6.0 EXAMINATION IN PUBLIC</p> <p>6.1 We wish to be represented and speak at the examination in public.</p> <p>6.2 To illuminate the issues raised by further explaining our concerns, the reasons for them and what we would like changed.</p>

Q4 Part of document	Policy
Q4 Policy	AB15
Q5 Sound	No
Q6 Details	<p>I consider the proposal to build 33 houses on the site known as AB15 to be unsound for the following reasons:-</p> <p>1)The proposed site is currently Green Belt and good agricultural land that contributes to the well-being of the local population. It is able to absorb rain water and helps mitigate any adverse local climate change issues. The building of 33 houses and all the road infrastructure associated with such a development will have an adverse affect on flooding plus additional road traffic to an already congested area.</p> <p>2)The proposed additional 33 houses will no doubt add to the vehicle count in the area and contribute to more congestion in an already busy area. The road through Audley is a 'rat run' for commuters traveling between Crewe and the Potteries as they try to avoid the congestion on the A500. I have witnessed major congestion at all times of the day due to the vehicles trying to negotiate the mini roundabout on the B5500 Nantwich Road and I see the proposed site will only make the situation worse.</p> <p>3)The extra 33 houses would probably overstretch the existing Schools, Doctor and Dentist surgeries and car parks unless additional resources are put in place as a condition of the plan up front.</p>

Q7 Modification	The Planning Inspectorate should delete the proposed building of 33 houses in site AB15 as completely unsound.
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)

Q6 Details	<p>I object to the the following planning: AB12, AB2, AB15 and AB33</p> <ol style="list-style-type: none"> 1 NuLBC are applying a high growth strategy. They present no evidence that this will transpire. In the village of audley and surrounds there are small pockets of land that are being developed appropriately and proportionately to the surrounds. Larger scale housing is not required, therefore I feel this is unjustified and unsound. 1 AB12 represents a high quality contribution to the green belt. Building 125 homes here would exacerbate flooding into the nearby Brierley Brook. This would take away climate mitigation and contributions to our food security, not just from this site but also from neighbouring fields that will be affected by flooding. This site is therefore not justified and consequently unsound. 2 AB15 (33 dwellings) and AB33 (55 dwellings): Similar arguments to item 5 above can be applied to these allocations also. Therefore, these allocations are similarly unsound. 3 All allocations in the Audley and Bignall End area for housing are in the green belt. <p>Moreover, as proposed developments they would increase traffic flow well beyond the capacity of the current road system as well as placing added pressure on local schools and GP's surgeries etc. These allocations are therefore not justified, hence unsound.</p> <p>I would further like to add a personal note. Being a mother (REDACTED BY OFFICERS), I want to stress the importance of our community here, our children "go outside to play" these green spaces are invaluable. At a time where mental health in young people is a pandemic problem let's not allow this to happen to our children, who won't be children forever. We want everyone to enjoy this wonderful village, this generation and many more to come. The wildlife in our village is amazing, from owls and bats to badgers and hedgehogs. We WANT to keep it this way. Trees are natures carbon catchers, it is vital that these green belt areas are protected and cherished. Staffordshire County council should be utilising brown field sites over green belt.</p>
Q7 Modification	To render the local plan sound, remove these allocations from the local plan.

Q6 Details	<p><u>Site AB12 – Land east of Diglake Street</u></p> <p><u>Site AB15 – Land north of Vernon Avenue</u></p> <p><u>Site AB 33 land off Nantwich Road/Park Lane, Audley</u></p> <p>I would like the local council to remove the following development sites from the local plan and consider looking at low infill areas rather than large developments that will damage the local area, put pressure on infrastructure that is already struggling with demand and change the character of the village that can never be regained should these developments occur.</p> <p>There is a large development proposed at Red Street which is a short distance from Audley and the amount of traffic pollution that would be caused across both these areas is ill advised. At peak times in the village the traffic can back up due to double parked cars in an already overcrowded area. The village can, at times become impassable and leads to people seeking short cuts around high pedestrian areas. The local roads cannot sustain the additional traffic that extra housing will bring, potentially 200 to 300 cars plus the direction of traffic when problems occur on M6/A500 when the village becomes a diversion route.</p> <p>Audley and Bignall End is a small rural village and does not have the necessary infrastructure to support and sustain these new developments and become to all intents and purposes a town. Currently, it is very difficult to get a GP/Dentist appointment and further residents will add to that strain. There is one</p>

	<p>primary school with limited space so people would need to travel out of the area to access schools, again adding to the congestion and adding to the environmental pollution.</p> <p>The main road – Ravens Lane is already congested, cars park on either side and it is difficult to pass when buses/tractors/larger goods vehicles are on the road, an additional 200 to 300 cars will add to these pressures and there is a real fear that road traffic accidents and incidents will rise.</p> <p>I have fears that the village, feelings of the residents, the local heritage is all being ignored. The fact that council members did not have time to look at all the relevant paperwork prior to voting this plan through speaks volumes, it is almost like it does not matter what we say, it will just be done to us anyway.</p> <p>Words fail me when thoughts turn to the removal of large swathes of greenbelt in one area, the proposed developments will increase the traffic on roads that are not able to cope with current volume and therefore are not justified. These sites need to be removed from the local plan as they are unjustifiable and hence unsound.</p>

Q4 Policy	AB15
Q6 Details	<p>In respect of the above I have the following comments as to why the proposed sites within the Audley Rural Parish are not viable, and please note this is a rural parish, which would not be the case anymore if any of the proposed sites are allowed!</p> <p>AB15</p> <p>Simply put there is no way that this should be allowed. The narrow roads and volume of traffic in this area and the village itself would not cope with even this small number of houses. The on road parking make driving round this area difficult now, and the volume of vehicles even without new housing seems to increase year on year. Most families in this area have two or three cars, a lot of the houses in the main village are terraced with no driveway parking and people use those roads for access which causes big traffic issues.</p> <p>I would question the Councils decision making if they consider any of the above sites to be justifiable and all of them to be unsound with very little consideration given to the community and residents of Audley and Bignall End. Whilst I accept that there has to be a need for housing and industry they need to be built in areas that can cope with all that they bring with infrastructure already in place, the infrastructure is not something that can be added at a later date! At the start of my email I mentioned this is a Rural Parish, and that is what it should remain. The surrounding country side and the sites themselves are of benefit to the local ecology and as such is as valuable as any housing or warehousing would be.</p>

Q6 Details	<p>Re: Policy AB33 land off Nantwich Road/Park Lane and AB12 and AB15</p> <ul style="list-style-type: none"> My primary objection to the sites chosen for housing – AB33, AB12 and AB15, is that they are on the green belt. I am aware that there are many brownfield sites around the borough, including Audley, that could be cleaned up and developed. I recognise that developers would prefer green belt sites as it makes the project cheaper and faster, but this does not make it right..

	<ul style="list-style-type: none"> Our village infrastructure is not designed nor large enough to take extra traffic from places of work and/or large housing estates. Indeed the current poor state of the road surfaces will only be made worse from increases in traffic volume. There will also be extra demand on village amenities such as schools, shops and GP surgery, which currently are running at very high capacity with seemingly little capability to increase. <p>I would like to state that I, along with many others, recognise the need for good, low cost housing throughout the borough, and that includes Audley. I believe that we should accommodate new houses, so that younger people who have grown up in this location, together with people who wish to move here, have a chance to own their own their own homes or rent suitable properties in good condition.</p> <p>The proposed changes to our rural village of Audley would seem to fail on many fronts, but the use of green belt and the necessary changes, even if possible, would alter the character and functioning of a small, relatively quiet place.</p> <p>It is for these reasons that we wish the planners to remove sites AB2, AB15, AB12 and AB33 from the local proposal.</p>

Q6 Details	<p>Issues with AB15 and Access to Vernon Avenue:</p> <p>The proposed AB15 development will also have a detrimental impact on traffic and road safety, particularly with the access onto Church Street from Vernon Avenue. This area is already prone to congestion, and the development will further strain the local road network, increasing the likelihood of serious road traffic accidents. The local infrastructure is simply not designed to handle such a significant increase in traffic volume.</p>

Also, the allocation of sites AB12, AB15 and AB33 in the Local Plan. We do not believe the overall housing figures, nor the</p>

	<p>site selections are sound, they can neither be justified nor is it likely to be effective. The grounds for the exceptional case for removing the land from the Green Belt have not been met.</p> <p>2.1 The infrastructure of the parish is not adequate for the level of extra housing envisaged. There are existing problems with rat running through the villages and the local highways are struggling to accommodate the strain of the traffic. There is a severe parking problem in the centre of Audley and more cars will make this worse. No impact assessment has been made for these combined sites. This problem will be even greater if site AB2 remains in the Local Plan.</p> <p>2.2 There are flooding issues throughout the parish and the existing sewage system is inadequate, as shown by United Utilities records (please see attachment)</p> <p>Audley discharges account for 47% of the Constituency's hours of discharge (907.07 of 1,925 hours) and 29.5% of the spills (135 of 458 spills). The highest of the six watercourses in the Constituency (please see attachment)</p> <p>3.1 At regulation 18, United Utilities noted "various sewer assets and associated combined sewer overflow pass through this site which will be a constraint to development." However, no assessment has been made to ascertain how this site will impact on the sewer system.</p> <p>3.2 At regulation 18, Staffordshire County Council noted concerns about the access. It stated "Wide enough access to Diglake Street but issues regarding on street parking and increased traffic. Preferred access is B5500 but existing access is of insufficient width in its present form."</p> <p>3.3 LP para 13.27 has not sufficiently addressed this problem unless. Whilst there is provision for off street parking on site AB12, most residents do not like parking their cars out of site. How will they be induced to use this parking area? The suspicion is that it is intended to force residents from parking outside their homes in Diglake Street, possibly by the introduction of double yellow lines? We strongly object to a Local Plan site that creates a problem, then disadvantages existing residents in order to remedy the problem that the Local Plan has made. Surely, this dilemma shows that the site is not appropriate for housing?</p> <p>3.4 We are also astounded that a site judged to provide a strong contribution to the Green Belt has been chosen over sites that provide a moderate contribution.</p> <p>3.5 We are also disappointed that good agricultural land forming part of a County Council starter farm is being lost.</p> <p>4.0</p> <p>4.1 At regulation 18, United Utilities noted that a "sewer passes through site which will need to be taken into consideration." However, no assessment has been made to ascertain how this site will impact on the sewer system.</p> <p>4.2 At regulation 18, Natural England noted that the site is "adjacent to a traditional orchard and this should be taken into consideration." This site is not mentioned in the Local plan. How was it taken into consideration?</p> <p>4.3 This site is at the bottom of a hill and there is a steep gradient from the site to village facilities. This is likely to reduce active travel.</p> <p>4.4 We are also disappointed that good agricultural land is being lost.</p>

Consultee Family Name	Rowley
Consultee Given Name	Ian
Q4 Part of document	Policy
Q4 Policy	AB33
Q5 Sound	No
Q6 Details	<p>We agree some housing needs to be built, but are the housing target needs accurate, is old information being used? The figures used predicted the population would increase, predictions were wrong – population levels have decreased. We DO NOT agree to large storage units being built, why is greenbelt land being suggested? when brownfield sites exist in the county. Is it because developers do not like to use brownfield sites due to the additional costs of preparing the land? greenbelt land is cheaper to build on – creating more profits. As you travel around there are many large empty storage units in and around the Newcastle/Stoke area. How many local people are expected to be employed by the proposed storage units or will the labour be from outside the parish? Greenbelt land is a carbon storage capture area and a O2 producer, soil and trees are the biggest collectors of carbon so concreting these areas will increase the carbon footprint. Where will the water go from millions of square meters of roofing, nature drains the land naturally. Areas in the Parish now flood which have never done in the past, due to changes in the global weather patterns. There will be disruption in the local area during and after construction with noise and light pollution also poor air quality due to the pollution created by more large vehicles.</p> <p>Audley Parish has contributed to the industrial past with sacrifices made by the land and its people. Audley Parish was built on a Victorian footprint to facilitate its industrial past, roads in the area were not designed to take the present traffic levels, so any increase in additional traffic would cause gridlock! Local services will not be able to cope with more people and utility services will be stretched to supply these new developments. Audley Parish would lose its identity, as a collection of small individual villages which have established over many centuries.</p> <p>The world is on a knife edge with climate change – lots of these little takes of greenbelt land are mounting up to be larger worldwide problems. These developments will lead to further climate change, thus changing the quality of our environment forever. Greenbelt land is there for everyone to enjoy when they want. Monitoring cameras were installed over one weekend to register the footfall using the public footpaths across the land. This small snapshot would not have given a true record of the usage and therefore should be dismissed as evidence when the developers present their case. Once greenbelt has been taken, there is no going back!</p> <p>If a small number of houses must be built then building affordable housing for local people is important, but developers don't like building these as there is very little profit to be made. Larger houses attract bigger profits for developers, but large housing attracts people from outside the area, who do not contribute to our local economy. They will use the easy access to the A500 and M6 to travel to work in the larger conurbation areas. If local people cannot afford the property being built, they will move away, thus destroying the future fabric of the local community.</p> <p>Remember: You don't want history saying you were the ones who destroyed the local area and left nothing for our children and grandchildren. Don't let your legacy be that you contributed to the increase of global warming!</p> <p>LIFE IS MORE IMPORTANT THAN PROFIT</p>

Q6 Details	<p>i am objecting the proposals to develop on sites AB2, AB33, AB15 and AB12 because I believe it is unsound. Firstly, the local area of which the proposed sites are located are specifically intended to be a rural area. For example, the parish council is titled Audley Rural Parish Council. On this note, the local schools, health centre and public services are only equipt to handle a small village population. The primary schools in particular are at capacity, and many residents struggle to get appointments at Audley Health Centre (myself and my family included).</p> <p>Secondly, the proposed sites are agricultural land which is of significant natural beauty. The residents surrounding the sites (Eg. Diglake Street, Ravens Lane etc.) overlook beautiful views, which largely contribute to their property values. If developement were to go ahead, the values of their properties would plummet, which would largely impact the lives of many long-term residents.</p> <p>Above all, it is not within my interests or any local residents interests to have houses built here. The AB2 industrial employment site exceeds the employment land target, which therefore means there will be a future demand for more housing when people move to work here. These are only a few points that I could make, but I think I have made my point clear and I hope many other local residents will share my deep concerns.</p>
Q7 Modification	There would be a need for new schooling facilities, healthcare facilities, and public services to meet the demand of the new residents of the parish. This also means for parking and suitable roads. However, my primary suggestion is to not develop on these sites whatsoever. Make the AB2 site smaller as it currently exceeds employment land targets. Build elsewhere, outside of the area.
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)

Q9 Hearing reasons	I hope many others will be able to attend this to speak on behalf of my views

Q6 Details	<p>Dear sir</p> <p>Far beit from me to deny people having their own homes. However I feel that there are a few things that need to be done first.For instance in Audley there is limited parking space even parking on the medical centre is difficult at times. No parking in Bignall End except on pavements. Streets such as Albert, Diglake, Hope and Tibb Streets plus all the way up Ravens Lane are all double parking making it difficult for all traffic and emergency vehicles to get through.In Bignall End where elderly people, mothers with prams and disabled people and children have to try and cross a very busy road therefore a very urgent need for a pedestrian crossing.Quite recently I went to catch a bus only to find 2 cars parked by the bus stop and I have a photo to prove it.So there needs to be a painted sign on the road as is on the other side.I do feel that there is a lot of things to consider before building 200 houses which equates to 400 people plus children plus cars and lighting the country side with warehouses which will only make the current situation worse.</p> <p>Looking forward to your reply</p> <p>Yours sincerely Roy Cooper (redacted by admin)</p>

Q6 Details	<p>Morning I am a local resident and would like to put my views across, don't know if i have come to the page or not but, I can not express enough how much Newcastle Under Broughy planning to building on</p>

	<p>houses, warehouses ect this is up setting and unsettling this is for our area! As me my family old generations and new generations have grown up around!</p> <p>2024 and 2025 and the furniture up and coming generations is a scary world to live in today. (Kinfe crime, bullying, break in ect...!)</p> <p>I get that you like to build to bright and beautiful future for people but come on the is a green environment area for people to enjoy! And your taking that all away form us.</p> <p>I am coming into my 50 and I listen to people talk about the younger generations dare not even come out there houses, the young generations moving, schools due to all of the above or even up rooting everything but sad to go (). Has the surroundings Audley, Wood Lane, Bignall end areas all been a safe place to live!</p> <p>The roads are compacted with congestion of cars, lorry's especially when the A500 is shut off due to accidents on the locale junctions from 18 right down to 15.</p> <p>We have now double parking no the main road in Bignall End predictions are unfortunately can not get passed on the pavements, parking on the bends an accident waiting to happen. It will only a child or animals to run out, as drives are unable to see around.</p> <p>Our local School have no wear to park their cars they take to the main roads too and you want to add more! Thanks.</p> <p>I myself is scared for my own safety growing old now around these araea as your will not listen to people, you will not listen to people, you will not even read this and take it into consideration. When Labour were voted in I listened, to what was said that you wanted to create job, home's ect. But nothing on people feelings. I heard on the radio the other day your building on green belt what have been build on before! What a load of(redacted by admin) excuses my language as these places your building on have never been build on before! Green belt stands for a reason why take it away from us.</p> <p>Any how I a normal person whome, enjoyed playing out around our local area day to day when I was younger Wood Lane, Bignall End and Audley.</p> <p>I've worked since age 14, age 18 driving to work and back, listening to people's concerns from friends and family. Watching the traffic as I go. Going into my 50s soon wanting to stay in this area old and safe. Contributing to this community and countryside when I old and retired.</p> <p>Witch I will not see future generations doing as they are to sacred to go out side in today's world. Please don't take this away from us.</p> <p>If you read this then thank you for listening like I said I just a normal person whome placed my vote, witch was not Labour by the the way as I knew what was coming our way if they got in. Not wrong hey!</p> <p>And I want to have my say!</p> <p>Kind Regards Lisa Owen</p>

Q6 Details	<p>Dear Sir/Madam</p> <p>I am writing to oppose the local plan for Audley with regard to development sites.</p> <p>Whilst some may deem it necessary to enlarge the footprint of the village I would personally disagree.</p> <p>If you lived here you would know that the proposed access routes to these areas are already overstretched with roads being too narrow and littered with parked vehicles that make it difficult and dangerous to see round to pull out of junctions.</p> <p>There is also the issue of facilities, these are already fully stretched in Audley, the doctors is full as is the dentist and schools. There is also the issue of parking in the village which at times is ridiculous. Many times I have tried to park and been unable to as everywhere was full so I've had to go elsewhere to shop.</p> <p>Also if there are problems on the motorway or A500 the village becomes a rat run for people trying to avoid hold ups so the added lorries and cars using the proposed development sites would only make it more difficult for the residents.</p> <p>Audley is full and doesn't have the infrastructure to support these planned developments we don't have enough facilities as it is so by building more houses people would just go further afield and the village would die anyway.</p> <p>Yours faithfully Amanda Moody</p>

Consultee Family Name	Austin
Consultee Given Name	Jim
Q4 Part of document	Policy
Q4 Policy	AB33
Q5 Sound	No
Q6 Details	<p>The factors that limit the justification of AB12 apply equally well to AB33. Other factors specific to AB33, which may limit effectiveness as well as justification, are listed below.</p> <p>In item 7, the intention is to mitigate against flooding by concentrating development to areas of least at risk. With the exception of a slight rise of approximately 10 meters at the eastern boundary of the site, the area is largely flat and low lying. Therefore, most of the site area is at risk of flooding, which is being exacerbated by the current effects if climate change.</p> <p>Item 11 addresses the need for contributions to increase capacity for local schools and health services. However, there are no specifics as to how these contributions will be applied. Due to its proximity to the AB15 site, the arguments applied to item 9 in regard to AB15 apply here also.</p> <p>In paragraph 13.43 of supporting information, it is implied that the flood risk, mentioned in item 7, can be addressed. However, there is no specifics about where the necessary drainage is to be routed, or what flow capacity is needed. Because of the low gradients on this site, required storm drain cross sections are likely to be larger than normal. Moreover, if it materialises, flooding issues will be exacerbated by the neighbouring AB2 employment site. This is a significant factor limiting the effectiveness (deliverability) of development.</p> <p>In paragraph 13.45, the same arguments apply to paragraph 13.41 in regard to AB15. That is, will new patients be required to register with GP's surgeries elsewhere in the borough?</p> <p>Contrary to some verbal statements that have come from NuLBC to the effect that AB33 is not in use, cattle are often seen grazing on this site. This is another example of the kind of obfuscation tactics applied by this council to get certain sites accepted on the local plan. This is an open green space, with commercial agricultural value, backing on to properties at the eastern boundary. Therefore, any development on this site will represent an intrusion into the views looking westward from these properties.</p>
Q7 Modification	<p>In this draft local plan, the Borough are proposing an unprecedented transformation to the character of the Audley and Bignall End. One which is completely unjustified as far as local need is concerned. Due to these considerations, and lack of effectiveness in some instances, especially the unjustified nature of AB2, the proposed sites AB2, AB12, AB15 and AB33 should be removed from the local plan.</p> <p>Just as it is likely that an employment site at AB2 will create an employment/residential imbalance, it will boost the demand for further housing over and above what is already proposed. Conversely, it is also the case that the removal of AB2 from the plan would eliminate the need for housing at AB12, AB15 and AB33.</p> <p>These proposals here go completely against the essence of paragraph 4.3 of the local plan, dealing with "The Strategic Objectives for the Borough" (page 10), which "...will have respected and improved the character and distinctiveness of our market towns, villages, and other rural areas with a particular focus on broadening our network of Neighbourhood Plans." On the contrary therefore, the proposals here will completely destroy the character of the Audley and Bignall End as rural villages; the entire surrounding</p>

	<p>area having been completely urbanised. On this point at least the local plan can be considered wholly inconsistent.</p> <p>Many of the arguments against these proposals apply equally well to proposed green field developments elsewhere in the borough. It is hoped that the examiner will bare these in mind when considering other such proposals in this draft local plan.</p> <p>I am not sure whether the examiner will consider these points legitimate as far is planning is concerned. Most of the residents have no knowledge or experience of planning law. However, he/she can be assured that the majority of the residents of Audley and Bignall End are desperate to see these wholly destructive proposals removed from the local plan. The points made in this representation should be sufficient to render AB2, AB12, AB15 and AB33 unsound due to not being justified or effective. Therefore, I ask that these proposals be removed entirely from the local plan.</p>

Newcastle under Lyme draft local plan – regulation 18: Consultation response

Dear Sir/Madam,

The following is a robust objection to all developments on green field sites covering all the proposals within Audley Parish and many more elsewhere as recommended in the draft local plan. In writing this response, I am aware of the need to adopt a local plan in order for local authorities to maintain democratic control of development in the area. This requirement appears to be a symptom of the subsection in the NPPF titled “The presumption in favour of sustainable development” (paragraphs 11-14). However, from a resident’s point of view, this gives the impression that local authorities must demonstrate a willingness to develop a particular area in order to avoid it being developed. This is, in essence, a commitment to eventual development even if it is not needed. And this is a source of great anxiety amongst residents that undesirable development is out of control, a situation clearly being fuelled by the existence of paragraphs 11-14. On this basis therefore, this subsection of the NPPF needs to be challenged.

This response may differ from others in that it comments on local planning within a strategic context. As I see it, there are three main types of development, which are likely to blight the future generations in the UK: (i) infrastructure (example, HS2), (ii) commercial (examples, AB2 and TK30 in the NuLBC local plan) and (iii) residential (example, recent housing developments either side of the A513, Beaconside, Stafford). Infrastructure is within the remit of Westminster rather than local authorities, so that is not a particular concern here. My main focus is encroachment of developments, both residential and commercial, in green spaces allowed for in the draft local plan. And any new developments in rural areas will, at the very least, result in:

- Loss of light or overshadowing

- Increased risk of flooding due to ‘run-off’

- Loss of visual amenity

- Limitations to physical activity

- Generation of extra traffic, overloading already busy local roads

- Extra noise, pollution, disturbance and danger from increased traffic

- Loss of trees and other biodiversity – bats, lizards etc.

- Loss of natural carbon capture

- Decrease in food production capacity

Increased local population placing further pressure on local schools, GP’s surgeries and other services, which are already oversubscribed.

The United Kingdom as a whole is currently gripped by a pandemic of overdevelopment, which threatens nature and the already depleted biodiversity we see in this country. And it has now reached the stage where it should be considered a national emergency. I for one, do not feel that I have any influence over the shape of our surroundings. There are numerous drivers for this trend many of which are not being addressed by government at any level. At the heart of this is a significant disconnection between the opinions of politicians and public as to what is actually needed. There appears to be cross-party support for activities driving economic growth at all costs, irrespective of the consequences to the natural environment. Aggravating this divide is the aforementioned paragraphs 11-14 of the NPPF. At a local level, what is not in doubt, is that whenever there is land removed from the green belt there is rarely, if ever, an equivalent area so returned, so the process is irreversible. And in the absence of any agreed lower limit on the area of protected green spaces within the UK, no release of green belt land, or development on green spaces, can be considered sustainable. Unless, of course, the use of agricultural land for just that purpose is also considered “developed”, i.e. it has an economic and sustainable use. And the local plan does appear to acknowledge this¹, so why not include agricultural use into the local plan implying no change in particular areas? If this is not the case, we are committed to a process where the end point is a UK completely covered in tarmac and concrete. Anyone arguing against this interpretation needs to state and justify precisely where that end point is. If they cannot, this renders the term ‘sustainable development’ an oxymoron.

One particular trend of major concern is the growing UK population. At the time of writing this stands at just under 69 million, and is set to reach 74 million before 2050. Studies in the US (Pimental and Giampietro, 1994; Lal, 1989) suggest that comfortable/sustainable living requires 0.5 Ha (1.2 acres) per capita. If we are generous, sustainable living in the UK was possible with a population of 57 million, a figure I remember from the late 1960s. With a total area of the UK at just over 60 million acres, a land area of one acre per capita for sustainable living in the UK seems feasible. As we have seen, anything more puts a strain on the environment as a whole. On this basis therefore, the UK is currently overpopulated by about 15%, and there appears to be no initiatives to address this issue. On this point, Westminster appears to be in a state of denial, thus fuelling the current avalanche of overdevelopment nationwide. Residential developments have a knock on effect by requiring other types of development to provide infrastructure, services and employment. Notwithstanding overpopulation, this gives the impression that there is not enough housing stock to accommodate the current population. Recent data, in the form of an infographic (“Housing crisis fact check”) from the Community Planning Alliance², convincingly shows that this is far from the case. In short, what is perceived as the current “housing shortage” is little more than a myth propagated by the construction industry and related interests. This is justified by item 3 on the infographic stating that “there are 1.5 million more dwellings than households” in England and Wales alone^{3,4}. On this basis therefore, no further house building is needed in the UK subject to efforts addressing projected population growth. In other words, what we have at present is a substantial housing surplus. Therefore, locally there are strong grounds for objections to development of the sites

AB12(p74)

AB15(p75)

AB32(p75)

AB33(p75).

Ignoring the 1.5 million surplus dwellings nationwide, the current (regulation18) draft of the local plan quotes a minimum housing requirement of 7160 in the Borough over the period 2020-40, of which 1206 are already completed. Of these, only 40% are to be 'affordable' (1-2 bedroom dwellings). Therefore, of the minimum requirement, only 2864 dwellings will be affordable. If we assume that those already built are affordable (they probably aren't) then the borough will only need 1658 homes built between now and 2040. This is because, due to being beyond affordability, most locals will be unable to buy or rent the other 60%. Therefore, they are not needed, and the proposed mix is entirely incompatible with general affordability. Given the surplus dwellings throughout England and Wales however, it is likely that none will be needed, especially considering the imminent removal of mandatory housing targets by the DLUHC under Michael Gove MP, and any specific affordable housing needs can be catered for by using brownfield sites only. All of the green areas in the local plan could therefore be planned in for their present use.

Infographic from the Community Planning Alliance summarising UK housing stock in relation to the population.

Another statistic from the infographic is that nationwide we could build up to 1.2 million homes on brownfield sites (item 2)2,5. And like any other local authority, NuLBC is legally obliged to and does keep a register of its brownfield sites, although it is likely that some may slip through the net.

If there is an imperative, it is to increase further democratic control of the development process both locally and nationally. And both local and national authorities would do well to remember that they have a responsibility to the people they represent and not to the commercial viability of developers, the construction industry or overseas investors. In short, no new housing development is required, especially given that the borough has exceeded its housing targets in recent years. This calls into question the need for housing developments outside Audley Parish mentioned in the local plan. These include

BL18 (p75)

CT1 (p76, 750 dwellings)

RC8 (p76, 6 dwellings, potential flood risk.)

KS3 (p77)

LW53 (p77)

MD29 (p78, 150 dwellings, likely to conflict with HS2 construction?)

NC13 (p78)

NC77 (p78)

SP11 (p78, 900 dwellings, former Keele golf course)

SP12 (p79)

SP23 (p79)

TB19 (p79)

TB23 (p79, 124 dwellings, adjacent to Walley's Quarry.)

TK10 (p80)

TK17 (p80)

TK27 (p80).

Other sites which may also be questioned are

KS17 (p77, would include loss of playing fields and other village amenities. This may be classed as infill.)

KL13 (p77,93, part built already within the grounds of Keele University Campus).

The other class of developments locally is commercial. All too often we hear in the news from both local and Westminster sources, the mantra that economic growth is the imperative. But the actual imperative is stability, and we have reached the point where growth at any cost has become toxic, especially given the impossibility of unrestrained growth in a land of finite area. Have our political masters never heard of the circular economy?

Since the beginning of deindustrialisation in the 1980s, the diversity of employment opportunities has declined. We have seen an unhealthy move away from manufacturing/production of goods that we need as a nation, to one entirely reliant on trade with overseas partners, leaving us open to blackmail and the current spike of rampant imported inflation. Look what happened during lockdown. Over recent decades this has led to the demolition of old factories for residential developments and the rise of logistics centres (warehousing) for the temporary storage of imported goods, which will ultimately be operated by robots and AIs leading to even less employment. The problem with warehousing of course is its large consumption of land area. My question is, what is the driver for the proposed "big box" developments on AB2 and TK30 locally? Both of these proposals lie entirely within the greenbelt, although the TK30 land has already been quarried in parts. Neither of these proposals is either desirable or needed. However, if we are forced to accept one or the other then TK30, being about 5% smaller, is the lesser of two evils. With the green light given to the development of the 44 Ha Chatterley Valley site on Peacock Hay Road, and the numerous empty warehouses existing across the potteries, North Staffordshire and Cheshire East. It is dubious to say the least to claim that either AB2 or TK30 are needed. These sites are 70 Ha and 66 Ha respectively. However, in the recently published "Housing and Economic Needs Assessment Update", the borough as a whole only needs a maximum of 34 Ha6. So why are we saddled with 154 Ha total covered by AB2, TK30 and KL15?

If the local plan caters for agricultural developments, AB2 and TK30 could be planned for their existing use. The majority of the area covered by these sites is high grade (3a) agricultural land. In the case of TK30 the quarried areas could be reclaimed for agriculture or, if this proves difficult, used in other ways to enhance biodiversity. If the land in question is council owned, and the motivation is to sell off council assets, then once sold, they cannot be sold again, and any control is lost. Moreover, once farmland is developed for other purposes then it is near to impossible for it to be reclaimed later for that use – and so the ratchet inexorably turns. On this

basis therefore, I would urge the LPA to remove the warehousing proposals AB2 and TK30 from the local plan.

The purpose of this consultation is to supply feedback to the Borough Council. Another question is, does Westminster similarly consult with local authorities on planning issues, or is there any other mechanism where local councils can supply feedback to Westminster, providing a better feel for the mood of the nation? If so, why do we not see a root and branch reform of the NPPF rather than the tinkering around the edges approach seen in the July 2021 version? Most especially, there should be a removal of paragraphs 11-14 and its supporting statements elsewhere in the document, which is tantamount to a developer's charter. And there should be more flexibility within the NPPF allowing local plans to include parcels of land for their current purpose, given that there is almost none in this country that is not currently in use. As far as I can see this plan is nowhere near compatible with efforts required to address the current climate crisis. Moreover, given their scale, the proposed developments represent too greater shock to the environment and local communities over the short 20-year period suggested for their completion. And with the sufficient housing and unused commercial sites we already have, there is no need for any encroachment into our green spaces.

Yours sincerely
Jim Austin

Title	Policy AB33 Land off Nantwich Road / Park Lane, Audley
Consultee Family Name	Wood
Consultee Given Name	Alma
Q4 Part of document	Policy
Q4 Policy	AB33
Q5 Sound	No
Q6 Details	<p>Many factors limiting the justification of AB12 apply equally well to AB33, which may limit its justification are shown below.</p> <p>Item 7: Flooding cannot be mitigated by the concentrating development on the areas of least risk as most of the area is flat and low lying. This means that apart from a rise of 10 meters towards the eastern boundary of the site, most of the site is at risk of flooding which will be exacerbated by climate change.</p> <p>Item 11: States that there will be a need for contributions to increase the capacity of local schools and health services but with no specifics to show how these will be applied.</p> <p>Paragraph 13:43: Implies that the flood risk can be addressed but there is nothing specifically stated where the drainage will be routed or flow capacity required. As the site has low gradients the required storm drain cross sections are likely to be larger than normal. Moreover, if this site is developed flooding will be exacerbated by the neighboring AB2 employment site. This is a limiting factor on the effectiveness of the development.</p> <p>It seems that NULBC are ill informed of the sites continued use as cattle are often seen grazing there as it is an open green space with commercial agricultural value which backs onto the properties at the eastern boundary.</p>

Q7 Modification	<p>The draft local plan proposed as transformation of Audley and Bignall End which is unjustified by local need. The lack of effectiveness and unjustified nature of AB2 weakens the reason for house building on local green belt parcels. Therefore, the proposed sites of AB2, AB12, AB15 and AB33 should be removed from the local plan.</p> <p>These proposals seem to go against paragraph 4.3 of the local plan which states it "will have respected and improved the character and distinctiveness of our market towns, villages and other rural areas" On the contrary, these proposals will destroy the rural village character of Audley and Bignall End, completely urbanizing the entire surrounding area. The local plan is therefore inconsistent. The majority of residents of Audley and Bignall End are strongly against these proposals and wish to see them removed from the local plan. It is hoped that the points made will to be sufficient to render AB2, AB12, AB15 and AB33 unsound as they are not justified or effective. I request that all the proposals should be removed from the local plan.</p>

Title	Policy AB33 Land off Nantwich Road / Park Lane, Audley
Consultee Family Name	Wood
Consultee Given Name	Alma
Q4 Part of document	Policy
Q4 Policy	AB33
Q6 Details	<p>This is my objection to the proposed draft local plan for the area of Audley Parish and many more in surrounding areas. In writing this response, I am aware of the alleged need to adopt a local plan in order for local authorities to maintain democratic control of development in the area. In writing this I am indebted to the objection document submitted by Dr. J. C. Austin for his invaluable research and relevant information for an objection on a wider scale but nevertheless relevant to the local area. As he states the democratic control referred to by the council seems to be a "symptom of the subsection in the NPPF titled "The presumption in favour of sustainable development" (paragraphs 11-14)", I totally agree with him that to residents it seems that "this gives the impression that local authorities must demonstrate a willingness to develop a particular area in order to avoid it being developed", and "seems to be a commitment to eventual development even if it is not needed", which is extremely worrying on many levels for the community. These proposed new developments would, in the view of many residents, have a devastating impact on our rural area, which is part of the Designated Conservation Area of Audley (1976, information listed on the Council's Local Plan 2011).</p> <p>In particular, I believe it would result in the following problems:</p> <ul style="list-style-type: none"> • Loss of light or overshadowing • Increased risk of flooding due to 'run-off' (there is already some flooding in the area) • Loss of visual amenity • Limitations to physical activity (There are many public footpaths in the area, cyclists, horseriders etc. all use the area on a regular basis) • Generation of extra traffic, overloading already busy local roads resulting in extra noise, pollution, disturbance and danger to humans, livestock and wildlife. • Loss of trees and other biodiversity – bats, lizards, newts etc. • Loss of natural carbon capture • Decrease in food production capacity, look at the current threat posed by the reduction of grain from Ukraine and the shortages created by the recent COVID Lockdown for example. We need to grow more of our own food, not destroy prime farmland and rely on imports. Sustainability here is the key message! • Increased local population placing further pressure on local schools, GP's surgeries (the one in Audley has already stated that it will be unable to cope), dentists and other services which are already oversubscribed. <p>As Dr. Austin has stated there appears to be an "overdevelopment which threatens nature and the already depleted biodiversity we see in this country". This is true both nationally and locally and the local populous feel that their opinions are disregarded on all political levels and by politicians of any political persuasion. It has been stated on national television that a large proportion of younger people and children are very worried about the effects of climate change and identifying areas of green belt to be built on will only enhance the problem. Allowing developers to destroy existing farmland, green spaces and mature woodland is short-sighted to say the least, it takes decades for a habitat to establish itself and support wildlife and replacing these with saplings will not solve the problem, therefore these proposals cannot be regarded as sustainable development at all. Do we really need all these new houses to combat the so-called housing shortage or is it really, as Dr. Austin states, "little more than a myth propagated by the construction industry and related interests"?</p> <p>Therefore, I agree with his analysis that "locally there are strong grounds for objections to development of the sites"</p> <ul style="list-style-type: none"> • AB12(p74) • AB15(p75) • AB32(p75) • AB33(p75). <p>Furthermore, I agree with Dr. Austin when he says that "both local and national authorities would do well to remember that they have a responsibility to the people they represent</p>

	<p>and not to the commercial viability of developers, the construction industry or overseas investors". As he has pointed out the commercial developments mooted for the AB2 and TK30 sites locally are not needed and I believe that the developers normal cry of "it will create jobs" is misleading to say the least and proposes far more land use than the councils own recently published assessment document of housing and economic needs suggests! Would the council please explain why they are intending to ignore their own document! Moreover, the proposal seems to be mainly for agricultural land, which once lost would be virtually impossible to recover. We need to be more sustainable in feeding ourselves and not relying on overseas imports whether they are from Europe or the wider world. It should also be noted that the country, as a whole, needs to stop foreign investing in building homes which the local populous can neither afford to buy or rent (there are countries in the world which will not allow non-native individuals/companies from buying/building houses – Thailand is a case in point). This would certainly enhance the prospects for affordable homes.</p> <p>In summary, I would like to ask the council, and the government would they really like to be remembered as the politicians who made the local area and the UK as a whole a 'concrete wasteland'?</p>

Q4 Part of document	Policy
Q4 Policy	AB33
Q6 Details	<p>Site AB33 Land off Nantwich Road/Park Lane, Audley</p> <p>As with AB12, this proposed site represents a high contribution to the green belt and houses built here will add to the current flooding which occurs regularly. The lane leading to this site is, in places, single track and used regularly by walkers, horse riders and joggers and increased volume of traffic will pose a risk. All allocations in the Audley/Bignall End area proposed for housing are in the Green Belt. Besides the pressure increased traffic would cause on our already overcrowded and weak roads, these proposed developments would add significant pressure on local amenities, GP Practice, Dentist, Schools. These allocations are not justified and therefore unsound and should be removed from the Local Plan. Thank you for taking the time to read my comments and reasons for my strong objection to these planned developments</p>

Title	Policy AB33 Land off Nantwich Road / Park Lane, Audley
Consultee Family Name	Hoban
Consultee Given Name	Che
Q4 Part of document	Policy
Q4 Policy	AB33
Q6 Details	<p>I wish the Planning Inspectorate to consider my following representations in response to the Newcastle -Under-Lyme Borough Council – Final Draft Local Plan Consultation (Regulation 19)</p> <p>I wish the Planning Inspectorate to remove all policies from the plan which involve any development on Green Belt Land.</p> <p>The specific policies are: -</p> <ul style="list-style-type: none"> • AB2, AB33, AB15 & AB12 – Audley Ward • BW 1 – Bradwell Ward • CT 1 – Crackley Bank & Red Street Ward • KL13 & KL 15 -Keele Ward • SP11(2) & SP11(3) – Silverdale Ward • TK 10, TK 27 & BL18 – Talke & Butt Lane Ward <p>All of these developments impact green belt land, are unsound and should be removed from the plan. They will all have a negative effect on the Net Biodiversity gain of each local area. Which in turn has a knock-on effect across the Borough. Open spaces are essential for the environment by absorbing carbon dioxide from our atmosphere, which helps reduce climate control. They also provide habitats for a wide range of plants and animals. Open spaces are also important to human health as they can reduce stress, improve mental health, and assist in people sleeping better. They provide areas for physical activity which improve both physical and mental health. Removal of green belt will decrease the air quality within that area, increase respiratory issues for humans and wildlife, and also increase noise pollution.</p> <p>With specific reference to policies AB2, AB33, AB15 and AB12. I ask the Planning inspectorate to remove policies based on the following justifications:</p> <ul style="list-style-type: none"> • AB2 - It is simply the case that the small village of Audley and its surrounding countryside lanes could not cope with the large increase of traffic caused by these policies. The large number of

	<p>HGV's travelling to the proposed AB2 site would definitely increase the traffic within the Audley area due to the daily traffic jams along the A500 and at M6 Junction 16. Traffic will spill on to local roads e.g. A5500, increasing Noise and air pollution</p> <ul style="list-style-type: none"> AB12 - Proposed access to site AB12 via Diglake Street is untenable. This street is small and it is already difficult to drive down due to parked cars on both sides of the terraced street. A new development of houses would make it virtually impassable causing gridlock, increased air pollution, increased noise pollution and limiting access for the emergency services. <p>The proposed new car park for resident's in Diglake Street due to the proposed AB12 policy would be detrimental to Blue badge Holders, People with mobility issues and Carers of babies and children.</p> <p>AB12 will not be close to any amenities with little or no access to a regular bus route.</p> <ul style="list-style-type: none"> AB33 – Primary Vehicular access to Park Lane is unsound. This is an already busy junction. AB33 will not be close to any amenities with little or no access to a regular bus route. Creating more traffic therefore noise pollution and air pollution. With an increased danger to pedestrians. <p>With poor access to health care and education.</p> <ul style="list-style-type: none"> AB15 – The proposed site at AB15 is unsound because of the poor access to health care, education, local amenities and public transport. <p>I therefore would like the Planning inspectorate to remove Policies AB2, AB12, AB33 & AB15 from the plan.</p>

Consultee Family Name	Page
Consultee Given Name	Richard
Q4 Part of document	Policy
Q4 Policy	AB33
Q6 Details	<p>In response to the Local Plan consultation, we would like to object to the parts pertaining to Audley & Bignall End. Building around 250 extra houses in the area will considerably change the nature and character of the village, going against particularly SOIV, to reduce the carbon footprint, promote sustainability and harness opportunities for carbon sequestration. It also goes against SOVI, to promote and sustain villages and their character. The road infrastructure will not cope with the increase in traffic that this will bring. In many places along the routes in & through the village the houses open directly onto the road with no off-road parking. This results in parked vehicles restricting the carriageways and causing congestion. This will be made worse with the increase in cars that the extra housing will bring. There is no mention in the plan of any provision for healthcare or schools for the increased population. The medical practice in Audley is already at capacity and increasing the population will put increased strain on the health services and risk diminution of care to the existing patients of the practice. The current proposals also go against the direction of travel for government policy with the need to keep most development within urban areas as far as possible, with optimisation of densification of properties to make best use of public transport and greener travel. Green belt land should be protected. The National Planning Policy Framework 2021 already indicates the need to protect green belt land and that rural development should support local services, not overwhelm them.</p>

Title	Policy AB33 Land off Nantwich Road / Park Lane, Audley
Consultee Family Name	Cunningham
Consultee Given Name	Helena
Q4 Part of document	Policy
Q4 Policy	AB15
Q6 Details	<p>F.A.O Planning Policy Team</p> <p>I write to strongly object to proposals within the Local Plan in particular the allocations for sites, AB2, AB2A, AB12, AB15 and AB33 and do not believe it has been completed in a lawful way.</p> <p>I do not believe the Borough Council have taken into account any feedback that they have been given since the first round of consultations and have ploughed ahead with a Local Plan that is not fit for purpose.</p> <p>The sites within this allocation fall within greenbelt land and the Council is yet to exhaust all brownfield sites and have vacant buildings within the borough that have stood empty for years.</p> <p>The release of greenbelt land for the sites AB2 and AB2A do not make strategic sense due to location and the impact that it will have on the rural parish of Audley. Again, there are vacant sites within the Newcastle under Lyme boundary that can be utilized without the need to release greenbelt land (e.g the old Makro site and other unit within the Chesterton/Waterhayes area)</p> <p>Whilst some housing may be needed, I do not believe that greenbelt land should be released for this within the parish as there are better options elsewhere within Newcastle under Lyme.</p> <p>My main objection with the housing developments is for site AB33, placing houses on this site will lead to further issues for the community. This site is agricultural land and is in use currently (see attached</p>

	<p>photo). You state the site is not in use, yet the photos contradict this, you also say that it is surface water flooding, yet the flood has been there for a significant length of time, which indicates it is more than surface water. I believe that the new housing would have a detrimental impact on local services, the roads/footpath infrastructure is already poor. There is double parking throughout the village, people with prams/wheelchairs are often forced into the roads and to suggest building further housing will only exacerbate the issues.</p> <p>To build an access road onto Nantwich Road is a huge cause for concern, this road is continually busy with traffic with users often travelling above the speed limit of the road. The road acts as a cut through from those heading both north and south for work etc. Park Road also does not have the infrastructure in place to do this.</p> <p>Newcastle under Lyme should be acting more strategically and resurrect a joint Local Plan with Stoke on Trent Council. The Councils should be working in partnership to develop a plan that will bring life back to the City and in turn make people want to visit and settle here. I do not believe that there is sound evidence the housing numbers or development numbers that you have put forward.</p> <p>I believe that the Local Plan is poor, is full of contradictions and does not adhere to local or national policy. It is simply not fit for purpose and should not be progressed in its current state when you have received so much negative feedback at all stages of the process.</p> <p>Regards</p>

Title	Policy AB33 Land off Nantwich Road / Park Lane, Audley
Consultee Family Name	Ashmore
Consultee Given Name	Michelle
Q4 Part of document	Policy
Q4 Policy	AB33
Q6 Details	<p>Dear Newcastle-under-Lyme Brough Council,</p> <p>I the undersigned, as residents of Audley, wish to object to the proposals of four housing sites and a large employment site in the council's draft local plan for Audley. My objections are about both the proposals for Audley in general and also specifically about site AB15 which is at the back of my home where I live and would significantly and detrimentally impact my life.</p> <p>My objections to the proposals for Audley in general are an additional 250-270 homes with a further 1000 residents and a large employment site of over 170 acres warehouses will destroy the character of our beautiful village. As I sit here writing this letter to you, I can hear birds singing and am looking out on a beautiful green field with cows grazing which is a very healthy way to live, considering the fact that where I live has been so important in restoring my mental health if your proposals go ahead that will totally damagingly affect my life, the downward spiral mental health of so many residents and the quaint, picturesque village of Audley.</p> <p>In this regard, if only or mostly green belt sites are available in the Audley area, the Council does not have to build the number of houses it says it must, because government figures are only advisory. It therefore seems that the Council is choosing to build on green belt sites when it doesn't have to.</p> <p>Furthermore, it also seems that the number of houses proposed to be built on AB15 and around Audley is excessively weighted to this area compared to the rest of the Borough as a whole and are mostly on green-belt sites. Why have you not planned to deliver housing in the urban centre with amenities and infrastructure of a town already. Instead, your plan overloads an already overloaded infrastructure area.</p> <p>The Junction with the A500 already has capacity constraints and development in this area could exacerbate this without appropriate justification. The proposed additional housing for the Audley area in general would cause already inadequate roads to become impossibly congested and to deteriorate even further. Connected to this, given that the current schooling and health facilities in the village are not enough to cope with a sudden increase in population, would further development and therefore more land be needed to build more schooling and medical facilities?</p>

Title	Policy AB33 Land off Nantwich Road / Park Lane, Audley
Consultee Family Name	Gibson
Consultee Given Name	Catherine
Q4 Part of document	Policy
Q4 Policy	AB33
Q6 Details	<p>I write to you in relation to the Newcastle Borough Council Local Plan – sites within Audley Rural Parish which includes AB2 – Employment Site, AB33 – Land off Nantwich Road/Park Lane, AB12 – Land east of Diglake Street and AB15 – Land north of Vernon Avenue.</p> <p>In essence I don't think any of the sites are justified or sound and should all be removed from the local plan.</p> <p>Reasons against all sites:</p>

- More people into the area, with very little public transport there will be more cars on very small roads.
- More cars is more pollution, we have enough air pollution coming into this area from Walleys Quarry landfill in Silverdale, the landfill air pollution is worse in the winter, which is also when traffic pollution would increase as well.
- Parking is already a problem, there are local car parks in Audley itself but much of the surrounding area has cars parked on both sides of the road due to no off road parking. Visibility is non-existent much of the time around Miles Green and Halmer End, you often proceed and hope nothing is coming in the opposite direction.
- We have narrow Victorian streets in much of the parish which were not designed for the number of cars already here. There are many accidents to both parked and moving cars because of the amount of traffic and the speed of traffic through the narrow roads. This is only going to get worse if more vehicles and quite possibly bigger vehicles are added into the area.
- Two of the sites are council owned farm facilities, there are young farmers wanting farms but unless you are from a farming family then this is not going to be possible with fewer/no farms to rent to get started in farming.
- There is a bigger and bigger national population and if farmland is going to be built on then how are we going to feed the bigger population? Farmland is being built on all across the country, not just the proposed in Staffordshire.
- Our local services such as schools, doctors and dentists are full. More housing is going to put more pressure on already stretched services.
- There are empty warehouses in the local area but they fall under different councils. Why can't the area work together and consider the land regionally for housing and warehousing rather than each council needing to have a certain amount? Some areas of land are going to be better suited to different developments and much of these proposed sites are greenbelt and good agricultural land. Therefore the sites are not justified.

Reasons against AB2:

- Site is a huge area, 198 acres of good agricultural land in the greenbelt, this site alone is four times bigger than NULBC have said is needed, and is a bigger area than all our villages.
- More jobs, more people into the area, no public transport so more cars on very small roads.
- Proposed new bus routes will not fit all shift patterns so people will more likely use their cars than buses increasing traffic on the narrow roads, and cycling is unlikely as the area is all hills. We do not cycle for this reason and we haven't just done a 12 hour warehouse shift.
- More jobs may well create pressure for more housing in the future, more loss of greenbelt near to the warehousing.
- There are always accidents on the M6 along this stretch, we never use between junction 15 and 16 for this reason and avoid the M6 if we can go another route. Accidents always put more pressure on the surrounding local roads, our area leads to the A34 as a parallel route to the M6.
- Emergency exits from the planned site are along single track roads with blind corners along them, not easy with current traffic, add any more along with people who don't know the roads and it is going to cause many more accidents.

Reasons against AB33:

- This site floods, ducks are seen on the water in the field.
- More traffic on roads that are narrow, often congested and with turns on difficult to see corners, such as turning in and out of Church Street Audley.

Reasons against AB12:

- Loss of currently productive farmland on greenbelt.
- Potential flood risks if developed, either on new development or passed further down, there are many big puddles on Bignall End Road after a bit of rain, if AB12 is developed this can only cause further floods on a much used local road to Talke and Kidsgrove.
- Access and more traffic past both a nursery and a primary school. I travel (redacted by admin) during the day and it is one way traffic between the parked cars then, further cars are not going to be safe in the middle of the day let alone at school drop off and collection times.
- Is this land being sold off by SCC being considered rather than more appropriate land?

Reasons against AB15:

- This site floods, ducks are seen on the water in the field.

So to conclude, I don't think any of the sites are justified or sound for the current residents, services or wildlife and should all be removed from the local plan.

Q6 Details	<p>Objection to site AB33 on the map</p> <p>We consider that this part of the plan is NOT legally compliant</p> <p>NOT sound</p> <p>NOT compliant with Duty to Co-operate</p> <p>For the following reasons</p> <ul style="list-style-type: none"> • The population of the borough is falling so the housing numbers cannot be justified. • Housebuilding has exceeded the increase in households over the past 10 years in the borough. • The emphasis should be on developing brownfield sites and empty town centre buildings rather than using greenbelt land. • Park Lane floods and has been underwater for 6 months of the year, which indicates a lack of foresight in planning • Building more houses will increase the risk of flooding • Park Lane site was a working farm which the council has allowed to fall into a state of disrepair denying local families the opportunity to run a small holding • Concern about access to the site and safety, Park Lane is a single track road with no pavements • Audley Parish has narrow Victorian roads with on road parking in most streets. Traffic flow and parking issues will continue to increase if more traffic on these roads • GP surgery is over subscribed and difficult to get appointments. This will get worse if more people living in the village. • Schools are over subscribed and have poor facilities, which will get worse with more pupils.

Title	Policy AB33 Land off Nantwich Road / Park Lane, Audley
Consultee Family Name	Maddock
Consultee Given Name	Paul
Q4 Part of document	Policy
Q4 Policy	AB33
Q5 Sound	No
Q6 Details	<p>I would like to put forward a number of points as to why I believe the Local Plan is unsound, with the focus upon plans for the village of Audley, the proposed strategic employment site of AB2 and the proposed housing sites of AB12, AB15 and AB33, which are all on Green Belt land but do not meet the requirements of exceptional circumstances for the removal from the Green Belt.</p> <p>AB33</p> <p>Is adjacent to AB15 and suffers the same flooding in lower areas. Once again, in the Green Belt Review Report, it is reported that the land is not in active use, yet cattle are grazing there and have been all year (time stamped images available). This land is owned by Staffordshire County Council and was a starter farm for up and coming farmers. The local people of Audley view the sale of this farm land as asset stripping by the County Council to bring in revenue at the cost of encouraging young people into farming. The proposed access from Park Lane or Nantwich Road would have some serious traffic problems. Park Lane is a narrow country lane used by dog walkers and horse riders. To allow access for 55 houses would need extensive road works and safety would have to be factored in. If AB2 were to go ahead, then Nantwich Road (B5500) would be an alternative route to avoid congestion as alluded to above. Access from this road would have serious implications. To remove this area from the Green Belt, does this represent exceptional circumstances? I feel it doesn't and that there are far more suitable sites within the Borough.</p> <p>AB12, AB15, AB33 and AB2 and the impact upon the village.</p> <p>The impact upon the village's infrastructure will be catastrophic. Building in these locations will, without doubt, bring in a serious amount of traffic to the village which will mean extensive development of new roads to be created to cope with inevitable traffic that will need to access the proposed developments. Audley village, with two small car parks, is already suffering the impact of increased car ownership by residents already living here, with many people forced to park on double yellow lines and in turn hampering safety. Audley has recently lost some of its bus service, which means more cars and taxis will be on the roads. Then there is the impact on the facilities like, the doctors' and dentists' surgeries etc. The primary and secondary schools are at full capacity. With the advent of the proposed 213 new houses to be built in the Audley Parish, where will the children of these new households go to school? The local schools are at full capacity. I am an ex school governor so I am aware of the situation locally. Will the newly refurbished sewage works be able to cope with the additional houses on the plan? I am reliably informed it will not.</p>
Q7 Modification	<p>AB12, AB15 and AB33 if built upon, creating 213 extra houses will have a catastrophic impact on the infrastructure of the village of Audley. The removal of this land from the Green Belt must be justified and only done in exceptional circumstances. It is obvious that this land would be attractive to developers as is all agricultural land that is removed from the Green Belt and designated for building, but this should not be a driver for this decision. In Section 6 above, I have highlighted my concerns in relation to village infrastructure, flooding and excessive traffic. It is on these grounds I feel these proposed sites AB12, AB15 and AB33 are unsound and should be removed from the Local Plan</p>

Q4 Part of document	Policy
Q4 Policy	AB33
Q6 Details	<p>Dear sirs</p> <p>RE: Local Plan AB33- off Park Lane</p> <p>I wish to object to the above policy as it is unsound for the following reasons:</p> <p>Firstly the roads and traffic in the area is already ridiculously high for what should be a rural area. Only recently local residents did a car count in which was recorded within in a 2 hour period between 1300 and 1800 vehicles here alone on the Alsager road outside of my property.</p> <p>Only recently we have had a number of accidents on A500 which has also impacted on the amount of vehicles having to use the road because of the A500 being closed off for 12 hours. To which at one point a huge trailer was blocking the roundabout and and reversing back on it making it dangerous whilst some cars were still trying to pass it (of which I HAVE ON CAMERA).</p> <p>Secondly, the infrastructure in the area is already unsuitable for the proposed more houses. The drains/sewers are insufficient at present and are not coping with the amount of rainfall/surface water. Proof of which I have, since the property I live in has experienced for the past 8 years.</p> <p>The sewers are not big enough as stated by united utilities at present to cope with the amount of rainfall</p>

(that's why we have drainage issues at this property still).

Having spoken with workers previously at united utilities they have stated they will not refuse new builds being added into the drains as it is REVENUE and the drains are NOT big enough at present without new builds being added to them.

AB33 land for the past number of years has been holding water and flooding. Something which it has never done before and climate change and the amount of rainfall we are now experiencing is the result of this.

Adding more houses to this area will only increase our already under pressure drains and roads which are already at breaking point. Just because the Council own and have earmarked this ground for possible building does not mean it is suitable and the residents in the area are the ones who should be listened to and not the so called councillors/planners. Our concerns are justified and rightly so, we live in the area and they DO NOT this is something that we are having to manage with every day.

Thirdly, the land at AB33 is also part of Pear Tree farm which is classed as a starter farm owned by Staffordshire Council and has been for a number of years. It is standing **empty** not being used as it should as a business housing a family and contributing to the area. Farmers are an important role in England for our future especially as around the world we are unsure of what is to come. We should be supporting them not selling off parts of the farm bit by bit.

Our local primary and secondary school are already bursting and our small village of a few shops/post office cannot cope with the amount of vehicles they contend with. Plus lack of parking in the area, 1 GP

surgery in the area and a dentist which at present is not accepting patients.

Building more houses in the area will change the area putting more vehicles on our roads, changing the landscape, more light pollution (which is affecting our nocturnal nightlife already) and put more pressures on our sewers and risk more flooding.

We cannot afford to lose the farming area and greenbelt here, it is crucial we do not exacerbate the problems the area already is experiencing

Therefore the above site (AB33) needs to be removed to make the Local Plan sound.

Title	Policy AB33 Land off Nantwich Road / Park Lane, Audley
Consultee Family Name	Pustkowski
Consultee Given Name	Naomi
Q4 Part of document	Policy
Q4 Policy	AB33
Q6 Details	<p>I am emailing to object to the proposed development on AB33.</p> <p>I do not believe the land to be sound or the reasons to develop justifiable for the below reasons.</p> <p>The overall NULBC housing numbers cannot be justified: The population of the Borough is falling (a 0.5% drop from 2011 to 2021) which suggests a lower Household forecast.</p> <p>The number of new dwellings built in the Borough in excess of the targets in previous years (32% over the target from the 2018-19 year to the 2020-21 year) and the excess in neighbouring authorities. People from Kidsgrove will live in new builds in Golden Hill, even though it's technically in Stoke, people from Audley will live the new builds in Alsager, even though it in Cheshire East and people from Baldwins Gate & Loggerheads will live in new builds in Market Drayton, even though it's in Shropshire.</p> <p>NuLBC are applying a high growth strategy. They present no evidence that this will transpire. This is neither justified nor is it likely to be deliverable, therefore it is unsound.</p> <p>Housebuilding has exceeded the increase in households over the past 10 years in the Borough.</p> <p>The Local Plan should also place greater emphasis on developing brownfield sites at higher densities, reusing vacant town centre buildings and tackling the waste of resources that is long term empty homes.</p> <p>We shouldn't be building on good quality, carbon soaking, agricultural land that forms the beautiful countryside that our residents enjoy in their leisure time.</p> <p>The land on which has been proposed for housing is extremely waterlogged. I do not feel that this land is suitable to build new homes on. I fear that it would only exacerbate the flooding issue as the new builds have on barleyfields Audley. A number of residents have commented on how flooding has since become an issue for them since these new builds next to their homes have been built.</p> <p>In addition our village cannot take the extra traffic that would come with this many new homes. There are no traffic calming measures, and the village is already massively overrun with vehicles especially at peak times. Church street in particular is too busy already and has become dangerous. With cars parked on double yellows, all car parks full and pedestrians trying to cross the roads with people driving too quickly and vision impaired by illegally parked cars. This would be worse with more people living in the local area using the same amenities. We have (redacted by admin) and in 10 years the traffic I feel has already doubled, it is much busier and much more dangerous than it was (redacted by admin)</p>

	<p>I fear that the added pressure on our doctors and dentist would also have a negative impact. We are already having to wait longer for appointments at the doctors, this would be much worse with more residents using the same health centre. There are residents in alsager waiting more than 4 weeks for an appointment, I do not wish for the people of Audley parish to be in the same situation.</p> <p>The dentist is already at capacity and not taking on new customers, they are also very difficult to get an appointment with.</p> <p>The traffic coming in and out of the village is dangerous, with many collisions and near misses coming on and off the a500. This again would be made much worse with more residents living in the parish.</p> <p>I strongly disagree building on green belt land, this green space provides a safe haven for nature and wildlife to thrive. It is our duty to protect our wildlife and their habitats. It is also good for mental well-being to have ample green spaces around us. We chose to (redacted by admin) here due to the green spaces available, the fresh air and the opportunity to exercise in the countryside and to teach (redacted by admin) about nature. To have numerous green spaces ruined for housing that isn't actually needed would be devastating for both the wildlife and the residents who have the right to enjoy the countryside around us. There are ample sites in the surrounding areas which can be built on, with permission already granted. I would strongly urge the council to look in to those sites before destroying precious green space.</p> <p>The village is a semi rural village, and we take pride (redacted by admin), Audley and bignall end should be kept this way for all of the reasons mentioned above. Our small village really could not cope with this huge increase of housing on top of the proposed warehouse space too. It simply does not have capacity to accommodate this.</p> <p>The local schools are also very busy too, and with only 1 nursery local to our parish I also fear that the pressure on these will be too high. They will not be able to keep up with the amount of children needing a place.</p> <p>We should also be supporting our local farmers and encouraging farm land to continue. I am astonished that this isn't something that the council would be putting as a priority. Sustainable farming whilst supporting the wildlife is far more important than building homes that are not needed.</p>

Title	Policy AB33 Land off Nantwich Road / Park Lane, Audley
Consultee Family Name	Poppleton
Consultee Given Name	Rebecca
Q4 Part of document	Policy
Q4 Policy	AB33
Q5 Sound	No
Q6 Details	AB12 I believe that the plan for 125 houses will accessibility from Diglake Street to be unsound living on that street but also feel like much of the following applies to both AB12, AB33, AB15. The road is already

	<p>congested and has very limited accessibility. At peak times it is hard to park cars and get cars and people safely down the street. The roads are too narrow and the junctions onto the main road are already extremely busy and dangerous without the additional traffic from 125 houses, utilising both Diglake Street and Albert Street and Chapel Street, with Ravensmead School just a few minutes down the road. The increase traffic would also cause more danger to those children travelling to school and living on the streets surrounding the new development.</p> <p>Pedestrian and cyclist access through the park is also a concern given that the majority of people down the street have families and small yards the park used by families in the area, taking parts of it away and again the increased traffic is a concern and unjust.</p> <p>A car park will not solve these issues and restricts residents on being able to park outside their houses to unload shopping, those with small children or with disabilities.</p> <p>The reason we chose this house was due to the views from our rear garden fields, the greenbelt and views to the monument with this development you are seriously affecting the views from our house and also potentially the sale value of our home. Given that we have had sheep in this field also I am concerned into yet more farmland being destroyed and the impact on our environment taking yet more of our greenbelt. Given the flooding in nearby Brierly Brook I feel that this development would also affect that as well as the surrounding fields and farmland.</p> <p>Traffic flow through Bignall End in general is already at a maximum increasing traffic both through AB33 and AB12 this would be further increase this beyond capacity. I also fear of the effect this will have on the GP, local schools etc. With all of this what is being proposed is just not justified or needed and is unsound and should not go ahead and should be removed from the local plan.</p> <p>In relation to AB2 there is no evidence that this will give people within the local area jobs and or attract people to the local area and again taking from our greenbelt. There are already significant levels of traffic at the M6 junc 16 and accidents at that junction regularly and already heavy impact on the A500 this is just going to exasberate this further and there is no evidence to say it will do what the council are saying.</p>
Q7 Modification	The best way to modify this is to remove AB12, AB33, AB15 AB2 they are unsound and unjustified.
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)

Title	Policy AB33 Land off Nantwich Road / Park Lane, Audley
Consultee Family Name	Page
Consultee Given Name	Diane
Q4 Part of document	Policy
Q4 Policy	AB33
Q6 Details	<p>In response to the Local Plan consultation, we would like to object to the parts pertaining to Audley & Bignall End. Building around 250 extra houses in the area will considerably change the nature and character of the village, going against particularly SOIV, to reduce the carbon footprint, promote sustainability and harness opportunities for carbon sequestration. It also goes against SOVI, to promote and sustain villages and their character. The road infrastructure will not cope with the increase in traffic that this will bring. In many places along the routes in & through the village the houses open directly onto the road with no off-road parking. This results in parked vehicles restricting the carriageways and causing congestion. This will be made worse with the increase in cars that the extra housing will bring. There is no mention in the plan of any provision for healthcare or schools for the increased population. The medical practice in Audley is already at capacity and increasing the population will put increased strain on the health services and risk diminution of care to the existing patients of the practice. The current proposals also go against the direction of travel for government policy with the need to keep most development within urban areas as far as possible, with optimisation of densification of properties to make best use of public transport and greener travel. Green belt land should be protected. The National Planning Policy Framework 2021 already indicates the need to protect green belt land and that rural development should support local services, not overwhelm them.</p>

Title	Policy AB33 Land off Nantwich Road / Park Lane, Audley
Consultee Family Name	Gilmour
Consultee Given Name	Jeanette
Q4 Part of document	Policy
Q4 Policy	AB33
Q6 Details	Part B - Policy: AB33

AB33 is a **strong** contributor to the greenbelt so why look at this site and not sites that are **moderate** contribution to the greenbelt, is it because it is **Staffordshire County Council land** and they want to sell off the whole starter farm and offered it all up to NULBC. This site floods all through the year, animals and ducks surround it. The field is very boggy in the winter especially and ran all across the field last winter and into the spring. Where will all this water go if it is concreted over, it is a flat area at the bottom of Audley. The following two fields also flood greatly and I have photographs to prove this. There is a main sewage line that goes through this field. This will increase costs.

Our garden is extremely wet in the winter, what will happen to our garden and neighbours gardens if all this green land is converted to concrete. Extra drainage would be required but with a old drainage in place now, a new supply straight down to the sewage works would be required, to prevent further increases in flooding.

AB33 is in the wrong place to be available for what is needed for the village which is 1 bedroom homes which enables the elderly that want to downsize and stay in the village, but the topography of this site makes it inaccessible for the elderly, the hill is too steep to walk, I know this because our neighbours were unable to and no bus service comes near to here, and considering the bus services have been reduced from the main street in the village, this will not be funded, especially in the long term. You have to walk up the hill to access from the main street. A site that is an accessible place for walking to the doctors, dentists, supermarket, bus stop etc is needed for 1 and 2 bedroom homes. These would then free up the larger houses in the village. There is a small block (9) of privately owned 1 & 2 bed bungalows just off the main street in Audley and has easy access to those services mentioned. These are never empty for long, they are snapped up as soon as they are on the market, because so many are wanting to downsize or families wanting to get elderly parents closer to facilities.

Policy AB33 page 114 item 2: LP states that there would be two access points to the development , **secondary one on Nantwich road B5500**, which is a very busy country road already and many cars are parked on this road and there is not enough parking outside the homes already and at peak times, there are many delays getting through this stretch of the road, causing traffic jams especially at peak times and when HGV's are trying to get through. **The Primary access road on Park Lane**, this road was considered unsafe for an entry onto the cemetery a few years ago, so why now is it safe to have over 55 homes built meaning a minimum of 100 vehicles using this lane, this doesn't make sense, and therefore it is unsound.

Evidence 3.74 THE NEED FOR INFRASTRUCTURE TO SUPPORT ACTIVE TRAVEL and by no car modes on AB2, AB15 & AB33. 3.75 states, identified migration measures would be funded by developer's contributions - how long for? We have already had funding & bus routes reduced and no travel via these means from the village after 6.30 pm. These services need to be guaranteed if elderly/young families, starter or retirement homes were to be considered for AB33, which are the types of homes that are required. If bus services are reduced now, they will not be funded for the long term. This makes it an unsustainable site.

I live on (redacted by admin) and trying to reverse onto our drive at peak times and especially if issues on the M6/A500 is awful, the road is too busy, I can wait up to 5 minutes to be able to reverse onto the drive. Which my husband and I do, as it is such a busy road and close to a bend (many cars and Lorries exceed the speed limit of 30mph). We are also close to the entrance to the 55 housing development of AB33, how will this affect my ability to reverse onto my drive, if another 100+ vehicles, then the additional cars from the other villages Talke, Chesterton, Madeley , Crewe & Alsager that will use this road to avoid J16

There is not enough parking in the village now , with cars parked every single day on the double yellow lines, as many do not walk to the village, is this because the bus service is so unreliable?

Housing increased by 6% over the last 4 decades in this borough but NUBC are predicting 6% per year, how can this be sound? Even if expecting to migrate growth into the area, this is not a justified reason to lose the greenbelt for a predicted possibility when we have so many empty houses already.

Policy AB33 page 114 item 3: Where is the connectivity to existing cycle and pedestrian routes, I see no mention of the planned routes for these, which I would be extremely interested in. Especially as these country lanes are to be overrun by additional Lorries and cars. It will be impossible for me to cycle out of my door.

Page 114 item 7: as mentioned there is flooding all year round (we have a constant lake) in this field and especially this year it stretched across the whole field and onto Park Lane. Where will all this water go?

Page 114 item 10: what contributions and accessibility improvements to Alsager Road play area? No mention of what this is, I would advise that with the increased traffic a pedestrian crossing at the very least is needed now and especially with future development plans. It is already difficult to cross to the playing fields from Alsager road and cars can be parked on the pavement making pushchairs go onto the road. The pavements need to be widened and this is impossible.

Has St Modwen issued a traffic impact report to NULBC and if so when was this taken, needs to be taken over a few weeks, to show the high number of vehicles this junction takes and the amount of delays that are on the rat run of B5500 to avoid Junction 16, this is a small busy country road already with traffic using it as a cut through to avoid Junction 16, especially at peak times or when there are accidents, breakdowns occurring on the M6 or A500. If 213 additional houses are developed in Audley all will join the B5500 to travel out of the village, that is potentially 500+ more vehicles with no regular bus service, that is only available from the main street of Audley, there is a steep hill to walk from AB33 to a bus stop, which makes it inaccessible for the elderly to purchase a home on AB33 or young families with pushchairs.

There are exceptional circumstances for our borough that should be considered. The population has had more deaths than births over the last decade.

	<p>There are 1000 empty houses in the borough, on the NULBC website. The growth is not realistic, especially if going for big growth, as the borough already have empty homes and warehouses. This does not justify losing greenbelt for the potential increased migration. Therefore this is an unsound plan.</p> <p>I have not seen any grading of the agricultural land on AB2 or for AB33, AB12, AB15. These are all good farming greenbelt.</p> <p><i>Site allocations that involve removing land from the Green Belt will provide compensatory improvements to the remaining Green Belt. These sites will also establish a recognisable and permanent new boundary to the Green Belt. These measures will be agreed with the Council as part of the preparation of site wide master planning and informed by the Green Belt Study, Landscape Study / landscape assessments, Open Space and Green Infrastructure Strategy, and biodiversity / recreational needs assessments. The scope of compensatory improvements will also be informed through early engagement with relevant landowners, key stakeholders and the local community. Compensatory measures will be secured as appropriate through the use of conditions / section 106 obligations and the community infrastructure levy</i></p> <p>From the above statement I would like to see the compensatory improvements to the remaining greenbelt, in the Local Plan, but there isn't, how can we believe that the development will end with the one field AB33 and not lose the whole farm (Pear Tree Farm), What would be needed on the B5500 road at its junction with Alsager road (mini roundabout)? For any further traffic, it would need to be widened to the mini roundabout, this is impossible as there are Victorian walls and homes along this route. Additional drainage or ponds/pools needed for all the additional water from the floods in the field now. Road humps and pedestrian crossings for the roads as it is too busy now and cars travel over the speed limit of 30mph regularly (see the data from the speed monitors). Where is this mentioned in the Plan? Provisions are needed to discourage the B5500 from been used as a cut through to avoid J16. This is not sustainable.</p> <p>I have not had enough time to spend looking through this Local Plan and have had to look at a few of the elements that affect me. The Consultations and the use of the portals are not fit for purpose and many people have complained that it is not user friendly.</p> <p>I agree with the response from PROTECT AUDLEY PARISH GREENBELT. And like so many followers (1200 on Facebook) who have not had the stamina to reply to this Local Plan.</p>

Title	Policy AB33 Land off Nantwich Road / Park Lane, Audley
Consultee Family Name	Council
Consultee Given Name	Audley Parish
Q4 Part of document	Policy
Q4 Policy	AB33
Q5 Legally compliant	No
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>Please note the contents of the attached letter which sets out the Council's comments in this regard. Please do not dilute the comments in any officer reports as the document needs to be read in context alongside the previous responses made.</p> <p>Sites AB12, AB15 and AB33 are all within Audley Parish. APC accepts that some housing growth is needed to meet local housing need, including small (one bedroom) and family (4 bedroom) accommodation and homes suitable for older people and those with limited mobility. The sites are close to existing settlements and do not create coalescence between settlements. APC would emphasise that green belt release should only occur in exceptional circumstances, but accepts that there are no alternative sites that would not involve green belt release.</p> <p>The new housing would help to ensure that existing shops and other facilities in Audley and Bignall End remain viable. The increase in population would place more pressure on health, education and other facilities and this one of the main concerns for many residents. The provision of a safe and adequate access would be essential for all sites.</p>
Q7 Modification	As above
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	As set out in this response and the previous 2 responses - the Parish Council has strong objections in particular to the inclusion of AB2.

Q5 Sound	No
Q6 Details	<p>AB33 is high quality agricultural land in the green belt. It is owned by Staffordshire County Council and has been used as a starter farm for those wishing to get into farming for many, many years. As per NULBC evidence document ED29 Site selection – this site is “strong” with regard to the Green Belt, so how is that his site has been chosen bearing in mind that there are other sites in the Parish which are either “weak” or “moderate”. Why have two “strong” sites belonging to Staffordshire County Council been chosen? Again, I believe this is just asset stripping by the Borough Council – in fact a recent commission by Staffordshire County Council suggested that 1000 houses could be built in Audley so they are definitely intent on selling off all their publicly owned land. See Staffs CC Land at Audley Greenbelt Assessment & Parcel Option prepared by David Locke Associates 04/23. In recent years, Staffordshire County Council have not re-let the farmstead itself even though they have had enquiries but the fields are still in use for grazing cattle even though the Local Plan says otherwise. The site is subject to flooding due to the high water table in the area and has in fact had a pond for the majority of 2024 (see attachment)</p>
Q7 Modification	<p>The Final Local Plan is based on a High Growth Scenario yet there is no justification of why this might be.</p> <p>The last census showed a reduction in population, our birth rate is lower than our death rate, our unemployment is low – Newcastle under Lyme does not follow the rest of the UK so I feel we do have exceptional circumstances to justify a reduction in NULBC housing targets but they have not listened. Can you also refer to Pages 4 & 9 of Appendix B which was my response to Regulation 18 for more figures to back this point up. I honestly believe this Local Plan is not sound – the housing figures are still too high. The previous consultation (Regulation 18) didn’t follow the Gunning Principles – see Audley Rural Parish response and this consultation has had various set-backs including mis communication with the public – we were initially informed that email submissions would not be allowed but then after several weeks, we were informed that emails were allowed. See official notice from NULBC below.</p> <p>The Portal for both consultations has caused much frustration amongst residents. There were complaints about the Portal during Regulation 18 yet the same problems of not being able to access it, not being able to add comments continues. NULBC did not listen to residents and improve the Portal At the Audley consultation event for Regulation 18, Cllr McEmeny was heard to say that this AB2 WILL be going ahead – this is gross predetermination. For Regulation 19 several evidential reports were not made available in time for either the Special meeting of the Economy & Place Scrutiny Committee on 11th July 2024 nor the Full Council Meeting on 24th July 2024 – certain councillors actually lied at the Full Council and said that they were available – they were not! We have the proof that they weren’t – see below</p> <p>How do councillors make crucial decisions as to whether the draft Local Plan should be progressed without having the opportunity to view and digest information? In any event, in order to make this Final Local Plan sound you need to remove the following sites from this the Final Local Plan AB2/AB2a AB12, AB15 & AB33</p>
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)
Q9 Hearing reasons	Although I do not wish to speak at the public hearing – I would like to be in the public gallery if at all possible. I am unsure whether this will be possible.

Consultee Family Name	Gilmour
Consultee Given Name	John
Q4 Part of document	Policy
Q4 Policy	AB33
Q5 Sound	No
Q6 Details	Policy AB15/AB12/AB33

	<p>I oppose this because it is too many houses for Audley Parish , it is not justified to lose so much greenbelt, there are not exceptional circumstances, therefore it is unsound. The roads that run through Audley/Bignall End, are country B5500 roads with cars parked either side.</p> <p>AB12/15/33</p> <p>The main reason is the amount of traffic that will be generated through the narrow roads. Already the B5500 and Alsager road to the A500 are rat runs and throughout the day articulated vehicles HGV, OGV1&2 use this road as a cut through to avoid M6 junction 16 and Talke roundabout. In 2 hours on three occasions I counted between 1350-1750 vehicles using the mini roundabout at the junction of B5500 & Alsager road. The larger vehicles have damaged the roundabout many times and only this year have had it re tarmace'd after having huge potholes for over 12 months.</p> <p>If there is an accident or breakdown on the A500 or M6 near j16, the amount of traffic must double, the traffic is queuing along B5500 with hgvs and commercial vehicles blocking the roads.</p> <p>Policy : AB34</p> <p>On AB33 the field floods constantly, we have had a lake in this field for a few years now. Concreting over this is going to cause major issues to the surrounding properties.</p> <p>There are sewers in this field also that need attention.</p>

Title	Policy AB33 Land off Nantwich Road / Park Lane, Audley
Consultee Family Name	Hopkins
Consultee Given Name	Sheila
Q4 Part of document	Policy
Q4 Policy	AB33
Q6 Details	<p>I am responding to the following site plans.</p> <p>Plan: AB2 I OBJECT TO THIS PLAN. This junction is already at capacity & can't cope with the sheer weight of traffic. If a massive warehouse is built, which incidentally is on good farming greenbelt land providing milk/beef etc and giving jobs to locals, the environmental impact will be catastrophic. We should be producing food IN this country rather than creating air miles by importing food/drink/fuel etc. It is already a bottle neck at Junction 16, M6 & A500, causing many accidents. This results in vehicles, many of which are HGV's, causing them to congest country lanes around Audley & surrounding villages. These narrow roads are not built to withstand this amount of heavy traffic. The proposed Emergency exits onto Park Lane & Barthomley Road are very narrow one car width lanes without footpaths or street lighting. These lanes could equally be used by employees of the proposed factory to avoid queuing on the A500 & making it a'ratrun' adding to noise pollution.</p> <p>Plan: AB12 I OBJECT TO THIS PLAN. The access point to this site is proposed to be on Diglake Street. Have any of the planners ever been up this street? It is lined with terraced houses with all the residents parking on both sides of the road which leaves only room for one vehicle to navigate the street at a time. The idea of having a carpark for these residents is ludicrous, is someone seriously asking them to park away from their house & bring shopping/carry children etc back to their house so these new homes can have the luxury of parking on their drive? If any of the residents are disabled will they expected to be wheelchaired back from the carpark in the rain/ice? There will be an additional 250 extra cars pulling out of/into Diglake Street & Albert Street via Ravens Lane which is the main Nursery & Primary School route. There is a children's play area at the end of Albert Street which would be become dangerous with the proposed amount of traffic passing it. . It is already a dangerous junction without all this extra traffic. The Site AB12 is prime agricultural valued greenbelt land & should remain as this, we need to be using this land to feed our country & not polluting the atmosphere by importing food stuffs. If this land is developed it will have a high potential to flood making it unsound. The flood water run off will end up in Brierly Brook with the potential of flooding the surrounding agricultural fields. This land belongs to Staffordshire County Council, it is currently in use & being farmed.</p> <p>Plan: AB33. I OBJECT TO THIS PLAN. The proposal to build 55 houses on this site is unviable firstly because of the access onto Park Lane which is as it says is a 'lane' so very narrow and single track. Two HGV's would be unable to pass anywhere & there's limited passing places for cars. There is no footpath so walking down there when this site is built would be impossible as it would be too dangerous. The proposed field is a flood area, so building on it will push the water on to neighbouring properties causing them to flood.</p>

Consultee Family Name	Colclough
Consultee Given Name	Mark
Q4 Part of document	Policy

Q4 Policy	AB33
Q6 Details	<p>Too who it may concern, I wish to register my objection to the building of 55 new homes in the proposed AB33 area.</p> <p>Audley village does not have the infostructure to cope with this amount of housing, whether that be health care, road network, or schooling.</p> <p>Traffic increase and pollution from this amount of housing, along with other considered sites is significant, at a time when we should be protecting green belt and encouraging farming.</p> <p>It is also a regular exercise route, for walking, jogging and cycling, so green space and mental health for local people is very important and we wish to keep Audley rural, and as a village.</p> <p>There is currently minimal parking in the village, this will make matters worse.</p> <p>The health centre struggles to cope with demand and local schools do not have capacity.</p> <p>There is no significant need for new builds, as there are plenty of houses for sale around the area of all types, so I disagree totally with this proposal, and ask for it to be rejected.</p>

Title	Policy AB33 Land off Nantwich Road / Park Lane, Audley
Consultee Family Name	Humphreys
Consultee Given Name	Kevan
Q4 Part of document	Policy
Q4 Policy	AB33
Q6 Details	<p>These comments are in relation to the Audley Ward, which is my area of experience given that I live there.</p> <p><u>HOUSING</u></p> <p>Firstly, must state I'm not a "NIMBY"; I fully accept that we need more housing nationally, however ...</p> <p>I wish to strongly object to the proposed construction of new housing in previously undeveloped land in the Audley area (AB12, AB15, AB33). This is because:-</p> <p>The existing local infrastructure is simply unable to support any further developments – the village is already blighted with crowded and potholed roads (the illegal parking in the village has to be seen to be believed) – so is already a danger to drivers and pedestrians. The additional traffic from any new developments will make this much, much worse.</p> <p>Also, there is already a stark lack of access to facilities - such as doctors / dentists / schools / shops / buses etc. – and the planned developments will undoubtedly have a devastating effect on local wildlife and rural land, including erosion of green belt, higher levels of pollution and even more congestion (as any recent survey / examination must show, levels of pollution and congestion in the centre is already appreciably higher than expected for a 'village'). So the factors above would have a major long-term detrimental effect on the physical health and mental wellbeing of existing residents.</p> <p>My understanding is that government policy states that development of greenbelt should only be considered in "exceptional circumstance"? What are the exceptional circumstances? Surely it can't be that there are no other locations within the area where brown field land cannot be used? A journey through our city reveals many areas of abandoned and derelict land, including former industrial and domestic uses (as one drive from Junction 16 to15 of the M6 via the A500 will confirm).</p> <p>To reiterate, I'm genuinely not a 'NIMBY', but the proposed number of houses in this area would have a devastating effect for local residents and wildlife.</p> <p>So I therefore strongly object to the proposals for AB2, AB12, AB15 and AB33.</p>

Q4 Part of document	Policy
Q4 Policy	AB33
Q5 Legally compliant	No
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>Policy AB2 is unsound as the warehouses and employment site will never be used as is the case with large parts of Newcastle-under-lyme and recently Alsager, where warehouses and employment buildings stand empty. This is a purely an illogical approach as in the present and foreseeable future businesses are shutting down due to the economical recession. My suggestion would be to reduce AB2 considerably by not building an employment zone or warehouses.</p>

	<p>Policy AB15 is unsound as creating new unaffordable houses (government and many councils are delusional in thinking builders will sell their properties at anything less than the area asking prices) will create more traffic problems increase stress on the infrastructure ie schools, hospitals, power, sewage which are already overstretched. My suggestion would be to halve the amount of houses to 16.</p> <p>Policy AB33 the same comment as for policy AB15 with the same suggestion reducing the houses by half to 27.</p>
Q7 Modification	<p>AB2 just build the lorry park I guarantee the warehouses and employment buildings will remain empty for at least 10 to 20 years.</p> <p>AB15 reduce the houses by half to 16.</p> <p>AB33 reduce the houses by half to 27.</p>

Q4 Part of document	Policy
Q4 Policy	AB33
Q6 Details	<p>In respect of the above I have the following comments as to why the proposed sites within the Audley Rural Parish are not viable, and please note this is a rural parish, which would not be the case anymore if any of the proposed sites are allowed!!</p> <p>AB33</p> <p>This site is the least inoffensive, though the same issues arise in respect of the local road infrastructure, as with the other sites proposed this is also on greenbelt land! The addition of even 55 houses adds significantly to the traffic flow, the roads are not adequate for the increase.</p> <p>I would question the Councils decision making if they consider any of the above sites to be justifiable and all of them to be unsound with very little consideration given to the community and residents of Audley and Bignall End. Whilst I accept that there has to be a need for housing and industry they need to be built in areas that can cope with all that they bring with infrastructure already in place, the infrastructure is not something that can be added at a later date! At the start of my email I mentioned this is a Rural Parish, and that is what it should remain. The surrounding country side and the sites themselves are of benefit to the local ecology and as such is as valuable as any housing or warehousing would be.</p>

Q5 Legally compliant	No
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>AB33 Land off Nantwich Road/ Park Lane Audley</p> <p>I object to this development of Greenbelt land. The traffic through Audley has increased over the years and anymore would be far too much. The parking even now is causing problems in the village especially for disabled, older people and people with pushchairs / children.</p> <p>Nantwich Road B5500 is already a 'rat run' for traffic to Newcastle from A531 partly due to being directed away from Betley/Wrinnehill. We have problems with sewers on Nantwich Road + Park Lane. They are old and will not cope with extra input from a substantial number of new homes. Water treatment overflows were 900 in 2023. This development would make it worse. The land floods regularly in wet weather so the developer would have to mitigate this. This would lead to extra cost & would make it profit less than 20%. This would put pressure on the number of affordable homes to be built. My main concern is traffic increase + how they will all get on & off the site.</p>
Q7 Modification	Remove AB33 from Local Plan

Q4 Part of document	Policy
Q4 Policy	AB33
Q6 Details	<p>Re: Policy AB33 land off Nantwich Road/Park Lane and AB12 and AB15</p> <ul style="list-style-type: none"> • My primary objection to the sites chosen for housing – AB33, AB12 and AB15, is that they are on the green belt. I am aware that there are many brownfield sites around the borough, including Audley, that could be cleaned up and developed. I recognise that developers would prefer green belt sites as it makes the project cheaper and faster, but this does not make it right.. • Our village infrastructure is not designed nor large enough to take extra traffic from places of work and/or large housing estates. Indeed the current poor state of the road surfaces will only be made worse from increases in traffic volume. There will also be extra demand on village amenities such as schools, shops and GP surgery, which currently are running at very high capacity with seemingly little capability to increase. <p>I would like to state that I, along with many others, recognise the need for good, low cost housing throughout the borough, and that includes Audley. I believe that we should accommodate new houses, so that younger people who have grown up in this location, together with people who wish to move here, have a chance to own their own their own homes or rent suitable properties in good condition.</p> <p>The proposed changes to our rural village of Audley would seem to fail on many fronts, but the use of green belt and the necessary changes, even if possible, would alter the character and functioning of a small, relatively quiet place.</p> <p>It is for these reasons that we wish the planners to remove sites AB2, AB15, AB12 and AB33 from the local proposal.</p>

Consultee Family Name	Barber
Consultee Given Name	Peter
Q4 Part of document	Policy
Q4 Policy	AB33
Q5 Sound	No
Q6 Details	<p>NOTE: All my responses are in Blue</p> <p>Reg19 and related Evidence Documents are in Black</p> <p>Reference to site AB12,AB15 & AB33 and related issues that arise including interface with other development in the Local Plan REG19 and associated Evidence documents have been used for comments below.</p> <p>General:</p> <p>Population growth figures (Census 2021 & ONS figures) suggest only a 6.9% increase in population, variable student figures do skew this slightly but this is a mobile population.</p> <p>The area of Audley has a population that is mixed but contains quite a few older residents and a younger people who wish to stay if affordable housing (1-2 Bedrooms) was available</p> <p>Employment is high although a need for better education and up skilling the workforce is required.</p> <p>Some small growth is required for these populations. However building on green belt land would open the floodgates for excessive development, Especially if AB2 was to go ahead. The risk of over development to chase possible jobs would happen. The risk of over development with surrounding conurbations is high. Note the (NPPF) the borough has already exceeded its recent housing targets. Where is the evidence we need so many more?</p> <p>The projected models would result in many high cost homes with few if any affordable housing for locals. Also these housing numbers do not really match the requirements and exceed them by quite a margin. Are we creating a need for AB2 that does not warrant it based upon inflated employment figures for the economic zones such as AB2/AB2a</p> <p>The vast majority of AB2 site employees would come from the surrounding districts by car, (with generally only outside high income earners in the affordable properties in jobs not related to the economic Zones AB2).</p> <p>Most of these new homes could easily be incorporated in areas of brown field sites (opposite TK30 etc and along the A500 corridor.</p>

	<p>Regarding building sites it is noted that the employment sites AB2/Ab/2a is on Green Belt flat open easy build terrain(accepted) and TK30 is on Green Belt hilly, mine, and scrap yard site (rejected).</p> <p>Bus services are dismal for they area and providing a reasonable service appears unviaable to most bus operators. New employment sites AB2 would only provide services from Newcastle or Stoke. The report also stresses the difficulties of funding and operators clearly.</p> <p>Traffic from the M⁴/J16 & A500 would cause great congestion if a problem occurred on the Highway system as it does now with traffic taking short cut from Crewe and traffic for school runs etc. The traffic survey does not really address this and any mitigation would be years away.</p> <p>How much funding would S106 and other measures contribute towards infrastructure (eg a £100000 s106 would not pay for a school (around 15000000 to £200000) let alone the cost of water, and services for a community on top of that. Can the borough afford such investment??</p> <p>Loss of Greenbelt is a serious issue as any mitigation is a poor replacement for nature and habitat and really needs to be a last resort based on sound evidence not economic requirements. It is also grade 1-2-3 Agricultural land.</p> <p>AB12</p> <p>Location: Green Belt would break and allow further unchecked expansion at a later date. Some livestock use the land regularly</p> <p>Drainage : site has areas of poor drainage or flooding potential that will cause problems for new and existing structures</p> <p>Access: Very poor access given the planned amount of dwelling on this site and the need to reduce traffic on Diglake street which is very narrow. The overflow of parking would be felt right across the area.</p> <p>Traffic: Traffic flow increase would also cause problems through the village</p> <p>Number of dwellings: very large number on site with currently no idea of type or number of each type (3 story town house, 5 bedrooms or 1-2 bedroom small house).</p> <p>AB15</p> <p>Location: Green Belt would break and allow further unchecked expansion at a later date</p> <p>Drainage : site has areas potential poor drainage or flooding potential that could cause problems for new and existing structures</p> <p>Poor access: potential access, but would cause parking problems</p> <p>Traffic: high volume of traffic in very narrow streets</p> <p>Number of dwellings: very large number on site with currently no idea of type or number of each type (3 story town house, 5 bedrooms or 1-2 bedroom small house). AB15may allow for the required readjusted small amount of housing required for Audley if it is affordable for young people and older residents (being near the centre)</p> <p>AB33</p> <p>Location: Green Belt would break and allow further unchecked expansion at a later date. It also has working agricultural activity and is on good soil. Livestock use the surrounding land also Therefore its loss would not easily be replaced and harm the environment.</p> <p>Drainage : site has areas poor drainage and flooding potential that could cause problems for new and existing structures . New building would cause extra problems too.</p> <p>Poor access: small country lane with associated width of road and junction problems with volumes of traffic.</p> <p>Traffic: as above</p> <p>Number of dwellings: very large number on site with currently no idea of type or number of each type (3 story town house, 5 bedrooms or 1-2 bedroom small house).</p> <p><i>Reading through all the documents including supporting evidence documents has taken a great deal of time by any individual. Few people including councillors would have a full understanding of all the points contained let alone a non- expert. I believe these documents became available for the full council on July16th 2024, ready to be passed for scrutiny on the 24th July 2024.</i></p> <p><i>Having some experience of technical documents in industry the following is of concern.</i></p> <ol style="list-style-type: none"> <i>a) The time scale given between release and scrutiny as many people involve would not have been aware of all the details from all parts of the final document/s even those who would have been involved in aspects of it. The time scale to fully check (1000,s of pages across numerous documents) given that councillors have other tasks and duties in my view is insufficient to arrive at a full rounded decision based on evidence.</i> <i>b) Many of the supporting evidence documents are produced by consultants. What assurance do we have to confirm they are fully independent from development involvement bias?</i> <i>c) The public consultations I have attended have only provided very vague answers. To find more out you have to dig much deeper, hence above notes). Within the consultation timescale many members of the public wish to respond but find the task very confusing, intimidating and with day to day lives hard to complete or do simple not have the skills or equipment to respond. Reg. 18 for me was extremely difficult to complete online despite phone calls, but I did manage it (Ithink!).</i> <p><i>From above on AB12,AB15 & AB33 I am not sure currently given the information seen that the selection of these site and the Local Plan (reg19) clearly demonstrates soundness in this regard due to the issues noted in all above sections</i></p>
Q7 Modification	<p><i>To hold review of the facts surround AB12,AB15, AB33 the local plan Reg19. This review that would need to look at the real number of dwellings, linked to a more reasonable review of employment and sites required (see above section on AB2/AB2a, TK30 ,KL15)</i></p>

	<p><i>It may on the surface appear expensive and unnecessary as appears to have been sorted out and decided However a pause and a review would be much cheaper in the long run and potentially save millions not to mention good green belt. To provide affordable homes to a local population rather than large homes for outside investment would be a better policy as a small number of dwells are required in the right place would allow a slower development pace and time to reflect and react on trends in a more accurate manner.</i></p> <p><i>From above on AB12,AB15 & AB33 I am not sure currently given the information seen that the selection of these site and the Local Plan (reg19) clearly demonstrates soundness in this regard due to the issues noted in all above sections</i></p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	To gain an understanding of the processes involve in coming to a final decision based upon the technical evidence.

Title	Policy AB33 Land off Nantwich Road / Park Lane, Audley
Consultee Family Name	Evans
Consultee Given Name	RI
Q4 Part of document	Policy
Q4 Policy	AB33
Q5 Sound	No
Q6 Details	<p>I consider the proposal to build 55 houses on the site known as AB33 to be unsound for the following reasons:-</p> <p>1)The proposed site is currently Green Belt and good agricultural land that contributes to the well-being of the local population. It is able to absorb rain water and helps mitigate any adverse local climate change issues. The building of 80 houses and all the road infrastructure associated with such a development will have an adverse affect on flooding plus additional road traffic to an already congested area.</p> <p>2)The proposed additional 55 houses will no doubt add to the vehicle count in the area and contribute to more congestion in an already busy area. The road through Audley is a 'rat run' for commuters traveling between Crewe and the Potteries as they try to avoid the congestion on the A500. I have witnessed major congestion at all times of the day due to the vehicles trying to negotiate the mini roundabout on the B5500 Nantwich Road and I see the proposed site will only make the situation worse.</p> <p>3)The proposed access to the site is along Park Lane which is a single track road for most of its length used by agricultural tractors and associated heavy machinery making it very difficult to pass even another car without the need to reverse into a gateway or similar.</p> <p>4)Where Park Lane joins the B5500, it forms an offset crossroads with Chester Road so any increase in traffic at this junction would require traffic lights or a new roundabout to make the junction safe and fit for purpose.</p> <p>5)The extra 55 houses would definitely overstretch the existing Schools, Doctor and Dentist surgeries and car parks unless additional resources are put in place as a condition of the plan up front.</p>
Q7 Modification	The Planning Inspectorate should delete the proposed building of 55 houses in site AB33 as completely unsound.
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)

Q5 Sound	No
Q6 Details	<p>I object to the the following planning:</p> <p>AB12, AB2, AB15 and AB33</p> <ol style="list-style-type: none"> 1 NuLBC are applying a high growth strategy. They present no evidence that this will transpire. In the village of audley and surrounds there are small pockets of land that are being developed appropriately and proportionately to the surrounds. Larger scale housing is not required, therefore I feel this is unjustified and unsound. 1 AB12 represents a high quality contribution to the green belt. Building 125 homes here would exacerbate flooding into the nearby Brierley Brook. This would take away climate mitigation and contributions to our food security, not just from this site but also from neighbouring fields that will be affected by flooding. This site is therefore not justified and consequently unsound. 2 AB15 (33 dwellings) and AB33 (55 dwellings): Similar arguments to item 5 above can be applied to these allocations also. Therefore, these allocations are similarly unsound. 3 All allocations in the Audley and Bignall End area for housing are in the green belt. <p>Moreover, as proposed developments they would increase traffic flow well beyond the capacity of the current road system as well as placing added pressure on local schools and GP’s surgeries etc. These allocations are therefore not justified, hence unsound.</p> <p>I would further like to add a personal note. Being a mother (REDACTED BY OFFICERS), I want to stress the importance of our community here, our children “go outside to play” these green spaces are invaluable. At a time where mental health in young people is a pandemic problem let’s not allow this to happen to our children, who won’t be children forever. We want everyone to enjoy this wonderful village, this generation and many more to come. The wildlife in our village is amazing, from owls and bats to badgers and hedgehogs. We WANT to keep it this way. Trees are natures carbon catchers, it is vital that these green belt areas are protected and cherished. Staffordshire County council should be utilising brown field sites over green belt.</p>
Q7 Modification	To render the local plan sound, remove these allocations from the local plan.

Title	Policy AB33 Land off Nantwich Road / Park Lane, Audley
Consultee Family Name	Clewes
Consultee Given Name	Martine
Q4 Part of document	Policy
Q4 Policy	AB33
Q6 Details	<p><u>Site AB12 – Land east of Diglake Street</u></p> <p><u>Site AB15 – Land north of Vernon Avenue</u></p> <p><u>Site AB 33 land off Nantwich Road/Park Lane, Audley</u></p> <p>I would like the local council to remove the following development sites from the local plan and consider looking at low infill areas rather than large developments that will damage the local area, put pressure on infrastructure that is already struggling with demand and change the character of the village that can never be regained should these developments occur.</p> <p>There is a large development proposed at Red Street which is a short distance from Audley and the amount of traffic pollution that would be caused across both these areas is ill advised. At peak times in the village the traffic can back up due to double parked cars in an already overcrowded area. The village can, at times become impassable and leads to people seeking short cuts around high pedestrian areas. The local roads cannot sustain the additional traffic that extra housing will bring, potentially 200 to 300 cars plus the direction of traffic when problems occur on M6/A500 when the village becomes a diversion route.</p> <p>Audley and Bignall End is a small rural village and does not have the necessary infrastructure to support and sustain these new developments and become to all intents and purposes a town. Currently, it is very difficult to get a GP/Dentist appointment and further residents will add to that strain. There is one primary school with limited space so people would need to travel out of the area to access schools, again adding to the congestion and adding to the environmental pollution.</p> <p>The main road – Ravens Lane is already congested, cars park on either side and it is difficult to pass when buses/tractors/larger goods vehicles are on the road, an additional 200 to 300 cars will add to these pressures and there is a real fear that road traffic accidents and incidents will rise.</p> <p>I have fears that the village, feelings of the residents, the local heritage is all being ignored. The fact that council members did not have time to look at all the relevant paperwork prior to voting this plan through speaks volumes, it is almost like it does not matter what we say, it will just be done to us anyway.</p> <p>Words fail me when thoughts turn to the removal of large swathes of greenbelt in one area, the proposed developments will increase the traffic on roads that are not able to cope with current volume and therefore are not justified. These sites need to be removed from the local plan as they are unjustifiable and hence unsound.</p>

Q5 Legally compliant	No
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>The policy relating to AB33, Land off Nantwich Road and Park Lane Audley is sound and should be scrapped.</p> <p>Traffic through the village has increased over the years to unacceptable levels for a B road (B5500) and village streets. This development would be too much for the area. Parking is already a problem in Audley and Bignall End, this would take it to even worse levels.</p> <p>A5500 is already a 'rat run' for traffic diverted from Betley going to the M6/A500 and Newcastle any extra traffic would be unsustainable the sewers along Nantwich Road and Park Lane are old (victorian) and would not be able to cope with the extra volume due to more houses. We have problems with system already.</p> <p>Water treatment overflows were over 900 in 2023 this development would increase these.</p> <p>The land floods regularly in bad weather so any developer would need to deal with this leading to extra costs making the 20% profit the developers are entitled to unviable. This in turn would put pressure on the number of affordable houses built.</p> <p>Schools in the area, both primary and secondary are already over subscribed so extra demand would cause more problems for them. For these reasons the plan at AB33 is unjustifiable and unsound.</p>

Q7 Modification	AB33 should be scrapped altogether

Q4 Part of document	Policy
Q4 Policy	AB33
Q7 Modification	<p>Policy AB33 Land off Nantwich Road / Park Lane, Audley</p> <p>We request that criterion 7 is amended to take account of records of sewer flooding having occurred in the wider area and the fact that sewers pass through the site.</p> <p>'7. A sequential approach will be taken within the site to direct development to areas of least risk of flooding, taking account flood risk from all sources including surface water flooding and sewer flood risk,'</p> <p>We also request amendment to paragraph 13.43:</p> <p>'13.43 The site is located within Flood Zone 1 but some areas within the site are affected by surface water flooding. In accordance with national and Local Plan policy, an effective drainage strategy will be established, and a sequential approach applied within the site directing development to areas of lowest flood risk. There are flood incidents from the public sewer in the wider area. Applicants must engage with United Utilities to consider the detailed design of the site and drainage details. Applicants should not assume that the sewers can be diverted, or that any levels can change on top of the sewers, as such proposals can negatively affect hydraulic performance and increase or displace flood risk. Any risk of sewer flooding could affect the developable area of the site and the detail of the design. Careful consideration will need to be given to the approach to drainage including the management of surface water; the point of connection; whether the proposal will be gravity or pumped; the proposed finished floor and ground levels; the management of exceedance paths from existing and proposed drainage systems and any appropriate mitigating measures to manage any risk of sewer surcharge.'</p>

Q4 Part of document	Policy
Q4 Policy	AB33
Q6 Details	<p>1.1 Audley Community Action Group (PAPG) is a community interest company. The CIC exists to protect and enhance the Green Belt in the civil parish of Audley, with over 1,300 supporters.</p> <p>1.2 We strongly object to the high number of houses planned for the borough. Also, the allocation of sites AB12, AB15 and AB33 in the Local Plan. We do not believe the overall housing figures, nor the site selections are sound, they can neither be justified nor is it likely to be effective. The grounds for the exceptional case for removing the land from the Green Belt have not been met.</p> <p>1.1 Audley Community Action Group (PAPG) is a community interest company. The CIC exists to protect and enhance the Green Belt in the civil parish of Audley, with over 1,300 supporters.</p> <p>1.2 We strongly object to the high number of houses planned for the borough. Also, the allocation of sites AB12, AB15 and AB33 in the Local Plan. We do not believe the overall housing figures, nor the site selections are sound, they can neither be justified nor is it likely to be effective. The grounds for the exceptional case for removing the land from the Green Belt have not been met.</p> <p>2.1 The infrastructure of the parish is not adequate for the level of extra housing envisaged. There are existing problems with rat running through the villages and the local highways are struggling to accommodate the strain of the traffic. There is a severe parking problem in the centre of Audley and more cars will make this worse. No impact assessment has been made for these combined sites. This problem will be even greater if site AB2 remains in the Local Plan.</p> <p>2.2 There are flooding issues throughout the parish and the existing sewage system is inadequate, as shown by United Utilities records (please see attachment)</p> <p>Audley discharges account for 47% of the Constituency's hours of discharge (907.07 of 1,925 hours) and 29.5% of the spills (135 of 458 spills). The highest of the six watercourses in the Constituency (please see attachment)</p> <p>3.1 At regulation 18, United Utilities noted "various sewer assets and associated combined sewer overflow pass through this site which will be a constraint to development." However, no assessment has been made to ascertain how this site will impact on the sewer system.</p>

	<p>3.2 At regulation 18, Staffordshire County Council noted concerns about the access. It stated "Wide enough access to Diglake Street but issues regarding on street parking and increased traffic. Preferred access is B5500 but existing access is of insufficient wide in its present form."</p> <p>3.3 LP para 13.27 has not sufficiently addressed this problem unless. Whilst there is provision for off street parking on site AB12, most residents do not like parking their cars out of site. How will they be induced to use this parking area? The suspicion is that it is intended to force residents from parking outside their homes in Diglake Street, possibly by the introduction of double yellow lines? We strongly object to a Local Plan site that creates a problem, then disadvantages existing residents in order to remedy the problem that the Local Plan has made. Surely, this dilemma shows that the site is not appropriate for housing?</p> <p>3.4 We are also astounded that a site judged to provide a strong contribution to the Green Belt has been chosen over sites that provide a moderate contribution.</p> <p>3.5 We are also disappointed that good agricultural land forming part of a County Council starter farm is being lost.</p> <p>5.0 AB33</p> <p>5.1 At regulation 18, Staffordshire County Council stated that "off-site highways improvements likely to be required. Master plan to be supported with a Transport Assessment." Yet no details of access have been provided. This is of particular importance as a previous planning application to create an access to the cemetery from Park Lane was refused on highway safety grounds.</p> <p>5.2 This site is at the bottom of a hill and there is a steep gradient from the site to village facilities. This is likely to reduce active travel.</p> <p>5.3 We are also astounded that a site judged to provide a strong contribution to the Green Belt has been chosen over sites that provide a moderate contribution.</p> <p>5.4 We are also disappointed that good agricultural land forming part of a County Council starter farm is being lost.</p>

Q6 Details	<p>Dear Inspector,</p> <p>Newcastle Under Lyme needs a local plan, to allow structured development of housing across the Borough and secure sites that are in green belt land.</p> <p>However, I feel that the local plan we see being put forward has sites in , that are not just unpopular but also have real infrastructure concerns and based on assumptions that I feel cannot be substantiated.</p> <p>Having attended various resident group meetings , I have found that they are very knowledgeable and who knows better than local residents , the problems that they face now and how the new developments will affect them and not against a local plan but sites that are in the plan.</p> <p>The main sites that I have concern over AB2, AB33,AB12,AB15, CT1, BL8,BL18,BL32, TK6,Tk17 and TK27.</p> <p>These are in Audley , Red Street and Butt Lane /Talke , areas that I have links with and know well.</p> <p>Documents are now accessible, but residents and councillors have by timings of release , which in some cases have not allowed proper time for scrutiny and meaningful consultation.</p> <p>All these sites have traffic issues already and note recommendations regarding A500 , Talke Interchange, A34 ,A527 , which will need major financial assistance .</p> <p>I believe all the sites listed have questions about infrastructure and would question how sound the reasoning and financial constraints of the projects to be deliverable.</p> <p>I would like to mention two sites in particular , which are AB2 and CT1.</p> <p>AB2 is a 80-hectare project for warehousing /factory that is not in keeping with the rural area , with only 22 hectares needed for warehouse , the rest is for lorry car park and substation.</p> <p>Having experienced problems in my Ward , Holditch and Chesterton , with warehouse now occupied by Boughey Distribution I believe this is not a sound proposal.</p> <p>Residents constantly complain about traffic and noise , plus air quality.</p> <p>When it was built people complained , before it was even occupied residents about construction, and we also had problems concerning getting Road adopted by Staffordshire County Council .</p> <p>Without this happening , warehouse contract would not have been signed , and quite possibly would still be empty now .</p> <p>AB2 in Audley , is potentially 3 times bigger than Chesterton warehouse , and have grave reservations regarding the soundness of this development plus I believe that there may be another more appropriate alternative.</p> <p>CT1 Red Street has been scaled down but worth noting , that area has a history of being used for mining , as well as this mentioned in the report doctors which closed and now a dentist.</p> <p>Due to the problems with documentation being available for consultation , and real reservations about infrastructure and financial viability , I would ask you to consider if this plan is sound and complaint.</p>

Q4 Part of document	Policy
Q4 Policy	AB33
Q6 Details	<p>I wish to lodge the objections listed below. They are relative to the Newcastle Under Lyme Local Plan with particular reference to the site allocations in Audley Parish. I feel that the local plan in these areas is not justifiable and is not sound.</p> <p><u>Site AB 2 – Land at junction 16 of the M6, Proposed strategic employment site.</u></p> <p>This site is proposed at 80HA – the local plan says the council are looking to allocate 22HA so why is this quadruple the size needed and all in one area and all on high quality green belt land. To allocate something that is four times what is needed, makes this element not justifiable.</p> <p>There will be a lot of work required around a new junction should this site be granted, where is the funding to come from for this? I cannot see any reference to the funding for this so feel this in itself is unsound.</p> <p>I expect there will be an increase in volume of traffic in the local area should this site be allowed, increasing air and noise pollution is not in the best interests of people living in the area and causing greater traffic volume on already busy local roads. I cannot see any justification for this development at all given that there is much warehousing lying empty in other parts of the county.</p> <p>The council appear to be adopting a high growth strategy and I would like to know where the evidence for this strategy is? I think this approach without evidence makes the plan unsound.</p>

	<p>I strongly believe that this site needs to be removed from the local plan as it is not a justifiable development and goes against what the council themselves say is needed for employment in the local area.</p> <p><u>Site AB12 – Land east of Diglake Street</u></p> <p><u>Site AB15 – Land north of Vernon Avenue</u></p> <p><u>Site AB 33 land off Nantwich Road/Park Lane, Audley</u></p> <p>I believe all these sites should be removed from the local plan as they are unjustifiable and unsound for the following reasons.</p> <p>AB12 – Access and egress on narrow roads that are already congested and not sustainable over time</p> <p>AB12 Areas prone to flooding and not sustaining climate control</p> <p>All areas on high quality green belt land</p> <p>Audley and Bignall End are small rural villages – losing the identity of both areas is unsound</p> <p>Additional 200 to 400 cars on the roads that are already congested, where parking problems are a major concern</p> <p>The pressure on local services that cannot manage now, I cannot get an appointment to see my GP due to demand and yet nothing presented on how this will be addressed</p> <p>Small local school, over capacity would then lead to more people travelling out of the area for school and creating further congestion</p> <p>All the suggested allocations for the area are on the green belt and would change the landscape of the local area for ever. More sustainable sites should be found and all the above should be removed from the local plan as unjustifiable and unsound.</p>

Q6 Details	<p>To whom it may concern,</p> <p>As with all previous responses I sincerely hope that all comments are read in full, and are truly taken into consideration in respect of proposed plans. I fear this is just a tick box exercise and that decisions have already been made.</p> <p>What makes this more difficult is, I like many people who have responded numerous times just wonder is there any point.</p> <p>Unlike the last response I sent I have not had the time to view the full and extensive document, therefore, this will be bullet points of objections/concerns and suggestions of how we can better make use of this land if it needs to be 'developed' at all.</p> <p>These proposed residential sites are in greenbelt, rather than destroying these areas we should be encouraging open spaces for wildlife and the health and wellbeing of existing residents.</p> <p>These sites especially AB12 will only put more pressure on the small main road (Ravens lane) that is already populated with too many cars-now parked on both sides of the road as the elderly members of the community move (varied reasons) from terraced houses to be replaced by families with as many as 3 or 4 cars-making it difficult for large farm machinery and HGV to pass, destroying roads which are rarely repaired.</p> <p>This will alter the very fabric of our community putting extra pressures on already stretched local services: doctors, dentists, village parking, schools and public transport- NB a major link route being discontinued only in the last couple of years - reducing the access to wider services for many.</p> <p>Whilst I understand and appreciate there is a need for more housing as the population rises, however, maybe we need to consider as a country better management of our borders and who we accept into the country - possibly using a well structured and practiced method such as Australia.</p> <p>Also when building new houses anywhere there needs to be more thought and space allocated to off road parking.</p> <p>There are many brownfields sites around Newcastle & Stoke that could be effectively utilised if only councils worked together.</p> <p>A suggestion of how we as a community could instead work towards being fit for the future and carbon neutral; these identified resident areas could instead be large charging parks for electric vehicles that could be accessed and used by all local residents to conform with government plans moving forward.</p> <p>There are so many terraced houses it will be impossible to mange this locally in the future if solutions are not considered now!</p> <p>In respect of AB2 surely there can be no further requirement for 'warehousing' - just look around the area.</p> <p>This would destroy access to the country side, significant wildlife areas and turn Stoke into warehouse central.</p> <p>Instead; wind turbines or solar fields would mean that the area could still be used but would benefit the national grid.</p>

Title	Policy AB33 Land off Nantwich Road / Park Lane, Audley
Consultee Company / Organisation	Protect Audley Parish Green Belt Group
Consultee Family Name	Roberts
Consultee Given Name	Gary
Q4 Part of document	Policy
Q4 Policy	AB33
Q5 Sound	No
Q6 Details	<p>1.0 INTRODUCTION</p> <p>1.1 Audley Community Action Group (PAPG) is a community interest company. The CIC exists to protect and enhance the Green Belt in the civil parish of Audley, with over 1,300 supporters.</p> <p>1.2 We strongly object to the high number of houses planned for the borough. Also, the allocation of sites AB12, AB15 and AB33 in the Local Plan. We do not believe the overall housing figures, nor the site selections are sound, they can neither be justified nor is it likely to be effective. The grounds for the exceptional case for removing the land from the Green Belt have not been met.</p> <p>2.0 PSD1</p> <p>2.1 The housing target is too high and will negatively impact on the weaker housing markets in the borough and nearby settlements. It will also reduce the amount of valuable agricultural land in the green belt.</p> <p>2.2 The following tables, with numbers taken from ONS, show that both population growth and households growth are historically low in the borough :</p> <p>(TABLES ATTACHED IN FILE)</p> <p>2.3 The Local Plan has set a target of 8,663 new dwellings over a two decade period. Council tax records indicate that there are 57,627 dwellings in the borough, so the target is for a 15% increase over a two decade period. This will undermine the weaker housing markets in the borough and nearby settlements</p> <p>2.4 The cost of housing in the borough is low by national standards (ONS figures for 2023 show that the average earnings/house prices ratio is 5.52 in the borough and 4.12 in Audley. This compares to the national figure of 8.14).</p> <p>2.5 ONS figures comparing 2011 to 2021 show that the earning/house price ratio has been rising much slower in the borough compared to region and England:</p> <p>(TABLE ATTACHED IN FILE)</p> <p>2.6 Looking at some demographic data (which is ignored in the consultants reports) we can begin to understand why the population is not increasing. The table below shows the data taken from Nomis. For the years 2018 to 2021 the table shows live births and the issuance of national insurance numbers (NINOs), usually to migrants and the number of deaths. This shows that in 2020 and 2021 deaths outstripped births easily and hence population growth has been driven overwhelmingly by inward migration.</p> <p>(TABLE ATTACHED IN FILE)</p> <p>2.7 In the borough, there is a problem of under occupation (with an aging population) and empty properties. Adding more homes is only likely to worsen the over-supply and to draw in better off residents from Stoke-on-Trent, undermining the city's regeneration policies.</p> <p>3.0 AUDLEY RURAL PARISH</p> <p>2.1 The infrastructure of the parish is not adequate for the level of extra housing envisaged. There are existing problems with rat running through the villages and the local highways are struggling to accommodate the strain of the traffic. There is a severe parking problem in the centre of Audley and more cars will make this worse. No impact assessment has been made for these combined sites. This problem will be even greater if site AB2 remains in the Local Plan.</p> <p>2.2 There are flooding issues throughout the parish and the existing sewage system is inadequate, as shown by United Utilities records</p> <p>(TABLE AND MAP ATTACHED IN FILE)</p> <p>4.0</p> <p>4.1 At regulation 18, United Utilities noted that a "sewer passes through site which will need to be taken into consideration." However, no assessment has been made to ascertain how this site will impact on the sewer system.</p> <p>4.2 At regulation 18, Natural England noted that the site is "adjacent to a traditional orchard and this should be taken into consideration. " This site is not mentioned in the Local plan. How was it taken into consideration?</p> <p>4.3 This site is at the bottom of a hill and there is a steep gradient from the site to village facilities. This is likely to reduce active travel.</p> <p>4.4 We are also disappointed that good agricultural land is being lost.</p> <p>5.0 AB33</p> <p>5.1 At regulation 18, Staffordshire County Council stated that "off-site highways improvements likely to be required. Master plan to be supported with a Transport Assessment." Yet no details of access have been provided. This is of particular importance as a previous planning application to create an access to the cemetery from Park Lane was refused on highway safety grounds.</p> <p>5.2 This site is at the bottom of a hill and there is a steep gradient from the site to village facilities. This is likely to reduce active travel.</p> <p>5.3 We are also astounded that a site judged to provide a strong contribution to the Green Belt has been chosen over sites that provide a moderate contribution.</p>

	5.4 We are also disappointed that good agricultural land forming part of a County Council starter farm is being lost.

Q6 Details	<p>Re: Final Draft Local Plan – representation</p> <p>I am submitting my representation to the Final Draft Local Plan consultation via email as I experienced a delay in receiving an activation code when trying to register to use the online portal.</p> <p>My representation relates to the proposed development of the AB33 site within the Local Plan and whether it is sound.</p> <p>Details of why I consider the plan is not sound and the modifications I would like to see made</p> <p>Page 114, point 2. “Primary vehicular access being via Park Lane...”</p> <p>I do not believe the plans for vehicles to exit and enter the site from Park Lane is sound.</p> <p>The lane is narrow and when cars park outside the houses opposite the development site, two cars can not pass.</p> <p>The exit onto Nantwich Road from Park Lane is angled, making a left turn much easier than a right turn. There would need to be an adjustment to this junction to make it safe for an increase in traffic.</p> <p>If cars turn left out of Park Lane and then right at the mini roundabout on to New Road (the main route into Newcastle-under-Lyme), there are often cars parked on the right-hand side. The road is narrow and a car and lorry can not pass at the same time. This often holds up traffic, which backs up to the mini roundabout. This congestion with worsen with the proposed housing development. I believe, double yellow lines would need to be introduced.</p>

Title	Policy AB33 Land off Nantwich Road / Park Lane, Audley
Consultee Family Name	Malkin
Consultee Given Name	Victoria and Peter
Q4 Part of document	Policy
Q4 Policy	AB33
Q5 Legally compliant	No
Q5 Sound	No
Q6 Details	<p>We would like to question the soundness and legality of the final draft local plan for Newcastle-under-Lyme with regards to the methodology used in assessing and decision making in the allocation of sites in Audley, specifically AB32/AB33 for much needed housing.</p> <p>We believe it is biased to remove AB32 from the local plan. Both AB33 and AB32 are greenfield sites. In the first draft local plan, both sites were assessed as a strong contribution to greenbelt purposes. In the final plan, AB33 has been reassessed as a moderate contribution to greenbelt purposes, but AB32 still a strong contribution. This was explained by the council in a meeting with ourselves on 2nd Sept, in that this is because the site size of AB33 had been reduced. We believe the methodology used in this reassessment is not sound. If AB33 is to be released for housing, AB32 will be surrounded on three sides by housing. How can that be assessed as greenbelt land when it will be surrounded by houses and essentially infill. We do not believe this can legally be allowed to surround greenbelt land in this way.</p> <p>Secondly, the grading of the land, both AB33 and AB32 are grade 3 agricultural land and both covered by a mineral safeguarded area.</p> <p>Thirdly, with regards to sewers running through the site, the sewers run through both AB33 and AB32.</p>

	<p>AB32 has been in our family for over 80 years now and has never flooded in that time. We are though aware of flooding/sewer issues on Alsager Road, but this is closer to the AB33 site.</p> <p>The point with regards to Audley being within 150m of AB32 is the same as AB33 and there are 3 listed buildings within 250m of AB33, whereas there are only 2 listed buildings within 250m of AB32.</p> <p>With regard to the availability of access to AB32, we do have legal access to the plot via Nursery Gardens. The first draft local plan stipulated " the site should be masterplan led with AB33 with access taken from the adjoining site" which would negate the need for access via Nursery Gardens, where is the evidence base for this being removed from the final local plan?</p> <p>We believe that if this final plan is adopted, our land will be locked in the middle of a housing estate on 3 sides and is most definitely NOT valuable greenbelt land for Audley. We are seeking legal advice as to our options if this plan is adopted as it is drafted.</p> <p>We were very much encouraged and supported to put our land forward in the plan by the local council in the call for sites as we are aware of the much needed local and affordable housing.</p> <p>We have had to endure over 2 years of the spreading of mis-information by some members of the local community and on social media, particularly the PAPG Protect Audley Parish Greenbelt facebook platform during the consultation processes and even a member of Audley Parish Council, and what is essentially bullying, character assassinations and the spreading of lies, and all this has achieved is to depreciate the value of our land, and that it will still be classed as greenbelt is now ludicrous!</p> <p>We would appreciate that our concerns are investigated/considered prior to the final local plan being adopted.</p>

Consultee Given Name	Che
Q4 Part of document	Policy
Q4 Policy	BW1
Q6 Details	<p>I wish the Planning Inspectorate to consider my following representations in response to the Newcastle -Under-Lyme Borough Council – Final Draft Local Plan Consultation (Regulation 19)</p> <p>I wish the Planning Inspectorate to remove all policies from the plan which involve any development on Green Belt Land.</p> <p>The specific policies are: -</p> <ul style="list-style-type: none"> • AB2, AB33, AB15 & AB12 – Audley Ward • BW 1 – Bradwell Ward • CT 1 – Crackley Bank & Red Street Ward • KL13 & KL 15 -Keele Ward • SP11(2) & SP11(3) – Silverdale Ward • TK 10, TK 27 & BL18 – Talke & Butt Lane Ward <p>All of these developments impact green belt land, are unsound and should be removed from the plan.</p> <p>They will all have a negative effect on the Net Biodiversity gain of each local area. Which in turn has a knock-on effect across the Borough. Open spaces are essential for the environment by absorbing carbon dioxide from our atmosphere, which helps reduce climate control. They also provide habitats for a wide range of plants and animals. Open spaces are also important to human health as they can reduce stress, improve mental health, and assist in people sleeping better. They provide areas for physical activity which improve both physical and mental health. Removal of green belt will decrease the air quality within that area, increase respiratory issues for humans and wildlife, and also increase noise pollution.</p> <p>With specific reference to policies AB2, AB33, AB15 and AB12. I ask the Planning inspectorate to remove policies based on the following justifications:</p> <ul style="list-style-type: none"> • AB2 - It is simply the case that the small village of Audley and its surrounding countryside lanes could not cope with the large increase of traffic caused by these policies. The large number of HGV's travelling to the proposed AB2 site would definitely increase the traffic within the Audley area due to the daily traffic jams along the A500 and at M6 Junction 16. Traffic will spill on to local roads e.g. A5500, increasing Noise and air pollution • AB12 - Proposed access to site AB12 via Diglake Street is untenable. This street is small and it is already difficult to drive down due to parked cars on both sides of the terraced street. A new development of houses would make it virtually impassable causing gridlock, increased air pollution, increased noise pollution and limiting access for the emergency services. <p>The proposed new car park for resident's in Diglake Street due to the proposed AB12 policy would be detrimental to Blue badge Holders, People with mobility issues and Carers of babies and children.</p> <p>AB12 will not be close to any amenities with little or no access to a regular bus route.</p> <ul style="list-style-type: none"> • AB33 – Primary Vehicular access to Park Lane is unsound. This is an already busy junction. AB33 will not be close to any amenities with little or no access to a regular bus route. Creating more traffic therefore noise pollution and air pollution. With an increased danger to pedestrians. <p>With poor access to health care and education.</p> <ul style="list-style-type: none"> • AB15 – The proposed site at AB15 is unsound because of the poor access to health care, education, local amenities and public transport. <p>I therefore would like the Planning inspectorate to remove Policies AB2, AB12, AB33 & AB15 from the plan.</p>

Q4 Part of document	Policy
Q4 Policy	BW1
Q6 Details	<p>Policy BW1, Chatterley Valley – we were surprised that the draft Local Plan did not give greater prominence to Chatterley Valley as a strategic employment site. This lack of recognition is surprising</p>

	<p>given the considerable public investment that has taken place. This site is located close to key highways (M6, A500) and situated not far from rail lines which serve the Midlands and the North West. As Chatterley Valley has a good deal of brownfield land, investment in this site would contribute to regeneration and has the potential to attract firms specializing in green technology. Developing a brownfield site such as Chatterley Valley may allow more land within the Green Belt to be preserved.</p>
Q7 Modification	<p>Modify Policy BW1 – give greater prominence to the Chatterley Valley site as a centre for future technological and manufacturing enterprise.</p>
Q9 Hearing reasons	<p>Conclusion</p> <p>Cross Heath, Wolstanton and May Bank Branch Labour Party welcomes the opportunity to give its views in response to the Regulation 19 stage of the draft Local Plan. If it is felt to be appropriate, a member of the Branch would be prepared to take part in the public scrutiny of the draft Local Plan.</p>

Policy CT1 Land at Red Street and High Carr Farm, Chesterton

Comment ID	NULLP190
Order	159
Title	Policy CT1 Land at Red Street and High Carr Farm, Chesterton
Consultee Family Name	Palmer
Consultee Given Name	Kevin
Q4 Part of document	Policy
Q4 Policy	CT1
Q5 Sound	No
Q6 Details	<p>Local Draft Plan Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117) Green Belt - Unsound Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1. to check the unrestricted sprawl of large built-up areas; 2. to prevent neighbouring towns merging into one another' 3. to assist in safeguarding the countryside from encroachment; 4. to preserve the setting and special character of historic towns; and 5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <p>The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)</p> <p>Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.</p> <p>The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.</p> <p>Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.</p> <p>Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.</p> <p>Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.</p> <p>Historical Mining - Unsound Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.</p> <p>The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.</p> <p>Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.</p> <p>Land Ownership - Unsound Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?</p> <p>Infrastructure - Unsound We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles</p>

will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.

Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area. The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.

In addition to all outlined in this objection I just want to emphasise the main points of living in an area classed as semi-rural.

Regardless of reducing the original plan of 778 homes to 530 the infrastructure simply isn't there to support them. Red Street village struggles to cope with the existing population as it is with its lack of facilities and while the plan outlines a community hub (which I believe is retail based) it's an additional Surgery/Practice and NHS Dentist that we need and not more fast food, barbers and convenience stores.

Nature conservation also plays a big part in this area which supports an abundance of wildlife, mature trees and hedgerows which I fear will all disappear should this development go ahead. With all these points along with all the excellent points raised in the document I feel strongly CT1 should not go forward for planning.

Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.</p> <p>Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area. The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p> <p>Can't see how Red Street can or could cope with all the extra traffic - then theres the pollution from all traffic its bad enough now when theres a problem with on A34 or 500. Red street is used as a rat run, heavy lorries which makes property's shake, and then theres where all these children are to go to school. Parking at St Chads school is a nightmare now with buses unable to get through. No room at Doctors or Dentists can't get any appointments now, then who in there right mind would say its ok to build houses on ground which has problem with sinkholes could it cause problems with homes already here a lot have had to pinned, we at Red Street have a lot of wildlife which would be lost, can the drains take anymore rain water, A34 sets closed now while we have a field to take most of the rain Im sure theres lots of brown belt or even land which be better used for homes. CT1 shouldnt be allowed.</p>
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Title	Policy CT1 Land at Red Street and High Carr Farm, Chesterton
Consultee Family Name	Lamb
Consultee Given Name	Philip
Q4 Part of document	Policy
Q4 Policy	CT1
Q5 Sound	No
Q6 Details	<p>Local Draft Plan Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117) Green Belt - Unsound</p> <p>Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1. to check the unrestricted sprawl of large built-up areas; 2. to prevent neighbouring towns merging into one another' 3. to assist in safeguarding the countryside from encroachment; 4. to preserve the setting and special character of historic towns; and 5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <p>The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)</p>

Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.

The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be

	<p>significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.</p> <p>Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area.</p> <p>The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p>
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Q4 Part of document	Policy
Q4 Policy	CT1
Q5 Sound	No
Q6 Details	<p>Local Draft Plan Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117) Green Belt - Unsound</p> <p>Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1. to check the unrestricted sprawl of large built-up areas; 2. to prevent neighbouring towns merging into one another' 3. to assist in safeguarding the countryside from encroachment; 4. to preserve the setting and special character of historic towns; and 5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <p>The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)</p> <p>Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.</p> <p>The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.</p> <p>Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.</p> <p>Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.</p> <p>Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.</p> <p>Historical Mining - Unsound Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the</p>

	<p>land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.</p> <p>The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.</p> <p>Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.</p> <p>Land Ownership - Unsound</p> <p>Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?</p> <p>Infrastructure - Unsound</p> <p>We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.</p> <p>Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.</p> <p>The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Title	Policy CT1 Land at Red Street and High Carr Farm, Chesterton
Consultee Family Name	Kent
Consultee Given Name	Richard
Q4 Part of document	Policy
Q4 Policy	CT1
Q5 Sound	No
Q6 Details	<p>Local Draft Plan Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117) Green Belt - Unsound</p> <p>Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1. to check the unrestricted sprawl of large built-up areas; 2. to prevent neighbouring towns merging into one another' 3. to assist in safeguarding the countryside from encroachment; 4. to preserve the setting and special character of historic towns; and 5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <p>The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)</p>

Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.

The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be

	<p>significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.</p> <p>Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area.</p> <p>The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p>
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.</p> <p>Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.</p> <p>Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.</p> <p>Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.</p> <p>Historical Mining - Unsound Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the</p>

land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.

Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area.

The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.

Slightly off topic but something I did find very interesting is that during my research of the localised area, I have viewed many maps one of which is a side by side comparative which shows multiple maps dating back to the 1830's and one striking consistent feature is that the area identified in the local plan CT1 has remained relatively unchanged since the 1830's

The maps (pre selected) can be viewed here

<https://maps.nls.uk/geo/explore/side-by-side/#zoom=16.0&lat=53.05851&lon=-2.25207&layers=257&right=ESRIWorld> this again reminds me that the land is Greenbelt, never been built on and the development will destroy the land, wildlife and overall aesthetics of the area

there is also an air shaft into some of the old mine workings on the edge of the proposed CT1 land, approximate location shown in Appendix 2

which I have not yet identified on a coal map to its underground direction

	For all of the reasons detailed above and in the previous pages I am strongly opposed to this development
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Local Draft Plan

Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117)

Green Belt - Unsound

Greenbelt land is in place for the following reasons:

1. to check the unrestricted sprawl of large built-up areas;
2. to prevent neighbouring towns merging into one another
3. to assist in safeguarding the countryside from encroachment;
4. to preserve the setting and special character of historic towns; and
5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)

Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.

The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

	<p>The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.</p> <p>In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss</p>

of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.

Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has

	recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area. The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Title	Policy CT1 Land at Red Street and High Carr Farm, Chesterton
Consultee Family Name	Payne
Consultee Given Name	Deborah
Q4 Part of document	Policy
Q4 Policy	CT1
Q5 Sound	No
Q6 Details	<p>Local Draft Plan Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117) Green Belt - Unsound</p> <p>Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1. to check the unrestricted sprawl of large built-up areas; 2. to prevent neighbouring towns merging into one another 3. to assist in safeguarding the countryside from encroachment; 4. to preserve the setting and special character of historic towns; and 5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <p>The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)</p> <p>Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.</p> <p>The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.</p> <p>Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.</p> <p>Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.</p> <p>Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.</p> <p>Historical Mining - Unsound</p> <p>Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.</p> <p>The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.</p>

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.

Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area.

The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.

Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the</p>

south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently over subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.

Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the

	<p>infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Q4 Part of document	Policy
Q4 Policy	CT1
Q5 Sound	No
Q6 Details	<p>Local Draft Plan Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117) Green Belt - Unsound</p> <p>Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1. to check the unrestricted sprawl of large built-up areas; 2. to prevent neighbouring towns merging into one another 3. to assist in safeguarding the countryside from encroachment; 4. to preserve the setting and special character of historic towns; and 5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <p>The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)</p> <p>Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.</p> <p>The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.</p> <p>Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.</p>

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.

Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area.

The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.

MY HOME IS [redacted by admin] IT IS OVER 100 YRS OLD AND IS PINNED WITH THE BARS THROUGH THE HOUSE DUE TO PREVIOUS MINING, THE HOUSES HAVE MOVED IN THE [redacted by admin] YRS I HAVE LIVED HERE (ALL 7 HOUSES ARE THE SAME)

	WE HAVE RECEIVED NO INFORMATION WHATSOEVER AND FOUND OUT ABOUT THE PROPOSALS BY ACCIDENT VIA AN UNCONNECTED FACEBOOK GROUP, WE HAVE BEEN TOTALLY IGNORED
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Newcastle under Lyme draft local plan – regulation 18: Consultation response

Dear Sir/Madam,

The following is a robust objection to all developments on green field sites covering all the proposals within Audley Parish and many more elsewhere as recommended in the draft local plan. In writing this response, I am aware of the need to adopt a local plan in order for local authorities to maintain democratic control of development in the area. This requirement appears to be a symptom of the subsection in the NPPF titled “The presumption in favour of sustainable development” (paragraphs 11-14). However, from a resident’s point of view, this gives the impression that local authorities must demonstrate a willingness to develop a particular area in order to avoid it being developed. This is, in essence, a commitment to eventual development even if it is not needed. And this is a source of great anxiety amongst residents that undesirable development is out of control, a situation clearly being fuelled by the existence of paragraphs 11-14. On this basis therefore, this subsection of the NPPF needs to be challenged.

This response may differ from others in that it comments on local planning within a strategic context. As I see it, there are three main types of development, which are likely to blight the future generations in the UK: (i) infrastructure (example, HS2), (ii) commercial (examples, AB2 and TK30 in the NuLBC local plan) and (iii) residential (example, recent housing developments either side of the A513, Beaconside, Stafford). Infrastructure is within the remit of Westminster rather than local authorities, so that is not a particular concern here. My main focus is encroachment of developments, both residential and commercial, in green spaces allowed for in the draft local plan. And any new developments in rural areas will, at the very least, result in:

- Loss of light or overshadowing

- Increased risk of flooding due to ‘run-off’

- Loss of visual amenity

- Limitations to physical activity

- Generation of extra traffic, overloading already busy local roads

- Extra noise, pollution, disturbance and danger from increased traffic

- Loss of trees and other biodiversity – bats, lizards etc.

- Loss of natural carbon capture

- Decrease in food production capacity

Increased local population placing further pressure on local schools, GP’s surgeries and other services, which are already oversubscribed.

The United Kingdom as a whole is currently gripped by a pandemic of overdevelopment, which threatens nature and the already depleted biodiversity we see in this country. And it has now reached the stage where it should be considered a national emergency. I for one, do not feel that I have any influence over the shape of our surroundings. There are numerous drivers for this trend many of which are not being addressed by government at any level. At the heart of this is a significant disconnection between the opinions of politicians and public as to what is actually needed. There appears to be cross-party support for activities driving economic growth at all costs, irrespective of the consequences to the natural environment. Aggravating this divide is the aforementioned paragraphs 11-14 of the NPPF. At a local level, what is not in doubt, is that whenever there is land removed from the green belt there is rarely, if ever, an equivalent area so returned, so the process is irreversible. And in the absence of any agreed lower limit on the area of protected green spaces within the UK, no release of green belt land, or development on green spaces, can be considered sustainable. Unless, of course, the use of agricultural land for just that purpose is also considered “developed”, i.e. it has an economic and sustainable use. And the local plan does appear to acknowledge this¹, so why not include agricultural use into the local plan implying no change in particular areas? If this is not the case, we are committed to a process where the end point is a UK completely covered in tarmac and concrete. Anyone arguing against this interpretation needs to state and justify precisely where that end point is. If they cannot, this renders the term ‘sustainable development’ an oxymoron.

One particular trend of major concern is the growing UK population. At the time of writing this stands at just under 69 million, and is set to reach 74 million before 2050. Studies in the US (Pimental and Giampietro, 1994; Lal, 1989) suggest that comfortable/sustainable living requires 0.5 Ha (1.2 acres) per capita. If we are generous, sustainable living in the UK was possible with a population of 57 million, a figure I remember from the late 1960s. With a total area of the UK at just over 60 million acres, a land area of one acre per capita for sustainable living in the UK seems feasible. As we have seen, anything more puts a strain on the environment as a whole. On this basis therefore, the UK is currently overpopulated by about 15%, and there appears to be no initiatives to address this issue. On this point, Westminster appears to be in a state of denial, thus fuelling the current avalanche of overdevelopment nationwide. Residential developments have a knock on effect by requiring other types of development to provide infrastructure, services and employment. Notwithstanding overpopulation, this gives the impression that there is not enough housing stock to accommodate the current population. Recent data, in the form of an infographic (“Housing crisis fact check”) from the Community Planning Alliance², convincingly shows that this is far from the case. In short, what is perceived as the current “housing shortage” is little more than a myth propagated by the construction industry and related interests. This is justified by item 3 on the infographic stating that “there are 1.5 million more dwellings than households” in England and Wales alone^{3,4}. On this basis therefore, no further house building is needed in the UK subject to efforts addressing projected population growth. In other words, what we have at present is a substantial housing surplus. Therefore, locally there are strong grounds for objections to development of the sites

AB12(p74)

AB15(p75)

AB32(p75)

AB33(p75).

Ignoring the 1.5 million surplus dwellings nationwide, the current (regulation18) draft of the local plan quotes a minimum housing requirement of 7160 in the Borough over the period 2020-40, of which 1206 are already completed. Of these, only 40% are to be 'affordable' (1-2 bedroom dwellings). Therefore, of the minimum requirement, only 2864 dwellings will be affordable. If we assume that those already built are affordable (they probably aren't) then the borough will only need 1658 homes built between now and 2040. This is because, due to being beyond affordability, most locals will be unable to buy or rent the other 60%. Therefore, they are not needed, and the proposed mix is entirely incompatible with general affordability. Given the surplus dwellings throughout England and Wales however, it is likely that none will be needed, especially considering the imminent removal of mandatory housing targets by the DLUHC under Michael Gove MP, and any specific affordable housing needs can be catered for by using brownfield sites only. All of the green areas in the local plan could therefore be planned in for their present use.

Infographic from the Community Planning Alliance summarising UK housing stock in relation to the population.

Another statistic from the infographic is that nationwide we could build up to 1.2 million homes on brownfield sites (item 2)2,5. And like any other local authority, NuLBC is legally obliged to and does keep a register of its brownfield sites, although it is likely that some may slip through the net.

If there is an imperative, it is to increase further democratic control of the development process both locally and nationally. And both local and national authorities would do well to remember that they have a responsibility to the people they represent and not to the commercial viability of developers, the construction industry or overseas investors. In short, no new housing development is required, especially given that the borough has exceeded its housing targets in recent years. This calls into question the need for housing developments outside Audley Parish mentioned in the local plan. These include

BL18 (p75)

CT1 (p76, 750 dwellings)

RC8 (p76, 6 dwellings, potential flood risk.)

KS3 (p77)

LW53 (p77)

MD29 (p78, 150 dwellings, likely to conflict with HS2 construction?)

NC13 (p78)

NC77 (p78)

SP11 (p78, 900 dwellings, former Keele golf course)

SP12 (p79)

SP23 (p79)

TB19 (p79)

TB23 (p79, 124 dwellings, adjacent to Walley's Quarry.)

TK10 (p80)

TK17 (p80)

TK27 (p80).

Other sites which may also be questioned are

KS17 (p77, would include loss of playing fields and other village amenities. This may be classed as infill.)

KL13 (p77,93, part built already within the grounds of Keele University Campus).

The other class of developments locally is commercial. All too often we hear in the news from both local and Westminster sources, the mantra that economic growth is the imperative. But the actual imperative is stability, and we have reached the point where growth at any cost has become toxic, especially given the impossibility of unrestrained growth in a land of finite area. Have our political masters never heard of the circular economy?

Since the beginning of deindustrialisation in the 1980s, the diversity of employment opportunities has declined. We have seen an unhealthy move away from manufacturing/production of goods that we need as a nation, to one entirely reliant on trade with overseas partners, leaving us open to blackmail and the current spike of rampant imported inflation. Look what happened during lockdown. Over recent decades this has led to the demolition of old factories for residential developments and the rise of logistics centres (warehousing) for the temporary storage of imported goods, which will ultimately be operated by robots and AIs leading to even less employment. The problem with warehousing of course is its large consumption of land area. My question is, what is the driver for the proposed "big box" developments on AB2 and TK30 locally? Both of these proposals lie entirely within the greenbelt, although the TK30 land has already been quarried in parts. Neither of these proposals is either desirable or needed. However, if we are forced to accept one or the other then TK30, being about 5% smaller, is the lesser of two evils. With the green light given to the development of the 44 Ha Chatterley Valley site on Peacock Hay Road, and the numerous empty warehouses existing across the potteries, North Staffordshire and Cheshire East. It is dubious to say the least to claim that either AB2 or TK30 are needed. These sites are 70 Ha and 66 Ha respectively. However, in the recently published "Housing and Economic Needs Assessment Update", the borough as a whole only needs a maximum of 34 Ha6. So why are we saddled with 154 Ha total covered by AB2, TK30 and KL15?

If the local plan caters for agricultural developments, AB2 and TK30 could be planned for their existing use. The majority of the area covered by these sites is high grade (3a) agricultural land. In the case of TK30 the quarried areas could be reclaimed for agriculture or, if this proves difficult, used in other ways to enhance biodiversity. If the land in question is council owned, and the motivation is to sell off council assets, then once sold, they cannot be sold again, and any control is lost. Moreover, once farmland is developed for other purposes then it is near to impossible for it to be reclaimed later for that use – and so the ratchet inexorably turns. On this

	<p>basis therefore, I would urge the LPA to remove the warehousing proposals AB2 and TK30 from the local plan.</p> <p>The purpose of this consultation is to supply feedback to the Borough Council. Another question is, does Westminster similarly consult with local authorities on planning issues, or is there any other mechanism where local councils can supply feedback to Westminster, providing a better feel for the mood of the nation? If so, why do we not see a root and branch reform of the NPPF rather than the tinkering around the edges approach seen in the July 2021 version? Most especially, there should be a removal of paragraphs 11-14 and its supporting statements elsewhere in the document, which is tantamount to a developer's charter. And there should be more flexibility within the NPPF allowing local plans to include parcels of land for their current purpose, given that there is almost none in this country that is not currently in use. As far as I can see this plan is nowhere near compatible with efforts required to address the current climate crisis. Moreover, given their scale, the proposed developments represent too greater shock to the environment and local communities over the short 20-year period suggested for their completion. And with the sufficient housing and unused commercial sites we already have, there is no need for any encroachment into our green spaces.</p> <p>Yours sincerely Jim Austin</p> <p>Notes</p> <ol style="list-style-type: none"> 1. Q4 Policy	CT1
Q5 Sound	No
Q6 Details	<p>Local Draft Plan</p> <p>Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117)</p> <p>Green Belt - Unsound</p> <p>Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1. to check the unrestricted sprawl of large built-up areas; 2. to prevent neighbouring towns merging into one another' 3. to assist in safeguarding the countryside from encroachment; 4. to preserve the setting and special character of historic towns; and 5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <p>The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)</p> <p>Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.</p>

The Proforma for CT1A also states that “Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4).” In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a “community hub”, we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental

	<p>practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.</p> <p>Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area.</p> <p>The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p>
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan</p>

is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.

Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area. The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.

I am really concerned about the impact that building this number of houses would have on the local community especially the road through Red Street which is already used as a rat run when there are issues on the A34. There have been numerous accidents this year due to increased volume in traffic including a young boy being knocked over.

It is already difficult to get a doctors or dentist appointment in the local area and this would only get more difficult with an increase in population.

Building on this scale would also have significant impact on the wildlife in the area. We need more green spaces for our well being and mental health not being subjected to lengthy building processes

Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Title	Policy CT1 Land at Red Street and High Carr Farm, Chesterton
Consultee Family Name	Hoban

Consultee Given Name	Che
Q4 Part of document	Policy
Q4 Policy	CT1
Q6 Details	<p>I wish the Planning Inspectorate to consider my following representations in response to the Newcastle -Under-Lyme Borough Council – Final Draft Local Plan Consultation (Regulation 19)</p> <p>I wish the Planning Inspectorate to remove all policies from the plan which involve any development on Green Belt Land.</p> <p>The specific policies are: -</p> <ul style="list-style-type: none"> • AB2, AB33, AB15 & AB12 – Audley Ward • BW 1 – Bradwell Ward • CT 1 – Crackley Bank & Red Street Ward • KL13 & KL 15 -Keele Ward • SP11(2) & SP11(3) – Silverdale Ward • TK 10, TK 27 & BL18 – Talke & Butt Lane Ward <p>All of these developments impact green belt land, are unsound and should be removed from the plan.</p> <p>They will all have a negative effect on the Net Biodiversity gain of each local area. Which in turn has a knock-on effect across the Borough. Open spaces are essential for the environment by absorbing carbon dioxide from our atmosphere, which helps reduce climate control. They also provide habitats for a wide range of plants and animals. Open spaces are also important to human health as they can reduce stress, improve mental health, and assist in people sleeping better. They provide areas for physical activity which improve both physical and mental health. Removal of green belt will decrease the air quality within that area, increase respiratory issues for humans and wildlife, and also increase noise pollution.</p> <p>With specific reference to policies AB2, AB33, AB15 and AB12. I ask the Planning inspectorate to remove policies based on the following justifications:</p> <ul style="list-style-type: none"> • AB2 - It is simply the case that the small village of Audley and its surrounding countryside lanes could not cope with the large increase of traffic caused by these policies. The large number of HGV's travelling to the proposed AB2 site would definitely increase the traffic within the Audley area due to the daily traffic jams along the A500 and at M6 Junction 16. Traffic will spill on to local roads e.g. A5500, increasing Noise and air pollution • AB12 - Proposed access to site AB12 via Diglake Street is untenable. This street is small and it is already difficult to drive down due to parked cars on both sides of the terraced street. A new development of houses would make it virtually impassable causing gridlock, increased air pollution, increased noise pollution and limiting access for the emergency services. <p>The proposed new car park for resident's in Diglake Street due to the proposed AB12 policy would be detrimental to Blue badge Holders, People with mobility issues and Carers of babies and children.</p> <p>AB12 will not be close to any amenities with little or no access to a regular bus route.</p> <ul style="list-style-type: none"> • AB33 – Primary Vehicular access to Park Lane is unsound. This is an already busy junction. AB33 will not be close to any amenities with little or no access to a regular bus route. Creating more traffic therefore noise pollution and air pollution. With an increased danger to pedestrians. <p>With poor access to health care and education.</p> <ul style="list-style-type: none"> • AB15 – The proposed site at AB15 is unsound because of the poor access to health care, education, local amenities and public transport. <p>I therefore would like the Planning inspectorate to remove Policies AB2, AB12, AB33 & AB15 from the plan.</p>

Title	Policy CT1 Land at Red Street and High Carr Farm, Chesterton
Consultee Family Name	Smith
Consultee Given Name	Rebecca
Q4 Part of document	Policy
Q4 Policy	CT1
Q6 Details	<p>Local Draft Plan</p> <p>Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117)</p> <p>Green Belt - Unsound</p> <p>Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1 to check the unrestricted sprawl of large built-up areas; 2 to prevent neighbouring towns merging into one another' 3 to assist in safeguarding the countryside from encroachment; 4 to preserve the setting and special character of historic towns; and 5 to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <p>The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward</p>

would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)

Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.

The Proforma for CT1A also states that *“Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4).”* In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a “community hub”, we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which

	<p>suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.</p> <p>In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.</p> <p>Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area.</p> <p>The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p>
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Q4 Part of document	Policy
Q4 Policy	CT1
Q6 Details	<p>Local Draft Plan</p> <p>Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117)</p> <p>Green Belt - Unsound</p> <p>Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1. to check the unrestricted sprawl of large built-up areas; 2. to prevent neighbouring towns merging into one another' 3. to assist in safeguarding the countryside from encroachment; 4. to preserve the setting and special character of historic towns; and 5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <p>The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)</p> <p>Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.</p> <p>The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.</p> <p>Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.</p> <p>Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawksetc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.</p> <p>Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.</p> <p>Historical Mining - Unsound</p> <p>Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the</p>

land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing aNHS dental service of 2 days a week.

Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area.

The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead

Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Title	Policy CT1 Land at Red Street and High Carr Farm, Chesterton
Consultee Family Name	Davies
Consultee Given Name	Simon
Q4 Part of document	Policy
Q4 Policy	CT1
Q6 Details	<p>Local Draft Plan</p> <p>Stages of development of the Local Plan (Page 4)</p> <p>Regulation 19 Publication – Not Compliant with Duty to Co-operate</p> <p>When the plan was first introduced, the publication and consultation for it was limited. We were unaware of the impact for our area until the second phase. Under the planning processes laid out in the Town and Country Planning Regulations 2012, Regulation 18 notices were put up. One was placed on the lamppost, part way down Bells Hollow which is a single lane road with limited footfall and inability to be seen from a moving vehicle. The second on a lamp post part way down Talke Road, which only has a footpath on one side and is a National Speed Limit Road. This was to cover the entire neighbourhoods affected by the original CT sites as listed in the first draft which is not adequate. These two locations were not in areas of high footfall and we feel that there was inadequate publication of the regulation 18 notices in our Ward. As a community we printed the Reg 18 Notices and placed them in more high footfall areas and distributed to households in the vicinity to generate knowledge of the plans. These are steps that should have been taken by the local authority not the community.</p> <p>Furthermore, no community consultations were held in Red Street. Bearing in mind that we have an aging population, the majority of which do not drive, and the very limited bus routes, we feel that the local population were not adequately informed at Regulation 18 Stage. A complaint was lodged to this fact with the council but no response was received. It is not realistic to expect elderly residents to make informed decisions about their locality if they are not engaged.</p> <p>As a community, we organised a community meeting, which was positively attended and the council again were asked to include Red Street as part of the consultation at Reg 18 as one of the largest areas to be considered for housing, it needed to be part of their plan. Most people reported that they would not have been aware of the proposals without the input from the local community and the failing of the council to execute their duty under the regulations.</p>

Regulation 19 notices were sent to residents who had submitted responses to the Regulation 18 notice and included an email address with their response, but again, no Regulation 19 notices were published in the vicinity of Red Street to publicise the community consultation dates or the fact that responses can be submitted to the Final Local Plan. This is not sound decision making from a Local Plan communication perspective.

Local Draft Plan

Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117)

Green Belt - Unsound

Greenbelt land is in place for the following reasons:

- 1 to check the unrestricted sprawl of large built-up areas;
- 2 to prevent neighbouring towns merging into one another;
- 3 to assist in safeguarding the countryside from encroachment;
- 4 to preserve the setting and special character of historic towns; and
- 5 to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)

Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.

The Proforma for CT1A also states that *“Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4).”* In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, St.Chad's, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

I live right by the entrance to St.Chad's school, and see dangerous driving, illegal parking and children's and adults lives put at risk every single day, the road narrows to single file due to vehicle parking on both sides of the road, the traffic often comes to a standstill, and as mentioned, the increase of potentially over 1000 more vehicles trying to get through will be absolutely horrendous. This will also increase pollution in the local area.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s. Again, this will mean any traffic going to the schools from the new development will need to pass through the narrow Red Street village, which as mentioned, is already a bottleneck.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.

Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area.

The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.

Please set out the modification(s) you consider necessary to make the Local Plan legally compliant and sound in respect of any legal compliance or soundness matters you have identified at above:

We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from

the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Additional Comments:

My Previously submitted comments from 21/09/23, submission ref id 241106, are below:

"Dear Sir/Madam,

This email is to confirm my objection to plans to potentially build housing and commercial property within the area of Red Street and Talke, specifically, but not limited to, areas CT1 and TK30.

Looking at the maps in the Local Plan, it would mean continuous housing all the way from Newcastle to Kidsgrove.

In previous Local Plans, Newcastle Borough Council have said they would avoid "urban sprawl", so has this policy now changed?

It feels like every inch of green space is being turned into housing, and brown sites seem to be too much trouble to build on.

As an example, work started on housing on London Road Chesterton, near to the mini roundabout by Holditch Road, many years ago and was abandoned. How many other areas are like this? I have passed numerous sites where derelict buildings have been standing for years, these are in a very poor condition so why not use this land?

Traffic:

I have lived (redacted by admin) in Red Street since 2007, residents have to park on both sides of the road through Red Street, resulting in traffic being narrowed to single file through this stretch. The traffic is often at a standstill, especially during school time, and this is also a major bus route.

There are also major issues whenever accidents happen on the M6, A500 or A34 as people then attempt to use Red Street as a "rat run" causing yet more congestion.

Building over 1,000 houses on CT1 and TK30 would be devastating for the area, potentially meaning an extra (at least) 2,000 more vehicles on the already narrow roads through Dean's Lane and Red Street/ Crackley Bank.

This increase in traffic will obviously increase both noise and air pollution.

Amenities:

There are already major problems signing up with dentists and doctors in the area, and there aren't any at all in Red Street, so by adding over 1,000 houses, (potentially over 3,000 people assuming 3x people per house) where will these people go?

There are no shops here, only a butchers.

There is one primary school, St.Chads, which I believe is always at full capacity. The nearest other schools are in Chesterton and Talke, which I also believe are at full capacity. So where will these new younger residents go to school?

Wildlife:

Within the local green spaces we have been enjoying for many years, we are very lucky to have a rich variety of wildlife including bats, hedgehogs, foxes, numerous birds of prey, skylarks, swallows, owls, rabbits, badgers etc. Building on these areas will have a devastating effect on this wildlife.

Mining & subsidence:

Both CT1 and TK30 have had major mine workings over the last few hundred years, much of which is not mapped. Collapsed workings and holes regularly appear in these fields. By building on these areas, it could have a knock on effect on nearby properties, potentially causing subsidence.

There is also the question of water drainage, especially on CT1, as it will cause more flooding issues at the A500/A34 roundabout.

In summary, CT1 and TK30 are both huge areas of existing green space, home to such a wide variety of wildlife.

Red Street and the immediate areas are simply not suitable for such a large housing estate, please reconsider these inappropriate building plans.

The government have stated the housing requirements have fallen, this should also be honoured by the local borough councils.

In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.</p> <p>Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.</p> <p>Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.</p> <p>Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.</p> <p>Historical Mining - Unsound Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.</p> <p>The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.</p> <p>Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.</p> <p>Land Ownership - Unsound Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?</p> <p>Infrastructure - Unsound We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.</p> <p>Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not</p>

been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.

Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area. The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.

Additional Comments:

WE HAVE READ THE CONTENTS OF THE RESPONSE FORM IN RELATION TO REGULATION 19 OF THE LOCAL PLAN AND WE ARE IN FULL AGREEMENT WITH THE CONTENTS THROUGHOUT

Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Title	Policy CT1 Land at Red Street and High Carr Farm, Chesterton
Consultee Family Name	Round
Consultee Given Name	Gillian
Q4 Part of document	Policy
Q4 Policy	CT1
Q5 Sound	No
Q6 Details	<p>Local Draft Plan</p> <p>Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117)</p> <p>Green Belt - Unsound</p> <p>Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1. to check the unrestricted sprawl of large built-up areas; 2. to prevent neighbouring towns merging into one another' 3. to assist in safeguarding the countryside from encroachment; 4. to preserve the setting and special character of historic towns; and 5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <p>The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)</p>

Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.

The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be

	<p>significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. Q4 Part of document	Policy
Q4 Policy	CT1
Q6 Details	<p>Local Draft Plan</p> <p>Stages of development of the Local Plan (Page 4)</p> <p>Regulation 19 Publication – Not Compliant with Duty to Co-operate</p> <p>When the plan was first introduced, the publication and consultation for it was limited. We were unaware of the impact for our area until the second phase. Under the planning processes laid out in the Town and Country Planning Regulations 2012, Regulation 18 notices were put up. One was placed on the lamppost, part way down Bells Hollow which is a single lane road with limited footfall and inability to be seen from a moving vehicle. The second on a lamp post part way down Talke Road, which only has a footpath on one side and is a National Speed Limit Road. This was to cover the entire neighbourhoods affected by the original CT sites as listed in the first draft which is unacceptable. These two locations were not in areas of high footfall and we feel that there was inadequate publication of the regulation 18 notices in our Ward. As a community we printed the Reg 18 Notices and placed them in more high footfall areas and distributed to households in the vicinity to generate knowledge of the plans. These are steps that should have been taken by the local authority not the community. Furthermore, no community consultations were held in Red Street. Bearing in mind that we have an aging population, the majority of which do not drive, and the very limited bus routes, we feel that the local population were not adequately informed at Regulation 18 Stage. A complaint was lodged to this fact with the council but no response was received. It is not realistic to expect elderly residents to make informed decisions about their locality if they are not engaged.</p> <p>As a community, we organised a community meeting, which was positively attended and the council again were asked to include Red Street as part of the consultation at Reg 18 as one of the largest areas to be considered for housing, it needed to be part of their plan. Most people reported that they would not have been aware of the proposals without the input from the local community and the failing of the council to execute their duty under the regulations.</p> <p>Regulation 19 notices were sent to residents who had submitted responses to the Regulation 18 notice and included an email address with their response, but again, no Regulation 19 notices were published in the vicinity of Red Street to publicise the community consultation dates or the fact that responses can be submitted to the Final Local Plan. This is not sound decision making from a Local Plan communication perspective.</p> <p>Local Draft Plan</p> <p>Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117)</p> <p>Green Belt - Unsound</p> <p>Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1 to check the unrestricted sprawl of large built-up areas; 2 to prevent neighbouring towns merging into one another' 3 to assist in safeguarding the countryside from encroachment; 4 to preserve the setting and special character of historic towns; and 5 to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)

Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.

The Proforma for CT1A also states that *“Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4).”* In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan. Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a “community hub”, we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which

	<p>suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.</p> <p>In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.</p> <p>Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area.</p> <p>The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p> <p>Please set out the modification(s) you consider necessary to make the Local Plan legally compliant and sound in respect of any legal compliance or soundness matters you have identified at above:</p> <p>We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.</p> <p>Additional Comments:</p> <p>We have since found the reg 19 notices – one is half way down Bells Hollow and facing into a field and un-readable from the road. The second is half way down Liverpool Road towards Talke, again on an open gate so unreadable from the road. Both of these Reg 19 notices are not in places of high footfall and therefore have done nothing to raise awareness in the area. This is further evidence that the Regulation 19 Publication is not compliant with Duty to Co-operate.</p>

The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.</p> <p>The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.</p> <p>Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.</p> <p>Land Ownership - Unsound</p> <p>Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?</p> <p>Infrastructure - Unsound</p> <p>We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.</p> <p>Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and</p>

	<p>many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.</p> <p>The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.</p> <p>In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.</p> <p>Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area. The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p> <p>Additional Comments: Ground not stable enough with all the mine workings on CT1 the roads cannot take anymore traffic in this little village. Wildlife that will be lost habitat & water this land holds, the A34 floods now so if the land cannot hold the water as is there will be major roads like A34 A500 being effected by this. Schools not big enough (520) homes. 2 kids to a property or more, pollution from 1000 vehicles.</p>
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Title	Policy CT1 Land at Red Street and High Carr Farm, Chesterton
Consultee Family Name	Millward
Consultee Given Name	Lesley
Q4 Part of document	Policy
Q4 Policy	CT1
Q5 Sound	No
Q6 Details	<p>Local Draft Plan Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117) Green Belt - Unsound</p> <p>Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1. to check the unrestricted sprawl of large built-up areas; 2. to prevent neighbouring towns merging into one another' 3. to assist in safeguarding the countryside from encroachment; 4. to preserve the setting and special character of historic towns; and 5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <p>The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)</p>

Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.

The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be

	<p>significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.</p> <p>Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area.</p> <p>The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p> <p>Additional Comments Cross over from Crackley Bank onto Liverpool Road every morning and afternoon is chaotic with buses trying to pass but can't because of parked cars of parents dropping or picking up school children from St Chads, the residents of this area have had car mirrors broken, cars scratched etc. The road narrows at this point, just after the raised crossing for school children. I have witnessed road rage, drivers swearing and near accidents. If the A34 is blocked, drivers use Red Street as a rat run, I have seen and felt double trailed HGVs using Red Street as a divert and my house has shaken. I cannot imagine what additional traffic would do to our roads and infrastructure, children would be put under great stress and danger with the unmanned crossing and additional traffic. If the government are still thinking of putting forward no cars on pavements, this will only make it more difficult for this tiny village. Most houses in this area were built in the early 1900s so the roads were not meant for the possible amount of traffic if this build were to go ahead.</p> <p>Additional Comments: Due to historical mining in this area, I am very concerned that building on CT1 will make the land more unstable. As pointed out, many sink holes have appeared and my property, on the row of terraces already tie bars due to land movement. Would the developer be responsible should more movement occur and further damage these properties.</p> <p>This plan is not thought through and the council have not been honest and open with locals about it. Notices were not put up where there is footfall but hidden in quiet spots. Locals love this area for the greenery & wish it to stay as it is. Our local doctors is already very difficult to get an appointment due to being so bust. These plans do not help this situation & make it significantly more difficult. The wellbeing of people is important and the mental health at risk. Many people - most people live in Red Street for the green outlook, for peace & tranquility which you are trying to destroy. I seek removal of CT1 from your plans</p>
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Q4 Part of document	Policy
Q4 Policy	CT1
Q6 Details	<p>Local Draft Plan</p> <p>Stages of development of the Local Plan (Page 4)</p> <p>Regulation 19 Publication – Not Compliant with Duty to Co-operate</p> <p>When the plan was first introduced, the publication and consultation for it was limited. We were unaware of the impact for our area until the second phase. Under the planning processes laid out in the Town and Country Planning Regulations 2012, Regulation 18 notices were put up. One was placed on the lamppost, part way down Bells Hollow which is a single lane road with limited footfall and inability to be seen from a moving vehicle. The second on a lamp post part way down Talke Road, which only has a footpath on one side and is a National Speed Limit Road. This was to cover the entire neighbourhoods affected by the original CT sites as listed in the first draft which is a These two locations were not in areas of high footfall and we feel that there was inadequate publication of the regulation 18 notices in our Ward. As a community we printed the Reg 18 Notices and placed them in more high footfall areas and distributed to households in the vicinity to generate knowledge of the plans. These are steps that should have been taken by the local authority not the community.</p>

Furthermore, no community consultations were held in Red Street. Bearing in mind that we have an aging population, the majority of which do not drive, and the very limited bus routes, we feel that the local population were not adequately informed at Regulation 18 Stage. A complaint was lodged to this fact with the council but no response was received. It is not realistic to expect elderly residents to make informed decisions about their locality if they are not engaged.

As a community, we organised a community meeting, which was positively attended and the council again were asked to include Red Street as part of the consultation at Reg 18 as one of the largest areas to be considered for housing, it needed to be part of their plan. Most people reported that they would not have been aware of the proposals without the input from the local community and the failing of the council to execute their duty under the regulations.

Regulation 19 notices were sent to residents who had submitted responses to the Regulation 18 notice and included an email address with their response, but again, no Regulation 19 notices were published in the vicinity of Red Street to publicise the community consultation dates or the fact that responses can be submitted to the Final Local Plan. This is not sound decision making from a Local Plan communication perspective.

Local Draft Plan

Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117)

Green Belt - Unsound

Greenbelt land is in place for the following reasons:

- 1 to check the unrestricted sprawl of large built-up areas;
- 2 to prevent neighbouring towns merging into one another;
- 3 to assist in safeguarding the countryside from encroachment;
- 4 to preserve the setting and special character of historic towns; and
- 5 to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)

Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.

The Proforma for CT1A also states that *“Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4).”* In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a

fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.

Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area.

The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.

	<p>Please set out the modification(s) you consider necessary to make the Local Plan legally compliant and sound in respect of any legal compliance or soundness matters you have identified at above:</p> <p>We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.</p> <p>Additional Comments:</p> <p>Coal Mining</p> <p>The site was identified as a Coal Authority high risk area. This suggests that there is a high probability of ground movement. The old properties adjacent to CT1 could be affected by this if building takes place. It is well known that the CT1 site has mine shafts and adits; the terraced houses close by to CT1 are over 120 years old and so are not in a position to withstand the effects of ground movement in the immediate vicinity.</p> <p>Flooding</p> <p>Whilst there has only been surface water flooding once in 30 years, this could take a turn for the worse if you tarmac a very large area for housing and we could see that existing houses/gardens on Liverpool Road flooding as the water no longer has anywhere to go. This year has been a prime example of climate change in that we have an unprecedented amount of rainfall. Add this to a large scale development and I think you will find that this is a recipe for flooding.</p>

Q6 Details	<p><u>Local Draft Plan</u></p> <p><u>Policy CT1 - land at Red Street and High Carr Farm, Chesterton - pls. 116,117.</u></p> <p>This part of the Local Plan is <u>unsound</u>.</p> <p>This land is greenbelt land. It was classified as greenbelt for good reason:-</p> <ul style="list-style-type: none"> • to check the unrestricted sprawl of large built-up areas • to prevent neighbouring towns from merging into one another • to assist in safeguarding the countryside from encroachment • to preserve the setting and special character of historic towns • to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <p>The Green Belt Site Review Consolidated Report (16 July 2024)</p> <p>states that site CT1 should not be progressed if site TK17 is put forward.</p> <p>TK17 remains in the plan. Both sites being taken forward would constitute unrestricted sprawl and the merging of two distinct neighbourhoods, Those of Red Street and Talke/Butt Lane).</p> <p>In addition the documents relating to CT1 and CT4 state that they are within 800m of an existing Dr.'s surgery. This is incorrect, and reveals an example of the flaws in the local planning.</p> <p>In addition the proforma for CT1 states, "<i>Consideration would also need to be given to the remaining area of Green Belt to the south (inc. site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4) "</i></p> <p>In the Regulation 19 plan, CT4 and CT1 have been removed, leaving CT1A. Therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area. This would lead to a loss of biodiversity, and the isolation of wildlife in a pocket of land unconnected to the greenbelt.</p> <p>This is also the case for Proforma CT1. According to the Green Belt site assessment, the plans for CT1 should only go ahead if CT4 is also included which is not the case, as CT4 has been removed from the Local Plan.</p> <p>Additionally, site CT1A, from the Green Belt Site Review, is being taken forward in the Local Plan. However, it is referenced as CT1 in the Local Plan document, which is misleading, - and makes it difficult to cross-reference.</p> <p>Local residents are aware that the CT1 area supports a wide range of wildlife, including mice, hedgehogs, foxes, and badgers. Hedgehogs are in danger and their habitats need to be protected. A pair of hedgehogs were in our garden which backs onto CT1 only a couple of weeks ago. Also the trees, fields and hedgerows provide habitats for a wide range of birds, including goldfinches and other finches, starlings (currently in serious decline), blackbirds, a range of tits, wrens, sparrow-hawks. It also provides support for visiting birds such as geese, partridge, and greater spotted woodpeckers.</p> <p>The development of CT1 would destroy this precious biodiversity.</p> <p>Therefore the decision-making in the Final local Plan is unsound as there is no proper justification for including CT1 in the plan.</p> <p><u>The history of mining in the CT1 area also makes its inclusion in the Final Plan unsound.</u></p> <p>The CT1 site was mined between 1860 and 1930. The coal was extracted using pillar and stall mining methods, leaving pillars of coal to support the land. As a result several sink holes and collapses have occurred upon this land.</p> <p>There is evidence of a significant fault line (High Carr Fault) present at the south east part of CT1.</p> <p>The housing that is in existence has been subject to pinning , bracing and strapping. My house for example has had extensive such work carried out upon it.</p> <p>I have great concern that the proposals in the Final Plan would compromise the structure of my home and the homes of many others living in this area. The negative impact on the structure of our existing buildings would be likely to be serious.</p> <p>The extent of the mining that has been carried out in the CT1 area has not been fully established by the borough council. The extent of the mining, the resulting instability of the land and the location of the fault line for CT1 makes it an unsound basis for taking the site forward in the final plan.</p> <p><u>Current ownership of the land in CT1.</u></p> <p>The land in CT1 is owned by several parties. There is no proposal for compulsory purchase of the land. Individual arrangements will have to be made between land owner and developer. There are no safeguards</p>

	<p>to ensure that the proposed development works well as a joined-up project. So, eg. what if one landowner decides to sell, and another decides not to.</p> <p>Again - this is not a sound basis for moving forward with the plan for CT1.</p> <p>Local Infrastructure</p> <p>The proposed significant development on CT1 would inevitably lead to higher volume of traffic. The Local Plan has not reasonably taken into account the impact that this would have upon the village of Red Street.</p> <p>Many of the houses on the main route through Red Street, are lovely old terraced properties. However they have to park their cars on the road, which means that the main route through the village is narrow, and can create health and safety issues in just trying to cross the road.</p> <p>Nearby the A34 frequently is heavily congested - and frequently flooded at the nearby roundabout, this means that traffic uses Red Street as a means to escape congestion. This already causes issues re safety and pollution.</p> <p>The proposed developments in the local area could lead to over 1000 additional vehicles, putting pressure on the road network, increasing pollution and putting residents at even greater risk of accidents.</p> <p>Red Street has a small Primary School, and again this causes significant problems with parking and traffic and children and adults trying to cross the road. There have been some "near misses. The proposals are unsound - as they place people at greater risk of accidents.</p> <p>I understand that the plan does make provision for developers to make payments to enhance local schools and "a community hub" - but how will this work if the development is split between several companies and if land sales are occurring at different times there can be no joined-up approach. There are examples locally of other developments that have not delivered on their promises. eg Moss Grove the additional street lighting promised along Deans Lane has not materialised adding to higher pedestrian risk. Also additional support promised for local schools did not materialise.</p> <p>The Local Plan has not taken into account</p> <ul style="list-style-type: none"> the future needs for Primary and Secondary school places the need for Doctors' surgeries for the area the need for Dentists in the area the need for CAMHS and general mental health support the need for green spaces <p>to name but a few - and all of which will be placed under even more pressure even though they are struggling to cope.</p> <p>Bus routes have been cut - leading to great difficulty for many in the local population struggling to be able access either of the nearest GP surgeries.</p> <p>All of the above issues briefly outline why the Local Plan is not legally compliant, is unsound and is not compliant with the duty to coop</p>
Q7 Modification	<p>I, (along with the local residents of Red Street) have collated sufficient evidence to show that the proposals for CT1 need to be removed from the Local Plan.</p> <p>The Greenbelt assessment states that CT1 should NOT be in the plan if TK17 remains.</p> <p>TK17 has remained in the Local Plan.</p> <p>Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together.</p> <p>CT4 has been removed from the plan.</p> <p>Therefore the removal of CT1 from the plan is imperative, so that the plan falls in line with the site selection process and with the supporting information outlined in the Greenbelt Assessment.</p>

Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117)

Green Belt - Unsound

Greenbelt land is in place for the following reasons:

1. to check the unrestricted sprawl of large built-up areas;
2. to prevent neighbouring towns merging into one another
3. to assist in safeguarding the countryside from encroachment;
4. to preserve the setting and special character of historic towns; and
5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)

Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.

The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference. Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity. Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's. The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area. Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again has not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed. The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surrounding schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently over subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at

	<p>least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.</p> <p>In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.</p> <p>Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area. The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p> <p>I am not against a local plan and agree that we need one. However, this plan does not take into account the area as a whole and reflect what draws people to the location in the first place. All the areas of focus are green belt sites without consideration of other areas that are viable options. The plan has been put into place with no consultation or consideration of the impact on the localities and whether it is practical. As outlined the impact on the infrastructure in the area will be significant, especially when taking into consideration the developments in other areas which all draw on the same resources. The developments in Bignall End and Audley share our doctors as well as school catchment areas. Bradwell and Chesterton likewise. The plan is considering areas and not the impact for the plan as a whole which will flood the resources and make it untenable. There is already a wait for Dr's appts, a reduced NHS dental service and Schools are over subscribed or near capacity.</p> <p>The plan also does not take into account the demographic of housing needed with plans of large dwellings at the expense of single occupancy. Census shows that we have an increasing elderly population and that the number of people living in Newcastle is on the decline.</p>
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Q4 Policy	CT1
Q6 Details	<p>Local Draft Plan</p> <p>Stages of development of the Local Plan (Page 4)</p> <p>Regulation 19 Publication – Not Compliant with Duty to Co-operate</p> <p>When the plan was first introduced, the publication and consultation for it was limited. We were unaware of the impact for our area until the second phase. Under the planning processes laid out in the Town and Country Planning Regulations 2012, Regulation 18 notices were put up. One was placed on the lamppost, part way down Bells Hollow which is a single lane road with limited footfall and inability to be seen from a moving vehicle. The second on a lamp post part way down Talke Road, which only has a footpath on one side and is a National Speed Limit Road. This was to cover the entire neighbourhoods affected by the original CT sites as listed in the first draft which is unacceptable. These two locations were not in areas of high footfall and we feel that there was inadequate publication of the regulation 18 notices in our Ward. As a community we printed the Reg 18 Notices and placed them in more high footfall areas and distributed to households in the vicinity to generate knowledge of the plans. These are steps that should have been taken by the local authority not the community.</p> <p>Furthermore, no community consultations were held in Red Street. Bearing in mind that we have an aging population, the majority of which do not drive, and the very limited bus routes, we feel that the local population were not adequately informed at Regulation 18 Stage. A complaint was lodged to this fact with the council but no response was received. It is not realistic to expect elderly residents to make informed decisions about their locality if they are not engaged.</p> <p>As a community, we organised a community meeting, which was positively attended and the council again were asked to include Red Street as part of the consultation at Reg 18 as one of the largest areas to be considered for housing, it needed to be part of their plan. Most people reported that they would not</p>

have been aware of the proposals without the input from the local community and the failing of the council to execute their duty under the regulations.

Regulation 19 notices were sent to residents who had submitted responses to the Regulation 18 notice and included an email address with their response, but again, no Regulation 19 notices were published in the vicinity of Red Street to publicise the community consultation dates or the fact that responses can be submitted to the Final Local Plan. This is not sound decision making from a Local Plan communication perspective.

Local Draft Plan

Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117)

Green Belt - Unsound

Greenbelt land is in place for the following reasons:

- 1 to check the unrestricted sprawl of large built-up areas;
- 2 to prevent neighbouring towns merging into one another;
- 3 to assist in safeguarding the countryside from encroachment;
- 4 to preserve the setting and special character of historic towns; and
- 5 to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)

Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.

The Proforma for CT1A also states that *“Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4).”* In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan. Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered.

Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.

Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area.

The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.

Please set out the modification(s) you consider necessary to make the Local Plan legally compliant and sound in respect of any legal compliance or soundness matters you have identified at above:

We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Additional Comments:

When I drive home from activities or holidays or scout camps I see the monument. I feel proud to be to belong in a tiny village on the edge of a town and if this buildings do take place behind my house it will be a town it self red street which is where I live will be upper Chesterton and my neighbour said that postman told him that this red street not Chesterton. There is a lot of mines underneath the field with shafts and tunnels. I do not like walking around busy towns like Newcastle and I love red street just the way it is now.

Title	Policy CT1 Land at Red Street and High Carr Farm, Chesterton
Consultee Family Name	Hardstaff
Consultee Given Name	Angela
Q4 Part of document	Policy
Q4 Policy	CT1
Q5 Legally compliant	No
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<u>Local Draft Plan</u> Policy CT1 - land at Red Street and High Carr Farm. Chesterton - pls. 116,117.

This part of the Local Plan is **unsound**.

This land is greenbelt land. It was classified as greenbelt for good reason:-

- to check the unrestricted sprawl of large built-up areas
- to prevent neighbouring towns from merging into one another
- to assist in safeguarding the countryside from encroachment
- to preserve the setting and special character of historic towns
- to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

The Green Belt Site Review Consolidated Report (16 July 2024)

states that site CT1 should not be progressed if site TK17 is put forward.

TK17 remains in the plan. Both sites being taken forward would constitute unrestricted sprawl and the merging of two distinct neighbourhoods, Those of Red Street and Talke/Butt Lane).

In addition the documents relating to CT1 and CT4 state that they are within 800m of an existing Dr.'s surgery. This is incorrect, and reveals an example of the flaws in the local planning.

In addition the proforma for CT1 states, *"Consideration would also need to be given to the remaining area of Green Belt to the south (inc. site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4) "*

In the Regulation 19 plan, CT4 and CT1 have been removed, leaving CT1A. Therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area. This would lead to a loss of biodiversity, and the isolation of wildlife in a pocket of land unconnected to the greenbelt.

This is also the case for Proforma CT1. According to the Green Belt site assessment, the plans for CT1 should only go ahead if CT4 is also included which is not the case, as CT4 has been removed from the Local Plan.

Additionally, site CT1A, from the Green Belt Site Review, is being taken forward in the Local Plan. However, it is referenced as CT1 in the Local Plan document, which is misleading, - and makes it difficult to cross-reference.

Local residents are aware that the CT1 area supports a wide range of wildlife, including mice, hedgehogs, foxes, and badgers. Hedgehogs are in danger and their habitats need to be protected. A pair of hedgehogs were in our garden which backs onto CT1 only a couple of weeks ago. Also the trees, fields and hedgerows provide habitats for a wide range of birds, including goldfinches and other finches,

starlings (currently in serious decline), blackbirds, a range of tits, wrens, sparrow-hawks. It also provides support for visiting birds such as geese, partridge, and greater spotted woodpeckers.

The development of CT1 would destroy this precious biodiversity.

Therefore the decision-making in the Final local Plan is unsound as there is no proper justification for including CT1 in the plan.

The history of mining in the CT1 area also makes its inclusion in the Final Plan unsound.

The CT1 site was mined between 1860 and 1930. The coal was extracted using pillar and stall mining methods, leaving pillars of coal to support the land. As a result several sink holes and collapses have occurred upon this land.

There is evidence of a significant fault line (High Carr Fault) present at the south east part of CT1.

The housing that is in existence has been subject to pinning , bracing and

strapping. My house for example has had extensive such work carried out upon it. I have great concern that the proposals in the Final Plan would compromise the structure of my home and the homes of many others living in this area. The negative impact on the structure of our existing buildings would be likely to be serious.

The extent of the mining that has been carried out in the CT1 area has not been fully established by the borough council. The extent of the mining, the resulting instability of the land and the location of the fault line for CT1 makes it an unsound basis for taking the site forward in the final plan.

Current ownership of the land in CT1.

The land in CT1 is owned by several parties. There is no proposal for compulsory purchase of the land. Individual arrangements will have to be made between land owner and developer. There are no safeguards to ensure that the proposed development works well as a joined-up project. So, eg. what if one landowner decides to sell, and another decides not to.

Again - this is not a sound basis for moving forward with the plan for CT1.

Local Infrastructure

The proposed significant development on CT1 would inevitably lead to higher volume of traffic. The Local Plan has not reasonably taken into account the impact that this would have upon the village of Red Street.

Many of the houses on the main route through Red Street, are lovely old terraced properties. However they have to park their cars on the road, which means that the main route through the village is narrow, and can create health and safety issues in just trying to cross the road.

	<p>Nearby the A34 frequently is heavily congested - and frequently flooded at the nearby roundabout, this means that traffic uses Red Street as a means to escape congestion. This already causes issues re safety and pollution.</p> <p>The proposed developments in the local area could lead to over 1000 additional vehicles, putting pressure on the road network, increasing pollution and putting residents at even greater risk of accidents.</p> <p>Red Street has a small Primary School, and again this causes significant problems with parking and traffic and children and adults trying to cross the road. There have been some "near misses. The proposals are unsound - as they place people at greater risk of accidents.</p> <p>I understand that the plan does make provision for developers to make payments to enhance local schools and "a community hub" - but how will this work if the development is split between several companies and if land sales are occurring at different times there can be no joined-up approach. There are examples locally of other developments that have not delivered on their promises. eg Moss Grove the additional street lighting promised along Deans Lane has not materialised adding to higher pedestrian risk. Also additional support promised for local schools did not materialise.</p> <p>The local primary school would be affected by this plan - and would be expected to accommodate more children. This would put the school at risk because there are already a significant number of mobile classrooms there - and they are not conducive to appropriate learning environments.</p> <p>Access to a GP in this area is very difficult. The lack of General Practitioners in the area already poses many difficulties. To overload existing practices even more could have a devastating effect upon our local population and the rise in the number of patients per GP is likely to become unmanageable.</p> <p>The Local Plan has not taken into account</p> <ul style="list-style-type: none"> the future needs for Primary and Secondary school places the need for Doctors' surgeries for the area the need for Dentists in the area the need for CAMHS and general mental health support the need for green spaces to name but a few - and all of which will be placed under even more pressure even though they are struggling to cope. <p>Bus routes have been cut - leading to great difficulty for many in the local population struggling to be able access either of the nearest GP surgeries.</p> <p>All of the above issues briefly outline why the Local Plan is not legally compliant, is unsound and is not compliant with the duty to cooperate.</p>
Q7 Modification	<p>I, (along with the local residents of Red Street) have collated sufficient evidence to show that the proposals for CT1 need to be removed from the Local Plan. The Greenbelt assessment states that CT1 should NOT be in the plan if TK17 remains.</p> <p>TK17 has remained in the Local Plan.</p> <p>Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan.</p> <p>Therefore the removal of CT1 from the plan is imperative, so that the plan falls in line with the site selection process and with the supporting information outlined in the Greenbelt Assessment.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	<p>I think that it would be necessary for as many people as possible, who will be affected by the proposals regarding CT1, to participate in the hearing sessions, as the proposals mean that their lives and quality of life would fundamentally change.</p> <p>Additionally representation needs to be made to limit the everlasting damage that could be done to the environment.</p>

RE: CT1 TK30

Environmental impact

The environmental impact of destroying green belt land would be catastrophic.

(redacted by admin)

Over the past 30 years as people who are passionate about wildlife and natural history, we have enjoyed a landscape character of vast open spaces, traditional undulating fields, trees and hedgerows.

We have seen close up the bio-diversity of animals and plants working together in eco-systems on organic farm land, for eg. each spring ground-nesting lapwings breed in the pasture land of the field in question.

CT1 - this field is rough grazing and unimproved, which is ideal for these birds.

The field is also a home and haven for hundreds of starlings foraging for insects, living symbiotically with grazing sheep.

Starlings are protected under the **Wildlife and Countryside Act 1981**, as are Lapwings, and other species that visit this field and i will refer to.

Starling numbers have fallen by 66% since the mid-70's. Lapwing numbers have fallen even more. Because of this they are red-listed as birds of high conservation concern. November can see murmurations of many hundreds of starlings over this area.

Other birds within the habitat include grey partridge, barn owl, rooks, jackdaws, fieldfares, many types of sparrows, blackbirds, finches, goldfinch, martins, wood pigeons and collared doves, gulls and terns etc. It is also a hunting ground for sparrow hawks and a pathway for the fox in winter.

We estimate there is approximately 1500 metres plus of hedgerow, with hedgerow nesting birds and small mammals in peril if these are destroyed.

Destroy this habitat - and this wildlife is gone from the area forever.

Sir David Attenborough has unveiled a message at the Natural History museum that states, "The future of the natural world, on which we all depend, is in our hands".

At the unveiling the naturalist said, "Each of us must cherish the natural world that surrounds us from wide open countryside to tiny patches of green in our cities.

Climate Change and Carbon footprint

The land proposed for building works currently supports the organic growth of pork, Lamb and beef on the farm, where there is also an abattoir which serves the butchers shop in Red Street. Hence zero carbon footprint.

This means that the area has a massive value in lowering the carbon footprint for the area.

Councils have a significant role to play in tackling our climate emergency. How can the destruction of productive greenbelt land and adding further to the urban sprawl that is currently occurring nearby - contribute towards the responsibility to improve our climate?

There are many spaces in the borough that would be suitable for building dwellings - for example, on brown land and previously built upon spaces - that would be far less damaging to nature and to our climate.

CT1 TK 30

Overshadowing and privacy issues

(redacted by admin) The spectacular outlook of many square miles of traditional countryside would be completely obliterated at a stroke.

There would be devastating and depressing overshadowing and loss of natural light. Privacy would be totally compromised by being overlooked and new housing would be way out of character with our property and neighbouring properties, some of which date back to the 1800's. Building on this green belt land would increase light, noise and air pollution and create more health issues within the community.

CT1 T K30

Noise and disturbance

The semi-rural village of Red Street is in a fairly quiet, tranquil and generally undisturbed setting, with small roads, lanes and avenues. It is generally a safe place for children, and the elderly and vulnerable - for whom we have designated dwellings in Red Street. Traffic mostly is not excessive, which is fortunate as the road system would struggle to cope with increased traffic. This is exemplified when the M6 is closed or experiencing traffic issues, which leads to a sudden surge of traffic along our narrow roads and lanes, creating a logjam and great difficulties for residents. At certain times of the day the A34 is very congested, and couldn't cope with more traffic. The area is already suffering from increased traffic with the devastating building works on Peacock Hay Road.

When the new Wedgewood View estate was recently built, the boundary of which is approximately 150m from the proposed new site, the noise disturbance for the local surrounding community was disproportionate and ongoing.

Pile driving shook the ground and the dB levels continued far in excess of recommended levels for many months.

This site was described in planning as being for up to 50 dwellings.

The proposals for the CT1 site would be a staggering at least **15 times** that amount. An overbearing development with the inevitable associated noise levels, disturbance and pollution, and an infrastructure in the area that would be totally unable to cope.

	<p>CT1 TK30 <u>Meeting Needs</u></p> <p>Red Street is a relatively small community with few amenities. There is a Community Centre, a pub, a butchers, a church, a home for the elderly and designated dwellings for the elderly and vulnerable, as well as housing for families.</p> <p>It would seem impossible for the village, with meagre amenities to adequately meet the needs and demands of a hugely burgeoning population.</p> <p>Local GP's are already struggling to meet the needs of the community.</p> <p>The local primary and secondary schools are ill equipped to cope with their current populations, let alone a much larger number.</p> <p>There are insufficient dental practices.</p> <p>Indeed the draft proposals would compromise the needs and would create an incredibly hostile environment for the existing residents; for example, how would extended building works in close proximity to a care home adversely affect the residents?</p> <p>CT1 TK30</p> <p><u>Exceptional personal circumstances.</u></p> <p>After a life of working hard in public service both my wife and I are now retired and have a number of health issues. (redacted by admin) when a peaceful environment is essential.</p> <p>We also provide long periods of respite for a family member who is over 90 and very vulnerable and with a variety of health conditions - including heart issues.</p> <p>My own mental health also means that i require a peaceful environment .</p> <p>We found the noise and disturbance from the building works nearby at Wedgewood View to be intolerable at times. The noise levels, dirt and dust and poor air quality emanating from a much larger building site immediately next to us, throughout the days and months (and possibly years?) and often at unsociable hours, is an horrific prospect.</p> <p>The draft proposals relating to building at this site, were they to go ahead, would surely inevitably lead to significant mental health issues for us and for our family members.</p> <p>SUBSIDENCE AND SLIPPAGE</p> <p>As previously mentioned, (redacted by admin), is an old property built upon clay splay footings, and dating back to the mid-1800s . The property has experienced subsidence and slippage, some of its internal structure being testimony to this. This was almost certainly associated with the coal mining footers in very close proximity to the house.</p> <p>In 2003 significant cracks appeared in the upper external bathroom and bedroom walls. Our building society was made aware and strapping and pinning repairs were carried out by specialist builders to make good .</p> <p>We are extremely concerned and fearful that disturbances from groundwork within the vicinity of the house may very well result in further subsidence and slippage, compromising the stability and safety of the property.</p>
Q7 Modification	<p>I, (along with the local residents of Red Street) have collated sufficient evidence to show that the proposals for CT1 need to be removed from the Local Plan.</p> <p>The Greenbelt assessment states that CT1 should NOT be in the plan if TK17 remains.</p> <p>TK17 has remained in the Local Plan.</p> <p>Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together.</p> <p>CT4 has been removed from the plan.</p> <p>Therefore the removal of CT1 from the plan is imperative, so that the plan falls in line with the site selection process and with the supporting information outlined in the Greenbelt Assessment.</p> <p>My wife is a cancer sufferer and her medication for this, along with the pain, discomfort and side effects of medication for possible spinal stenosis, results in extended periods of insomnia and difficult mornings</p> <p>12a Copes Row</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)

Q6 Details

Local Draft Plan

Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117)

Green Belt - Unsound

Greenbelt land is in place for the following reasons:

1. to check the unrestricted sprawl of large built-up areas;
2. to prevent neighbouring towns merging into one another;
3. to assist in safeguarding the countryside from encroachment;
4. to preserve the setting and special character of historic towns; and
5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)

Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.

The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

	<p>The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.</p> <p>In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.</p> <p>Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area.</p> <p>The local plan document doesn't set out a justification or means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p> <p>As of 2024 (and as a resident of 86 years) I have seen 4 large estates that have been built, ie Original Crackley Estate Waterhayes Estate Mitchells Wood Estate and Shutt Lane Deans Lane Estate + 3 built on Farm Land.</p> <p>As a result, traffic through Red Street has increased enormously. Surely some agricultural land should be left for crops. Quality of life has been degraded. Already we have sprawl to Chesterton and with this plan there will be spread to Talke contravening Green Belt.</p>
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Q6 Details	<p>Dear Inspector,</p> <p>Newcastle Under Lyme needs a local plan, to allow structured development of housing across the Borough and secure sites that are in green belt land.</p> <p>However, I feel that the local plan we see being put forward has sites in , that are not just unpopular but also have real infrastructure concerns and based on assumptions that I feel cannot be substantiated.</p> <p>Having attended various resident group meetings , I have found that they are very knowledgeable and who knows better than local residents , the problems that they face now and how the new developments will affect them and not against a local plan but sites that are in the plan.</p>

The main sites that I have concern over AB2, AB33,AB12,AB15, CT1, BL8,BL18,BL32, TK6,Tk17 and TK27.

These are in Audley , Red Street and Butt Lane /Talke , areas that I have links with and know well.

Documents are now accessible, but residents and councillors have by timings of release , which in some cases have not allowed proper time for scrutiny and meaningful consultation.

All these sites have traffic issues already and note recommendations regarding A500 , Talke Interchange, A34 ,A527 , which will need major financial assistance .

I believe all the sites listed have questions about infrastructure and would question how sound the reasoning and financial constraints of the projects to be deliverable.

I would like to mention two sites in particular , which are AB2 and CT1.

AB2 is a 80-hectare project for warehousing /factory that is not in keeping with the rural area , with only 22 hectares needed for warehouse , the rest is for lorry car park and substation.

Having experienced problems in my Ward , Holditch and Chesterton , with warehouse now occupied by Boughey Distribution I believe this is not a sound proposal.

Residents constantly complain about traffic and noise , plus air quality.

When it was built people complained , before it was even occupied residents about construction, and we also had problems concerning getting Road adopted by Staffordshire County Council .

Without this happening , warehouse contract would not have been signed , and quite possibly would still be empty now .

AB2 in Audley , is potentially 3 times bigger than Chesterton warehouse , and have grave reservations regarding the soundness of this development plus I believe that there may be another more appropriate alternative.

CT1 Red Street has been scaled down but worth noting , that area has a history of being used for mining , as well as this mentioned in the report doctors which closed and now a dentist.

Due to the problems with documentation being available for consultation , and real reservations about infrastructure and financial viability , I would ask you to consider if this plan is sound and complaint.

Q6 Details	<p>Local Draft Plan Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117) Green Belt - Unsound Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1. to check the unrestricted sprawl of large built-up areas; 2. to prevent neighbouring towns merging into one another 3. to assist in safeguarding the countryside from encroachment; 4. to preserve the setting and special character of historic towns; and 5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <p>The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)</p> <p>Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.</p> <p>The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.</p> <p>Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.</p> <p>Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.</p> <p>Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.</p> <p>Historical Mining - Unsound Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.</p> <p>The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.</p> <p>Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.</p> <p>Land Ownership - Unsound Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?</p> <p>Infrastructure - Unsound We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles</p>

will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.

Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area.

The local plan document doesn't set out a justification or means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.

We have lived in Red Street for 34 years, in those 34 years. Have seen two estates go up one Waterhays and one on Deans Lane. Witch has already caused a lot of traffic in the area we struggle to get in and out of are own driveway the traffic is that bad. We feel as a small community Red Street can not cope with any more traffic going through this area. Also we have a small school St Chads the staff are already struggling with the amount off children they have in each class. Are the council willing to build new facilities to support the amount people that will move in to the new houses. This area is already struggling with the amount of traffic coming through with the new industrial estate that have gone up. We will be losing more greenland the fumes off the traffic is unhealthy at the moment it will be a lot worse with more housing estates going up.

Surely there must be other places you could consider. Where it is not so built up. Already we feel like we have had enough housing estates put up in this area over the last thirty years. As I write this letter the traffic is bumper to bumper in Red Street. We are fed up and really against it. It makes us sick.

Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Consultee Given Name	Marion
Q4 Part of document	Policy
Q4 Policy	CT1
Q5 Sound	No
Q6 Details	<p>Local Draft Plan Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117) Green Belt - Unsound</p> <p>Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1. to check the unrestricted sprawl of large built-up areas; 2. to prevent neighbouring towns merging into one another' 3. to assist in safeguarding the countryside from encroachment; 4. to preserve the setting and special character of historic towns; and 5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <p>The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)</p> <p>Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.</p> <p>The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended</p>

that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4).” In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.

	<p>Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area. The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p> <p>Additional Comments</p> <p>Cross over from Crackley Bank onto Liverpool Road every morning and afternoon is chaotic with buses trying to pass but can't because of parked cars of parents dropping or picking up school children from St Chads, the residents of this area have had car mirrors broken, cars scratched etc. The road narrows at this point, just after the raised crossing for school children. I have witnessed road rage, drivers swearing and near accidents. If the A34 is blocked, drivers use Red Street as a rat run, I have seen and felt double trailered HGVs using Red Street as a divert and my house has shaken. I cannot imagine what additional traffic would do to our roads and infrastructure, children would be put under great stress and danger with the unmanned crossing and additional traffic. If the government are still thinking of putting forward no cars on pavements, this will only make it more difficult for this tiny village. Most houses in this area were built in the early 1900s so the roads were not meant for the possible amount of traffic if this build were to go ahead.</p>
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Q4 Part of document	Policy
Q4 Policy	CT1
Q5 Sound	No
Q6 Details	<p>Local Draft Plan</p> <p>Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117)</p> <p>Green Belt - Unsound</p> <p>Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1. to check the unrestricted sprawl of large built-up areas; 2. to prevent neighbouring towns merging into one another' 3. to assist in safeguarding the countryside from encroachment; 4. to preserve the setting and special character of historic towns; and 5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <p>The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)</p> <p>Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.</p> <p>The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.</p> <p>Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.</p> <p>Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice,</p>

hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.

Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area.

The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.

Additional Comments:

Parkhouse Pit in the 1960s was full of water my father was a miner and spend days working up to his waist and the pumps were going all the time underground after 60 years must be full of water. Perhaps you should think twice about disturbing the land the floods on the A34 are horrid and the roads get closed another 450 houses being built could make this problem worse. Also building houses by Bradwell Hospital

	and St Martins at Talke will make our little estate feel trapped. I dont want the traffic going down Shrewsbury drive because thats what will happen its a rat race now with all the school traffic from St Chads school we have a lot of elderly people living down this road.

Title	Policy CT1 Land at Red Street and High Carr Farm, Chesterton
Consultee Family Name	Smith
Consultee Given Name	Philip
Q4 Part of document	Policy
Q4 Policy	CT1
Q5 Sound	No
Q6 Details	<p>Local Draft Plan Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117) Green Belt - Unsound Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1. to check the unrestricted sprawl of large built-up areas; 2. to prevent neighbouring towns merging into one another' 3. to assist in safeguarding the countryside from encroachment; 4. to preserve the setting and special character of historic towns; and 5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <p>The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)</p> <p>Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.</p> <p>The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.</p> <p>Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.</p> <p>Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.</p> <p>Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.</p> <p>Historical Mining - Unsound Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.</p> <p>The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.</p> <p>Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.</p> <p>Land Ownership - Unsound Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?</p>

	<p>Infrastructure - Unsound</p> <p>We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Order	159
Title	Policy CT1 Land at Red Street and High Carr Farm, Chesterton
Consultee Family Name	Johnson
Consultee Given Name	Alan
Q4 Part of document	Policy
Q4 Policy	CT1
Q5 Sound	No
Q6 Details	<p>Local Draft Plan</p> <p>Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117)</p> <p>Green Belt - Unsound</p> <p>Greenbelt land is in place for the following reasons:</p>

1. to check the unrestricted sprawl of large built-up areas;
2. to prevent neighbouring towns merging into one another'
3. to assist in safeguarding the countryside from encroachment;
4. to preserve the setting and special character of historic towns; and
5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)

Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.

The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one

	<p>for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.</p> <p>In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.</p> <p>Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area. The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p> <p>Additional Comments</p> <p>Any area designated as a Green Belt should be forever. Never to be altered no matter what for. Without these areas there would be a decline in all nature and to the environment. We need these areas to help in maintaining a livable atmosphere not just for now but for many years to come. I shudder to think what the future will the next generation encounter without areas like Green belts.</p> <p>To put 700 odd houses in that area (CT1) and even more in TK30 (Deans Lane) area the infrastructure has not been taken into account. The traffic through Red Street is getting worse not only at week ends and early mornings but even during a normal day because of cars parked. Is there anywhere else a bus service has to detour in the afternoons at school finishing times</p>
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Title	Policy CT1 Land at Red Street and High Carr Farm, Chesterton
Consultee Family Name	Lewis
Consultee Given Name	Rebekah
Q6 Details	<p>Local Draft Plan Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117) Green Belt - Unsound</p> <p>Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1. to check the unrestricted sprawl of large built-up areas; 2. to prevent neighbouring towns merging into one another' 3. to assist in safeguarding the countryside from encroachment; 4. to preserve the setting and special character of historic towns; and 5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <p>The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)</p> <p>Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.</p> <p>The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true</p>

for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.

Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area.

	<p>The local plan document doesn't set out a justification or means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p> <p>St Chads Primary School has received a letter saying that they will be receiving funding to expand the school. St Chads is a fantastic primary school, but has no space for expansion. The school already has classrooms which are effectively static caravans. These are too hot in the summer, and too cold in the winter. I don't think that correct surveys have been completed in regards to needs for more shops, schools, doctors & dental surgeries along with other infrastructure. There is no evidence base for this and also pre-empting the decision that the planning inspectorate make the agreement that the local plan is sound.</p>
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Q4 Policy	CT1
Q5 Sound	No
Q6 Details	<p>Local Draft Plan Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117) Green Belt - Unsound</p> <p>Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1. to check the unrestricted sprawl of large built-up areas; 2. to prevent neighbouring towns merging into one another' 3. to assist in safeguarding the countryside from encroachment; 4. to preserve the setting and special character of historic towns; and 5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <p>The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)</p> <p>Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.</p> <p>The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.</p> <p>Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.</p> <p>Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.</p> <p>Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.</p> <p>Historical Mining - Unsound</p> <p>Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a</p>

fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.

Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area.

The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.

Additional Comments

Cross over from Crackley Bank onto Liverpool Road every morning and afternoon is chaotic with buses trying to pass but can't because of parked cars of parents dropping or picking up school children from St Chads, the residents of this area have had car mirrors broken, cars scratched etc. The road narrows at this point, just after the raised crossing for school children. I have witnessed road rage, drivers swearing and near accidents. If the A34 is blocked, drivers use Red Street as a rat run, I have seen and felt double trailered HGVs using Red Street as a divert and my house has shaken. I cannot imagine what additional traffic would do to our roads and infrastructure, children would be put under great stress and danger with the unmanned crossing and additional traffic. If the government are still thinking of putting forward no cars on pavements, this will only make it more difficult for this tiny village. Most houses in this area were built in the early 1900s so the roads were not meant for the possible amount of traffic if this build were to go ahead.

Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Q4 Part of document	Policy
Q4 Policy	CT1
Q5 Sound	No
Q6 Details	<p>Local Draft Plan</p> <p>Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117)</p>

Green Belt - Unsound

Greenbelt land is in place for the following reasons:

1. to check the unrestricted sprawl of large built-up areas;
2. to prevent neighbouring towns merging into one another'
3. to assist in safeguarding the countryside from encroachment;
4. to preserve the setting and special character of historic towns; and
5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)

Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.

The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having

	<p>looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.</p> <p>In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.</p> <p>Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area. The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p> <p>Additional Comments: WE HAVE READ THE CONTENTS OF THE RESPONSE FORM IN RELATION TO REGULATION 19 OF THE LOCAL PLAN AND WE ARE IN FULL AGREEMENT WITH THE CONTENTS THROUGHOUT</p>
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss</p>

of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.

Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has

	recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area. The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Title	Policy CT1 Land at Red Street and High Carr Farm, Chesterton
Consultee Family Name	Pegg
Consultee Given Name	Dorothy
Q6 Details	<p>Local Draft Plan Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117) Green Belt - Unsound</p> <p>Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1. to check the unrestricted sprawl of large built-up areas; 2. to prevent neighbouring towns merging into one another' 3. to assist in safeguarding the countryside from encroachment; 4. to preserve the setting and special character of historic towns; and 5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <p>The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)</p> <p>Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.</p> <p>The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.</p> <p>Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.</p> <p>Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.</p> <p>Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.</p> <p>Historical Mining - Unsound</p> <p>Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.</p> <p>The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.</p> <p>Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.</p> <p>Land Ownership - Unsound</p> <p>Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the</p>

	<p>arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?</p> <p>Infrastructure - Unsound</p> <p>We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.</p> <p>Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.</p> <p>The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.</p> <p>In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.</p> <p>Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area.</p> <p>The local plan document doesn't set out a justification or means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p> <p>As of 2024 (and as a resident of 86 years) I have seen 4 large estates that have been built, ie Original Crackley Estate Waterhayes Estate Mitchells Wood Estate and Shutt Lane Deans Lane Estate + 3 built on Farm Land.</p> <p>As a result, traffic through Red Street has increased enormously. Surely some agricultural land should be left for crops. Quality of life has been degraded. Already we have sprawl to Chesterton and with this plan there will be spread to Talke contravening Green Belt.</p>
Q7 Modification	<p>We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.</p>

Title	Policy CT1 Land at Red Street and High Carr Farm, Chesterton
Consultee Family Name	Hackett
Consultee Given Name	Jennifer
Q6 Details	<p>Local Draft Plan Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117) Green Belt - Unsound</p> <p>Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1 to check the unrestricted sprawl of large built-up areas; 2. to prevent neighbouring towns merging into one another' 3. to assist in safeguarding the countryside from encroachment; 4. to preserve the setting and special character of historic towns; and 5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <p>The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)</p>

Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.

The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be

	<p>significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.</p> <p>Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area.</p> <p>The local plan document doesn't set out a justification or means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p> <p>Not enough schools</p> <p>Not enough doctors</p> <p>Road congestion</p> <p>Wild life disruption</p>
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.</p> <p>The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.</p> <p>Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.</p> <p>Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice,</p>

hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.

Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area.

The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.

Additional Comments

Cross over from Crackley Bank onto Liverpool Road every morning and afternoon is chaotic with buses trying to pass but can't because of parked cars of parents dropping or picking up school children from St Chads, the residents of this area have had car mirrors broken, cars scratched etc. The road narrows at this point, just after the raised crossing for school children. I have witnessed road rage, drivers swearing

	and near accidents. If the A34 is blocked, drivers use Red Street as a rat run, I have seen and felt double trailered HGVs using Red Street as a divert and my house has shaken. I cannot imagine what additional traffic would do to our roads and infrastructure, children would be put under great stress and danger with the unmanned crossing and additional traffic. If the government are still thinking of putting forward no cars on pavements, this will only make it more difficult for this tiny village. Most houses in this area were built in the early 1900s so the roads were not meant for the possible amount of traffic if this build were to go ahead.
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.

Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area.

The local plan document doesn't set out a justification or means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.

We have lived in Red Street for 34 years, in those 34 years. Have seen two estates go up one Waterhays and one on Deans Lane. Witch has already caused a lot of traffic in the area we struggle to get in and out of are own driveway the traffic is that bad. We feel as a small community Red Street can not cope with any more traffic going through this area. Also we have a small school St Chads the staff are already struggling with the amount off children they have in each class. Are the council willing to build new facilities to support the amount people that will move in to the new houses. This area is already struggling with the amount of traffic coming through with the new industrial estate that have gone up. We will be losing more greenland the fumes off the traffic is unhealthy at the moment it will be a lot worse with more housing estates going up.

Surely there must be other places you could consider. Where it is not so built up. Already we feel like we have had enough housing estates put up in this area over the last thirty years. As I write this letter the traffic is bumper to bumper in Red Street. We are fed up and really against it. It makes us sick.

Q7 Modification

We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p> <p>Additional Comments: Parking on Liverpool Road, + Bells Hollow is an accident waiting to happen during school drop off and pick up. From the times of 8:15am-9:00am and 2:45-3:30pm the volume of traffic on this small village is ridiculous. People park, or rather dump, their cars all over pavements, double yellow lines and block home-owners driveways. The bus service cannot get through. We have suffered abuse from (quite regularly) parents of the school when asked not to block our drive. To increase the volume of traffic from the proposed development would be madness- this village cannot take anymore traffic!!</p>
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Order	159
Title	Policy CT1 Land at Red Street and High Carr Farm, Chesterton
Consultee Family Name	Williams
Consultee Given Name	David
Q4 Part of document	Policy
Q4 Policy	CT1
Q5 Sound	No
Q6 Details	<p>Local Draft Plan</p> <p>Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117)</p> <p>Green Belt - Unsound</p> <p>Greenbelt land is in place for the following reasons:</p>

1. to check the unrestricted sprawl of large built-up areas;
2. to prevent neighbouring towns merging into one another'
3. to assist in safeguarding the countryside from encroachment;
4. to preserve the setting and special character of historic towns; and
5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)

Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.

The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one

	<p>for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.</p> <p>In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.</p> <p>Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area. The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p>
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Title	Policy CT1 Land at Red Street and High Carr Farm, Chesterton
Consultee Family Name	Wilkes
Consultee Given Name	Allan
Q4 Part of document	Policy
Q4 Policy	CT1
Q5 Sound	No
Q6 Details	<p>Local Draft Plan Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117) Green Belt - Unsound</p> <p>Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1. to check the unrestricted sprawl of large built-up areas; 2. to prevent neighbouring towns merging into one another' 3. to assist in safeguarding the countryside from encroachment; 4. to preserve the setting and special character of historic towns; and 5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <p>The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)</p> <p>Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.</p> <p>The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.</p>

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.

Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area. The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.

Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Local Draft Plan

Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117)

Green Belt - Unsound

Greenbelt land is in place for the following reasons:

1. to check the unrestricted sprawl of large built-up areas;
2. to prevent neighbouring towns merging into one another
3. to assist in safeguarding the countryside from encroachment;
4. to preserve the setting and special character of historic towns; and
5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)

Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.

The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

	<p>The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.</p> <p>In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.</p> <p>The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended</p>

that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4).” In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.

	<p>Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area. The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p> <p>Additional Comments</p> <p>Cross over from Crackley Bank onto Liverpool Road every morning and afternoon is chaotic with buses trying to pass but can't because of parked cars of parents dropping or picking up school children from St Chads, the residents of this area have had car mirrors broken, cars scratched etc. The road narrows at this point, just after the raised crossing for school children. I have witnessed road rage, drivers swearing and near accidents. If the A34 is blocked, drivers use Red Street as a rat run, I have seen and felt double trailered HGVs using Red Street as a divert and my house has shaken. I cannot imagine what additional traffic would do to our roads and infrastructure, children would be put under great stress and danger with the unmanned crossing and additional traffic. If the government are still thinking of putting forward no cars on pavements, this will only make it more difficult for this tiny village. Most houses in this area were built in the early 1900s so the roads were not meant for the possible amount of traffic if this build were to go ahead.</p>
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

The development of this land would put at risk our local biodiversity.</p> <p>Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.</p>

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.

Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area.

The local plan document doesn't set out a justification or means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.

It is known that there are a large amount of mine workings in this area of proposed development. Investigation by the landowner has shown that development is not financially viable.

Q7 Modification

We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Title	Policy CT1 Land at Red Street and High Carr Farm, Chesterton
Consultee Family Name	Hansell
Consultee Given Name	Jason
Q6 Details	<p>Local Draft Plan Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117) Green Belt - Unsound</p> <p>Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1 to check the unrestricted sprawl of large built-up areas; 2. to prevent neighbouring towns merging into one another' 3. to assist in safeguarding the countryside from encroachment; 4. to preserve the setting and special character of historic towns; and 5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <p>The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)</p> <p>Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.</p>

The Proforma for CT1A also states that “Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4).” In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a “community hub”, we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental

	<p>practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.</p> <p>Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area.</p> <p>The local plan document doesn't set out a justification or means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p>
Q7 Modification	<p>We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.</p>

Title	Policy CT1 Land at Red Street and High Carr Farm, Chesterton
Consultee Family Name	Faint
Consultee Given Name	Gemma
Q6 Details	<p>Local Draft Plan Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117) Green Belt - Unsound</p> <p>Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1. to check the unrestricted sprawl of large built-up areas; 2. to prevent neighbouring towns merging into one another' 3. to assist in safeguarding the countryside from encroachment; 4. to preserve the setting and special character of historic towns; and 5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <p>The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)</p> <p>Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.</p> <p>The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.</p> <p>Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.</p> <p>Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.</p> <p>Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.</p> <p>Historical Mining - Unsound</p> <p>Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.</p> <p>The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.</p>

	<p>Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.</p> <p>Land Ownership - Unsound</p> <p>Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?</p> <p>Infrastructure - Unsound</p> <p>We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.</p> <p>Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.</p> <p>The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.</p> <p>In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.</p> <p>Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area.</p> <p>The local plan document doesn't set out a justification or means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p> <ul style="list-style-type: none"> • Not enough schools in the area. • GP's are already overcrowded • Dentists unable to take on new patients • Red Street as a village cannot cope with the volume of traffic we have today let alone more houses with cars • St Chad's School has 6 classes already in porta cabins
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Consultee Family Name	Medlock
Consultee Given Name	Ross
Q4 Part of document	Policy
Q4 Policy	CT1
Q5 Sound	No
Q6 Details	<p>Local Draft Plan Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117) Green Belt - Unsound</p> <p>Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1. to check the unrestricted sprawl of large built-up areas; 2. to prevent neighbouring towns merging into one another' 3. to assist in safeguarding the countryside from encroachment; 4. to preserve the setting and special character of historic towns; and 5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <p>The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward</p>

would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)

Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.

The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

	<p>In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.</p> <p>Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area. The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p>
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

The development of this land would put at risk our local biodiversity.</p> <p>Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.</p>

	<p>Historical Mining - Unsound</p> <p>Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.</p> <p>The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.</p> <p>Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.</p> <p>Land Ownership - Unsound</p> <p>Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?</p> <p>Infrastructure - Unsound</p> <p>We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.</p> <p>Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.</p> <p>The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.</p> <p>In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.</p> <p>Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area. The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p> <p>Additional Comments: Infrastructure cannot take any more traffic, pollution, wildlife</p>
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Title	Policy CT1 Land at Red Street and High Carr Farm, Chesterton
Consultee Family Name	Findler
Consultee Given Name	Carol
Q4 Part of document	Policy
Q4 Policy	CT1
Q5 Sound	No
Q6 Details	<p>Local Draft Plan Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117) Green Belt - Unsound</p> <p>Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1. to check the unrestricted sprawl of large built-up areas; 2. to prevent neighbouring towns merging into one another' 3. to assist in safeguarding the countryside from encroachment; 4. to preserve the setting and special character of historic towns; and 5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <p>The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)</p> <p>Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.</p> <p>The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.</p> <p>Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.</p> <p>Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.</p> <p>Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.</p> <p>Historical Mining - Unsound</p> <p>Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.</p> <p>The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.</p> <p>Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.</p> <p>Land Ownership - Unsound</p> <p>Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?</p> <p>Infrastructure - Unsound</p> <p>We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles</p>

	<p>will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.</p> <p>Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.</p> <p>The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.</p> <p>In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.</p> <p>Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area. The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p> <p>Additional Comments</p> <p>Cross over from Crackley Bank onto Liverpool Road every morning and afternoon is chaotic with buses trying to pass but can't because of parked cars of parents dropping or picking up school children from St Chads, the residents of this area have had car mirrors broken, cars scratched etc. The road narrows at this point, just after the raised crossing for school children. I have witnessed road rage, drivers swearing and near accidents. If the A34 is blocked, drivers use Red Street as a rat run, I have seen and felt double trailered HGVs using Red Street as a divert and my house has shaken. I cannot imagine what additional traffic would do to our roads and infrastructure, children would be put under great stress and danger with the unmanned crossing and additional traffic. If the government are still thinking of putting forward no cars on pavements, this will only make it more difficult for this tiny village. Most houses in this area were built in the early 1900s so the roads were not meant for the possible amount of traffic if this build were to go ahead.</p>
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Title	Policy CT1 Land at Red Street and High Carr Farm, Chesterton
Consultee Family Name	Brennan
Consultee Given Name	Paul
Q4 Part of document	Policy
Q4 Policy	CT1
Q5 Sound	No
Q6 Details	<p>Local Draft Plan</p> <p>Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117)</p> <p>Green Belt - Unsound</p> <p>Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1. to check the unrestricted sprawl of large built-up areas; 2. to prevent neighbouring towns merging into one another' 3. to assist in safeguarding the countryside from encroachment; 4. to preserve the setting and special character of historic towns; and 5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <p>The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward</p>

would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)

Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.

The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

	<p>In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.</p> <p>Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area. The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p>
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Title	Policy CT1 Land at Red Street and High Carr Farm, Chesterton
Consultee Family Name	Everall
Consultee Given Name	David
Q4 Part of document	Policy
Q4 Policy	CT1
Q5 Sound	No
Q6 Details	<p>Local Draft Plan Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117) Green Belt - Unsound</p> <p>Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1. to check the unrestricted sprawl of large built-up areas; 2. to prevent neighbouring towns merging into one another' 3. to assist in safeguarding the countryside from encroachment; 4. to preserve the setting and special character of historic towns; and 5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <p>The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)</p> <p>Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.</p> <p>The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.</p> <p>Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.</p> <p>Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.</p> <p>Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.</p> <p>Historical Mining - Unsound</p>

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.

Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area.

The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.

Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Title	Policy CT1 Land at Red Street and High Carr Farm, Chesterton
Consultee Family Name	Brennan
Consultee Given Name	Paul
Q4 Part of document	Policy
Q4 Policy	CT1
Q5 Sound	No
Q6 Details	<p>Local Draft Plan Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117) Green Belt - Unsound</p> <p>Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1. to check the unrestricted sprawl of large built-up areas; 2. to prevent neighbouring towns merging into one another' 3. to assist in safeguarding the countryside from encroachment; 4. to preserve the setting and special character of historic towns; and 5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)

Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.

The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.</p> <p>Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.</p> <p>Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide</p>

homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.

Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area. The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.

Additional Comments

Thank you for your research and study into these plans. We are grateful. Its good to know that our community is nor prepared to give in without a fight. I agree with all your hard work in producing this information for the residents of Red Street and district.

We would require at least another through road/street to ease the traffic on Crackley Bank especially at school times as well as a larger school. We are also concerned that our street (redacted by admin) will

	become much busier that it already is at school times in the morning and afternoon. I would hate to see busses and heavier traffic using it as a rat run. Thank you for all your hard work
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Title	Policy CT1 Land at Red Street and High Carr Farm, Chesterton
Consultee Family Name	Ratcliffe
Consultee Given Name	Jayne
Q6 Details	<p>Local Draft Plan Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117) Green Belt - Unsound Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1. to check the unrestricted sprawl of large built-up areas; 2. to prevent neighbouring towns merging into one another' 3. to assist in safeguarding the countryside from encroachment; 4. to preserve the setting and special character of historic towns; and 5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <p>The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)</p> <p>Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.</p> <p>The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.</p> <p>Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.</p> <p>Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.</p> <p>Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.</p> <p>Historical Mining - Unsound Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.</p> <p>The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.</p> <p>Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.</p> <p>Land Ownership - Unsound Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?</p>

	<p>Infrastructure - Unsound</p> <p>We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Title	Policy CT1 Land at Red Street and High Carr Farm, Chesterton
Consultee Family Name	Lench
Consultee Given Name	David
Q6 Details	<p>Local Draft Plan Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117) Green Belt - Unsound</p> <p>Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1 to check the unrestricted sprawl of large built-up areas; 2. to prevent neighbouring towns merging into one another' 3. to assist in safeguarding the countryside from encroachment; 4. to preserve the setting and special character of historic towns; and 5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)

Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.

The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Q6 Details	<p>Local Draft Plan Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117) Green Belt - Unsound</p> <p>Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1. to check the unrestricted sprawl of large built-up areas; 2. to prevent neighbouring towns merging into one another 3. to assist in safeguarding the countryside from encroachment; 4. to preserve the setting and special character of historic towns; and 5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <p>The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)</p> <p>Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.</p> <p>The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.</p> <p>Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.</p> <p>Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.</p> <p>Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.</p> <p>Historical Mining - Unsound</p> <p>Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.</p> <p>The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.</p> <p>Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.</p> <p>Land Ownership - Unsound</p> <p>Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?</p> <p>Infrastructure - Unsound</p> <p>We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.</p> <p>Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub</p>

would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.

Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area.

The local plan document doesn't set out a justification or means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.

Red Street cannot withstand anymore traffic it is dangerous now!! Deans Lane is a very busy road with no footpath and a dangerous junction entering onto Talke Road. Cars parked on Talke Road cause it to be a danger when bigger vehicles use the road or when the A34 is blocked. Bells Hollow is a single track road that the amount of cars that use it, it should be made one way now!! Cars speed through Red Street causing a potential fatality to other road users and pedestrians Red Street doesn't have an infrastructure to withstand additional houses been built. If every house has an estimated 2 or 3 children that makes 3000 more and estimated 1400 more cars. I strongly oppose this. Someone should come and study this road at 4:30pm onwards everyday.

Title	Policy CT1 Land at Red Street and High Carr Farm, Chesterton
Consultee Family Name	Hood
Consultee Given Name	Pauline
Q6 Details	<p>Local Draft Plan Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117) Green Belt - Unsound</p> <p>Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1 to check the unrestricted sprawl of large built-up areas; 2. to prevent neighbouring towns merging into one another' 3. to assist in safeguarding the countryside from encroachment; 4. to preserve the setting and special character of historic towns; and 5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <p>The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)</p> <p>Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.</p> <p>The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the</p>

south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently over subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.

Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the

	<p>infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area.</p> <p>The local plan document doesn't set out a justification or means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p>
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

	<p>The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.</p> <p>In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.</p> <p>Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area.</p> <p>The local plan document doesn't set out a justification or means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p> <p>Not enough school spaces Roads infrastructure not adequate Doctors and dentist over stretched now</p>
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Q4 Policy	CT1
Q6 Details	<p>Local Draft Plan</p> <p>Stages of development of the Local Plan (Page 4)</p> <p>Regulation 19 Publication – Not Compliant with Duty to Co-operate</p> <p>When the plan was first introduced, the publication and consultation for it was limited. We were unaware of the impact for our area until the second phase. Under the planning processes laid out in the Town and Country Planning Regulations 2012, Regulation 18 notices were put up. One was placed on the lamppost, part way down Bells Hollow which is a single lane road with limited footfall and inability to be seen from a moving vehicle. The second on a lamp post part way down Talke Road, which only has a footpath on one side and is a National Speed Limit Road. This was to cover the entire neighbourhoods affected by the original CT sites as listed in the first draft which is a These two locations were not in areas of high footfall and we feel that there was inadequate publication of the regulation 18 notices in our Ward. As a community we printed the Reg 18 Notices and placed them in more high footfall areas and distributed to households in the vicinity to generate knowledge of the plans. These are steps that should have been taken by the local authority not the community.</p>

Furthermore, no community consultations were held in Red Street. Bearing in mind that we have an aging population, the majority of which do not drive, and the very limited bus routes, we feel that the local population were not adequately informed at Regulation 18 Stage. A complaint was lodged to this fact with the council but no response was received. It is not realistic to expect elderly residents to make informed decisions about their locality if they are not engaged.

As a community, we organised a community meeting, which was positively attended and the council again were asked to include Red Street as part of the consultation at Reg 18 as one of the largest areas to be considered for housing, it needed to be part of their plan. Most people reported that they would not have been aware of the proposals without the input from the local community and the failing of the council to execute their duty under the regulations.

Regulation 19 notices were sent to residents who had submitted responses to the Regulation 18 notice and included an email address with their response, but again, no Regulation 19 notices were published in the vicinity of Red Street to publicise the community consultation dates or the fact that responses can be submitted to the Final Local Plan. This is not sound decision making from a Local Plan communication perspective.

Local Draft Plan

Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117)

Green Belt - Unsound

Greenbelt land is in place for the following reasons:

- 1 to check the unrestricted sprawl of large built-up areas;
- 2 to prevent neighbouring towns merging into one another;
- 3 to assist in safeguarding the countryside from encroachment;
- 4 to preserve the setting and special character of historic towns; and
- 5 to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)

Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.

The Proforma for CT1A also states that *“Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4).”* In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a

fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.

Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area.

The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.

	<p>Please set out the modification(s) you consider necessary to make the Local Plan legally compliant and sound in respect of any legal compliance or soundness matters you have identified at above:</p> <p>We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.</p>

Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.</p>
--------------------------	--

	<p>The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.</p> <p>In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.</p> <p>Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area. The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p> <p>Additional Comments:</p> <p>I am very saddened and filled with despair at the prospect of more open space/ green belt land being lost forever, replaced with yet more housing, industry, warehousing etc</p> <p>I am fourth generation to reside in Red Street and in my life time I have seen fields and open land disappear to be replaced by High Carr and Parkhouse Industrial Estates, Waterhayes, Mitchels Wood, Fresian Heights, Badgers Croft and the newly constructed Wedgewood view (off deans lane). Housing developments.</p> <p>In my view I think Red Street has had more than its fair share of fields and land being turned into industry and housing already. Please do not takeaway any more greenfields and land off us. Leave us be.</p> <p>Also, I live (redacted by admin) and at times due to high volumes of traffic using Crackley Bank its very difficult to get our car in/out of our drive and if the plan to build all of the extra housing goes ahead the amount of traffic using Crackley Bank, Red Street will be unbearable for existing residents</p>
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Q4 Part of document	Policy
Q4 Policy	CT1
Q5 Sound	No
Q6 Details	<p>Local Draft Plan</p> <p>Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117)</p> <p>Green Belt - Unsound</p> <p>Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1. to check the unrestricted sprawl of large built-up areas; 2. to prevent neighbouring towns merging into one another' 3. to assist in safeguarding the countryside from encroachment; 4. to preserve the setting and special character of historic towns; and 5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)

Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.

The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which

	<p>suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.</p> <p>In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.</p> <p>Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area. The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p> <p>Additional Comments Further comments regarding the proposed development:</p> <ul style="list-style-type: none"> - inadequate local health care facilities - doctors cbds 2 years ago/ no dentists available - School capacity is not what stated in this report with class sizes already high! - additional traffic on an already congested road, used as a cut through - type of house being built do not suit average wages in Newcastle under Lyme (Newcastle is a low income area) - developments are encircling Red Street and Chesterton, no green spaces! - house sales are slow in this area, lower demand - no affordable houses - development proximity to M6 is what is being considered by developer to locals!
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Q4 Part of document	Policy
Q4 Policy	CT1
Q5 Sound	No
Q6 Details	<p>Local Draft Plan Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117) Green Belt - Unsound</p> <p>Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1. to check the unrestricted sprawl of large built-up areas; 2. to prevent neighbouring towns merging into one another' 3. to assist in safeguarding the countryside from encroachment; 4. to preserve the setting and special character of historic towns; and 5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <p>The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)</p> <p>Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.</p> <p>The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss</p>

of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.

Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has

	<p>recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area. The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p> <p>Additional Comments</p> <p>Cross over from Crackley Bank onto Liverpool Road every morning and afternoon is chaotic with buses trying to pass but can't because of parked cars of parents dropping or picking up school children from St Chads, the residents of this area have had car mirrors broken, cars scratched etc. The road narrows at this point, just after the raised crossing for school children. I have witnessed road rage, drivers swearing and near accidents. If the A34 is blocked, drivers use Red Street as a rat run, I have seen and felt double trailered HGVs using Red Street as a divert and my house has shaken. I cannot imagine what additional traffic would do to our roads and infrastructure, children would be put under great stress and danger with the unmanned crossing and additional traffic. If the government are still thinking of putting forward no cars on pavements, this will only make it more difficult for this tiny village. Most houses in this area were built in the early 1900s so the roads were not meant for the possible amount of traffic if this build were to go ahead.</p> <p>Additional comments</p> <p>Without the necessary infrastructure in place this development will put severe pressures on schools, doctors surgery, roads unable to take the extra traffic. What about resources such as water, where will the additional water come from? There are no new resources in the area, so where will that come from?</p>
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?</p> <p>Infrastructure - Unsound We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street</p>

	<p>has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.</p> <p>Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.</p> <p>The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.</p> <p>In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.</p> <p>Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area. The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p> <p>Additional Comments</p> <p>All very good points in the previous pages particularly in relation to the possible impact on existing properties when disturbing historical mining areas, particularly for us who live (redacted by admin). Also the huge increase in the amount of vehicles in the area if all the developments take place</p>
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Title	Policy CT1 Land at Red Street and High Carr Farm, Chesterton
Consultee Family Name	Richmond
Consultee Given Name	Christine
Q6 Details	<p>Local Draft Plan</p> <p>Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117)</p> <p>Green Belt - Unsound</p> <p>Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1 to check the unrestricted sprawl of large built-up areas; 2. to prevent neighbouring towns merging into one another' 3. to assist in safeguarding the countryside from encroachment; 4. to preserve the setting and special character of historic towns; and 5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)

Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.

The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which

	<p>suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.</p> <p>In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.</p> <p>Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area.</p> <p>The local plan document doesn't set out a justification or means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p>
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

3. to assist in safeguarding the countryside from encroachment;
4. to preserve the setting and special character of historic towns; and
5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)

Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.

The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity.

	<p>Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.</p> <p>In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.</p> <p>Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area. The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p> <p>Additional Comments:</p> <ul style="list-style-type: none"> - Damage to the environment will be irreparable - Possible damage to some of the older houses due to pile driving - The roads in Redt St will not be able to cope with the huge increase of traffic and subsequent pollution - Pollution from building machinery - Too many parts of the country are being turned into an urban jungle with urban sprawl and increasing connection of seperate communities - To build on this land is asking for drainage problems in the future- this is a very high point in North Staffs - Some of the proposed land for the building is riddled with mine shafts - More development will destroy what is left
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.

	<p>Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area. The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p>
Q7 Modification	<p>We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.</p>

Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.</p> <p>The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.</p> <p>In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.</p> <p>Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area. The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p> <p>Additional Comments Congested Local Roads Concerned about insufficient amount of high schools in the local area</p>
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Title	Policy CT1 Land at Red Street and High Carr Farm, Chesterton
Consultee Family Name	Sherwood
Consultee Given Name	Tina
Q4 Part of document	Policy
Q4 Policy	CT1
Q5 Sound	No
Q6 Details	<p>Local Draft Plan Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117) Green Belt - Unsound</p> <p>Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1. to check the unrestricted sprawl of large built-up areas; 2. to prevent neighbouring towns merging into one another' 3. to assist in safeguarding the countryside from encroachment; 4. to preserve the setting and special character of historic towns; and

5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)

Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.

The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan

	<p>states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.</p> <p>In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.</p> <p>Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area. The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p> <p>Additional Comments</p> <p>Cross over from Crackley Bank onto Liverpool Road every morning and afternoon is chaotic with buses trying to pass but can't because of parked cars of parents dropping or picking up school children from St Chads, the residents of this area have had car mirrors broken, cars scratched etc. The road narrows at this point, just after the raised crossing for school children. I have witnessed road rage, drivers swearing and near accidents. If the A34 is blocked, drivers use Red Street as a rat run, I have seen and felt double traiered HGVs using Red Street as a divert and my house has shaken. I cannot imagine what additional traffic would do to our roads and infrastructure, children would be put under great stress and danger with the unmanned crossing and additional traffic. If the government are still thinking of putting forward no cars on pavements, this will only make it more difficult for this tiny village. Most houses in this area were built in the early 1900s so the roads where not meant for the possible amount of traffic if this build were to go ahead.</p> <p>Additional Comments</p> <p>I understand that there is a shortage of suitable housing for first time buyers but there is land in Chesterton that has already been purchased but no one has built on yet</p>
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

The development of this land would put at risk our local biodiversity.</p> <p>Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.</p> <p>Historical Mining - Unsound Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.</p> <p>The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.</p>

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.

Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area.

The local plan document doesn't set out a justification or means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.

Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Q6 Details

Local Draft Plan

Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117)

Green Belt - Unsound

Greenbelt land is in place for the following reasons:

1. to check the unrestricted sprawl of large built-up areas;
2. to prevent neighbouring towns merging into one another;
3. to assist in safeguarding the countryside from encroachment;
4. to preserve the setting and special character of historic towns; and
5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)

Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.

The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

	<p>The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.</p> <p>In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.</p> <p>Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area.</p> <p>The local plan document doesn't set out a justification or means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.</p>
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Title	Policy CT1 Land at Red Street and High Carr Farm, Chesterton
Consultee Family Name	Paxton-Moore
Consultee Given Name	Denise
Q6 Details	<p>Local Draft Plan Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117) Green Belt - Unsound</p> <p>Greenbelt land is in place for the following reasons:</p> <ol style="list-style-type: none"> 1. to check the unrestricted sprawl of large built-up areas; 2. to prevent neighbouring towns merging into one another' 3. to assist in safeguarding the countryside from encroachment; 4. to preserve the setting and special character of historic towns; and 5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <p>The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)</p> <p>Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.</p> <p>The Proforma for CT1A also states that "Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4)." In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true</p>

for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.

Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area.

	The local plan document doesn't set out a justification or means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.
Q7 Modification	We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Q4 Part of document	Policy
Q4 Policy	CT20
Q6 Details	<p>Dear Sir / Madam,</p> <p>Regulation 19 Consultation on the Draft New Local Plan for Newcastle-Under-Lyme Borough Council – Representations on Behalf of Tarmac Trading Limited</p> <p>Introduction</p> <p>Heatons have been instructed by Tarmac Trading Limited ('Tarmac') to prepare and submit representations to the above public consultation for the emerging Newcastle-Under-Lyme Local Plan. The consultation closes 7th October 2024.</p> <p>Tarmac operates a concrete plant in Chesterton. This plant is vital for the importation and production of construction materials for Newcastle-under-Lyme and surrounding areas. The importance of minerals infrastructure such as the plant at Chesterton should be recognised in the emerging Local Plan to safeguard their use, especially from development that could cause conflict in adjoining land use or prejudice future minerals operations.</p> <p>Following a review of the published consultation documents, this letter is Tarmac's formal response to the Final Draft Newcastle-under-Lyme Local Plan. This review focuses on areas of the draft plan which are relevant to Tarmac and their commercial activities at Chesterton, we trust that this representation will positively contribute towards the submission of the Draft Local Plan for examination.</p> <p>Tarmac Interests in Newcastle</p> <p>Tarmac's Chesterton Concrete Plant is located in Rowhurst Industrial Estate, at the corner of Rowhurst Close and Watermills Road. The site is accessed directly from Watermills Road and is surrounded by other industrial uses, with vacant land opposite and adjacent to the site. The site's address is Tarmac Concrete Plant, Watermills Rd, Chesterton, Stoke-on-Trent, Newcastle, ST5 6BD.</p> <p>The site consists of a concrete batching plant and an aggregate storage building, with conveyors that feed the concrete plant as well as a site office and car park. The site is strategically located for the production and distribution of ready mixed concrete to Newcastle and Stoke.</p> <p><u>Planning Policy and Guidance Context</u></p> <p>National Planning Policy Framework (2023) –</p> <p>Section 17 of the National Planning Policy Framework (NPPF) relates to 'Facilitating the sustainable use of minerals'. Paragraph 215 confirms it is essential that there is a sufficient supply of minerals to provide the infrastructure, buildings, energy and goods that the country needs.</p> <p>The NPPF also states that planning policies and decisions should adopt the 'agent of change' principle to safeguard the operation of existing businesses from new development nearby. Paragraph 193 states that:</p> <p>"... Existing businesses and facilities should not have unreasonable restrictions placed on them as a result of development permitted after they were established. Where the operation of an existing business or community facility could have a significant adverse effect on new development (including changes of use) in its vicinity, the applicant (or 'agent of change') should be required to provide suitable mitigation before the development has been completed."</p> <p>The onus is therefore placed on new development to account for mitigation and the NPPF is clear that planning policies should reflect this principle.</p> <p>The recent draft version of the NPPF does not propose to remove the agent of change principle.</p> <p>Final Draft Newcastle-under-Lyme Local Plan – Regulation 19 Consultation Version July 2024</p> <p>The Final Draft Newcastle-under-Lyme Local Plan sets out the Council's vision for future development in Newcastle-under-Lyme until 2040. The Draft Local Plan places an emphasis on providing sustainable housing and employment opportunities for the borough.</p> <p>Draft Policy EMP2 'Existing Employment Sites' requires that development proposals adhere to the 'agent of change' principle, ensuring suitable mitigation to protect existing business operations from negative impacts.</p> <p>Draft Policy CT20 allocates 8.88 hectares of land next to Rowhurst Industrial Estate for employment uses, accessible off Watermills Road and therefore adjacent to Tarmac's site. This policy also requires development within the proposed allocation to consider the relationship of the site to surrounding development in line with the agent of change principle.</p> <p>Tarmac welcomes the agent of change principle in Draft Policy CT20 and EMP2 and consider its inclusion necessary to protect important industrial sites such as Chesterton Concrete Plant. The specific reference of and inclusion of the agent of change principle is considered necessary and is consistent with the existing and draft NPPF.</p> <p>Overall, Tarmac welcomes the focus on applying the agent of change principle in the Draft Newcastle-under-Lyme Local Plan – this should be retained in the submission of the Final Local Plan.</p>

<p>Q6 Details</p>	<p>FAO: Planning Policy department PLANNING AND COMPULSORY PURCHASE ACT 2004 NEWCASTLE FINAL DRAFT PLAN REGULATION 19 CONSULTATION REPRESENTATIONS IN RESPECT OF SITES KL33 AND KL34 We write in respect of our clients, William and James Summerfield, in response to the Newcastle Final Draft Plan Regulation 19 Consultation. The Regulation 19 Local Plan sets out the key priorities for the Borough through the plan period to 2040 and the commitments to deliver a successful and sustainable Borough which supports healthy, active and safe communities with accessible town centres for all. The regulation 19 Plan allocates sites for housing and employment to provide certainty on where growth will occur. It is encouraging to see that the Council are recognising the need for growth around Keele, the University and surrounding areas. This is considered to be an appropriate opportunity to support student accommodation and employment uses. The draft Local Plan (Regulation 19) version plans for 400 homes per annum, in excess of the Government's current standard method, which would require 347 dwellings per annum. This is a positive approach, if the sites are deliverable. The NPPF supports delivery above the standard method, where justified by local economic growth strategy. We do have concerns regarding the Council's approach to future growth, particularly later in the plan period, and in the context of upcoming Government changes to the NPPF and the Revised Method for housing need. The indicative table issued as part of the recent national public consultation in relation to planning reform suggests that there will be a significant increase in housing need to 593 dwellings per annum for the Borough. This is a significant uplift and will require a substantial review of new sites far in excess of the additional land already included in the draft Regulation 19 Local Plan. Green Belt The Council have undertaken a Green Belt review and propose to release a number of sites from the Green Belt, to be allocated for development. We support the proposed review of Green Belt boundaries and the principle of release to meet local need. In the context of the proposed national planning reform, there is concern that the Council have not appropriately assessed existing Green Belt sites which are available and deliverable to ensure robust Green Belt boundaries which will endure beyond the Plan period. We are disappointed to see that sites KL33 and KL34 have not been identified for release or allocated for future development. As identified within our Regulation 18 written representations, we have concerns regarding the Site Selection process undertaken, and the conclusions of the Green Belt Assessment. The 2024 Green Belt Site Review: Consolidated Report includes a detailed assessment of Site KL33, within our client's ownership. The site was scored as 'majority green' and suitable for development, except for the fact that it is considered to be detached from the urban area of Keele village and Keele University and hence was not recommended to be taken forward. We would strongly disagree with this assessment. The land is immediately adjacent to the existing settlement of Keele village, to the immediate north east of the church and existing dwellings on Church Fields. The University facilities and sports centre are adjacent on the opposite side of Keele Road. The land presents a significant opportunity to support the key priorities of the Borough, to deliver new development such as residential, student or supporting infrastructure such as car parking for the University, or overarching sustainability objectives. The release of all or part of our client's land would make a valuable contribution towards new development in Keele, meeting the identified need, have limited site constraints and meet the criteria of available, viable and deliverable. The Council's own evidence base concludes that the sites score moderately against the Green Belt principles. In order to have a sound and robust approach to the Local Plan, the Council should include additional sites alongside KL13. Sites KL33 and KL34 are well suited to future development, whether residential or supporting infrastructure, in close proximity to the University, and other strategic growth for the Borough. We welcome any ongoing engagement with the Local authority to discuss the future use of these sites as part of this Local Plan review, or subsequent processes upon adoption of the new NPPF and standard housing method.</p>

Q6 Details	<p>Newcastle under Lyme draft local plan – regulation 18: Consultation response</p> <p>Dear Sir/Madam,</p> <p>The following is a robust objection to all developments on green field sites covering all the proposals within Audley Parish and many more elsewhere as recommended in the draft local plan. In writing this response, I am aware of the need to adopt a local plan in order for local authorities to maintain democratic control of development in the area. This requirement appears to be a symptom of the subsection in the NPPF titled "The presumption in favour of sustainable development" (paragraphs 11-14). However, from a resident's point of view, this gives the impression that local authorities must demonstrate a willingness to develop a particular area in order to avoid it being developed. This is, in essence, a commitment to eventual development even if it is not needed. And this is a source of great anxiety amongst residents that undesirable development is out of control, a situation clearly being fuelled by the existence of paragraphs 11-14. On this basis therefore, this subsection of the NPPF needs to be challenged.</p> <p>This response may differ from others in that it comments on local planning within a strategic context. As I see it, there are three main types of development, which are likely to blight the future generations in the UK: (i) infrastructure (example, HS2), (ii) commercial (examples, AB2 and TK30 in the NuLBC local plan) and (iii) residential (example, recent housing developments either side of the A513, Beaconside, Stafford). Infrastructure is within the remit of Westminster rather than local authorities, so that is not a particular concern here. My main focus is encroachment of developments, both residential and commercial, in green spaces allowed for in the draft local plan. And any new developments in rural areas will, at the very least, result in:</p> <ul style="list-style-type: none"> Loss of light or overshadowing Increased risk of flooding due to 'run-off' Loss of visual amenity Limitations to physical activity Generation of extra traffic, overloading already busy local roads Extra noise, pollution, disturbance and danger from increased traffic Loss of trees and other biodiversity – bats, lizards etc. Loss of natural carbon capture Decrease in food production capacity Increased local population placing further pressure on local schools, GP's surgeries and other services, which are already oversubscribed. <p>The United Kingdom as a whole is currently gripped by a pandemic of overdevelopment, which threatens nature and the already depleted biodiversity we see in this country. And it has now reached the stage where it should be considered a national emergency. I for one, do not feel that I have any influence over the shape of our surroundings. There are numerous drivers for this trend many of which are not being addressed by government at any level. At the heart of this is a significant disconnection between the opinions of politicians and public as to what is actually needed. There appears to be cross-party support for activities driving economic growth at all costs, irrespective of the</p>

consequences to the natural environment. Aggravating this divide is the aforementioned paragraphs 11-14 of the NPPF. At a local level, what is not in doubt, is that whenever there is land removed from the green belt there is rarely, if ever, an equivalent area so returned, so the process is irreversible. And in the absence of any agreed lower limit on the area of protected green spaces within the UK, no release of green belt land, or development on green spaces, can be considered sustainable. Unless, of course, the use of agricultural land for just that purpose is also considered "developed", i.e. it has an economic and sustainable use. And the local plan does appear to acknowledge this¹, so why not include agricultural use into the local plan implying no change in particular areas? If this is not the case, we are committed to a process where the end point is a UK completely covered in tarmac and concrete. Anyone arguing against this interpretation needs to state and justify precisely where that end point is. If they cannot, this renders the term 'sustainable development' an oxymoron. One particular trend of major concern is the growing UK population. At the time of writing this stands at just under 69 million, and is set to reach 74 million before 2050. Studies in the US (Pimental and Giampietro, 1994; Lal, 1989) suggest that comfortable/sustainable living requires 0.5 Ha (1.2 acres) per capita. If we are generous, sustainable living in the UK was possible with a population of 57 million, a figure I remember from the late 1960s. With a total area of the UK at just over 60 million acres, a land area of one acre per capita for sustainable living in the UK seems feasible. As we have seen, anything more puts a strain on the environment as a whole. On this basis therefore, the UK is currently overpopulated by about 15%, and there appears to be no initiatives to address this issue. On this point, Westminster appears to be in a state of denial, thus fuelling the current avalanche of overdevelopment nationwide. Residential developments have a knock on effect by requiring other types of development to provide infrastructure, services and employment. Notwithstanding overpopulation, this gives the impression that there is not enough housing stock to accommodate the current population. Recent data, in the form of an infographic ("Housing crisis fact check") from the Community Planning Alliance², convincingly shows that this is far from the case. In short, what is perceived as the current "housing shortage" is little more than a myth propagated by the construction industry and related interests. This is justified by item 3 on the infographic stating that "there are 1.5 million more dwellings than households" in England and Wales alone^{3,4}. On this basis therefore, no further house building is needed in the UK subject to efforts addressing projected population growth. In other words, what we have at present is a substantial housing surplus. Therefore, locally there are strong grounds for objections to development of the sites

AB12(p74)

AB15(p75)

AB32(p75)

AB33(p75).

Ignoring the 1.5 million surplus dwellings nationwide, the current (regulation¹⁸) draft of the local plan quotes a minimum housing requirement of 7160 in the Borough over the period 2020-40, of which 1206 are already completed. Of these, only 40% are to be 'affordable' (1-2 bedroom dwellings). Therefore, of the minimum requirement, only 2864 dwellings will be affordable. If we assume that those already built are affordable (they probably aren't) then the borough will only need 1658 homes built between now and 2040. This is because, due to being beyond affordability, most locals will be unable to buy or rent the other 60%. Therefore, they are not needed, and the proposed mix is entirely incompatible with general affordability. Given the surplus dwellings throughout England and Wales however, it is likely that none will be needed, especially considering the imminent removal of mandatory housing targets by the DLUHC under Michael Gove MP, and any specific affordable housing needs can be catered for by using brownfield sites only. All of the green areas in the local plan could therefore be planned in for their present use.

Infographic from the Community Planning Alliance summarising UK housing stock in relation to the population.

Another statistic from the infographic is that nationwide we could build up to 1.2 million homes on brownfield sites (item 2)^{2,5}. And like any other local authority, NuLBC is legally obliged to and does keep a register of its brownfield sites, although it is likely that some may slip through the net.

If there is an imperative, it is to increase further democratic control of the development process both locally and nationally. And both local and national authorities would do well to remember that they have a responsibility to the people they represent and not to the commercial viability of developers, the construction industry or overseas investors. In short, no new housing development is required, especially given that the borough has exceeded its housing targets in recent years. This calls into question the need for housing developments outside Audley Parish mentioned in the local plan. These include

BL18 (p75)

CT1 (p76, 750 dwellings)

RC8 (p76, 6 dwellings, potential flood risk.)

KS3 (p77)

LW53 (p77)

MD29 (p78, 150 dwellings, likely to conflict with HS2 construction?)

NC13 (p78)

NC77 (p78)

SP11 (p78, 900 dwellings, former Keele golf course)

SP12 (p79)

SP23 (p79)

TB19 (p79)

TB23 (p79, 124 dwellings, adjacent to Walley's Quarry.)

TK10 (p80)

TK17 (p80)

TK27 (p80).

Other sites which may also be questioned are

KS17 (p77, would include loss of playing fields and other village amenities. This may be classed as infill.)

KL13 (p77,93, part built already within the grounds of Keele University Campus).

The other class of developments locally is commercial. All too often we hear in the news from both local and Westminster sources, the mantra that economic growth is the imperative. But the actual imperative is stability, and we have reached the point where growth at any cost has become toxic, especially given the impossibility of unrestrained growth in a land of finite area. Have our political masters never heard of the circular economy?

Since the beginning of deindustrialisation in the 1980s, the diversity of employment opportunities has declined. We have seen an unhealthy move away from manufacturing/production of goods that we need as a nation, to one entirely reliant on trade with overseas partners, leaving us open to blackmail and the current spike of rampant imported inflation. Look what happened during lockdown. Over recent decades this has led to the demolition of old factories for residential developments and the rise of logistics centres (warehousing) for the temporary storage of imported goods, which will ultimately be operated by robots and AIs leading to even less employment. The problem with warehousing of course is its large consumption of land area. My question is, what is the driver for the proposed "big box" developments on AB2 and TK30 locally? Both of these proposals lie entirely within the greenbelt, although the TK30 land has already been quarried in parts. Neither of these proposals is either desirable or needed. However, if we are forced to accept one or the other then TK30, being about 5% smaller, is the lesser of two evils. With the green light given to the development of the 44 Ha Chatterley Valley site on Peacock Hay Road, and the numerous empty warehouses existing across the potteries, North Staffordshire and Cheshire East. It is dubious to say the least to claim that either AB2 or TK30 are needed. These sites are 70 Ha and 66 Ha respectively. However, in the recently published "Housing and Economic Needs Assessment Update", the borough as a whole only needs a maximum of 34 Ha6. So why are we saddled with 154 Ha total covered by AB2, TK30 and KL15?

If the local plan caters for agricultural developments, AB2 and TK30 could be planned for their existing use. The majority of the area covered by these sites is high grade (3a) agricultural land. In the case of TK30 the quarried areas could be reclaimed for agriculture or, if this proves difficult, used in other ways to enhance biodiversity. If the land in question is council owned, and the motivation is to sell off council assets, then once sold, they cannot be sold again, and any control is lost. Moreover, once farmland is developed for other purposes then it is near to impossible for it to be reclaimed later for that use – and so the ratchet inexorably turns. On this basis therefore, I would urge the LPA to remove the warehousing proposals AB2 and TK30 from the local plan.

The purpose of this consultation is to supply feedback to the Borough Council. Another question is, does Westminster similarly consult with local authorities on planning issues, or is there any other mechanism where local councils can supply feedback to Westminster, providing a better feel for the mood of the nation? If so, why do we not see a root and branch reform of the NPPF rather than the tinkering around the edges approach seen in the July 2021 version? Most especially, there should be a removal of paragraphs 11-14 and its supporting statements elsewhere in the document, which is tantamount to a developer's charter. And there should be more flexibility within the NPPF allowing local plans to include parcels of land for their current purpose, given that there is almost none in this country that is not currently in use. As far as I can see this plan is nowhere near compatible with efforts required to address the current climate crisis. Moreover, given their scale, the proposed developments represent too greater shock to the environment and local communities over the short 20-year period suggested for their completion. And with the sufficient housing and unused commercial sites we already have, there is no need for any encroachment into our green spaces.

Yours sincerely

Jim Austin

Q4 Part of document	Policy
Q4 Policy	KL13
Q6 Details	<p>I wish the Planning Inspectorate to consider my following representations in response to the Newcastle -Under-Lyme Borough Council – Final Draft Local Plan Consultation (Regulation 19)</p> <p>I wish the Planning Inspectorate to remove all policies from the plan which involve any development on Green Belt Land.</p> <p>The specific policies are: -</p> <ul style="list-style-type: none"> • AB2, AB33, AB15 & AB12 – Audley Ward • BW 1 – Bradwell Ward • CT 1 – Crackley Bank & Red Street Ward • KL13 & KL 15 -Keele Ward • SP11(2) & SP11(3) – Silverdale Ward • TK 10, TK 27 & BL18 – Talke & Butt Lane Ward <p>All of these developments impact green belt land, are unsound and should be removed from the plan. They will all have a negative effect on the Net Biodiversity gain of each local area. Which in turn has a knock-on effect across the Borough. Open spaces are essential for the environment by absorbing carbon dioxide from our atmosphere, which helps reduce climate control. They also provide habitats for a wide range of plants and animals. Open spaces are also important to human health as they can reduce stress, improve mental health, and assist in people sleeping better. They provide areas for physical activity which improve both physical and mental health. Removal of green belt will decrease the air quality within that area, increase respiratory issues for humans and wildlife, and also increase noise pollution.</p> <p>With specific reference to policies AB2, AB33, AB15 and AB12. I ask the Planning inspectorate to remove policies based on the following justifications:</p> <ul style="list-style-type: none"> • AB2 - It is simply the case that the small village of Audley and its surrounding countryside lanes could not cope with the large increase of traffic caused by these policies. The large number of HGV's travelling to the proposed AB2 site would definitely increase the traffic within the Audley area due to the daily traffic jams along the A500 and at M6 Junction 16. Traffic will spill on to local roads e.g. A5500, increasing Noise and air pollution • AB12 - Proposed access to site AB12 via Diglake Street is untenable. This street is small and it is already difficult to drive down due to parked cars on both sides of the terraced street. A new development of houses would make it virtually impassable causing gridlock, increased air pollution, increased noise pollution and limiting access for the emergency services. <p>The proposed new car park for resident's in Diglake Street due to the proposed AB12 policy would be detrimental to Blue badge Holders, People with mobility issues and Carers of babies and children.</p> <p>AB12 will not be close to any amenities with little or no access to a regular bus route.</p> <ul style="list-style-type: none"> • AB33 – Primary Vehicular access to Park Lane is unsound. This is an already busy junction. AB33 will not be close to any amenities with little or no access to a regular bus route. Creating more traffic therefore noise pollution and air pollution. With an increased danger to pedestrians. <p>With poor access to health care and education.</p> <ul style="list-style-type: none"> • AB15 – The proposed site at AB15 is unsound because of the poor access to health care, education, local amenities and public transport. <p>I therefore would like the Planning inspectorate to remove Policies AB2, AB12, AB33 & AB15 from the plan.</p>

Q4 Part of document	Policy
Q4 Policy	KL13
Q6 Details	Keele Parish Council recognise that developing national policy with regard to the NPPF means that, in order for the plan to be considered under the existing regulations, the amount of housing delivered per

	<p>annum must come within 200 of the proposed nationally set target. The proposed new algorithm is 593 per annum. Whilst we do not accept the proposed target of 400 houses per annum is robustly supported by the evidence provided, we recognise that, were the plan to fail at inspection, that this already inflated target would, in all likelihood, be subject to a mandatory increase. Thus we have no choice other than to support this target in the hope that the plan will pass.</p> <p>We support the University's aspirations for growth and agree that it plays a critical role in the ongoing development of the Borough. We refer you to the comments made in our submission to the previous consultation regarding the need to be realistic about this growth.</p> <p>We are concerned that the proposal for a link road between the A53 and A525 is too vague. It is not based on robust and credible evidence. No details are given regarding the route and we assume that it would traverse the estate of the University, going from TB19 to the A525. Details are needed regarding what vehicles would be allowed to use this road. Were it to be open to all traffic, this would create a 'rat run' through the University's estate. Have they given permission for this? If this is the intention and the university were to agree, this would place a significant additional load on the busy University roundabout onto the A525. It would also undermine the sustainability credentials of the University and contradict policy SE1, particularly with regard to air quality. We strongly urge that further detail be provided about this proposal and that access be restricted to sustainable transport (foot, cycle, buses) and potentially, University employees.</p>

Q4 Part of document	Policy
Q4 Policy	KL13

Q6 Details

Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.

Natural England welcomes the opportunity to comment at this stage of the Local Plan and particularly supports the inclusion of policies on green and blue infrastructure, biodiversity, health and wellbeing, trees hedgerows and woodlands. We have reviewed the consultation documents and provide comments that relate to the soundness of the Local Plan and that are most relevant to our interest in the Natural Environment.

Natural England has adopted a robust precautionary approach within this plan response. Whilst we welcome the content of the Local Plan, Natural England advises that the plan is currently at risk of being unsound and/or not legally compliant due to the potential impacts on air quality in relation to internationally designated nature conservation sites and the justification for the potential loss of 263ha best and most versatile (BMV) agricultural land. Further detail is provided below.

Natural England have also provided other advice within this submission relating to further improvements that could strengthen plan policies and specific strategic site options and related mitigation.

Do you consider that the Newcastle Under Lyme Plan is Sound and Legally Compliant?

Natural England notes that the plan is at the pre-submission stage and as such your authority is seeking confirmation on the soundness of the plan. Having reviewed the plan and supporting documents, Natural England considers the pre-submission plan in its current form is not sound or legally compliant, this is due to a lack of evidence with regards to air quality and the cumulative loss of BMV agricultural land both in a local and national context.

Air quality

Natural England notes that the Sustainability Appraisal states that "Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)

As Natural England understands it the current evidence base used to conduct the HRA cannot rule out adverse impacts on designated sites. The HRA states at page 22 3.4.16 "At the time of writing, the traffic modelling run for the final suite of Regulation 19 allocations had not been undertaken." Appendix A lists the local plans for neighbouring LPA's concluding that 'in combination' with plans and projects (approved and those yet to be implemented) they may trigger in-combination effects on European sites as a result of air quality, particularly as we understand it in the key commuting areas.

Natural England notes that Annual Average Daily Traffic (AADT) data and traffic modelling in the Strategic Transport Assessment (STA) concludes a potential reduction in travel and related air pollution at allocated sites as a result of a predicted preference in the use of public transport. We are surprised by this projected decrease in both traffic and related air pollution, particularly as one employment allocation site includes a 200-bay lorry park and increased congestion is predicted at junction 16 of the M6 where it joins the A500 in a rural location with no existing rural transport provision. The Sustainability Appraisal also notes that: "There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work". (p 206)

Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot therefore currently be ruled out at the following internationally designated sites:

- Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI
- Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI

The HRA outlines that the main source of ammonia emissions is agricultural practice, and that material increases in NH3 emissions are unlikely to be associated with the proposed local plan. At Black Firs and Cranberry Bog and Oakhanger Moss, any increase in nitrogen deposition has the potential to exacerbate pollution levels and thereby undermine the reasons for notification of these sites as a Ramsar.

Ammonia can be emitted from vehicle exhaust emissions as a by-product of the catalytic conversion process designed to reduce emissions of nitrogen oxide. As traffic composition transitions toward more petrol and electric cars (i.e., fewer diesel cars on the road), catalytic converters may aid in reducing NOx emissions but result in increased ammonia emissions. Ammonia emissions from road traffic therefore could make a significant difference to nitrogen deposition close to roads.

Natural England therefore advise that ammonia sourced from traffic emissions should be included for assessment within the local plan HRA, as the impact from this source on designated sites is currently unclear. For further information please see this report from Air Quality Consultants (AQC) that looks at ammonia emissions from roads for assessing impacts on nitrogen-sensitive habitats. Whilst we are aware that the current CREAM model created by AQC used to assess ammonia emissions from road traffic has not been peer reviewed, at this time it has been recognised as a Best Available Tool and we deem it appropriate to be used where any caveats associated with this model are also considered within the assessment. An assessment based on the best available approach is necessary. The next stage of assessment can then consider uncertainties in the model and site specifics to decide if mitigation needs to be considered.

Further work is therefore required to inform the Habitat Regulations Assessment. Natural England will engage with the Local Planning Authority in order to produce a Statement of Common Ground (SoCG) on this matter.

'Best and most versatile' (BMV) agricultural land

Natural England notes that "the proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land. A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of 'best and most versatile' (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services". (page 74 Sustainability Appraisal).

Under the Town and Country Planning (Development Management Procedure) (England) Order 2015 (DMPO) Natural England is a statutory consultee on development that would lead to the loss of over 20ha of 'best and most versatile' (BMV) agricultural land (land graded as 1, 2 and 3a in the Agricultural Land Classification (ALC) system, where this is not in accordance with an approved plan.

Natural England would like to understand how the local planning authority have produced the evidence base and options assessment which informs the strategic site allocations.

Natural England will engage with the local planning authority to consider the cumulative impacts of the loss of BMV both in the local and national context and the challenges related to environmental impact, infrastructure, and the requirement to deliver a balance between the need for development and the potential urbanisation of the countryside including the potential mitigation measures that need to be considered.

NPPF paragraph 174e states:

Planning policies and decisions should contribute to and enhance the natural and local environment by: ... preventing new and existing development from contributing to, being put at unacceptable risk from, or being adversely affected by, unacceptable levels of soil, air, water or noise pollution or land instability. Development should, wherever possible, help to improve local environmental conditions such as air and water quality, taking into account relevant information such as river basin management plans.

Natural England provides guidance to inform further assessment of air quality and the loss of BMV agricultural land in our response to the content of the plans Strategic Policies as set out below.

Do you consider that the Newcastle-under-Lyme Borough Council Regulation 19 pre-submission draft Plan is compliant with Duty to Co-operate?

In terms of working with neighbouring authorities, Natural England notes that initially the plan was intended to be produced jointly with the City of Stoke-on-Trent, the plan does not however currently present an evidence base that demonstrates that a collaborative approach has been adopted and that the Duty to Co-operate has been fully complied with.

The Sustainability Appraisal states that: "Overall, there is potential for a cumulative adverse effect on biodiversity, owing to the fragmentation of the ecological network... Where a large amount of development is located on previously undeveloped land surrounding rural settlements, this is likely to produce a long-term irreversible negative cumulative effect regarding the urbanisation of the countryside" (p 71)

Natural England would therefore like to further understand how the areas identified to meet the City of Stoke-on-Trent's unmet employment needs are justified and appropriate and whether meeting some of the employment needs of the City of Stoke-on-Trent has led to the need to release or safeguard more land from the Green Belt in Newcastle under Lyme. If this is the case, what are the exceptional circumstances for doing this and how does this align with the allocated sites options assessment?

Recreational Pressure

In terms of the South Pennine Moors SAC and recreational impacts, the Local Plan does comply with the Duty to Co-operate. Natural England recommends that reference is made to the 'Recreation use of the South Pennine Moors and implications for strategic housing growth' report by Footprint Ecology Ref 778 date 27th March 2024. This report should both inform the evidence base and ensure that policies relating to open space/green infrastructure are as rigorous and robust as possible.

The report concludes that more data/evidence is required to determine if recreational use is causing an impact across to the South Pennine Moors and to get a better understanding of the scale and location of any impact. Natural England notes that the report records 7,000 additional dwellings in

Newcastle-under-Lyme over the plan period rather than the 8,000 included in this regulation 19 submission. Newcastle-under-Lyme Borough Council should therefore continue to work with local authority and other partners to ensure coordinated and continued cross boundary action.

Other matters

Natural England has specific concerns related to allocations in the Green Belt. Notwithstanding that, Natural England considers most of the policies within the plan to be sound and deliverable. The plan is consistent with national policy with regard to those policies that are within Natural England's remit. Further information on strengthening policies including but not limited to Soils and best and most versatile (BMV) agricultural land, preventing loss and fragmentation of habitats and supporting green infrastructure are provided below.

Vision and Strategy

Natural England notes that the Plan's vision and emerging development strategy set out a framework for the future development of Newcastle-under-Lyme and addresses the needs in relation to housing, the economy, community facilities and infrastructure, including specific reference to a proposed employment site allocation.

This vision and the related objectives should also set out the environmental ambition for the plan area and form the basis for nature recovery and enhancement, supported by the policies and proposals in the plan.

Natural England advises that the vision should also incorporate more on the local ecology and landscape features which underpin local distinctiveness such as the "strong rural character with long open views across the surrounding rural landscape, towards more distant hills often framed by trees" (p 69) Part 3 Site Specific Landscape & Visual Appraisal. "Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms" (p 187) Sustainability Appraisal.

Strategic Objectives

Natural England welcome strategic objective SO-4 relating to carbon reduction and climate change, however we do not feel that this group of thirteen strategic objectives value or reflect the Boroughs whole ecology and landscape including but not limited to the protection of soil and best and most versatile (BMV) agricultural land. We would suggest that additional objectives are added relating to: air quality, water quality and quantity, soils and landscape.

Natural England would also like to see stronger reference to the Nature Recovery Network which is one of the specific aims of the Environment Act 2021 and will underpin the approach to the enhancement of nature.

Air quality is a major threat to habitats and species. Many ecological sites are exceeding their critical loads and levels for ammonia, nitrogen deposition and acid deposition. The strengthening of the policies and the rationale behind site allocations within this plan will ensure that new development does not contribute to the further deterioration of habitats and species due to air pollution. Further advice on strengthening the plans evidence base with regards to air quality is provided in the links below:

Natural England's approach to advising competent authorities on the assessment of road traffic emissions under the Habitats Regulations (NEA001)

 Strategic Policies
 5 Planning for Sustainable Development
 Policy PSD5: Green Belt
 Natural England notes that this policy “aims to protect the Borough’s essential open spaces, prioritise the use of brownfield land, and guide potential future development in accordance with the National Planning Policy Framework (NPPF)”.
 Natural England however notes that amendments to the Green Belt boundary are proposed in the form of 14 site allocations to accommodate both the growth requirements of the borough and the employment requirements of wider Stoke-on-Trent conurbation. Natural England’s has some site-specific concerns about the potential impacts of some of the green belt sites selected on the natural environment with regards to habitat loss, fragmentation and justification for the loss of BMV agricultural land.
 We note the LPA’s intention to release and compensate for the loss of green belt and prioritise the use of suitable brownfield land. However, the site allocations in the green belt would result in the potential loss of 263ha of Best and Most Versatile (BMV) agricultural land. The council should satisfy itself that it is making a balanced decision for sustainable development, the Sustainability Appraisal concludes that: “The Green Belt Study assessed land parcels against the contribution they make to the five purposes of the Green Belt on a four-point scale...Three allocated sites (AB12, AB33 and TK10) are located in areas which make a ‘strong’ overall contribution to the purposes of the Green Belt where “the site contributes to the purpose in a strong and undeniable way, whereby removal of the site from the Green Belt will detrimentally undermine this purpose” (p101)
 “Site allocations on previously undeveloped land or that would result in a net loss of GI / vegetation could result in a reduced capability of the environment to provide ecosystem services including carbon storage, the storage and filtration of water including natural flood protection, as well as reduced availability and connectivity of habitats within the green network enabling movement of species. (p 165)
 Strategic Site Allocations
 Natural England suggests that the HRA should include a “requirement for project-level/site specific HRA’s and targeted ecological surveys”.
 The Sustainability Appraisal concludes that:
 “Some 12 allocated sites partially coincide with priority habitats, where 3.43% of the total site allocation areas coinciding with priority habitats which include deciduous woodland, good quality semi-improved grassland and Site BL18 coincides with lowland fens which is a very high distinctiveness habitat in the BNG handbook (2024). These habitats can support a range of species of principal importance. Allocated Site KL15 is adjacent to ‘The Butts and Hands Wood’ ancient woodland, with a further 20 allocated sites located in close proximity to ancient woodlands. P158
 “Six allocated sites (Sites CT20, HD10, KL13, RC8, SP11(2) and SP23) are located within areas of ‘high’ or ‘very high’ habitat distinctiveness that provide high biodiversity value. Whilst in many cases these habitats can be conserved alongside development, it is likely that in some cases fragmentation or loss of habitats and connections between habitats will occur”
 “The majority of allocated sites are located on previously undeveloped land, which would result in the loss of soil resources and the ecosystem services they provide. (p 159) The development of new buildings on previously undeveloped land would be expected to result in a direct loss of soil resource, with little or no scope for mitigation” (p 216)
 “The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution. (p 68)
 For all sites, Natural England advises that the hydrological catchment within which the site sits is taken into consideration, with regards to the potential impact of the developments proposed on the adjoining watercourses and wider catchments, including but not limited to surface water runoff (including during construction), existing and required capacity of Waste Water Treatment Works (WwTW) and water supply and flooding issues. Each site will require site specific investigation, and the council should understand the impact of all the sites put forward individually and in combination.
 Natural England has specific concerns and or requires further information about the following ‘Strategic Site Allocations’ which could potentially impact on designated sites as a result of air and water quality and/or lead to the loss and / or fragmentation of priority habitats and BMV agricultural land:
 BL18 – Clough Hall Playing Fields, Talke
 Natural England would like to further understand this larger residential development proposal with regards to the potential impacts on the lowland fen habitat.
 KL13 & KL15 – Land South of A525 between Keele University and Newcastle
 Natural England notes this proposal for Employment development is immediately adjacent to ancient woodland priority habitat.
 HM28 – Land off East Lawns, Betley

Existing and projected water quality issues at Betley Mere will need to be considered with regards to this allocation.

LW53 – Loggerheads

Natural England notes this residential housing development proposal is located within the IRZ of protected sites (Burnt Wood SSSI) which states that development proposals of 50 or more homes outside existing settlements/urban areas in these zones should be consulted upon with Natural England.

SP11 – Former Keele Municipal Golf Course

This Larger residential development is categorised in the Landscape Assessment as having a Major adverse impact on the local Landscape.

AB2 – Land Adjoining Corner of A500 and M6 Southbound

Natural England notes this proposed employment allocation released entirely from the green belt, which comprises 70ha of grade 2 BMV agricultural land. The Landscape study concludes that the: "Proposed development scenario is likely to have a major adverse effect on the SA objective with no satisfactory mitigation possible" (p 15). With regards to potential Air Quality impacts on protected sites Natural England notes from the options analysis that "The loss or potential moving of a layby to enable access to the site could be problematic indicating potential issues with site access and traffic flow. An increase in HGV and personal vehicle traffic is anticipated, which could lead to potential congestion and air pollution in the area". Natural England would therefore also like to understand the evidence base further including the rationale for an alternative site TK30 @ Talke A34 / A500 roundabout being ruled out.

Policy PSD6: Health and Wellbeing

Natural England welcome this policy direction in terms of safeguarding health and amenity and supporting healthy communities, through the protection and provision of high-quality open spaces, including allotments and the promotion of active travel transport choices Further information on joining up Nature Recovery and Green Infrastructure (GI) with health priorities is set out below. If more cities and towns can be creatively designed and managed, with nature and communities at their heart, we will see nature and people thrive. This is something we set out to inspire at Natural England when developing the Green Infrastructure Framework and Design Guide. Natural England's People and Nature survey tells us that, for 82% of people 'being in nature makes me happy'. With the cost-of-living crisis, 'free' places like local parks and greenspace, have become even more important. The value of these spaces for the economy is estimated at £28.7 billion per year.

Green infrastructure in towns and cities provides places to relax, exercise, and spend time outdoors; cools urban areas; reduces flooding by allowing water to permeate the ground rather than overwhelm our drains; increases biodiversity and helps to reduce inequalities in access to nature. Options assessments for development sites and related green and blue Infrastructure within and between developments, green spaces and designated sites should; include soft transition and consider potential direct and indirect implications on sustainable use for example visitor pressure and transport / access options.

The natural environment affords the best 'natural' play opportunities for children while offering multifunctional nature-based solutions to climate change etc. These can be blended into wildlife rich green infrastructure and green open spaces that can act as destination play sites for local children (See best practice at Play England and Play Wales) that have proven health and wellbeing value.

Evidence for nature play and health:

Play, naturally: a review of children's natural play

Nature for health and wellbeing | The Wildlife Trusts

Good practice in social prescribing for mental health: the role of nature-based interventions - NECR228 (naturalengland.org.uk)

6 Climate and Renewable Energy

Whilst Natural England welcomes this group of policies we recommend including Policy CRE1: Climate Change and Policy CRE2: Renewable Energy within the Sustainable Environment (SE) group of policies to achieve a collective strategic focus on sustainable development and working toward achieving net zero alongside the SE policies relating to Pollution and Air Quality (SE1) and requirements for sustainable water management measures to reduce water use, natural flood protection features alongside the specific policies on Sustainable Drainage Systems (Policy SE4:)

Natural England continues to work with the LPAs across the region on understanding air pollution across area boundaries (see comments and links in objectives section.)

10 Infrastructure and Transport Policy.

Policy IN4 Cycleways, Bridleways and Public Rights of Way

Natural England welcomes the inclusion of this group of policies which seek to maintain and enhance the network of public rights of way that cross the borough. We note that the sustainability appraisal states that "the borough has relatively poor accessibility to the cycle network and is the lowest performing in the county for walking zones" (p 206) and that, "eight allocated sites (AB2, AB12, AB33, HD10, KL15, MD29, SP11(3) and TK10) do not currently have safe pedestrian or cycle access adjacent to the site, where site end users may be reliant upon less sustainable modes of transport including private car use". (p 180)

11 Sustainable Environment

Natural England welcomes this group of policies and has the following policy specific comments:

Policy SE1: Pollution and Air Pollution.

Natural England welcomes this policy that notes that development proposals which are likely to result in detrimental impacts on air quality, will not be permitted unless it can be demonstrated that mitigation measures effectively address these impacts. (Comments on Air Quality are also provided on page 2 and 4 of this letter). The promotion of sustainable and active travel options, low-emission technologies and enhancement of green infrastructure to absorb air pollution is also noted. (see comment above re integrating the group: 6 Policies Climate and Renewable Energy).

Policy SE7: Biodiversity Net Gain

Natural England supports the inclusion of a policy on BNG. We suggest the following minor amendments to further improve the plan policy.

The BNG policy should make it clear that biodiversity net gain is not applied to irreplaceable habitats, and that any mitigation and/or compensation requirements for Habitats sites should be dealt with separately

from biodiversity net gain provision. The policy should also set out how biodiversity net gain will be delivered and managed through the lifetime of the scheme and including monitoring requirements. This should include indicators to demonstrate the amount and type of gain provided through development. The indicators should be as specific as possible to help build an evidence base to take forward for future reviews of the plan, for example the total number and type of biodiversity units created, the number of developments achieving biodiversity net gains and a record of on-site and off-site contributions. Natural England notes that the Sustainability Appraisal states "Despite the BNG provisions at the site level, there remains potential for a cumulative adverse impact on biodiversity at the landscape scale, owing to incremental habitat losses. As a result of development within the Local Plan undeveloped land will be lost which will include the loss of soil resources, habitats recognised as being of 'high' and 'very high' distinctiveness, and potentially ecological links between biodiversity assets, whereby the policies will not be expected to fully mitigate the fragmentation of the ecological network. Fragmentation of the ecological network across Newcastle-under-Lyme is expected to be a long-term and permanent significant effect." (p 162)

Policy SE8: Biodiversity and Geodiversity

Natural England supports the inclusion of this policy to protect the Boroughs internationally, nationally and locally designated sites important for their biodiversity value and to enhance the natural environment and work with partners toward Nature Recovery.

We particularly welcome the plans recognition of the value of "wider ecological networks" stating that "Other sites, both individually and collectively, that are not designated can also contribute towards protecting and enhancing diversity of species locally".

Policy SE10: Landscape

Natural England welcomes this policy aimed at ensuring that "development proposals should protect and enhance the character, quality, beauty, and tranquillity of the Borough". We note from the sustainability appraisal that "The entirety of the south of the borough is identified as being high in relation to landscape sensitivity, which starts in Audley in the north and covers the southern area of the borough, including Loggerheads and Almington." We agree that "Alteration of the landscape character is a long-term and permanent significant effect... There is potential for a cumulative adverse effect on landscape character resulting from the development proposed in the Plan". (p193) SA.

Natural England has divided England into 159 distinct natural areas called National Character Areas (NCAs) Newcastle-under-Lyme falls within two NCAs: Shropshire, Cheshire and Staffordshire Plain: gently rolling plains dominated by intensive dairy farming, beef and arable production; The Potteries and Churnet Valley: strong contrast between the industrialised landscape of the Potteries and the pastoral, strongly dissected hills and small plateaux that flank the Churnet and Dove valleys.

Natural agrees with the following statement in the sustainability appraisal: "Although various policies aim to ensure that development conserves and enhances landscape character and distinctiveness, when combined with Local Plan policies that support infrastructural improvements such as for transportation, water, and waste, this is likely to lead to a long-term and irreversible cumulative adverse effect on landscape character and tranquillity and associated indicators such as dark skies." (p72)

Policy SE11: Trees, hedgerows, and woodland

Natural England welcomes this plans recognition that "Trees, hedgerows, and woodlands are integral to the distinctive character and ecological health of the Borough of Newcastle-under-Lyme, defining landscapes across both urban and rural settlements." And that "This policy prioritises the protection of existing natural assets, seeking to not only preserve, but actively enhance, these valuable features wherever possible".

Policy SE13: Soil and Agricultural Land

Natural England has concerns about the justification for the loss of BMV agricultural land within this plan. "The proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land, A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of 'best and most versatile' (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services." (page74) (SA)

Natural England notes that policy SE13 states: "Outside of sites allocated for development in the Local Plan, development proposals should avoid the loss of best and most versatile agricultural land (BMV) unless it can be demonstrated that the benefits of development clearly outweigh the loss of the land and every effort has been made to mitigate for the overall impact of the development on best and most versatile agricultural land."

With regards to Soil and Agricultural Land Quality, Natural England advises that The Local Plan should give appropriate weight to the roles performed by the area's soils. These should be valued as a finite multi-functional resource which underpin our wellbeing and prosperity. Decisions about development should take full account of the impact on soils, their intrinsic character and the sustainability of the many ecosystem services they deliver.

The 25 Year Environment Plan (25YEP) sets out government action to help the natural world regain and retain good health, including highlighting the need to:

- protect the best agricultural land
- put a value on natural capital, including healthy soil
- ensure all soils are managed sustainably by 2030
- restore and protect peatland

Soil is a finite resource which plays an essential role within sustainable ecosystems, performing an array of functions supporting a range of ecosystem services, including storage of carbon and water, the infiltration and transport of water, nutrient cycling, a buffer against pollution and provision of food. In order to safeguard soil resources as part of the overall sustainability of the development, it is important that the soil resource is able to retain as many of its important functions as possible. This can be achieved through careful soil management and appropriate, beneficial soil re-use, with consideration on how any adverse impacts on soils can be avoided or minimised.

The conservation and sustainable management of soils is reflected in the National Planning Policy Framework (NPPF), particularly in paragraph 180(a), 180(b) and 181 (footnote 62). When planning authorities are considering land use change, the permanency of the impact on soils is an important

consideration. Particular care over planned changes to the most potentially productive soil is needed, for the ecosystem services it supports including its role in agriculture and food production. Plan policies should therefore take account of the impact on land and soil resources and the wide range of vital functions (ecosystem services) they provide in line with paragraph 180(b) of the NPPF.

Soil Plan Policies

We strongly advise that at a minimum, the plan includes core policies for:

- the protection of best and most versatile (BMV) agricultural land (Grades 1, 2 and 3a in the Agricultural Land Classification (ALC)); and
- for the protection of and sustainable management of soils as a resource for the future.

-Areas of poorer quality land (ALC grades 3b, 4, 5) should be preferred to areas of higher quality land (grades 1, 2 and 3a).

-Recognise that development has an irreversible adverse impact on the finite national and local stock of BMV land.

-Conforms to NPPF and Planning Practice Guidance (Natural Environment and Minerals).

-Requires detailed ALC surveys to support plan allocations and for subsequent planning applications (for all sites larger than 5 ha). ALC surveys to support plan allocations and for subsequent planning applications for smaller sites (1 – 5 ha) would be welcomed.

-Recognise that development (soil sealing) has a major and usually irreversible adverse impact on soils.

-Soils of high environmental value (e.g., wetland and carbon stores such as peatland, low nutrient soils; or soils of high environmental value in the local context) should also be considered as part of ecological connectivity (Nature Recovery Network / Green Infrastructure).

-Requires soil handling and sustainable soil management strategies based on a detailed assessment of the soil resource based on best practice guidance (for all sites larger than 5 ha), ideally as part of the planning application process for major sites to help inform master-planning, and to safeguard the continued delivery of ecosystem services through careful soil management and appropriate, beneficial soil re-use. Soil handling and sustainable soil management strategies for smaller sites (1 – 5 ha) would be welcomed.

-Reference should be made to Defra's Construction Code of Practice for the Sustainable Use of Soils on Construction Sites

-In addition, for minerals and other temporary forms of development, plans for reinstatement, restoration and aftercare will be required (or for solar, a commitment to do so if the operational life is in decades); normally this will be return to the former land quality (ALC grade)

-Refers to soils issues within relevant policy areas such as renewable energy, climate change, green infrastructure and biodiversity net gain, flood schemes, managed realignment, development design and landscaping.

Policy SE14: Green and Blue Infrastructure

Natural England supports this policy. Well-designed cross boundary multi-functional green infrastructure contributes greatly to a number of benefits both for people and nature. Your green and blue (for example cross boundary canals) infrastructure should dovetail with your biodiversity net gain strategies to maximise benefits.

We would advise that the Local Authority also considers Natural England's Green Infrastructure Framework of Principles and Standards for England. As stated in our document, "Green infrastructure (GI) is part of the solution to many of the challenges we face; health inequalities, biodiversity crisis, climate change, nature recovery and levelling up. The GI framework supports local authorities, developers, parks and greenspace managers and local communities to enhance and create new good quality green infrastructure."

We would also suggest reference is made to the emerging Local Nature Recovery Strategy. Preparing Local Nature Recovery Strategies (LNRS) is a statutory requirement under the Environment Act 2021. LNRS are designed to work closely alongside other measures in the Act including supporting the delivery of mandatory biodiversity net gain and providing a focus for a strengthened duty on all public authorities to conserve and enhance biodiversity. They will also underpin the Nature Recovery Network, alongside work to develop partnerships and to integrate nature into our incentives and land management activities. Each LNRS will be specific and tailored to its area. The responsible authorities and people involved in preparing a strategy can choose how they want it to look, but every strategy must contain:

1. A local habitat map.
2. A written statement of biodiversity priorities. Statutory guidance for responsible authorities explains in detail what these 2 things should contain. Together they set out what the strategy is aiming to achieve and what practical actions will help do this. They will also propose where actions could be carried out for best effect and to connect and expand existing areas that are important for nature. We expect local nature recovery strategies to propose actions such as the:
 - creation of wetlands
 - restoration of peatlands
 - planting of trees and hedgerows
 - more sustainable management of existing woodlands and other habitats like grasslands
 These actions are intended to help nature itself and to also help improve the wider natural environment.

Whilst the Staffordshire Local Nature Recovery Strategy (LNRS) is currently a work in progress, Newcastle-under-Lyme Borough Council Regulation 19 pre-submission should still be consistent with NPPF Paragraph 185 in terms of setting out local habitat priorities and identifying potential measures by which they can be achieved, alongside mapping areas that could become of particular importance in the future.

Natural England encourages Newcastle Under Lyme Borough Council via their Local Nature Recovery Strategy to actively develop cross border cooperation between other Local Planning Authorities (LPA) (for example Staffordshire Moorlands Borough Council) in coordinating land development projects that impact on local biodiversity sites to ensure that local biodiversity corridors are maintained and link up other local important sites for nature conservation.

This is a good way of achieving nature recovery and preparing to deliver the LNRS alongside enabling the local authority and its partners to identify, map and safeguard site areas, including green and blue infrastructure opportunities and interlinkages.

Habitats Regulations Assessment

Natural England notes that this Local Plan is not directly connected with or necessary to the management of any European site. A screening assessment has been undertaken which identified a number of Likely Significant Effects (LSE) associated with the Local Plan. Taking no account of mitigation measures, the HRA concludes that Local Plan has the potential to affect the following European sites:

- Cannock Chase SAC
- Humber Estuary SAC, SPA and Ramsar
- Mersey Estuary SPA and Ramsar
- Midland Meres and Mosses Phase 1 Ramsar
- Midland Meres and Mosses Phase 2 Ramsar
- Pasturefields Salt Marsh SAC
- Peak District Dales SAC
- Peak District Moors (South Pennine Moors Phase 1) SPA
- Severn Estuary SAC, SPA and Ramsar
- South Pennine Moors SAC
- West Midland Mosses SAC

We welcome that your HRA includes the Humber Estuary SAC, SPA and Ramsar site which is hydrologically connected to the river Trent. If the Local Plan resulted in significant water pollution, this European site could be affected and has therefore been screened in, in relation to water quality only, on a precautionary basis. Natural England however notes that the Sustainability Appraisal identifies "A long-term cumulative adverse effect ...in terms of water quality" (p 148) as a result of the plan, this is not fully reflected in the current HRA.

Natural England note that the Sustainability Appraisal states: that "the entirety of the borough falls within IRZs of one or more SSSIs. All five SSSIs within the borough are in 'unfavourable' condition: Burnt Wood SSSI, Maer Pool SSSI, Black Firs and Cranberry Bog SSSI (Midlands Meres and Mosses Phase 2 Ramsar), Betley Mere SSSI (Midlands Meres and Mosses Phase 1 Ramsar) and Metallic Tileries, Parkhouse SSSI."

Natural England are also aware of the extensive network of ancient woodland spread across the borough, totalling 707.60 hectares, as well as a large quantity of priority habitats, totalling 1,791 hectares.

Natural England agree that the following designated sites and related priority habitats in adjoining LPA areas may also be affected by development through several pathways, including fragmentation, recreational pressure and/or pollution (including Air and Water Quality). Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI, Wybunbury Moss SAC SSSI, Tyrley Canal Cutting SSSI, King's and Hargreaves Wood SSSI, Gannister Quarry SSSI, Roe Park Woods SSSI, Wetley Moore SSSI, Churnet Valley SSSI, Hatherton Flush SSSI, Sounds Heath SSSI, Ford Green Redebed SSSI, and Cop Mere SSSI.

It is noted that the Appropriate Assessment stage of the HRA assessed potential impacts by topic;

- Impacts on designated features affected by a possible deterioration in air quality
- Impacts on water quality and quantity associated with increased levels of built development.
- Impacts associated with increased recreational pressure at European sites; and
- Consideration of impacts at associated functionally linked land.

Natural England notes that the HRA also factored the following into the assessment process "the protective framework provided by the Local Plan and existing protection measures set out in high level strategic policy and existing planning policy frameworks that serve to help overcome the identified potential adverse effects" and that "taking into consideration these factors, it is concluded that the Local Plan would have no adverse impact on site integrity at any European site, either alone or in-combination.

Natural England disagree agree with this conclusion that for those Habitats sites in the area of search with features sensitive to air pollution, adverse effects on their integrity, alone or in-combination, can be ruled out for the reasons set out at the beginning of this letter on page 2 and repeated in part below:

Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot currently be ruled out at the following internationally designated sites:

- Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI
- Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI

Natural England are currently in discussion with a number of the Staffordshire and West Midlands LPA's with regards to the cumulative impacts of air quality. We advise that further work is required to inform the HRA. The HRA should demonstrate that there are no adverse effects on integrity of Habitat sites as a result of this Local Plan, alone and in combination with other plans and projects. With regards to allocated sites, it is unclear whether the individual sites put forward in the Local Plan have been assessed through the Habitat Regulations Assessment process and how mitigation will be applied here.

Sustainability Appraisal

Natural England has reviewed the Sustainability Appraisal (SA) and included comments taken from the document throughout our response.

The SA is a comprehensive document which should be reviewed in strengthening the HRA, particularly with regards to residual adverse effects that would be expected to remain in terms of wastewater following the implementation of the Local Plan policies. (p 141) Natural England notes that "Increased pressure on wastewater treatment has the potential to be a long term and potentially permanent significant effect" (p 142)

The SA recognises the local distinctiveness of the plan area;

"The Borough itself is largely rural in nature and supports some high-quality agricultural land, but is more heavily built up towards the north east surrounding Stoke-on-Trent. (p 8)

Newcastle-under-Lyme has a strong rural character with a high-quality landscape and countryside, with some areas identified as being sensitive to change as a result of new development. (p 19)

Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms make up the key features of some of these Landscape Character Types." (p 20)

Sets out the area specific barriers to achieving sustainable growth;

"Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)

	<p>Loss of tranquillity The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution.(p 68)</p> <p>"The pre-mitigation SA assessments identified negative impacts in relation to air quality due to the proximity of sites to major roads, landscape character due to the location of sites within areas of high landscape sensitivity, close proximity to the PRoW network and potential for coalescence and urban sprawl, habitat sites, priority habitats, habitat distinctiveness, loss of undeveloped land, 'best and most versatile' (BMV) agricultural land, coinciding with mineral safeguarding areas (MSAs) and areas of surface water flood risk (SWFR); and access to healthcare facilities, schools, the local cycle network and railway network. (p 40)</p> <p>There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work. (p 21)</p> <p>Trends in transport choice are unlikely to change significantly, and private car use would continue to increase as the selected method of transport to work, with potential adverse impacts on air quality in the borough."(p 23)</p> <p>Considers the local and cumulative significance of soil loss alongside the ecological implications:</p> <p>"Loss of soil resources, BMV land and ecosystem services The proposed allocations would cumulatively result in the loss of up to approximately 342ha of previously undeveloped land, including up to 263ha of BMV agricultural land. The proposed development would be expected to reduce the ability of the local soil biome to effectively provide ecosystem services, to some extent. Additionally, the loss of permeable soils could potentially increase the risk of flooding and result in a loss of biodiversity across the Plan area. Loss of soil can also result in an increase in soil erosion and have subsequent impacts on agricultural yield.(p 68) The majority of the borough is ALC Grade 3 soil, with areas of ALC Grade 2 scattered across the borough. Grade 2 and potentially Grade 3 represents some of the borough's BMV agricultural land and should be conserved wherever possible (p 21)</p> <p>A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of BMV land to be lost as a result of the development proposed in the Local Plan." (p 59)'</p> <p>Other Advice</p> <p>Further general advice is provided within Natural England Advice Note – Local Plans February 2024, attached at (Appendix A) - see attachment</p>

Q4 Part of document	Policy
Q4 Policy	KL15
Q6 Details	<p>I wish the Planning Inspectorate to consider my following representations in response to the Newcastle -Under-Lyme Borough Council – Final Draft Local Plan Consultation (Regulation 19)</p> <p>I wish the Planning Inspectorate to remove all policies from the plan which involve any development on Green Belt Land.</p> <p>The specific policies are: -</p> <ul style="list-style-type: none"> • AB2, AB33, AB15 & AB12 – Audley Ward • BW 1 – Bradwell Ward • CT 1 – Crackley Bank & Red Street Ward • KL13 & KL 15 -Keele Ward • SP11(2) & SP11(3) – Silverdale Ward • TK 10, TK 27 & BL18 – Talke & Butt Lane Ward <p>All of these developments impact green belt land, are unsound and should be removed from the plan.</p> <p>They will all have a negative effect on the Net Biodiversity gain of each local area. Which in turn has a knock-on effect across the Borough. Open spaces are essential for the environment by absorbing carbon dioxide from our atmosphere, which helps reduce climate control. They also provide habitats for a wide range of plants and animals. Open spaces are also important to human health as they can reduce stress, improve mental health, and assist in people sleeping better. They provide areas for physical activity which improve both physical and mental health. Removal of green belt will decrease the air quality within that area, increase respiratory issues for humans and wildlife, and also increase noise pollution.</p> <p>With specific reference to policies AB2, AB33, AB15 and AB12. I ask the Planning inspectorate to remove policies based on the following justifications:</p> <ul style="list-style-type: none"> • AB2 - It is simply the case that the small village of Audley and its surrounding countryside lanes could not cope with the large increase of traffic caused by these policies. The large number of HGV's travelling to the proposed AB2 site would definitely increase the traffic within the Audley area due to the daily traffic jams along the A500 and at M6 Junction 16. Traffic will spill on to local roads e.g. A5500, increasing Noise and air pollution • AB12 - Proposed access to site AB12 via Diglake Street is untenable. This street is small and it is already difficult to drive down due to parked cars on both sides of the terraced street. A new development of houses would make it virtually impassable causing gridlock, increased air pollution, increased noise pollution and limiting access for the emergency services. <p>The proposed new car park for resident's in Diglake Street due to the proposed AB12 policy would be detrimental to Blue badge Holders, People with mobility issues and Carers of babies and children.</p> <p>AB12 will not be close to any amenities with little or no access to a regular bus route.</p> <ul style="list-style-type: none"> • AB33 – Primary Vehicular access to Park Lane is unsound. This is an already busy junction. AB33 will not be close to any amenities with little or no access to a regular bus route. Creating more traffic therefore noise pollution and air pollution. With an increased danger to pedestrians. <p>With poor access to health care and education.</p> <ul style="list-style-type: none"> • AB15 – The proposed site at AB15 is unsound because of the poor access to health care, education, local amenities and public transport. <p>I therefore would like the Planning inspectorate to remove Policies AB2, AB12, AB33 & AB15 from the plan.</p>

Consultee Company / Organisation	Keele Parish Council
Consultee Position	Parish Clerk
Consultee Family Name	Powell
Consultee Given Name	Debra
Q4 Part of document	Policy
Q4 Policy	KL15
Q6 Details	<p>Keele Parish Council recognise that developing national policy with regard to the NPPF means that, in order for the plan to be considered under the existing regulations, the amount of housing delivered per annum must come within 200 of the proposed nationally set target. The proposed new algorithm is 593 per annum. Whilst we do not accept the proposed target of 400 houses per annum is robustly supported by the evidence provided, we recognise that, were the plan to fail at inspection, that this already inflated target would, in all likelihood, be subject to a mandatory increase. Thus we have no choice other than to support this target in the hope that the plan will pass.</p> <p>We support the University's aspirations for growth and agree that it plays a critical role in the ongoing development of the Borough. We refer you to the comments made in our submission to the previous consultation regarding the need to be realistic about this growth.</p> <p>We are concerned that the proposal for a link road between the A53 and A525 is too vague. It is not based on robust and credible evidence. No details are given regarding the route and we assume that it would traverse the estate of the University, going from TB19 to the A525. Details are needed regarding what vehicles would be allowed to use this road. Were it to be open to all traffic, this would create a 'rat run' through the University's estate. Have they given permission for this? If this is the intention and the university were to agree, this would place a significant additional load on the busy University roundabout onto the A525. It would also undermine the sustainability credentials of the University and contradict policy SE1, particularly with regard to air quality. We strongly urge that further detail be provided about this proposal and that access be restricted to sustainable transport (foot, cycle, buses) and potentially, University employees.</p>

Q6 Details

Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.

Natural England welcomes the opportunity to comment at this stage of the Local Plan and particularly supports the inclusion of policies on green and blue infrastructure, biodiversity, health and wellbeing, trees hedgerows and woodlands. We have reviewed the consultation documents and provide comments that relate to the soundness of the Local Plan and that are most relevant to our interest in the Natural Environment.

Natural England has adopted a robust precautionary approach within this plan response. Whilst we welcome the content of the Local Plan, Natural England advises that the plan is currently at risk of being unsound and/or not legally compliant due to the potential impacts on air quality in relation to internationally designated nature conservation sites and the justification for the potential loss of 263ha best and most versatile (BMV) agricultural land. Further detail is provided below.

Natural England have also provided other advice within this submission relating to further improvements that could strengthen plan policies and specific strategic site options and related mitigation.

Do you consider that the Newcastle Under Lyme Plan is Sound and Legally Compliant?

Natural England notes that the plan is at the pre-submission stage and as such your authority is seeking confirmation on the soundness of the plan. Having reviewed the plan and supporting documents, Natural England considers the pre-submission plan in its current form is not sound or legally compliant, this is due to a lack of evidence with regards to air quality and the cumulative loss of BMV agricultural land both in a local and national context.

Air quality

Natural England notes that the Sustainability Appraisal states that "Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)

As Natural England understands it the current evidence base used to conduct the HRA cannot rule out adverse impacts on designated sites. The HRA states at page 22 3.4.16 "At the time of writing, the traffic modelling run for the final suite of Regulation 19 allocations had not been undertaken." Appendix A lists the local plans for neighbouring LPA's concluding that 'in combination' with plans and projects (approved and those yet to be implemented) they may trigger in-combination effects on European sites as a result of air quality, particularly as we understand it in the key commuting areas.

Natural England notes that Annual Average Daily Traffic (AADT) data and traffic modelling in the Strategic Transport Assessment (STA) concludes a potential reduction in travel and related air pollution at allocated sites as a result of a predicted preference in the use of public transport. We are surprised by this projected decrease in both traffic and related air pollution, particularly as one employment allocation site includes a 200-bay lorry park and increased congestion is predicted at junction 16 of the M6 where it joins the A500 in a rural location with no existing rural transport provision. The Sustainability Appraisal also notes that: "There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work". (p 206)

Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot therefore currently be ruled out at the following internationally designated sites:

- Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI
- Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI

The HRA outlines that the main source of ammonia emissions is agricultural practice, and that material increases in NH3 emissions are unlikely to be associated with the proposed local plan. At Black Firs and Cranberry Bog and Oakhanger Moss, any increase in nitrogen deposition has the potential to exacerbate pollution levels and thereby undermine the reasons for notification of these sites as a Ramsar.

Ammonia can be emitted from vehicle exhaust emissions as a by-product of the catalytic conversion process designed to reduce emissions of nitrogen oxide. As traffic composition transitions toward more petrol and electric cars (i.e., fewer diesel cars on the road), catalytic converters may aid in reducing NOx emissions but result in increased ammonia emissions. Ammonia emissions from road traffic therefore could make a significant difference to nitrogen deposition close to roads.

Natural England therefore advise that ammonia sourced from traffic emissions should be included for assessment within the local plan HRA, as the impact from this source on designated sites is currently unclear. For further information please see this report from Air Quality Consultants (AQC) that looks at ammonia emissions from roads for assessing impacts on nitrogen-sensitive habitats. Whilst we are aware that the current CREAM model created by AQC used to assess ammonia emissions from road traffic has not been peer reviewed, at this time it has been recognised as a Best Available Tool and we deem it appropriate to be used where any caveats associated with this model are also considered within the assessment. An assessment based on the best available approach is necessary. The next stage of assessment can then consider uncertainties in the model and site specifics to decide if mitigation needs to be considered.

Further work is therefore required to inform the Habitat Regulations Assessment. Natural England will engage with the Local Planning Authority in order to produce a Statement of Common Ground (SoCG) on this matter.

'Best and most versatile' (BMV) agricultural land

Natural England notes that "the proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land. A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of 'best and most versatile' (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services". (page 74 Sustainability Appraisal).

Under the Town and Country Planning (Development Management Procedure) (England) Order 2015 (DMPO) Natural England is a statutory consultee on development that would lead to the loss of over 20ha of 'best and most versatile' (BMV) agricultural land (land graded as 1, 2 and 3a in the Agricultural Land Classification (ALC) system, where this is not in accordance with an approved plan.

Natural England would like to understand how the local planning authority have produced the evidence base and options assessment which informs the strategic site allocations.

Natural England will engage with the local planning authority to consider the cumulative impacts of the loss of BMV both in the local and national context and the challenges related to environmental impact, infrastructure, and the requirement to deliver a balance between the need for development and the potential urbanisation of the countryside including the potential mitigation measures that need to be considered.

NPPF paragraph 174e states:

Planning policies and decisions should contribute to and enhance the natural and local environment by: ... preventing new and existing development from contributing to, being put at unacceptable risk from, or being adversely affected by, unacceptable levels of soil, air, water or noise pollution or land instability. Development should, wherever possible, help to improve local environmental conditions such as air and water quality, taking into account relevant information such as river basin management plans.

Natural England provides guidance to inform further assessment of air quality and the loss of BMV agricultural land in our response to the content of the plans Strategic Policies as set out below.

Do you consider that the Newcastle-under-Lyme Borough Council Regulation 19 pre-submission draft Plan is compliant with Duty to Co-operate?

In terms of working with neighbouring authorities, Natural England notes that initially the plan was intended to be produced jointly with the City of Stoke-on-Trent, the plan does not however currently present an evidence base that demonstrates that a collaborative approach has been adopted and that the Duty to Co-operate has been fully complied with.

The Sustainability Appraisal states that: "Overall, there is potential for a cumulative adverse effect on biodiversity, owing to the fragmentation of the ecological network... Where a large amount of development is located on previously undeveloped land surrounding rural settlements, this is likely to produce a long-term irreversible negative cumulative effect regarding the urbanisation of the countryside" (p 71)

Natural England would therefore like to further understand how the areas identified to meet the City of Stoke-on-Trent's unmet employment needs are justified and appropriate and whether meeting some of the employment needs of the City of Stoke-on-Trent has led to the need to release or safeguard more land from the Green Belt in Newcastle under Lyme. If this is the case, what are the exceptional circumstances for doing this and how does this align with the allocated sites options assessment?

Recreational Pressure

In terms of the South Pennine Moors SAC and recreational impacts, the Local Plan does comply with the Duty to Co-operate. Natural England recommends that reference is made to the 'Recreation use of the South Pennine Moors and implications for strategic housing growth' report by Footprint Ecology Ref 778 date 27th March 2024. This report should both inform the evidence base and ensure that policies relating to open space/green infrastructure are as rigorous and robust as possible.

The report concludes that more data/evidence is required to determine if recreational use is causing an impact across to the South Pennine Moors and to get a better understanding of the scale and location of any impact. Natural England notes that the report records 7,000 additional dwellings in

Newcastle-under-Lyme over the plan period rather than the 8,000 included in this regulation 19 submission. Newcastle-under-Lyme Borough Council should therefore continue to work with local authority and other partners to ensure coordinated and continued cross boundary action.

Other matters

Natural England has specific concerns related to allocations in the Green Belt. Notwithstanding that, Natural England considers most of the policies within the plan to be sound and deliverable. The plan is consistent with national policy with regard to those policies that are within Natural England's remit. Further information on strengthening policies including but not limited to Soils and best and most versatile (BMV) agricultural land, preventing loss and fragmentation of habitats and supporting green infrastructure are provided below.

Vision and Strategy

Natural England notes that the Plan's vision and emerging development strategy set out a framework for the future development of Newcastle-under-Lyme and addresses the needs in relation to housing, the economy, community facilities and infrastructure, including specific reference to a proposed employment site allocation.

This vision and the related objectives should also set out the environmental ambition for the plan area and form the basis for nature recovery and enhancement, supported by the policies and proposals in the plan.

Natural England advises that the vision should also incorporate more on the local ecology and landscape features which underpin local distinctiveness such as the "strong rural character with long open views across the surrounding rural landscape, towards more distant hills often framed by trees" (p 69) Part 3 Site Specific Landscape & Visual Appraisal. "Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms" (p 187) Sustainability Appraisal.

Strategic Objectives

Natural England welcome strategic objective SO-4 relating to carbon reduction and climate change, however we do not feel that this group of thirteen strategic objectives value or reflect the Boroughs whole ecology and landscape including but not limited to the protection of soil and best and most versatile (BMV) agricultural land. We would suggest that additional objectives are added relating to: air quality, water quality and quantity, soils and landscape.

Natural England would also like to see stronger reference to the Nature Recovery Network which is one of the specific aims of the Environment Act 2021 and will underpin the approach to the enhancement of nature.

Air quality is a major threat to habitats and species. Many ecological sites are exceeding their critical loads and levels for ammonia, nitrogen deposition and acid deposition. The strengthening of the policies and the rationale behind site allocations within this plan will ensure that new development does not contribute to the further deterioration of habitats and species due to air pollution. Further advice on strengthening the plans evidence base with regards to air quality is provided in the links below:

Natural England's approach to advising competent authorities on the assessment of road traffic emissions under the Habitats Regulations (NEA001)

 Strategic Policies
 5 Planning for Sustainable Development
 Policy PSD5: Green Belt
 Natural England notes that this policy “aims to protect the Borough’s essential open spaces, prioritise the use of brownfield land, and guide potential future development in accordance with the National Planning Policy Framework (NPPF)”.
 Natural England however notes that amendments to the Green Belt boundary are proposed in the form of 14 site allocations to accommodate both the growth requirements of the borough and the employment requirements of wider Stoke-on-Trent conurbation. Natural England’s has some site-specific concerns about the potential impacts of some of the green belt sites selected on the natural environment with regards to habitat loss, fragmentation and justification for the loss of BMV agricultural land.
 We note the LPA’s intention to release and compensate for the loss of green belt and prioritise the use of suitable brownfield land. However, the site allocations in the green belt would result in the potential loss of 263ha of Best and Most Versatile (BMV) agricultural land. The council should satisfy itself that it is making a balanced decision for sustainable development, the Sustainability Appraisal concludes that: “The Green Belt Study assessed land parcels against the contribution they make to the five purposes of the Green Belt on a four-point scale...Three allocated sites (AB12, AB33 and TK10) are located in areas which make a ‘strong’ overall contribution to the purposes of the Green Belt where “the site contributes to the purpose in a strong and undeniable way, whereby removal of the site from the Green Belt will detrimentally undermine this purpose” (p101)
 “Site allocations on previously undeveloped land or that would result in a net loss of GI / vegetation could result in a reduced capability of the environment to provide ecosystem services including carbon storage, the storage and filtration of water including natural flood protection, as well as reduced availability and connectivity of habitats within the green network enabling movement of species. (p 165)
 Strategic Site Allocations
 Natural England suggests that the HRA should include a “requirement for project-level/site specific HRA’s and targeted ecological surveys”.
 The Sustainability Appraisal concludes that:
 “Some 12 allocated sites partially coincide with priority habitats, where 3.43% of the total site allocation areas coinciding with priority habitats which include deciduous woodland, good quality semi-improved grassland and Site BL18 coincides with lowland fens which is a very high distinctiveness habitat in the BNG handbook (2024). These habitats can support a range of species of principal importance. Allocated Site KL15 is adjacent to ‘The Butts and Hands Wood’ ancient woodland, with a further 20 allocated sites located in close proximity to ancient woodlands. P158
 “Six allocated sites (Sites CT20, HD10, KL13, RC8, SP11(2) and SP23) are located within areas of ‘high’ or ‘very high’ habitat distinctiveness that provide high biodiversity value. Whilst in many cases these habitats can be conserved alongside development, it is likely that in some cases fragmentation or loss of habitats and connections between habitats will occur”
 “The majority of allocated sites are located on previously undeveloped land, which would result in the loss of soil resources and the ecosystem services they provide. (p 159) The development of new buildings on previously undeveloped land would be expected to result in a direct loss of soil resource, with little or no scope for mitigation” (p 216)
 “The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution. (p 68)
 For all sites, Natural England advises that the hydrological catchment within which the site sits is taken into consideration, with regards to the potential impact of the developments proposed on the adjoining watercourses and wider catchments, including but not limited to surface water runoff (including during construction), existing and required capacity of Waste Water Treatment Works (WwTW) and water supply and flooding issues. Each site will require site specific investigation, and the council should understand the impact of all the sites put forward individually and in combination.
 Natural England has specific concerns and or requires further information about the following ‘Strategic Site Allocations’ which could potentially impact on designated sites as a result of air and water quality and/or lead to the loss and / or fragmentation of priority habitats and BMV agricultural land:
 BL18 – Clough Hall Playing Fields, Talke
 Natural England would like to further understand this larger residential development proposal with regards to the potential impacts on the lowland fen habitat.
 KL13 & KL15 – Land South of A525 between Keele University and Newcastle
 Natural England notes this proposal for Employment development is immediately adjacent to ancient woodland priority habitat.
 HM28 – Land off East Lawns, Betley

Existing and projected water quality issues at Betley Mere will need to be considered with regards to this allocation.

LW53 – Loggerheads

Natural England notes this residential housing development proposal is located within the IRZ of protected sites (Burnt Wood SSSI) which states that development proposals of 50 or more homes outside existing settlements/urban areas in these zones should be consulted upon with Natural England.

SP11 – Former Keele Municipal Golf Course

This Larger residential development is categorised in the Landscape Assessment as having a Major adverse impact on the local Landscape.

AB2 – Land Adjoining Corner of A500 and M6 Southbound

Natural England notes this proposed employment allocation released entirely from the green belt, which comprises 70ha of grade 2 BMV agricultural land. The Landscape study concludes that the: "Proposed development scenario is likely to have a major adverse effect on the SA objective with no satisfactory mitigation possible" (p 15). With regards to potential Air Quality impacts on protected sites Natural England notes from the options analysis that "The loss or potential moving of a layby to enable access to the site could be problematic indicating potential issues with site access and traffic flow. An increase in HGV and personal vehicle traffic is anticipated, which could lead to potential congestion and air pollution in the area". Natural England would therefore also like to understand the evidence base further including the rationale for an alternative site TK30 @ Talke A34 / A500 roundabout being ruled out.

Policy PSD6: Health and Wellbeing

Natural England welcome this policy direction in terms of safeguarding health and amenity and supporting healthy communities, through the protection and provision of high-quality open spaces, including allotments and the promotion of active travel transport choices. Further information on joining up Nature Recovery and Green Infrastructure (GI) with health priorities is set out below. If more cities and towns can be creatively designed and managed, with nature and communities at their heart, we will see nature and people thrive. This is something we set out to inspire at Natural England when developing the Green Infrastructure Framework and Design Guide. Natural England's People and Nature survey tells us that, for 82% of people 'being in nature makes me happy'. With the cost-of-living crisis, 'free' places like local parks and greenspace, have become even more important. The value of these spaces for the economy is estimated at £28.7 billion per year.

Green infrastructure in towns and cities provides places to relax, exercise, and spend time outdoors; cools urban areas; reduces flooding by allowing water to permeate the ground rather than overwhelm our drains; increases biodiversity and helps to reduce inequalities in access to nature. Options assessments for development sites and related green and blue Infrastructure within and between developments, green spaces and designated sites should; include soft transition and consider potential direct and indirect implications on sustainable use for example visitor pressure and transport / access options.

The natural environment affords the best 'natural' play opportunities for children while offering multifunctional nature-based solutions to climate change etc. These can be blended into wildlife rich green infrastructure and green open spaces that can act as destination play sites for local children (See best practice at Play England and Play Wales) that have proven health and wellbeing value.

Evidence for nature play and health:

Play, naturally: a review of children's natural play

Nature for health and wellbeing | The Wildlife Trusts

Good practice in social prescribing for mental health: the role of nature-based interventions - NECR228 (naturalengland.org.uk)

6 Climate and Renewable Energy

Whilst Natural England welcomes this group of policies we recommend including Policy CRE1: Climate Change and Policy CRE2: Renewable Energy within the Sustainable Environment (SE) group of policies to achieve a collective strategic focus on sustainable development and working toward achieving net zero alongside the SE policies relating to Pollution and Air Quality (SE1) and requirements for sustainable water management measures to reduce water use, natural flood protection features alongside the specific policies on Sustainable Drainage Systems (Policy SE4:)

Natural England continues to work with the LPAs across the region on understanding air pollution across area boundaries (see comments and links in objectives section.)

10 Infrastructure and Transport Policy.

Policy IN4 Cycleways, Bridleways and Public Rights of Way

Natural England welcomes the inclusion of this group of policies which seek to maintain and enhance the network of public rights of way that cross the borough. We note that the sustainability appraisal states that "the borough has relatively poor accessibility to the cycle network and is the lowest performing in the county for walking zones" (p 206) and that, "eight allocated sites (AB2, AB12, AB33, HD10, KL15, MD29, SP11(3) and TK10) do not currently have safe pedestrian or cycle access adjacent to the site, where site end users may be reliant upon less sustainable modes of transport including private car use". (p 180)

11 Sustainable Environment

Natural England welcomes this group of policies and has the following policy specific comments:

Policy SE1: Pollution and Air Pollution.

Natural England welcomes this policy that notes that development proposals which are likely to result in detrimental impacts on air quality, will not be permitted unless it can be demonstrated that mitigation measures effectively address these impacts. (Comments on Air Quality are also provided on page 2 and 4 of this letter). The promotion of sustainable and active travel options, low-emission technologies and enhancement of green infrastructure to absorb air pollution is also noted. (see comment above re integrating the group: 6 Policies Climate and Renewable Energy).

Policy SE7: Biodiversity Net Gain

Natural England supports the inclusion of a policy on BNG. We suggest the following minor amendments to further improve the plan policy.

The BNG policy should make it clear that biodiversity net gain is not applied to irreplaceable habitats, and that any mitigation and/or compensation requirements for Habitats sites should be dealt with separately

from biodiversity net gain provision. The policy should also set out how biodiversity net gain will be delivered and managed through the lifetime of the scheme and including monitoring requirements. This should include indicators to demonstrate the amount and type of gain provided through development. The indicators should be as specific as possible to help build an evidence base to take forward for future reviews of the plan, for example the total number and type of biodiversity units created, the number of developments achieving biodiversity net gains and a record of on-site and off-site contributions. Natural England notes that the Sustainability Appraisal states "Despite the BNG provisions at the site level, there remains potential for a cumulative adverse impact on biodiversity at the landscape scale, owing to incremental habitat losses. As a result of development within the Local Plan undeveloped land will be lost which will include the loss of soil resources, habitats recognised as being of 'high' and 'very high' distinctiveness, and potentially ecological links between biodiversity assets, whereby the policies will not be expected to fully mitigate the fragmentation of the ecological network. Fragmentation of the ecological network across Newcastle-under-Lyme is expected to be a long-term and permanent significant effect." (p 162)

Policy SE8: Biodiversity and Geodiversity

Natural England supports the inclusion of this policy to protect the Boroughs internationally, nationally and locally designated sites important for their biodiversity value and to enhance the natural environment and work with partners toward Nature Recovery.

We particularly welcome the plans recognition of the value of "wider ecological networks" stating that "Other sites, both individually and collectively, that are not designated can also contribute towards protecting and enhancing diversity of species locally".

Policy SE10: Landscape

Natural England welcomes this policy aimed at ensuring that "development proposals should protect and enhance the character, quality, beauty, and tranquillity of the Borough". We note from the sustainability appraisal that "The entirety of the south of the borough is identified as being high in relation to landscape sensitivity, which starts in Audley in the north and covers the southern area of the borough, including Loggerheads and Almington." We agree that "Alteration of the landscape character is a long-term and permanent significant effect... There is potential for a cumulative adverse effect on landscape character resulting from the development proposed in the Plan". (p193) SA.

Natural England has divided England into 159 distinct natural areas called National Character Areas (NCAs) Newcastle-under-Lyme falls within two NCAs: Shropshire, Cheshire and Staffordshire Plain: gently rolling plains dominated by intensive dairy farming, beef and arable production; The Potteries and Churnet Valley: strong contrast between the industrialised landscape of the Potteries and the pastoral, strongly dissected hills and small plateaux that flank the Churnet and Dove valleys.

Natural agrees with the following statement in the sustainability appraisal: "Although various policies aim to ensure that development conserves and enhances landscape character and distinctiveness, when combined with Local Plan policies that support infrastructural improvements such as for transportation, water, and waste, this is likely to lead to a long-term and irreversible cumulative adverse effect on landscape character and tranquillity and associated indicators such as dark skies." (p72)

Policy SE11: Trees, hedgerows, and woodland

Natural England welcomes this plans recognition that "Trees, hedgerows, and woodlands are integral to the distinctive character and ecological health of the Borough of Newcastle-under-Lyme, defining landscapes across both urban and rural settlements." And that "This policy prioritises the protection of existing natural assets, seeking to not only preserve, but actively enhance, these valuable features wherever possible".

Policy SE13: Soil and Agricultural Land

Natural England has concerns about the justification for the loss of BMV agricultural land within this plan. "The proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land, A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of 'best and most versatile' (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services." (page74) (SA)

Natural England notes that policy SE13 states: "Outside of sites allocated for development in the Local Plan, development proposals should avoid the loss of best and most versatile agricultural land (BMV) unless it can be demonstrated that the benefits of development clearly outweigh the loss of the land and every effort has been made to mitigate for the overall impact of the development on best and most versatile agricultural land."

With regards to Soil and Agricultural Land Quality, Natural England advises that The Local Plan should give appropriate weight to the roles performed by the area's soils. These should be valued as a finite multi-functional resource which underpin our wellbeing and prosperity. Decisions about development should take full account of the impact on soils, their intrinsic character and the sustainability of the many ecosystem services they deliver.

The 25 Year Environment Plan (25YEP) sets out government action to help the natural world regain and retain good health, including highlighting the need to:

- protect the best agricultural land
- put a value on natural capital, including healthy soil
- ensure all soils are managed sustainably by 2030
- restore and protect peatland

Soil is a finite resource which plays an essential role within sustainable ecosystems, performing an array of functions supporting a range of ecosystem services, including storage of carbon and water, the infiltration and transport of water, nutrient cycling, a buffer against pollution and provision of food. In order to safeguard soil resources as part of the overall sustainability of the development, it is important that the soil resource is able to retain as many of its important functions as possible. This can be achieved through careful soil management and appropriate, beneficial soil re-use, with consideration on how any adverse impacts on soils can be avoided or minimised.

The conservation and sustainable management of soils is reflected in the National Planning Policy Framework (NPPF), particularly in paragraph 180(a), 180(b) and 181 (footnote 62). When planning authorities are considering land use change, the permanency of the impact on soils is an important

consideration. Particular care over planned changes to the most potentially productive soil is needed, for the ecosystem services it supports including its role in agriculture and food production. Plan policies should therefore take account of the impact on land and soil resources and the wide range of vital functions (ecosystem services) they provide in line with paragraph 180(b) of the NPPF.

Soil Plan Policies

We strongly advise that at a minimum, the plan includes core policies for:

- the protection of best and most versatile (BMV) agricultural land (Grades 1, 2 and 3a in the Agricultural Land Classification (ALC)); and
- for the protection of and sustainable management of soils as a resource for the future.

-Areas of poorer quality land (ALC grades 3b, 4, 5) should be preferred to areas of higher quality land (grades 1, 2 and 3a).

-Recognise that development has an irreversible adverse impact on the finite national and local stock of BMV land.

-Conforms to NPPF and Planning Practice Guidance (Natural Environment and Minerals).

-Requires detailed ALC surveys to support plan allocations and for subsequent planning applications (for all sites larger than 5 ha). ALC surveys to support plan allocations and for subsequent planning applications for smaller sites (1 – 5 ha) would be welcomed.

-Recognise that development (soil sealing) has a major and usually irreversible adverse impact on soils.

-Soils of high environmental value (e.g., wetland and carbon stores such as peatland, low nutrient soils; or soils of high environmental value in the local context) should also be considered as part of ecological connectivity (Nature Recovery Network / Green Infrastructure).

-Requires soil handling and sustainable soil management strategies based on a detailed assessment of the soil resource based on best practice guidance (for all sites larger than 5 ha), ideally as part of the planning application process for major sites to help inform master-planning, and to safeguard the continued delivery of ecosystem services through careful soil management and appropriate, beneficial soil re-use. Soil handling and sustainable soil management strategies for smaller sites (1 – 5 ha) would be welcomed.

-Reference should be made to Defra's Construction Code of Practice for the Sustainable Use of Soils on Construction Sites

-In addition, for minerals and other temporary forms of development, plans for reinstatement, restoration and aftercare will be required (or for solar, a commitment to do so if the operational life is in decades); normally this will be return to the former land quality (ALC grade)

-Refers to soils issues within relevant policy areas such as renewable energy, climate change, green infrastructure and biodiversity net gain, flood schemes, managed realignment, development design and landscaping.

Policy SE14: Green and Blue Infrastructure

Natural England supports this policy. Well-designed cross boundary multi-functional green infrastructure contributes greatly to a number of benefits both for people and nature. Your green and blue (for example cross boundary canals) infrastructure should dovetail with your biodiversity net gain strategies to maximise benefits.

We would advise that the Local Authority also considers Natural England's Green Infrastructure Framework of Principles and Standards for England. As stated in our document, "Green infrastructure (GI) is part of the solution to many of the challenges we face; health inequalities, biodiversity crisis, climate change, nature recovery and levelling up. The GI framework supports local authorities, developers, parks and greenspace managers and local communities to enhance and create new good quality green infrastructure."

We would also suggest reference is made to the emerging Local Nature Recovery Strategy. Preparing Local Nature Recovery Strategies (LNRS) is a statutory requirement under the Environment Act 2021. LNRS are designed to work closely alongside other measures in the Act including supporting the delivery of mandatory biodiversity net gain and providing a focus for a strengthened duty on all public authorities to conserve and enhance biodiversity. They will also underpin the Nature Recovery Network, alongside work to develop partnerships and to integrate nature into our incentives and land management activities. Each LNRS will be specific and tailored to its area. The responsible authorities and people involved in preparing a strategy can choose how they want it to look, but every strategy must contain:

1. A local habitat map.
2. A written statement of biodiversity priorities. Statutory guidance for responsible authorities explains in detail what these 2 things should contain. Together they set out what the strategy is aiming to achieve and what practical actions will help do this. They will also propose where actions could be carried out for best effect and to connect and expand existing areas that are important for nature. We expect local nature recovery strategies to propose actions such as the:
 - creation of wetlands
 - restoration of peatlands
 - planting of trees and hedgerows
 - more sustainable management of existing woodlands and other habitats like grasslands
 These actions are intended to help nature itself and to also help improve the wider natural environment.

Whilst the Staffordshire Local Nature Recovery Strategy (LNRS) is currently a work in progress, Newcastle-under-Lyme Borough Council Regulation 19 pre-submission should still be consistent with NPPF Paragraph 185 in terms of setting out local habitat priorities and identifying potential measures by which they can be achieved, alongside mapping areas that could become of particular importance in the future.

Natural England encourages Newcastle Under Lyme Borough Council via their Local Nature Recovery Strategy to actively develop cross border cooperation between other Local Planning Authorities (LPA) (for example Staffordshire Moorlands Borough Council) in coordinating land development projects that impact on local biodiversity sites to ensure that local biodiversity corridors are maintained and link up other local important sites for nature conservation.

This is a good way of achieving nature recovery and preparing to deliver the LNRS alongside enabling the local authority and its partners to identify, map and safeguard site areas, including green and blue infrastructure opportunities and interlinkages.

Habitats Regulations Assessment

Natural England notes that this Local Plan is not directly connected with or necessary to the management of any European site. A screening assessment has been undertaken which identified a number of Likely Significant Effects (LSE) associated with the Local Plan. Taking no account of mitigation measures, the HRA concludes that Local Plan has the potential to affect the following European sites:

- Cannock Chase SAC
- Humber Estuary SAC, SPA and Ramsar
- Mersey Estuary SPA and Ramsar
- Midland Meres and Mosses Phase 1 Ramsar
- Midland Meres and Mosses Phase 2 Ramsar
- Pasturefields Salt Marsh SAC
- Peak District Dales SAC
- Peak District Moors (South Pennine Moors Phase 1) SPA
- Severn Estuary SAC, SPA and Ramsar
- South Pennine Moors SAC
- West Midland Mosses SAC

We welcome that your HRA includes the Humber Estuary SAC, SPA and Ramsar site which is hydrologically connected to the river Trent. If the Local Plan resulted in significant water pollution, this European site could be affected and has therefore been screened in, in relation to water quality only, on a precautionary basis. Natural England however notes that the Sustainability Appraisal identifies "A long-term cumulative adverse effect ...in terms of water quality" (p 148) as a result of the plan, this is not fully reflected in the current HRA.

Natural England note that the Sustainability Appraisal states: that "the entirety of the borough falls within IRZs of one or more SSSIs. All five SSSIs within the borough are in 'unfavourable' condition: Burnt Wood SSSI, Maer Pool SSSI, Black Firs and Cranberry Bog SSSI (Midlands Meres and Mosses Phase 2 Ramsar), Betley Mere SSSI (Midlands Meres and Mosses Phase 1 Ramsar) and Metallic Tileries, Parkhouse SSSI."

Natural England are also aware of the extensive network of ancient woodland spread across the borough, totalling 707.60 hectares, as well as a large quantity of priority habitats, totalling 1,791 hectares.

Natural England agree that the following designated sites and related priority habitats in adjoining LPA areas may also be affected by development through several pathways, including fragmentation, recreational pressure and/or pollution (including Air and Water Quality). Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI, Wybunbury Moss SAC SSSI, Tyrley Canal Cutting SSSI, King's and Hargreaves Wood SSSI, Gannister Quarry SSSI, Roe Park Woods SSSI, Wetley Moore SSSI, Churnet Valley SSSI, Hatherton Flush SSSI, Sounds Heath SSSI, Ford Green Redebed SSSI, and Cop Mere SSSI.

It is noted that the Appropriate Assessment stage of the HRA assessed potential impacts by topic;

- Impacts on designated features affected by a possible deterioration in air quality
- Impacts on water quality and quantity associated with increased levels of built development.
- Impacts associated with increased recreational pressure at European sites; and
- Consideration of impacts at associated functionally linked land.

Natural England notes that the HRA also factored the following into the assessment process "the protective framework provided by the Local Plan and existing protection measures set out in high level strategic policy and existing planning policy frameworks that serve to help overcome the identified potential adverse effects" and that "taking into consideration these factors, it is concluded that the Local Plan would have no adverse impact on site integrity at any European site, either alone or in-combination.

Natural England disagree agree with this conclusion that for those Habitats sites in the area of search with features sensitive to air pollution, adverse effects on their integrity, alone or in-combination, can be ruled out for the reasons set out at the beginning of this letter on page 2 and repeated in part below:

Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot currently be ruled out at the following internationally designated sites:

- Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI
- Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI

Natural England are currently in discussion with a number of the Staffordshire and West Midlands LPA's with regards to the cumulative impacts of air quality. We advise that further work is required to inform the HRA. The HRA should demonstrate that there are no adverse effects on integrity of Habitat sites as a result of this Local Plan, alone and in combination with other plans and projects. With regards to allocated sites, it is unclear whether the individual sites put forward in the Local Plan have been assessed through the Habitat Regulations Assessment process and how mitigation will be applied here.

Sustainability Appraisal

Natural England has reviewed the Sustainability Appraisal (SA) and included comments taken from the document throughout our response.

The SA is a comprehensive document which should be reviewed in strengthening the HRA, particularly with regards to residual adverse effects that would be expected to remain in terms of wastewater following the implementation of the Local Plan policies. (p 141) Natural England notes that "Increased pressure on wastewater treatment has the potential to be a long term and potentially permanent significant effect" (p 142)

The SA recognises the local distinctiveness of the plan area;

"The Borough itself is largely rural in nature and supports some high-quality agricultural land, but is more heavily built up towards the north east surrounding Stoke-on-Trent. (p 8)

Newcastle-under-Lyme has a strong rural character with a high-quality landscape and countryside, with some areas identified as being sensitive to change as a result of new development. (p 19)

Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms make up the key features of some of these Landscape Character Types." (p 20)

Sets out the area specific barriers to achieving sustainable growth;

"Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)

	<p>Loss of tranquillity The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution.(p 68)</p> <p>"The pre-mitigation SA assessments identified negative impacts in relation to air quality due to the proximity of sites to major roads, landscape character due to the location of sites within areas of high landscape sensitivity, close proximity to the PRoW network and potential for coalescence and urban sprawl, habitat sites, priority habitats, habitat distinctiveness, loss of undeveloped land, 'best and most versatile' (BMV) agricultural land, coinciding with mineral safeguarding areas (MSAs) and areas of surface water flood risk (SWFR); and access to healthcare facilities, schools, the local cycle network and railway network. (p 40)</p> <p>There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work. (p 21)</p> <p>Trends in transport choice are unlikely to change significantly, and private car use would continue to increase as the selected method of transport to work, with potential adverse impacts on air quality in the borough."(p 23)</p> <p>Considers the local and cumulative significance of soil loss alongside the ecological implications:</p> <p>"Loss of soil resources, BMV land and ecosystem services The proposed allocations would cumulatively result in the loss of up to approximately 342ha of previously undeveloped land, including up to 263ha of BMV agricultural land. The proposed development would be expected to reduce the ability of the local soil biome to effectively provide ecosystem services, to some extent. Additionally, the loss of permeable soils could potentially increase the risk of flooding and result in a loss of biodiversity across the Plan area. Loss of soil can also result in an increase in soil erosion and have subsequent impacts on agricultural yield.(p 68) The majority of the borough is ALC Grade 3 soil, with areas of ALC Grade 2 scattered across the borough. Grade 2 and potentially Grade 3 represents some of the borough's BMV agricultural land and should be conserved wherever possible (p 21)</p> <p>A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of BMV land to be lost as a result of the development proposed in the Local Plan." (p 59)'</p> <p>Other Advice</p> <p>Further general advice is provided within Natural England Advice Note – Local Plans February 2024, attached at (Appendix A) - see attachment</p>

Newcastle under Lyme draft local plan – regulation 18: Consultation response

Dear Sir/Madam,

The following is a robust objection to all developments on green field sites covering all the proposals within Audley Parish and many more elsewhere as recommended in the draft local plan. In writing this response, I am aware of the need to adopt a local plan in order for local authorities to maintain democratic control of development in the area. This requirement appears to be a symptom of the subsection in the NPPF titled “The presumption in favour of sustainable development” (paragraphs 11-14). However, from a resident’s point of view, this gives the impression that local authorities must demonstrate a willingness to develop a particular area in order to avoid it being developed. This is, in essence, a commitment to eventual development even if it is not needed. And this is a source of great anxiety amongst residents that undesirable development is out of control, a situation clearly being fuelled by the existence of paragraphs 11-14. On this basis therefore, this subsection of the NPPF needs to be challenged.

This response may differ from others in that it comments on local planning within a strategic context. As I see it, there are three main types of development, which are likely to blight the future generations in the UK: (i) infrastructure (example, HS2), (ii) commercial (examples, AB2 and TK30 in the NuLBC local plan) and (iii) residential (example, recent housing developments either side of the A513, Beaconside, Stafford). Infrastructure is within the remit of Westminster rather than local authorities, so that is not a particular concern here. My main focus is encroachment of developments, both residential and commercial, in green spaces allowed for in the draft local plan. And any new developments in rural areas will, at the very least, result in:

- Loss of light or overshadowing

- Increased risk of flooding due to ‘run-off’

- Loss of visual amenity

- Limitations to physical activity

- Generation of extra traffic, overloading already busy local roads

- Extra noise, pollution, disturbance and danger from increased traffic

- Loss of trees and other biodiversity – bats, lizards etc.

- Loss of natural carbon capture

- Decrease in food production capacity

Increased local population placing further pressure on local schools, GP’s surgeries and other services, which are already oversubscribed.

The United Kingdom as a whole is currently gripped by a pandemic of overdevelopment, which threatens nature and the already depleted biodiversity we see in this country. And it has now reached the stage where it should be considered a national emergency. I for one, do not feel that I have any influence over the shape of our surroundings. There are numerous drivers for this trend many of which are not being addressed by government at any level. At the heart of this is a significant disconnection between the opinions of politicians and public as to what is actually needed. There appears to be cross-party support for activities driving economic growth at all costs, irrespective of the consequences to the natural environment. Aggravating this divide is the aforementioned paragraphs 11-14 of the NPPF. At a local level, what is not in doubt, is that whenever there is land removed from the green belt there is rarely, if ever, an equivalent area so returned, so the process is irreversible. And in the absence of any agreed lower limit on the area of protected green spaces within the UK, no release of green belt land, or development on green spaces, can be considered sustainable. Unless, of course, the use of agricultural land for just that purpose is also considered “developed”, i.e. it has an economic and sustainable use. And the local plan does appear to acknowledge this¹, so why not include agricultural use into the local plan implying no change in particular areas? If this is not the case, we are committed to a process where the end point is a UK completely covered in tarmac and concrete. Anyone arguing against this interpretation needs to state and justify precisely where that end point is. If they cannot, this renders the term ‘sustainable development’ an oxymoron.

One particular trend of major concern is the growing UK population. At the time of writing this stands at just under 69 million, and is set to reach 74 million before 2050. Studies in the US (Pimental and Giampietro, 1994; Lal, 1989) suggest that comfortable/sustainable living requires 0.5 Ha (1.2 acres) per capita. If we are generous, sustainable living in the UK was possible with a population of 57 million, a figure I remember from the late 1960s. With a total area of the UK at just over 60 million acres, a land area of one acre per capita for sustainable living in the UK seems feasible. As we have seen, anything more puts a strain on the environment as a whole. On this basis therefore, the UK is currently overpopulated by about 15%, and there appears to be no initiatives to address this issue. On this point, Westminster appears to be in a state of denial, thus fuelling the current avalanche of overdevelopment nationwide. Residential developments have a knock on effect by requiring other types of development to provide infrastructure, services and employment. Notwithstanding overpopulation, this gives the impression that there is not enough housing stock to accommodate the current population. Recent data, in the form of an infographic (“Housing crisis fact check”) from the Community Planning Alliance², convincingly shows that this is far from the case. In short, what is perceived as the current “housing shortage” is little more than a myth propagated by the construction industry and related interests. This is justified by item 3 on the infographic stating that “there are 1.5 million more dwellings than households” in England and Wales alone^{3,4}. On this basis therefore, no further house building is needed in the UK subject to efforts addressing projected population growth. In other words, what we have at present is a substantial housing surplus. Therefore, locally there are strong grounds for objections to development of the sites

AB12(p74)

AB15(p75)

AB32(p75)

AB33(p75).

Ignoring the 1.5 million surplus dwellings nationwide, the current (regulation18) draft of the local plan quotes a minimum housing requirement of 7160 in the Borough over the period 2020-40, of which 1206 are already completed. Of these, only 40% are to be 'affordable' (1-2 bedroom dwellings). Therefore, of the minimum requirement, only 2864 dwellings will be affordable. If we assume that those already built are affordable (they probably aren't) then the borough will only need 1658 homes built between now and 2040. This is because, due to being beyond affordability, most locals will be unable to buy or rent the other 60%. Therefore, they are not needed, and the proposed mix is entirely incompatible with general affordability. Given the surplus dwellings throughout England and Wales however, it is likely that none will be needed, especially considering the imminent removal of mandatory housing targets by the DLUHC under Michael Gove MP, and any specific affordable housing needs can be catered for by using brownfield sites only. All of the green areas in the local plan could therefore be planned in for their present use.

Infographic from the Community Planning Alliance summarising UK housing stock in relation to the population.

Another statistic from the infographic is that nationwide we could build up to 1.2 million homes on brownfield sites (item 2)2,5. And like any other local authority, NuLBC is legally obliged to and does keep a register of its brownfield sites, although it is likely that some may slip through the net.

If there is an imperative, it is to increase further democratic control of the development process both locally and nationally. And both local and national authorities would do well to remember that they have a responsibility to the people they represent and not to the commercial viability of developers, the construction industry or overseas investors. In short, no new housing development is required, especially given that the borough has exceeded its housing targets in recent years. This calls into question the need for housing developments outside Audley Parish mentioned in the local plan. These include

BL18 (p75)

CT1 (p76, 750 dwellings)

RC8 (p76, 6 dwellings, potential flood risk.)

KS3 (p77)

LW53 (p77)

MD29 (p78, 150 dwellings, likely to conflict with HS2 construction?)

NC13 (p78)

NC77 (p78)

SP11 (p78, 900 dwellings, former Keele golf course)

SP12 (p79)

SP23 (p79)

TB19 (p79)

TB23 (p79, 124 dwellings, adjacent to Walley's Quarry.)

TK10 (p80)

TK17 (p80)

TK27 (p80).

Other sites which may also be questioned are

KS17 (p77, would include loss of playing fields and other village amenities. This may be classed as infill.)

KL13 (p77,93, part built already within the grounds of Keele University Campus).

The other class of developments locally is commercial. All too often we hear in the news from both local and Westminster sources, the mantra that economic growth is the imperative. But the actual imperative is stability, and we have reached the point where growth at any cost has become toxic, especially given the impossibility of unrestrained growth in a land of finite area. Have our political masters never heard of the circular economy?

Since the beginning of deindustrialisation in the 1980s, the diversity of employment opportunities has declined. We have seen an unhealthy move away from manufacturing/production of goods that we need as a nation, to one entirely reliant on trade with overseas partners, leaving us open to blackmail and the current spike of rampant imported inflation. Look what happened during lockdown. Over recent decades this has led to the demolition of old factories for residential developments and the rise of logistics centres (warehousing) for the temporary storage of imported goods, which will ultimately be operated by robots and AIs leading to even less employment. The problem with warehousing of course is its large consumption of land area. My question is, what is the driver for the proposed "big box" developments on AB2 and TK30 locally? Both of these proposals lie entirely within the greenbelt, although the TK30 land has already been quarried in parts. Neither of these proposals is either desirable or needed. However, if we are forced to accept one or the other then TK30, being about 5% smaller, is the lesser of two evils. With the green light given to the development of the 44 Ha Chatterley Valley site on Peacock Hay Road, and the numerous empty warehouses existing across the potteries, North Staffordshire and Cheshire East. It is dubious to say the least to claim that either AB2 or TK30 are needed. These sites are 70 Ha and 66 Ha respectively. However, in the recently published "Housing and Economic Needs Assessment Update", the borough as a whole only needs a maximum of 34 Ha6. So why are we saddled with 154 Ha total covered by AB2, TK30 and KL15?

If the local plan caters for agricultural developments, AB2 and TK30 could be planned for their existing use. The majority of the area covered by these sites is high grade (3a) agricultural land. In the case of TK30 the quarried areas could be reclaimed for agriculture or, if this proves difficult, used in other ways to enhance biodiversity. If the land in question is council owned, and the motivation is to sell off council assets, then once sold, they cannot be sold again, and any control is lost. Moreover, once farmland is developed for other purposes then it is near to impossible for it to be reclaimed later for that use – and so the ratchet inexorably turns. On this

	<p>basis therefore, I would urge the LPA to remove the warehousing proposals AB2 and TK30 from the local plan.</p> <p>The purpose of this consultation is to supply feedback to the Borough Council. Another question is, does Westminster similarly consult with local authorities on planning issues, or is there any other mechanism where local councils can supply feedback to Westminster, providing a better feel for the mood of the nation? If so, why do we not see a root and branch reform of the NPPF rather than the tinkering around the edges approach seen in the July 2021 version? Most especially, there should be a removal of paragraphs 11-14 and its supporting statements elsewhere in the document, which is tantamount to a developer's charter. And there should be more flexibility within the NPPF allowing local plans to include parcels of land for their current purpose, given that there is almost none in this country that is not currently in use. As far as I can see this plan is nowhere near compatible with efforts required to address the current climate crisis. Moreover, given their scale, the proposed developments represent too greater shock to the environment and local communities over the short 20-year period suggested for their completion. And with the sufficient housing and unused commercial sites we already have, there is no need for any encroachment into our green spaces.</p> <p>Yours sincerely Jim Austin</p> <p>Notes</p> <ol style="list-style-type: none"> 1. Q4 Part of document	Policy
Q4 Policy	RC14
Q5 Legally compliant	No
Q5 Sound	No
Q6 Details	<p>As a prime example of how the current Draft Plan has 'missed the boat' the following example demonstrates a totally discarded site which is surely amongst others which need a more justified approach and recognition rather than a simplistic dismissal.</p> <p>This particular site has been the subject of SHELAA submissions dating back to 2008 (ref 422) and has received analysis under the Green Belt Assessment (Part 2) Study as Site RC14.</p> <p>The aforementioned Assessment was very detailed in nature and in recognition of the site being assessed as making a weak contribution to Green Belt purposes and was recommended for further consideration. It's potential for sustainable small-scale growth adjacent to Kidsgrove and its local facilities was recognised.</p> <p>The site is clearly Brownfield / previously developed land with a substantial former farm complex of substantial buildings now in commercial use plus associated substantial hard standings. The site should form part of the Brownfield Land Register for Newcastle Borough.</p> <p>The Newcastle Borough Regulation 18 First Draft Local Plan (June 2023) Exceptional Circumstances for Green Belt release sets an important context. At 5.10 it states 'suitable previously developed land was prioritised for development during the site selection process'. It then refers to constraints typically associated with development of brownfield sites, such as lack of economic viability and land contamination. In relation to Site RC 14 – which does not form part of the Plan; 7.1 of the report confirms urban and brownfield sites have received site allocation focus, and that 'wherever a brownfield site was assessed to be suitable, this land has been allocated'. This is clearly not the case with Site RC 14. Perversely the Draft Plan at states that 'the lack of brownfield land ... within the urban boundary has resulted in the need to consider sites beyond the urban boundary'. This site being cross-boundary demonstrates an ever-greater justification for allocation in relation to Stoke's substantial housing requirements. Further, smaller sites such are critical to meeting early 5 year housing land supply requirements, with large strategic sites proven to have long lead-in times to delivery. This site could be fully developed within 3 years; at most 5 years. This is an example of how the Site selection process is flawed.</p> <p>The Draft Local Plan is scant in relation to its Spatial Growth reasoning, but clearly emanates from the more fulsome Issues & Options which showed strong reasoning behind Green Belt release around Kidsgrove, the Borough's second largest settlement with strong connectivity. The Green Belt Assessment Study in this context recommended that four sites (NC4, NC5, NC13 and RC14) be taken forward for further consideration. None of these sites are proposed allocations – only site KG6 is promoted in the Plan as offering estimated 6 dwellings. The Draft Plan Policy PSD 3: Settlement Hierarchy promoting substantial growth of Kidsgrove Urban Centre is totally imbalanced in this respect.</p> <p>The NPPF has a whole range of relevance to the allocation of Site RC 14. National policy calls for 'a variety and mix of land' (Para 60), a priority for sites that are deliverable in 5 years (69a) and that at least 10% of housing requirements should be made up of small sites (70) in recognition of main supply and delivery of housing requirements (74-77). Paras 24-27 highlight the need for joint co-operation in Plan making and the tests of soundness at Para 35. Para 1 refers to making effective use of land and emphasis to the role of small sites.</p> <p>The Levelling up & Regeneration Bill 2023 fingerposts 'local planning authorities to deliver as many houses as possible on land which has been previously developed'. Further, the Government announced on 13 February 2024 an even greater emphasis on prioritising such land and respect this in policy setting. They stated that 'the brownfield presumption will be strictly enforced' and announced 'a rocket boost to bringing forward as much previously used land as possible to deliver much needed housing'. This is stated to be followed up by an even stronger 'brownfield first presumption on development' through a planned revised NPPF and National Development Management Policies in 2024.</p> <p>The Draft Plan overlooks brownfield development opportunities in favour of in many instances open green belt sites with no logical circumstance in favour of allocation.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)

Q9 Hearing reasons	<p>As a professionally qualified Planner I have been commissioned to represent a landowner in the Local Plan process for both Newcastle Borough and Stoke-on-Trent City Councils. I have significant experience in the Local Plan process including Plan Examinations.</p> <p>I wish to be offered the opportunity of further developing this representation through suitable topic hearing statements on key matters and issues, and appearance at Plan Examination sessions to ensure in particular participation on Plan soundness.</p>

Newcastle under Lyme draft local plan – regulation 18: Consultation response

Dear Sir/Madam,

The following is a robust objection to all developments on green field sites covering all the proposals within Audley Parish and many more elsewhere as recommended in the draft local plan. In writing this response, I am aware of the need to adopt a local plan in order for local authorities to maintain democratic control of development in the area. This requirement appears to be a symptom of the subsection in the NPPF titled “The presumption in favour of sustainable development” (paragraphs 11-14). However, from a resident’s point of view, this gives the impression that local authorities must demonstrate a willingness to develop a particular area in order to avoid it being developed. This is, in essence, a commitment to eventual development even if it is not needed. And this is a source of great anxiety amongst residents that undesirable development is out of control, a situation clearly being fuelled by the existence of paragraphs 11-14. On this basis therefore, this subsection of the NPPF needs to be challenged.

This response may differ from others in that it comments on local planning within a strategic context. As I see it, there are three main types of development, which are likely to blight the future generations in the UK: (i) infrastructure (example, HS2), (ii) commercial (examples, AB2 and TK30 in the NuLBC local plan) and (iii) residential (example, recent housing developments either side of the A513, Beaconside, Stafford). Infrastructure is within the remit of Westminster rather than local authorities, so that is not a particular concern here. My main focus is encroachment of developments, both residential and commercial, in green spaces allowed for in the draft local plan. And any new developments in rural areas will, at the very least, result in:

- Loss of light or overshadowing

- Increased risk of flooding due to ‘run-off’

- Loss of visual amenity

- Limitations to physical activity

- Generation of extra traffic, overloading already busy local roads

- Extra noise, pollution, disturbance and danger from increased traffic

- Loss of trees and other biodiversity – bats, lizards etc.

- Loss of natural carbon capture

- Decrease in food production capacity

Increased local population placing further pressure on local schools, GP’s surgeries and other services, which are already oversubscribed.

The United Kingdom as a whole is currently gripped by a pandemic of overdevelopment, which threatens nature and the already depleted biodiversity we see in this country. And it has now reached the stage where it should be considered a national emergency. I for one, do not feel that I have any influence over the shape of our surroundings. There are numerous drivers for this trend many of which are not being addressed by government at any level. At the heart of this is a significant disconnection between the opinions of politicians and public as to what is actually needed. There appears to be cross-party support for activities driving economic growth at all costs, irrespective of the consequences to the natural environment. Aggravating this divide is the aforementioned paragraphs 11-14 of the NPPF. At a local level, what is not in doubt, is that whenever there is land removed from the green belt there is rarely, if ever, an equivalent area so returned, so the process is irreversible. And in the absence of any agreed lower limit on the area of protected green spaces within the UK, no release of green belt land, or development on green spaces, can be considered sustainable. Unless, of course, the use of agricultural land for just that purpose is also considered “developed”, i.e. it has an economic and sustainable use. And the local plan does appear to acknowledge this¹, so why not include agricultural use into the local plan implying no change in particular areas? If this is not the case, we are committed to a process where the end point is a UK completely covered in tarmac and concrete. Anyone arguing against this interpretation needs to state and justify precisely where that end point is. If they cannot, this renders the term ‘sustainable development’ an oxymoron.

One particular trend of major concern is the growing UK population. At the time of writing this stands at just under 69 million, and is set to reach 74 million before 2050. Studies in the US (Pimental and Giampietro, 1994; Lal, 1989) suggest that comfortable/sustainable living requires 0.5 Ha (1.2 acres) per capita. If we are generous, sustainable living in the UK was possible with a population of 57 million, a figure I remember from the late 1960s. With a total area of the UK at just over 60 million acres, a land area of one acre per capita for sustainable living in the UK seems feasible. As we have seen, anything more puts a strain on the environment as a whole. On this basis therefore, the UK is currently overpopulated by about 15%, and there appears to be no initiatives to address this issue. On this point, Westminster appears to be in a state of denial, thus fuelling the current avalanche of overdevelopment nationwide. Residential developments have a knock on effect by requiring other types of development to provide infrastructure, services and employment. Notwithstanding overpopulation, this gives the impression that there is not enough housing stock to accommodate the current population. Recent data, in the form of an infographic (“Housing crisis fact check”) from the Community Planning Alliance², convincingly shows that this is far from the case. In short, what is perceived as the current “housing shortage” is little more than a myth propagated by the construction industry and related interests. This is justified by item 3 on the infographic stating that “there are 1.5 million more dwellings than households” in England and Wales alone^{3,4}. On this basis therefore, no further house building is needed in the UK subject to efforts addressing projected population growth. In other words, what we have at present is a substantial housing surplus. Therefore, locally there are strong grounds for objections to development of the sites

AB12(p74)

AB15(p75)

AB32(p75)

AB33(p75).

Ignoring the 1.5 million surplus dwellings nationwide, the current (regulation18) draft of the local plan quotes a minimum housing requirement of 7160 in the Borough over the period 2020-40, of which 1206 are already completed. Of these, only 40% are to be 'affordable' (1-2 bedroom dwellings). Therefore, of the minimum requirement, only 2864 dwellings will be affordable. If we assume that those already built are affordable (they probably aren't) then the borough will only need 1658 homes built between now and 2040. This is because, due to being beyond affordability, most locals will be unable to buy or rent the other 60%. Therefore, they are not needed, and the proposed mix is entirely incompatible with general affordability. Given the surplus dwellings throughout England and Wales however, it is likely that none will be needed, especially considering the imminent removal of mandatory housing targets by the DLUHC under Michael Gove MP, and any specific affordable housing needs can be catered for by using brownfield sites only. All of the green areas in the local plan could therefore be planned in for their present use.

Infographic from the Community Planning Alliance summarising UK housing stock in relation to the population.

Another statistic from the infographic is that nationwide we could build up to 1.2 million homes on brownfield sites (item 2)2,5. And like any other local authority, NuLBC is legally obliged to and does keep a register of its brownfield sites, although it is likely that some may slip through the net.

If there is an imperative, it is to increase further democratic control of the development process both locally and nationally. And both local and national authorities would do well to remember that they have a responsibility to the people they represent and not to the commercial viability of developers, the construction industry or overseas investors. In short, no new housing development is required, especially given that the borough has exceeded its housing targets in recent years. This calls into question the need for housing developments outside Audley Parish mentioned in the local plan. These include

BL18 (p75)

CT1 (p76, 750 dwellings)

RC8 (p76, 6 dwellings, potential flood risk.)

KS3 (p77)

LW53 (p77)

MD29 (p78, 150 dwellings, likely to conflict with HS2 construction?)

NC13 (p78)

NC77 (p78)

SP11 (p78, 900 dwellings, former Keele golf course)

SP12 (p79)

SP23 (p79)

TB19 (p79)

TB23 (p79, 124 dwellings, adjacent to Walley's Quarry.)

TK10 (p80)

TK17 (p80)

TK27 (p80).

Other sites which may also be questioned are

KS17 (p77, would include loss of playing fields and other village amenities. This may be classed as infill.)

KL13 (p77,93, part built already within the grounds of Keele University Campus).

The other class of developments locally is commercial. All too often we hear in the news from both local and Westminster sources, the mantra that economic growth is the imperative. But the actual imperative is stability, and we have reached the point where growth at any cost has become toxic, especially given the impossibility of unrestrained growth in a land of finite area. Have our political masters never heard of the circular economy?

Since the beginning of deindustrialisation in the 1980s, the diversity of employment opportunities has declined. We have seen an unhealthy move away from manufacturing/production of goods that we need as a nation, to one entirely reliant on trade with overseas partners, leaving us open to blackmail and the current spike of rampant imported inflation. Look what happened during lockdown. Over recent decades this has led to the demolition of old factories for residential developments and the rise of logistics centres (warehousing) for the temporary storage of imported goods, which will ultimately be operated by robots and AIs leading to even less employment. The problem with warehousing of course is its large consumption of land area. My question is, what is the driver for the proposed "big box" developments on AB2 and TK30 locally? Both of these proposals lie entirely within the greenbelt, although the TK30 land has already been quarried in parts. Neither of these proposals is either desirable or needed. However, if we are forced to accept one or the other then TK30, being about 5% smaller, is the lesser of two evils. With the green light given to the development of the 44 Ha Chatterley Valley site on Peacock Hay Road, and the numerous empty warehouses existing across the potteries, North Staffordshire and Cheshire East. It is dubious to say the least to claim that either AB2 or TK30 are needed. These sites are 70 Ha and 66 Ha respectively. However, in the recently published "Housing and Economic Needs Assessment Update", the borough as a whole only needs a maximum of 34 Ha6. So why are we saddled with 154 Ha total covered by AB2, TK30 and KL15?

If the local plan caters for agricultural developments, AB2 and TK30 could be planned for their existing use. The majority of the area covered by these sites is high grade (3a) agricultural land. In the case of TK30 the quarried areas could be reclaimed for agriculture or, if this proves difficult, used in other ways to enhance biodiversity. If the land in question is council owned, and the motivation is to sell off council assets, then once sold, they cannot be sold again, and any control is lost. Moreover, once farmland is developed for other purposes then it is near to impossible for it to be reclaimed later for that use – and so the ratchet inexorably turns. On this

basis therefore, I would urge the LPA to remove the warehousing proposals AB2 and TK30 from the local plan.

The purpose of this consultation is to supply feedback to the Borough Council. Another question is, does Westminster similarly consult with local authorities on planning issues, or is there any other mechanism where local councils can supply feedback to Westminster, providing a better feel for the mood of the nation? If so, why do we not see a root and branch reform of the NPPF rather than the tinkering around the edges approach seen in the July 2021 version? Most especially, there should be a removal of paragraphs 11-14 and its supporting statements elsewhere in the document, which is tantamount to a developer's charter. And there should be more flexibility within the NPPF allowing local plans to include parcels of land for their current purpose, given that there is almost none in this country that is not currently in use. As far as I can see this plan is nowhere near compatible with efforts required to address the current climate crisis. Moreover, given their scale, the proposed developments represent too greater shock to the environment and local communities over the short 20-year period suggested for their completion. And with the sufficient housing and unused commercial sites we already have, there is no need for any encroachment into our green spaces.

Yours sincerely
Jim Austin

Newcastle under Lyme draft local plan – regulation 18: Consultation response

Dear Sir/Madam,

The following is a robust objection to all developments on green field sites covering all the proposals within Audley Parish and many more elsewhere as recommended in the draft local plan. In writing this response, I am aware of the need to adopt a local plan in order for local authorities to maintain democratic control of development in the area. This requirement appears to be a symptom of the subsection in the NPPF titled “The presumption in favour of sustainable development” (paragraphs 11-14). However, from a resident’s point of view, this gives the impression that local authorities must demonstrate a willingness to develop a particular area in order to avoid it being developed. This is, in essence, a commitment to eventual development even if it is not needed. And this is a source of great anxiety amongst residents that undesirable development is out of control, a situation clearly being fuelled by the existence of paragraphs 11-14. On this basis therefore, this subsection of the NPPF needs to be challenged.

This response may differ from others in that it comments on local planning within a strategic context. As I see it, there are three main types of development, which are likely to blight the future generations in the UK: (i) infrastructure (example, HS2), (ii) commercial (examples, AB2 and TK30 in the NuLBC local plan) and (iii) residential (example, recent housing developments either side of the A513, Beaconside, Stafford). Infrastructure is within the remit of Westminster rather than local authorities, so that is not a particular concern here. My main focus is encroachment of developments, both residential and commercial, in green spaces allowed for in the draft local plan. And any new developments in rural areas will, at the very least, result in:

- Loss of light or overshadowing

- Increased risk of flooding due to ‘run-off’

- Loss of visual amenity

- Limitations to physical activity

- Generation of extra traffic, overloading already busy local roads

- Extra noise, pollution, disturbance and danger from increased traffic

- Loss of trees and other biodiversity – bats, lizards etc.

- Loss of natural carbon capture

- Decrease in food production capacity

Increased local population placing further pressure on local schools, GP’s surgeries and other services, which are already oversubscribed.

The United Kingdom as a whole is currently gripped by a pandemic of overdevelopment, which threatens nature and the already depleted biodiversity we see in this country. And it has now reached the stage where it should be considered a national emergency. I for one, do not feel that I have any influence over the shape of our surroundings. There are numerous drivers for this trend many of which are not being addressed by government at any level. At the heart of this is a significant disconnection between the opinions of politicians and public as to what is actually needed. There appears to be cross-party support for activities driving economic growth at all costs, irrespective of the consequences to the natural environment. Aggravating this divide is the aforementioned paragraphs 11-14 of the NPPF. At a local level, what is not in doubt, is that whenever there is land removed from the green belt there is rarely, if ever, an equivalent area so returned, so the process is irreversible. And in the absence of any agreed lower limit on the area of protected green spaces within the UK, no release of green belt land, or development on green spaces, can be considered sustainable. Unless, of course, the use of agricultural land for just that purpose is also considered “developed”, i.e. it has an economic and sustainable use. And the local plan does appear to acknowledge this¹, so why not include agricultural use into the local plan implying no change in particular areas? If this is not the case, we are committed to a process where the end point is a UK completely covered in tarmac and concrete. Anyone arguing against this interpretation needs to state and justify precisely where that end point is. If they cannot, this renders the term ‘sustainable development’ an oxymoron.

One particular trend of major concern is the growing UK population. At the time of writing this stands at just under 69 million, and is set to reach 74 million before 2050. Studies in the US (Pimental and Giampietro, 1994; Lal, 1989) suggest that comfortable/sustainable living requires 0.5 Ha (1.2 acres) per capita. If we are generous, sustainable living in the UK was possible with a population of 57 million, a figure I remember from the late 1960s. With a total area of the UK at just over 60 million acres, a land area of one acre per capita for sustainable living in the UK seems feasible. As we have seen, anything more puts a strain on the environment as a whole. On this basis therefore, the UK is currently overpopulated by about 15%, and there appears to be no initiatives to address this issue. On this point, Westminster appears to be in a state of denial, thus fuelling the current avalanche of overdevelopment nationwide. Residential developments have a knock on effect by requiring other types of development to provide infrastructure, services and employment. Notwithstanding overpopulation, this gives the impression that there is not enough housing stock to accommodate the current population. Recent data, in the form of an infographic (“Housing crisis fact check”) from the Community Planning Alliance², convincingly shows that this is far from the case. In short, what is perceived as the current “housing shortage” is little more than a myth propagated by the construction industry and related interests. This is justified by item 3 on the infographic stating that “there are 1.5 million more dwellings than households” in England and Wales alone^{3,4}. On this basis therefore, no further house building is needed in the UK subject to efforts addressing projected population growth. In other words, what we have at present is a substantial housing surplus. Therefore, locally there are strong grounds for objections to development of the sites

AB12(p74)

AB15(p75)

AB32(p75)

AB33(p75).

Ignoring the 1.5 million surplus dwellings nationwide, the current (regulation18) draft of the local plan quotes a minimum housing requirement of 7160 in the Borough over the period 2020-40, of which 1206 are already completed. Of these, only 40% are to be 'affordable' (1-2 bedroom dwellings). Therefore, of the minimum requirement, only 2864 dwellings will be affordable. If we assume that those already built are affordable (they probably aren't) then the borough will only need 1658 homes built between now and 2040. This is because, due to being beyond affordability, most locals will be unable to buy or rent the other 60%. Therefore, they are not needed, and the proposed mix is entirely incompatible with general affordability. Given the surplus dwellings throughout England and Wales however, it is likely that none will be needed, especially considering the imminent removal of mandatory housing targets by the DLUHC under Michael Gove MP, and any specific affordable housing needs can be catered for by using brownfield sites only. All of the green areas in the local plan could therefore be planned in for their present use.

Infographic from the Community Planning Alliance summarising UK housing stock in relation to the population.

Another statistic from the infographic is that nationwide we could build up to 1.2 million homes on brownfield sites (item 2)2,5. And like any other local authority, NuLBC is legally obliged to and does keep a register of its brownfield sites, although it is likely that some may slip through the net.

If there is an imperative, it is to increase further democratic control of the development process both locally and nationally. And both local and national authorities would do well to remember that they have a responsibility to the people they represent and not to the commercial viability of developers, the construction industry or overseas investors. In short, no new housing development is required, especially given that the borough has exceeded its housing targets in recent years. This calls into question the need for housing developments outside Audley Parish mentioned in the local plan. These include

BL18 (p75)

CT1 (p76, 750 dwellings)

RC8 (p76, 6 dwellings, potential flood risk.)

KS3 (p77)

LW53 (p77)

MD29 (p78, 150 dwellings, likely to conflict with HS2 construction?)

NC13 (p78)

NC77 (p78)

SP11 (p78, 900 dwellings, former Keele golf course)

SP12 (p79)

SP23 (p79)

TB19 (p79)

TB23 (p79, 124 dwellings, adjacent to Walley's Quarry.)

TK10 (p80)

TK17 (p80)

TK27 (p80).

Other sites which may also be questioned are

KS17 (p77, would include loss of playing fields and other village amenities. This may be classed as infill.)

KL13 (p77,93, part built already within the grounds of Keele University Campus).

The other class of developments locally is commercial. All too often we hear in the news from both local and Westminster sources, the mantra that economic growth is the imperative. But the actual imperative is stability, and we have reached the point where growth at any cost has become toxic, especially given the impossibility of unrestrained growth in a land of finite area. Have our political masters never heard of the circular economy?

Since the beginning of deindustrialisation in the 1980s, the diversity of employment opportunities has declined. We have seen an unhealthy move away from manufacturing/production of goods that we need as a nation, to one entirely reliant on trade with overseas partners, leaving us open to blackmail and the current spike of rampant imported inflation. Look what happened during lockdown. Over recent decades this has led to the demolition of old factories for residential developments and the rise of logistics centres (warehousing) for the temporary storage of imported goods, which will ultimately be operated by robots and AIs leading to even less employment. The problem with warehousing of course is its large consumption of land area. My question is, what is the driver for the proposed "big box" developments on AB2 and TK30 locally? Both of these proposals lie entirely within the greenbelt, although the TK30 land has already been quarried in parts. Neither of these proposals is either desirable or needed. However, if we are forced to accept one or the other then TK30, being about 5% smaller, is the lesser of two evils. With the green light given to the development of the 44 Ha Chatterley Valley site on Peacock Hay Road, and the numerous empty warehouses existing across the potteries, North Staffordshire and Cheshire East. It is dubious to say the least to claim that either AB2 or TK30 are needed. These sites are 70 Ha and 66 Ha respectively. However, in the recently published "Housing and Economic Needs Assessment Update", the borough as a whole only needs a maximum of 34 Ha6. So why are we saddled with 154 Ha total covered by AB2, TK30 and KL15?

If the local plan caters for agricultural developments, AB2 and TK30 could be planned for their existing use. The majority of the area covered by these sites is high grade (3a) agricultural land. In the case of TK30 the quarried areas could be reclaimed for agriculture or, if this proves difficult, used in other ways to enhance biodiversity. If the land in question is council owned, and the motivation is to sell off council assets, then once sold, they cannot be sold again, and any control is lost. Moreover, once farmland is developed for other purposes then it is near to impossible for it to be reclaimed later for that use – and so the ratchet inexorably turns. On this

basis therefore, I would urge the LPA to remove the warehousing proposals AB2 and TK30 from the local plan.

The purpose of this consultation is to supply feedback to the Borough Council. Another question is, does Westminster similarly consult with local authorities on planning issues, or is there any other mechanism where local councils can supply feedback to Westminster, providing a better feel for the mood of the nation? If so, why do we not see a root and branch reform of the NPPF rather than the tinkering around the edges approach seen in the July 2021 version? Most especially, there should be a removal of paragraphs 11-14 and its supporting statements elsewhere in the document, which is tantamount to a developer's charter. And there should be more flexibility within the NPPF allowing local plans to include parcels of land for their current purpose, given that there is almost none in this country that is not currently in use. As far as I can see this plan is nowhere near compatible with efforts required to address the current climate crisis. Moreover, given their scale, the proposed developments represent too greater shock to the environment and local communities over the short 20-year period suggested for their completion. And with the sufficient housing and unused commercial sites we already have, there is no need for any encroachment into our green spaces.

Yours sincerely
Jim Austin

Q6 Details	<p>Dear Sir/ Madam,</p> <p>Re. Building plans KS18 - houses on parking area adjacent to Ex-serviceman's Club, High Street, Knutton</p> <p>I am writing on behalf of the Parochial Church Council (PCC) of St Mary's Church, Knutton. The PCC are concerned that the above development will affect parking areas that the Church currently utilises. Parking outside the Church not only causes inconvenience to our neighbours, but is also a serious safety issue in that it causes congestion on the very busy Church Lane.</p> <p>We have, for a considerable time done our best to mitigate this by encouraging people who attend our Church, for services, events, weddings and funerals, to park on the carpark adjacent to the Ex-Servicemen's club, accessed from High Street Knutton, so as to alleviate the situation. The Church was built 150 years ago, when parking was not an issue, but times change. Our Church is still very much an integral part of the Knutton community and we feel that we should make it as accessible as possible, in a safe and sensible way. Many of our congregation and visitors struggle to walk far.</p> <p>We are seeking reassurance that the proposed building works and subsequent dwellings will not take away the only parking area near to us. We hope that the council take our concern seriously and are able to alleviate our concerns</p> <p>Yours faithfully</p> <p>Susan Newman (Secretary to the PCC)</p>

Q4 Part of document	Policy
Q4 Policy	LW53
Q6 Details	<p>I consider that the draft plan is not sound, in particular, with reference to page 129 namely "Policy LW53 Land at Corner of Muckleston Wood Lane, Loggerheads". This is because the allocation of site LW53 for future housing development is contrary to and inconsistent with current national policy namely, the National Planning Policy Framework 2023 ("the NPPF 2023").</p> <p>I also challenge the soundness of the draft local plan with regard to "Policy PSD3: Distribution of Development" (page 16 of the draft plan) in that the numbers within this Policy have not been justified.</p> <p>Summary of Reasons</p> <ol style="list-style-type: none"> 1 LW53 is not a "sustainable location" for future housing development and is therefore contrary to national policy. This view was endorsed by the Council's Planning Committee on the 27th February 2024, who refused outline planning permission for the development of housing on this same site for the following reason regarding sustainability: <ul style="list-style-type: none"> - The site is not considered to be a sustainable location by virtue of the lack of supporting infrastructure available locally to support the development, limited public transport facilities and the need to travel by car to access higher level services. <p>The Council has already determined that this site is not within a sustainable location; consequently, and for the above reasons, the inclusion of this site for housing development contravenes the NPPF 2023.</p> <p>In addition, the Council's own evidence document namely, the "Rural Area Topic Paper" (June 2021 topic paper-paragraph 124) notes that Loggerheads the following:</p>

	<p>“Loggerheads - G.P access is dependent on travel to Ashley and does not have a direct bus service to the hospital. Loggerheads is the least accessible to jobs by public transport (to Newcastle-under-Lyme) Loggerheads has very mixed accessibility in terms of travel times to services and facilities”.</p> <p>The above text and the recent refusal of this site for housing development supports the view that it is not a sustainable location and development will only encourage reliance on private motor vehicle due to the lack of poor public transport and access to higher leisure/retail services.</p> <p>In conclusion, LW53 is not considered to be a site within a sustainable location and is contrary to the NPPF 2023.</p> <ol style="list-style-type: none"> (i) LW53 is currently in use as agricultural farmland and consists of best and most versatile agricultural land. The UI proposed development would therefore result in the loss of best and most versatile agricultural land contrary to Paragraph 180 of the NPPF (2023). This point was recognised by the Council's Planning Committee and was one of the reasons for the refusal of housing on this site. (ii) The selection of this green field site for housing is also contrary to the underlying national policy principle of prioritising brownfield and other under-utilised urban sites. <ol style="list-style-type: none"> LW53 is adjacent to the Grade II listed building of White House Farm. The recent planning application for this site recognised that the proposed development of the site for housing would result in harm to the setting of this Grade II listed building. As the listed building will remain, any future development would inevitably result in harm to this heritage asset and would be contrary to the aims and objectives of the NPPF (2023). Again, this harm was recognised by the Council's Planning Committee as part of the reasoning for the refusal of housing on this site. The inclusion of LW53 for residential development will have an adverse impact on the character and appearance of the open countryside and the rural setting and character of this part of Muckleston Wood Lane. This would be in contradiction of the aims and objectives of the National Planning Policy Framework (2023). Again, this was recognised by the Council's Planning Committee as part of the reasoning for the refusal of housing on this site. Policy PSD3: Distribution of Development (page 16) <p>(i) No figures/evidence has been provided to justify why it is considered necessary for Loggerheads to expand by 450 dwellings. The proposed expansion figure should be compared to other rural centres where dwellings in the region of 250 is suggested. Given the Council's own evidence regarding the accessibility of Loggerheads being mixed, no justification has been provided for such a large increase.</p> <p>(ii) The draft local plan also suggests that this number of dwellings are required to meet the development proposals of Loggerheads. Again, no justification is given for this statement (page 127 of the draft plan). Although, current on-going developments are part of the proposed increase, no account has been taken of the current variety of housing (including affordable, single housing and bungalows) already being provided. Planning Policy Officers merely say that “the Borough has a need for x amount of housing and Loggerheads has to have its share”. Yet no justification has been provided for the proposed 450 dwelling increase for Loggerheads when comparing with the proposed smaller increases for the other rural centres.</p> <ol style="list-style-type: none"> Conclusion <p>6(i) In order for the draft local plan to pass the test of “soundness”, the allocation of LW53 should be removed as a preferred site for future housing. This site, as acknowledged by the Council's Planning Committee, is not a sustainable location and for the other reasons (above) is contrary to the NPPF 2023.</p> <p>6(ii) The reference to the increase of 450 dwellings should be removed from the draft plan.</p>
Q7 Modification	<p>6(i) In order for the draft local plan to pass the test of “soundness”, the allocation of LW53 should be removed as a preferred site for future housing. This site, as acknowledged by the Council's Planning Committee, is not a sustainable location and for the other reasons (above) is contrary to the NPPF 2023.</p> <p>6(ii) The reference to the increase of 450 dwellings should be removed from the draft plan.</p>

Consultee Family Name	Dunlevy
Consultee Given Name	Julie
Q4 Part of document	Policy
Q4 Policy	LW53
Q5 Sound	No
Q6 Details	<p>Dear Sir or Madam, I am writing to express my objection to the inclusion of the land on Muckleston Wood Lane LW53 for future housing development for the following reasons:</p> <p>The draft plan is not sound in relation to “Policy LW53 Land at Corner of Muckleston Wood Lane, Loggerheads”. This is because the allocation of site LW53 for future housing development is contrary to and inconsistent with current national policy namely, the National Planning Policy Framework 2023 (“the NPPF 2023”).</p> <p>I also challenge the soundness of the draft local plan with regard to “Policy PSD3: Distribution of Development” (page 16of the draft plan) in that the numbers within this Policy have not been justified.</p>

	<p>Summary of Reasons</p> <p>1 LW53 is not a “sustainable location” for future housing development and is therefore contrary to national policy. This view was endorsed by the Council's Planning Committee on the 27th February 2024, who refused outline planning permission for the development of housing on this same site for the following reason regarding sustainability:</p> <ul style="list-style-type: none"> The site is not considered to be a sustainable location by virtue of the lack of supporting infrastructure, available locally to support the development, limited public transport facilities and the need to travel by car to access higher level services. <p>The Council has already determined that this site is not within a sustainable location; consequently, and for the above reasons, the inclusion of this site for housing development contravenes the NPPF 2023.</p> <p>In addition, the Council's own evidence document namely, the “Rural Area Topic Paper “(June 2021 topic paper-paragraph 124) notes that Loggerheads the following:</p> <p>“Loggerheads - G.P access is dependent on travel to Ashley and does not have a direct bus service to the hospital. Loggerheads is the least accessible to jobs by public transport (to Newcastle-under-Lyme) Loggerheads has very mixed accessibility in terms of travel times to services and facilities”.</p> <p>The above text and the recent refusal of this site for housing development supports the view that it is not a sustainable location and development will only encourage reliance on private motor vehicle due to the lack of poor public transport and access to higher leisure/retail services.</p> <p>In conclusion, LW53 is not considered to be a site within a sustainable location and is contrary to the NPPF 2023.</p> <p>2(i) LW53 is currently in use as agricultural farmland and consists of best and most versatile agricultural land. The UI proposed development would therefore result in the loss of best and most versatile agricultural land contrary to Paragraph 180 of the NPPF (2023). This point was recognised by the Council's Planning Committee and was one of the reasons for the refusal of housing on this site.</p> <p>2.(ii) The selection of this green field site for housing is also contrary to the underlying national policy principle of prioritising brownfield and other under-utilised urban sites.</p> <p>3. LW53 is adjacent to the Grade II listed building of White House Farm. The recent planning application for this site recognised that the proposed development of the site for housing would result in harm to the setting of this Grade II listed building. As the listed building will remain, any future development would inevitably result in harm to this heritage asset and would be contrary to the aims and objectives of the NPPF (2023). Again, this harm was recognised by the Council's Planning Committee as part of the reasoning for the refusal of housing on this site.</p> <p>4. The inclusion of LW53 for residential development will have an adverse impact on the character and appearance of the open countryside and the rural setting and character of this part of Muckleston Wood Lane. This would be in contradiction of the aims and objectives of the National Planning Policy Framework (2023). Again, this was recognised by the Council's Planning Committee as part of the reasoning for the refusal of housing on this site.</p> <p>6 Policy PSD3: Distribution of Development (page 16)</p> <p>(i) No figures/evidence has been provided to justify why it is considered necessary for Loggerheads to expand by 450 dwellings. The proposed expansion figure should be compared to other rural centres where dwellings in the region of 250 is suggested. Given the Council's own evidence regarding the accessibility of Loggerheads being mixed, no justification has been provided for such a large increase.</p> <p>(ii) The draft local plan also suggests that this number of dwellings are required to meet the development proposals of Loggerheads. Again, no justification is given for this statement (page 127 of the draft plan). Although, current on-going developments are part of the proposed increase, no account has been taken of the current variety of housing (including affordable, single housing and bungalows) already being provided. Planning Policy Officers merely say that “the Borough has a need for x amount of housing and Loggerheads has to have its share”. Yet no justification has been provided for the proposed 450 dwelling increase for Loggerheads when comparing with the proposed smaller increases for the other rural centres.</p> <p>1 Conclusion</p> <p>7(i) In order for the draft local plan to pass the test of “soundness”, the allocation of LW53 should be removed as a preferred site for future housing. This site, as acknowledged by the Council's Planning Committee, is not a sustainable location and for the other reasons (above) is contrary to the NPPF 2023.</p> <p>7(ii) The reference to the increase of 450 dwellings should be removed from the draft plan.</p>
Q7 Modification	<p>7(i) In order for the draft local plan to pass the test of “soundness”, the allocation of LW53 should be removed as a preferred site for future housing. Title	Policy LW53 Land at Corner of Muckleston Wood Lane, Loggerheads
Consultee Family Name	Franklin
Consultee Given Name	David
Q6 Details	The Local Plan

	<p>A parcel of land north of Mucklestone Wood Lane and east of Rock Lane has been marked for future housing development.</p> <p>There have been three previous proposals, the last one for 130 dwellings was unanimously rejected by NULBC Planning Committee earlier this year.</p> <p>The land is outside of the village boundary, there is nothing in the plan to expand the boundary.</p> <p>All the objections to the development still remain the same, nothing has changed, it is still Green Belt and agricultural land, with mineral resources below ground.</p>
Q7 Modification	<p>There is a need for a viable improvement in public transport so people can get to work in Newcastle under Lyme or Stoke on Trent or Shrewsbury/Telford. There is no employment in the village.</p> <p>The needs to be improvements in education and health facilities. Nothing is mentioned in the plan specifically about Loggerheads</p>

Q4 Policy	LW53
Q5 Sound	No
Q6 Details	<p><u>Appeal against the draft Locat Plan</u></p> <p>Newcastle-under-Lyme Local Plan 2020-2040</p> <p>Draft Local Plan (Regulation 19 stage)</p> <p>I consider the draft plan to be unsound, for the following reasons:-</p> <p>Page 129 "Policy LW53 Land at corner of Mucklestone Wood Lane, Loggerheads.</p> <p>Its inclusion and allocation of LW53 for future housing development is not only contrary but also inconsistent with the current national policy, the NPPF 2023.</p> <p>Policy PSD3 – Distribution of Development (page 16), has no justification to qualify the numbers in the plan for this site or Loggerheads.</p> <p>Reasoning: -</p> <p>LW53 is not a sustainable location, therefore, in contrast to national policy, please reference the Councils Planning Committee of 27/02/2024, where this point was endorsed in the refusal of the planning permission for the development of housing on this specific site. Their reasons being, sustainability, lack of supporting infrastructure, limited transport facilities (increasing the need to travel by car to access employment, hospitals, retail and higher education facilities.</p> <p>Please also note the councils' own evidence in the Rural Area Topic Paper, (June 2021 para 124):</p> <p>Loggerheads - G.P access is dependent on travel to Ashley and does not have a direct bus service to the hospital. Loggerheads is the least accessible to jobs by public transport (to Newcastle-under-Lyme)</p> <p>Loggerheads has very mixed accessibility in terms of travel times to services and facilities".</p> <p>This evidence and very recent refusal for development at the LW53 site emphasises that the site is not a sustainable location and is in contradiction to the NPPF 2023.</p> <p>Other points to consider in the case to remove LW53 from the plan are:</p> <p>LW53 currently being the best and most versatile agricultural land, (its inclusion would result in the loss of said agricultural land), contrary to Para. 180 of the NPPF (2023).</p> <p>As a greenfield site, its inclusion is also contrary to the underlying national policy principle of prioritising brownfield and other under-utilised urban sites.</p> <p>.</p> <p>The location of LW53 next to a grade II listed building and its development would irrevocably harm the setting of the building (again contrary to NPPF (2023))</p> <p>The development would also have an adverse impact on the character of this part of Mucklestone Wood Lane. This would be in contradiction of the aims and objectives of the National Planning Policy Framework (2023).</p> <p>All the above points were recognised by the Council's Planning Committee as part of the reasoning for the refusal of housing on this site on 27/02/2024.</p> <p>Policy PSD3: Distribution of Development (page 16)</p> <p>There have been no presentation of numbers or evidence to justify why Loggerheads qualifies to take the burden of 450 dwellings, when compared to other rural centres where almost half this number is suggested.</p> <p>The increase in housing stock in Loggerheads since 2020 (plan start date) has already contributed a large number to this figure, how can, with the evidence and previous refusal by the Planning Committee (because of accessibility, infrastructure, agricultural loss, unsustainability and overall character impact) the inclusion of LW53 be acceptable and should be removed from the Draft Plan.</p> <p>The above factors bring into question the soundness of the Draft Plan, the allocation of LW53 should be removed as a preferred site for future housing. This site, as acknowledged by the Council's Planning Committee (27/02/2024) in its own refusal for the site, is not a sustainable location and for the other reasons (above) is contrary to the NPPF 2023 and Rural Area Topic Paper (June 2021) and subsequently with no evidence or justification for the reference to the 450 dwellings increase, it should also be removed from the Draft plan.</p>

Consultee Family Name	Oakley
Consultee Given Name	Paul
Q4 Part of document	Policy
Q4 Policy	LW53
Q5 Sound	No
Q6 Details	<p>As a resident of Loggerheads, I wish to comment on the Newcastle-Under-Lyme Local Plan specifically with reference to page 129 "Policy LW53 Land at corner of Muckleston Wood Lane, Loggerheads." Despite the planning Committee turning the application down recently (27 February 2024), this parcel of agricultural land has been resurrected as a preferred site for development without further reference to the wishes of the Committee, local residents or the general consensus of the community of Loggerheads. It is a failure to co-operate within the framework of procedures. It appears the only reason this site has been earmarked is because the agricultural land has become speculatively available for sale, for one reason or another. This is not a good enough reason in itself to press ahead regardlessly with this development.</p> <p>Why is LW53 NOT a sustainable location:</p> <p>*Poor local transport - only six buses per day (5.45pm to Loggerheads from Hanley is the last bus of the day).</p> <p>*Inaccessable GP surgery - Ashley surgery is 39 minutes walk and along lanes without pavements would be a danger to anyone waking, pushing a pushchair or wheelchair, or accompanying young children.</p> <p>*The junction of Muckleston Wood Lane and A53 by its nature is a very precarious or even dangerous and there has been a fatality there. Crossing on foot or by car is near impossible, even with traffic moving at 30 mph (which is rare).</p> <p>*Loss of versatile agricultural farmland (contrary to Paragraph 180 of the NPPF 2023)</p> <p>*LW53 is adjacent to the Grade II listed building of White House Farm and would harm the setting of this building.</p> <p>*A proposal of 450 dwellings without justification to the small village of Loggerheads which has already seen a number of new build over the past two years is stretching the infrastructure past its limits.</p> <p>*Lack of infrastructure: With only one junior and primary school locally, secondary school children and college students would need to find transport out of the area. There is a limited choice of retail and leisure facilities locally. No dentist surgery locally, unless a patient can get an appointment in Market Drayton - a ten mile round trip, or Eccleshall (no bus link).</p> <p>*Traffic : Placing families in a rural setting will inevitably mean upwards of 900 cars, not to mention service vehicles, which will result in further pollution.</p> <p>*The development of is outside the village envelope of the Village Plan. The inclusion of LW53 for residential development will have an adverse impact on the character and appearance of the open countryside and rural setting of this part of Muckleston Wood Lane.</p> <p>In conclusion:</p> <p>In my opinion the Local Plan in general is sound, apart from the comments I have highlighted above, where the planning has failed to take into account the Planning Committee's decision to disregard planning application of LW53. The fact that the land is available for sale as agricultural land is not a reason for making it available to development for housing.</p>

Title	Policy LW53 Land at Corner of Muckleston Wood Lane, Loggerheads
Consultee Family Name	Silvester
Consultee Given Name	Gillian
Q4 Part of document	Policy
Q4 Policy	LW53
Q6 Details	<p>Dear councillors, we wish to strongly object to proposals contained in the draft local plan to build new houses on prime agricultural land at Muckleston. It is strange that these plans have been retained on the plan when Newcastle's own planning committee threw them out.</p> <p>There are many reasons why the plan for housing should be abandoned. The local protest committee has already sent you a very detailed response so we will not restate all their points.</p> <p>It seems to us that the site is not the right location because there is no appropriate infrastructure locally to support the development. Public transport is very limited. Residents would need to travel everywhere by private car. The council's planning committee agreed that this was an important consideration.</p> <p>The council's own document "Rural Area Topic Paper " says this : "GP access is dependent on travel to Ashley and there is no direct bus service to the hospital; Loggerheads is the least accessible to jobs by public transport (to Newcastle-under-Lyme). Loggerheads has very mixed accessibility in terms of travel times to services and facilities".</p> <p>The site is on prime agricultural farmland and is clearly a greenfield location. It is close to a Grade 11 listed building.</p>

	<p>The village of Loggerheads has already seen upwards of 1,000 new houses in recent years. It would be an act of vandalism to add to this list. Local people now have to put up with a vast increase in traffic which gives rise to major pollution from both noise and exhaust fumes. Loggerheads is a village. Not a town. We do not wish these problems to be spread along Muckleston Wood Lane to the picturesque village of Muckleston,</p> <p>We note that since this housing plan was rejected by your planning committee the number of proposed houses has risen to 450. Where has this number come from? It is a disturbing revelation. Who came up with this number? It does not sound arbitrary. But it is suspicious.</p> <p>The people of Loggerheads and Muckleston have had to accept that nearly 1,000 new houses have already been built against most of their wishes. Isn't that sufficient? Don't you think we have fulfilled our random quota? Perhaps it just happens that we live in a place you find convenient for your local plan. A place where you can dump lots of houses because it's the easy way to solve a problem. People who live here do not want hundreds more cars and a sudden inability to get a doctor's appointment.</p>

Title	Policy LW53 Land at Corner of Muckleston Wood Lane, Loggerheads
Consultee Family Name	Allen
Consultee Given Name	Sally
Q4 Part of document	Policy
Q4 Policy	lw53
Q5 Sound	No
Q6 Details	<p>I consider that the draft plan is not sound, in particular, with reference to page 129 namely "Policy LW53 Land at Corner of Muckleston Wood Lane, Loggerheads". This is because the allocation of site LW53 for future housing development is contrary to and inconsistent with current national policy namely, the National Planning Policy Framework 2023 ("the NPPF 2023").</p> <p>I also challenge the soundness of the draft local plan with regard to "Policy PSD3: Distribution of Development" (page 16 of the draft plan) in that the numbers within this Policy have not been justified. Summary of Reasons 1. LW53 is not a "sustainable location" for future housing development and is therefore contrary to national policy. This view was endorsed by the Council's Planning Committee on the 27th February 2024, who refused outline planning permission for the development of housing on this same site for the following reason regarding sustainability: 2 / 3 - The site is not considered to be a sustainable location by virtue of the lack of supporting infrastructure, available locally to support the development, limited public transport facilities and the need to travel by car to access higher level services. The Council has already determined that this site is not within a sustainable location; consequently, and for the above reasons, the inclusion of this site for housing development contravenes the NPPF 2023. In addition, the Council's own evidence document namely, the "Rural Area Topic Paper" (June 2021 topic paper-paragraph 124) notes that Loggerheads the following: "Loggerheads - G.P access is dependent on travel to Ashley and does not have a direct bus service to the hospital. Loggerheads is the least accessible to jobs by public transport (to Newcastle-under-Lyme) Loggerheads has very mixed accessibility in terms of travel times to services and facilities". The above text and the recent refusal of this site for housing development supports the view that it is not a sustainable location and development will only encourage reliance on private motor vehicle due to the lack of poor public transport and access to higher leisure/retail services. In conclusion, LW53 is not considered to be a site within a sustainable location and is contrary to the NPPF 2023. 2. (i) LW53 is currently in use as agricultural farmland and consists of best and most versatile agricultural land. The UI proposed development would therefore result in the loss of best and most versatile agricultural land contrary to Paragraph 180 of the NPPF (2023). This point was recognised by the Council's Planning Committee and was one of the reasons for the refusal of housing on this site. 2.(ii) The selection of this green field site for housing is also contrary to the underlying national policy principle of prioritising brownfield and other under-utilised urban sites. 3. LW53 is adjacent to the Grade II listed building of White House Farm. The recent planning application for this site recognised that the proposed development of the site for housing would result in harm to the setting of this Grade II listed building. As the listed building will remain, any future development would inevitably result in harm to this heritage asset and would be contrary to the aims and objectives of the NPPF (2023). Again, this harm was recognised by the Council's Planning Committee as part of the reasoning for the refusal of housing on this site. 4. The inclusion of LW53 for residential development will have an adverse impact on the character and appearance of the open countryside and the rural setting and character of this part of Muckleston Wood Lane. This would be in contradiction of the aims and objectives of the National Planning Policy Framework (2023). Again, this was recognised by the Council's Planning Committee as part of the reasoning for the refusal of housing on this site. 6. Policy PSD3: Distribution of Development (page 16) (i) No figures/evidence has been provided to justify why it is considered necessary for Loggerheads to expand by 450 dwellings. The proposed expansion figure should be compared to other rural 3 / 3 centres where dwellings in the region of 250 is suggested. Given the Council's own evidence regarding the accessibility of Loggerheads being mixed, no justification has been provided for such a large increase. (ii) The draft local plan also suggests that this number of dwellings are required to meet the development proposals of Loggerheads. Again, no justification is given for this statement (page 127 of the draft plan). Although, current on-going developments are part of the proposed increase, no account has been taken of the current variety of housing (including affordable, single housing and bungalows) already being provided. Planning Policy Officers merely say that "the Borough has a need for x amount of housing and Loggerheads has to have its share". Yet no justification has been provided for the proposed 450 dwelling increase for Loggerheads when comparing with the proposed smaller increases for the other rural centres. 7. Conclusion 7(i) In order for the draft local plan to pass</p>

	the test of “soundness”, the allocation of LW53 should be removed as a preferred site for future housing. This site, as acknowledged by the Council’s Planning Committee, is not a sustainable location and for the other reasons (above) is contrary to the NPPF 2023. 7(ii) The reference to the increase of 450 dwellings should be removed from the draft plan.
Q7 Modification	7. Conclusion 7(i) In order for the draft local plan to pass the test of “soundness”, the allocation of LW53 should be removed as a preferred site for future housing. This site, as acknowledged by the Council’s Planning Committee, is not a sustainable location and for the other reasons (above) is contrary to the NPPF 2023. 7(ii) The reference to the increase of 450 dwellings should be removed from the draft plan.

Q6 Details	<p>I wish to formally record my objection to proposed identification of this site for future development, for the following reasons.</p> <p>a) Loggerheads has already had significant housing developments in a relatively short space of time, changing significantly the nature of the village. Any proposed developments or site designation are solely profit driven and not designed to enhance village life.</p> <p>Residents no longer want this level of development to continue and local planning as a public service should recognise their wishes.</p> <p>b) This area could not support a sustainable development with no infrastructure to support it. Road links are very limited, doctors and school places limited with poor access. This point has been supported by local authorities recent rejection of a proposed housing development.</p> <p>c) Where Muckleston Lane joins the main A road are two dangerous roundabouts used by heavy lorries and any increase in traffic levels would add significantly to the danger levels particularly as one roundabout has a school crossing point on it. The road network is unsuitable even for current levels of traffic.</p> <p>d) This land is farm land and once developed is lost forever. Any developments should first be considered for brown field sites thereby protect wildlife and quality of life for residents.</p>

This view was endorsed by the Council’s Planning Committee on the 27th February 2024, who refused outline planning permission for the development of housing on this same site for the following reason regarding sustainability: <ul style="list-style-type: none"> • The site is not considered to be a sustainable location by virtue of the lack of supporting infrastructure available locally to support the development, limited public transport facilities and the need to travel by car to access higher level services. <p>The Council has already determined that this site is not within a sustainable location; consequently, and for the above reasons, the inclusion of this site for housing development contravenes the NPPF 2023.</p>

In addition, the Council's own evidence document namely, the "Rural Area Topic Paper "(June 2021 topic paper-paragraph 124) notes that Loggerheads the following:

"Loggerheads - G.P access is dependent on travel to Ashley and does not have a direct bus service to the hospital. Loggerheads is the least accessible to jobs by public transport (to Newcastle-under-Lyme) Loggerheads has very mixed accessibility in terms of travel times to services and facilities".

The above text and the recent refusal of this site for housing development supports the view that it is not a sustainable location and development will only encourage reliance on private motor vehicle due to the lack of poor public transport and access to higher leisure/retail services.

In conclusion, LW53 is not considered to be a site within a sustainable location and is contrary to the NPPF 2023.

- 1 (i) LW53 is currently in use as agricultural farmland and consists of best and most versatile agricultural land. The UI proposed development would therefore result in the loss of best and most versatile agricultural land contrary to Paragraph 180 of the NPPF (2023). This point was recognised by the Council's Planning Committee and was one of the reasons for the refusal of housing on this site.

2.(ii) The selection of this green field site for housing is also contrary to the underlying national policy principle of prioritising brownfield and other under-utilised urban sites.

- 1 LW53 is adjacent to the Grade II listed building of White House Farm. The recent planning application for this site recognised that the proposed development of the site for housing would result in harm to the setting of this Grade II listed building. As the listed building will remain, any future development would inevitably result in harm to this heritage asset and would be contrary to the aims and objectives of the NPPF (2023). Again, this harm was recognised by the Council's Planning Committee as part of the reasoning for the refusal of housing on this site.
- 2 The inclusion of LW53 for residential development will have an adverse impact on the character and appearance of the open countryside and the rural setting and character of this part of Mucklestone Wood Lane. This would be in contradiction of the aims and objectives of the National Planning Policy Framework (2023). Again, this was recognised by the Council's Planning Committee as part of the reasoning for the refusal of housing on this site.
- 3 Policy PSD3: Distribution of Development (page 16)

(i) No figures/evidence has been provided to justify why it is considered necessary for Loggerheads to expand by 450 dwellings. The proposed expansion figure should be compared to other rural centres where dwellings in the region of 250 is suggested. Given the Council's own evidence regarding the accessibility of Loggerheads being mixed, no justification has been provided for such a large increase.

(ii) The draft local plan also suggests that this number of dwellings are required to meet the development proposals of Loggerheads. Again, no justification is given for this statement (page 127 of the draft plan). Although, current on-going developments are part of the proposed increase, no account has been taken of the current variety of housing (including affordable, single housing and bungalows) already being provided. Planning Policy Officers merely say that "the Borough has a need for x amount of housing and Loggerheads has to have its share". Yet no justification has been provided for the proposed 450 dwelling increase for Loggerheads when comparing with the proposed smaller increases for the other rural centres.

1 Conclusion

6(i) In order for the draft local plan to pass the test of "soundness", the allocation of LW53 should be removed as a preferred site for future housing. This site, as acknowledged by the Council's Planning Committee, is not a sustainable location and for the other reasons (above) is contrary to the NPPF 2023.

6(ii) The reference to the increase of 450 dwellings should be removed from the draft plan.

Q4 Part of document	Policy
Q4 Policy	LW53
Q6 Details	Comments as a concerned resident of (Redacted by admin), on the Regulation 19 Draft Local Plan. I consider that the draft plan is not sound, in particular, with reference to page 129 namely "Policy LW53 Land at Corner of Mucklestone Wood Lane, Loggerheads". This is because the allocation of site LW53 for future housing development is contrary to and inconsistent with current national policy namely, the National Planning Policy Framework 2023 ("the NPPF 2023"). I also challenge the soundness of the draft local plan with regard to "Policy PSD3: Distribution of Development" (page 16of the draft plan) in that the numbers within this Policy have not been justified. Summary of Reasons 1. LW53 is not a "sustainable location" for future housing development and is therefore contrary to national policy. This view was endorsed by the Council's Planning Committee on the 27th February 2024, who refused outline

planning permission for the development of housing on this same site for the following reason regarding sustainability: 2 / 3 · The site is not considered to be a sustainable location by virtue of the lack of supporting infrastructure, available locally to support the development, limited public transport facilities and the need to travel by car to access higher level services. The Council has already determined that this site is not within a sustainable location; consequently, and for the above reasons, the inclusion of this site for housing development contravenes the NPPF 2023. In addition, the Council's own evidence document namely, the "Rural Area Topic Paper "(June 2021 topic paper-paragraph 124) notes that Loggerheads the following: "Loggerheads - G.P access is dependent on travel to Ashley and does not have a direct bus service to the hospital. Loggerheads is the least accessible to jobs by public transport (to Newcastle-under-Lyme) Loggerheads has very mixed accessibility in terms of travel times to services and facilities". The above text and the recent refusal of this site for housing development supports the view that it is not a sustainable location and development will only encourage reliance on private motor vehicle due to the lack of poor public transport and access to higher leisure/retail services. In conclusion, LW53 is not considered to be a site within a sustainable location and is contrary to the NPPF 2023. 2. (i) LW53 is currently in use as agricultural farmland and consists of best and most versatile agricultural land. The UI proposed development would therefore result in the loss of best and most versatile agricultural land contrary to Paragraph 180 of the NPPF (2023). This point was recognised by the Council's Planning Committee and was one of the reasons for the refusal of housing on this site. 2.(ii) The selection of this green field site for housing is also contrary to the underlying national policy principle of prioritising brownfield and other under-utilised urban sites. 3. LW53 is adjacent to the Grade II listed building of White House Farm. The recent planning application for this site recognised that the proposed development of the site for housing would result in harm to the setting of this Grade II listed building. As the listed building will remain, any future development would inevitably result in harm to this heritage asset and would be contrary to the aims and objectives of the NPPF (2023). Again, this harm was recognised by the Council's Planning Committee as part of the reasoning for the refusal of housing on this site. 4. The inclusion of LW53 for residential development will have an adverse impact on the character and appearance of the open countryside and the rural setting and character of this part of Muckleston Wood Lane. This would be in contradiction of the aims and objectives of the National Planning Policy Framework (2023). Again, this was recognised by the Council's Planning Committee as part of the reasoning for the refusal of housing on this site. 6. Policy PSD3: Distribution of Development (page 16) (i) No figures/evidence has been provided to justify why it is considered necessary for Loggerheads to expand by 450 dwellings. The proposed expansion figure should be compared to other rural 3 / 3 centres where dwellings in the region of 250 is suggested. Given the Council's own evidence regarding the accessibility of Loggerheads being mixed, no justification has been provided for such a large increase. (ii) The draft local plan also suggests that this number of dwellings are required to meet the development proposals of Loggerheads. Again, no justification is given for this statement (page 127 of the draft plan). Although, current on-going developments are part of the proposed increase, no account has been taken of the current variety of housing (including affordable, single housing and bungalows) already being provided. Planning Policy Officers merely say that "the Borough has a need for x amount of housing and Loggerheads has to have its share". Yet no justification has been provided for the proposed 450 dwelling increase for Loggerheads when comparing with the proposed smaller increases for the other rural centres. 7. Conclusion 7(i) In order for the draft local plan to pass the test of "soundness", the allocation of LW53 should be removed as a preferred site for future housing. This site, as acknowledged by the Council's Planning Committee, is not a sustainable location and for the other reasons (above) is contrary to the NPPF 2023. 7(ii) The reference to the increase of 450 dwellings should be removed from the draft plan.

I am one of the regular pedestrians on this road that snakes through from Newcastle Rd to the T junction with Muckleston Rd. I say" on" this road because that is where you have to walk, due to MWL having a pavement footpath for only 25% on just one side of the road.

Street lighting is restricted in similar fashion to part only of Muckleston Wood lane.

If planning is approved this would mean circa 150 extra vehicles per day spilling out directly on to MWL and all returning on the same MWL, This does not take into account the dozens of delivery vehicles (Amazon DHL etc to name just 2)

The impact on vehicle and pedestrian use is a massive cause for concern particularly for the safety of pedestrians.

All social housing occupants will need vehicles to access all facilities including taking children to school if the existing schools can actually accommodate them?

All the objections stated against the previous housing application for this site are applicable here.It is not sustainable has has no merit need or benefit whatsoever,and makes it axiomatic that this location should not be included in the plan NPPF2023.

Q6 Details	<p>Comments on the Regulation 19 Draft Local Plan consider that the draft plan is <i>not sound</i>, in particular, with reference to page 129 namely “Policy LW53 Land at Corner of Mucklestone Wood Lane, Loggerheads”. This is because the allocation of site LW53 for future housing development is contrary to and inconsistent with current national policy namely, the National Planning Policy Framework 2023 (“the NPPF 2023”). I also challenge the soundness of the draft local plan with regard to “Policy <i>PSD3</i>: Distribution of Development” (page 16 of the draft plan) in that the numbers within this Policy have not been justified. Summary of Reasons1. LW53 is not a “<i>sustainable location</i>” for future housing development and is therefore contrary to national policy. Loggerheads - G.P access is dependent on travel to Ashley and does not have a direct bus service to the hospital. Loggerheads is the least accessible to jobs by public transport (to Newcastle-under-Lyme) Loggerheads has very mixed accessibility in terms of travel times to services and facilities”.2. (i) LW53 is currently in use as agricultural farmland and consists of best and most versatile agricultural land. The UI proposed development would therefore result in the loss of best and most versatile agricultural land contrary to Paragraph 180 of the NPPF (2023).2.(ii) The selection of this green field site for housing is also contrary to the underlying national policy principle of prioritising brownfield and other under-utilised urban sites.3. LW53 is adjacent to the Grade II listed building of White House Farm. The recent planning application for this site recognised that the proposed development of the site for housing would result in harm to the setting of this Grade II listed building. As the listed building will remain, any future development would inevitably result in harm to this heritage asset and would be contrary to the aims and objectives of the NPPF (2023). 4. The inclusion of LW53 for residential development will have an adverse impact on the character and appearance of the open countryside and the rural setting and character of this part of Mucklestone Wood Lane. This would be in contradiction of the aims and objectives of the National Planning Policy Framework (2023). 5. Policy <i>PSD3</i>: Distribution of Development (page 16)(i) No figures/evidence has been provided to justify why it is considered necessary for Loggerheads to expand by 450 dwellings. <i>the Borough has a need for x amount of housing and Loggerheads has to have its share</i>6. Conclusion6(i) In order for the draft local plan to pass the test of “soundness”, the allocation of LW53 should be removed as a preferred site for future housing. This site, as acknowledged by the Council’s Planning Committee, is not a sustainable location and for the other reasons (above) is contrary to the NPPF 2023.6(ii) The reference to the increase of 450 dwellings should be removed from the draft plan.</p>

Q6 Details	<p>To Whom It May Concern,</p> <p>I am writing to put forward my comments regarding the Newcastle-under-Lyme Local Plan 2020-2040 Draft Local Plan (Regulation 19 stage) as follows:-</p> <p>Here in Loggerheads we have absolutely no infrastructure to support further building sites. We have in recent months had various different building companies creating new homes, some of which are struggling to sell. We have one site built as rental properties which appear to still be mostly empty.</p> <p>We have no decent public transport, mostly it consists of a less than decent bus service, going either way from Hanley to Shrewsbury and various stops in between. Only running every two hours. Therefore families would be dependant on their own mode of transport causing even more pressure on the already busy A53, which is the main link to and from the M6 motorway.</p> <p>LW53 would most certainly create problems for Mucklestone Wood Lane and the exit out on to the A53 is an accident waiting to happen now, let alone with 900 extra vehicles trying to access it. (Given that most of the 450 dwelling would likely have two or more vehicles per property). It is a greenfield site and has a grade II listed building on it.</p> <p>Loggerheads has one small co-op, a post office situated within the chemist and limited other facilities.</p>

	<p>The nearest gp surgery is in Ashley, which is not easily accessible to those without their own transport. There is no dentist.</p> <p>There is only one infant school at Muckleston and one infant/junior school actually in Loggerheads. There are no leisure amenities whatsoever.</p> <p>I consider that the draft plan is not sound, in particular, with reference to page 129 namely "Policy LW53 Land at Corner of Muckleston Wood Lane, Loggerheads". This is because the allocation of site LW53 for future housing development is contrary to and inconsistent with current national policy namely, the National Planning Policy Framework 2023 ("the NPPF2023").</p> <p>I also challenge the soundness of the draft local plan with regard to "Policy PSD3: Distribution of Development" (page 16 of the draft plan) in that the numbers within this Policy have not been justified.</p> <p>Summary of Reasons</p> <p>1. LW53 is not a "sustainable location" for future housing development and is therefore contrary to national policy.</p> <p>2. (i) LW53 is currently in use as agricultural farmland and consists of best and most versatile agricultural land. The UI proposed development would therefore result in the loss of best and most versatile agricultural land contrary to Paragraph 180 of the NPPF (2023). This point was recognised by the Council's Planning Committee and was one of the reasons for the refusal of housing on this site.</p> <p>2(ii) The selection of this green field site for housing is also contrary to the underlying national policy principle of prioritising brownfield and other under utilised urban sites.</p> <p>3. LW53 is adjacent to the Grade II listed building of White House Farm. The recent planning application for recognised that the proposed development of the site for housing would result in harm to the setting of the Grade II listed building. As the listed building will remain, any future development would inevitably result in harm to this heritage asset and would be contrary to the aims and objectives of the NPPF (2023).</p> <p>4. The inclusion of LW53 for residential development will have an adverse impact on the character and appearance of the open countryside and the rural setting and character of this part of Muckleston Wood Lane. This would be in contradiction of the aims and objectives of the National Planning Policy Framework (2023).</p> <p>5. Policy PSD3: Distribution of Development (page 16)</p> <p>No figures or evidence have been provided to justify why it is necessary for Loggerheads to expand by 450 dwellings.</p> <p>6. Conclusion</p> <p>6(i) In order for the draft local plan to pass the test of "soundness", the allocation of LW53 should be removed as a preferred site for future housing. This site, as acknowledged by the Council's Planning Committee, is not a sustainable location and for other reasons (above) is contrary to the NPPF 2023.</p> <p>6(ii) The reference to the increase of 450 dwellings should be removed from the draft plan.</p>
Q7 Modification	<p>6. Conclusion</p> <p>6(i) In order for the draft local plan to pass the test of "soundness", the allocation of LW53 should be removed as a preferred site for future housing. Q4 Part of document	Policy
Q4 Policy	LW53
Q5 Sound	No
Q6 Details	<p>I wish to comment on the Regulation 19 Draft Local Plan for the Borough of Newcastle under Lyme. With reference to page 129 "Policy LW53 Land at Corner of Muckleston Wood Lane". I consider that the inclusion of this land for future housing development is both unacceptable and extremely puzzling and also not compatible with the current National Planning Framework 2023 (the NPPF2023). I also challenge the plan on the grounds that numbers within this Policy have not been justified – "Distribution of Development PSD3 -page 16 of the draft plan. Development here (LW53) would be unsustainable. This was endorsed unanimously by the council's Planning Committee on 27th February 2024 when outline planning permission for housing development was refused on this site. Reasons given at this meeting include the following:</p> <p>1 Lack of supporting infrastructure in general: very limited public transport which would mean increased use of cars to access a range of services such as doctors (the nearest is in Ashley), secondary schools, no direct bus to a hospital, supermarkets and other shops are also not readily accessible by public transport. This means that the inclusion of this site contravenes the NPPF 2023. Loggerheads also has extremely limited access to jobs by public transport and few employment opportunities in the village itself. The bus service is infrequent and only runs between Hanley, Newcastle and Market Drayton. There are no direct links between other main towns e.g. Stafford, Crewe and Telford. Evidence considered by the Planning Committee in February 2024 ruled decisively that this location was unsustainable and contrary to NPPF 2023.</p>

	<p>2 LW53 is currently under cultivation and has had continuous use as agricultural land for many years. The development of this site would result in the loss of best and versatile agricultural land which contravenes paragraph 180 of the NPPOF2023. The Planning Committee, in February 2024, gave this as a reason for refusing to allow housing on this site. The selection of this greenfield site for housing is also against the stated national policy of this Labour government to prioritise brownfield and “grey field sites”. I listened to a Labour spokesperson on Radio 4 immediately after this year's general election pledging that anyone who looked out on greenfields would not see them built on. Obviously this spokesperson has not read the Newcastle Borough Local Plan nor seen the number of agricultural fields surrounding the Loggerheads village which have already been covered in houses over the past few years.</p> <p>3 The council also acknowledged in their decision to refuse planning permission, the existence of a Grade II listed building adjacent to the site as housing development nearby, they considered would harm this heritage asset in contradiction to the aims and objectives of the National Planning Policy Framework 2023. Additionally, they ruled that the development of a housing estate on LW53 would adversely affect the rural nature of the area again in contravention of the National Planning Policy Framework 2023.</p> <p>4 The Council has not provided any figures to justify why Loggerheads needs to expand by 450 dwellings. 3 other rural centres have a target of 250 dwellings on the Local Plan. The draft plan suggests that Loggerheads NEEDS these dwellings but no reasons are given for this statement (Page 127 of the Draft Plan) . There is no reason why Loggerheads should bear more than its share of new housing when already current and ongoing developments offer a range of housing including affordable and bungalows to meet the needs of a range of population. To meet the condition of, “soundness”, the Local I Plan should remove the LW53 site as a site for future housing and also remove the increase of 450 houses for which no justification has been given and which is excessive compared to other rural centres.</p>
Q7 Modification	To meet the condition of, “soundness”, the Local I Plan should remove the LW53 site as a site for future housing and also remove the increase of 450 houses for which no justification has been given and which is excessive compared to other rural centres.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)

Q4 Policy	LW53
Q6 Details	<p>Dear councillors, we wish to strongly object to proposals contained in the draft local plan to build new houses on prime agricultural land at Muckleston. It is strange that these plans have been retained on the plan when Newcastle's own planning committee threw them out.</p> <p>There are many reasons why the plan for housing should be abandoned. The local protest committee has already sent you a very detailed response so we will not restate all their points.</p> <p>It seems to us that the site is not the right location because there is no appropriate infrastructure locally to support the development. Public transport is very limited. Residents would need to travel everywhere by private car. The council's planning committee agreed that this was an important consideration.</p> <p>The council's own document “Rural Area Topic Paper “ says this : “GP access is dependent on travel to Ashley and there is no direct bus service to the hospital; Loggerheads is the least accessible to jobs by public transport (to Newcastle-under-Lyme). Loggerheads has very mixed accessibility in terms of travel times to services and facilities”.</p> <p>The site is on prime agricultural farmland and is clearly a greenfield location. It is close to a Grade 11 listed building.</p> <p>The village of Loggerheads has already seen upwards of 1,000 new houses in recent years. It would be an act of vandalism to add to this list. Local people now have to put up with a vast increase in traffic which gives rise to major pollution from both noise and exhaust fumes. Loggerheads is a village. Not a town. We do not wish these problems to be spread along Muckleston Wood Lane to the picturesque village of Muckleston,</p> <p>We note that since this housing plan was rejected by your planning committee the number of proposed houses has risen to 450. Where has this number come from? It is a disturbing revelation. Who came up with this number? It does not sound arbitrary. But it is suspicious.</p> <p>The people of Loggerheads and Muckleston have had to accept that nearly 1,000 new houses have already been built against most of their wishes. Isn't that sufficient? Don't you think we have fulfilled our random quota? Perhaps it just happens that we live in a place you find convenient for your local plan. A place where you can dump lots of houses because it's the easy way to solve a problem. People who live here do not want hundreds more cars and a sudden inability to get a doctor's appointment.</p>

Q4 Part of document	Policy
Q4 Policy	lw53
Q5 Sound	No
Q6 Details	<p>I consider that the draft plan is not sound, in particular, with reference to page 129 namely "Policy LW53 Land at Corner of Mucklestone Wood Lane, Loggerheads". This is because the allocation of site LW53 for future housing development is contrary to and inconsistent with current national policy namely, the National Planning Policy Framework 2023 ("the NPPF 2023").</p> <p>I also challenge the soundness of the draft local plan with regard to "Policy PSD3: Distribution of Development" (page 16 of the draft plan) in that the numbers within this Policy have not been justified. Summary of Reasons 1. LW53 is not a "sustainable location" for future housing development and is therefore contrary to national policy. This view was endorsed by the Council's Planning Committee on the 27th February 2024, who refused outline planning permission for the development of housing on this same site for the following reason regarding sustainability: 2 / 3 - The site is not considered to be a sustainable location by virtue of the lack of supporting infrastructure, available locally to support the development, limited public transport facilities and the need to travel by car to access higher level services. The Council has already determined that this site is not within a sustainable location; consequently, and for the above reasons, the inclusion of this site for housing development contravenes the NPPF 2023. In addition, the Council's own evidence document namely, the "Rural Area Topic Paper" (June 2021 topic paper-paragraph 124) notes that Loggerheads the following: "Loggerheads - G.P access is dependent on travel to Ashley and does not have a direct bus service to the hospital. Loggerheads is the least accessible to jobs by public transport (to Newcastle-under-Lyme) Loggerheads has very mixed accessibility in terms of travel times to services and facilities". The above text and the recent refusal of this site for housing development supports the view that it is not a sustainable location and development will only encourage reliance on private motor vehicle due to the lack of poor public transport and access to higher leisure/retail services. In conclusion, LW53 is not considered to be a site within a sustainable location and is contrary to the NPPF 2023. 2. (i) LW53 is currently in use as agricultural farmland and consists of best and most versatile agricultural land. The UI proposed development would therefore result in the loss of best and most versatile agricultural land contrary to Paragraph 180 of the NPPF (2023). This point was recognised by the Council's Planning Committee and was one of the reasons for the refusal of housing on this site. 2.(ii) The selection of this green field site for housing is also contrary to the underlying national policy principle of prioritising brownfield and other under-utilised urban sites. 3. LW53 is adjacent to the Grade II listed building of White House Farm. The recent planning application for this site recognised that the proposed development of the site for housing would result in harm to the setting of this Grade II listed building. As the listed building will remain, any future development would inevitably result in harm to this heritage asset and would be contrary to the aims and objectives of the NPPF (2023). Again, this harm was recognised by the Council's Planning Committee as part of the reasoning for the refusal of housing on this site. 4. The inclusion of LW53 for residential development will have an adverse impact on the character and appearance of the open countryside and the rural setting and character of this part of Mucklestone Wood Lane. This would be in contradiction of the aims and objectives of the National Planning Policy Framework (2023). Again, this was recognised by the Council's Planning Committee as part of the reasoning for the refusal of housing on this site. 6. Policy PSD3: Distribution of Development (page 16) (i) No figures/evidence has been provided to justify why it is considered necessary for Loggerheads to expand by 450 dwellings. The proposed expansion figure should be compared to other rural 3 / 3 centres where dwellings in the region of 250 is suggested. Given the Council's own evidence regarding the accessibility of Loggerheads being mixed, no justification has been provided for such a large increase. (ii) The draft local plan also suggests that this number of dwellings are required to meet the development proposals of Loggerheads. Again, no justification is given for this statement (page 127 of the draft plan). Although, current on-going developments are part of the proposed increase, no account has been taken of the current variety of housing (including affordable, single housing and bungalows) already being provided. Planning Policy Officers merely say that "the Borough has a need for x amount of housing and Loggerheads has to have its share". Yet no justification has been provided for the proposed 450 dwelling increase for Loggerheads when comparing with the proposed smaller increases for the other rural centres. 7. Conclusion 7(i) In order for the draft local plan to pass the test of "soundness", the allocation of LW53 should be removed as a preferred site for future housing. This site, as acknowledged by the Council's Planning Committee, is not a sustainable location and for the other reasons (above) is contrary to the NPPF 2023. 7(ii) The reference to the increase of 450 dwellings should be removed from the draft plan.</p>
Q7 Modification	<p>7. Conclusion 7(i) In order for the draft local plan to pass the test of "soundness", the allocation of LW53 should be removed as a preferred site for future housing. Policy PSD3: Distribution of Development (page 16)</p> <p>a) No figures/evidence has been provided to justify why it is considered necessary for Loggerheads to expand by 450 dwellings. The proposed expansion figure should be compared to other rural centres where dwellings in the region of 250 is suggested. Given the Council's own evidence regarding the accessibility of Loggerheads being mixed, no justification has been provided for such a large increase.</p> <p>b) The draft local plan also suggests that this number of dwellings are required to meet the development proposals of Loggerheads. Again, no justification is given for this statement (page 127 of the draft plan). Although, current on-going developments are part of the proposed increase, no account has been taken of the current variety of housing (including affordable, single housing and bungalows) already being provided.</p> <p>c) Planning Policy Officers merely say that "the Borough has a need for x amount of housing and Loggerheads has to have its share". Yet no justification has been provided for the proposed 450 dwelling increase for Loggerheads when comparing with the proposed smaller increases for the other rural centres.</p> <p>In Conclusion, for the draft local plan to pass the test of "soundness", the allocation of LW53 should be removed as a preferred site for future housing. This site, as acknowledged by the Council's Planning Committee, is not a sustainable location and for the other reasons (above) is contrary to the NPPF 2023.</p> <p>7(ii) The reference to the increase of 450 dwellings should be removed from the draft plan.</p>

Q6 Details	<p>Proposal: LW53</p> <p>I start my letter by stating firstly that I cannot believe that I am having to compile yet another letter to you with regards to the above. I think you must believe that the residents of Loggerheads will get fed up with doing this yet again and will give up!!!</p> <p>Please see below my many many reasons why I wish to APPEAL, object and complain about the above development going into the Final Draft Local Plan.</p> <p>***Firstly, I would think when the Planning Committee have objected against the above development then this should be enough for you to understand that the development SHOULD NOT go ahead****.</p> <p>Please see underlined in my comments where the Planning Committee have recognised these reasons for refusing the above development.</p> <p>1. LW53 is currently in use as agricultural farmland and consists of best and most versatile agricultural land. The UI proposed development would therefore result in the loss of best and most versatile agricultural land contrary to Paragraph 180 of the NPPF (2023). This point was recognised by the Council's Planning Committee and was one of the reasons for the refusal of housing on this site.</p> <p>2. W53 is adjacent to the Grade II listed building of White House Farm. The recent planning application for this site recognised that the proposed development of the site for housing would result in harm to the setting of this Grade II listed building. As the listed building will remain, any future development would inevitably result in harm to this heritage asset and would be contrary to the aims and objectives of the NPPF (2023). Again, this harm was recognised by the Council's Planning Committee as part of the reasoning for the refusal of housing on this site.</p> <p>3. The inclusion of LW53 for residential development will have an adverse impact on the character and appearance of the open countryside and the rural setting and character of this part of Muckleston Wood Lane. This would be in contradiction of the aims and objectives of the National Planning Policy Framework (2023). Again, this was recognised by the Council's Planning Committee as part of the reasoning for the refusal of housing on this site.</p> <p>4. LW53 is not a "sustainable location" for future housing development and is therefore contrary to national policy. This view was endorsed by the Council's Planning Committee on the 27th February 2024, who refused outline planning permission for the development of housing on this same site for the following reason regarding sustainability:</p> <p>5. I consider that the draft plan is not sound, in particular, with reference to page 129 namely "Policy LW53 Land at Corner of Muckleston Wood Lane, Loggerheads". This is because the allocation of site LW53 for future housing development is contrary to and inconsistent with current national policy namely,</p>

	<p>the National Planning Policy Framework 2023 ("the NPPF 2023"). I also challenge the soundness of the draft local plan with regard to "Policy PSD3: Distribution of Development" (page 16of the draft plan) in that the numbers within this Policy have not been justified.</p> <p>6. Conclusion 7(i) In order for the draft local plan to pass the test of "soundness", the allocation of LW53 should be removed as a preferred site for future housing. This site, as acknowledged by the Council's Planning Committee, is not a sustainable location and for the other reasons (above) is contrary to the NPPF 2023. 7(ii) The reference to the increase of 450 dwellings should be removed from the draft plan.</p> <p>7. In addition, the Council's own evidence document namely, the "Rural Area Topic Paper "(June 2021 topic paper-paragraph 124) notes that Loggerheads the following: *****"Loggerheads - G.P access is dependent on travel to Ashley and does not have a direct bus service to the hospital. Loggerheads is the least accessible to jobs by public transport (to Newcastle-under-Lyme) Loggerheads has very mixed accessibility in terms of travel times to services and facilities". The above text and the recent refusal of this site for housing development supports the view that it is not a sustainable location and development will only encourage reliance on private motor vehicle due to the lack of poor public transport and access to higher leisure/retail services.*****</p> <p>In conclusion, LW53 is not considered to be a site within a sustainable location and is contrary to the NPPF 2023.</p> <p>Not to mention all of the wildlife, hedgehogs, bats, lap wings, birds, etc that have a habitat along the lane and in the "said" fields. This land is good agricultural land as well as green belt land and SHOULD NOT BE BUILT ON.</p> <p>The traffic along the lane is getting faster, more hazardous and is a much larger volume now than it was and this will only greatly increase. Tractors, lorries, vans etc. People are frequently, walking their babies, children, elderly parents and dogs and there is going to be a major incident shortly, not to mention joining the main A53 at the end of Mucklestone Wood Lane. This is dangerous every day that you pull out and is also a severe accident waiting to happen.</p>

Q6 Details	<p>Dear Sir/Madam</p> <p>Comments on the Newcastle-under-Lyme Local Plan 2020-2040</p> <p>1. I object to the inclusion of LW53, land at the corner of Mucklestone Wood Lane, Loggerheads as this is not a sustainable location. Outline planning permission was refused by the planning committee on February 27th 2024 on the lack of sustainability. This is due to the absence of infrastructure in the area to support the development, limited public transport and the need to travel by car for employment, larger supermarkets, leisure facilities and even the doctors'. As the council have already stated that the site is not in a sustainable location, its inclusion in the plan contravenes the National Planning Framework 2023 (NPPF 2023)</p> <p>LW53 is currently farmed and consists of the best and most versatile agricultural land, which would be lost should development go ahead on this site. This is contrary to paragraph 180 pf the NPPF2023 and was another reason for the refusal by the Planning Committee. Brownfield sites should be prioritised, not greenfield sites.</p> <p>2. I also question the reason for Loggerheads to expand by 450 dwellings when other rural communities where around 250 dwellings are suggested. There is already a variety of housing in Loggerheads, including affordable housing and bungalows, and there is no indication as to how the figures were reached.</p> <p>In conclusion, I feel that LW53 should be removed from the Local Plan and the reference to an extra 450 dwellings for Loggerheads should also be removed.</p>

Q4 Part of document	Policy
Q4 Policy	LW53
Q6 Details	<p>Dear Sir / Madam.</p> <p>I am writing to express my opinion on the Regulation 19 Draft Local Plan for Newcastle under Lyme borough.</p> <p>With reference to page 129, "Policy LW53 Land at Corner of Mucklestone Wood Lane". The inclusion of this land for future housing development is unacceptable. The borough council's Planning Committee (meeting on 27 February 2024) unanimously rejected the developer's proposal to build houses there on grounds of sustainability. The reasons given at this meeting were:</p> <p>A lack of supporting infrastructure. There is very limited public transport, which would lead to a significant increase in the use of private cars in order to access schools, colleges, hospitals, doctors and dentists; there is one GP surgery and one primary school, both of which would be unable to cope with a significant further rise in population. Access to shopping and leisure facilities would similarly entail a significant increase in private road transport. This would be in contravention of NPPF 2023. Furthermore, if such</p>

development were to be permitted, the access road, Mucklestone Wood Lane, would be completely unable to cope with the extra road (work, school, leisure, shopping) traffic generated.

Loggerheads has very limited access to employment by public transport; the infrequent Arriva bus service serves only Market Drayton, Newcastle and Hanley – there are no bus services to Stafford, Crewe or other employment centres. There are very few employment opportunities within the village itself.

Site LW53 is agricultural land, currently under cultivation. It has been in continuous use as such for many years. The loss of good agricultural land would contravene para. 180 of NPPF 2023. The Planning Committee in February 2024 gave this as one of the reasons for rejection of the developer's proposal. The selection for housing development of this greenfield site is against the Labour Government's stated policy of prioritising development of brownfield and "grey" field sites, and not on agricultural land.

In rejecting the proposal in February, the Planning Committee pointed to the existence of a Grade II listed building adjacent to the site. A housing development so close to the building would vitiate this heritage asset, in contradiction to the aims and objectives of the National Planning Framework 2023. Furthermore, the Planning Committee accepted that the development of site LW53 would adversely affect the rural nature of the area which is again in contradiction of the National Planning Framework 2023.

The Borough Council has not provided any justification for why Loggerheads needs to expand by 450 houses – three other rural centres have a target of 250 houses/dwellings on the Local Plan. Loggerheads, it seems, is a location with the least suitable infrastructure being targeted with the biggest number of houses. The draft plan suggests that Loggerheads needs these dwellings, but no reasons for this are given. Loggerheads has already more than fulfilled its share of new housing, without any upgrades in infrastructure. The sluggish sales of the new builds should also be taken into consideration.

In order to meet the criterion of "soundness", the Local Plan should withdraw site LW53 as a location for further housing development, as well as removing the arbitrary target of 450 houses. No justification has been given for this figure; it smacks of Soviet-style planning where arbitrary targets are handed down, leading to arbitrary and mistaken decisions, to the detriment of all concerned – except the developers.

Yours truly,
Keith Wilson

Newcastle under Lyme draft local plan – regulation 18: Consultation response

Dear Sir/Madam,

The following is a robust objection to all developments on green field sites covering all the proposals within Audley Parish and many more elsewhere as recommended in the draft local plan. In writing this response, I am aware of the need to adopt a local plan in order for local authorities to maintain democratic control of development in the area. This requirement appears to be a symptom of the subsection in the NPPF titled “The presumption in favour of sustainable development” (paragraphs 11-14). However, from a resident’s point of view, this gives the impression that local authorities must demonstrate a willingness to develop a particular area in order to avoid it being developed. This is, in essence, a commitment to eventual development even if it is not needed. And this is a source of great anxiety amongst residents that undesirable development is out of control, a situation clearly being fuelled by the existence of paragraphs 11-14. On this basis therefore, this subsection of the NPPF needs to be challenged.

This response may differ from others in that it comments on local planning within a strategic context. As I see it, there are three main types of development, which are likely to blight the future generations in the UK: (i) infrastructure (example, HS2), (ii) commercial (examples, AB2 and TK30 in the NuLBC local plan) and (iii) residential (example, recent housing developments either side of the A513, Beaconside, Stafford). Infrastructure is within the remit of Westminster rather than local authorities, so that is not a particular concern here. My main focus is encroachment of developments, both residential and commercial, in green spaces allowed for in the draft local plan. And any new developments in rural areas will, at the very least, result in:

- Loss of light or overshadowing

- Increased risk of flooding due to ‘run-off’

- Loss of visual amenity

- Limitations to physical activity

- Generation of extra traffic, overloading already busy local roads

- Extra noise, pollution, disturbance and danger from increased traffic

- Loss of trees and other biodiversity – bats, lizards etc.

- Loss of natural carbon capture

- Decrease in food production capacity

Increased local population placing further pressure on local schools, GP’s surgeries and other services, which are already oversubscribed.

The United Kingdom as a whole is currently gripped by a pandemic of overdevelopment, which threatens nature and the already depleted biodiversity we see in this country. And it has now reached the stage where it should be considered a national emergency. I for one, do not feel that I have any influence over the shape of our surroundings. There are numerous drivers for this trend many of which are not being addressed by government at any level. At the heart of this is a significant disconnection between the opinions of politicians and public as to what is actually needed. There appears to be cross-party support for activities driving economic growth at all costs, irrespective of the consequences to the natural environment. Aggravating this divide is the aforementioned paragraphs 11-14 of the NPPF. At a local level, what is not in doubt, is that whenever there is land removed from the green belt there is rarely, if ever, an equivalent area so returned, so the process is irreversible. And in the absence of any agreed lower limit on the area of protected green spaces within the UK, no release of green belt land, or development on green spaces, can be considered sustainable. Unless, of course, the use of agricultural land for just that purpose is also considered “developed”, i.e. it has an economic and sustainable use. And the local plan does appear to acknowledge this¹, so why not include agricultural use into the local plan implying no change in particular areas? If this is not the case, we are committed to a process where the end point is a UK completely covered in tarmac and concrete. Anyone arguing against this interpretation needs to state and justify precisely where that end point is. If they cannot, this renders the term ‘sustainable development’ an oxymoron.

One particular trend of major concern is the growing UK population. At the time of writing this stands at just under 69 million, and is set to reach 74 million before 2050. Studies in the US (Pimental and Giampietro, 1994; Lal, 1989) suggest that comfortable/sustainable living requires 0.5 Ha (1.2 acres) per capita. If we are generous, sustainable living in the UK was possible with a population of 57 million, a figure I remember from the late 1960s. With a total area of the UK at just over 60 million acres, a land area of one acre per capita for sustainable living in the UK seems feasible. As we have seen, anything more puts a strain on the environment as a whole. On this basis therefore, the UK is currently overpopulated by about 15%, and there appears to be no initiatives to address this issue. On this point, Westminster appears to be in a state of denial, thus fuelling the current avalanche of overdevelopment nationwide. Residential developments have a knock on effect by requiring other types of development to provide infrastructure, services and employment. Notwithstanding overpopulation, this gives the impression that there is not enough housing stock to accommodate the current population. Recent data, in the form of an infographic (“Housing crisis fact check”) from the Community Planning Alliance², convincingly shows that this is far from the case. In short, what is perceived as the current “housing shortage” is little more than a myth propagated by the construction industry and related interests. This is justified by item 3 on the infographic stating that “there are 1.5 million more dwellings than households” in England and Wales alone^{3,4}. On this basis therefore, no further house building is needed in the UK subject to efforts addressing projected population growth. In other words, what we have at present is a substantial housing surplus. Therefore, locally there are strong grounds for objections to development of the sites

AB12(p74)

AB15(p75)

AB32(p75)

AB33(p75).

Ignoring the 1.5 million surplus dwellings nationwide, the current (regulation18) draft of the local plan quotes a minimum housing requirement of 7160 in the Borough over the period 2020-40, of which 1206 are already completed. Of these, only 40% are to be 'affordable' (1-2 bedroom dwellings). Therefore, of the minimum requirement, only 2864 dwellings will be affordable. If we assume that those already built are affordable (they probably aren't) then the borough will only need 1658 homes built between now and 2040. This is because, due to being beyond affordability, most locals will be unable to buy or rent the other 60%. Therefore, they are not needed, and the proposed mix is entirely incompatible with general affordability. Given the surplus dwellings throughout England and Wales however, it is likely that none will be needed, especially considering the imminent removal of mandatory housing targets by the DLUHC under Michael Gove MP, and any specific affordable housing needs can be catered for by using brownfield sites only. All of the green areas in the local plan could therefore be planned in for their present use.

Infographic from the Community Planning Alliance summarising UK housing stock in relation to the population.

Another statistic from the infographic is that nationwide we could build up to 1.2 million homes on brownfield sites (item 2)2,5. And like any other local authority, NuLBC is legally obliged to and does keep a register of its brownfield sites, although it is likely that some may slip through the net.

If there is an imperative, it is to increase further democratic control of the development process both locally and nationally. And both local and national authorities would do well to remember that they have a responsibility to the people they represent and not to the commercial viability of developers, the construction industry or overseas investors. In short, no new housing development is required, especially given that the borough has exceeded its housing targets in recent years. This calls into question the need for housing developments outside Audley Parish mentioned in the local plan. These include

BL18 (p75)

CT1 (p76, 750 dwellings)

RC8 (p76, 6 dwellings, potential flood risk.)

KS3 (p77)

LW53 (p77)

MD29 (p78, 150 dwellings, likely to conflict with HS2 construction?)

NC13 (p78)

NC77 (p78)

SP11 (p78, 900 dwellings, former Keele golf course)

SP12 (p79)

SP23 (p79)

TB19 (p79)

TB23 (p79, 124 dwellings, adjacent to Walley's Quarry.)

TK10 (p80)

TK17 (p80)

TK27 (p80).

Other sites which may also be questioned are

KS17 (p77, would include loss of playing fields and other village amenities. This may be classed as infill.)

KL13 (p77,93, part built already within the grounds of Keele University Campus).

The other class of developments locally is commercial. All too often we hear in the news from both local and Westminster sources, the mantra that economic growth is the imperative. But the actual imperative is stability, and we have reached the point where growth at any cost has become toxic, especially given the impossibility of unrestrained growth in a land of finite area. Have our political masters never heard of the circular economy?

Since the beginning of deindustrialisation in the 1980s, the diversity of employment opportunities has declined. We have seen an unhealthy move away from manufacturing/production of goods that we need as a nation, to one entirely reliant on trade with overseas partners, leaving us open to blackmail and the current spike of rampant imported inflation. Look what happened during lockdown. Over recent decades this has led to the demolition of old factories for residential developments and the rise of logistics centres (warehousing) for the temporary storage of imported goods, which will ultimately be operated by robots and AIs leading to even less employment. The problem with warehousing of course is its large consumption of land area. My question is, what is the driver for the proposed "big box" developments on AB2 and TK30 locally? Both of these proposals lie entirely within the greenbelt, although the TK30 land has already been quarried in parts. Neither of these proposals is either desirable or needed. However, if we are forced to accept one or the other then TK30, being about 5% smaller, is the lesser of two evils. With the green light given to the development of the 44 Ha Chatterley Valley site on Peacock Hay Road, and the numerous empty warehouses existing across the potteries, North Staffordshire and Cheshire East. It is dubious to say the least to claim that either AB2 or TK30 are needed. These sites are 70 Ha and 66 Ha respectively. However, in the recently published "Housing and Economic Needs Assessment Update", the borough as a whole only needs a maximum of 34 Ha6. So why are we saddled with 154 Ha total covered by AB2, TK30 and KL15?

If the local plan caters for agricultural developments, AB2 and TK30 could be planned for their existing use. The majority of the area covered by these sites is high grade (3a) agricultural land. In the case of TK30 the quarried areas could be reclaimed for agriculture or, if this proves difficult, used in other ways to enhance biodiversity. If the land in question is council owned, and the motivation is to sell off council assets, then once sold, they cannot be sold again, and any control is lost. Moreover, once farmland is developed for other purposes then it is near to impossible for it to be reclaimed later for that use – and so the ratchet inexorably turns. On this

basis therefore, I would urge the LPA to remove the warehousing proposals AB2 and TK30 from the local plan.

The purpose of this consultation is to supply feedback to the Borough Council. Another question is, does Westminster similarly consult with local authorities on planning issues, or is there any other mechanism where local councils can supply feedback to Westminster, providing a better feel for the mood of the nation? If so, why do we not see a root and branch reform of the NPPF rather than the tinkering around the edges approach seen in the July 2021 version? Most especially, there should be a removal of paragraphs 11-14 and its supporting statements elsewhere in the document, which is tantamount to a developer's charter. And there should be more flexibility within the NPPF allowing local plans to include parcels of land for their current purpose, given that there is almost none in this country that is not currently in use. As far as I can see this plan is nowhere near compatible with efforts required to address the current climate crisis. Moreover, given their scale, the proposed developments represent too greater shock to the environment and local communities over the short 20-year period suggested for their completion. And with the sufficient housing and unused commercial sites we already have, there is no need for any encroachment into our green spaces.

Yours sincerely
Jim Austin

Title	Policy LW53 Land at Corner of Mucklestone Wood Lane, Loggerheads
Consultee Company / Organisation	Shropshire Homes
Consultee Family Name	Shropshire Homes
Agent Company / Organisation	Knights
Agent Family Name	Corinaldi-Knott
Agent Given Name	Alan
Q4 Part of document	Policy
Q4 Policy	LW53
Q5 Legally compliant	Yes
Q5 Sound	Yes
Q5 DTC compliant	Yes
Q6 Details	<p>Shropshire Homes currently has a land interest on the edge of Loggerheads on Mucklestone Wood Lane, and one site is proposed for allocation (LW53). This proposed allocation in the Regulation 19 Local Plan is supported.</p> <p>Draft Site Allocation LW53</p> <p>Shropshire Homes currently have an outline planning application for up to 150 dwellings that is subject to appeal. As set out in the introduction, the planning application was recommended for approval by officers with no technical objections and no objections from statutory consultees or other statutory bodies. The recommendation for approval was overturned by Members at the Council's planning committee. This site is identified as a draft allocation for around 130 dwellings (site reference LW53). In light of the outline planning application before the Council, it is suggested that the number of dwellings that the allocation can accommodate be increased to 150 dwellings instead of 130 dwellings and that this should be worded accordingly in the allocations policy.</p> <p>Therefore, the first sentence of the policy wording should be amended to:</p> <p>"Land at the corner of Mucklestone Wood Lane is allocated for residential development in the region of 150 dwellings"</p> <p>The above would reflect the actual capacity of the site that is being pursued through the planning application, and allows a degree of flexibility should the final number of dwellings vary to a marginal degree at reserved matters stage in the event that the appeal is allowed.</p> <p>Policy LW53 then lists a number of criteria that need to be addressed and each of these will be considered below in turn.</p> <p>Criteria 1</p> <p>Criteria 1 states that the requirements of Policy SA1 should be satisfactorily addressed. Policy SA1 sets out a number of requirements for the proposed site allocations and each will be assessed below.</p> <p>Master Plans</p>

A masterplan has already been provided to the Development Management section of the Council as part of application reference 23/00002/OUT setting out how the site can deliver the proposed dwellings, access roads, open space, trees and landscaping whilst respecting surrounding character of the settlement and the setting of the nearby listed building. A copy of the masterplan is provided as Appendix 2 to demonstrate how the Council's policy objectives can be delivered on this site. This masterplan has been informed through pre-application discussions with the Council, as well as being shaped through the Design Review Panel

process. The layout has also been refined in response to consultation responses during the planning application process.

Neighbourhood Plans

The submitted planning application has responded to the housing mix policies of the adopted Loggerheads Neighbourhood Plan by providing a broad mix of house types and sizes, including smaller properties, homes suitable for first time buyers and the elderly and affordable housing.

Affordable Housing

The outline planning application that is currently subject to appeal provides for 30% affordable housing in accordance with the council's emerging affordable housing policy which requires 30% affordable housing on greenfield sites.

Housing Mix and Density

As set out above under Neighbourhood Plans, the site will deliver a broad mix of housetypes and these will be provided in a mix of densities to reflect the characteristics, opportunities and constraints of the site.

Design

The submitted masterplan has been informed by an extensive contextual analysis and a full design review. The masterplan demonstrates that a high quality design and layout can be delivered on the site, along with landscape infrastructure and sustainable drainage. Shropshire Homes are experienced developers and deliver high quality housetypes. Shropshire Homes are currently delivering another site adjacent to the Community Fire Station in Loggerheads which demonstrates the high quality housing product that Shropshire Homes can deliver.

Historic Environment

It is accepted that the proposal would result in some visual change within the setting of White House Farm which is a Grade II listed building. As set out in the committee report to application reference 23/00002/OUT, the proposal would result in less than substantial harm that would fall at the lower end of the spectrum of less than substantial harm and that this should be weighed against the public benefits of the proposal.

This less than substantial harm would occur through the anticipated visibility of development in views to and from the asset, although it should be noted that a significant area of intervening agricultural land will remain between the asset and the proposed allocation and there will be a green landscaped buffer to the eastern boundary of the site that would provide a transition between built form and the boundary to the adjoining field parcel.

The Heritage Impact Assessment (HIA) forms part of the Council's Local Plan evidence base. The HIA provides an assessment proforma of LW53.

With regard to the significance and setting of known heritage assets, the HIA concludes, with regard to the contribution that the site makes to the significance of White House Farm, that:

The closest designated heritage assets to the site are a mid-to-late 19th century milepost (1205706) on Eccleshall Road, c 230m west of the site, and White House Farmhouse (1377586), c 240m east of the site. Despite its proximity, there is no intervisibility between the milepost (1205706) on Eccleshall Road and the site, however, there is partial intervisibility between the White House Farmhouse (1377586) and the majority of the site – the significance of this asset is derived, in part, from its imposing and prominent position within the existing landscape but also as a defining feature within a previous post-medieval agricultural landscape. Despite its continued agricultural use there are no 'positive' remains of previous medieval/postmedieval features indicative of this activity within the site, and the extent to which belowground elements of these features survive is unknown. As such, the site makes a neutral contribution to the setting/significance of known heritage assets within the study area. (emphasis added).

With regard to an overall impact assessment, the HIA acknowledges that the development of the site could impact upon on heritage assets within the environs of the site and makes recommendations for minimising harm and maximising enhancement. These recommendations include:

- (a) Where possible existing hedgerows and trees should be retained to help to preserve the pattern of enclosure within the site.
- (b) Additional areas of screening/planting should be considered at the eastern extent of the site, to reduce harm to White House Farmhouse.
- (c) Development within the site should attempt to preserve long range views of the farmhouse, particularly those along the key approaches into the village from the north (Rock Lane), and west (Eccleshall Road) of the site. This would help to maintain the site's existing neutral contribution to the setting/significance of this asset.

The submitted masterplan demonstrates that in accordance with the emerging policy, that the layout and design of the development can respond sensitively to the significance of the nearby heritage asset (Whitehouse Farm).

Social and Community Facilities

The supporting masterplan demonstrates that the development of the site can provide on site open space, including linear green walking routes around the site perimeter, informal areas of open space, tree planting and a local area of play.

In addition, the development can provide financial contributions towards a MUGA and additional facilities on Neighbourhood Plan allocations LV1 and LV2. Such contributions are being provided as part of the appeal proposal and would be secured by way of a Section 106 Agreement.

With regard to education, Loggerheads contains a primary school. In addition, the site also falls within the catchment of St Mary's School, Mucklestone. Both schools currently have surplus capacity to accommodate additional primary age pupils as demonstrated by the school capacity and pupil roll data below available from the Department for Education (see attachment)

In response to the planning application proposals for 150 dwellings, Staffordshire County Council as Local Education Authority calculated that 32 primary school places are likely to arise from the proposed development. With 33 places available at St Mary's School in Muckleston and a further 51 places available at Hugo Meynell School, there is sufficient capacity available to accommodate additional primary school pupils arising from new development in Loggerheads.

With regard to healthcare provision, the Loggerheads is located in close proximity to the village of Ashley where the doctors surgery is located. Ashley Surgery accepts new patient registrations⁵.

Whilst the GP surgery is not located in Loggerheads itself, journeys to Ashley surgery would be relatively short. Financial contributions towards local healthcare provision can be facilitated by the development if deemed to be CIL compliant.

With regard to promoting healthy and active lifestyles, as already stated above, the site can provide expansive areas of open space, play space and walking routes, and walking routes that are surfaced and lit are available to access local services and facilities in Loggerheads.

Landscape and Green Infrastructure

As demonstrated through the planning application submission, the greatest level of visual change would relate to the site and the very localised area immediately adjacent to the site. The effect on potential receptor groups in the wider landscape context, including users of the wider PRoW network, would be generally very limited.

The existing trees and hedgerows which surround the site would also help to soften the appearance of new built form where this is visible and the mitigation inherent in the design will help to assimilate the proposed development into the landscape in a manner which complements the character of the existing adjacent areas of the settlement (i.e. a strong framework of green infrastructure set across the upper slopes and topographical high ground).

Overall, the context provided by the existing settlement edge of Loggerheads and the combined screening effects of topography, existing vegetation and built form means that effects on landscape character and local visual amenity would be very limited in scale.

The submitted masterplan otherwise demonstrates how the development can be successfully incorporated into the landscape.

With regard to blue infrastructure, SUDS measures, including swales and an attenuation basis, to reduce surface water run off and also provide habitat.

Biodiversity and Geodiversity

There are no ecological constraints to developing the site, subject to appropriate avoidance and mitigation measures where required.

The submitted biodiversity metric provided with the planning application demonstrates that 10% biodiversity net gain can be achieved on the site.

Highways

A suitable access with appropriate visibility splays can be provided directly onto Muckleston Wood Lane. In addition, a bus set down facility can be provided on the edge of the site curtilage for secondary school pupils using the secondary school bus service.

In addition to the above, off site highway improvement works can be undertaken along Muckleston Wood Lane as per those submitted to the Council and endorsed by the Local Highway Authority as part of application reference 23/0002/OUT which include a series of kerb build outs and refuges to both control vehicle speeds as well as provide refuges for pedestrians to step off the road to avoid any oncoming traffic.

Sufficient levels of parking can be provided within the development, including the provision of electric vehicle charging infrastructure to each of the proposed dwellings.

Environmental Health

In terms of site specific opportunities and constraints, there are no barriers to the development of the site land contamination and air quality perspective and construction related activities can be controlled by way of a construction and environmental management plan.

Flood Risk

As referred to earlier, the supporting masterplan for the site demonstrates that surface water attenuation can be provided on site in the form of ponds and swales. The design of these measures have been informed by a flood risk assessment and drainage strategy that was submitted with application reference 23/0002/OUT and agreed in principle by the Lead Local Flood Authority (Staffordshire County Council).

Utilities

Suitable utility provision is available within the surrounding area, and no objections were raised on the grounds of insufficient infrastructure capacity by statutory undertakers in response to application reference 23/0002/OUT.

Infrastructure

The site can make the necessary contributions towards local infrastructure provision in line with Policy IN1.

Minerals

A Mineral Resource Assessment was submitted with application reference 23/00002/OUT which demonstrates that some of the mineral resource on site can be used as part of the programme of construction works. The County Council as the Mineral Planning Authority raised no objections to the final proposals for 150 dwellings on this site.

In light of the conclusions above, it has been demonstrated the development of 150 dwellings on this site would satisfy criteria 1 of Policy LW53.

Criteria 2 – Access onto Muckleston Wood Lane

As set out in response to highways and access under criteria 1 above, direct access with appropriate visibility splays can be provided onto Muckleston Wood Lane.

Criteria 3 – Submission of a Heritage Impact Assessment

A heritage impact assessment was submitted with application reference 23/00002/OUT.

The proposal would result in some visual change to the setting of the nearby listed building (White House Farm), and the Council agree that this would result in less than substantial harm, albeit at the lower end of the spectrum of less than substantial harm. This harm can be further mitigated through the provision of an appropriate landscape scheme to the eastern boundary of the site.

Criteria 4 - Archaeological Recording

The planning application did not include the submission of an archaeological survey. It is unclear what evidence there is to demonstrate whether or not there is likely to be archaeological remains on the site and it may be that this criteria has been included in the policy in error. In addition, no conditions were proposed to be imposed with regard to archaeology in the officer report to committee. It is therefore requested that this criteria be removed from the policy.

Criteria 5 – Landscape Buffer to the East of the Site

As discussed under other criteria, the submitted masterplan demonstrates the provision of a landscape buffer to the east of the site and that this can be achieved in a suitable manner.

Criteria 6 – Green Buffer to the West of the Site

As discussed under other criteria, the submitted masterplan demonstrates the provision of a green buffer to the west of the site. This includes the retention of existing trees and the enhancement of this buffer through further planting.

Criteria 7 and 8 – Land Contamination and Noise Impact Assessment

Both of these assessments were submitted with the planning application to demonstrate that land contamination and noise is not a constraint to development, and that any noise impacts from surrounding uses can be mitigated where necessary.

Criteria 9 – Mitigation Strategy - SPZ3 Groundwater Protection Zone

The development does not interrupt the SPZ3 Bearstone Groundwater Aquifer, however extensive testing of the aquifer will accompany any planning application in order to ensure that the development does not affect the aquifer.

Criteria 10, 11 and 12 – Financial Contributions

These criteria require contributions towards education, healthcare provision, open space, community facilities and highway contributions.

As set out under Criteria 1 of the policy earlier in this submission, the proposal can make all of the relevant contributions towards local services and infrastructure as required and as demonstrated through the submitted planning application.

Other Considerations - Suitability of Loggerheads for Additional Housing Development

Loggerheads is identified as a Rural Centre in the DLP. This status in the DLP settlement hierarchy is underpinned by the Rural Area Topic Paper that forms part of the Council's evidence base.

The topic paper demonstrates that Loggerheads currently benefits from the following services and facilities:

- (a) Co-operative foodstore
- (b) Post Office
- (c) Primary school
- (d) Library
- (e) Hairdressers
- (f) Restaurant
- (g) Public house
- (h) Places of worship
- (i) Butchers
- (j) Community meeting room at the Fire Station
- (k) Pharmacy
- (l) Bus service between Market Drayton and Newcastle-under-Lyme (service number 64)
- (m) Veterinary clinic

In addition, Loggerheads is located in close proximity to the settlements of Mucklestone and Ashley, both of which fall within the Loggerheads Parish. Ashley contains a GP surgery and a restaurant and a village hall is located outside of the village boundary between Ashley and Loggerheads. Mucklestone also contains a primary school, with parts of Loggerheads falling within the catchment area for this primary school, including proposed site allocation LW53.

The three villages therefore provide a range of services where services in one village may support the residents of another village. In particular, residents of Ashley and Mucklestone will rely on the Post Office and Co-Operative foodstore, and residents of Loggerheads will rely on the GP surgery in Ashley.

Rural Centres are identified as providing "a significant role in service provision to the local population and must contain a number of essential services and facilities in order to meet the day to day needs of residents".

The above demonstrates that Loggerheads is a sustainable location that is a suitable location for some additional residential development in planning policy terms, and that has been the consistent finding of both planning officers in determining planning applications, and planning inspectors at appeal.

Further to the above, allowing some additional development around the larger rural centres would provide additional critical mass to provide additional residents to support existing services and facilities and provide some additional patronage to existing bus services so that such services continue to be viable. As such, there is no doubt that Loggerheads is a suitable and sustainable location for some additional residential development and the proposed allocation of LW53 at Loggerheads is considered to be sound, supported by a robust evidence base and is therefore justified.

DELIVERABILITY

This site is being promoted by Shropshire Homes who are committed to the delivery of this site for housing as demonstrated through the submission of the planning and application and the lodging of a subsequent appeal.

In terms of delivery, it is anticipated that the development of the site will follow the following broad timescales in the event that the planning appeal is allowed, with dwellings being delivered at a rate of around 25 – 35 homes per annum:

- (a) Appeal decision expected February 2025
- (b) Submission of applications for reserved matters and discharge conditions – second or third quarter of 2025
- (c) Site preparation works and construction of initial site access – fourth quarter of 2025
- (d) First phase of homes delivered on site – first half of 2026
- (e) Completion of the development – circa 2029

	The site would therefore be deliverable within the plan period and within the first 5 years of adoption.
Q7 Modification	Please see supporting representation by Knights on behalf of Shropshire Homes for allocation reference LW53
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	Please see supporting representation by Knights on behalf of Shropshire Homes for allocation reference LW53

Order	191
Title	Policy LW53 Land at Corner of Mucklestone Wood Lane, Loggerheads
Consultee Company / Organisation	Natural England
Consultee Position	Senior Officer
Consultee Family Name	McLaughlin
Consultee Given Name	Sally
Q4 Part of document	Policy
Q4 Policy	LW53
Q6 Details	<p>Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.</p> <p>Natural England welcomes the opportunity to comment at this stage of the Local Plan and particularly supports the inclusion of policies on green and blue infrastructure, biodiversity, health and wellbeing, trees hedgerows and woodlands. We have reviewed the consultation documents and provide comments that relate to the soundness of the Local Plan and that are most relevant to our interest in the Natural Environment.</p> <p>Natural England has adopted a robust precautionary approach within this plan response. Whilst we welcome the content of the Local Plan, Natural England advises that the plan is currently at risk of being unsound and/or not legally compliant due to the potential impacts on air quality in relation to internationally designated nature conservation sites and the justification for the potential loss of 263ha best and most versatile (BMV) agricultural land. Further detail is provided below.</p> <p>Natural England have also provided other advice within this submission relating to further improvements that could strengthen plan policies and specific strategic site options and related mitigation.</p> <p>Do you consider that the Newcastle Under Lyme Plan is Sound and Legally Compliant?</p> <p>Natural England notes that the plan is at the pre-submission stage and as such your authority is seeking confirmation on the soundness of the plan. Having reviewed the plan and supporting documents, Natural England considers the pre-submission plan in its current form is not sound or legally compliant, this is due to a lack of evidence with regards to air quality and the cumulative loss of BMV agricultural land both in a local and national context.</p> <p>Air quality</p> <p>Natural England notes that the Sustainability Appraisal states that "Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)</p> <p>As Natural England understands it the current evidence base used to conduct the HRA cannot rule out adverse impacts on designated sites. The HRA states at page 22 3.4.16 "At the time of writing, the traffic modelling run for the final suite of Regulation 19 allocations had not been undertaken." Appendix A lists the local plans for neighbouring LPA's concluding that 'in combination' with plans and projects (approved and those yet to be implemented) they may trigger in-combination effects on European sites as a result of air quality, particularly as we understand it in the key commuting areas.</p> <p>Natural England notes that Annual Average Daily Traffic (AADT) data and traffic modelling in the Strategic Transport Assessment (STA) concludes a potential reduction in travel and related air pollution at allocated sites as a result of a predicted preference in the use of public transport. We are surprised by this projected decrease in both traffic and related air pollution, particularly as one employment allocation site includes a 200-bay lorry park and increased congestion is predicted at junction 16 of the M6 where it joins the A500 in a rural location with no existing rural transport provision. The Sustainability Appraisal also notes that: "There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work". (p 206)</p> <p>Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot therefore currently be ruled out at the following internationally designated sites:</p> <ul style="list-style-type: none"> •Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI •Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI <p>The HRA outlines that the main source of ammonia emissions is agricultural practice, and that material increases in NH3 emissions are unlikely to be associated with the proposed local plan. At Black Firs and Cranberry Bog and Oakhanger Moss, any increase in nitrogen deposition has the potential to exacerbate pollution levels and thereby undermine the reasons for notification of these sites as a Ramsar.</p> <p>Ammonia can be emitted from vehicle exhaust emissions as a by-product of the catalytic conversion process designed to reduce emissions of nitrogen oxide. As traffic composition transitions toward more</p>

petrol and electric cars (i.e., fewer diesel cars on the road), catalytic converters may aid in reducing NOx emissions but result in increased ammonia emissions. Ammonia emissions from road traffic therefore could make a significant difference to nitrogen deposition close to roads.

Natural England therefore advise that ammonia sourced from traffic emissions should be included for assessment within the local plan HRA, as the impact from this source on designated sites is currently unclear. For further information please see this report from Air Quality Consultants (AQC) that looks at ammonia emissions from roads for assessing impacts on nitrogen-sensitive habitats. Whilst we are aware that the current CREAM model created by AQC used to assess ammonia emissions from road traffic has not been peer reviewed, at this time it has been recognised as a Best Available Tool and we deem it appropriate to be used where any caveats associated with this model are also considered within the assessment. An assessment based on the best available approach is necessary. The next stage of assessment can then consider uncertainties in the model and site specifics to decide if mitigation needs to be considered.

Further work is therefore required to inform the Habitat Regulations Assessment. Natural England will engage with the Local Planning Authority in order to produce a Statement of Common Ground (SoCG) on this matter.

'Best and most versatile' (BMV) agricultural land

Natural England notes that "the proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land. A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of 'best and most versatile' (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services". (page 74 Sustainability Appraisal).

Under the Town and Country Planning (Development Management Procedure) (England) Order 2015 (DMPO) Natural England is a statutory consultee on development that would lead to the loss of over 20ha of 'best and most versatile' (BMV) agricultural land (land graded as 1, 2 and 3a in the Agricultural Land Classification (ALC) system, where this is not in accordance with an approved plan.

Natural England would like to understand how the local planning authority have produced the evidence base and options assessment which informs the strategic site allocations.

Natural England will engage with the local planning authority to consider the cumulative impacts of the loss of BMV both in the local and national context and the challenges related to environmental impact, infrastructure, and the requirement to deliver a balance between the need for development and the potential urbanisation of the countryside including the potential mitigation measures that need to be considered.

NPPF paragraph 174e states:

Planning policies and decisions should contribute to and enhance the natural and local environment by:

- ... preventing new and existing development from contributing to, being put at unacceptable risk from, or being adversely affected by, unacceptable levels of soil, air, water or noise pollution or land instability.

Development should, wherever possible, help to improve local environmental conditions such as air and water quality, taking into account relevant information such as river basin management plans.

Natural England provides guidance to inform further assessment of air quality and the loss of BMV agricultural land in our response to the content of the plans Strategic Policies as set out below.

Do you consider that the Newcastle-under-Lyme Borough Council Regulation 19 pre-submission draft Plan is compliant with Duty to Co-operate?

In terms of working with neighbouring authorities, Natural England notes that initially the plan was intended to be produced jointly with the City of Stoke-on-Trent, the plan does not however currently present an evidence base that demonstrates that a collaborative approach has been adopted and that the Duty to Co-operate has been fully complied with.

The Sustainability Appraisal states that: "Overall, there is potential for a cumulative adverse effect on biodiversity, owing to the fragmentation of the ecological network... Where a large amount of development is located on previously undeveloped land surrounding rural settlements, this is likely to produce a long-term irreversible negative cumulative effect regarding the urbanisation of the countryside" (p 71)

Natural England would therefore like to further understand how the areas identified to meet the City of Stoke-on-Trent's unmet employment needs are justified and appropriate and whether meeting some of the employment needs of the City of Stoke-on-Trent has led to the need to release or safeguard more land from the Green Belt in Newcastle under Lyme. If this is the case, what are the exceptional circumstances for doing this and how does this align with the allocated sites options assessment?

Recreational Pressure

In terms of the South Pennine Moors SAC and recreational impacts, the Local Plan does comply with the Duty to Co-operate. Natural England recommends that reference is made to the 'Recreation use of the South Pennine Moors and implications for strategic housing growth' report by Footprint Ecology Ref 778 date 27th March 2024. This report should both inform the evidence base and ensure that policies relating to open space/green infrastructure are as rigorous and robust as possible.

The report concludes that more data/evidence is required to determine if recreational use is causing an impact across to the South Pennine Moors and to get a better understanding of the scale and location of any impact. Natural England notes that the report records 7,000 additional dwellings in Newcastle-under-Lyme over the plan period rather than the 8,000 included in this regulation 19 submission.

Newcastle-under-Lyme Borough Council should therefore continue to work with local authority and other partners to ensure coordinated and continued cross boundary action.

Other matters

Natural England has specific concerns related to allocations in the Green Belt. Notwithstanding that, Natural England considers most of the policies within the plan to be sound and deliverable. The plan is consistent with national policy with regard to those policies that are within Natural England's remit. Further information on strengthening policies including but not limited to Soils and best and most versatile (BMV) agricultural land, preventing loss and fragmentation of habitats and supporting green infrastructure are provided below.

Vision and Strategy

Natural England notes that the Plan's vision and emerging development strategy set out a framework for the future development of Newcastle-under-Lyme and addresses the needs in relation to housing,

the economy, community facilities and infrastructure, including specific reference to a proposed employment site allocation.

This vision and the related objectives should also set out the environmental ambition for the plan area and form the basis for nature recovery and enhancement, supported by the policies and proposals in the plan.

Natural England advises that the vision should also incorporate more on the local ecology and landscape features which underpin local distinctiveness such as the “strong rural character with long open views across the surrounding rural landscape, towards more distant hills often framed by trees” (p 69) Part 3 Site Specific Landscape & Visual Appraisal. “Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms” (p 187) Sustainability Appraisal.

Strategic Objectives

Natural England welcome strategic objective SO-4 relating to carbon reduction and climate change, however we do not feel that this group of thirteen strategic objectives value or reflect the Boroughs whole ecology and landscape including but not limited to the protection of soil and best and most versatile (BMV) agricultural land. We would suggest that additional objectives are added relating to: air quality, water quality and quantity, soils and landscape.

Natural England would also like to see stronger reference to the Nature Recovery Network which is one of the specific aims of the Environment Act 2021 and will underpin the approach to the enhancement of nature.

Air quality is a major threat to habitats and species. Many ecological sites are exceeding their critical loads and levels for ammonia, nitrogen deposition and acid deposition. The strengthening of the policies and the rationale behind site allocations within this plan will ensure that new development does not contribute to the further deterioration of habitats and species due to air pollution. Further advice on strengthening the plans evidence base with regards to air quality is provided in the links below:

Strategic Policies

5 Planning for Sustainable Development

Policy PSD5: Green Belt

Natural England notes that this policy “aims to protect the Borough’s essential open spaces, prioritise the use of brownfield land, and guide potential future development in accordance with the National Planning Policy Framework (NPPF)”.

Natural England however notes that amendments to the Green Belt boundary are proposed in the form of 14 site allocations to accommodate both the growth requirements of the borough and the employment requirements of wider Stoke-on-Trent conurbation. Natural England’s has some site-specific concerns about the potential impacts of some of the green belt sites selected on the natural environment with regards to habitat loss, fragmentation and justification for the loss of BMV agricultural land.

We note the LPA’s intention to release and compensate for the loss of green belt and prioritise the use of suitable brownfield land. However, the site allocations in the green belt would result in the potential loss of 263ha of Best and Most Versatile (BMV) agricultural land. The council should satisfy itself that it is making a balanced decision for sustainable development, the Sustainability Appraisal concludes that: “The Green Belt Study assessed land parcels against the contribution they make to the five purposes of the Green Belt on a four-point scale...Three allocated sites (AB12, AB33 and TK10) are located in areas which make a ‘strong’ overall contribution to the purposes of the Green Belt where “the site contributes to the purpose in a strong and undeniable way, whereby removal of the site from the Green Belt will detrimentally undermine this purpose” (p101)

“Site allocations on previously undeveloped land or that would result in a net loss of GI / vegetation could result in a reduced capability of the environment to provide ecosystem services including carbon storage, the storage and filtration of water including natural flood protection, as well as reduced availability and connectivity of habitats within the green network enabling movement of species. (p 165)

Strategic Site Allocations

Natural England suggests that the HRA should include a “requirement for project-level/site specific HRA’s and targeted ecological surveys”.

The Sustainability Appraisal concludes that:

“Some 12 allocated sites partially coincide with priority habitats, where 3.43% of the total site allocation areas coinciding with priority habitats which include deciduous woodland, good quality semi-improved grassland and Site BL18 coincides with lowland fens which is a very high distinctiveness habitat in the BNG handbook (2024). These habitats can support a range of species of principal importance. Allocated Site KL15 is adjacent to ‘The Butts and Hands Wood’ ancient woodland, with a further 20 allocated sites located in close proximity to ancient woodlands. P158

“Six allocated sites (Sites CT20, HD10, KL13, RC8, SP11(2) and SP23) are located within areas of ‘high’ or ‘very high’ habitat distinctiveness that provide high biodiversity value. Whilst in many cases these habitats can be conserved alongside development, it is likely that in some cases fragmentation or loss of habitats and connections between habitats will occur”

“The majority of allocated sites are located on previously undeveloped land, which would result in the loss of soil resources and the ecosystem services they provide. (p 159) The development of new buildings on previously undeveloped land would be expected to result in a direct loss of soil resource, with little or no scope for mitigation” (p 216)

“The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution. (p 68)

For all sites, Natural England advises that the hydrological catchment within which the site sits is taken into consideration, with regards to the potential impact of the developments proposed on the adjoining watercourses and wider catchments, including but not limited to surface water runoff (including during construction), existing and required capacity of Waste Water Treatment Works (WwTW) and water supply and flooding issues. Each site will require site specific investigation, and the council should understand the impact of all the sites put forward individually and in combination.

Natural England has specific concerns and or requires further information about the following ‘Strategic Site Allocations’ which could potentially impact on designated sites as a result of air and water quality and/or lead to the loss and / or fragmentation of priority habitats and BMV agricultural land:

BL18 – Clough Hall Playing Fields, Talke
Natural England would like to further understand this larger residential development proposal with regards to the potential impacts on the lowland fen habitat.

KL13 & KL15 – Land South of A525 between Keele University and Newcastle
Natural England notes this proposal for Employment development is immediately adjacent to ancient woodland priority habitat.

HM28 – Land off East Lawns, Betley
Existing and projected water quality issues at Betley Mere will need to be considered with regards to this allocation.

LW53 – Loggerheads
Natural England notes this residential housing development proposal is located within the IRZ of protected sites (Burnt Wood SSSI) which states that development proposals of 50 or more homes outside existing settlements/urban areas in these zones should be consulted upon with Natural England.

SP11 – Former Keele Municipal Golf Course
This Larger residential development is categorised in the Landscape Assessment as having a Major adverse impact on the local Landscape.

AB2 – Land Adjoining Corner of A500 and M6 Southbound
Natural England notes this proposed employment allocation released entirely from the green belt, which comprises 70ha of grade 2 BMV agricultural land. The Landscape study concludes that the: “Proposed development scenario is likely to have a major adverse effect on the SA objective with no satisfactory mitigation possible” (p 15). With regards to potential Air Quality impacts on protected sites Natural England notes from the options analysis that “The loss or potential moving of a layby to enable access to the site could be problematic indicating potential issues with site access and traffic flow. An increase in HGV and personal vehicle traffic is anticipated, which could lead to potential congestion and air pollution in the area”. Natural England would therefore also like to understand the evidence base further including the rationale for an alternative site TK30 @ Talke A34 / A500 roundabout being ruled out.

Policy PSD6: Health and Wellbeing
Natural England welcome this policy direction in terms of safeguarding health and amenity and supporting healthy communities, through the protection and provision of high-quality open spaces, including allotments and the promotion of active travel transport choices Further information on joining up Nature Recovery and Green Infrastructure (GI) with health priorities is set out below. If more cities and towns can be creatively designed and managed, with nature and communities at their heart, we will see nature and people thrive. This is something we set out to inspire at Natural England when developing the Green Infrastructure Framework and Design Guide. Natural England’s People and Nature survey tells us that, for 82% of people ‘being in nature makes me happy’. With the cost-of-living crisis, ‘free’ places like local parks and greenspace, have become even more important. The value of these spaces for the economy is estimated at £28.7 billion per year.

Green infrastructure in towns and cities provides places to relax, exercise, and spend time outdoors; cools urban areas; reduces flooding by allowing water to permeate the ground rather than overwhelm our drains; increases biodiversity and helps to reduce inequalities in access to nature. Options assessments for development sites and related green and blue Infrastructure within and between developments, green spaces and designated sites should; include soft transition and consider potential direct and indirect implications on sustainable use for example visitor pressure and transport / access options.

The natural environment affords the best ‘natural’ play opportunities for children while offering multifunctional nature-based solutions to climate change etc. These can be blended into wildlife rich green infrastructure and green open spaces that can act as destination play sites for local children (See best practice at Play England and Play Wales) that have proven health and wellbeing value.

Evidence for nature play and health:
Play, naturally: a review of children’s natural play
Nature for health and wellbeing | The Wildlife Trusts
Good practice in social prescribing for mental health: the role of nature-based interventions - NECR228 (naturalengland.org.uk)

6 Climate and Renewable Energy
Whilst Natural England welcomes this group of policies we recommend including Policy CRE1: Climate Change and Policy CRE2: Renewable Energy within the Sustainable Environment (SE) group of policies to achieve a collective strategic focus on sustainable development and working toward achieving net zero alongside the SE policies relating to Pollution and Air Quality (SE1) and requirements for sustainable

water management measures to reduce water use, natural flood protection features alongside the specific policies on Sustainable Drainage Systems (Policy SE4:)

Natural England continues to work with the LPAs across the region on understanding air pollution across area boundaries (see comments and links in objectives section.)

10 Infrastructure and Transport Policy.

Policy IN4 Cycleways, Bridleways and Public Rights of Way

Natural England welcomes the inclusion of this group of policies which seek to maintain and enhance the network of public rights of way that cross the borough. We note that the sustainability appraisal states that “the borough has relatively poor accessibility to the cycle network and is the lowest performing in the county for walking zones” (p 206) and that, “eight allocated sites (AB2, AB12, AB33, HD10, KL15, MD29, SP11(3) and TK10) do not currently have safe pedestrian or cycle access adjacent to the site, where site end users may rely upon less sustainable modes of transport including private car use”. (p 180)

11 Sustainable Environment

Natural England welcomes this group of policies and has the following policy specific comments:

Policy SE1: Pollution and Air Pollution.

Natural England welcomes this policy that notes that development proposals which are likely to result in detrimental impacts on air quality, will not be permitted unless it can be demonstrated that mitigation measures effectively address these impacts. (Comments on Air Quality are also provided on page 2 and 4 of this letter). The promotion of sustainable and active travel options, low-emission technologies and enhancement of green infrastructure to absorb air pollution is also noted. (see comment above re integrating the group: 6 Policies Climate and Renewable Energy).

Policy SE7: Biodiversity Net Gain

Natural England supports the inclusion of a policy on BNG. We suggest the following minor amendments to further improve the plan policy.

The BNG policy should make it clear that biodiversity net gain is not applied to irreplaceable habitats, and that any mitigation and/or compensation requirements for Habitats sites should be dealt with separately from biodiversity net gain provision. The policy should also set out how biodiversity net gain will be delivered and managed through the lifetime of the scheme and including monitoring requirements. This should include indicators to demonstrate the amount and type of gain provided through development. The indicators should be as specific as possible to help build an evidence base to take forward for future reviews of the plan, for example the total number and type of biodiversity units created, the number of developments achieving biodiversity net gains and a record of on-site and off-site contributions.

Natural England notes that the Sustainability Appraisal states “Despite the BNG provisions at the site level, there remains potential for a cumulative adverse impact on biodiversity at the landscape scale, owing to incremental habitat losses. As a result of development within the Local Plan undeveloped land will be lost which will include the loss of soil resources, habitats recognised as being of ‘high’ and ‘very high’ distinctiveness, and potentially ecological links between biodiversity assets, whereby the policies will not be expected to fully mitigate the fragmentation of the ecological network. Fragmentation of the ecological network across Newcastle-under-Lyme is expected to be a long-term and permanent significant effect.” (p 162)

Policy SE8: Biodiversity and Geodiversity

Natural England supports the inclusion of this policy to protect the Boroughs internationally, nationally and locally designated sites important for their biodiversity value and to enhance the natural environment and work with partners toward Nature Recovery.

We particularly welcome the plans recognition of the value of “wider ecological networks” stating that “Other sites, both individually and collectively, that are not designated can also contribute towards protecting and enhancing diversity of species locally”.

Policy SE10: Landscape

Natural England welcomes this policy aimed at ensuring that “development proposals should protect and enhance the character, quality, beauty, and tranquillity of the Borough”. We note from the sustainability appraisal that “The entirety of the south of the borough is identified as being high in relation to landscape sensitivity, which starts in Audley in the north and covers the southern area of the borough, including Loggerheads and Alington.” We agree that “Alteration of the landscape character is a long-term and permanent significant effect...There is potential for a cumulative adverse effect on landscape character resulting from the development proposed in the Plan”. (p193) SA.

Natural England has divided England into 159 distinct natural areas called National Character Areas (NCAs) Newcastle-under-Lyme falls within two NCAs: Shropshire, Cheshire and Staffordshire Plain: gently rolling plains dominated by intensive dairy farming, beef and arable production; The Potteries and Churnet Valley: strong contrast between the industrialised landscape of the Potteries and the pastoral, strongly dissected hills and small plateaux that flank the Churnet and Dove valleys.

Natural agrees with the following statement in the sustainability appraisal: “Although various policies aim to ensure that development conserves and enhances landscape character and distinctiveness, when combined with Local Plan policies that support infrastructural improvements such as for transportation, water, and waste, this is likely to lead to a long-term and irreversible cumulative adverse effect on landscape character and tranquillity and associated indicators such as dark skies.” (p72)

Policy SE11: Trees, hedgerows, and woodland

Natural England welcomes this plans recognition that “Trees, hedgerows, and woodlands are integral to the distinctive character and ecological health of the Borough of Newcastle-under-Lyme, defining landscapes across both urban and rural settlements.” And that “This policy prioritises the protection of existing natural assets, seeking to not only preserve, but actively enhance, these valuable features wherever possible”.

Policy SE13: Soil and Agricultural Land

Natural England has concerns about the justification for the loss of BMV agricultural land within this plan. “The proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land, A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of ‘best and most versatile’ (BMV) agricultural

land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services.” (page74) (SA)

Natural England notes that policy SE13 states: “Outside of sites allocated for development in the Local Plan, development proposals should avoid the loss of best and most versatile agricultural land (BMV) unless it can be demonstrated that the benefits of development clearly outweigh the loss of the land and every effort has been made to mitigate for the overall impact of the development on best and most versatile agricultural land.”

With regards to Soil and Agricultural Land Quality, Natural England advises that The Local Plan should give appropriate weight to the roles performed by the area’s soils. These should be valued as a finite multi-functional resource which underpin our wellbeing and prosperity. Decisions about development should take full account of the impact on soils, their intrinsic character and the sustainability of the many ecosystem services they deliver.

The 25 Year Environment Plan (25YEP) sets out government action to help the natural world regain and retain good health, including highlighting the need to:

- protect the best agricultural land
- put a value on natural capital, including healthy soil
- ensure all soils are managed sustainably by 2030
- restore and protect peatland

Soil is a finite resource which plays an essential role within sustainable ecosystems, performing an array of functions supporting a range of ecosystem services, including storage of carbon and water, the infiltration and transport of water, nutrient cycling, a buffer against pollution and provision of food. In order to safeguard soil resources as part of the overall sustainability of the development, it is important that the soil resource is able to retain as many of its important functions as possible. This can be achieved through careful soil management and appropriate, beneficial soil re-use, with consideration on how any adverse impacts on soils can be avoided or minimised.

The conservation and sustainable management of soils is reflected in the National Planning Policy Framework (NPPF), particularly in paragraph 180(a), 180(b) and 181 (footnote 62). When planning authorities are considering land use change, the permanency of the impact on soils is an important consideration. Particular care over planned changes to the most potentially productive soil is needed, for the ecosystem services it supports including its role in agriculture and food production.

Plan policies should therefore take account of the impact on land and soil resources and the wide range of vital functions (ecosystem services) they provide in line with paragraph 180(b) of the NPPF.

Soil Plan Policies

We strongly advise that at a minimum, the plan includes core policies for:

- the protection of best and most versatile (BMV) agricultural land (Grades 1, 2 and 3a in the Agricultural Land Classification (ALC)); and
- for the protection of and sustainable management of soils as a resource for the future.
- Areas of poorer quality land (ALC grades 3b, 4, 5) should be preferred to areas of higher quality land (grades 1, 2 and 3a).
- Recognise that development has an irreversible adverse impact on the finite national and local stock of BMV land.
- Conforms to NPPF and Planning Practice Guidance (Natural Environment and Minerals).
- Requires detailed ALC surveys to support plan allocations and for subsequent planning applications (for all sites larger than 5 ha). ALC surveys to support plan allocations and for subsequent planning applications for smaller sites (1 – 5 ha) would be welcomed.
- Recognise that development (soil sealing) has a major and usually irreversible adverse impact on soils.
- Soils of high environmental value (e.g., wetland and carbon stores such as peatland, low nutrient soils; or soils of high environmental value in the local context) should also be considered as part of ecological connectivity (Nature Recovery Network / Green Infrastructure).
- Requires soil handling and sustainable soil management strategies based on a detailed assessment of the soil resource based on best practice guidance (for all sites larger than 5 ha), ideally as part of the planning application process for major sites to help inform master-planning, and to safeguard the continued delivery of ecosystem services through careful soil management and appropriate, beneficial soil re-use. Soil handling and sustainable soil management strategies for smaller sites (1 – 5 ha) would be welcomed.
- Reference should be made to Defra’s Construction Code of Practice for the Sustainable Use of Soils on Construction Sites
- In addition, for minerals and other temporary forms of development, plans for reinstatement, restoration and aftercare will be required (or for solar, a commitment to do so if the operational life is in decades); normally this will be return to the former land quality (ALC grade)
- Refers to soils issues within relevant policy areas such as renewable energy, climate change, green infrastructure and biodiversity net gain, flood schemes, managed realignment, development design and landscaping.

Policy SE14: Green and Blue Infrastructure

Natural England supports this policy. Well-designed cross boundary multi-functional green infrastructure contributes greatly to a number of benefits both for people and nature. Your green and blue (for example cross boundary canals) infrastructure should dovetail with your biodiversity net gain strategies to maximise benefits.

We would advise that the Local Authority also considers Natural England’s Green Infrastructure Framework of Principles and Standards for England. As stated in our document, “Green infrastructure (GI) is part of the solution to many of the challenges we face; health inequalities, biodiversity crisis, climate change, nature recovery and levelling up. The GI framework supports local authorities, developers, parks and greenspace managers and local communities to enhance and create new good quality green infrastructure.”

We would also suggest reference is made to the emerging Local Nature Recovery Strategy. Preparing Local Nature Recovery Strategies (LNRS) is a statutory requirement under the Environment Act 2021. LNRS are designed to work closely alongside other measures in the Act including supporting the delivery of mandatory biodiversity net gain and providing a focus for a strengthened duty on all public authorities

to conserve and enhance biodiversity. They will also underpin the Nature Recovery Network, alongside work to develop partnerships and to integrate nature into our incentives and land management activities. Each LNRS will be specific and tailored to its area. The responsible authorities and people involved in preparing a strategy can choose how they want it to look, but every strategy must contain:

1. A local habitat map.

2. A written statement of biodiversity priorities. Statutory guidance for responsible authorities explains in detail what these 2 things should contain. Together they set out what the strategy is aiming to achieve and what practical actions will help do this. They will also propose where actions could be carried out for best effect and to connect and expand existing areas that are important for nature. We expect local nature recovery strategies to propose actions such as the:

- creation of wetlands
 - restoration of peatlands
 - planting of trees and hedgerows
 - more sustainable management of existing woodlands and other habitats like grasslands
- These actions are intended to help nature itself and to also help improve the wider natural environment.

Whilst the Staffordshire Local Nature Recovery Strategy (LNRS) is currently a work in progress, Newcastle-under-Lyme Borough Council Regulation 19 pre-submission should still be consistent with NPPF Paragraph 185 in terms of setting out local habitat priorities and identifying potential measures by which they can be achieved, alongside mapping areas that could become of particular importance in the future.

Natural England encourages Newcastle Under Lyme Borough Council via their Local Nature Recovery Strategy to actively develop cross border cooperation between other Local Planning Authorities (LPA) (for example Staffordshire Moorlands Borough Council) in coordinating land development projects that impact on local biodiversity sites to ensure that local biodiversity corridors are maintained and link up other local important sites for nature conservation.

This is a good way of achieving nature recovery and preparing to deliver the LNRS alongside enabling the local authority and its partners to identify, map and safeguard site areas, including green and blue infrastructure opportunities and interlinkages.

Habitats Regulations Assessment

Natural England notes that this Local Plan is not directly connected with or necessary to the management of any European site. A screening assessment has been undertaken which identified a number of Likely Significant Effects (LSE) associated with the Local Plan. Taking no account of mitigation measures, the HRA concludes that Local Plan has the potential to affect the following European sites:

- Cannock Chase SAC
- Humber Estuary SAC, SPA and Ramsar
- Mersey Estuary SPA and Ramsar
- Midland Meres and Mosses Phase 1 Ramsar
- Midland Meres and Mosses Phase 2 Ramsar
- Pasturefields Salt Marsh SAC
- Peak District Dales SAC
- Peak District Moors (South Pennine Moors Phase 1) SPA
- Severn Estuary SAC, SPA and Ramsar
- South Pennine Moors SAC
- West Midland Mosses SAC

We welcome that your HRA includes the Humber Estuary SAC, SPA and Ramsar site which is hydrologically connected to the river Trent. If the Local Plan resulted in significant water pollution, this European site could be affected and has therefore been screened in, in relation to water quality only, on a precautionary basis. Natural England however notes that the Sustainability Appraisal identifies "A long-term cumulative adverse effect ...in terms of water quality" (p 148) as a result of the plan, this is not fully reflected in the current HRA.

Natural England note that the Sustainability Appraisal states: that "the entirety of the borough falls within IRZs of one or more SSSIs. All five SSSIs within the borough are in 'unfavourable' condition: Burnt Wood SSSI, Maer Pool SSSI, Black Firs and Cranberry Bog SSSI (Midlands Meres and Mosses Phase 2 Ramsar), Betley Mere SSSI (Midlands Meres and Mosses Phase 1 Ramsar) and Metallic Tileries, Parkhouse SSSI."

Natural England are also aware of the extensive network of ancient woodland spread across the borough, totalling 707.60 hectares, as well as a large quantity of priority habitats, totalling 1,791 hectares.

Natural England agree that the following designated sites and related priority habitats in adjoining LPA areas may also be affected by development through several pathways, including fragmentation, recreational pressure and/or pollution (including Air and Water Quality). Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI, Wyburnbury Moss SAC SSSI, Tyrley Canal Cutting SSSI, King's and Hargreaves Wood SSSI, Gannister Quarry SSSI, Roe Park Woods SSSI, Wetley Moore SSSI, Churnet Valley SSSI, Hatherton Flush SSSI, Sounds Heath SSSI, Ford Green Redebed SSSI, and Cop Mere SSSI.

It is noted that the Appropriate Assessment stage of the HRA assessed potential impacts by topic;

- Impacts on designated features affected by a possible deterioration in air quality
- Impacts on water quality and quantity associated with increased levels of built development.
- Impacts associated with increased recreational pressure at European sites; and
- Consideration of impacts at associated functionally linked land.

Natural England notes that the HRA also factored the following into the assessment process "the protective framework provided by the Local Plan and existing protection measures set out in high level strategic policy and existing planning policy frameworks that serve to help overcome the identified potential adverse effects" and that "taking into consideration these factors, it is concluded that the Local Plan would have no adverse impact on site integrity at any European site, either alone or in-combination.

Natural England disagree agree with this conclusion that for those Habitats sites in the area of search with features sensitive to air pollution, adverse effects on their integrity, alone or in-combination, can be ruled out for the reasons set out at the beginning of this letter on page 2 and repeated in part below:

	<p>Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot currently be ruled out at the following internationally designated sites:</p> <ul style="list-style-type: none"> •Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI •Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI <p>Natural England are currently in discussion with a number of the Staffordshire and West Midlands LPA's with regards to the cumulative impacts of air quality. We advise that further work is required to inform the HRA. The HRA should demonstrate that there are no adverse effects on integrity of Habitat sites as a result of this Local Plan, alone and in combination with other plans and projects. With regards to allocated sites, it is unclear whether the individual sites put forward in the Local Plan have been assessed through the Habitat Regulations Assessment process and how mitigation will be applied here.</p> <p>Sustainability Appraisal</p> <p>Natural England has reviewed the Sustainability Appraisal (SA) and included comments taken from the document throughout our response.</p> <p>The SA is a comprehensive document which should be reviewed in strengthening the HRA, particularly with regards to residual adverse effects that would be expected to remain in terms of wastewater following the implementation of the Local Plan policies. (p 141) Natural England notes that "Increased pressure on wastewater treatment has the potential to be a long term and potentially permanent significant effect" (p 142)</p> <p>The SA recognises the local distinctiveness of the plan area;</p> <p>"The Borough itself is largely rural in nature and supports some high-quality agricultural land, but is more heavily built up towards the north east surrounding Stoke-on-Trent. (p 8)</p> <p>Newcastle-under-Lyme has a strong rural character with a high-quality landscape and countryside, with some areas identified as being sensitive to change as a result of new development. (p 19)</p> <p>Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms make up the key features of some of these Landscape Character Types." (p 20)</p> <p>Sets out the area specific barriers to achieving sustainable growth;</p> <p>"Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)</p> <p>Loss of tranquillity The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution.(p 68)</p> <p>"The pre-mitigation SA assessments identified negative impacts in relation to air quality due to the proximity of sites to major roads, landscape character due to the location of sites within areas of high landscape sensitivity, close proximity to the PRoW network and potential for coalescence and urban sprawl, habitat sites, priority habitats, habitat distinctiveness, loss of undeveloped land, 'best and most versatile' (BMV) agricultural land, coinciding with mineral safeguarding areas (MSAs) and areas of surface water flood risk (SWFR); and access to healthcare facilities, schools, the local cycle network and railway network. (p 40)</p> <p>There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work. (p 21)</p> <p>Trends in transport choice are unlikely to change significantly, and private car use would continue to increase as the selected method of transport to work, with potential adverse impacts on air quality in the borough."(p 23)</p> <p>Considers the local and cumulative significance of soil loss alongside the ecological implications:</p> <p>"Loss of soil resources, BMV land and ecosystem services The proposed allocations would cumulatively result in the loss of up to approximately 342ha of previously undeveloped land, including up to 263ha of BMV agricultural land. The proposed development would be expected to reduce the ability of the local soil biome to effectively provide ecosystem services, to some extent. Additionally, the loss of permeable soils could potentially increase the risk of flooding and result in a loss of biodiversity across the Plan area. Loss of soil can also result in an increase in soil erosion and have subsequent impacts on agricultural yield.(p 68) The majority of the borough is ALC Grade 3 soil, with areas of ALC Grade 2 scattered across the borough. Grade 2 and potentially Grade 3 represents some of the borough's BMV agricultural land and should be conserved wherever possible (p 21)</p> <p>A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of BMV land to be lost as a result of the development proposed in the Local Plan." (p 59)</p> <p>Other Advice</p> <p>Further general advice is provided within Natural England Advice Note – Local Plans February 2024, attached at (Appendix A) - see attachment</p>

Title	Policy LW53 Land at Corner of Mucklestone Wood Lane, Loggerheads
Consultee Family Name	Friend
Consultee Given Name	William and Louise
Q4 Part of document	Policy
Q4 Policy	LW53

Q6 Details

I wish to re-iterate my previous objection to the application (attached), again for both this appeal and against possible inclusion of this site - the land to the west of Mucklestone Wood Lane and north of the Rock lane at Loggerheads ,into the developing local plan - Ref LW53 . Both of these roads form clear , obvious and defensible boundaries between the developed urban land to the south/east and the open unspoilt land to the north/west, with important landscape and habitat , and the ancient heritage assets, and rural Character of the 'Doomsday' village of Mucklestone , and its peripheral farms . These lines should not be 'crossed' for the reasons set out in two planning refusals , one appeal refusal and the numerous letters of objection from local residents , businesses and democratic representatives , as well as those reasons previously identified in previous local plans and loggerheads parish plans hitherto . There can be no justification in reversing these planning constraints - of the use of prime agricultural farmland , population pressure upon and disturbance of, the remaining hinterland , contamination of the Bearstone water catchment area, pressure on the ancient woodland sites and wetland habitats and unimproved traditional species rich meadows of Church Farm, Mucklestone , the forty acres wood (with rare bilberry stands) , Winnington and Willoughbridge and adverse impact on the White House Farm agricultural holding , both its own heritage assets, with listed farmhouse etc., the holding itself which is likely to be rendered unviable by the loss of its main block of readily workable arable land - as opposed to the other lower lying heavy clay land, and the special landscape character of this prominent hill top feature of the farm itself in the surrounding landscape and its biodiversity value.

I urge the appeal's inspector , and local plan inspectors to uphold the previous decisions made by the elected members and officers. I do not believe the allocation of this LW53 site , that would 'jump' Mucklestone wood lane and rock lanes , eroding the rural character of the land on the north and eastern sides of them , is a sustainable location for the reasons cited previously by many and therefore contrary to NPPF 2023 and should both, be dismissed again at appeal, and struck out of the draft plan , to remove this threat from blighting the ' Mucklestone Woods ancient woodland habitats and landscapes , that it has been my 'mission' to enhance and protect [redacted by admin]

Mucklestone Business Centre

With regard to the local plan , I would also ask officers to further underscore the positive role of 'Mucklestone Nurseries ' and 'Mucklestone Business Centre' have to play as a valuable employment site, for the existing settlement of loggerheads , as identified by the previous loggerheads local plan, (attached). It offers a range of enterprises and facilities that compliment both the 'built' heritage assets of the conservation area, the parkland/garden /arboretum settings of the business units and nurseries , and then the natural landscape and biodiversity features , 'wild' meadow and grassland areas, pond areas , and woodlands beyond , which all allow the public (my neighbours, tenants and customers) access to , benefit from, engagement with and enjoyment of this local environment , and thereby generates the means and justification in their positive ongoing 'wilding', management and enhancement.

Please find my 'Mucklestone woods' woodland management plan, setting out my detailed objectives for the woods , my option map, , and a copy of my HLS ELS environmental stewardship option schedule and cover page for my 'Church Farm' holding, HLS/ELS stewardship agreement, which I believe would be severely harmed and compromised by this proposed intrusive development on the adjoining land and on the skyline, eroding this area's exceptional rural landscape , habitat diversity and biodiversity , by urban intrusion [Admin note: option map and environmental stewardship agreement available on request. Objection letter included below]

We believe these proposals would contravene Policies N3 and N8 of the Local plan and H1 protection of the Countryside policies. It is outside the Loggerheads village envelope and contravenes the Loggerhead Neighbourhood plan.

It is contrary to Policy ASP6 - Mucklestone Wood lane (MWL), and Rock Lane provide clearly defined and defensible boundaries to the village envelope , the land extending to the north of MWL. forms a continuous block of unspoiled agricultural land of outstanding landscape character interspersed with a matrix of semi natural habitat areas of important ancient woodland, natural woodland , spring fed ponds and areas of preserved species rich meadows., natural culm pasture , and wildlife corridors of shelterbelts , hedgerows and stream margins . These areas form the headwaters of the Bearstone water catchment .

The rest of the water in this vicinity to the south of MWL flows south into the Tadgedale brook , joining the river tern further downstream at Oakley

Any proposed development of this land therefore represents a significant threat to this important high grade catchment and the underground aquifers. These also feed the historic private water supplies at Mucklestone Village , that gave rise to the original location of the village, and the dedication of the Church to 'St. Mary', as the successor to earlier pre-Christian 'mother earth' deities venerated at 'holy springs' such as these. .

The development of the Tadgedale quarry has pushed development outside the village envelope , but this was granted at appeal presumably on the basis of it being previously developed commercial/ brown field land and so this large scale residential development should not be taken as a precedent to allow further such developments to 'jump' across to the north of MWL or to the East of Rock Lane . It is a normal planning condition on such quarry sites , that they should be restored to either agricultural land , or to environmentally advantageous natural habitat, and it is unfortunately that such terms were not enforced and implemented in this case . The quarry could have been used to provide a useful habitat area and public open space/amenity , rather than pushing residential development out into the agricultural landscape , with the knock on effects threatening that adjoining rural landscape with the effects of urban intrusion.

The loss of this large area will represent a significant loss of high grade versatile farmland . These are the two best and driest arable fields at Whitehouse farm which is a typical 150-200 acre holding of the area , formerly part of the Meynall estate . The Hunters point development to the south of MWL has already been lost from the holding a generation ago. At the time the impact of residential development on the area was thought to be less than gravel extraction. The further loss of these fields would further threaten the future of remainder of the holding as a viable independent , or semi-independent unit, and its continued role as a green 'buffer' or boundary between the intensive residential development to the

south of MWL, and extensive traditional semi natural landscape to the North. . The planning history hitherto shows a usual pattern of sustainable farm developments and small scale diversifications , in line with local and national policies. It should be understood that WHF is a mixed arable and livestock holding ,a former dairy farm. It is policy that new livestock buildings are built over 400m from the nearest protected dwelling (off the holding). The building of these houses in such close proximity to the farmstead buildings will essentially negate their future use for livestock housing (which is essential during the winter months due to the wet nature of most of the rest of the farm).

These two fields are comprised of a significant gravel deposit, known as the bunter pebble beds, continuing on from the Tadgedale Quarry deposits. The local plan identifies that these should be preserved as a strategic asset for the future, as neighbouring quarries at Almington , Willoughbridge and Whitmore are exhausted. .

The application site is at an extremely visible location , It would overlook and make an overbearing visual intrusion on the skyline of the otherwise unspoilt and secluded countryside landscape to the north. The Loggerheads neighbourhood plan shows photos of the uninterrupted view from Whitehouse farm westwards to the Welsh hills , which would be lost , as well as the reciprocal view from the whole of North Shropshire back to WHF, and its wooded backdrop which is a well known local landmark, as the name suggests, in the landscape . The site was chosen by the North Shropshire Ed Authority , for its line of site microwave links to the majority of its schools and establishments in the North Shropshire area. Whitehouse farm , with its established views is also used by local churches on Easter Morning to watch the Easter sunrise from , due to its wonderful location as a viewpoint . .

The development opposes policy B5 of the local plan , by being in close proximity to the main farmstead , and the Whitehouse farmhouse which is Grade 2 listed , spoiling the setting of it .

The Rock lane

This is a green lane leading to Mucklestone. It is publicly maintained as far as Ranworth Kennels , but beyond that the remainder is unadopted , maintained by the adjoining land owners (chiefly myself and my predecessors) . It is popular with joggers and dog walkers , but is also 'abused' by users of unlicensed motorcycles and quadbikes etc. Fly tipping of garden waste with invasive alien species and diseased plant matter , poses increased risks to native semi-natural habitats along the lane and beyond. Several garden species are present along the lane , such as *Lamium glebdomifolium* , banned as an invasive alien species under the Wildlife and countryside act, and *Phytophthora ramorum* (oak dieback disease) is present in the area on *Rhododendron ponticum* plants. I am endeavouring to reduce or eliminate these and manage and encourage the native woodland species , both along the lane and beyond. There is at present limited 'conflict' between the pedestrian leisure users and limited farm and access traffic , the use will increase substantially with the use by the new residents of the Tadgedale quarry , backing onto the lane. Issues of trespass over the Protected habitat and livestock areas will increase , together with antisocial use of unlicensed vehicles , uncontrolled dogs and fly tipping.

The Mucklestone wood road narrows at the top and it is a dangerous junction onto the A53 this is highlighted in the Neighbourhood plan too! It is unsuited to increased use , and to widen it would require detrimental removal of adjoining shelterbelts , hedgerows and historic buildings on private land along its margins, irreversibly harming it's rural character .

We do not believe the existing infrastructure can support so many new homes in the village

There is a woeful lack of transport links, healthcare facilities and local amenities . Any residents of affordable housing, the elderly or the young ,without cars, are effectively 'trapped' without access to jobs , public amenities, healthcare or social interaction. This in turn can lead to other social issues and antisocial behaviour amongst the young . In particular the main commuter route along the A53 back towards the rest of the boroughs' facilities faces two accident black spots with appalling visibility and long traffic delays at peak times where it crosses the A51 at 'Blackbrook' and 'The Swan with Two necks'. No provision has been made to improve these two perilous junctions .

The electrical grid is currently over capacity , due to the high demand from Mueller's , with no opportunity for extra connections for green energy generation .

We urge officers and inspectors to refuse this application as it not an appropriate development for this prominent rural location for the reasons given above

Newcastle under Lyme draft local plan – regulation 18: Consultation response

Dear Sir/Madam,

The following is a robust objection to all developments on green field sites covering all the proposals within Audley Parish and many more elsewhere as recommended in the draft local plan. In writing this response, I am aware of the need to adopt a local plan in order for local authorities to maintain democratic control of development in the area. This requirement appears to be a symptom of the subsection in the NPPF titled “The presumption in favour of sustainable development” (paragraphs 11-14). However, from a resident’s point of view, this gives the impression that local authorities must demonstrate a willingness to develop a particular area in order to avoid it being developed. This is, in essence, a commitment to eventual development even if it is not needed. And this is a source of great anxiety amongst residents that undesirable development is out of control, a situation clearly being fuelled by the existence of paragraphs 11-14. On this basis therefore, this subsection of the NPPF needs to be challenged.

This response may differ from others in that it comments on local planning within a strategic context. As I see it, there are three main types of development, which are likely to blight the future generations in the UK: (i) infrastructure (example, HS2), (ii) commercial (examples, AB2 and TK30 in the NuLBC local plan) and (iii) residential (example, recent housing developments either side of the A513, Beaconsfield, Stafford). Infrastructure is within the remit of Westminster rather than local authorities, so that is not a particular concern here. My main focus is encroachment of developments, both residential and commercial, in green spaces allowed for in the draft local plan. And any new developments in rural areas will, at the very least, result in:

- Loss of light or overshadowing

- Increased risk of flooding due to ‘run-off’

- Loss of visual amenity

- Limitations to physical activity

- Generation of extra traffic, overloading already busy local roads

- Extra noise, pollution, disturbance and danger from increased traffic

- Loss of trees and other biodiversity – bats, lizards etc.

- Loss of natural carbon capture

- Decrease in food production capacity

Increased local population placing further pressure on local schools, GP’s surgeries and other services, which are already oversubscribed.

The United Kingdom as a whole is currently gripped by a pandemic of overdevelopment, which threatens nature and the already depleted biodiversity we see in this country. And it has now reached the stage where it should be considered a national emergency. I for one, do not feel that I have any influence over the shape of our surroundings. There are numerous drivers for this trend many of which are not being addressed by government at any level. At the heart of this is a significant disconnection between the opinions of politicians and public as to what is actually needed. There appears to be cross-party support for activities driving economic growth at all costs, irrespective of the consequences to the natural environment. Aggravating this divide is the aforementioned paragraphs 11-14 of the NPPF. At a local level, what is not in doubt, is that whenever there is land removed from the green belt there is rarely, if ever, an equivalent area so returned, so the process is irreversible. And in the absence of any agreed lower limit on the area of protected green spaces within the UK, no release of green belt land, or development on green spaces, can be considered sustainable. Unless, of course, the use of agricultural land for just that purpose is also considered “developed”, i.e. it has an economic and sustainable use. And the local plan does appear to acknowledge this¹, so why not include agricultural use into the local plan implying no change in particular areas? If this is not the case, we are committed to a process where the end point is a UK completely covered in tarmac and concrete. Anyone arguing against this interpretation needs to state and justify precisely where that end point is. If they cannot, this renders the term ‘sustainable development’ an oxymoron.

One particular trend of major concern is the growing UK population. At the time of writing this stands at just under 69 million, and is set to reach 74 million before 2050. Studies in the US (Pimental and Giampietro, 1994; Lal, 1989) suggest that comfortable/sustainable living requires 0.5 Ha (1.2 acres) per capita. If we are generous, sustainable living in the UK was possible with a population of 57 million, a figure I remember from the late 1960s. With a total area of the UK at just over 60 million acres, a land area of one acre per capita for sustainable living in the UK seems feasible. As we have seen, anything more puts a strain on the environment as a whole. On this basis therefore, the UK is currently overpopulated by about 15%, and there appears to be no initiatives to address this issue. On this point, Westminster appears to be in a state of denial, thus fuelling the current avalanche of overdevelopment nationwide. Residential developments have a knock on effect by requiring other types of development to provide infrastructure, services and employment. Notwithstanding overpopulation, this gives the impression that there is not enough housing stock to accommodate the current population. Recent data, in the form of an infographic (“Housing crisis fact check”) from the Community Planning Alliance², convincingly shows that this is far from the case. In short, what is perceived as the current “housing shortage” is little more than a myth propagated by the construction industry and related interests. This is justified by item 3 on the infographic stating that “there are 1.5 million more dwellings than households” in England and Wales alone^{3,4}. On this basis therefore, no further house building is needed in the UK subject to efforts addressing projected population growth. In other words, what we have at present is a substantial housing surplus. Therefore, locally there are strong grounds for objections to development of the sites

AB12(p74)

AB15(p75)

AB32(p75)

AB33(p75).

Ignoring the 1.5 million surplus dwellings nationwide, the current (regulation18) draft of the local plan quotes a minimum housing requirement of 7160 in the Borough over the period 2020-40, of which 1206 are already completed. Of these, only 40% are to be 'affordable' (1-2 bedroom dwellings). Therefore, of the minimum requirement, only 2864 dwellings will be affordable. If we assume that those already built are affordable (they probably aren't) then the borough will only need 1658 homes built between now and 2040. This is because, due to being beyond affordability, most locals will be unable to buy or rent the other 60%. Therefore, they are not needed, and the proposed mix is entirely incompatible with general affordability. Given the surplus dwellings throughout England and Wales however, it is likely that none will be needed, especially considering the imminent removal of mandatory housing targets by the DLUHC under Michael Gove MP, and any specific affordable housing needs can be catered for by using brownfield sites only. All of the green areas in the local plan could therefore be planned in for their present use.

Infographic from the Community Planning Alliance summarising UK housing stock in relation to the population.

Another statistic from the infographic is that nationwide we could build up to 1.2 million homes on brownfield sites (item 2)2,5. And like any other local authority, NuLBC is legally obliged to and does keep a register of its brownfield sites, although it is likely that some may slip through the net.

If there is an imperative, it is to increase further democratic control of the development process both locally and nationally. And both local and national authorities would do well to remember that they have a responsibility to the people they represent and not to the commercial viability of developers, the construction industry or overseas investors. In short, no new housing development is required, especially given that the borough has exceeded its housing targets in recent years. This calls into question the need for housing developments outside Audley Parish mentioned in the local plan. These include

BL18 (p75)

CT1 (p76, 750 dwellings)

RC8 (p76, 6 dwellings, potential flood risk.)

KS3 (p77)

LW53 (p77)

MD29 (p78, 150 dwellings, likely to conflict with HS2 construction?)

NC13 (p78)

NC77 (p78)

SP11 (p78, 900 dwellings, former Keele golf course)

SP12 (p79)

SP23 (p79)

TB19 (p79)

TB23 (p79, 124 dwellings, adjacent to Walley's Quarry.)

TK10 (p80)

TK17 (p80)

TK27 (p80).

Other sites which may also be questioned are

KS17 (p77, would include loss of playing fields and other village amenities. This may be classed as infill.)

KL13 (p77,93, part built already within the grounds of Keele University Campus).

The other class of developments locally is commercial. All too often we hear in the news from both local and Westminster sources, the mantra that economic growth is the imperative. But the actual imperative is stability, and we have reached the point where growth at any cost has become toxic, especially given the impossibility of unrestrained growth in a land of finite area. Have our political masters never heard of the circular economy?

Since the beginning of deindustrialisation in the 1980s, the diversity of employment opportunities has declined. We have seen an unhealthy move away from manufacturing/production of goods that we need as a nation, to one entirely reliant on trade with overseas partners, leaving us open to blackmail and the current spike of rampant imported inflation. Look what happened during lockdown. Over recent decades this has led to the demolition of old factories for residential developments and the rise of logistics centres (warehousing) for the temporary storage of imported goods, which will ultimately be operated by robots and AIs leading to even less employment. The problem with warehousing of course is its large consumption of land area. My question is, what is the driver for the proposed "big box" developments on AB2 and TK30 locally? Both of these proposals lie entirely within the greenbelt, although the TK30 land has already been quarried in parts. Neither of these proposals is either desirable or needed. However, if we are forced to accept one or the other then TK30, being about 5% smaller, is the lesser of two evils. With the green light given to the development of the 44 Ha Chatterley Valley site on Peacock Hay Road, and the numerous empty warehouses existing across the potteries, North Staffordshire and Cheshire East. It is dubious to say the least to claim that either AB2 or TK30 are needed. These sites are 70 Ha and 66 Ha respectively. However, in the recently published "Housing and Economic Needs Assessment Update", the borough as a whole only needs a maximum of 34 Ha6. So why are we saddled with 154 Ha total covered by AB2, TK30 and KL15?

If the local plan caters for agricultural developments, AB2 and TK30 could be planned for their existing use. The majority of the area covered by these sites is high grade (3a) agricultural land. In the case of TK30 the quarried areas could be reclaimed for agriculture or, if this proves difficult, used in other ways to enhance biodiversity. If the land in question is council owned, and the motivation is to sell off council assets, then once sold, they cannot be sold again, and any control is lost. Moreover, once farmland is developed for other purposes then it is near to impossible for it to be reclaimed later for that use – and so the ratchet inexorably turns. On this

basis therefore, I would urge the LPA to remove the warehousing proposals AB2 and TK30 from the local plan.

The purpose of this consultation is to supply feedback to the Borough Council. Another question is, does Westminster similarly consult with local authorities on planning issues, or is there any other mechanism where local councils can supply feedback to Westminster, providing a better feel for the mood of the nation? If so, why do we not see a root and branch reform of the NPPF rather than the tinkering around the edges approach seen in the July 2021 version? Most especially, there should be a removal of paragraphs 11-14 and its supporting statements elsewhere in the document, which is tantamount to a developer's charter. And there should be more flexibility within the NPPF allowing local plans to include parcels of land for their current purpose, given that there is almost none in this country that is not currently in use. As far as I can see this plan is nowhere near compatible with efforts required to address the current climate crisis. Moreover, given their scale, the proposed developments represent too greater shock to the environment and local communities over the short 20-year period suggested for their completion. And with the sufficient housing and unused commercial sites we already have, there is no need for any encroachment into our green spaces.

Yours sincerely
Jim Austin

Title	Policy MD29 Land North of Bar Hill, Madeley
Consultee Family Name	Nutbeem
Consultee Given Name	Roy
Q4 Part of document	Policy
Q4 Policy	MD29
Q6 Details	<p>Cannot comment on other sites, but regarding Bar Hill, which is also under planning and which many people have already responded on (planning reference 23/00979/OUT.)</p> <p>Many comments have been put on regarding that application, and I hope and expect that those comments are taken into consideration when assessing this new local plan. They should be</p> <p>Governments view to use Grey belt land. The land on bar hill is green belt – fully agricultural, no grey or brown site influences whatever. With farming being a national security (food) concern now. Removal for houses seems contrary. This has been highlighted many times from this policy, not just on Bar Hill but others</p> <p>I see the plan was in the last years local plan draft. It has not taken long for the above said planning application to come in following that, even though the land is not approved yet for use. And the same number of houses too.</p> <p>This plan 23/00979/OUT has currently been rejected or at least has by National Rail. Referring to Network rail response 26/06/24 in the above planning application. To quote “</p> <p>“Network Rail is submitting some additional comments to those submitted below. This is a high-risk slope washout and a known flooding site - NR notes that this is a perennial problem site at the site.”</p> <p>“Network Rail would emphasize the importance that the railway cannot accept any amount of surface or sub-surface runoff, either directly from the new development or via highways or other avenues.”</p> <p>And more importantly</p> <p>“NO works are to commence until with agreed Network Rail”</p> <p>Why continue with considering planning on a site that has serious issues and risks to the national transport infrastructure</p> <p>This land was part of HS2 safeguarding area</p> <p>And though that is cancelled it is currently still being subjected to site and survey work by HS2.</p> <p>The area may now get utilized again following the release of the proposed Midland-North west Rail plan by the Birmingham /Manchester mayors (HS2 is all but name), as all the government planning regarding it us still in place, so would be utilized again</p> <p>Notification – walking round Madeley. I found one indication of the prospective work that may be done – on the very last signpost in the village going towards Woore. Not exactly obvious and informative of a major change to the village and environment</p> <p>I note that the Baldwins gate development (LW74) was not on the draft plan, but has been added to the final one, and also apparently planning permission been passed too, with the land starting to be cordoned off</p> <p>The policy says, To fully mitigate the proposed new housing further educational infrastructure would be required at both primary and secondary school phases. Therefore, education contributions will be required to make these developments acceptable in planning terms. The Infrastructure Delivery Plan identifies that the site should make a contribution towards a further expansion at Madeley High School and an expansion to Sir John Offley CE (VC) Primary School.</p> <p>And would that happen before or afterwards. As we know on many housing developments, the proposed extra facilities (the caveat for building house to be agreed) for a community never happen, or happen very, very late and inadequately.</p> <p>So educational infrastructure would be required at both primary and secondary school phases – If any housing development was green lit, I would expect the additional infrastructure to be built beforehand, otherwise all students from the new builds will be travelling away from the village, so increases car usage and travel. Emissions etc.</p>

Q4 Part of document	Policy
Q4 Policy	MD29
Q5 Legally compliant	No

Q5 Sound	No
Q6 Details	<p>Draft Policy MD29: Land North of Bar Hill, Madeley Draft</p> <p>Policy MD29 allocates land for residential development. This site is divorced from the wider settlement on the opposite side of the Crewe – Stafford railway line. We consider that the methodology for site selection for allocations which underpins this plan is fundamentally flawed and has resulted in less sustainable options being pursued due to lack of a Green Belt designation beyond the Crewe – Stafford railway line. This is considered to represent an inappropriate incursion into the wider open countryside when compared against our client's land interests. We consider that the plan has not proactively assessment reasonable alternatives which would significantly reduce harm to the wider landscape and open countryside overall.</p> <p>Indeed, e</p> <p>merging national policy proposes changes regarding Green Belt release. This sets out that when considering site's for Green Belt release, consideration should be first be given to previously developed land in sustainable locations, then consider Grey Belt land in sustainable locations. Grey Belt land is defined as land which provides a limited contribution to Green Belt purposes. The purpose of this policy shift is to allow the easier release of poor-quality Grey Belt land to meet development needs. We consider that the Site has good potential to be considered Grey Belt because it provides a limited contribution to the Green Belt purposes (as demonstrated above). The Site is also considered to comprise land which is (1) fully enclosed by built form, (2) make no contribution to preventing neighbouring towns from merging into one another (3) land which is dominated by urban land uses and (4) has no contribution to preserving the setting and special character of historic towns. As such, it is unclear why land which has good potential to be considered Grey Belt in line with emerging policy was not assessed as a reasonable alternative compared to draft allocation MD29.</p> <p>The Site is considered to lie in a sustainable location adjoining the rural centre of Madeley and Madeley Heath (joint) providing a range of essential services to meet day to day needs of residents. The Site has also been earmarked for the future delivery of a new school. As set out above, the Council's own evidence base</p> <p>(Rural Area Topic Paper Part 1: Hierarchy of Centres) states that the centre of the village of Madeley is within 15 minutes' walk to the centre of Madeley Heath and therefore it is important to review the sustainability of this Site in the context of the joint settlement and the Council's policy approach to settlement hierarchy. Further analysis of sustainability is detailed in the Frost Planning Regulation 18 representations where it was found that the Site is within walking distance to: Meadows Primary School (within 10 metres); Talk Talk Park (within 100m); The Old Swan public house (within 200m); a range of retail/leisure/community uses in the wider village of Madeley (ranging within 800-1500m), Madeley High School (within 1000m). Bus / cycle accessibility to: Keele University (within 3.5km); Newcastle-under-Lyme town centre (within 6km). Regular bus service (no.85) connects to Madeley village centre, Crewe town centre, Keele University, and Newcastle-under-Lyme town centre. Indeed, draft allocation MD29 and site MD12A both adjoin the same joint settlement and are therefore considered to score the same in context of sustainability of location.</p> <p>MHDL considers that the draft</p> <p>Policy MD29 and the Policies Map fails to meet the tests of soundness because it is not justified: the methodology for site selection has resulted in less sustainable options being presented and has not properly considered more sustainable options within the Green Belt which are considered to have less harm on the wider landscape and open countryside to meet development needs (such as Site MD12A).</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	On behalf of our client, MHDL, we formally request to participate in hearing sessions associated with Draft Policy PSD 1, Draft Policy PSD 2, Draft Policy PSD 3, SA Section 5: Reasonable Alternatives, Draft Policy PSD 5 & Draft Policy MD29. We consider that our representation at the hearing sessions is necessary to ensure our representations above are taken into account for the draft Local Plan to be found sound.

Q6 Details

Land North of Bar Hill, Madeley (Allocation MD29)

2.15. Just to start with, Paragraph 13.141 and its title should be amended slightly to reference Madeley and Madeley Heath as the rural centre, not Madeley and Betley, as set out above.

2.16. In relation to the wider settlement, Madeley was considered as part of the Rural Topic Paper which has informed the settlement hierarchy. Within this there is an assessment of the range of facilities, focusing on core facilities to assist in categorising rural settlement. In this regard, Madeley performs well and scores green for all areas of the assessment, which demonstrated that Madeley is a sustainable rural settlement capable of accommodating additional development.

Response to Site Specific Requirements

2.17. The site has been identified as a draft housing allocation in the Regulation 19 Local Plan under site MD29 which is clearly illustrated as a preferred location for residential development on the supporting Proposal Map. It would also be useful to make reference in the opening to this Policy to the outline planning application submitted at the site, as this is likely to be approved at the point of the adoption of the Plan.

2.18. Lone Star would also comment on the site being identified for '150 dwellings'. In order to comply with the outline application and for the plan to be positively prepared (in accordance with Paragraph 16 of the NPPF), and to make the optimum use of land (as required by various paragraphs in the NPPF including 8, 11, 119, 124 and 125), the quantum of development for this allocation should be changed to 'at least 155 dwellings'. This is also relevant for para 13.143, to ensure consistency.

2.19. In relation to point 1 there is no need for a masterplan to be prepared in accordance with Policy SA1. A masterplan has been prepared and submitted in support of the planning application on the site (Appendix 2). This is the masterplan that should be referenced in this policy, given it has been subject to consultation with the Council and there are no consultee responses that cannot or have not been addressed.

2.20. Active travel links are suggested in point 3, with an expectation of enhancements to the footbridge over the west coast mainline. It is recommended that the policy is specific and requires the footbridge to be improved in general accordance with the details agreed as part of the planning application, as shown on Plan Ref: SCP/210296/D10 (Appendix 3).

2.21. Elements 4 (landscape led), 5 (long range views) and 11 (heritage) are also less relevant given the masterplan proposed at point 1. It should also be noted that the masterplan was subject to a Design Panel review before the application was submitted. This covered detailed elements which the masterplan should consider at the application stage, including reflecting local architectural styles and also reflecting topographical features such as landmarks and long views, which it has done.

2.22. If there is a need for any direction on these specific elements, then reference could be made to the submitted DAS or the LVIA and the Heritage Assessment in the absence of a planning approval on the site at the point of the adoption of the Local Plan

2.23. In relation to para 13.150, the element relating to the sequential approach to flood risk needs removing. As part of its allocation, the Council should have assessed flood risk on the site and determined it is sequentially preferable than other options in Madeley. When this site is allocated, it is not for a planning application to revisit this. Furthermore, the planning application is supported by a site-specific flood risk assessment, and we understand that shortly it will be confirmed by Network Rail and the LLFA that there are no flood risk issues in respect of this site.

2.24. The final point Lone Star would want to make is in respect of the Neighbourhood Plan. As drafted the Neighbourhood Plan would be in conformity with the strategic policies currently adopted Local Plan (NPPF footnote 16). It is not for this emerging Plan to be guided by existing Neighbourhood Plans and as set out in Para 30 of the NPPF, "Once a neighbourhood plan has been brought into force, the policies it contains take precedence over existing non-strategic policies in a local plan covering the neighbourhood area, where they are in conflict; unless they are superseded by strategic or non-strategic policies that are adopted subsequently".

2.25. In order to assist the Council, we have suggested a track change version of the Policy MD29 below:

Land north of Bar Hill is allocated for residential development for 150 at least 155 dwellings. Development will be permitted to reflect outline planning application Ref: 23/00979/OUT and ~~will be permitted~~ subject to:

~~- 1. Satisfactorily addressing the site allocation requirements set out in Policy SA1 (General Requirements);~~ Be developed in broad compliance with the masterplan ref: 645868/Rev22D

2. Access to the development being taken via Bar Hill,

3. Improvements to active travel links, including enhancement to the ~~width and condition of~~ the existing footbridge over the rail line as set out in SCP Plan SCP/210296/D10,

4. The layout and development of the site will be in accordance with masterplan referenced at point 1 and the LVIA and DAS submitted in support of the application on the site ~~landscape led and buildings or structures designed to ensure they are not intrusive in~~ significant views from the surrounding area, including the area of open countryside on its western edge. ~~Where possible existing hedgerows and trees should be retained on the site;~~ particularly to the tree-lined driveway used to access the existing property at Moor Hall Farm;

~~5. Development within the site should preserve long range views to the west;~~

6. Any proposal should provide drainage details for surface water on the site,

7. Proximity of Bar Hill Wood Ancient Woodland in near proximity (500m) to the west of the site being recognised, & any impacts, mitigated,

8. Recognition of Tree Preservation Orders (TPO), including root networks,

	<p>9. Submission of a noise assessment and Reflect the mitigation strategy set out in the noise report prepared by InAcoustic (Ref:23-383) in relation to the impact of the A525 and West Coast Mainline railway line,</p> <p>10. Preservation and enhancement of the existing Public Right of Way adjoining the site's western boundary,</p> <p>11. Submission of a Heritage Impact Assessment to Demonstrate how the layout and design of the development will respond sensitively to the significance of nearby heritage assets giving consideration to the HIA for the site prepared by the Council and the Heritage Assessment prepared in support of the application.</p> <p>12. Financial contributions to improvements in the capacity of local schools and health facilities</p> <p>2.26. Overall, Lone Star fully support the proposed allocation of site MD29, but there are slight alterations required, as set out above, to ensure that the allocation is positively prepared, to ensure it reflects the outline planning application on the site and is not subject to additional onerous requirements.</p>
