- 1. ~~Satisfactorily addressing the site allocation requirements set out in Policy SA1 (General Requirements);~~ Be developed in broad compliance with the masterplan ref: 645868/Rev22D

2. Access to the development being taken via Bar Hill,

3. Improvements to active travel links, including enhancement to the ~~width and condition of~~ the existing footbridge over the rail line as set out in SCP Plan SCP/210296/D10,

4. The layout and development of the site will be in accordance with masterplan referenced at point 1 and the LVIA and DAS submitted in support of the application on the site ~~landscape led and buildings or structures designed to ensure they are not intrusive in~~ significant views from the surrounding area, including the area of open countryside on its western edge. ~~Where possible existing hedgerows and trees should be retained on the site, particularly to the tree-lined driveway used to access the existing property at Moor Hall Farm;~~

5. ~~Development within the site should preserve long range views to the west;~~

6. Any proposal should provide drainage details for surface water on the site,

7. Proximity of Bar Hill Wood Ancient Woodland in near proximity (500m) to the west of the site being recognised, & any impacts, mitigated,

8. Recognition of Tree Preservation Orders (TPO), including root networks,

9. ~~Submission of a noise assessment and~~ Reflect the mitigation strategy set out in the noise report prepared by InAcoustic (Ref:23-383) in relation to the impact of the A525 and West Coast Mainline railway line,

10. Preservation and enhancement of the existing Public Right of Way adjoining the site's western boundary,

11. ~~Submission of a Heritage Impact Assessment to Demonstrate how the layout and design of the development will respond sensitively to the significance of nearby heritage assets giving consideration to the HIA for the site prepared by the Council and the Heritage Assessment prepared in support of the application.~~

12. Financial contributions to improvements in the capacity of local schools and health facilities

2.26. Overall, Lone Star fully support the proposed allocation of site MD29, but there are slight alterations required, as set out above, to ensure that the allocation is positively prepared, to ensure it reflects the outline planning application on the site and is not subject to additional onerous requirements.

Q6 Details	<p>Cannot comment on other sites, but regarding Bar Hill, which is also under planning and which many people have already responded on (planning reference 23/00979/OUT.)</p> <p>Many comments have been put on regarding that application, and I hope and expect that those comments are taken into consideration when assessing this new local plan. They should be</p> <p>Governments view to use Grey belt land. The land on bar hill is green belt – fully agricultural, no grey or brown site influences whatever. With farming being a national security (food) concern now. Removal for houses seems contrary. This has been highlighted many teimes from this policy, not just on Bar Hill but others</p> <p>I see the plan was in the last years local plan draft. It has not taken long for the above said planning application to come in following that, even though the land is not approved yet for use. And the same number of houses too.</p> <p>This plan 23/00979/OUT has currently been rejected or at least has by National Rail. Referring to Network rail response 26/06/24 in the above planning application. To quote “</p> <p>“Network Rail is submitting some additional comments to those submitted below. This is a high-risk slope washout and a known flooding site - NR notes that this is a perennial problem site at the site.”</p> <p>“Network Rail would emphasize the importance that the railway cannot accept any amount of surface or sub-surface runoff, either directly from the new development or via highways or other avenues.”</p> <p>And more importantly</p> <p>“NO works are to commence until with agreed Network Rail”</p> <p>Why continue with considering planning on a site that has serious issues and risks to the national transport infrastructure</p> <p>This land was part of HS2 safeguarding area</p> <p>And though that is cancelled it is currently still being subjected to site and survey work by HS2.</p> <p>The area may now get utilized again following the release of the proposed Midland-North west Rail plan by the Birmingham /Manchester mayors (HS2 is all but name), as all the government planning regarding it us still in place, so would be utilized again</p> <p>Notification – walking round Madeley. I found one indication of the prospective work that may be done – on the very last signpost in the village going towards Woore. Not exactly obvious and informative of a major change to the village and environment</p> <p>I note that the Baldwins gate development (LW74) was not on the draft plan, but has been added to the final one, and also apparently planning permission been passed too, with the land starting to be cordoned off</p> <p>The policy says, To fully mitigate the proposed new housing further educational infrastructure would be required at both primary and secondary school phases. Therefore, education contributions will be required to make these developments acceptable in planning terms. The Infrastructure Delivery Plan identifies that the site should make a contribution towards a further expansion at Madeley High School and an expansion to Sir John Offley CE (VC) Primary School.</p>

And would that happen before or afterwards. As we know on many housing developments, the proposed extra facilities (the caveat for building house to be agreed) for a community never happen, or happen very, very late and inadequately.

So educational infrastructure would be required at both primary and secondary school phases – If any housing development was green lit, I would expect the additional infrastructure to be built beforehand, otherwise all students from the new builds will be travelling away from the village, so increases car usage and travel. Emissions etc.

I object to this proposal

Newcastle under Lyme draft local plan – regulation 18: Consultation response

Dear Sir/Madam,

The following is a robust objection to all developments on green field sites covering all the proposals within Audley Parish and many more elsewhere as recommended in the draft local plan. In writing this response, I am aware of the need to adopt a local plan in order for local authorities to maintain democratic control of development in the area. This requirement appears to be a symptom of the subsection in the NPPF titled “The presumption in favour of sustainable development” (paragraphs 11-14). However, from a resident’s point of view, this gives the impression that local authorities must demonstrate a willingness to develop a particular area in order to avoid it being developed. This is, in essence, a commitment to eventual development even if it is not needed. And this is a source of great anxiety amongst residents that undesirable development is out of control, a situation clearly being fuelled by the existence of paragraphs 11-14. On this basis therefore, this subsection of the NPPF needs to be challenged.

This response may differ from others in that it comments on local planning within a strategic context. As I see it, there are three main types of development, which are likely to blight the future generations in the UK: (i) infrastructure (example, HS2), (ii) commercial (examples, AB2 and TK30 in the NuLBC local plan) and (iii) residential (example, recent housing developments either side of the A513, Beaconside, Stafford). Infrastructure is within the remit of Westminster rather than local authorities, so that is not a particular concern here. My main focus is encroachment of developments, both residential and commercial, in green spaces allowed for in the draft local plan. And any new developments in rural areas will, at the very least, result in:

- Loss of light or overshadowing

- Increased risk of flooding due to ‘run-off’

- Loss of visual amenity

- Limitations to physical activity

- Generation of extra traffic, overloading already busy local roads

- Extra noise, pollution, disturbance and danger from increased traffic

- Loss of trees and other biodiversity – bats, lizards etc.

- Loss of natural carbon capture

- Decrease in food production capacity

Increased local population placing further pressure on local schools, GP’s surgeries and other services, which are already oversubscribed.

The United Kingdom as a whole is currently gripped by a pandemic of overdevelopment, which threatens nature and the already depleted biodiversity we see in this country. And it has now reached the stage where it should be considered a national emergency. I for one, do not feel that I have any influence over the shape of our surroundings. There are numerous drivers for this trend many of which are not being addressed by government at any level. At the heart of this is a significant disconnection between the opinions of politicians and public as to what is actually needed. There appears to be cross-party support for activities driving economic growth at all costs, irrespective of the consequences to the natural environment. Aggravating this divide is the aforementioned paragraphs 11-14 of the NPPF. At a local level, what is not in doubt, is that whenever there is land removed from the green belt there is rarely, if ever, an equivalent area so returned, so the process is irreversible. And in the absence of any agreed lower limit on the area of protected green spaces within the UK, no release of green belt land, or development on green spaces, can be considered sustainable. Unless, of course, the use of agricultural land for just that purpose is also considered “developed”, i.e. it has an economic and sustainable use. And the local plan does appear to acknowledge this¹, so why not include agricultural use into the local plan implying no change in particular areas? If this is not the case, we are committed to a process where the end point is a UK completely covered in tarmac and concrete. Anyone arguing against this interpretation needs to state and justify precisely where that end point is. If they cannot, this renders the term ‘sustainable development’ an oxymoron.

One particular trend of major concern is the growing UK population. At the time of writing this stands at just under 69 million, and is set to reach 74 million before 2050. Studies in the US (Pimental and Giampietro, 1994; Lal, 1989) suggest that comfortable/sustainable living requires 0.5 Ha (1.2 acres) per capita. If we are generous, sustainable living in the UK was possible with a population of 57 million, a figure I remember from the late 1960s. With a total area of the UK at just over 60 million acres, a land area of one acre per capita for sustainable living in the UK seems feasible. As we have seen, anything more puts a strain on the environment as a whole. On this basis therefore, the UK is currently overpopulated by about 15%, and there appears to be no initiatives to address this issue. On this point, Westminster appears to be in a state of denial, thus fuelling the current avalanche of overdevelopment nationwide. Residential developments have a knock on effect by requiring other types of development to provide infrastructure, services and employment. Notwithstanding overpopulation, this gives the impression that there is not enough housing stock to accommodate the current population. Recent data, in the form of an infographic (“Housing crisis fact check”) from the Community Planning Alliance², convincingly shows that this is far from the case. In short, what is perceived as the current “housing shortage” is little more than a myth propagated by the construction industry and related interests. This is justified by item 3 on the infographic stating that “there are 1.5 million more dwellings than households” in England and Wales alone^{3,4}. On this basis therefore, no further house building is needed in the UK subject to efforts addressing projected population growth. In other words, what we have at present is a substantial housing surplus. Therefore, locally there are strong grounds for objections to development of the sites

AB12(p74)

AB15(p75)

AB32(p75)

AB33(p75).

Ignoring the 1.5 million surplus dwellings nationwide, the current (regulation18) draft of the local plan quotes a minimum housing requirement of 7160 in the Borough over the period 2020-40, of which 1206 are already completed. Of these, only 40% are to be 'affordable' (1-2 bedroom dwellings). Therefore, of the minimum requirement, only 2864 dwellings will be affordable. If we assume that those already built are affordable (they probably aren't) then the borough will only need 1658 homes built between now and 2040. This is because, due to being beyond affordability, most locals will be unable to buy or rent the other 60%. Therefore, they are not needed, and the proposed mix is entirely incompatible with general affordability. Given the surplus dwellings throughout England and Wales however, it is likely that none will be needed, especially considering the imminent removal of mandatory housing targets by the DLUHC under Michael Gove MP, and any specific affordable housing needs can be catered for by using brownfield sites only. All of the green areas in the local plan could therefore be planned in for their present use.

Infographic from the Community Planning Alliance summarising UK housing stock in relation to the population.

Another statistic from the infographic is that nationwide we could build up to 1.2 million homes on brownfield sites (item 2)2,5. And like any other local authority, NuLBC is legally obliged to and does keep a register of its brownfield sites, although it is likely that some may slip through the net.

If there is an imperative, it is to increase further democratic control of the development process both locally and nationally. And both local and national authorities would do well to remember that they have a responsibility to the people they represent and not to the commercial viability of developers, the construction industry or overseas investors. In short, no new housing development is required, especially given that the borough has exceeded its housing targets in recent years. This calls into question the need for housing developments outside Audley Parish mentioned in the local plan. These include

BL18 (p75)

CT1 (p76, 750 dwellings)

RC8 (p76, 6 dwellings, potential flood risk.)

KS3 (p77)

LW53 (p77)

MD29 (p78, 150 dwellings, likely to conflict with HS2 construction?)

NC13 (p78)

NC77 (p78)

SP11 (p78, 900 dwellings, former Keele golf course)

SP12 (p79)

SP23 (p79)

TB19 (p79)

TB23 (p79, 124 dwellings, adjacent to Walley's Quarry.)

TK10 (p80)

TK17 (p80)

TK27 (p80).

Other sites which may also be questioned are

KS17 (p77, would include loss of playing fields and other village amenities. This may be classed as infill.)

KL13 (p77,93, part built already within the grounds of Keele University Campus).

The other class of developments locally is commercial. All too often we hear in the news from both local and Westminster sources, the mantra that economic growth is the imperative. But the actual imperative is stability, and we have reached the point where growth at any cost has become toxic, especially given the impossibility of unrestrained growth in a land of finite area. Have our political masters never heard of the circular economy?

Since the beginning of deindustrialisation in the 1980s, the diversity of employment opportunities has declined. We have seen an unhealthy move away from manufacturing/production of goods that we need as a nation, to one entirely reliant on trade with overseas partners, leaving us open to blackmail and the current spike of rampant imported inflation. Look what happened during lockdown. Over recent decades this has led to the demolition of old factories for residential developments and the rise of logistics centres (warehousing) for the temporary storage of imported goods, which will ultimately be operated by robots and AIs leading to even less employment. The problem with warehousing of course is its large consumption of land area. My question is, what is the driver for the proposed "big box" developments on AB2 and TK30 locally? Both of these proposals lie entirely within the greenbelt, although the TK30 land has already been quarried in parts. Neither of these proposals is either desirable or needed. However, if we are forced to accept one or the other then TK30, being about 5% smaller, is the lesser of two evils. With the green light given to the development of the 44 Ha Chatterley Valley site on Peacock Hay Road, and the numerous empty warehouses existing across the potteries, North Staffordshire and Cheshire East. It is dubious to say the least to claim that either AB2 or TK30 are needed. These sites are 70 Ha and 66 Ha respectively. However, in the recently published "Housing and Economic Needs Assessment Update", the borough as a whole only needs a maximum of 34 Ha6. So why are we saddled with 154 Ha total covered by AB2, TK30 and KL15?

If the local plan caters for agricultural developments, AB2 and TK30 could be planned for their existing use. The majority of the area covered by these sites is high grade (3a) agricultural land. In the case of TK30 the quarried areas could be reclaimed for agriculture or, if this proves difficult, used in other ways to enhance biodiversity. If the land in question is council owned, and the motivation is to sell off council assets, then once sold, they cannot be sold again, and any control is lost. Moreover, once farmland is developed for other purposes then it is near to impossible for it to be reclaimed later for that use – and so the ratchet inexorably turns. On this

basis therefore, I would urge the LPA to remove the warehousing proposals AB2 and TK30 from the local plan.

The purpose of this consultation is to supply feedback to the Borough Council. Another question is, does Westminster similarly consult with local authorities on planning issues, or is there any other mechanism where local councils can supply feedback to Westminster, providing a better feel for the mood of the nation? If so, why do we not see a root and branch reform of the NPPF rather than the tinkering around the edges approach seen in the July 2021 version? Most especially, there should be a removal of paragraphs 11-14 and its supporting statements elsewhere in the document, which is tantamount to a developer's charter. And there should be more flexibility within the NPPF allowing local plans to include parcels of land for their current purpose, given that there is almost none in this country that is not currently in use. As far as I can see this plan is nowhere near compatible with efforts required to address the current climate crisis. Moreover, given their scale, the proposed developments represent too greater shock to the environment and local communities over the short 20-year period suggested for their completion. And with the sufficient housing and unused commercial sites we already have, there is no need for any encroachment into our green spaces.

Yours sincerely
Jim Austin

Q5 Legally compliant	No
Q5 Sound	No

Q6 Details	I can see no evidence of any investigation into concerns over school parking and increased traffic through already congested residential areas. The exit from Freedom Drive is already difficult to navigate as it is located on a bend.
Q7 Modification	What investigation has been done by the council into the use of derelict Brownfield sites in the area? What, if any traffic surveys have been completed? The road through the village just past the school is narrow and with the parking of cars means that two cars cannot pass making this dangerous for pedestrians and cars as there is no pavement there either. Has any investigation been completed around infrastructure? Trying to get a doctors appointment is nigh on impossible at the best of times. This is a semi-rural area with little employment opportunities which will result in increased vehicle use. The idea is to reduce the Borough's carbon footprint however the plan will have the opposite effect I therefore feel the choice of NC13 as a proposed development site is wrong.
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)

Title	Policy NC13 Land West of Bullockhouse Road, Harriseahead
Consultee Family Name	Fenton
Consultee Given Name	Dave
Q4 Part of document	Policy
Q4 Policy	NC13
Q5 Legally compliant	No
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p><u>Site selection / Plan not Justified/Positively Prepared</u></p> <p>The selection of Green Belt sites has not been transparent. Sites have been selected and removed from the plan with no explanation other than they were identified during a call for sites.</p> <p>(redacted by admin) I believe NC13 was put forward by a neighbouring Residents group to divert attention away from a site originally identified in their area.</p> <p>More senior Councillors and Council Officers have also ensured no sites have been proposed where they live. The whole selection process is suspect and if the plan goes ahead it needs to be subjected to independent scrutiny.</p> <p>The Council have also not provided any evidence that all Brownfield land in the Borough has been exhausted before it started identifying Greenbelt land. There are several derelict farm sites in our area that could have been investigated but haven't</p> <p><u>New National Planning Policy Framework / Plan not consistent with National Policy</u></p> <p>This plan has been rushed through in an attempt to get it approved before the NPPF rule changes are implemented. This was witnessed at Full Council on 24/7/24 when all Conservative Councillors were ordered to vote in favour of the plan without having time to read all the evidence documents some that had only been released that week.</p> <p>What is the point of approving a plan that will be out of date and not compliant with Government Policy before it has even started. The Council know that the Greenbelt sites will not be as profitable if they have to comply with imminent new NPPF rules. For example, the increase to 50% affordable housing required on redesignated Greenbelt land.</p> <p><u>Plan not legally compliant Consultation/ Insufficient publicity and confusing processes</u></p> <p>I was completely unaware of the first period of consultation in 2021 and the only reason I became aware of the second period in 2023 was a neighbour photographed an A4 paper notice attached to the gate of NC13 before it got wet and blew away in a few days. Had I not seen this Facebook post my family and I would not be aware to date of the Local Plan's potential impact on our community.</p> <p>All residents living adjacent to proposed sites should have been notified by letter.</p> <p>The Planning Portal was very difficult to navigate and submit comments and was overwhelming and near impossible for those who are not I.T. confident. A lot of my neighbours gave up trying. I personally submitted comments on the portal and by email and not one appeared on the Portal 'what people say' results section.</p> <p>The removal of the Greenbelt protection on NC13 is a huge decision and there is no evidence of any investigation being done into community concerns raised during the consultation for example traffic / school parking surveys. All roads in and out of NC13 will be through already congested residential areas that's 100 to 200 extra cars on tired, poorly maintained roads with no employment existing or planned within a several miles. It makes no sense and those who took the trouble to take part in the consultation have been ignored by a tick box meaningless consultation process.</p>
Q7 Modification	<p>Full disclosure of the site selection processes specific to individual sites</p> <p>Delay and Redraft of plan to fit new NPPF</p> <p>Proper responses and action to respond to effectively to public consultation.</p>
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)

Title	Policy NC13 Land West of Bullockhouse Road, Harriseahead
Consultee Company / Organisation	Bloor Homes
Consultee Family Name	Bloor Homes
Agent Company / Organisation	Knights
Agent Family Name	Corinaldi-Knott
Agent Given Name	Alan
Q4 Part of document	Policy
Q4 Policy	PSD1
Q5 Legally compliant	Yes
Q5 Sound	Yes
Q5 DTC compliant	Yes
Q6 Details	<p>Please see supporting representation by Knights on behalf of Bloor Homes for allocation reference NC13.</p> <p>ALLOCATIONS</p> <p>Bloor Homes currently have land interests on the edge of Harriseahead on land to the west of Bullockhouse Road, which is proposed for allocation (NC13). This proposed allocation in the Regulation 19 Local Plan is supported.</p> <p>DRAFT SITE ALLOCATION NC13</p> <p>This site is identified as a draft allocation for around 100 dwellings.</p> <p>Policy NC13 then lists a number of criteria that need to be addressed and each of these will be considered below in turn.</p> <p>Criterion 1</p> <p>Criterion 1 states that the requirements of Policy SA1 should be satisfactorily addressed. Policy SA1 sets out a number of requirements for the proposed site allocations and each will be assessed below.</p> <p>Master Plans</p> <p>A master plan is not provided at this stage, however Bloor Homes are committed to providing a master plan-led development at the time a planning application is to be prepared. Any master plan would take into account the opportunities and constraints of the site, and would set out how the site can deliver the proposed dwellings, access roads, open space, trees and landscaping whilst respecting surrounding character of the settlement.</p> <p>Neighbourhood Plans</p> <p>There is currently no adopted Neighbourhood Plan for the area, however any master plan for the site can deliver a broad mix of housetypes and sizes and would comply with relevant policies and requirements of the development plan as a whole.</p> <p>Affordable Housing</p> <p>The site is capable of delivering 30% affordable housing in accordance with the Council's emerging affordable housing policy which requires 30% affordable housing on greenfield sites. This would enable the delivery of 30 affordable homes on the site.</p> <p>Housing Mix and Density</p> <p>As set out above under Neighbourhood Plans, the site will deliver a broad mix of housetypes and these will be provided in a mix of densities to reflect the characteristics, opportunities and constraints of the site.</p> <p>Design</p> <p>A layout master plan and design has yet to be undertaken for this site, however as a starting point, Bloor Homes always looks to advance proposals for housing development of this scale and within sites of this nature with due regard to the Council's urban design guidance and an appropriate level of engagement with the LPA and local community. Bloor Homes can deliver a broad range of housetypes and sizes , and can provide appropriate housetypes in this location that are compatible with the character and appearance of the area.</p> <p>Historic Environment</p> <p>The site does not contain any listed buildings, locally listed buildings or known archaeological remains. In addition, the site is not located within the setting of designated heritage asset.</p> <p>Social and Community Facilities</p> <p>Whilst a master plan for the site has yet to be prepared, the development of the site would be able to provide on site open space, including informal areas of open space, tree planting and a local area of play.</p> <p>With regard to education, the site is located within a short walking distance Thursfield Primary School. As of the 2022/2023 academic year, the school had surplus capacity to accommodate additional primary age pupils as demonstrated by the school capacity and pupil roll data below available from the Department for Education5:</p> <p>(see table in attachment)</p> <p>Given that the exact housing mix for the site is not known at this stage, it is not possible to assess the likely level of primary school pupils that would arise from the development of this site. In respect of other residential development proposals Knights has been involved in, the County Council has assessed housing developments of 150 dwellings generating demand for around 30-35 primary school places, so a development of 100 dwellings is likely to generate demand for a smaller number of primary school places.</p>

With regard to secondary school provision, the site is within the catchment of Kidsgrove Secondary School. Information relating to pupil numbers and school capacity from the Department for Education web site is available covering the period 2018/19 – 2022/23. The data available is provided in the table below which demonstrates that there are a significant number of secondary school places available within the catchment.

(see table in attachment)

The above analysis demonstrates that there is sufficient capacity in local primary and secondary schools to accommodate additional development. Whilst the primary school capacity is more limited than secondary school capacity, the proximity to the primary school means that residents of any new development on NC13 would be prioritised for primary school places ahead of any parents from outside of the catchment exercising parental choice and selecting the primary school as a first preference because prospective residents would be closer to the school and therefore higher up the selection criteria in situations where the applications for school places are over-subscribed.

With regard to healthcare provision, the site is located close to the administrative boundary of Stoke-on-Trent. The nearest GP surgery from the site is located approximately 15 minute walking distance from the site. The GP surgery is the Tunstall Primary Care Packmoor Branch and is currently accepting patients⁶. Footways are available on the surrounding highway network that are lit that would facilitate walking to the GP surgery by those who are able to.

Whilst the GP surgery is not located in Harriseahead itself, journeys to the GP surgery would be relatively short if undertaken by car. Financial contributions towards local healthcare provision can be facilitated by the development if deemed to be CIL compliant.

With regard to promoting healthy and active lifestyles, the site can provide areas of open space, play space and walking routes.

Landscape and Green Infrastructure

The site sits at a slightly lower level to the existing development to the east of Bullocks House Road.

The land rises slightly to the north and views from Bullocks House Road into the site looking towards the south west show the site against a backdrop of existing residential development. It is considered that the greatest level of visual change would relate to the site and the very localised area immediately adjacent to the site. The effect on potential receptor groups in the wider landscape context, including users of the wider PRoW network, would be generally very limited.

The existing trees and hedgerows located in and around the site could be utilised and incorporated into any master plan-led development of the site to help to soften the appearance of new built form where this is visible and the mitigation inherent in the design will help to assimilate the proposed development into the landscape in a manner which complements the character of the existing adjacent areas of the settlement.

Overall, the context provided by the surrounding development and the combined screening effects of topography, existing vegetation and built form means that effects on landscape character and local visual amenity would be very limited in scale.

With regard to blue infrastructure, SUDS measures, including swales and an attenuation basin to reduce surface water run off and also provide habitat could be incorporated into any proposed development, subject to the preparation of a detailed flood risk assessment and drainage strategy.

Biodiversity and Geodiversity

There are no known statutory ecological constraints to developing the site, subject to appropriate avoidance and mitigation measures where required.

It is anticipated that a 10% net gain in biodiversity would be achievable.

Highways

A transport matters statement (TMS) by Eddisons accompanies this submission (Appendix 2).

The supporting TMS demonstrates that the proposed quantum of the allocation could be served by a single point of vehicular access of Bullocks House Road. An access proposal is provided within the TMS. The proposed site access shown within the TMS incorporates a 5.5 metre wide road with 2 metre wide footways on both sides and a 6 metre junction radii. The visibility in each direction is at least 2.4 metres by 43 metres to accord with the current 30 mph speed limit. The proposed footways will connect to the existing footways on Bullocks House Road to ensure a safe and direct connection to the existing pedestrian infrastructure network in the area. Potential improvements to the local infrastructure could be discussed at a more advanced stage in the planning process to further improve the safety of the routes for pedestrians and cyclists.

In terms of pedestrian accessibility, plan 2 of the TMS provides a map showing a 2 kilometre walking distance from the centre of the site. All of Harriseahead and large parts of Kidsgrove fall within this 2 kilometre catchment. This includes bus stops, primary and secondary education, sports/leisure facilities, healthcare, public houses and retail uses.

The nearest bus stops are located around a 5 minute walk from the site. The nearest bus stops to the site provides various services throughout the day to destinations such as Hanley, Kidsgrove and Biddulph. The available services provide a choice of how people travel with the bus services operating from around 6:00am to around 7:00pm, making travel by public transport a real alternative to travelling by car for commuting trips, in particular.

Sufficient levels of parking can be provided within the development, including the provision of electric vehicle charging infrastructure to each of the proposed dwellings.

Environmental Health

In terms of site specific opportunities and constraints, there are no barriers to the development of the site land contamination and air quality perspective and construction related activities can be controlled by way of a construction and environmental management plan.

Flood Risk

Betts Hydro have provided Bloor Homes with an initial high-level overview of flood risk and drainage matters that are likely to be relevant based upon available sources of information (a flood risk and drainage strategy has yet to be undertaken).

The site is located in Flood Zone 1. Flood risk from Rivers and the Sea is very low as is the risk from reservoirs and canals. The risk from surface water varies across the site from very low to high, however it is proposed to only develop areas of lesser risk with no development in the areas of medium or high

risk. The flood risk from groundwater is currently undefined, however based on topography and geology it is likely that any areas of greater flood risk will align with those areas of higher surface water flood risk so would not be proposed for development.

The flood risk from the sewers crossing the site is currently undefined but again based on topography areas of higher risk will align with the higher surface water risk so would not be proposed for development. The sewers are in locations that can be satisfactorily incorporated into the layout development and/or diverted within site. Engagement with UU as part of the pre-development enquiry will enable the most suitable solution to be established.

With development proposed only within areas at lesser flood risk and suitable mitigation measures, the flood risk to the proposed development can be considered to be very low – low from all sources of flood risk.

Drainage Strategy

Infiltration is not considered viable, whilst percolation testing has not been undertaken the information available is supportive of this position. The BGS geology maps and Soilscales soil classification indicate infiltration is unlikely; BGS identifies Till, Devensian – Diamicton overlaying Pennine Middle Coal Measures Formation – Mudstone, siltstone and sandstone with Soilscales identifying the soils to be 'restored soils mostly from quarry and opencast spoil' with 'drainage variable'.

It is understood that the existing runoff most likely ponds at the low point on site before a combination of natural losses occur and seepage into the existing public sewer network as there are significant assets crossing the lower location onsite where the surface water flood risk is indicated. The bed and surround of the sewers also likely provide a conduit for surface and groundwater flow.

It is proposed that the surface water runoff be discharged in the following hierarchy: -

(a) a) the watercourse to the west, or

(b) b) the existing public sewer network - the separate 225mm dia. surface water sewer in Merlin Way, or

(c) c) the existing public sewer network - the combined 600mm dia. sewer crossing the site.

Peak flows are managed by restricting the stormwater runoff to the pre-development greenfield runoff rate (QBar). QBar is estimated to be 7.1 l/s/ha based on the FEH method –assuming a development area of 60%, then 1.92ha of development area results in a proposed discharge rate of 13.6 l/s.

There will be an increase in the post development runoff volume as a result of the increase in the impermeable area. This is primarily mitigated for by restricting the peak rate of runoff to QBar. It is assumed that the impermeable area of the development area is approximately 55%, then 1.056ha of impermeable generates a stormwater storage requirement of approximately 664cu.m this can easily be provided on the site.

The proposals will include rainwater gardens, permeable private drives and a detention basin. These features provide a range of benefits; slowing the flow, volume of storage, improve water quality as well as enhancing biodiversity and providing amenity value.

The SuDS proposals will result in water quality that meets the requirements of the Simplified Index Approach within the CIRIA SuDS Manual (C753).

The majority of the drainage system will be offered for adoption under a Section 104 Agreement and will be maintained by United Utilities.

There are no existing foul water flows being generated. The proposals are to discharge the foul water generated by the proposals to the public sewer network within the site, preferred point of connection to be discussed and agreed with UU via a pre-development enquiry.

This initial assessment has not identified any reason why the site cannot be brought forward for residential development.

Utilities

Suitable utility provision is available within the surrounding area, and it is anticipated that sufficient capacity is available to accommodate the proposed development or can be enhanced where required.

Infrastructure

The site can make the necessary contributions towards local infrastructure provision in line with Policy IN1.

Minerals

The site is not located within a known mineral resource area or safeguarding area.

In light of the conclusions above, it has been demonstrated the development of 100 dwellings on this site can be delivered in a manner that would satisfy criteria 1 of Policy NC13.

Criterion 2 – Access onto Bullocks House Road

As set out in response to Highways under criterion 1 above, direct access with appropriate visibility splays can be provided onto Bullocks House Road

Criterion 3 – Improvements along the site frontage and contributions towards bus service improvements
Improvements to the site frontage can be incorporated into the final design and layout for the site, which can be master plan-led.

In terms of contributions towards bus service improvements, it is assumed that these can be provided subject to them being CIL compliant.

Criterion 4 – Landscape-led Development

As set out in earlier responses, the layout of the site can be landscape-led and would take into account the topography of the site, existing landscape features and key views whilst also accommodating measures to incorporate sustainable drainage, on-site public open space and biodiversity net gain.

Criterion 5 – Flood Risk

The site is located in Flood Zone 1, an area with a low risk of flooding. The EA Flood Zone mapping does not show any areas of the site to be located within flood zones 2 and 3. This criterion appears to have been included in error, however in any event, the earlier commentary demonstrates that SUDS can be provided on site in accordance with a flood risk assessment and drainage strategy.

Criterion 6 – Coal Mining Risk Assessment and Contamination Assessment

Any development proposal would be informed by an assessment of the ground conditions which would be undertaken prior to the submission of any planning application, which would inform the design and layout of the site and the design of any proposed foundations to the proposed dwellings.

Criterion 7 – Retention and Enhancement of Public Rights of Way

	<p>A Public Right of Way is located to the south of the site and this could be retained as part of the development. Given its location to the site boundary, it is unlikely that a diversion of the footpath would be required, and this could be accommodated as part of any perimeter landscaping of the site, subject to further master planning work for the site.</p> <p>Criterion 8 – Financial Contributions</p> <p>These criteria require contributions towards education, healthcare provision, open space, community facilities and highway contributions.</p> <p>As set out under criterion 1 of the policy earlier in this submission, the proposal can make all of the relevant contributions towards local services and infrastructure as required (subject to them being CIL compliant).</p> <p>DELIVERABILITY</p> <p>This site is being promoted by Bloor Homes who are committed to the delivery of this site for housing as demonstrated through the submission of the planning and application and the lodging of a subsequent appeal.</p> <p>In terms of delivery, it is at this point – including factoring in the LPA's target timescales for examination and adoption of the new Local Plan, and broadly speaking - anticipated that the development of the site would come forward in the following timescales in the event that the site is allocated (with dwellings, inclusive of affordable housing being delivered at a rate of around 35 – 40 homes per annum):</p> <p>(a) Plan adoption final quarter of 2025 or first quarter of 2026</p> <p>(b) Submission of planning application second/third quarter of 2025</p> <p>(c) Planning permission granted final quarter of 2025/first quarter of 2026</p> <p>(d) Site preparation works – second quarter of 2026</p> <p>(e) Construction of initial access and first phase of infrastructure – second/third quarters of 2026</p> <p>(f) First phase of homes (25) delivered on site – first quarter of 2027</p> <p>(g) Completion of the development – circa 2029</p> <p>The site would therefore be deliverable within the plan period and within the first five years following its adoption.</p>

Title	Policy NC13 Land West of Bullockhouse Road, Harriseahead
Consultee Family Name	Barlow
Consultee Given Name	Derrick
Q5 Legally compliant	No

Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>There are a number of reasons as to why this Local Plan is not legally compliant, unsound and fails to comply with the duty to co-operate. I will list these in turn:</p> <p>The local plan will not be consistent with the incoming National Planning Policy Framework (NPPF).</p> <ol style="list-style-type: none"> 1 There is no evidence that the Brownfield sites in the area are being investigated before condemning the greenbelt sites. For e.g. there are dwellings which are unused in the areas which could be repurposed which have not been considered. 2 There is no evidence of a traffic survey or any effort to mitigate the concerns raised regarding school traffic or the existing extensive traffic problems already in the area (especially Chapel Lane, which has no footpaths). At the planning meetings, it was inferred that Traffic Modelling had been carried out, but upon looking at the plan it is clear this only covers the M6 and A500 which is nowhere near our location. Parking is already a considerable issue, with cars parked up to and beyond our road (Freedom Drive). There has been no consideration of how the Local Plan will exacerbate these issues even further, causing extensive disruption to residents and the associated road safety concerns. <p>The consultation was poorly managed and communicated.</p> <ol style="list-style-type: none"> 1 I was not aware of the first consultation and only became aware of the second period when someone photographed and posted on Facebook a paper notice attached to the gate of NC13 before it got wet and blew away less than a week later. The meetings at Kildsgrove Town Hall were also terribly managed. I personally queued up for 20 minutes to speak to a representative of Newcastle Council and when I eventually spoke to him, he did not know where NC13 was. This shows the lack of consideration for residents trying to discuss the consultation. 2 After speaking to a number of local residents, it is clear that the consultation process has been completely inaccessible for elderly people in particular. The planning portal was difficult to navigate and make comments and particularly for those who do not have IT skills and knowledge, this is a very exclusionary and intimidating practice. 3 In summary, I felt that the whole consultation process was a tick box exercise rather than an opportunity to engage thoroughly with residents about their concerns. <p>The Local Plan has not adequately considered the loss of the local heritage of the area.</p> <ol style="list-style-type: none"> 1 This particularly relates to the well-known views across NC13, affectionately known locally as 'The Promenade'. You can even see the Welsh Hills on a clear day, which will be lost as a consequence of the Local Plan. When walking from Packmoor to Mow Cop, NC13 is the only proper Greenfield site, highlighting the importance of maintaining this. Despite the plan stating 'buildings are designed to ensure they are not intrusive to the significant views in the surrounding area', this is factually incorrect. Building houses in NC13 will of course be intrusive and to state otherwise is offensive to local people's intelligence. 2 As a result of NC13, the area will no longer constitute as semi-rural due to the increase in habitants and loss of Greenfields and will rather be closer to an urban location. 3 The Local Plan provides no specific information about how local services, including Thursfield Primary School and doctor's surgeries, will be affected and consequently compensated for the increase in residents as a result of NC13. It merely states 'financial contributions to improvements in the capacity of local schools and health facilities'- it is not clear what this actually means and if this contribution will be sufficient. <p>The Council Planning meetings were unfair and a foregone conclusion before any debates were heard.</p> <ol style="list-style-type: none"> 1 Labour Councillors during these meetings stated that due to the sheer volume of documents and evidence, there was not ample time to adequately consider the application (they were given just a few days to look at this). Their suggestions to delay the process until everybody had time to review the documents properly were ignored. A vote was taken with 25 Conservative Councillors and 16 Labour Councillors present. The vote was carried out and was voted 25 against the motion and 16 for. Following this, there were debates between all parties and although there were valid points on both sides, the final vote on whether the plan would progress to full planning was 25 to 16 again. This was clearly a politically motivated vote and an example of 'towing the party line' rather than a genuine consideration of the validity of the Local Plan.

Consultee Given Name	Andrew
Q4 Part of document	Policy
Q4 Policy	NC13

Q6 Details	<p>Policy NC13 Land West of Bullockhouse Road, Harriseahead</p> <p>There are a range of sewers on this site and therefore we request that an additional criterion is added to this policy as follows.</p> <p>'Development layout will consider proximity to the sewer within the site and provide for access for maintenance, repair and replacement, and appropriate offset distances from the assets. Applicants must not assume that the sewer can be diverted.'</p> <p>We also request the following amendment to criterion 5:</p> <p>'5. A sequential approach will be taken within the site to direct development to areas at lowest risk of flooding taking account of flood risk from all sources including surface water flooding and sewer flood risk.'</p> <p>We request the following amendment to paragraph 13.162:</p> <p>13.162 There are a range of sewers on or close to the site which are identified as at risk of flooding. There are also records of flooding incidents in the wider area. This The sewers and the risk of flooding from them will need careful assessment and consideration in the detailed design, masterplanning and drainage details for the site. Applicants should must engage with the relevant provider United Utilities to consider the detailed design of the site and drainage details. to ensure that development is not located in an area at risk of flooding from the public sewer. Applicants must demonstrate that the proposed development would be safe and not lead to increased flood risk. Applicants should not assume that the sewers can be diverted, or that any levels can change on top of the sewers, as such proposals can negatively affect hydraulic performance and increase or displace flood risk. Any risk of sewer flooding could affect the developable area of the site and the detail of the design. Applicants should consider site topography and any exceedance flow paths. Careful consideration will need to be given to site topography and the approach to drainage including the management of surface water; the point of connection; whether the proposal will be gravity or pumped; the proposed finished floor and ground levels; overland flow paths and the management of exceedance paths from existing and proposed drainage systems and any appropriate mitigating measures to manage any risk of sewer surcharge. Resultant layouts and levels should take account of such existing circumstances. In accordance with national and Local Plan policy, an effective drainage strategy will be established, and a sequential approach applied within the site directing development to areas of lowest flood risk.'</p>

Title	Silverdale
Consultee Family Name	Macdonald
Consultee Given Name	Samantha
Q4 Part of document	Policies Map
Q6 Details	<p>i feel i should comment having just moved to the area that borders Silverdale</p> <p>The loss of thousands of mature trees, including broadleaved and conifer species located in the former Keele Golf Course is not explored in the evidence base other than the loss of Bog's Wood and suggested mitigation. Within the former Keele Golf course there are also several blue corridors, which not assessment for ecological impact. If these blue and green habitats are not identified in accompanying reports in the Draft Local plan, will there be any onus for the masterplan to provide habitat protection? Silverdale assumes the answer will be no.</p> <p>The exceptional circumstances case is challengeable. Housing Affordability in Newcastle under Lyme is relatively low and is falling relative to even large unitary authorities in the region. Another case could be made for much more emphasis on brownfield land to reduce poor quality housing stock and to eliminate existing contaminated and other unused land rather than to build on greenfields.</p> <p>The proposals for sites SP11.SP12 and SP23 reduce the greenbelt by 82.95 ha by new build (Newcastle under Lyme: 78-78). A further 10.68 ha at SP14 is lost without an allocation (Newcastle under Lyme 2020). Overall, the proposals reduce greenbelt by 25 per cent in Silverdale alone in perpetuity. There is little to be gained by the existing residents to compensate. Loss of 25 per cent open land on a sloping topography has added environmental risks exacerbated by climate change where there has not been sufficient scientific investigation at the appropriate geography.</p> <p>Worse, the proposed land allocation at SP11, SP12 and SP23 would undermine the original character of Silverdale as a community 'nestled in a green valley', a defining characteristic of former mining villages across Britain.</p>

Q4 Policy	SP11 (3)
Q6 Details	<p>Subject: Local Plan 2020-2040 SP11 (3)</p> <p>The below represent my comments in relation to SP11 (3) contained within the Draft Local Plan 2020-2040</p> <ol style="list-style-type: none"> 1 The density of the properties seems very high given the size of the land detailed/allocated within SP11 (3) 2 Access via Ashbourne Drive/Staveley Place is less than desirable given that Staveley Place is effectively reduced to a single width road due to residents parking on the road. Likely to be in excess of an additional 800 vehicular movements per day from this specific development proposal. High St/Mill St (access road to Ashbourne Drive/Staveley Place) has traffic calming measures on their whole length between its junctions with the B5044. In most places vehicular movements are slowed by restricted carriageway widths due to residents parking their cars on the road. Church St/Newcastle St (B5044) (an alternative access route to Ashbourne Drive) is similarly affected by cars parking on both sides of the road which significantly restricts carriageway widths. 3 The development on the former Silverdale Colliery site has seen a significant increase in traffic on High St/Mill St and Church St/Newcastle St (B5044) and we are yet to see the impact the new development on Pepper St will have on local traffic. <p>My main objection is the additional traffic and its impact on the current local roads described above. There is also planning permission for an additional 4 detached properties at the rear of the Bush public house- accessed via Ashbourne Drive. Noting the need for residential properties within the area would it not be possible to combine SP(1) SP(2) and SP11(3) into a linear development with access via the A525 or provide an uprated/revised link road between SP11(2) and SP11(3) to negate the need to use Ashbourne Drive/Staveley Place for access purposes.</p> <p>(Redacted by admin)</p>

Q6 Details	<p>I live in (Redacted by admin) I would like to express my objections to the proposed possible access routes to the proposed housing developments. You have specified possible access routes on the Racecourse Silverdale. I would like to object to this, as I believe that this would pose safety risks to the children's primary school and would make Park road and the racecourse too busy, noisy and dangerous. I would also like to object to park road opening out and becoming a through road to cemetery road as this again will cause traffic disruption and safety concerns to what is currently a quiet village lane, which houses elderly people, disabled residents and young children. I believe that all access roads should be situated on the main keele road. Avoiding Silverdale village altogether.</p>

Q6 Details	<p>I have just been informed of the site allocations in Silverdale and a number of them are a cause for concern in regards to the environment of the village.</p> <p>Sites SP11 (1, 2, 3, and 4) and SP23 would all take away from a large area land that the public can use and which is fundamental for local wildlife to thrive. Kestrels are known to nest in the trees in the areas you are proposing to build on as well as species of bat.</p> <p>The proposed access points to SP11 (3), SP11 (4), and SP23 would result in considerable disruption during construction and traffic build-up once completed.</p> <p>Furthermore, would any prospective residents of these properties be made aware of the ongoing environmental issues regarding Walleys Quarry before they moved in? Beyond that, what controls are being put in place to ensure people can buy these houses for homes rather than being bought and rented out only for personal gain?</p> <p>Rather than destroying well-loved green spaces around the village, which is the main draw for new residents, a thorough scheme of renovation and rent and landlord controls would be more important to ensure that those who love the village can stay in the village.</p> <p>I trust these issues will be brought before the public in a way the whole village can have a say.</p>

Q6 Details	<p>The Draft Local Plan</p> <ul style="list-style-type: none"> • I endorse the general policy comments already circulated by Keele Parish Council and strongly support the view that Keele and Silverdale Parish Councils will need to work together since the planned housing developments will affect both communities. • I am concerned that the promise of a local centre, health centre and primary school is delivered because promises of a shop on the Hawthorns development was not delivered. Will the developers also have to make a contribution Madeley High and/or the Newcastle Academy? • I also note that planned inclusion of social housing is often not delivered by developers "for economic reasons" at a later date. It is a common "get-out" ploy. • There is little in the Local Plan about provision of social housing. I think the Local Authority as the planning authority should establish the existing need for accommodation for homeless families, for old people's bungalows (as at Knights Cross in Keele), for old peoples housing complexes as at the Madeley Centre and for residents with disabilities and then build them to meet real needs. • The local developments will be the biggest since the creation of Park Site. Think creatively. You will not just be building houses you will be creating and transforming communities for years to come. Have you asked experts such as sociologists what more you could and should do?

Q4 Part of document	Policy
Q4 Policy	SP11
Q5 Sound	No
Q6 Details	<p>I Strongly oppose the Keele developments (SP11) based on Soundness of plan in particular (SP11 1 & 2) which I consider wholly inappropriate, over the top, and an assault on a beautiful green space, frequently used by many local walkers / dog owners. (KL15 on attached Sheet)</p> <p>1) Not Justified</p> <p>a) SP11 can't be justified due to the impacts (public parkland and environmental impact) whilst reasonable alternatives for development of other sites with reduced detrimental impacts to the community exist.</p> <p>2) Not Consistent with National Planning Policy Framework December 2023</p> <p>a) Section 8. Promoting healthy and safe communities, > provision of safe and accessible green infrastructure. Promoting SP11 (particularly SP11 1 & 2) as a Nature reserve or Country park is an unmissable opportunity to serve an increasing local population with nearby accessible countryside, promoting healthier physical and mental lifestyles. (Reference Sandilands Golf Club on the Lincolnshire coast near Sutton-on-Sea, Where the NT will transformed the former golf course into a 25-hectare (62 acre) wetland nature reserve.)</p> <p>b) Section 12. Achieving well-designed and beautiful places, SP11 site will be over developed to claim it can still function as a country park. Possibly if SP11 1 & 2 were omitted there would be sufficient open green space left to justify the label of a small country park - Currently there is an expanse of beautiful green land / countryside, the development plan of four large developments SP11-1,2,3 & 4 will ruin the vista and natural feel of open land. The proposed developments will have a feel of housing estates separated by small patches of green doubling the population of Keele</p> <p>c) Section 13. Protecting Green Belt land > This is not just green belt land it as close as we in NUL get to a small AONB and it is accessible to the local population to enjoy. Even if all avenues for developing Brown field sites are limited then there are still some areas of green belt that should be ring-fenced and protected (possible developed as country parks and promoted as such for benefit of the wider Populus)</p> <p>d) Section 15. Conserving and enhancing the natural environment. The plans make a mockery of the intent of this section. The land in SP11 is now rich in a variety of trees and fauna and such be protected as such. there are other areas of green belt that could be taken with lower impact, e.g. scrub or farm land.</p> <p>e) Section 14. Meeting the challenge of climate change.... > The plans make a mockery of the intent of this section. Continued below (scroll down).... The land in SP11 is now rich in a variety of trees and fauna and such be protected as such. There are other areas of green belt that could be taken with lower impact on natural Carbon sequestration , e.g. scrub or farm land.</p> <p>f) Development of Sp11 particularly SP11 1 & 2 would be a tragic missed opportunity to convert this site to a nature reserve or country park and actively promoted as such. Other councils have successfully converted old golf courses RE Sandilands. This sites location is convenient and accessible to the wider NUL population. Once developed its likely this land will be lost forever and will not be able to be reclaimed.</p> <p>g) The national policy Framework does not advocate the easiest or most commercially advantageous routes for the local council, e.g. to prioritise development land that is already in ownership of the council.</p> <p>h) After the environmental & public health disaster of Wallies quarry landfill the "Authorities" owe the NUL community and NUL Green belt and should make amends by improved more sympathetic management and preservation of our green spaces.</p> <p>i) Section 11. Making effective use of land - Urban renewal - development of existing & brown field sites should be prioritised before our green belt is touched.</p>

	<p>j) Impacts of excessive Traffic to the A525 Keele Road would be unacceptable if all the Development's within the SP11 KL13 & KL15 were to take place.</p> <p>k) The SP11 developments of 900 dwellings will more than double the Keele population (last census 2021 - 2606 people, i don,t think this is fair do you?</p>
Q7 Modification	<p>Suggestions:</p> <p>1) Development of other areas:</p> <p>a) Further development of more land to the East of SP 23 - not sure why this is marked as protected as its just used for grassing</p> <p>b) selected Development of other Farm or scrub land in the NUL area. For instance the TB19 development is more easily justified.</p> <p>c) Selecting more sites like TB19 that are not efficiently farmed or used as recreational areas by the general Populous</p> <p>c) Selected Development of the outlying NUL villages to build them to a size where they can viably sustain some minimal community resources eg a primary school, doctors, pub, shop etc etc. Future developers could be forced to contribute to this as part of planning permissions.</p> <p>2) Urban renewal - development of existing & brown field sites should be prioritised before our green belt is touched. This should be a golden rule!</p> <p>3) Scaling back the development of some areas to be more sympathetic to the environment & community eg canceling SP1&2, but continuing SP3&4 at a capped 300 dwelling limit.</p> <p>4) If any development does take place on any NUL green belt, I strongly suggest that the building contractors are under penalty clauses for any damage to green belt or felling of trees that are not strictly essential, I have seen too many developments where the first act is to fell all trees within the site boundary whether essential or not.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	To ensure my views and the view of others are taken seriously and given sufficient air-time.

Newcastle under Lyme draft local plan – regulation 18: Consultation response

Dear Sir/Madam,

The following is a robust objection to all developments on green field sites covering all the proposals within Audley Parish and many more elsewhere as recommended in the draft local plan. In writing this response, I am aware of the need to adopt a local plan in order for local authorities to maintain democratic control of development in the area. This requirement appears to be a symptom of the subsection in the NPPF titled “The presumption in favour of sustainable development” (paragraphs 11-14). However, from a resident’s point of view, this gives the impression that local authorities must demonstrate a willingness to develop a particular area in order to avoid it being developed. This is, in essence, a commitment to eventual development even if it is not needed. And this is a source of great anxiety amongst residents that undesirable development is out of control, a situation clearly being fuelled by the existence of paragraphs 11-14. On this basis therefore, this subsection of the NPPF needs to be challenged.

This response may differ from others in that it comments on local planning within a strategic context. As I see it, there are three main types of development, which are likely to blight the future generations in the UK: (i) infrastructure (example, HS2), (ii) commercial (examples, AB2 and TK30 in the NuLBC local plan) and (iii) residential (example, recent housing developments either side of the A513, Beaconside, Stafford). Infrastructure is within the remit of Westminster rather than local authorities, so that is not a particular concern here. My main focus is encroachment of developments, both residential and commercial, in green spaces allowed for in the draft local plan. And any new developments in rural areas will, at the very least, result in:

- Loss of light or overshadowing

- Increased risk of flooding due to ‘run-off’

- Loss of visual amenity

- Limitations to physical activity

- Generation of extra traffic, overloading already busy local roads

- Extra noise, pollution, disturbance and danger from increased traffic

- Loss of trees and other biodiversity – bats, lizards etc.

- Loss of natural carbon capture

- Decrease in food production capacity

Increased local population placing further pressure on local schools, GP’s surgeries and other services, which are already oversubscribed.

The United Kingdom as a whole is currently gripped by a pandemic of overdevelopment, which threatens nature and the already depleted biodiversity we see in this country. And it has now reached the stage where it should be considered a national emergency. I for one, do not feel that I have any influence over the shape of our surroundings. There are numerous drivers for this trend many of which are not being addressed by government at any level. At the heart of this is a significant disconnection between the opinions of politicians and public as to what is actually needed. There appears to be cross-party support for activities driving economic growth at all costs, irrespective of the consequences to the natural environment. Aggravating this divide is the aforementioned paragraphs 11-14 of the NPPF. At a local level, what is not in doubt, is that whenever there is land removed from the green belt there is rarely, if ever, an equivalent area so returned, so the process is irreversible. And in the absence of any agreed lower limit on the area of protected green spaces within the UK, no release of green belt land, or development on green spaces, can be considered sustainable. Unless, of course, the use of agricultural land for just that purpose is also considered “developed”, i.e. it has an economic and sustainable use. And the local plan does appear to acknowledge this¹, so why not include agricultural use into the local plan implying no change in particular areas? If this is not the case, we are committed to a process where the end point is a UK completely covered in tarmac and concrete. Anyone arguing against this interpretation needs to state and justify precisely where that end point is. If they cannot, this renders the term ‘sustainable development’ an oxymoron.

One particular trend of major concern is the growing UK population. At the time of writing this stands at just under 69 million, and is set to reach 74 million before 2050. Studies in the US (Pimental and Giampietro, 1994; Lal, 1989) suggest that comfortable/sustainable living requires 0.5 Ha (1.2 acres) per capita. If we are generous, sustainable living in the UK was possible with a population of 57 million, a figure I remember from the late 1960s. With a total area of the UK at just over 60 million acres, a land area of one acre per capita for sustainable living in the UK seems feasible. As we have seen, anything more puts a strain on the environment as a whole. On this basis therefore, the UK is currently overpopulated by about 15%, and there appears to be no initiatives to address this issue. On this point, Westminster appears to be in a state of denial, thus fuelling the current avalanche of overdevelopment nationwide. Residential developments have a knock on effect by requiring other types of development to provide infrastructure, services and employment. Notwithstanding overpopulation, this gives the impression that there is not enough housing stock to accommodate the current population. Recent data, in the form of an infographic (“Housing crisis fact check”) from the Community Planning Alliance², convincingly shows that this is far from the case. In short, what is perceived as the current “housing shortage” is little more than a myth propagated by the construction industry and related interests. This is justified by item 3 on the infographic stating that “there are 1.5 million more dwellings than households” in England and Wales alone^{3,4}. On this basis therefore, no further house building is needed in the UK subject to efforts addressing projected population growth. In other words, what we have at present is a substantial housing surplus. Therefore, locally there are strong grounds for objections to development of the sites

AB12(p74)

AB15(p75)

AB32(p75)

AB33(p75).

Ignoring the 1.5 million surplus dwellings nationwide, the current (regulation18) draft of the local plan quotes a minimum housing requirement of 7160 in the Borough over the period 2020-40, of which 1206 are already completed. Of these, only 40% are to be 'affordable' (1-2 bedroom dwellings). Therefore, of the minimum requirement, only 2864 dwellings will be affordable. If we assume that those already built are affordable (they probably aren't) then the borough will only need 1658 homes built between now and 2040. This is because, due to being beyond affordability, most locals will be unable to buy or rent the other 60%. Therefore, they are not needed, and the proposed mix is entirely incompatible with general affordability. Given the surplus dwellings throughout England and Wales however, it is likely that none will be needed, especially considering the imminent removal of mandatory housing targets by the DLUHC under Michael Gove MP, and any specific affordable housing needs can be catered for by using brownfield sites only. All of the green areas in the local plan could therefore be planned in for their present use.

Infographic from the Community Planning Alliance summarising UK housing stock in relation to the population.

Another statistic from the infographic is that nationwide we could build up to 1.2 million homes on brownfield sites (item 2)2,5. And like any other local authority, NuLBC is legally obliged to and does keep a register of its brownfield sites, although it is likely that some may slip through the net.

If there is an imperative, it is to increase further democratic control of the development process both locally and nationally. And both local and national authorities would do well to remember that they have a responsibility to the people they represent and not to the commercial viability of developers, the construction industry or overseas investors. In short, no new housing development is required, especially given that the borough has exceeded its housing targets in recent years. This calls into question the need for housing developments outside Audley Parish mentioned in the local plan. These include

BL18 (p75)

CT1 (p76, 750 dwellings)

RC8 (p76, 6 dwellings, potential flood risk.)

KS3 (p77)

LW53 (p77)

MD29 (p78, 150 dwellings, likely to conflict with HS2 construction?)

NC13 (p78)

NC77 (p78)

SP11 (p78, 900 dwellings, former Keele golf course)

SP12 (p79)

SP23 (p79)

TB19 (p79)

TB23 (p79, 124 dwellings, adjacent to Walley's Quarry.)

TK10 (p80)

TK17 (p80)

TK27 (p80).

Other sites which may also be questioned are

KS17 (p77, would include loss of playing fields and other village amenities. This may be classed as infill.)

KL13 (p77,93, part built already within the grounds of Keele University Campus).

The other class of developments locally is commercial. All too often we hear in the news from both local and Westminster sources, the mantra that economic growth is the imperative. But the actual imperative is stability, and we have reached the point where growth at any cost has become toxic, especially given the impossibility of unrestrained growth in a land of finite area. Have our political masters never heard of the circular economy?

Since the beginning of deindustrialisation in the 1980s, the diversity of employment opportunities has declined. We have seen an unhealthy move away from manufacturing/production of goods that we need as a nation, to one entirely reliant on trade with overseas partners, leaving us open to blackmail and the current spike of rampant imported inflation. Look what happened during lockdown. Over recent decades this has led to the demolition of old factories for residential developments and the rise of logistics centres (warehousing) for the temporary storage of imported goods, which will ultimately be operated by robots and AIs leading to even less employment. The problem with warehousing of course is its large consumption of land area. My question is, what is the driver for the proposed "big box" developments on AB2 and TK30 locally? Both of these proposals lie entirely within the greenbelt, although the TK30 land has already been quarried in parts. Neither of these proposals is either desirable or needed. However, if we are forced to accept one or the other then TK30, being about 5% smaller, is the lesser of two evils. With the green light given to the development of the 44 Ha Chatterley Valley site on Peacock Hay Road, and the numerous empty warehouses existing across the potteries, North Staffordshire and Cheshire East. It is dubious to say the least to claim that either AB2 or TK30 are needed. These sites are 70 Ha and 66 Ha respectively. However, in the recently published "Housing and Economic Needs Assessment Update", the borough as a whole only needs a maximum of 34 Ha6. So why are we saddled with 154 Ha total covered by AB2, TK30 and KL15?

If the local plan caters for agricultural developments, AB2 and TK30 could be planned for their existing use. The majority of the area covered by these sites is high grade (3a) agricultural land. In the case of TK30 the quarried areas could be reclaimed for agriculture or, if this proves difficult, used in other ways to enhance biodiversity. If the land in question is council owned, and the motivation is to sell off council assets, then once sold, they cannot be sold again, and any control is lost. Moreover, once farmland is developed for other purposes then it is near to impossible for it to be reclaimed later for that use – and so the ratchet inexorably turns. On this

	<p>basis therefore, I would urge the LPA to remove the warehousing proposals AB2 and TK30 from the local plan.</p> <p>The purpose of this consultation is to supply feedback to the Borough Council. Another question is, does Westminster similarly consult with local authorities on planning issues, or is there any other mechanism where local councils can supply feedback to Westminster, providing a better feel for the mood of the nation? If so, why do we not see a root and branch reform of the NPPF rather than the tinkering around the edges approach seen in the July 2021 version? Most especially, there should be a removal of paragraphs 11-14 and its supporting statements elsewhere in the document, which is tantamount to a developer's charter. And there should be more flexibility within the NPPF allowing local plans to include parcels of land for their current purpose, given that there is almost none in this country that is not currently in use. As far as I can see this plan is nowhere near compatible with efforts required to address the current climate crisis. Moreover, given their scale, the proposed developments represent too greater shock to the environment and local communities over the short 20-year period suggested for their completion. And with the sufficient housing and unused commercial sites we already have, there is no need for any encroachment into our green spaces.</p> <p>Yours sincerely Jim Austin</p> <p>Notes</p> <ol style="list-style-type: none"> 1. Q6 Details	<p>This Regulation 19 Local Plan has gone forward to consultation without the full critical evidence base and additional contextual information being available for scrutiny of elected members. It is as if the administration wishes to get this LP approved before they are subject to the new governments National Planning Framework reforms. This jeopardises the changes of this LP being passed by the Planning Inspectorate.</p> <p>I am particularly concerned about this version meeting existing housing need, especially in relation to social housing and affordable housing. If land is removed from the greenbelt, as in the case of the rewilded former Keele Golf course it should only be used to meet the housing crisis i.e. the majority of it should be social housing and the rest meet the needs of the existing population. In my opinion the level of house building will not match job growth, making the developments unsustainable. We have already seen in other wards the building of large and expensive homes that do not meet the needs of local people and either remain unsold or are under occupied by newcomers, some of whom do not contribute to the local economy. Within this plan I do specific targets for social housing and therefore cannot be said to meet genuine housing need in this area of low incomes and aging population. On p.30 there is a worrying clause about the % split of social housing ie of 400 homes only 80 would be social housing when in truth the reverse of these percentages would better reflect the genuine housing need I see as a ward councillor.</p>

	<p>Another grave concern is transport. There are no proposals in the LP existing pressures of connectivity. The mitigations suggested in the SWECO 2024 report are not sufficient to sustain long term traffic flow in the area. There are major concerns about pinch points at Park Rd and the Racecourse where the traffic at peak times is already too much for the existing roads. The existing school's will have their concerns about pupil numbers and dangerous levels of traffic and will no doubt make their own submissions.</p> <p>Although the mention of infrastructure to support the development on the former KGC is welcome ie doctor's surgery and one form entry primary school residents are sceptical that this will actually materialise. They have seen numerous examples of Section106 agreements not being honoured locally. Although the addition of a country park is welcome, residents enjoy using the existing rewilded site for a variety of free leisure activities eg dog walking, fishing, running. They are fearful of losing what they have. Also, there is a feeling that the country park will be in effect a 'land bank' for NULBC. Residents tell me they are worried about drainage issues as the former KGC has natural underground springs and the area is already prone to flooding.</p> <p>Finally, Silverdale as a village has not been afforded any protection, unlike Keele. The green belt is meant to prevent urban sprawl, but we will see this historic pit village swallowed up, losing its character and heritage if this plan goes ahead in its entirety.</p> <p>I have been involved in the formulation the submissions of two Parish Councils and the Labour Group of councillors on NULBC. This submission is my own and as a resident of this borough and based on my experiences as the ward councillor for Silverdale.</p>

Q4 Part of document	Policy
Q4 Policy	SP11 SITE ARRANGMENT p172
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>Silverdale Parish has objected to the proposed intensity of development and re-focus its criticism on the infrastructure by exploring grey areas arising from design of SP11 overlapping SP23 design.</p> <p>Transport congestion problems in the High Street, Pepper St and B5044 were introduced at Ashbourne Drive and at Racecourse (with the pressure of a primary school location). There was acknowledgement of the improvements required, but these roads have extensive poor surface quality and narrow widths.</p> <p>Proposals as they stand will increase traffic flows through the centre of Silverdale and exacerbate movement problems at peak times. Additional concerns related to the possibility of rat runs through SP11 to and from Silverdale to the A525. It was noted a new spur was identified for A525 but the number of homes accessed from Silverdale will be about the same as accessed from Keele. How will the proposals change the road network from the Silverdale access points?</p> <p>The consistency of the treatment for SP23 alongside SP11 is uneven and is therefore questioned by the current presentation of the Local Plan. Rather than treating adjoining schemes independently in silos, there should be further steps to make the links more explicit.</p> <p>The impression given in the documentation is that issues in the design of SP11 are more important than SP23 to solve. This is a mistake that should be addressed.</p>
Q7 Modification	The promoter's master plan document for SP23 should be made publicly available prior to sign off by the council ahead of Planning Inspection.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	I would like the opportunity of reading the masterpan for SP23 alongside SP11.

Q6 Details	Good Morning, I think your proposed access is good ,the possible access especially from SP11(3) is not good at all it would bring more traffic to an already busy village,it would be better if the bottom section of houses at sp11(3) were joined with the larger mass of houses to the south?and the possible access onto the Racecourse isn't a very good idea when you consider the size of the existing road the already congested periods at school time,and lack of parking for existing residents,the 5 permanent pitches for travellers isn't a bad idea but would be much better accessed from where the eyesore of a depot is on the bend in cemetery road or compulsory purchase the depot and have a bigger site for travellers.

Q4 Part of document	Paragraph
Q5 Sound	No
Q6 Details	Paragraph 13.172 - This is self-evidently contradictory. The current area is a large grassed/treed expanse, big enough to absorb the human foot traffic imposed on it. Adding the best part of 1000 houses, circa 2-3000 people will wear down this area rapidly to resemble the worn out green-ish spaces closer to town. To speak of enhancing the area under this degree of footfall is twaddle.
Q7 Modification	To respect the soundness of this local plan, the fact that this is the greenest of green belt should be acknowledged, and should NEVER be developed.

Q6 Details	<p>Dear Borough Council,</p> <p>I am writing to express my concerns regarding the plan within Silverdale Parish - Keele golf course. You are proposing a country park? I wish to express my deepest concern that we currently have a vast amount of wildlife, birdlife, flora and fauna on this site which you are proposing to build on. I walk across this whole area on a daily basis in all 4 seasons and i assume that the persons who have offered up this land do not.</p> <p>This land was left to the people of Silverdale and Keele for recreational use and i am unsure how the Council can ride roughshod over the people of the Parish, whilst insulting them by dangling a 'carrot' of a country park.</p> <p>Silverdale and Keele have offered up a large percentage of land during the past 15 years and wildlife, environment can no longer survive.</p> <p>It is quite easy to see that the natural springs appear when we have rain now on this site.Take a walk down Pepper St to see the torrents of water now flooding the road from run off near that building site. The proposed roads offer a rat run between Silverdale and the A525 and extra traffic will create problems withing the village not to mention the poor residents on Staveley Close.</p> <p>How can we install solar farms in the name of climate change whilst destroying an environment that supports a vast array of wildlife?</p> <p>I spend an hour or more a day walking this area and think that the plan is nothing short of criminal. There are plenty of brownfield sites in this ancient historical Borough. We should preserve and respect what we have.</p>

Q6 Details	<p>It is noted that significant levels of student accommodation are included within proposed housing land supply. This flaw has also been highlighted in those appeals, and also that Keele University has also made a public announcement of consolidation and rationalisation due to major funding constraint. This also undermines the Councils' vanity project, to develop the former Keele Golf Course which it owns as Allocation SP11 Lyme Park for over 800 dwellings as outwith any justification in economic strategy terms.</p>
Q7 Modification	<ul style="list-style-type: none"> Revisit sites like SP11 and TB19 to re-examine their economic and spatial credentials.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)

Consultee Family Name	Nadin
Consultee Given Name	Michael Alan
Q4 Part of document	Policy
Q4 Policy	SP11
Q5 Sound	No
Q6 Details	<p>I wish to register my opposition to the draft policy SP11.</p> <p>1) The proposed developments SP11 (1), SP11 (2), SP11(3) SP11(4) all lie within areas understood as being Greenbelt.</p> <p>2) The development of SP11 (3) will substantially increase the level of traffic through the village of Silverdale which is already suffering from "traffic overload" & serious "parking issues" on both of the main arterial routes of Church Street & the High Street.</p> <p>3) The development of SP11(4) will also increase the level of traffic both through the village of Silverdale but in particular to the "Racecourse" area that has the potential to increase the risk of harm (vehicle/pedestrian collision) to the pupils, staff & parents directly associated with the Racecourse Academy Primary school.</p> <p>4) The SP11 development site has been identified, from a BDP report, as being;</p> <p>Quote: - "Flood Zone 1 - (low probability of flooding - less than 0.1% probability, but is susceptible to some, limited surface water flooding during heavy downpours".</p> <p>This comment is hardly surprising as water runs downhill!</p> <p>The problems of water "run-off" from the golf course site (SP11) causing water flooding issues in Silverdale are historical & well known both locally and by NUL BC. Works have been undertaken over the years to elviate the problems being experienced at that time, with limited success! Problems are still being experienced today in areas of existing housing developments! Individual streams of water are known to have always & contiuously drained from the golf course (SP11) & (SP23) areas on a 24/7 basis creating wet lands on the lower regions of the two areas and have never been known to run dry! Evidence of this can be seen today! Should such developments of SP11 & SP23 be undertaken, assuming that adequate solutions are found to elviate the 24/7 water "run-off" conditions, is the existing drainage & infrastructure in the village of Silverdale sufficiently adequate in its. size, condition & capacity to accommodate any increase of directed water flow?</p> <p>My objection is that the draft local plan has omitted & has failed to acknowledge any reference to the historical problems of water "run-off" from the development of the SP11(1 - 4) & SP23 areas & the</p>

	<p>consequence of assessed likelihood to any future potential problems that maybe encountered by the residents living in the valley of Silverdale.</p> <p>5) No guarantee is given in the draft that should SP11 (1 - 4) development proceed in its present format, that the 30% affordable housing initiative being applied is to each of the 4 development areas individually! In order to facilitate with the objectives of the housing initiative it is important to me that the 30% affordable housing is NOT one that is adopted as a collective for the site!</p>
Q7 Modification	<p>1) a- Maintain SP11 area as Greenbelt. b- Develop further the expanse of woodland between Red Heath wood & Job's wood, encouraging a greater bio-diversity for the whole area.</p> <p>2) a- Curtail the size of the development. b- Conduct an indepth traffic impact assessment to include & give due consideration to the existing traffic problems that are associated to the village of Silverdale.</p> <p>3) a- Curtail the size of the development. b- Conduct an in depth traffic impact assessment to include & give due consideration to the increased risk of harm at and around the areas surrounding the Racscourse Academy Primary school.</p> <p>4) a- Curtail the size of the development. b- Conduct an in depth Hydrology impact assessment to include to Topography of the development areas and to include & give due consideration to the potenitlial of increased risk of flooding in the lower areas of habitation within the village of Silverdale.</p> <p>5) That the 30% housing initative is set as being a mandatory requirement applicable to each area of housing developments individually by the NUL planning department to the developers and is not one that is governed by the housing developer to the NUL planning department.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	To express my concerns directly

Title	Policy SP11 Lyme Park, Silverdale
Consultee Family Name	Billington
Consultee Given Name	Tracey
Q4 Part of document	Policy
Q4 Policy	SP11
Q6 Details	<p>Dear Sirs</p> <p>I remain totally opposed to any development on Keele Golf course and those adjoining sites. I have information to the effect that the value of the land of the old golf course, if sold for housing, has already been included in the boroughs budgetary planning going forwards. This presupposes the outcome of the inspection process and does not properly separate the proper function of the LPA from the boroughs ambitions as a landowner. The local save our green space group intends to raise this point at inspection. This conflict of interests raises doubts about the motivation for the proposed housing development. It suggests that the proposals have been developed not in response to the principles of proper planning but rather for budgetary reasons.</p> <p>I believe that the research into housing need in the area is deeply flawed. This is illustrated by the recent census which shows a population decline, and yet you are proposing to build for a healthily growing population. The council continues to recite the tired mantra of build, and they will come, where is the evidence for this? It might have been thought that the boroughs population would grow in response to the building of HS2 with its terminus in Crewe. This is not now happening; so where will the additional population come from? It is stated in the plan that the greatest need in our area is for smaller, more affordable homes. The plan proposes that 278 affordable homes will be needed per annum over the lifespan of the plan. Four hundred houses are proposed in total per annum. Thus, seventy percent of the housing need is for affordable homes. The maximum percentage of affordable homes to be delivered in new developments is thirty percent on greenfield sites. I am at a loss to understand how the plan can deliver sufficient affordable homes. This lack of consistency means the document is ineffective and not deliverable and is not in line with national policy. It fails to meet objectively assessed requirements for affordable homes. Excessive house building, particularly the wrong houses built in the wrong place, has a detrimental effect on neighbourhoods and healthy communities. These include, increase in traffic, congestion on existing roads, damage to the environment (issues such as drainage and air pollution), the creation of artificial, anonymous places facilitates anti-social behaviour and lack of social cohesion. The borough plan proposes developing one thousand six hundred and fifty homes in areas surrounding Keele University. It also proposes over five hundred new dwellings be developed in and around the university campus. The plan states that new housing development will be targeted on those centres best able to support them with their facilities. The plan fails to identify which centres are supposed to support the SP11 sites, SP23, or TB19. If the intention is that Keele will be one of these centres, we would point out that the retail facilities available are very limited but not as limited as the available parking! The failure of the plan to dignify Silverdale as a centre of any sort, rather including it within urban Newcastle, prevents any recognition of the extra footfall Silverdale might receive. Again, the plan is not properly justified, not based on robust and credible evidence nor is it effective. In the unlikely event that this plan passes inspection, and the proposed housing is built, insufficient services will exist for the new residents, or these services will be effectively inaccessible. With thousands of new homes in a relatively small area, insufficient facilities within walking distance and the need for the new occupants to get into work, there will be huge pressure on the local road network. The plans proposals for sustainable transport options are mere window dressing, in truth, many thousands of extra car journeys will be made every day. Whilst understanding that transport infrastructure is not the direct responsibility of the borough, the plan should</p>

recognise existing capacity and the capacity to deliver improvements in the future. There is scant reference to current capacity nor to future deliverability in the plan. The danger of a failure in this respect will be to build the worst possible type of housing development. Development which grid locks local roads, undermines the effectiveness of local business, degrades the quality of the local environment and creates large scale anonymous estates with no heart. The utter failure of this plan to effectively vision the transport needs of the borough in the future is illustrated by the odd proposal to build a road between A53 and A525 passing through the sustainable campus of Keele University. The proposals are sketchy at best, but if it is proposed that such a road would be open to all traffic, it is highly unlikely that the university would approve its development. This is an illustration of just one aspect of this plan which is not properly justified nor effective nor deliverable. whilst I welcome the inclusion of a country park in the plans i am concerned that the plan offers no details of how such a park would be protected for the future were it to be withdrawn from greenbelt. It is my judgement that the park as proposed would be compromised by the need to connect the SP11 and SP23 sites to the proposed community hub/school. I am also concerned that any such 'park' may be nothing more than a land bank for further housing development. Especially in light of the proposed access to SP11 (4) and SP11 (3), from residential streets in Silverdale, I do not believe that the plan for the old golf course is effective or deliverable. I judge the risk as high that any eventual development will be of a different pattern and that the country park will not come to fruition. I judge that the borough will put financial gain before the needs of the existing population for health and recreation. The old golf course is heavily used by local people for exercise and recreation, it is the nearest and most accessible informal green space for many of the residents of the town. The needs of existing residents must be paramount in the decision-making processes of the council. Therefore, the council should reverse its proposal to build on the land and should instead make the whole area into a country park within the greenbelt. I believe that the definition of the former golf course as a "brown field site" is also flawed as the site has never previously had any built commercial or agricultural development. I believe that the plan does not take into consideration of the already built but vacant or empty homes within the city which amounts to over one thousand homes (Newcastle borough own information through freedom of information request) which could mitigate any identified housing need therefore making the plan deeply flawed. I believe the plan is deeply flawed as it does not consider the purchase of any new property situated near the university by absentee landlords, which have already been shown to purchase many of the new properties built in the location of the university. There properties are quickly converted into houses of multiple occupancy and rented out for part of the year to university students and render the neighbourhoods empty for large portions of the year, this is while Keele university are closing housing blocks and no longer supplying sufficient accommodation for their student population. The purchase of properties for students does not meet the local housing need. The prime example of this being the development at the former metal dealers, Hamptons where much of the estate is vacant out of term time unfortunately to the detriment of the community, as the majority of the residents become transient. I believe the plan does not consider the impact on local school, especially the secondary school provision as there is no new secondary development.

I remain totally opposed to any development on Keele Golf course and those adjoining sites. For the reasons stated in section 6 above all proposed development of those sites should be ceased and an alternative plan should be developed. The borough council should explore through compulsory purchase the one thousand plus vacant houses in the borough so that they can be brought back into use. Any financial gain from these proposed sites must not be included in current plans for the borough financial planning Any new development should be ring-fenced and only sold to local residents, a covenant should be applied to all homes prohibiting the renting out of these properties Keele university should be consulted and assisted in the planning and provision of adequate accommodation for its student population The former golf course should remain a greenbelt site and be converted into a country park, protected by law in perpetuity, giving borough residents easy access to a rewilded open space for recreational needs. The car park that currently remains locked should also be reopened providing adequate parking for visitors to the area.

Q5 Sound	Yes
Q5 DTC compliant	Yes
Q6 Details	The Local Plan housing allocations are sound. In my area of Silverdale they have repsonded to residents views and modified the allocation map and split SP11 development of the former golf course site into smaller parcels. This has maintained the housing target number but also allowed for the provision of a new Country Park to suppport residents wellbeing and preserve green spaces, ancient trees and water bodies in the area. The additon of a new primary school and health centre into the plans shows greater consideration of the infrastructure demands of new housing.

Q4 Part of document	<p>Policy</p>
Q4 Policy	<p>SP11</p>
Q6 Details	<p>Please accept these comments in relation to the local plan, 2020-2040.</p> <p>I am a (redacted by admin), therefore my comments are directed towards the building proposals SP11 1,2,3 and 4, and SP23.</p> <p>I understand that there is a need to build new and affordable housing. My concerns with the proposal is how these areas of new houses will impact on Silverdale.</p> <p>Firstly, the houses are planned to be built in Silverdale, but are being badged as Keele, which is quite frankly offensive to the people of silverdale.</p> <p>Secondly, I think the road systems which will support these building areas need to be very carefully considered. I think traffic should be directed away from Silverdale and towards Cemetry Road and Keele bypass to prevent Silverdale being used as a 'rat run'. The roads in the village are not big enough to deal with a significant increase in traffic. In particular, Park Road and Racecourse are not appropriate routes to direct traffic and this will have a detrimental effect on residents if this is not addressed.</p> <p>Thirdly, what are the plans for infrastructure to support the new residents? High school, Gp practice, dentist, local shops? I can see the plan for a primary school, but where will the children go after primary school?</p> <p>Fourthly, I can see there are plans to keep some green space up the golf course which is a positive, but what reassurance can you provide to residents that this will be honoured and not altered at the last minute. Green space is really important to the local area as it is one for the unique selling points for people being attracted to the area.</p> <p>Lastly, What reassurance can you give that those people who have been integral to developing the plan have taken the time to visit the area in order to understand the impact of the housing developments and the proposed access routes.</p> <p>I would also like to say that the reason I have emailed my comments is because the local plan is so large and overwhelming, it is very difficult to navigate. I expect this will impact on the number of people who feel able to comment, thus impacting on the influence local residents may have in shaping the future of our local area.</p>

Title	<p>Policy SP11 Lyme Park, Silverdale</p>

Consultee Family Name	Hoban
Consultee Given Name	Che
Q4 Part of document	Policy
Q4 Policy	SP11
Q6 Details	<p>I wish the Planning Inspectorate to consider my following representations in response to the Newcastle -Under-Lyme Borough Council – Final Draft Local Plan Consultation (Regulation 19)</p> <p>I wish the Planning Inspectorate to remove all policies from the plan which involve any development on Green Belt Land.</p> <p>The specific policies are: -</p> <ul style="list-style-type: none"> • AB2, AB33, AB15 & AB12 – Audley Ward • BW 1 – Bradwell Ward • CT 1 – Crackley Bank & Red Street Ward • KL13 & KL 15 -Keele Ward • SP11(2) & SP11(3) – Silverdale Ward • TK 10, TK 27 & BL18 – Talke & Butt Lane Ward <p>All of these developments impact green belt land, are unsound and should be removed from the plan.</p> <p>They will all have a negative effect on the Net Biodiversity gain of each local area. Which in turn has a knock-on effect across the Borough. Open spaces are essential for the environment by absorbing carbon dioxide from our atmosphere, which helps reduce climate control. They also provide habitats for a wide range of plants and animals. Open spaces are also important to human health as they can reduce stress, improve mental health, and assist in people sleeping better. They provide areas for physical activity which improve both physical and mental health. Removal of green belt will decrease the air quality within that area, increase respiratory issues for humans and wildlife, and also increase noise pollution.</p> <p>With specific reference to policies AB2, AB33, AB15 and AB12. I ask the Planning inspectorate to remove policies based on the following justifications:</p> <ul style="list-style-type: none"> • AB2 - It is simply the case that the small village of Audley and its surrounding countryside lanes could not cope with the large increase of traffic caused by these policies. The large number of HGV's travelling to the proposed AB2 site would definitely increase the traffic within the Audley area due to the daily traffic jams along the A500 and at M6 Junction 16. Traffic will spill on to local roads e.g. A5500, increasing Noise and air pollution • AB12 - Proposed access to site AB12 via Diglake Street is untenable. This street is small and it is already difficult to drive down due to parked cars on both sides of the terraced street. A new development of houses would make it virtually impassable causing gridlock, increased air pollution, increased noise pollution and limiting access for the emergency services. <p>The proposed new car park for resident's in Diglake Street due to the proposed AB12 policy would be detrimental to Blue badge Holders, People with mobility issues and Carers of babies and children.</p> <p>AB12 will not be close to any amenities with little or no access to a regular bus route.</p> <ul style="list-style-type: none"> • AB33 – Primary Vehicular access to Park Lane is unsound. This is an already busy junction. AB33 will not be close to any amenities with little or no access to a regular bus route. Creating more traffic therefore noise pollution and air pollution. With an increased danger to pedestrians. <p>With poor access to health care and education.</p> <ul style="list-style-type: none"> • AB15 – The proposed site at AB15 is unsound because of the poor access to health care, education, local amenities and public transport. <p>I therefore would like the Planning inspectorate to remove Policies AB2, AB12, AB33 & AB15 from the plan.</p>

Q4 Part of document	Policy
Q4 Policy	SP11 Clause 3
Q6 Details	<p>We have concerns regarding this site given the number of nearby heritage assets and the lack of specific mitigation measures incorporated into the Plan, to try and address these issues. Whilst any planning application will need to be accompanied by a HIA at that time, the information in the Council's own HIA should be detailed enough to inform appropriate and specific mitigation measures. How will the harm to these heritage assets be overcome? Specifically, we remain concerned about the impact to Keele Hall Registered Park and Garden. The HIA identifies a medium level of harm but no avoidance or mitigation measures in order to prevent this harm.</p>

	Additionally, the cumulative impact on these assets is a concern.

Q4 Part of document	Policy
Q4 Policy	SP11
Q6 Details	<p>Please see below my response to the proposed building on the old keele golf course :</p> <ul style="list-style-type: none"> - I am concerned about the effects on drainage building on the old golf course will have on those of us living on Ashbourne drive and further down in the village. We already have springs popping up all over the place and flooding despite the land up there being like a huge sponge, it will not be able to soak up any water when it is covered in tarmac. - there are no plans for a gp surgery or any schools despite the number of houses proposed. Since heritage park was built the schools are full and you cannot get a gp appointment. The traffic in the village and the state of our roads is awful. This will be made way worse with the proposed extra homes. - the proposed entry points for the new estates cannot be allowed to happen. The racecourse is already dangerous with the number of parked cars especially at school pick up and drop off time. If this is the only entry point for the proposed park road build it will become even more treacherous and way too busy, every car in and out of the new estate will be passing a school full of young children. - the other entry point for the build behind the cricket club will be dreadful for Ashbourne drive. It will turn our street into a rat run onto the new estate and will ruin the lovely quiet little close at the top of Ashbourne drive. The road does not have the capacity for that amount of traffic it is a crazy idea. Why are these new estates not being accessed off the Keele bypass and cemetery road rather than sending traffic via populated streets? It is a very dangerous proposal for the inhabitants and our children due to the increased traffic. - the old golf course is used by all the residents for walking etc it a beautiful green space which was a godsend during Covid, full of wildlife and it's an absolute travesty that you are even thinking of building on it. <p>I feel the build on this lovely area is a done deal and none of our opinions are going to make any difference to the final decision but I really do hope that the dangers of the proposed access points are re thought and redirected via keele and cemetery road for the safety of the inhabitants of Silverdale.</p>

Q4 Part of document	Policy
Q4 Policy	SP11
Q6 Details	<p>I wish to register my objections to the plan to build 1,100 homes in Silverdale.</p> <p>I particularly wish to object to the plan to build on the fields at the top of Rcecourse. Not only will this destroy the habitat of countless wildlife and birds and take away the small playpark, it would also make life for the residents of Racecourse intolerable due to increased traffic. This is a small, residential street which already sees unacceptable volumes of traffic due to the school and cars using it as a cut through to the top of High Street. To have a planned access at the top of the road is simply unacceptable and is totally unfair on the residents of Racecourse. In addition, the road itself would not be able to cope with the increased levels of traffic. It has already collapsed twice in the past two years.</p> <p>Not only do we, (redacted by admin), suffer dreadfully from the effects of Walley's Quarry, we are also going to be denied being able to walk along the bottom of Park Road and enjoy the beauty of nature. The risk of flooding is also a major concern. The field provides natural drainage and yet there is still a river that runs down Racecourse after a downpour.</p>

Q6 Details	<p>Hi i live at (redacted by admin) and im really concerned about one plot of new housing planned in particular. The plot of 100 new homes at location SP11(4). This is bad for the area:</p>

	<p>Firstly, its a local kids park (they dont have anywhere to play and stay out of trouble as it is) my daughter uses the one area locally to get fresh air and be outside, we walk up to the woods from there aswell, again being out in nature and not stuck inside. Its vital for a healthy mind.</p> <p>Secondly, the racecourse road itself isnt fit for purpose as it is, the current traffic struggles to get down the street. Especially during school traffic times of the day. The access for the planned extra 100 homes plot being at the top will cause chaos for the local homes including mine. We are already struggling at times to get on and off our driveways. The roads too narrow and when parked cars are on the street its easily blocked by traffic and any larger vehicle.</p> <p>I understand people need homes. And fully understand the other plots proposed for the area, even though i dont agree with it being built on green land / woodland.</p> <p>Please reconsider the sp11(4) plot as it is going have a really negative impact on the local community and my family. Who already are suffering the disaster that is the ongoing landfill problems.</p>

Consultee Given Name	Toby
Q4 Part of document	Policy
Q4 Policy	SP11
Q5 Legally compliant	No
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>I would like to object to the development of Keele Golf course for the following reasons:</p> <ol style="list-style-type: none"> 1. The residents of Silverdale are a special case. It should be acknowledged that they are in a different category to residents of other areas who have not had to endure the continuing stench from Walley's Quarry. It is a situation that is still ongoing. Putting the residents of Silverdale through what would conservatively be 6 years of construction, with its attendant noise and dust would simply be further punishment for an already beleaguered community. Years of piledriving would hardly be fair on us. 2. Trees. Air quality in the Silverdale area would suffer. The trees on Keele golf course provide us with clean oxygen that offsets the gasses emitted from Walley's Quarry. There can be no development on Keele Golf course until such time as Walley's Quarry is finally closed. We need the trees on the site to provide clean air to offset the effects of the quarry. 3. Traffic. The volume of traffic in Silverdale is such that further homes would create an intolerable burden on the roads. There are already 2,561 current homes in Silverdale and the streets are lined with cars and are already becoming impassable, in particular the main arteries of Silverdale, High Street and Church Street. Road capacity would be exceeded and that is on roads that are already regularly breaking down and developing potholes. The additional pollution cannot be justified, in addition to road safety issues. Your plan would mean hundreds of addition car journeys daily, maybe even over 1000. Any development on Keele Golf course cannot and should not be accessible from Silverdale and should only be accessed from the A525. 4. over-development. There has already been development at the Sutton Avenue site, a new estate at the top of cemetery Road and a development in pepper Street- Nearly 1000 new homes in Silverdale is colossal over-development. 5. Flooding. There has been no site-specific flood risk assessment. The available document put forward by you are general considerations for the wider area of Newcastle under Lyme. 6. There has been a groundswell of local support for Keele Golf course to be turned into a nature reserve for Local people. The wishes of the residents have been so ar completely ignored.
Q7 Modification	<ol style="list-style-type: none"> 1) Respecting the wishes of the local community who wish to see Keele Golf course become a nature reserve. 2) Public acknowledgement that no further development will commence until Walley's Quarry has closed

	<p>3) Confirmation that there will be no access to any development from Silverdale and that all access will be from the A525</p> <p>4) A site-specific flood risk assessment</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	I am a resident of Silverdale who will be directly affected by the proposed development

Consultee Company / Organisation	Save Our Green Space
Consultee Position	Coordinator
Consultee Family Name	Smith
Consultee Given Name	Diane
Q4 Part of document	Policy
Q4 Policy	SP11
Q6 Details	<p>We remain totally opposed to any development on Keele Golf course and those adjoining sites. We would like to submit the following comments in response to the current public consultation exercise.</p> <p>1. Whilst appreciating the planning process is primarily a 'technical' exercise for officers and councillors, the latter have a wider responsibility to their electorate where they must reflect the concerns, needs and views of the communities they represent. Any elected person can work to adapt and amend policies to protect local interests.</p> <p>2. Whilst some attempts have now been made to take into account local opinion e.g. the inclusion of a country park in the plans for the old golf course, it is our judgement that the overall plans remain neither effective nor deliverable.</p> <p>3. We have information to the effect that the value of the land of the old golf course, if sold for housing, has already been included in the boroughs budgetary planning going forwards. This presupposes the outcome of the inspection process and does not properly separate the proper function of the LPA from the boroughs ambitions as a landowner. We intend to raise this point at inspection. This conflict of interests raises doubts about the motivation for the proposed housing development. It suggests that the proposals have been developed not in response to the principles of proper planning but rather for budgetary reasons.</p> <p>4. The research into housing need in the area is deeply flawed. This is illustrated by the recent census which shows a population decline, and yet we are proposing to build for a healthily growing population. The council continues to recite the tired mantra of build, and they will come, where is the evidence for this? It might have been thought that the boroughs population would grow in response to the building of HS2 with its terminus in Crewe. This is not now happening; so where will the additional population come from?</p> <p>It is stated in the plan that the greatest need in our area is for smaller, more affordable homes. The plan proposes that 278 affordable homes will be needed per annum over the lifespan of the plan. Four hundred houses are proposed in total per annum. Thus, seventy percent of our housing need is for affordable homes. The maximum percentage of affordable homes to be delivered in new developments is thirty percent on greenfield sites. We are at a loss to understand how the plan can deliver sufficient affordable homes. This lack of consistency means the document is ineffective and not deliverable and is not in line with national policy. It fails to meet objectively assessed requirements for affordable homes.</p> <p>5. Excessive house building, particularly the wrong houses built in the wrong place, has a detrimental effect on neighbourhoods and healthy communities. These include, increase in traffic, congestion on existing roads, damage to the environment (issues such as drainage and air pollution), the creation of artificial, anonymous places facilitates anti-social behaviour and lack of social cohesion.</p> <p>The borough plan proposes developing one thousand six hundred and fifty homes in areas surrounding Keele University. It also proposes over five hundred new dwellings be developed in and around the university campus. The plan states that new housing development will be targeted on those centres best able to support them with their facilities. The plan fails to identify which centres are supposed to support the SP11 sites, SP23, or TB19. If the intention is that Keele will be one of these centres, we would point out that the retail facilities available are very limited but not as limited as the available parking!. The failure of the plan to dignify Silverdale as a centre of any sort, rather including it within urban Newcastle, prevents any recognition of the extra footfall Silverdale might receive. Again, the plan is not properly justified, not based on robust and credible evidence nor is it effective. In the unlikely event that this plan passes inspection, and the proposed housing is built, insufficient services will exist for the new residents, or these services will be effectively inaccessible.</p> <p>With thousands of new homes in a relatively small area, insufficient facilities within walking distance and the need for the new occupants to get into work, there will be huge pressure on the local road network. The plans proposals for sustainable transport options are mere window dressing, in truth, many thousands of extra car journeys will be made every day. Whilst understanding that transport infrastructure is not the direct responsibility of the borough, the plan should recognise existing capacity and the capacity to deliver improvements in the future. There is scant reference to current capacity nor to future deliverability in the plan. The danger of a failure in this respect will be to build the worst possible type of housing development. Development which grid locks local roads, undermines the effectiveness of local business, degrades the quality of the local environment and creates large scale anonymous estates with no heart. The utter failure of this plan to effectively vision the transport needs of the borough in the future is illustrated by the odd proposal to build a road between A53 and A525 passing through the sustainable</p>

	<p>campus of Keele University. The proposals are sketchy at best, but if it is proposed that such a road would be open to all traffic, it is highly unlikely that the university would approve its development. This is an illustration of just one aspect of this plan which is not properly justified nor effective nor deliverable.</p> <p>6. SOGS welcomes the inclusion of a country park in the plans but are concerned that the plan offers no details of how such a park would be protected for the future were it to be withdrawn from greenbelt. It is our judgement that the park as proposed would be compromised by the need to connect the SP11 and SP23 sites to the proposed community hub/school. We are also concerned that any such 'park' may be nothing more than a landbank for further housing development. Especially in light of the proposed access to SP11 (4) and SP11 (3), from residential streets in Silverdale, we do not believe that the plan for the old golf course is effective or deliverable. We judge the risk as high that any eventual development will be of a different pattern and that the country park will not come to fruition. We judge that the borough will put financial gain before the needs of the existing population for health and recreation.</p> <p>The old golf course is heavily used by local people for exercise and recreation, it is the nearest and most accessible informal green space for many of the residents of the town. The needs of existing residents must be paramount in the decision-making processes of the council. Therefore, the council should reverse its proposal to build on the land and should instead make the whole area into a country park within the greenbelt.</p>

Agent Given Name	Jon
Q4 Part of document	Policy
Q4 Policy	SP11
Q6 Details	<p>Please see attached representations</p> <p>b) Lyme Park / Former Keele Municipal Golf Course: Site Assessment</p> <p>4.16 Given the proximity of the proposed allocation at the Lyme Park (Site SP11 – including parcels SP11[1], SP11[2], SP11[3] and SP11[4]) and its potential to have significant impacts on the Green Belt, biodiversity, and Keele Village and the University, it is important that the Council fully considers the impact of allocating this site. This section provides:</p> <p>i. A review of the proposed site allocation and a critique of the evidence base that underpins the Council's selection of Site SP11;</p> <p>ii. An assessment of the site constraints, considering potential adverse impacts.</p> <p>i. Proposed Site Allocation and Evidence Base</p> <p>Proposed Site Allocation</p> <p>4.17 Site SP11 (Former Keele Municipal Golf Course) is identified:</p> <ul style="list-style-type: none"> • Within the NUL Strategic Centre (Silverdale); • As a site that is disaggregated into 4 land parcels, with a capacity for 900 dwellings, including: <ul style="list-style-type: none"> - SP11 (1) – Keele Square – a development of 255 homes, a local centre, including a health centre, to meet local needs and a 1 form entry Primary School, including an attractive public realm accessed from a new spur from A525 Keele Road / University Avenue roundabout. - SP11 (2) – Keele Woods – a development of 310 homes accessed from A525 Keele Road. - SP11 (3) – Ashbourne Drive – a development of 235 homes accessed from Ashbourne Drive. <p>22</p> <ul style="list-style-type: none"> - SP11 (4) – Park Road – a development of 100 homes accessed from a new road from the junction of Race Course and Park Road to the north east of the site. For SP11(4) no dwellings will be occupied before the cessation of the disposal of non-hazardous waste at the Whalley's Quarry Landfill Site, currently anticipated December 2026. <p>4.18 Persimmon makes the following overarching comments:</p> <ul style="list-style-type: none"> • The site is identified in the Strategic Centre, however, we note that the site would also have a very significant impact in the Keele and Keele University settlement –

effectively merging this settlement with the strategic centre at Silverdale.

- The site has significant constraints which are not fully considered in the evidence base or the Regulation 19 Plan. These are considered in more detail later in this section.
- Site SP23 (Land at Cemetery Road / Park Lane) is a smaller allocation that would also not be logical or deliverable without the release of Site SP11 from the Green Belt.
- The Council's Sustainability Appraisal provides no further justification for why this site is selected compared to other sites, such as Quarry Bank Road (this is discussed in more detail in Section 5).

Evidence Base & Site Selection

Site Selection Report (2024)

4.19 The Former Keele Municipal Golf Course / Lyme Park is identified as Site SP11 in the Site Selection Report (which draws on the SHELAA and Green Belt Assessment), with a capacity for 900 homes (using an applied density of 50dph) and is identified as available, achievable and viable – and suitable for residential development. The summary for the site states:

“A Green Belt site promoted for housing development. Part of the site is identified in the Open Space Strategy 2022 with three typologies. This includes Amenity Greenspace (approximately 3.1ha), Natural and Semi-Natural Greenspace (approximately 3.1ha), and Provision for Children and Teenagers (0.4ha). A Biodiversity Alert Site (Bogs Wood) and Regionally Important Geological Structure (Job's Wood Quarry) is on site.

Developable area calculation takes this into account. A Biodiversity Alert Site (Redheath Plantation) adjoins the western boundary. Keele Hall Registered Park and Gardens is in very close proximity to the site to the south. The site has access to services and facilities. Estimated potential capacity calculation derived from the previous masterplan 23

exercise as part of the Keele University Growth Corridor. Mineshaft and mature trees on site. The site has access to a range of services and facilities.4”.

4.20 This assessment highlights significant site constraints and displays no clear rationale for the selection of the site, when compared to other sites. Furthermore an earlier version of the SHELAA (2022) considered the site and it was identified as a ‘Site not in Deliverable & Developable Supply’ and assessed as follows:

(Table available in attachment)

4.21 It is unclear how or why the site has ultimately been selected by the Council based on the SHELAA, Site Selection Report or Sustainability Appraisal (which is discussed in more detail later).

Green Belt Assessment (Part 4, 2024)

4.22 The site is identified as ‘Former Keele Municipal Golf Course’ (Site Ref: SP11A). The 2024 Green Belt Assessment (“GBA”) provides a review of the site, which is summarised below:

(Table available in the attachment)

The assessment concluded:

“The site makes a moderate contribution to Green Belt purposes. Development would not result in neighbouring towns merging and it would not impact upon the setting or character of the historic town of Newcastle-under-Lyme. Development would entail an incursion into undeveloped countryside however development would not represent unrestricted sprawl as it would be reasonably contained and well defined along the strong permanent southern boundary of the A525 Keele Road. Overall, the removal of the site from the Green Belt will not harm the overall function and integrity of the Green Belt. A new recognisable and permanent Green Belt boundary would be created consisting of the A525 Keele Road to the south, a small section of Redheath Plantation and dense wooded areas to the west, and through strengthening the remainder of the western boundary. It is recommended that if the site is taken forward the accompanying policy should recognise this.5”

4.24 Persimmon considers that this assessment is fundamentally flawed in its conclusions. Quite clearly the allocation and development of the site would effectively merge together Silverdale (which forms part of the strategic centre) with the new Rural Centre of Keele and Keele University, and have a significant impact on the purposes of the Green Belt. In line with our comments on KL21, the Green Belt Assessment has clearly not considered that Keele and Keele University as a new inset settlement which is not washed over with Green Belt in the emerging Plan. Therefore the Green Belt Assessment and the site selection process is fundamentally unsound.

4.25 The following table provides an assessment of the Council's 2024 Green Belt Assessment, alongside Persimmon's assessment of the purposes of the Green Belt.

(Table available in the attachment)

4.26 As a minimum, the Council must review the Green Belt Assessment of this site, which does not consider the identification of Keele and Keele University as a key settlement in the Borough, as proposed in the Regulation 19 Plan – or the effective merger of Keele and Keele University with the Strategic Centre at Silverdale. The impact of this merger of settlements is clearly shown in the Settlement Boundary Review Paper (July 2024), as shown below, which highlights how the strategic gap between Silverdale and Keele / Keele University will be completely eradicated

(Figure available in attachment)

Assessment of Former Keele Municipal Golf Course Site Constraints

4.27 Persimmon consider that the Council has not fully assessed, nor given sufficient weight to the significant site constraints that are inherent on Site SP11. The following provides a review of the key constraints that must be considered before the site is allocated in the

Local Plan:

29

Highways

4.28 The traffic impact analysis undertaken for Quarry Bank Road (for 435 Units) has indicated that there is sufficient capacity on the surrounding highway network albeit with the mitigation at the A525 Keele Road/A525 Newcastle Road/A531 Crewe Road junction. The provision of 900 units on former Golf Course site would generate considerably higher levels of traffic on the local highway network and therefore require mitigation at junctions on the surrounding highway network.

4.29 There is limited scope for mitigation at the junctions in the vicinity of the site without requiring third party land, therefore, detailed assessment/analysis is required to demonstrate that the provision of circa 900 units can be accommodated on the network either with or without off-site highway works.

Ecology and Trees

Ecology

4.30 A Preliminary Ecological Appraisal was undertaken at Keele Golf Course by Ostara Ecology, which comprised of an online desk study, Phase 1 Habitat Survey, and an ecological scoping survey which assessed the potential of the site to support species which could present a constraint to development.

4.31 The site has been unmanaged since 2014, and has subsequently re-vegetated. This revegetation of the land has facilitated the growth of extensive areas of significant ecological value within the site. This includes 23.44ha of UK BAP priority habitat deciduous woodland with Ancient Woodland indicators, spread throughout the site. The site therefore serves as the ideal habitat to support an abundance of flora and fauna, and if further botanical surveys classify these areas of the site as ancient woodland, it would designate this as an irreplaceable habitat.

Ecological Designations

4.32 The streams and wider sites could be sensitive to hydraulic changes. A detailed statutory designated sites assessment up to 10km will be required to ascertain the National Context of the site along with a Habitat Regulations Assessment.

30

4.33 Within the site is 'Bogs Wood', a Biodiversity Alert Site and 'Job's Wood Quarry' which is identified as A Regionally Important Geological Structure. Adjoining the western boundary of the site is another Biodiversity Alert Site 'Redheath Plantation'. These clearly identified areas of ecological sensitivity are not fully considered in the 2024 GBA and have not been transparently assessed by the Council based on published evidence.

(Figure available in attachment)

4.34 The baseline field survey confirmed the presence and potential presence of a number of species which all pose a high risk to development, and require further assessment/mitigation prior to the commencement of works. These are as follows:

(Table available in attachment)

4.35 The above table shows that development of the site could result in significant damage to a wide array of protected habitats, plants, and animals. Development of the scale and nature proposed cannot be viewed as sustainable, and would likely result in irreparable damage to the species and habitats affected.

4.36 The cumulative impact from the assessment, mitigation, and, known and unknown constraints resulting from the presence of these protected categories is a significant constraint on the deliverability of the site. We consider that the site has significant ecology value and does not represent a suitable or sustainable site for selection.

Trees

4.37 There are several groups of trees across the site including heavily wooded areas within the site, with TPOs located along the southern boundary of the site (Keele Road) and also along the north eastern boundary (Park Road). The 2024 GBA proforma notes the following in relation to TPOs:

"There are TPOs on or immediately adjacent to the site which could be accommodated within any development by sensitive design/layout – TPOs are located along the southern boundary of the site (Keele Road) and also along the north eastern boundary (Park Road) however development could avoid these".

Landscape & Visual

4.38 The site is within the Keele Ancient Redland Farmlands Landscape Character Area. The site is also identified under 3 typologies in the Open Space Strategy (2022) including Amenity Greenspace (approximately 3.1ha), Natural and Semi-Natural Greenspace (approximately 3.1ha) and Provision for Children and Teenagers (0.4ha).

4.39 The LCA describes the site as "land comprising woodland vegetation... the site slopes steeply down from approximately 195m AOD in the south of the site to approximately 140m AOD in the north of the site along the existing settlement edge. The woodland and open grass areas provide the backdrop to the existing settlement and separate it from the Keele University campus to the south". This provides further evidence that development would result in both encroachment on the countryside, and the merging of two settlements.

Development would also directly conflict the LCA Landscape Strategy which gives specific landscape guidelines for this character area type, stating to, "Conserve and enhance woodland on steep slopes". There are several Open Spaces adjoining the site, which are Open Space Sites: 380 Redheath Plantation; 453 Keele Cemetery; 144 Job's Wood; and, 140 Park Road Allotments around the edges of the site. The Open Space and Green

33

Infrastructure Strategy designated the Open Space sites as either 'High Quality/High

	<p>Value' or 'Low Quality/High Value'. The proposed actions for sites of these ratings are for the sites to be 'protected and enhanced'. Development of such a significant size as the one proposed at SP11 will likely result in damage to these areas of Open Space given the volume of inflows of people and the resultant increase in foot traffic.</p> <p>4.40 Part 3 of the Landscape Character Assessment Study performed a site-specific assessment to judge the overall impact of developing the site. This assessment identified a number of 'potential significant adverse effects' including potential for:</p> <ul style="list-style-type: none"> • built form to intrude on undeveloped, wooded hillsides that are characteristic of this area and provide the backdrop to existing settlement; • development to be viewed as a conspicuous, large scale urban extension across the steep sides of the wooded hillside that provides the backdrop to Silverdale; • development to contribute to coalescence of the separate settlements of Silverdale and Keele University campus; • loss of public footpaths and land with recreation value that would alter local recreational opportunities and links between the urban and rural areas; • loss of woodland and trees that would alter the settlement backdrop, local sense of enclosure and remove vegetation links through the local landscape. <p>4.41 The Overall Appraisal then judged that, "larger residential development on this site would have a major adverse effect on the SA objective to strengthen the quality of the landscape and urban townscape and deliver well designed development which respects the local character and distinctiveness."</p> <p>4.42 Ultimately, allocating the site will result in a significantly weakened Green Belt; remove a significant area of land with existing recreation value, limiting local recreational opportunities and links between the urban and rural areas; threaten a number of identified high-quality open spaces; and, cause 'major adverse impacts' to the landscape and local character.</p> <p>Ground Conditions</p> <p>4.43 The GBA considers ground stability and mining activity, and states the following for site SP11: "Historic mining activities. Consultation with Coal Authority likely". There is limited further information with regard to this and it is unclear to what extent mining activity could</p> <p>34</p> <p>have been prevalent below ground, without specific investigation. This should be fully investigated by the Council prior to the allocation of the site.</p> <p>Summary of Site SP11</p> <p>4.44 Persimmon's assessment of the site demonstrates that the selection of Site SP11 is not sound, and the Council's assessment of the site lacks transparency or rigour. Our assessment highlights that:</p> <ul style="list-style-type: none"> • There is no clear rationale for the selection of Site SP11, and no justification to support its selection in the evidence base. • The Council's Green Belt Assessment is fundamentally flawed, not up to date and does not consider the impact of allocating SP11 on the proposed settlement of Keele & Keele University or the wider countryside. • The site has significant technical and environmental constraints that have not been fully considered by the Council and which have not informed the site selection. <p>4.45 Overall, Persimmon consider this site to be unsuitable for development and recommend that the Council consider it against the merits of Quarry Bank Road (Site KL21) – as set out in Section 5.</p> <p>(Comparative assessment of site 11 and KL21 available in attachment)</p>
Q7 Modification	<p>Please see attached representations</p> <p>The Council should fundamentally revisit its evidence base in relation to site selection, including its Green Belt Assessment and Site Selection Report in relation to Sites KL21 and SP11, in order to update these assessments, fully consider site constraints and to create transparency in the site selection process. The assessment process that has led to the allocation of site SP11 is contrived, lacks transparency and has no robust justification – which if carried through will require rigorous testing at Local Plan Examination.</p> <p>5. The Council should allocate Site KL21 at Quarry Bank Road, which offers an opportunity to bring forward a deliverable site early in the Plan Period that will support the growth of the University Growth Corridor and deliver a range of economic, social and environmental benefits on a site that will significantly contribute to meeting the needs of NUL. The site could provide 50% affordable housing, in line with emerging</p> <p>48</p> <p>national policy, that is aligned with the Borough's waiting lists in terms of product and tenure, providing the right times of homes for families, looked after children and older people.</p> <p>6. If Site KL21 is not allocated, as a minimum, the Council should consider safeguarding Site KL21, in line with the advice provided in the "Green Belt Safeguarded Land Advice Paper" to ensure that an adequate supply of market and affordable homes is held in reserve to meet the growth needs of the Borough and to be able to respond to the proposed fundamental shift in national policy.</p> <p>7.2 Persimmon would welcome ongoing engagement with the Council as a submission plan is prepared and has a team of technical and professional experts to underpin the merits of this site through to Local Plan examination. Any feedback, engagement or discussions in relation to this site can be arranged via Asteer, using the contact details below:</p>

Title	Policy SP11 Lyme Park, Silverdale
Consultee Company / Organisation	Bignall End
Consultee Family Name	Willard
Consultee Given Name	Gerald
Q4 Part of document	Policy
Q4 Policy	SP11
Q5 Sound	No
Q6 Details	<p>Policy SP11 Lyme Park, Silverdale</p> <p>This policy is a key plank of the council's housing delivery. It is critical for this reason alone. It is accordingly critical that the policy leads to the delivery for what it intends.</p> <p>The key housing allocations within this policy are:</p> <p>SP11 (1) – Keele Square – a development of 255 homes.</p> <p>SP11 (2) – Keele Woods – a development of 310 homes.</p> <p>SP11 (3) – Ashbourne Drive – a development of 235 homes.</p> <p>SP11 (4) – Park Road – a development of 100 homes.</p> <p>Delivering a new and additional country park is seen to be a core and inextricably linked part of the policy.</p> <p>The policy says:</p> <p>“The provision of a country park to include the retention of trees and maintenance of a high quality ecological and natural resource with appropriate walking and cycling routes through the site”. It is stated that a masterplan and design code must be produced. The policy says: That the development must be supported by the ‘preparation and agreement of a masterplan and design code prepared for the site which should be prepared in line with Policy SA1 (General Requirements)”</p> <p>It is extraordinary that this policy has been devised without any pre-consultation with key landowners whose support is necessary for delivery. This occurring despite repeated requests to engage with policy formulation together shared landowners. The council's policy team and estates team have ignored all requests. This is unfortunate. The policy as stands is both harmfully constricting, without apparent justification and with little attention given critically to delivery. These concerns are set out below:</p> <p>Unnecessarily constraining</p> <p>The new housing targets imposed by Government seeks an increase to 593 units per annum. This is an increase of 80%. Even if the councils stated figure of 400 units per annum is taken the new national target of 593 annual units would leave the plan with a 48% undersupply of housing. As a result of recent national housing targets the target for 900 units is too low.</p>

	<p>Lack of Justification</p> <p>Laudable as the delivery of 2nd country park (the other is Apedale) in this location might seem the policy contains no clear evidence of a local need for such a facility or evidence of a shortage of such a feature either.</p> <p>Delivery, ownership and management of county park</p> <p>The policy says that the country park is critical and that the 4 new housing allocation will sit within a county park.</p>
Q7 Modification	<p>The site allocation ought to be revised to accord this target which would be with an additional allocation which would increase the allocation by between 48% and 80%</p> <p>Increasing housing numbers on this site from 900 units will assist in meeting new national housing targets. Whilst the provision of housing sites within a new country park is dreamily ideal the council inexplicably have sought at this strategic stage of plan making to set out in detail the boundaries of all 4 housing allocations within the site. Four sites are identified with each having a housing target and defined boundary. Plan making; when done soundly ought to be clear and and capable of delivery. The draft plan gives no indication whatsoever as to how these boundaries for sites 1 to 4 have been defined. To do so in this way and especially in advance of a masterplan, archeological detail, transport study, flood/drainage assessment and other possible development constraints is at best misplaced and at worst foolhardy. If the policy is adopted in this form it would fail to provide the necessary flexibility for change that future detailed site assessment would require. It is not necessary to do so at this stage.</p> <p>As the provision will require funding both to provide and maintain and planning policy evolution ought to be based upon meeting needs and not simple whimsy the council ought to be obliged to set out clearly what. Country park in this location is needed.</p> <p>If it is critical then the council ought to set out clearly how it is to be delivered, its phasing its future ownership and how it will be funded and how and who will maintain it. The policy is silent on these matters for this critical land use. Without the plan addressing these matters there is significant doubt about the delivery of the country park.</p> <p>To give the necessary flexibility to meet new housing targets and to ensure proper and sound planning the policy should be changed by:</p> <p>A Increasing the target housing numbers for this site upwards from 900 units in line with new national targets.</p> <p>B Omit the defined housing areas 1 to 4 and simply define the allocation in this way:</p> <p>“Land at Lyme Park, Silverdale is allocated for residential, and community uses within a wider Country Park setting. Development shall proceed in accordance with a masterplan, delivery strategy and design code which addresses especially design, access, topography, sustainability, flood risk/drainage, archeology, land and mining stability, landscaping and ecology.</p> <ul style="list-style-type: none"> • Detailed development thereafter shall proceed in accordance with the agreed masterplan. • The delivery strategy must address the phasing of the housing units and community use and the country park making provision especially for the future protection, ownership and management of the country park”. <p>Note</p> <p>For such an important allocation it is a full of uncertainties. In addition to those above the following is of concern. 13.177 Walleys Quarry Landfill site which is currently operational is located in close proximity of the site. No dwellings on parcel 4 on Park Road should be occupied until the operation of Walleys Quarry as a landfill site has ceased which is anticipated in 2027. This will mitigate against potential polluting impacts from the landfill site. The development of the site will also give consideration to the Staffordshire Waste Local Plan and particularly safeguarding policy 2.5. The council surely must understand that when the delivery of housing units is so significant locally and nationally it is folly to adopt policy with is such uncertain. Tying housing delivery to events off site and beyond council control is not sound.. As stated above such concerns would be better addressed via a masterplan and deliver statement.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	In seeking the following modifications to the plan, I do consider it necessary to participate in examination hearing session(s) in order to advise the inspector of my clients concerns and to respond to any questions that the inspector may have.

Title	Policy SP11 Lyme Park, Silverdale
Consultee Company / Organisation	Keele Parish Council
Consultee Position	Parish Clerk
Consultee Family Name	Powell
Consultee Given Name	Debra
Q4 Part of document	Policy
Q4 Policy	SP11
Q6 Details	<p>Keele Parish Council recognise that developing national policy with regard to the NPPF means that, in order for the plan to be considered under the existing regulations, the amount of housing delivered per annum must come within 200 of the proposed nationally set target. The proposed new algorithm is 593 per annum. Whilst we do not accept the proposed target of 400 houses per annum is robustly supported by the evidence provided, we recognise that, were the plan to fail at inspection, that this already inflated target would, in all likelihood, be subject to a mandatory increase. Thus we have no choice other than to support this target in the hope that the plan will pass.</p> <p>e welcome the inclusion of a Country Park in the housing proposals for this site. A failure to provide a key to the map indicating the area to be removed from Greenbelt needs to be addressed as this constitutes a lack of proper justification and is easily corrected. If the red line on the map represents the area to be removed, we are concerned that it is proposed to take the land for the Country Park out of the green belt. Once this has happened, it is difficult to see how the land will be protected from future proposals for housing or other development and thus compromises deliverability. We also note that the plan suggests an island of Country Park between SP11 (2). Whilst recognising that this may be accessed by walking routes through SP11(2), further elaboration on this in the final submission would enhance the deliverability of this element.</p> <p>We judge that retention of the Country Park within the Greenbelt would allow PSD5-6 to be properly addressed and be in line with a number of other policies concerning recreation and environmental protection.</p> <p>It is unclear which Rural or Urban centre will service the proposed housing. We have already mentioned that the failure to include Silverdale in the settlement hierarchy is an error. Silverdale is a distinct village with a proud history and many facilities. The failure to mention it anywhere in the settlement hierarchy compromises the effectiveness of the document and undermines the proposals for this site. Two of the exit roads proposed will be into Silverdale. The plan notes:</p> <p>The Council has sought to direct the greatest level of development to the higher tiers of the settlement hierarchy. These have the highest levels of service provision and infrastructure, as well as the best sustainable transport opportunities in the Borough. Rural centres will take a smaller share of the overall levels of growth, to support the viability of services and facilities and the vitality of these centres.</p> <p>The plan does not make clear which centre will service these residents and it is far from obvious when Silverdale has not been included in the hierarchy. Equally, it is not clear which centre will service SP11(2) and (1). Whilst it may be assumed that these homes will access services at Keele University, this is not stated. No consideration has been given to the very limited parking available at the University nor the additional traffic impact resulting from this. The failure to provide any details of road links between the two 'islands' constituting SP11(3) undermines the effectiveness of the plan.</p> <p>We note that the plan gives no housing density figures for these sites. Are we correct in assuming that SP11 is regarded as development within a Rural Centre and thus that density should be 20-30 dwellings per hectare? Would density be calculated locally in each 'island' or by dividing the number of homes across the site by the total area, including the Country Park.</p> <p>Whilst we welcome the inclusion of a local centre to include a local health centre, it is unclear what else constitutes local services and facilities. Is there any plan to include retailing in this local centre. We also note that no location is suggested for this centre. As the development consists of 4 'island' villages, how is it proposed that residents from all 'islands' would be able to access the local centre sited in one of the settlements when separated by a Country Park? We note the proposal for an internal link road between SP(3) and SP11(2) and SP11(1) but no proposed route is shown. Such a road risks undermining the integrity of the Country Park if not properly planned. In addition, no such link is suggested between SP11(4) and SP11 (1+2). If residents would need to use existing roads to access the local centre, this would compromise the viability and localness of the proposed centre. This matter must be addressed to bolster the effectiveness and deliverability of the proposals in SP11.</p> <p>An additional Primary school on site may prove to be necessary but no evidence is provided regarding existing capacity in local Primary Schools. Details need to be provided about when such a school would be provided in the long development process for the site. Were the school to be provided at the beginning of the development it would risk undermining the sustainability of existing local schools or failing to attract</p>

	<p>sufficient children to itself be sustainable. If provided towards the end of the development of new housing, then local schools may lack capacity to accommodate the children of new residents. In order to ensure the effectiveness of the plan and its deliverability, it is critical that additional evidence be provided and referred to in the plan.</p> <p>We welcome the details provided in this policy element regarding dispersed access through 4 separate access roads. This goes some way towards addressing our concerns regarding traffic congestion. However, we note that SP11(3) will be accessed via Ashbourne Drive and SP11(4) by Park Road. These are currently narrow, domestic roads lined with housing. The traffic generated by 235 and 100 homes will be significant. We urge that to support the effectiveness of these proposals, evidence be provided on the likely impact of additional traffic on these roads and on the road network of Silverdale in general. On the same theme, that the plan proposes:</p> <p>Development of the site may require junction improvements and offsite improvements secured through financial contributions.</p> <p>The absence of any transport studies or further detail at this stage assumes that such improvements are possible. This is by no means clear and thus the lack of evidence makes deliverability uncertain. In short, we recommend further transport studies be included in the final submission to ensure deliverability and effectiveness.</p> <p>Keele Parish Council will seek to raise these issues at Inspection, irrespective of the risks of the plan being rejected or sent back for further modification with increased housing targets.</p> <p>Finally SP11 notes contributions required for a local health hub, schools and highway improvements. Drainage/ flood mitigation on the site is a complex issue, the coal mining risk assessment is outstanding, odour from Walley's quarry will delay development of parts of the site. Are you sure this proposal will be attractive to developers and that we will not have pleas from them that the required contributions will impact on financial viability? We remain sceptical regarding deliverability.</p>

Order	204
Title	Policy SP11 Lyme Park, Silverdale
Consultee Family Name	Jones
Consultee Given Name	Cllr David
Q4 Part of document	Policy
Q4 Policy	SP11
Q6 Details	<p>Cllr Dave Jones (Keele Ward) Response to Newcastle-under-Lyme Draft Local Plan</p> <p>I want to place on record my thanks to officers at the council over the work that has gone into the preparation of the regulation 19 local plan.</p> <p>As leader of the opposition group, I have submitted a formal response on behalf of the group that outline concerns with elements of the plan in general. Areas that we feel lack significant commitment from the council to ensure the impact of the proposed developments are mitigated sufficiently. In this response I will focus on concerns regarding the plan and the impact on the communities of Keele, Silverdale and the surrounding villages and centres. I have grouped these into specific themes:</p> <p>Significant Housing development in Keele and the surrounding areas (Sites SP11, SP23 and TB19): Taken together the plan seeks to develop approximately 1650 dwellings across these sites. These developments will place significant pressure on existing infrastructure, including the road network and health facilities. Within the plan, the only commitment to improving the road network is for a link road between the A525 and A53. I have significant concerns that given the extensive additional dwellings, combined with the pressures of commuter traffic to the university, this measure will fail to address the significant pressures on existing road network around Keele Bank, Silverdale and Milhouse.</p> <p>The SWECO report on transport modelling identifies this as a key issue. Under their modelled scenarios, assuming the link road does transfer the pressure off Keele Bank, and assuming a significant uptake of the new bus routes to Keele, that the additional burden of these dwellings will reduce the impact to the existing road network as at capacity. I have significant concerns that this ideal scenario will not unfold, and therefore these developments will have significant impact in worsening the current situation.</p> <p>The local plan refers to an integrated transport solution, with little detail as to how this will be implemented. We know that public transport in this part of the borough is heavily reliant on the bus network. I have significant concerns about the efficacy of public transport solutions, reliant on buses, due to the significant traffic pressures seen under current levels of dwellings. The introduction of 1650 dwellings will further increase the pressure, impacting on bus journey times and making the only public transport system less attractive.</p> <p>The cascade impact of these dwelling will be felt most acutely in the village of the Silverdale. With pressures on traffic exiting these developments via Keele Bank, most traffic will redirect through Silverdale village. The existing road network in Silverdale struggles with the pressure of continued development, and no improvements to the road network. The roads that link the northern segment of Silverdale village with the proposed developments on Keele Golf course are not designed for heavy traffic use.</p> <p>The undulated nature of the road network, coupled with on street parking will become a pressured rat run during peak commuting hours, place undue pressure on the residents of Silverdale.</p> <p>I am disappointed that a plan proposing to build a significant concentration of dwellings has not put forward a plan for improvement to the highway network. The lack of a tangible plan to mitigate these impacts, along with over-reliance on 106 funding to support transport improvements is a significant weakness that needs addressing before permission can be granted for these sites.</p> <p>The pressure on GP provision has not been appropriately assessed in this plan. The area benefits from two GP surgeries, one in Silverdale and one on the Keele University campus. I am led to believe that the new surgery proposed for the Golf Course developments will be a relocation of the Keele campus</p>

	<p>surgery, and therefore not additional provision. I have concerns that under the proposed developments, residents will struggle with provision of GP coverage.</p> <p>Pre-determination of Golf Course developments: I have significant concern that the inclusion of parcels of land on the former Golf Course have been made based on pre-determination. For reference, the decision to designate the former Golf Course as an asset for disposal was made by the same members of cabinet who approved the site to be included in the local plan. This asset sits within the Green Belt, providing the main green space between the villages of Keele and Silverdale, and critically contributes significantly to the biodiversity of the borough. The inclusion of this site for housing development, and thus it's removal from the green belt, will net significant funds for the council. As the local councillor I have raised this question at every opportunity and have never received a clear answer as to how the cabinet members have avoided pre-determination of the inclusion of this site. Notably, should cabinet wish to avoid concerns over pre-determination, they would need to isolate themselves from the site selection process. This has not happened and thus the inspector must be satisfied that the inclusion of this site, over other sites put forward by officers, has not been pre-determined by the value of asset realisation.</p> <p>Golf Course country park: I welcome the recognition of the part of the Golf Course site as a country park. However, under this plan the site will be removed from the green belt and thus run risk of future development. I would propose to the inspector that given the significant benefit of the biodiversity at this site, that should the inspector be minded approving this development that the country park remain within the green belt and thus protected from future development.</p> <p>Further general concerns on the local plan are covered in the opposition group response. I would also draw the inspectors attention to the formal response submitted by Keele and Silverdale Parish Councils, Cllr Jacqueline Brown, and Save our Green Spaces (SoGS).</p>

Q6 Details	I would like to object to the proposed building work in park road as the Racecourse could not cope with the increase of traffic. It is already a busy road with the primary school. (redacted by admin) I have witnessed emergency vehicles not being able to get through. I don't object to building on the golf course but the access should be through the old golf course off Keele road. The back lane is used daily by dog walkers, it is part of the community that people meet and chat, many of them being the older community which is vital for their mental health.

Q4 Part of document	Policy
Q4 Policy	SP11
Q6 Details	<p>Introduction Regulation 19 consultation is the final point in the progress towards Planning Inspection, a public enquiry to consider whether the documentation is sound. This council consultation ends 7 October but ran parallel with government's 30 July planning reforms (ended on 24 September) focusing on growth of the national housing target, anticipating larger increases in housing for districts without a local plan in place, such as Newcastle.</p> <p>Officers and members are urging that the current 2024 plan is approved to avoid the district being held hostage by uncontrolled development that threaten the green belt and other areas, coupled with spectre of even higher numbers in a future revised Local Plan (appendix 3).</p> <p>Although future changes to National Planning Practice Framework (NPPF) will not be announced for many weeks, housing and infrastructure-led economic growth form the central plank of the Starmer government's national economic policy. Many of the previous government's planning policies are being reversed, including the re-introduction of mandatory housing targets and the proposed sharper methodology for assessing housing need at district level (based on stock numbers projected at 0.8 per cent annual increase and adjusted for relative housing affordability).</p> <p>National planning policy is fundamentally uncertain in the crucial period leading up to the completion of the Newcastle under Lyme documentation Final Local Plan.</p> <p>Key Points: Borough The main borough wide changes since the 2023 consultation are: An increase in the overall target for new housing to 400 per annum (total 8,000 over 20 years). An increased employment land provision and with it the inclusion of the Audley AB2 site and the housing demand component from this greater employment growth.</p> <p>The Local Plan excludes Silverdale from the 'rural centres' settlement hierarchy (PSD 2: Settlement Hierarchy Policy and PSD 3: Distribution of Development).</p> <p>The Rural Area Topic Paper puts certain rural villages in a stronger position for protection from the impact of new development. Our neighbour, Keele Parish is classified as rural. But the methodology takes no account of Silverdale Parish Council's rural/urban complexion. Silverdale is uniquely omitted from the list of Newcastle under Lyme's parishes. This parish is considered wholly urban and assimilated within the town without analysis in the Topic Paper.</p> <p>In terms of land use, more than half of Silverdale's 361 hectares is green belt, a fact not entertained in the Local Plan nor in the Topic Paper.</p> <p>Silverdale Key Points: (comparing consultations 2024 with 2023) Overall Development Strategy (PSD1) As mentioned earlier, PSD1 has a target of 400 per annum, which Silverdale Parish Council believes is too high.</p> <p>In addition, Silverdale's share of the 8,000 proposed new homes is 14 per cent compared with Silverdale's share of total population, which is 4 per cent. The proposed growth bears a disproportionate weight on this parish. 1,100 homes (some 2,200 people at the ratio of 1:2.2) equate to the size of four communities, each as large as Heritage Park.</p> <p>Silverdale PC accepts that some housing growth is needed to meet local housing needs and welcomes the two significant brownfield site allocations. It is the unprecedented scale of the change to the parish's physical and social structures that is our concern and how the increase in population would place far more pressure on health, education and other facilities and this one of the main concerns for many residents, who also question how the new facilities can be incorporated into the space populated by previous proposals.</p> <p>The provision of a safe and adequate access would be essential for all the allocated sites, including T&G 8.</p> <p>Housing Site Allocations SP11, SP23 and T&G 8 Overall, loss of green belt land released from green belt at the former Golf Course and on land between Job's Wood and Park Road is unchanged. New boundaries are proposed at Redheath Plantation/Keele Driving Range on SP11 and at the Cemetery Road end of SP23. SP12 (Cope's Field) has been incorporated into SP11 within the Keele Country. The proposed loss of green belt at SP11 in 2024 is 69 hectares, marginally less than 2023.</p> <p>Additional proposals in 2024 cover a single-entry primary school, local centre/ health centre and a country park (Lime Park) with 4 new settlements. The published plans show vehicular access from Keele Rd via a spur into 3 parcels SP11 (1,2 and 3) and access from Ashbourne Drive to SP (1,2 and 3). Racecourse is the main access point to SP 11(4). Access to SP23 from Cemetery Road is another route but not clearly explained.</p> <p>Gypsy and Traveller Allocation Site T&G 8 allocated 5 pitches to land adjacent to Silverdale was a late inclusion into the Scrutiny Committee without proper consultation. See 4.2.</p> <p>BDP Masterplan 27 August Uploaded to the consultation portal as a late addition, Keele Park Masterplan arrived in the evidence basis as part of an objection to the Housing Policy Hou1 (see appendix 4). The report amounted to the landowner/promoter vision for the SP11 site with the consultants. It provides further grounds for SPC to make stronger representations concerning the infrastructure weaknesses in the proposals.</p> <p>The inclusion of new community and educational facilities and the country park were welcomed but the house numbers at 1,100 were still an additional 40% increase in the size of Silverdale's stock of houses</p>

in 2021. Silverdale objects to the proposed intensity of development and re-focus its criticism on the infrastructure by exploring grey areas arising from design of SP11 overlapping SP23 design.

Transport congestion problems in the High Street, Pepper St and B5044 were introduced at Ashbourne Drive and at Racecourse (with the pressure of a primary school location). Members were dismayed there was no description of the improvements required to these poor surface quality local roads with narrow widths. Proposals as they stand will increase traffic flows through the centre of Silverdale and exacerbate movement problems at peak times. Additional concerns related to the possibility of rat runs through SP11 to and from Silverdale to A525. It was noted a new spur was identified for A525 but the number of homes accessed from Silverdale was the same as from Keele. The consistency of the treatment for SP23 alongside SP11 is questioned by the current presentation of the Local Plan.

BDP Lyme Park document, uploaded to the planning portal on 27 August indicated the rationale for SP11 yet the proposal for infrastructure did not address SP23 as clearly as SP11.

Silverdale's response

Silverdale Parish Council argues the current Local Plan is unsafe on specific planning policy grounds and then makes modifications as follows:

1.Green Belt

The proposed Keele Park Development with the main land use as a country park is not sound because the current land use is parkland and it is illogical to remove the protection of 40 hectares of parkland from the greenbelt to provide 30 hectares of development as undesignated land. The decision to show parcels of land as circular spaces especially at SP11(3) does not permit a clear boundary between mixed housing development and parkland as is required. It is unclear how the range of density options will be utilised in the 4 distinct communities.

Modification1: The country park should remain incorporated in the greenbelt and the boundaries should be regularised showing distinction between land uses.

The proposed new boundary for SP23 and the former site SP14 also known as The Cowfield is proposed as an open space so the same argument can be applied.

Modification2: The former site SP14 should remain incorporated the greenbelt.

The net effect of the modifications would protect up to 45 hectares of open space currently within the greenbelt and thereby reduce the harm of the development proposals on the greenbelt.

The proposed vehicular access to SP11 and SP23 suggests only minor improvements are required. No roundabouts. This is not a sound engineering proposition because, Silverdale's inner roads are all below A grade. The B5044 is the main surface providing through routes from the east to the west at Scot Hay and to the northwest A525. An additional route through the string of developments SP11 will have knock on effects to traffic in these principal routes.

Modification1:

Access to SP11(3) via Ashbourne Drive/Underwood Road and to S11 (4) via Racecourse/Park Road should be pedestrian not vehicular. This would make a considerable saving to the infrastructure costs of SP11 and eliminate congestion in Silverdale village.

Modification2:

Transport infrastructure modelling to integrate SP11 with SP23 and should take account of traffic across Silverdale as well as the A525.

3.Relationship between new centres and existing centres

Silverdale has not been included as a rural parish and part of SP11 is contained in Keele which is designated as rural so that presents a classification problem for the borough council in the settlement hierarchy. The BDP report is not explicit how the new centre at SP11(2) and SP11(1) relates to Silverdale Local Centre.

Modification: Silverdale Parish Council considers itself a village under the following definition and a claim to be a rural parish should be at least recognised and explored within the Settlement Hierarchy Methodology.

A village in the UK is a compact settlement of houses, smaller in size than a town, and generally based on agriculture or, in some areas, mining (such as Ouston, County Durham), quarrying or sea fishing. In addition, given SP11 includes land in Keele Parish, which is rural. Then part of that site lies within a rural parish. The methodology adopted in the Rural Topic Paper (2024) does not address boundary issues where a housing allocation covers two adjoining parishes.

4. Housing Allocation

4.1 At 1,090 the total capacity, 1,100 houses remain unchanged, despite several new facilities and confining development with the introduction of new parcels (Local Plan p70).

The BDP consultant report (see Appendix 4) asserts that certain range of housing densities will prevail in the parcels at SP11 but the addition of more development mix other than residential into a smaller area entails density and site boundary considerations. Spaces for new facilities as well as housing density are not disaggregated from land allocated to the country park.

Modification: The proposals should make the trade-off explicit in terms of boundaries and density between new community provision and the housing allocation at SP11 sites 1,2,3 and 4. See also modification at SP23.

4.2 Gypsy and Traveller Allocation 5 pitches

Site T&G 8 inclusion at Scrutiny Committee without any prior consultation with Silverdale Parish Council prior to the July 2024 Scrutiny Committee.

The decision is challengeable in the law because the land was acquired for the specific purpose of being kept as allotments. The previous change required Secretary of State's approval and the proposed change similarly requires Secretary of State's consent. The proposed use passes directly through the centre of a current statutory allotment site. Acre Allotments was recorded in the 1900 OS Map and in previous years, having been previously designated so for the use of Silverdale's citizens.

	<p>The decision is perverse, because</p> <p>1 There is a long lease in place between the Borough Council and Silverdale Parish Council for the use of part of land, including the access road.</p> <p>2 The proposed road access to T&G8 would be shared with Acre Allotment Association, sub tenants of Silverdale Parish Council. The proposed sharing of the road access could only occur if the road was improved to allow transport by vehicles pulling trailers. The necessary road improvement would be a necessary condition and coupled with new mains supplies for the pitches would threaten the continuation of the Allotment Association.</p> <p>3 Extensive remediation is required where there is a history of unregulated deposit of different kinds of toxic waste harmful to human ranging from unremediated cattle and pig faeces to heavy metal contamination (from mining and waste accumulation) and also buried asbestos.</p> <p>4 The development of this site would be unsustainable and environmentally harmful in another context. Northwest of the proposed access road is the Racecourse Community Woodland, between Mill Street and Park Street, containing many mature native trees and there are local springs which generate an ecology that would be harmed by the traffic and development proposed.</p> <p>5 The single lane traffic access to the Acre Allotment Association is unsuitable. The access road is best classified as a country lane so the proposed development would fall foul of the policy of biodiversity impacts on rural lanes, where they need to be widened, including destruction of adjoining landscape.</p> <p>Modification: The proposal should be excluded from the Allocation of Gypsy and Traveller Sites or as an alternative an access from Maries Way could avoid the conflict with the natural environment at the Acres and at Racecourse Community Woodland but that option must involve a full physical survey of the area to identify contaminants followed by remediation.</p> <p>Appendices</p> <p>1. Audley Parish Council have commented through their consultant on 3 October 2024 that a mistake may have occurred in the classification as a district centre.</p> <p>Audley is identified as a 'District Centre', with Wolstanton, Chesterton and Silverdale. This is an obvious error and Audley should be classed as a 'Local Centre', as in previous versions of the Plan.</p> <p>2. There has been an active Facebook group, PAPG operating to gather support and organised a workshop in September to help guide residents through the documentation.</p> <p>3. Based on Proposed Draft 2024 NPPF giving Newcastle a higher Minimum Housing Need Target at 593 set against the current 400.</p> <p>The guidance re-imposed national housing targets for England and applied an increase of 21% in the target (from 305,000 to 370,000). However, the government also proposed to redistribute the highest target for London to the rest of England. The proposed guidance argues the average level of housing should be around 0.8 % per year.</p> <p>4 Extract from BDP Lime Park p41</p> <p>The four neighbourhoods would be:</p> <p>1. Keele Square SP11(1)</p> <p>A development of around 256 homes accessed from the existing roundabout on Keele Road. The neighbourhood is on gently sloping land and is planned around a landscape square which will also form a local centre.</p> <p>2. Keele Woods SP11(2)</p> <p>A development of 315 homes based on two points of access from Keele Road, one through the former golf clubhouse and the other through the driving range.</p> <p>It may be that both are not required depending on ecology and other constraints, but it is useful to keep the two options. This neighbourhood is also based around a green space with arms of development extending along the former fairways retaining the backs of tree planting.</p> <p>3. Ashbourne Drive SP11(3)</p> <p>This is proposed as a neighbourhood of 233 homes in the north-west part of the site, accessed from Ashbourne Drive. This scheme also has a village green and is planned to preserve the significant bank of trees running east to west through the site.</p> <p>4. Park Road SP11(4)</p> <p>The final, slightly smaller neighbourhood of just under 100 homes is on Park Road.</p> <p>This is physically separated from the rest of the site by a major bank of trees and would therefore feel like a very different place. The layout preserves the existing play area.</p> <p>This layout allows the site to be marketed either as one scheme or as four different development parcels providing maximum flexibility. The scheme going forward would need to be subject to a Design Code that would create distinct identities for each of the neighbourhoods. The public realm would be retained for public use and to maximise biodiversity net gain.</p>
Q7 Modification	<p>Modification1: The country park should remain incorporated in the greenbelt and the boundaries should be regularised showing distinction between land uses.</p> <p>The proposed new boundary for SP23 and the former site SP14 also known as The Cowfield is proposed as an open space so the same argument can be applied.</p> <p>Modification2: The former site SP14 should remain incorporated in the greenbelt.</p> <p>The net effect of the modifications would protect up to 45 hectares of open space currently within the greenbelt and thereby reduce the harm of the development proposals on the greenbelt.</p> <p>Modification1:</p> <p>Access to SP11(3) via Ashbourne Drive/Underwood Road and to S11 (4) via Racecourse/Park Road should be pedestrian not vehicular. This would make a considerable saving to the infrastructure costs of SP11 and eliminate congestion in Silverdale village.</p> <p>Modification2:</p> <p>Transport infrastructure modelling to integrate SP11 with SP23 and should take account of traffic across Silverdale as well as the A525.</p>

	<p>Modification: Silverdale Parish Council considers itself a village under the following definition and a claim to be a rural parish should be at least recognised and explored within the Settlement Hierarchy Methodology.</p> <p>A village in the UK is a compact settlement of houses, smaller in size than a town, and generally based on agriculture or, in some areas, mining (such as Ouston, County Durham), quarrying or sea fishing. In addition, given SP11 includes land in Keele Parish, which is rural. Then part of that site lies within a rural parish. The methodology adopted in the Rural Topic Paper (2024) does not address boundary issues where a housing allocation covers two adjoining parishes.</p> <p>Modification: The proposals should make the trade-off explicit in terms of boundaries and density between new community provision and the housing allocation at SP11 sites 1,2,3 and 4. See also modification at SP23.</p> <p>Modification: The proposal should be excluded from the Allocation of Gypsy and Traveller Sites or as an alternative an access from Maries Way could avoid the conflict with the natural environment at the Acres and at Racecourse Community Woodland but that option must involve a full physical survey of the area to identify contaminants followed by remediation.</p>

Title	Policy SP11 Lyme Park, Silverdale
Consultee Company / Organisation	Natural England
Consultee Position	Senior Officer
Consultee Family Name	McLaughlin
Consultee Given Name	Sally
Q4 Part of document	Policy
Q4 Policy	SP11
Q6 Details	<p>Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.</p> <p>Natural England welcomes the opportunity to comment at this stage of the Local Plan and particularly supports the inclusion of policies on green and blue infrastructure, biodiversity, health and wellbeing, trees hedgerows and woodlands. We have reviewed the consultation documents and provide comments that relate to the soundness of the Local Plan and that are most relevant to our interest in the Natural Environment.</p> <p>Natural England has adopted a robust precautionary approach within this plan response. Whilst we welcome the content of the Local Plan, Natural England advises that the plan is currently at risk of being unsound and/or not legally compliant due to the potential impacts on air quality in relation to internationally designated nature conservation sites and the justification for the potential loss of 263ha best and most versatile (BMV) agricultural land. Further detail is provided below.</p> <p>Natural England have also provided other advice within this submission relating to further improvements that could strengthen plan policies and specific strategic site options and related mitigation.</p> <p>Do you consider that the Newcastle Under Lyme Plan is Sound and Legally Compliant?</p> <p>Natural England notes that the plan is at the pre-submission stage and as such your authority is seeking confirmation on the soundness of the plan. Having reviewed the plan and supporting documents, Natural England considers the pre-submission plan in its current form is not sound or legally compliant, this is</p>

due to a lack of evidence with regards to air quality and the cumulative loss of BMV agricultural land both in a local and national context.

Air quality

Natural England notes that the Sustainability Appraisal states that “Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)

As Natural England understands it the current evidence base used to conduct the HRA cannot rule out adverse impacts on designated sites. The HRA states at page 22 3.4.16 “At the time of writing, the traffic modelling run for the final suite of Regulation 19 allocations had not been undertaken.” Appendix A lists the local plans for neighbouring LPA’s concluding that ‘in combination’ with plans and projects (approved and those yet to be implemented) they may trigger in-combination effects on European sites as a result of air quality, particularly as we understand it in the key commuting areas.

Natural England notes that Annual Average Daily Traffic (AADT) data and traffic modelling in the Strategic Transport Assessment (STA) concludes a potential reduction in travel and related air pollution at allocated sites as a result of a predicted preference in the use of public transport. We are surprised by this projected decrease in both traffic and related air pollution, particularly as one employment allocation site includes a 200-bay lorry park and increased congestion is predicted at junction 16 of the M6 where it joins the A500 in a rural location with no existing rural transport provision. The Sustainability Appraisal also notes that: “There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work”. (p 206)

Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot therefore currently be ruled out at the following internationally designated sites:

- Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI
- Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI

The HRA outlines that the main source of ammonia emissions is agricultural practice, and that material increases in NH3 emissions are unlikely to be associated with the proposed local plan. At Black Firs and Cranberry Bog and Oakhanger Moss, any increase in nitrogen deposition has the potential to exacerbate pollution levels and thereby undermine the reasons for notification of these sites as a Ramsar.

Ammonia can be emitted from vehicle exhaust emissions as a by-product of the catalytic conversion process designed to reduce emissions of nitrogen oxide. As traffic composition transitions toward more petrol and electric cars (i.e., fewer diesel cars on the road), catalytic converters may aid in reducing NOx emissions but result in increased ammonia emissions. Ammonia emissions from road traffic therefore could make a significant difference to nitrogen deposition close to roads.

Natural England therefore advise that ammonia sourced from traffic emissions should be included for assessment within the local plan HRA, as the impact from this source on designated sites is currently unclear. For further information please see this report from Air Quality Consultants (AQC) that looks at ammonia emissions from roads for assessing impacts on nitrogen-sensitive habitats. Whilst we are aware that the current CREAM model created by AQC used to assess ammonia emissions from road traffic has not been peer reviewed, at this time it has been recognised as a Best Available Tool and we deem it appropriate to be used where any caveats associated with this model are also considered within the assessment. An assessment based on the best available approach is necessary. The next stage of assessment can then consider uncertainties in the model and site specifics to decide if mitigation needs to be considered.

Further work is therefore required to inform the Habitat Regulations Assessment. Natural England will engage with the Local Planning Authority in order to produce a Statement of Common Ground (SoCG) on this matter.

‘Best and most versatile’ (BMV) agricultural land

Natural England notes that “the proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land. A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of ‘best and most versatile’ (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services”. (page 74 Sustainability Appraisal).

Under the Town and Country Planning (Development Management Procedure) (England) Order 2015 (DMPO) Natural England is a statutory consultee on development that would lead to the loss of over 20ha of ‘best and most versatile’ (BMV) agricultural land (land graded as 1, 2 and 3a in the Agricultural Land Classification (ALC) system, where this is not in accordance with an approved plan.

Natural England would like to understand how the local planning authority have produced the evidence base and options assessment which informs the strategic site allocations.

Natural England will engage with the local planning authority to consider the cumulative impacts of the loss of BMV both in the local and national context and the challenges related to environmental impact, infrastructure, and the requirement to deliver a balance between the need for development and the potential urbanisation of the countryside including the potential mitigation measures that need to be considered.

NPPF paragraph 174e states:

Planning policies and decisions should contribute to and enhance the natural and local environment by: ... preventing new and existing development from contributing to, being put at unacceptable risk from, or being adversely affected by, unacceptable levels of soil, air, water or noise pollution or land instability. Development should, wherever possible, help to improve local environmental conditions such as air and water quality, taking into account relevant information such as river basin management plans.

Natural England provides guidance to inform further assessment of air quality and the loss of BMV agricultural land in our response to the content of the plans Strategic Policies as set out below.

Do you consider that the Newcastle-under-Lyme Borough Council Regulation 19 pre-submission draft Plan is compliant with Duty to Co-operate?

In terms of working with neighbouring authorities, Natural England notes that initially the plan was intended to be produced jointly with the City of Stoke-on-Trent, the plan does not however currently present an evidence base that demonstrates that a collaborative approach has been adopted and that the Duty to Co-operate has been fully complied with.

The Sustainability Appraisal states that: "Overall, there is potential for a cumulative adverse effect on biodiversity, owing to the fragmentation of the ecological network... Where a large amount of development is located on previously undeveloped land surrounding rural settlements, this is likely to produce a long-term irreversible negative cumulative effect regarding the urbanisation of the countryside" (p 71) Natural England would therefore like to further understand how the areas identified to meet the City of Stoke-on-Trent's unmet employment needs are justified and appropriate and whether meeting some of the employment needs of the City of Stoke-on-Trent has led to the need to release or safeguard more land from the Green Belt in Newcastle under Lyme. If this is the case, what are the exceptional circumstances for doing this and how does this align with the allocated sites options assessment?

Recreational Pressure

In terms of the South Pennine Moors SAC and recreational impacts, the Local Plan does comply with the Duty to Co-operate. Natural England recommends that reference is made to the 'Recreation use of the South Pennine Moors and implications for strategic housing growth' report by Footprint Ecology Ref 778 date 27th March 2024. This report should both inform the evidence base and ensure that policies relating to open space/green infrastructure are as rigorous and robust as possible.

The report concludes that more data/evidence is required to determine if recreational use is causing an impact across to the South Pennine Moors and to get a better understanding of the scale and location of any impact. Natural England notes that the report records 7,000 additional dwellings in Newcastle-under-Lyme over the plan period rather than the 8,000 included in this regulation 19 submission. Newcastle-under-Lyme Borough Council should therefore continue to work with local authority and other partners to ensure coordinated and continued cross boundary action.

Other matters

Natural England has specific concerns related to allocations in the Green Belt. Notwithstanding that, Natural England considers most of the policies within the plan to be sound and deliverable. The plan is consistent with national policy with regard to those policies that are within Natural England's remit. Further information on strengthening policies including but not limited to Soils and best and most versatile (BMV) agricultural land, preventing loss and fragmentation of habitats and supporting green infrastructure are provided below.

Vision and Strategy

Natural England notes that the Plan's vision and emerging development strategy set out a framework for the future development of Newcastle-under-Lyme and addresses the needs in relation to housing, the economy, community facilities and infrastructure, including specific reference to a proposed employment site allocation.

This vision and the related objectives should also set out the environmental ambition for the plan area and form the basis for nature recovery and enhancement, supported by the policies and proposals in the plan.

Natural England advises that the vision should also incorporate more on the local ecology and landscape features which underpin local distinctiveness such as the "strong rural character with long open views across the surrounding rural landscape, towards more distant hills often framed by trees" (p 69) Part 3 Site Specific Landscape & Visual Appraisal. "Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms" (p 187) Sustainability Appraisal.

Strategic Objectives

Natural England welcome strategic objective SO-4 relating to carbon reduction and climate change, however we do not feel that this group of thirteen strategic objectives value or reflect the Boroughs whole ecology and landscape including but not limited to the protection of soil and best and most versatile (BMV) agricultural land. We would suggest that additional objectives are added relating to: air quality, water quality and quantity, soils and landscape.

Natural England would also like to see stronger reference to the Nature Recovery Network which is one of the specific aims of the Environment Act 2021 and will underpin the approach to the enhancement of nature.

Air quality is a major threat to habitats and species. Many ecological sites are exceeding their critical loads and levels for ammonia, nitrogen deposition and acid deposition. The strengthening of the policies and the rationale behind site allocations within this plan will ensure that new development does not contribute to the further deterioration of habitats and species due to air pollution. Further advice on strengthening the plans evidence base with regards to air quality is provided in the links below:

Strategic Policies

5 Planning for Sustainable Development

Policy PSD5: Green Belt

Natural England notes that this policy “aims to protect the Borough's essential open spaces, prioritise the use of brownfield land, and guide potential future development in accordance with the National Planning Policy Framework (NPPF)”.

Natural England however notes that amendments to the Green Belt boundary are proposed in the form of 14 site allocations to accommodate both the growth requirements of the borough and the employment requirements of wider Stoke-on-Trent conurbation. Natural England's has some site-specific concerns about the potential impacts of some of the green belt sites selected on the natural environment with regards to habitat loss, fragmentation and justification for the loss of BMV agricultural land.

We note the LPA's intention to release and compensate for the loss of green belt and prioritise the use of suitable brownfield land. However, the site allocations in the green belt would result in the potential loss of 263ha of Best and Most Versatile (BMV) agricultural land. The council should satisfy itself that it is making a balanced decision for sustainable development, the Sustainability Appraisal concludes that: “The Green Belt Study assessed land parcels against the contribution they make to the five purposes of the Green Belt on a four-point scale...Three allocated sites (AB12, AB33 and TK10) are located in areas which make a ‘strong’ overall contribution to the purposes of the Green Belt where “the site contributes to the purpose in a strong and undeniable way, whereby removal of the site from the Green Belt will detrimentally undermine this purpose” (p101)

“Site allocations on previously undeveloped land or that would result in a net loss of GI / vegetation could result in a reduced capability of the environment to provide ecosystem services including carbon storage, the storage and filtration of water including natural flood protection, as well as reduced availability and connectivity of habitats within the green network enabling movement of species. (p 165)

Strategic Site Allocations

Natural England suggests that the HRA should include a “requirement for project-level/site specific HRA's and targeted ecological surveys”.

The Sustainability Appraisal concludes that:

“Some 12 allocated sites partially coincide with priority habitats, where 3.43% of the total site allocation areas coinciding with priority habitats which include deciduous woodland, good quality semi-improved grassland and Site BL18 coincides with lowland fens which is a very high distinctiveness habitat in the BNG handbook (2024). These habitats can support a range of species of principal importance. Allocated Site KL15 is adjacent to ‘The Butts and Hands Wood’ ancient woodland, with a further 20 allocated sites located in close proximity to ancient woodlands. P158

“Six allocated sites (Sites CT20, HD10, KL13, RC8, SP11(2) and SP23) are located within areas of ‘high’ or ‘very high’ habitat distinctiveness that provide high biodiversity value. Whilst in many cases these habitats can be conserved alongside development, it is likely that in some cases fragmentation or loss of habitats and connections between habitats will occur”

“The majority of allocated sites are located on previously undeveloped land, which would result in the loss of soil resources and the ecosystem services they provide. (p 159) The development of new buildings on previously undeveloped land would be expected to result in a direct loss of soil resource, with little or no scope for mitigation” (p 216)

“The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution. (p 68)

For all sites, Natural England advises that the hydrological catchment within which the site sits is taken into consideration, with regards to the potential impact of the developments proposed on the adjoining watercourses and wider catchments, including but not limited to surface water runoff (including during construction), existing and required capacity of Waste Water Treatment Works (WwTW) and water supply and flooding issues. Each site will require site specific investigation, and the council should understand the impact of all the sites put forward individually and in combination.

Natural England has specific concerns and or requires further information about the following ‘Strategic Site Allocations’ which could potentially impact on designated sites as a result of air and water quality and/or lead to the loss and / or fragmentation of priority habitats and BMV agricultural land:

BL18 – Clough Hall Playing Fields, Talke

Natural England would like to further understand this larger residential development proposal with regards to the potential impacts on the lowland fen habitat.

KL13 & KL15 – Land South of A525 between Keele University and Newcastle

Natural England notes this proposal for Employment development is immediately adjacent to ancient woodland priority habitat.

HM28 – Land off East Lawns, Betley

Existing and projected water quality issues at Betley Mere will need to be considered with regards to this allocation.

LW53 – Loggerheads

Natural England notes this residential housing development proposal is located within the IRZ of protected sites (Burnt Wood SSSI) which states that development proposals of 50 or more homes outside existing settlements/urban areas in these zones should be consulted upon with Natural England.

SP11 – Former Keele Municipal Golf Course

This Larger residential development is categorised in the Landscape Assessment as having a Major adverse impact on the local Landscape.

AB2 – Land Adjoining Corner of A500 and M6 Southbound

Natural England notes this proposed employment allocation released entirely from the green belt, which comprises 70ha of grade 2 BMV agricultural land. The Landscape study concludes that the: “Proposed development scenario is likely to have a major adverse effect on the SA objective with no satisfactory mitigation possible” (p 15). With regards to potential Air Quality impacts on protected sites Natural England notes from the options analysis that “The loss or potential moving of a layby to enable access to the site could be problematic indicating potential issues with site access and traffic flow. An increase in HGV and personal vehicle traffic is anticipated, which could lead to potential congestion and air pollution in the area”. Natural England would therefore also like to understand the evidence base further including the rationale for an alternative site TK30 @ Talke A34 / A500 roundabout being ruled out.

Policy PSD6: Health and Wellbeing

Natural England welcome this policy direction in terms of safeguarding health and amenity and supporting healthy communities, through the protection and provision of high-quality open spaces, including allotments and the promotion of active travel transport choices. Further information on joining up Nature Recovery and Green Infrastructure (GI) with health priorities is set out below. If more cities and towns can be creatively designed and managed, with nature and communities at their heart, we will see nature and people thrive. This is something we set out to inspire at Natural England when developing the Green Infrastructure Framework and Design Guide. Natural England's People and Nature survey tells us that, for 82% of people 'being in nature makes me happy'. With the cost-of-living crisis, 'free' places like local parks and greenspace, have become even more important. The value of these spaces for the economy is estimated at £28.7 billion per year.

Green infrastructure in towns and cities provides places to relax, exercise, and spend time outdoors; cools urban areas; reduces flooding by allowing water to permeate the ground rather than overwhelm our drains; increases biodiversity and helps to reduce inequalities in access to nature. Options assessments for development sites and related green and blue Infrastructure within and between developments, green spaces and designated sites should; include soft transition and consider potential direct and indirect implications on sustainable use for example visitor pressure and transport / access options.

The natural environment affords the best 'natural' play opportunities for children while offering multifunctional nature-based solutions to climate change etc. These can be blended into wildlife rich green infrastructure and green open spaces that can act as destination play sites for local children (See best practice at Play England and Play Wales) that have proven health and wellbeing value.

Evidence for nature play and health:

Play, naturally: a review of children's natural play

Nature for health and wellbeing | The Wildlife Trusts

Good practice in social prescribing for mental health: the role of nature-based interventions - NECR228 (naturalengland.org.uk)

6 Climate and Renewable Energy

Whilst Natural England welcomes this group of policies we recommend including Policy CRE1: Climate Change and Policy CRE2: Renewable Energy within the Sustainable Environment (SE) group of policies to achieve a collective strategic focus on sustainable development and working toward achieving net zero alongside the SE policies relating to Pollution and Air Quality (SE1) and requirements for sustainable water management measures to reduce water use, natural flood protection features alongside the specific policies on Sustainable Drainage Systems (Policy SE4:)

Natural England continues to work with the LPAs across the region on understanding air pollution across area boundaries (see comments and links in objectives section.)

10 Infrastructure and Transport Policy.

Policy IN4 Cycleways, Bridleways and Public Rights of Way

Natural England welcomes the inclusion of this group of policies which seek to maintain and enhance the network of public rights of way that cross the borough. We note that the sustainability appraisal states that "the borough has relatively poor accessibility to the cycle network and is the lowest performing in the county for walking zones" (p 206) and that, "eight allocated sites (AB2, AB12, AB33, HD10, KL15, MD29, SP11(3) and TK10) do not currently have safe pedestrian or cycle access adjacent to the site, where site end users may be reliant upon less sustainable modes of transport including private car use". (p 180)

11 Sustainable Environment

Natural England welcomes this group of policies and has the following policy specific comments:

Policy SE1: Pollution and Air Pollution.

Natural England welcomes this policy that notes that development proposals which are likely to result in detrimental impacts on air quality, will not be permitted unless it can be demonstrated that mitigation measures effectively address these impacts. (Comments on Air Quality are also provided on page 2 and 4 of this letter). The promotion of sustainable and active travel options, low-emission technologies and enhancement of green infrastructure to absorb air pollution is also noted. (see comment above re integrating the group: 6 Policies Climate and Renewable Energy).

Policy SE7: Biodiversity Net Gain

Natural England supports the inclusion of a policy on BNG. We suggest the following minor amendments to further improve the plan policy.

The BNG policy should make it clear that biodiversity net gain is not applied to irreplaceable habitats, and that any mitigation and/or compensation requirements for Habitats sites should be dealt with separately from biodiversity net gain provision. The policy should also set out how biodiversity net gain will be delivered and managed through the lifetime of the scheme and including monitoring requirements. This should include indicators to demonstrate the amount and type of gain provided through development.

The indicators should be as specific as possible to help build an evidence base to take forward for future reviews of the plan, for example the total number and type of biodiversity units created, the number of developments achieving biodiversity net gains and a record of on-site and off-site contributions.

Natural England notes that the Sustainability Appraisal states "Despite the BNG provisions at the site level, there remains potential for a cumulative adverse impact on biodiversity at the landscape scale, owing to incremental habitat losses. As a result of development within the Local Plan undeveloped land will be lost which will include the loss of soil resources, habitats recognised as being of 'high' and 'very high' distinctiveness, and potentially ecological links between biodiversity assets, whereby the policies will not be expected to fully mitigate the fragmentation of the ecological network. Fragmentation of the ecological network across Newcastle-under-Lyme is expected to be a long-term and permanent significant effect." (p 162)

Policy SE8: Biodiversity and Geodiversity

Natural England supports the inclusion of this policy to protect the Boroughs internationally, nationally and locally designated sites important for their biodiversity value and to enhance the natural environment and work with partners toward Nature Recovery.

We particularly welcome the plans recognition of the value of “wider ecological networks” stating that “Other sites, both individually and collectively, that are not designated can also contribute towards protecting and enhancing diversity of species locally”.

Policy SE10: Landscape

Natural England welcomes this policy aimed at ensuring that “development proposals should protect and enhance the character, quality, beauty, and tranquillity of the Borough”. We note from the sustainability appraisal that “The entirety of the south of the borough is identified as being high in relation to landscape sensitivity, which starts in Audley in the north and covers the southern area of the borough, including Loggerheads and Alington.” We agree that “Alteration of the landscape character is a long-term and permanent significant effect...There is potential for a cumulative adverse effect on landscape character resulting from the development proposed in the Plan”. (p193) SA.

Natural England has divided England into 159 distinct natural areas called National Character Areas (NCAs) Newcastle-under-Lyme falls within two NCAs: Shropshire, Cheshire and Staffordshire Plain: gently rolling plains dominated by intensive dairy farming, beef and arable production; The Potteries and Churnet Valley: strong contrast between the industrialised landscape of the Potteries and the pastoral, strongly dissected hills and small plateaux that flank the Churnet and Dove valleys.

Natural agrees with the following statement in the sustainability appraisal: “Although various policies aim to ensure that development conserves and enhances landscape character and distinctiveness, when combined with Local Plan policies that support infrastructural improvements such as for transportation, water, and waste, this is likely to lead to a long-term and irreversible cumulative adverse effect on landscape character and tranquillity and associated indicators such as dark skies.” (p72)

Policy SE11: Trees, hedgerows, and woodland

Natural England welcomes this plans recognition that “Trees, hedgerows, and woodlands are integral to the distinctive character and ecological health of the Borough of Newcastle-under-Lyme, defining landscapes across both urban and rural settlements.” And that “This policy prioritises the protection of existing natural assets, seeking to not only preserve, but actively enhance, these valuable features wherever possible”.

Policy SE13: Soil and Agricultural Land

Natural England has concerns about the justification for the loss of BMV agricultural land within this plan. “The proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land, A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of ‘best and most versatile’ (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services.” (page74) (SA)

Natural England notes that policy SE13 states: “Outside of sites allocated for development in the Local Plan, development proposals should avoid the loss of best and most versatile agricultural land (BMV) unless it can be demonstrated that the benefits of development clearly outweigh the loss of the land and every effort has been made to mitigate for the overall impact of the development on best and most versatile agricultural land.”

With regards to Soil and Agricultural Land Quality, Natural England advises that The Local Plan should give appropriate weight to the roles performed by the area’s soils. These should be valued as a finite multi-functional resource which underpin our wellbeing and prosperity. Decisions about development should take full account of the impact on soils, their intrinsic character and the sustainability of the many ecosystem services they deliver.

The 25 Year Environment Plan (25YEP) sets out government action to help the natural world regain and retain good health, including highlighting the need to:

- protect the best agricultural land
- put a value on natural capital, including healthy soil
- ensure all soils are managed sustainably by 2030
- restore and protect peatland

Soil is a finite resource which plays an essential role within sustainable ecosystems, performing an array of functions supporting a range of ecosystem services, including storage of carbon and water, the infiltration and transport of water, nutrient cycling, a buffer against pollution and provision of food. In order to safeguard soil resources as part of the overall sustainability of the development, it is important that the soil resource is able to retain as many of its important functions as possible. This can be achieved through careful soil management and appropriate, beneficial soil re-use, with consideration on how any adverse impacts on soils can be avoided or minimised.

The conservation and sustainable management of soils is reflected in the National Planning Policy Framework (NPPF), particularly in paragraph 180(a), 180(b) and 181 (footnote 62). When planning authorities are considering land use change, the permanency of the impact on soils is an important consideration. Particular care over planned changes to the most potentially productive soil is needed, for the ecosystem services it supports including its role in agriculture and food production.

Plan policies should therefore take account of the impact on land and soil resources and the wide range of vital functions (ecosystem services) they provide in line with paragraph 180(b) of the NPPF.

Soil Plan Policies

We strongly advise that at a minimum, the plan includes core policies for:

- the protection of best and most versatile (BMV) agricultural land (Grades 1, 2 and 3a in the Agricultural Land Classification (ALC)); and
- for the protection of and sustainable management of soils as a resource for the future.
- Areas of poorer quality land (ALC grades 3b, 4, 5) should be preferred to areas of higher quality land (grades 1, 2 and 3a).
- Recognise that development has an irreversible adverse impact on the finite national and local stock of BMV land.
- Conforms to NPPF and Planning Practice Guidance (Natural Environment and Minerals).
- Requires detailed ALC surveys to support plan allocations and for subsequent planning applications (for all sites larger than 5 ha). ALC surveys to support plan allocations and for subsequent planning applications for smaller sites (1 – 5 ha) would be welcomed.
- Recognise that development (soil sealing) has a major and usually irreversible adverse impact on soils.

-Soils of high environmental value (e.g., wetland and carbon stores such as peatland, low nutrient soils; or soils of high environmental value in the local context) should also be considered as part of ecological connectivity (Nature Recovery Network / Green Infrastructure).

-Requires soil handling and sustainable soil management strategies based on a detailed assessment of the soil resource based on best practice guidance (for all sites larger than 5 ha), ideally as part of the planning application process for major sites to help inform master-planning, and to safeguard the continued delivery of ecosystem services through careful soil management and appropriate, beneficial soil re-use. Soil handling and sustainable soil management strategies for smaller sites (1 – 5 ha) would be welcomed.

-Reference should be made to Defra's Construction Code of Practice for the Sustainable Use of Soils on Construction Sites

-In addition, for minerals and other temporary forms of development, plans for reinstatement, restoration and aftercare will be required (or for solar, a commitment to do so if the operational life is in decades); normally this will be return to the former land quality (ALC grade)

-Refers to soils issues within relevant policy areas such as renewable energy, climate change, green infrastructure and biodiversity net gain, flood schemes, managed realignment, development design and landscaping.

Policy SE14: Green and Blue Infrastructure

Natural England supports this policy. Well-designed cross boundary multi-functional green infrastructure contributes greatly to a number of benefits both for people and nature. Your green and blue (for example cross boundary canals) infrastructure should dovetail with your biodiversity net gain strategies to maximise benefits.

We would advise that the Local Authority also considers Natural England's Green Infrastructure Framework of Principles and Standards for England. As stated in our document, "Green infrastructure (GI) is part of the solution to many of the challenges we face; health inequalities, biodiversity crisis, climate change, nature recovery and levelling up. The GI framework supports local authorities, developers, parks and greenspace managers and local communities to enhance and create new good quality green infrastructure."

We would also suggest reference is made to the emerging Local Nature Recovery Strategy. Preparing Local Nature Recovery Strategies (LNRS) is a statutory requirement under the Environment Act 2021. LNRS are designed to work closely alongside other measures in the Act including supporting the delivery of mandatory biodiversity net gain and providing a focus for a strengthened duty on all public authorities to conserve and enhance biodiversity. They will also underpin the Nature Recovery Network, alongside work to develop partnerships and to integrate nature into our incentives and land management activities. Each LNRS will be specific and tailored to its area. The responsible authorities and people involved in preparing a strategy can choose how they want it to look, but every strategy must contain:

1. A local habitat map.
2. A written statement of biodiversity priorities. Statutory guidance for responsible authorities explains in detail what these 2 things should contain. Together they set out what the strategy is aiming to achieve and what practical actions will help do this. They will also propose where actions could be carried out for best effect and to connect and expand existing areas that are important for nature. We expect local nature recovery strategies to propose actions such as the:
 - creation of wetlands
 - restoration of peatlands
 - planting of trees and hedgerows
 - more sustainable management of existing woodlands and other habitats like grasslands
 These actions are intended to help nature itself and to also help improve the wider natural environment.

Whilst the Staffordshire Local Nature Recovery Strategy (LNRS) is currently a work in progress, Newcastle-under-Lyme Borough Council Regulation 19 pre-submission should still be consistent with NPPF Paragraph 185 in terms of setting out local habitat priorities and identifying potential measures by which they can be achieved, alongside mapping areas that could become of particular importance in the future.

Natural England encourages Newcastle Under Lyme Borough Council via their Local Nature Recovery Strategy to actively develop cross border cooperation between other Local Planning Authorities (LPA) (for example Staffordshire Moorlands Borough Council) in coordinating land development projects that impact on local biodiversity sites to ensure that local biodiversity corridors are maintained and link up other local important sites for nature conservation.

This is a good way of achieving nature recovery and preparing to deliver the LNRS alongside enabling the local authority and its partners to identify, map and safeguard site areas, including green and blue infrastructure opportunities and interlinkages.

Habitats Regulations Assessment

Natural England notes that this Local Plan is not directly connected with or necessary to the management of any European site. A screening assessment has been undertaken which identified a number of Likely Significant Effects (LSE) associated with the Local Plan. Taking no account of mitigation measures, the HRA concludes that Local Plan has the potential to affect the following European sites:

- Cannock Chase SAC
- Humber Estuary SAC, SPA and Ramsar
- Mersey Estuary SPA and Ramsar
- Midland Meres and Mosses Phase 1 Ramsar
- Midland Meres and Mosses Phase 2 Ramsar
- Pasturefields Salt Marsh SAC
- Peak District Dales SAC
- Peak District Moors (South Pennine Moors Phase 1) SPA
- Severn Estuary SAC, SPA and Ramsar
- South Pennine Moors SAC
- West Midland Mosses SAC

We welcome that your HRA includes the Humber Estuary SAC, SPA and Ramsar site which is hydrologically connected to the river Trent. If the Local Plan resulted in significant water pollution, this European site could be affected and has therefore been screened in, in relation to water quality only, on

a precautionary basis. Natural England however notes that the Sustainability Appraisal identifies “A long-term cumulative adverse effect ...in terms of water quality” (p 148) as a result of the plan, this is not fully reflected in the current HRA.

Natural England note that the Sustainability Appraisal states: that “the entirety of the borough falls within IRZs of one or more SSSIs. All five SSSIs within the borough are in ‘unfavourable’ condition: Burnt Wood SSSI, Maer Pool SSSI, Black Firs and Cranberry Bog SSSI (Midlands Meres and Mosses Phase 2 Ramsar), Betley Mere SSSI (Midlands Meres and Mosses Phase 1 Ramsar) and Metallic Tileries, Parkhouse SSSI.”

Natural England are also aware of the extensive network of ancient woodland spread across the borough, totalling 707.60 hectares, as well as a large quantity of priority habitats, totalling 1,791 hectares.

Natural England agree that the following designated sites and related priority habitats in adjoining LPA areas may also be affected by development through several pathways, including fragmentation, recreational pressure and/or pollution (including Air and Water Quality). Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI, Wybunbury Moss SAC SSSI, Tyrley Canal Cutting SSSI, King’s and Hargreaves Wood SSSI, Gannister Quarry SSSI, Roe Park Woods SSSI, Wetley Moore SSSI, Churnet Valley SSSI, Hatherton Flush SSSI, Sounds Heath SSSI, Ford Green Redebed SSSI, and Cop Mere SSSI.

It is noted that the Appropriate Assessment stage of the HRA assessed potential impacts by topic;

- Impacts on designated features affected by a possible deterioration in air quality
- Impacts on water quality and quantity associated with increased levels of built development.
- Impacts associated with increased recreational pressure at European sites; and
- Consideration of impacts at associated functionally linked land.

Natural England notes that the HRA also factored the following into the assessment process “the protective framework provided by the Local Plan and existing protection measures set out in high level strategic policy and existing planning policy frameworks that serve to help overcome the identified potential adverse effects” and that “taking into consideration these factors, it is concluded that the Local Plan would have no adverse impact on site integrity at any European site, either alone or in-combination.

Natural England disagree agree with this conclusion that for those Habitats sites in the area of search with features sensitive to air pollution, adverse effects on their integrity, alone or in-combination, can be ruled out for the reasons set out at the beginning of this letter on page 2 and repeated in part below:

Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot currently be ruled out at the following internationally designated sites:

- Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI
- Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI

Natural England are currently in discussion with a number of the Staffordshire and West Midlands LPA’s with regards to the cumulative impacts of air quality. We advise that further work is required to inform the HRA. The HRA should demonstrate that there are no adverse effects on integrity of Habitat sites as a result of this Local Plan, alone and in combination with other plans and projects. With regards to allocated sites, it is unclear whether the individual sites put forward in the Local Plan have been assessed through the Habitat Regulations Assessment process and how mitigation will be applied here.

Sustainability Appraisal

Natural England has reviewed the Sustainability Appraisal (SA) and included comments taken from the document throughout our response.

The SA is a comprehensive document which should be reviewed in strengthening the HRA, particularly with regards to residual adverse effects that would be expected to remain in terms of wastewater following the implementation of the Local Plan policies. (p 141) Natural England notes that “Increased pressure on wastewater treatment has the potential to be a long term and potentially permanent significant effect” (p 142)

The SA recognises the local distinctiveness of the plan area;

“The Borough itself is largely rural in nature and supports some high-quality agricultural land, but is more heavily built up towards the north east surrounding Stoke-on-Trent. (p 8)

Newcastle-under-Lyme has a strong rural character with a high-quality landscape and countryside, with some areas identified as being sensitive to change as a result of new development. (p 19)

Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms make up the key features of some of these Landscape Character Types.” (p 20)

Sets out the area specific barriers to achieving sustainable growth;

“Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)

Loss of tranquillity The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution.(p 68)

“The pre-mitigation SA assessments identified negative impacts in relation to air quality due to the proximity of sites to major roads, landscape character due to the location of sites within areas of high landscape sensitivity, close proximity to the PRoW network and potential for coalescence and urban sprawl, habitat sites, priority habitats, habitat distinctiveness, loss of undeveloped land, ‘best and most versatile’ (BMV) agricultural land, coinciding with mineral safeguarding areas (MSAs) and areas of surface water flood risk (SWFR); and access to healthcare facilities, schools, the local cycle network and railway network. (p 40)

There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work. (p 21)

Trends in transport choice are unlikely to change significantly, and private car use would continue to increase as the selected method of transport to work, with potential adverse impacts on air quality in the borough.”(p 23)

Considers the local and cumulative significance of soil loss alongside the ecological implications:

“Loss of soil resources, BMV land and ecosystem services The proposed allocations would cumulatively result in the loss of up to approximately 342ha of previously undeveloped land, including up to 263ha of

	<p>BMV agricultural land. The proposed development would be expected to reduce the ability of the local soil biome to effectively provide ecosystem services, to some extent. Additionally, the loss of permeable soils could potentially increase the risk of flooding and result in a loss of biodiversity across the Plan area. Loss of soil can also result in an increase in soil erosion and have subsequent impacts on agricultural yield.(p 68) The majority of the borough is ALC Grade 3 soil, with areas of ALC Grade 2 scattered across the borough. Grade 2 and potentially Grade 3 represents some of the borough's BMV agricultural land and should be conserved wherever possible (p 21)</p> <p>A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of BMV land to be lost as a result of the development proposed in the Local Plan." (p 59)'</p> <p>Other Advice</p> <p>Further general advice is provided within Natural England Advice Note – Local Plans February 2024, attached at (Appendix A) - see attachment</p>

Newcastle under Lyme draft local plan – regulation 18: Consultation response

Dear Sir/Madam,

The following is a robust objection to all developments on green field sites covering all the proposals within Audley Parish and many more elsewhere as recommended in the draft local plan. In writing this response, I am aware of the need to adopt a local plan in order for local authorities to maintain democratic control of development in the area. This requirement appears to be a symptom of the subsection in the NPPF titled “The presumption in favour of sustainable development” (paragraphs 11-14). However, from a resident’s point of view, this gives the impression that local authorities must demonstrate a willingness to develop a particular area in order to avoid it being developed. This is, in essence, a commitment to eventual development even if it is not needed. And this is a source of great anxiety amongst residents that undesirable development is out of control, a situation clearly being fuelled by the existence of paragraphs 11-14. On this basis therefore, this subsection of the NPPF needs to be challenged.

This response may differ from others in that it comments on local planning within a strategic context. As I see it, there are three main types of development, which are likely to blight the future generations in the UK: (i) infrastructure (example, HS2), (ii) commercial (examples, AB2 and TK30 in the NuLBC local plan) and (iii) residential (example, recent housing developments either side of the A513, Beaconside, Stafford). Infrastructure is within the remit of Westminster rather than local authorities, so that is not a particular concern here. My main focus is encroachment of developments, both residential and commercial, in green spaces allowed for in the draft local plan. And any new developments in rural areas will, at the very least, result in:

- Loss of light or overshadowing

- Increased risk of flooding due to ‘run-off’

- Loss of visual amenity

- Limitations to physical activity

- Generation of extra traffic, overloading already busy local roads

- Extra noise, pollution, disturbance and danger from increased traffic

- Loss of trees and other biodiversity – bats, lizards etc.

- Loss of natural carbon capture

- Decrease in food production capacity

Increased local population placing further pressure on local schools, GP’s surgeries and other services, which are already oversubscribed.

The United Kingdom as a whole is currently gripped by a pandemic of overdevelopment, which threatens nature and the already depleted biodiversity we see in this country. And it has now reached the stage where it should be considered a national emergency. I for one, do not feel that I have any influence over the shape of our surroundings. There are numerous drivers for this trend many of which are not being addressed by government at any level. At the heart of this is a significant disconnection between the opinions of politicians and public as to what is actually needed. There appears to be cross-party support for activities driving economic growth at all costs, irrespective of the consequences to the natural environment. Aggravating this divide is the aforementioned paragraphs 11-14 of the NPPF. At a local level, what is not in doubt, is that whenever there is land removed from the green belt there is rarely, if ever, an equivalent area so returned, so the process is irreversible. And in the absence of any agreed lower limit on the area of protected green spaces within the UK, no release of green belt land, or development on green spaces, can be considered sustainable. Unless, of course, the use of agricultural land for just that purpose is also considered “developed”, i.e. it has an economic and sustainable use. And the local plan does appear to acknowledge this¹, so why not include agricultural use into the local plan implying no change in particular areas? If this is not the case, we are committed to a process where the end point is a UK completely covered in tarmac and concrete. Anyone arguing against this interpretation needs to state and justify precisely where that end point is. If they cannot, this renders the term ‘sustainable development’ an oxymoron.

One particular trend of major concern is the growing UK population. At the time of writing this stands at just under 69 million, and is set to reach 74 million before 2050. Studies in the US (Pimental and Giampietro, 1994; Lal, 1989) suggest that comfortable/sustainable living requires 0.5 Ha (1.2 acres) per capita. If we are generous, sustainable living in the UK was possible with a population of 57 million, a figure I remember from the late 1960s. With a total area of the UK at just over 60 million acres, a land area of one acre per capita for sustainable living in the UK seems feasible. As we have seen, anything more puts a strain on the environment as a whole. On this basis therefore, the UK is currently overpopulated by about 15%, and there appears to be no initiatives to address this issue. On this point, Westminster appears to be in a state of denial, thus fuelling the current avalanche of overdevelopment nationwide. Residential developments have a knock on effect by requiring other types of development to provide infrastructure, services and employment. Notwithstanding overpopulation, this gives the impression that there is not enough housing stock to accommodate the current population. Recent data, in the form of an infographic (“Housing crisis fact check”) from the Community Planning Alliance², convincingly shows that this is far from the case. In short, what is perceived as the current “housing shortage” is little more than a myth propagated by the construction industry and related interests. This is justified by item 3 on the infographic stating that “there are 1.5 million more dwellings than households” in England and Wales alone^{3,4}. On this basis therefore, no further house building is needed in the UK subject to efforts addressing projected population growth. In other words, what we have at present is a substantial housing surplus. Therefore, locally there are strong grounds for objections to development of the sites

AB12(p74)

AB15(p75)

AB32(p75)

AB33(p75).

Ignoring the 1.5 million surplus dwellings nationwide, the current (regulation18) draft of the local plan quotes a minimum housing requirement of 7160 in the Borough over the period 2020-40, of which 1206 are already completed. Of these, only 40% are to be 'affordable' (1-2 bedroom dwellings). Therefore, of the minimum requirement, only 2864 dwellings will be affordable. If we assume that those already built are affordable (they probably aren't) then the borough will only need 1658 homes built between now and 2040. This is because, due to being beyond affordability, most locals will be unable to buy or rent the other 60%. Therefore, they are not needed, and the proposed mix is entirely incompatible with general affordability. Given the surplus dwellings throughout England and Wales however, it is likely that none will be needed, especially considering the imminent removal of mandatory housing targets by the DLUHC under Michael Gove MP, and any specific affordable housing needs can be catered for by using brownfield sites only. All of the green areas in the local plan could therefore be planned in for their present use.

Infographic from the Community Planning Alliance summarising UK housing stock in relation to the population.

Another statistic from the infographic is that nationwide we could build up to 1.2 million homes on brownfield sites (item 2)2,5. And like any other local authority, NuLBC is legally obliged to and does keep a register of its brownfield sites, although it is likely that some may slip through the net.

If there is an imperative, it is to increase further democratic control of the development process both locally and nationally. And both local and national authorities would do well to remember that they have a responsibility to the people they represent and not to the commercial viability of developers, the construction industry or overseas investors. In short, no new housing development is required, especially given that the borough has exceeded its housing targets in recent years. This calls into question the need for housing developments outside Audley Parish mentioned in the local plan. These include

BL18 (p75)

CT1 (p76, 750 dwellings)

RC8 (p76, 6 dwellings, potential flood risk.)

KS3 (p77)

LW53 (p77)

MD29 (p78, 150 dwellings, likely to conflict with HS2 construction?)

NC13 (p78)

NC77 (p78)

SP11 (p78, 900 dwellings, former Keele golf course)

SP12 (p79)

SP23 (p79)

TB19 (p79)

TB23 (p79, 124 dwellings, adjacent to Walley's Quarry.)

TK10 (p80)

TK17 (p80)

TK27 (p80).

Other sites which may also be questioned are

KS17 (p77, would include loss of playing fields and other village amenities. This may be classed as infill.)

KL13 (p77,93, part built already within the grounds of Keele University Campus).

The other class of developments locally is commercial. All too often we hear in the news from both local and Westminster sources, the mantra that economic growth is the imperative. But the actual imperative is stability, and we have reached the point where growth at any cost has become toxic, especially given the impossibility of unrestrained growth in a land of finite area. Have our political masters never heard of the circular economy?

Since the beginning of deindustrialisation in the 1980s, the diversity of employment opportunities has declined. We have seen an unhealthy move away from manufacturing/production of goods that we need as a nation, to one entirely reliant on trade with overseas partners, leaving us open to blackmail and the current spike of rampant imported inflation. Look what happened during lockdown. Over recent decades this has led to the demolition of old factories for residential developments and the rise of logistics centres (warehousing) for the temporary storage of imported goods, which will ultimately be operated by robots and AIs leading to even less employment. The problem with warehousing of course is its large consumption of land area. My question is, what is the driver for the proposed "big box" developments on AB2 and TK30 locally? Both of these proposals lie entirely within the greenbelt, although the TK30 land has already been quarried in parts. Neither of these proposals is either desirable or needed. However, if we are forced to accept one or the other then TK30, being about 5% smaller, is the lesser of two evils. With the green light given to the development of the 44 Ha Chatterley Valley site on Peacock Hay Road, and the numerous empty warehouses existing across the potteries, North Staffordshire and Cheshire East. It is dubious to say the least to claim that either AB2 or TK30 are needed. These sites are 70 Ha and 66 Ha respectively. However, in the recently published "Housing and Economic Needs Assessment Update", the borough as a whole only needs a maximum of 34 Ha6. So why are we saddled with 154 Ha total covered by AB2, TK30 and KL15?

If the local plan caters for agricultural developments, AB2 and TK30 could be planned for their existing use. The majority of the area covered by these sites is high grade (3a) agricultural land. In the case of TK30 the quarried areas could be reclaimed for agriculture or, if this proves difficult, used in other ways to enhance biodiversity. If the land in question is council owned, and the motivation is to sell off council assets, then once sold, they cannot be sold again, and any control is lost. Moreover, once farmland is developed for other purposes then it is near to impossible for it to be reclaimed later for that use – and so the ratchet inexorably turns. On this

	<p>basis therefore, I would urge the LPA to remove the warehousing proposals AB2 and TK30 from the local plan.</p> <p>The purpose of this consultation is to supply feedback to the Borough Council. Another question is, does Westminster similarly consult with local authorities on planning issues, or is there any other mechanism where local councils can supply feedback to Westminster, providing a better feel for the mood of the nation? If so, why do we not see a root and branch reform of the NPPF rather than the tinkering around the edges approach seen in the July 2021 version? Most especially, there should be a removal of paragraphs 11-14 and its supporting statements elsewhere in the document, which is tantamount to a developer's charter. And there should be more flexibility within the NPPF allowing local plans to include parcels of land for their current purpose, given that there is almost none in this country that is not currently in use. As far as I can see this plan is nowhere near compatible with efforts required to address the current climate crisis. Moreover, given their scale, the proposed developments represent too greater shock to the environment and local communities over the short 20-year period suggested for their completion. And with the sufficient housing and unused commercial sites we already have, there is no need for any encroachment into our green spaces.</p> <p>Yours sincerely Jim Austin</p> <p>Notes</p> <ol style="list-style-type: none"> 1. Consultee Family Name	Adamczuk
Consultee Given Name	Henryk
Q4 Part of document	Policy
Q4 Policy	SP23 Land at Cemetery Road Park Road
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>For the first time since the scheme for the former golf course was muted in 2013, the proposals in 2024 cover a single-entry primary school, local centre/ health centre and a country park with 4 new separate settlements. These were inspired in a document known as Lime Park written for the borough council as land owner and uploaded elsewhere in the portal (see HOU1 27 Aug.).</p> <p>The published plans (Lime Park:17) show vehicular access from Keele Rd via a spur into 3 parcels of SP11 (1,2 and 3) and access from Ashbourne Drive to SP 11 (1,2 and 3).</p> <p>Racecourse is the main access point to SP 11(4). But SP23 adjoins the site. So what is the relationship between SP11(4) and SP23? The Local Plan Policy SP23 4) on p175 states it is Cemetery Road.</p> <p>There is no drawing of an access road to SP23 that informs the way movement occurs at and towards this site with a capacity of 200 houses.</p> <p>The former city engineer says that a roundabout 'should not have been built' in the current position at Galowstree Lane. Access for traffic access to SP23 is a major engineering undertaking due to the</p>

	<p>difference in height levels between Cemetery Road and Park Road and the downward sloping A525 towards Galowstree Lane, then sloping and curving route towards Cemetery Road.</p> <p>An attached plan was produced as a leaflet by the parish for residents to help uncover the overlapping ambitions for SP1 and SP23.</p> <p>The two sites adjoin, but no attempt has been made to create a single concept of 3 or 4 or 5 communities and this ambiguity is a serious weakness in terms of vehicular access in the proposals. The location of Silverdale primary Academy and the movement of children across Park Road to Newcastle Academy creates potential road safety issues to be incorporated in the design concept.</p> <p>Pedestrian access through Ashbourne Drive and Racecourse would both minimises the traffic disruption in Silverdale for residents in dozens of surrounding streets and alleviate road safety concerns.</p>
Q7 Modification	Consideration of pedestrian access from Ashbourne Drive and Racecourse.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	I am familiar with this part of Newcastle under Lyme and regularly discuss planning issues with residents.

Q4 Policy	Paragraph 13
Q5 Sound	No
Q6 Details	<p>From Memory, circa 1989-1990 the field adjacent to this site, SP11 in fact but geologically the same, was bulldozed to form a level playing field. This backfired in that the hillside, previously just adequately drained, became a swamp. It has NEVER dried out, and grows a fine bunch of rushes to this day.</p> <p>Without very expensive field drains, which will push the cost of the proposed houses way up, the hapless inhabitants will live inside a series of swamplets. In addition, a changing climate, a warmer, wetter, world, subject to more cloudbursts, implies an increased risk of major mudslides during construction. The example of the Gulval (nr Penzance) 18 August 2006 mudslide, where a ploughed field above the village post a cloudburst caused a lot of damage as it smashed through and downhill should be kept in mind.</p>

Q4 Part of document	Policy
Q4 Policy	SP23
Q6 Details	<p>Dear Sirs</p> <p>I remain totally opposed to any development on Keele Golf course and those adjoining sites. I have information to the effect that the value of the land of the old golf course, if sold for housing, has already been included in the boroughs budgetary planning going forwards. This presupposes the outcome of the inspection process and does not properly separate the proper function of the LPA from the boroughs ambitions as a landowner. The local save our green space group intends to raise this point at inspection. This conflict of interests raises doubts about the motivation for the proposed housing development. It suggests that the proposals have been developed not in response to the principles of proper planning but rather for budgetary reasons.</p> <p>I believe that the research into housing need in the area is deeply flawed. This is illustrated by the recent census which shows a population decline, and yet you are proposing to build for a healthily growing population. The council continues to recite the tired mantra of build, and they will come, where is the evidence for this? It might have been thought that the boroughs population would grow in response to the building of HS2 with its terminus in Crewe. This is not now happening; so where will the additional population come from? It is stated in the plan that the greatest need in our area is for smaller, more affordable homes. The plan proposes that 278 affordable homes will be needed per annum over the lifespan of the plan. Four hundred houses are proposed in total per annum. Thus, seventy percent of the housing need is for affordable homes. The maximum percentage of affordable homes to be delivered in new developments is thirty percent on greenfield sites. I am at a loss to understand how the plan can deliver sufficient affordable homes. This lack of consistency means the document is ineffective and not deliverable and is not in line with national policy. It fails to meet objectively assessed requirements for affordable homes. Excessive house building, particularly the wrong houses built in the wrong place, has a detrimental effect on neighbourhoods and healthy communities. These include, increase in traffic, congestion on existing roads, damage to the environment (issues such as drainage and air pollution), the creation of artificial, anonymous places facilitates anti-social behaviour and lack of social cohesion. The borough plan proposes developing one thousand six hundred and fifty homes in areas surrounding Keele University. It also proposes over five hundred new dwellings be developed in and around the university campus. The plan states that new housing development will be targeted on those centres best able to support them with their facilities. The plan fails to identify which centres are supposed to support the SP11 sites, SP23, or TB19. If the intention is that Keele will be one of these centres, we would point out that the retail facilities available are very limited but not as limited as the available parking!. The failure of the plan to dignify Silverdale as a centre of any sort, rather including it within urban Newcastle, prevents any recognition of the extra footfall Silverdale might receive. Again, the plan is not properly justified, not based on robust and credible evidence nor is it effective. In the unlikely event that this plan passes inspection, and the proposed housing is built, insufficient services will exist for the new residents, or these services will be effectively inaccessible. With thousands of new homes in a relatively small area, insufficient facilities within walking distance and the need for the new occupants to get into work, there will be huge pressure on the local road network. The plans proposals for sustainable transport options are mere window dressing, in truth, many thousands of extra car journeys will be made every day. Whilst understanding that transport infrastructure is not the direct responsibility of the borough, the plan should recognise existing capacity and the capacity to deliver improvements in the future. There is scant reference to current capacity nor to future deliverability in the plan. The danger of a failure in this respect will be to build the worst possible type of housing development. Development which grid locks local roads, undermines the effectiveness of local business, degrades the quality of the local environment and creates large scale anonymous estates with no heart. The utter failure of this plan to effectively vision the transport needs of the borough in the future is illustrated by the odd proposal to build a road between A53 and A525 passing through the sustainable campus of Keele University. The proposals are sketchy at best, but if it is proposed that such a road would be open to all traffic, it is highly unlikely that the university would approve its development. This is an illustration of just one aspect of this plan which is not properly justified nor effective nor deliverable. whilst I welcome the inclusion of a country park in the plans i am concerned that the plan offers no details of how such a park would be protected for the future were it to be withdrawn from greenbelt. It is my judgement that the park as proposed would be compromised by</p>

the need to connect the SP11 and SP23 sites to the proposed community hub/school. I am also concerned that any such 'park' may be nothing more than a land bank for further housing development. Especially in light of the proposed access to SP11 (4) and SP11 (3), from residential streets in Silverdale, I do not believe that the plan for the old golf course is effective or deliverable. I judge the risk as high that any eventual development will be of a different pattern and that the country park will not come to fruition. I judge that the borough will put financial gain before the needs of the existing population for health and recreation. The old golf course is heavily used by local people for exercise and recreation, it is the nearest and most accessible informal green space for many of the residents of the town. The needs of existing residents must be paramount in the decision-making processes of the council. Therefore, the council should reverse its proposal to build on the land and should instead make the whole area into a country park within the greenbelt. I believe that the definition of the former golf course as a "brown field site" is also flawed as the site has never previously had any built commercial or agricultural development. I believe that the plan does not take into consideration of the already built but vacant or empty homes within the city which amounts to over one thousand homes (Newcastle borough own information through freedom of information request) which could mitigate any identified housing need therefore making the plan deeply flawed. I believe the plan is deeply flawed as it does not consider the purchase of any new property situated near the university by absentee landlords, which have already been shown to purchase many of the new properties built in the location of the university. There properties are quickly converted into houses of multiple occupancy and rented out for part of the year to university students and render the neighbourhoods empty for large portions of the year, this is while Keele university are closing housing blocks and no longer supplying sufficient accommodation for their student population. The purchase of properties for students does not meet the local housing need. The prime example of this being the development at the former metal dealers, Hamptons where much of the estate is vacant out of term time unfortunately to the detriment of the community, as the majority of the residents become transient. I believe the plan does not consider the impact on local school, especially the secondary school provision as there is no new secondary development.

I remain totally opposed to any development on Keele Golf course and those adjoining sites. For the reasons stated in section 6 above all proposed development of those sites should be ceased and an alternative plan should be developed. The borough council should explore through compulsory purchase the one thousand plus vacant houses in the borough so that they can be brought back into use. Any financial gain from these proposed sites must not be included in current plans for the borough financial planning. Any new development should be ring-fenced and only sold to local residents, a covenant should be applied to all homes prohibiting the renting out of these properties. Keele university should be consulted and assisted in the planning and provision of adequate accommodation for its student population. The former golf course should remain a greenbelt site and be converted into a country park, protected by law in perpetuity, giving borough residents easy access to a rewilded open space for recreational needs. The car park that currently remains locked should also be reopened providing adequate parking for visitors to the area.

Q6 Details	<p>This representation is submitted on behalf of Richborough in response to the Newcastle-under-Lyme Draft Local Plan ("DLP") consultation. Please also refer to attached representations. Richborough have recently secured outline planning permission on appeal for 200 dwellings at Baldwins Gate Farm (LW74, identified in the plan as a commitment) , and are also promoting draft site allocation reference SP23 for development in the order of 200 dwellings. The inclusion of both of this site as an allocation is supported. This allocation that Richborough are promoting will be considered in further detail below against the relevant criteria of the SP23 site allocation policy.</p> <p>The site forms an important component of the council's overall development strategy, and is readily linked to the growth of the urban area and the growth of Keele University and Science Park.</p> <p>Policy SP23: Land at Cemetery Road</p> <p>As set out elsewhere in this representation, the client supports the inclusion of allocation reference SP23 (land off Cemetery Road / Park Lane) for 200 dwellings.</p> <p>The site forms an important component of the council's overall development strategy, and provides a strategic link between the growth of the urban area and the growth of Keele University and Science Park. The allocation of SP23 could provide new housing opportunities for those with links to the University such as graduates, research students and university professionals, in addition to a traditional family housing or "starter home" type of offer. The provision of some higher quality / aspirational homes in particular would align well with the Science and Innovation Park. With businesses increasingly required, as part of their corporate social responsibility objectives, to limit or reduce distances travelled to work, there are strong grounds to provide a range of higher quality housing options for business owners and their employees in close proximity to where they work. The allocation would also be able to deliver the 30% affordable housing requirement set out at Policy HOU 1, facilitating the delivery of around 60 affordable housing units in a highly sustainable location.</p> <p>In respect of the Green Belt itself, the allocation of the site would not unacceptably harm the five purposes of the Green Belt as identified in the Framework. Existing physical elements such as the wide and well established mature woodland boundary to the west, Keele University to the south and Silverdale to the north provide a strong and defensible Green Belt boundary which, together would physically and visually contain the proposed development. There would not be unrestricted urban sprawl into the surrounding open countryside; there would not be coalescence with other settlements and a precedent would not be set for further development to the west of the University campus. Further to this, the land to the west of the site (Keele Golf Course), is also proposed for allocation, and should the allocation of that site be confirmed, then SP23 would comprise a logical infill allocation. Otherwise, the site is visually self-contained due to the local topography and does not read as being part of an expansive tract of open countryside and there are no long distance views into and out of the site</p> <p>The consultation document suggests that SP23 should provide for defensible boundaries to the Green Belt, which should be achievable Given the surrounding context of the site.</p> <p>In light of the above considerations, Richborough supports the allocation of SP23, and are willing to work positively with the Council to deliver the masterplan-led approach to development in order to deliver a high quality, sustainable development to assist the Council in delivering its strategic objectives set out in the emerging Local Plan.</p> <p>The client intends to engage with developers in due course following the close of this consultation in order to bring forward a development partner for the site to ensure that the site would be deliverable within the proposed plan period.</p> <p>DELIVERABILITY</p> <p>Allocation reference SP23 is being promoted by Richborough who are national land promoters with a strong track record of bringing deliverable sites forward for development. In recent years, Richborough has brought forward two sites in the Borough on the edge of the settlement of Baldwins Gate. The most recent approval of planning permission for 200 dwellings was granted in the summer of 2023. Bellway are the development partner for that site and are due to commence the development of the site later this year.</p> <p>In terms of the delivery of this site, it is anticipated that following approval of an outline planning application, a reserved matters application to follow within three months of obtaining outline planning permission, with development to commence within 12 months of a grant of outline planning permission.</p> <p>It is anticipated that this site would deliver in the region of around 30-50 dwellings per annum with development to commence within 12 months of obtaining reserved matters planning permission.</p> <p>The site would therefore be deliverable within the plan period and would start delivering homes within the first 5 years of adoption.</p>
Q7 Modification	Please see supporting representation by Knights on behalf of Richborough for allocation reference SP23.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	Please see supporting representation by Knights on behalf of Richborough for allocation reference SP23.

Q4 Policy	SP23
Q6 Details	<p>We remain totally opposed to any development on Keele Golf course and those adjoining sites. We would like to submit the following comments in response to the current public consultation exercise.</p> <p>1. Whilst appreciating the planning process is primarily a 'technical' exercise for officers and councillors, the latter have a wider responsibility to their electorate where they must reflect the concerns, needs and views of the communities they represent. Any elected person can work to adapt and amend policies to protect local interests.</p> <p>2. Whilst some attempts have now been made to take into account local opinion e.g. the inclusion of a country park in the plans for the old golf course, it is our judgement that the overall plans remain neither effective nor deliverable.</p> <p>3. We have information to the effect that the value of the land of the old golf course, if sold for housing, has already been included in the boroughs budgetary planning going forwards. This presupposes the outcome of the inspection process and does not properly separate the proper function of the LPA from the boroughs ambitions as a landowner. We intend to raise this point at inspection. This conflict of interests raises doubts about the motivation for the proposed housing development. It suggests that the proposals have been developed not in response to the principles of proper planning but rather for budgetary reasons.</p> <p>4. The research into housing need in the area is deeply flawed. This is illustrated by the recent census which shows a population decline, and yet we are proposing to build for a healthily growing population. The council continues to recite the tired mantra of build, and they will come, where is the evidence for this? It might have been thought that the boroughs population would grow in response to the building of HS2 with its terminus in Crewe. This is not now happening; so where will the additional population come from?</p> <p>It is stated in the plan that the greatest need in our area is for smaller, more affordable homes. The plan proposes that 278 affordable homes will be needed per annum over the lifespan of the plan. Four hundred houses are proposed in total per annum. Thus, seventy percent of our housing need is for affordable homes. The maximum percentage of affordable homes to be delivered in new developments is thirty percent on greenfield sites. We are at a loss to understand how the plan can deliver sufficient affordable homes. This lack of consistency means the document is ineffective and not deliverable and is not in line with national policy. It fails to meet objectively assessed requirements for affordable homes.</p> <p>5. Excessive house building, particularly the wrong houses built in the wrong place, has a detrimental effect on neighbourhoods and healthy communities. These include, increase in traffic, congestion on existing roads, damage to the environment (issues such as drainage and air pollution), the creation of artificial, anonymous places facilitates anti-social behaviour and lack of social cohesion.</p> <p>The borough plan proposes developing one thousand six hundred and fifty homes in areas surrounding Keele University. It also proposes over five hundred new dwellings be developed in and around the university campus. The plan states that new housing development will be targeted on those centres best able to support them with their facilities. The plan fails to identify which centres are supposed to support the SP11 sites, SP23, or TB19. If the intention is that Keele will be one of these centres, we would point out that the retail facilities available are very limited but not as limited as the available parking!. The failure of the plan to dignify Silverdale as a centre of any sort, rather including it within urban Newcastle, prevents any recognition of the extra footfall Silverdale might receive. Again, the plan is not properly justified, not based on robust and credible evidence nor is it effective. In the unlikely event that this plan passes inspection, and the proposed housing is built, insufficient services will exist for the new residents, or these services will be effectively inaccessible.</p> <p>With thousands of new homes in a relatively small area, insufficient facilities within walking distance and the need for the new occupants to get into work, there will be huge pressure on the local road network. The plans proposals for sustainable transport options are mere window dressing, in truth, many thousands of extra car journeys will be made every day. Whilst understanding that transport infrastructure is not</p>

	<p>the direct responsibility of the borough, the plan should recognise existing capacity and the capacity to deliver improvements in the future. There is scant reference to current capacity nor to future deliverability in the plan. The danger of a failure in this respect will be to build the worst possible type of housing development. Development which grid locks local roads, undermines the effectiveness of local business, degrades the quality of the local environment and creates large scale anonymous estates with no heart. The utter failure of this plan to effectively vision the transport needs of the borough in the future is illustrated by the odd proposal to build a road between A53 and A525 passing through the sustainable campus of Keele University. The proposals are sketchy at best, but if it is proposed that such a road would be open to all traffic, it is highly unlikely that the university would approve its development. This is an illustration of just one aspect of this plan which is not properly justified nor effective nor deliverable.</p> <p>6. SOGS welcomes the inclusion of a country park in the plans but are concerned that the plan offers no details of how such a park would be protected for the future were it to be withdrawn from greenbelt. It is our judgement that the park as proposed would be compromised by the need to connect the SP11 and SP23 sites to the proposed community hub/school. We are also concerned that any such 'park' may be nothing more than a landbank for further housing development. Especially in light of the proposed access to SP11 (4) and SP11 (3), from residential streets in Silverdale, we do not believe that the plan for the old golf course is effective or deliverable. Q6 Details	<p>Please accept these comments in relation to the local plan, 2020-2040.</p> <p>I am a (redacted by admin), therefore my comments are directed towards the building proposals SP11 1,2,3 and 4, and SP23.</p> <p>I understand that there is a need to build new and affordable housing. My concerns with the proposal is how these areas of new houses will impact on Silverdale.</p> <p>Firstly, the houses are planned to be built in Silverdale, but are being badged as Keele, which is quite frankly offensive to the people of silverdale.</p> <p>Secondly, I think the road systems which will support these building areas need to be very carefully considered. I think traffic should be directed away from Silverdale and towards Cemetery Road and Keele bypass to prevent Silverdale being used as a 'rat run'. The roads in the village are not big enough to deal with a significant increase in traffic. In particular, Park Road and Racecourse are not appropriate routes to direct traffic and this will have a detrimental effect on residents if this is not addressed.</p> <p>Thirdly, what are the plans for infrastructure to support the new residents? High school, Gp practice, dentist, local shops? I can see the plan for a primary school, but where will the children go after primary school?</p> <p>Fourthly, I can see there are plans to keep some green space up the golf course which is a positive, but what reassurance can you provide to residents that this will be honoured and not altered at the last minute. Green space is really important to the local area as it is one for the unique selling points for people being attracted to the area.</p> <p>Lastly, What reassurance can you give that those people who have been integral to developing the plan have taken the time to visit the area in order to understand the impact of the housing developments and the proposed access routes.</p> <p>I would also like to say that the reason I have emailed my comments is because the local plan is so large and overwhelming, it is very difficult to navigate. I expect this will impact on the number of people who feel able to comment, thus impacting on the influence local residents may have in shaping the future of our local area.</p>

Q6 Details	<p>To whom it may concern,</p> <p>I would like to comment as part of the consultation process for 2020 -2040.</p> <p>I realise the need for housing but have objection to the plan for land SP11 (4) and SP23 for use for homes.</p> <p>The impact on local space wildlife and bluebell woods does not appear to of been considered regarding the negative impact building ,increased footfall and loss of space access for local residents.the impact in reducing wildlife forna and flora and wellbeing.</p> <p>Taking up space used by us locally does not improve my or others lives or that of nature.</p> <p>I would think that the allotments and back lane will change negatively due to this increase in people... wildlife .space that has traditionally being public space given over to development.</p> <p>I have concerns for the Blue bell woods and hope whole heartedly that the plea to keep this safe is understand, that this exercise of consultation is undertaken to listen to understand , not listening to respond.</p> <p>It will be interesting to see if the mix of social and private development is considered also.</p> <p>I would propose that the country park area is moved to the SP11 and SP23 areas to protect the woods and keep the back lane area and allotments and wildlife that frequents these areas and the bluebells protected .</p> <p>SP11 AND SP23 moving across into the other spaces.</p> <p>Children and locals use the lane for dog walking and safe no traffic space, .especially the elderly as it has a flat easily accessed walkway.They use this daily .</p> <p>Making this a road with traffic will alienate this group who need a flat surface (not grassed fields) to walk on to keep mobile and enjoy back lane like the rest of us local residents.</p> <p>The small right of way coming through to the racecourse appears to cut through the semi detached houses round the back , this may hopefully a wrong interpretation on the map.i think this is a private access road for residents</p> <p>Please consider the concerns. I do hope other feedback mirrors mine.</p> <p>Thank you for the opportunity.</p> <p>Let's hope active listening occurs and the understanding that to improve wellbeing and newhomes is not at the expense of reducing that of existing residents and the surrounding nature.</p>

Order	209
Title	Policy SP23 Land at Cemetery Road / Park Road
Consultee Company / Organisation	Keele Parish Council
Consultee Position	Parish Clerk
Consultee Family Name	Powell
Consultee Given Name	Debra
Q4 Part of document	Policy
Q4 Policy	SP23
Q6 Details	<p>Keele Parish Council recognise that developing national policy with regard to the NPPF means that, in order for the plan to be considered under the existing regulations, the amount of housing delivered per annum must come within 200 of the proposed nationally set target. The proposed new algorithm is 593 per annum. Whilst we do not accept the proposed target of 400 houses per annum is robustly supported by the evidence provided, we recognise that, were the plan to fail at inspection, that this already inflated target would, in all likelihood, be subject to a mandatory increase. Thus we have no choice other than to support this target in the hope that the plan will pass.</p> <p>Many of the points made above about SP11 are relevant to this site which is adjacent to SP11. For brevity, we will not reiterate them. We note proposals to link this site to SP11(4). If this is done SP23 and SP11(4) are effectively a single site.</p> <p>In addition we note that the development includes land which visually forms part of the large field visible from the Gallowstree roundabout and Cemetery Road. Whilst we welcome the protection of the terminal portion of the field, it is not clear how this land will be 'protected' from speculative development in the future.</p> <p>We object to the proposal as it stands as it will impact on the local landscape and views.</p> <p>The provided plan shows a number of field boundaries, in order to protect the iconic approach to Keele University, up the sweep of the existing field to the ridge, we urge that the protected area be expanded to include the adjacent area, up to the blue line shown on the map below (see attachment). Not to do so risks damage to a key view (ref. SE10-c) for a relatively small gain in housing.</p>

Title	Policy SP23 Land at Cemetery Road / Park Road
Consultee Company / Organisation	Silverdale Parish Council
Consultee Position	Chair
Consultee Family Name	Adamczuk
Consultee Given Name	Henryk
Q4 Part of document	Policy

Q4 Policy	SP23
Q6 Details	<p>Introduction</p> <p>Regulation 19 consultation is the final point in the progress towards Planning Inspection, a public enquiry to consider whether the documentation is sound. This council consultation ends 7 October but ran parallel with government's 30 July planning reforms (ended on 24 September) focusing on growth of the national housing target, anticipating larger increases in housing for districts without a local plan in place, such as Newcastle.</p> <p>Officers and members are urging that the current 2024 plan is approved to avoid the district being held hostage by uncontrolled development that threaten the green belt and other areas, coupled with spectre of even higher numbers in a future revised Local Plan (appendix 3).</p> <p>Although future changes to National Planning Practice Framework (NPPF) will not be announced for many weeks, housing and infrastructure-led economic growth form the central plank of the Starmer government's national economic policy. Many of the previous government's planning policies are being reversed, including the re-introduction of mandatory housing targets and the proposed sharper methodology for assessing housing need at district level (based on stock numbers projected at 0.8 per cent annual increase and adjusted for relative housing affordability).</p> <p>National planning policy is fundamentally uncertain in the crucial period leading up to the completion of the Newcastle under Lyme documentation Final Local Plan.</p> <p>Key Points: Borough</p> <p>The main borough wide changes since the 2023 consultation are:</p> <p>An increase in the overall target for new housing to 400 per annum (total 8,000 over 20 years). An increased employment land provision and with it the inclusion of the Audley AB2 site and the housing demand component from this greater employment growth.</p> <p>The Local Plan excludes Silverdale from the 'rural centres' settlement hierarchy (PSD 2: Settlement Hierarchy Policy and PSD 3: Distribution of Development).</p> <p>The Rural Area Topic Paper puts certain rural villages in a stronger position for protection from the impact of new development. Our neighbour, Keele Parish is classified as rural. But the methodology takes no account of Silverdale Parish Council's rural/urban complexion. Silverdale is uniquely omitted from the list of Newcastle under Lyme's parishes. This parish is considered wholly urban and assimilated within the town without analysis in the Topic Paper.</p> <p>In terms of land use, more than half of Silverdale's 361 hectares is green belt, a fact not entertained in the Local Plan nor in the Topic Paper.</p> <p>Silverdale Key Points: (comparing consultations 2024 with 2023)</p> <p>Overall Development Strategy (PSD1)</p> <p>As mentioned earlier, PSD1 has a target of 400 per annum, which Silverdale Parish Council believes is too high.</p> <p>In addition, Silverdale's share of the 8,000 proposed new homes is 14 per cent compared with Silverdale's share of total population, which is 4 per cent. The proposed growth bears a disproportionate weight on this parish. 1,100 homes (some 2,200 people at the ratio of 1:2.2) equate to the size of four communities, each as large as Heritage Park.</p> <p>Silverdale PC accepts that some housing growth is needed to meet local housing needs and welcomes the two significant brownfield site allocations. It is the unprecedented scale of the change to the parish's physical and social structures that is our concern and how the increase in population would place far more pressure on health, education and other facilities and this one of the main concerns for many residents, who also question how the new facilities can be incorporated into the space populated by previous proposals.</p> <p>The provision of a safe and adequate access would be essential for all the allocated sites, including T&G 8.</p> <p>Housing Site Allocations SP11, SP23 and T&G 8</p> <p>Overall, loss of green belt land released from green belt at the former Golf Course and on land between Job's Wood and Park Road is unchanged. New boundaries are proposed at Redheath Plantation/Keele Driving Range on SP11 and at the Cemetery Road end of SP23. SP12 (Cope's Field) has been incorporated into SP11 within the Keele Country. The proposed loss of green belt at SP11 in 2024 is 69 hectares, marginally less than 2023.</p> <p>Additional proposals in 2024 cover a single-entry primary school, local centre/ health centre and a country park (Lime Park) with 4 new settlements. The published plans show vehicular access from Keele Rd via a spur into 3 parcels SP11 (1,2 and 3) and access from Ashbourne Drive to SP (1,2 and 3). Racecourse is the main access point to SP 11(4). Access to SP23 from Cemetery Road is another route but not clearly explained.</p> <p>Gypsy and Traveller Allocation</p> <p>Site T&G 8 allocated 5 pitches to land adjacent to Silverdale was a late inclusion into the Scrutiny Committee without proper consultation. See 4.2.</p> <p>BDP Masterplan 27 August</p> <p>Uploaded to the consultation portal as a late addition, Keele Park Masterplan arrived in the evidence basis as part of an objection to the Housing Policy Hou1 (see appendix 4). The report amounted to the landowner/promoter vision for the SP11 site with the consultants. It provides further grounds for SPC to make stronger representations concerning the infrastructure weaknesses in the proposals.</p> <p>The inclusion of new community and educational facilities and the country park were welcomed but the house numbers at 1,100 were still an additional 40% increase in the size of Silverdale's stock of houses in 2021. Silverdale objects to the proposed intensity of development and re-focus its criticism on the infrastructure by exploring grey areas arising from design of SP11 overlapping SP23 design.</p>

Transport congestion problems in the High Street, Pepper St and B5044 were introduced at Ashbourne Drive and at Racecourse (with the pressure of a primary school location). Members were dismayed there was no description of the improvements required to these poor surface quality local roads with narrow widths. Proposals as they stand will increase traffic flows through the centre of Silverdale and exacerbate movement problems at peak times. Additional concerns related to the possibility of rat runs through SP11 to and from Silverdale to A525. It was noted a new spur was identified for A525 but the number of homes accessed from Silverdale was the same as from Keele. The consistency of the treatment for SP23 alongside SP11 is questioned by the current presentation of the Local Plan.

BDP Lyme Park document, uploaded to the planning portal on 27 August indicated the rationale for SP11 yet the proposal for infrastructure did not address SP23 as clearly as SP11.

Silverdale's response

Silverdale Parish Council argues the current Local Plan is unsafe on specific planning policy grounds and then makes modifications as follows:

1.Green Belt

The proposed Keele Park Development with the main land use as a country park is not sound because the current land use is parkland and it is illogical to remove the protection of 40 hectares of parkland from the greenbelt to provide 30 hectares of development as undesignated land. The decision to show parcels of land as circular spaces especially at SP11(3) does not permit a clear boundary between mixed housing development and parkland as is required. It is unclear how the range of density options will be utilised in the 4 distinct communities.

Modification1: The country park should remain incorporated in the greenbelt and the boundaries should be regularised showing distinction between land uses.

The proposed new boundary for SP23 and the former site SP14 also known as The Cowfield is proposed as an open space so the same argument can be applied.

Modification2: The former site SP14 should remain incorporated the greenbelt.

The net effect of the modifications would protect up to 45 hectares of open space currently within the greenbelt and thereby reduce the harm of the development proposals on the greenbelt.

The proposed vehicular access to SP11 and SP23 suggests only minor improvements are required. No roundabouts. This is not a sound engineering proposition because, Silverdale's inner roads are all below A grade. The B5044 is the main surface providing through routes from the east to the west at Scot Hay and to the northwest A525. An additional route through the string of developments SP11 will have knock on effects to traffic in these principal routes.

Modification1:

Access to SP11(3) via Ashbourne Drive/Underwood Road and to S11 (4) via Racecourse/Park Road should be pedestrian not vehicular. This would make a considerable saving to the infrastructure costs of SP11 and eliminate congestion in Silverdale village.

Modification2:

Transport infrastructure modelling to integrate SP11 with SP23 and should take account of traffic across Silverdale as well as the A525.

3.Relationship between new centres and existing centres

Silverdale has not been included as a rural parish and part of SP11 is contained in Keele which is designated as rural so that presents a classification problem for the borough council in the settlement hierarchy. The BDP report is not explicit how the new centre at SP11(2) and SP11(1) relates to Silverdale Local Centre.

Modification: Silverdale Parish Council considers itself a village under the following definition and a claim to be a rural parish should be at least recognised and explored within the Settlement Hierarchy Methodology.

A village in the UK is a compact settlement of houses, smaller in size than a town, and generally based on agriculture or, in some areas, mining (such as Ouston, County Durham), quarrying or sea fishing. In addition, given SP11 includes land in Keele Parish, which is rural. Then part of that site lies within a rural parish. The methodology adopted in the Rural Topic Paper (2024) does not address boundary issues where a housing allocation covers two adjoining parishes.

4. Housing Allocation

4.1 At 1,090 the total capacity, 1,100 houses remain unchanged, despite several new facilities and confining development with the introduction of new parcels (Local Plan p70).

The BDP consultant report (see Appendix 4) asserts that certain range of housing densities will prevail in the parcels at SP11 but the addition of more development mix other than residential into a smaller area entails density and site boundary considerations. Spaces for new facilities as well as housing density are not disaggregated from land allocated to the country park.

Modification: The proposals should make the trade-off explicit in terms of boundaries and density between new community provision and the housing allocation at SP11 sites 1,2,3 and 4. See also modification at SP23.

4.2 Gypsy and Traveller Allocation 5 pitches

Site T&G 8 inclusion at Scrutiny Committee without any prior consultation with Silverdale Parish Council prior to the July 2024 Scrutiny Committee.

The decision is challengeable in the law because the land was acquired for the specific purpose of being kept as allotments. The previous change required Secretary of State's approval and the proposed change similarly requires Secretary of State's consent. The proposed use passes directly through the centre of a current statutory allotment site. Acre Allotments was recorded in the 1900 OS Map and in previous years, having been previously designated so for the use of Silverdale's citizens.

The decision is perverse, because

1 There is a long lease in place between the Borough Council and Silverdale Parish Council for the use of part of land, including the access road.

	<p>2 The proposed road access to T&G8 would be shared with Acre Allotment Association, sub tenants of Silverdale Parish Council. The proposed sharing of the road access could only occur if the road was improved to allow transport by vehicles pulling trailers. The necessary road improvement would be a necessary condition and coupled with new mains supplies for the pitches would threaten the continuation of the Allotment Association.</p> <p>3 Extensive remediation is required where there is a history of unregulated deposit of different kinds of toxic waste harmful to human ranging from unremediated cattle and pig faeces to heavy metal contamination (from mining and waste accumulation) and also buried asbestos.</p> <p>4 The development of this site would be unsustainable and environmentally harmful in another context. Northwest of the proposed access road is the Racecourse Community Woodland, between Mill Street and Park Street, containing many mature native trees and there are local springs which generate an ecology that would be harmed by the traffic and development proposed.</p> <p>5 The single lane traffic access to the Acre Allotment Association is unsuitable. The access road is best classified as a country lane so the proposed development would fall foul of the policy of biodiversity impacts on rural lanes, where they need to be widened, including destruction of adjoining landscape.</p> <p>Modification: The proposal should be excluded from the Allocation of Gypsy and Traveller Sites or as an alternative an access from Maries Way could avoid the conflict with the natural environment at the Acres and at Racecourse Community Woodland but that option must involve a full physical survey of the area to identify contaminants followed by remediation.</p> <p>Appendices</p> <p>1. Audley Parish Council have commented through their consultant on 3 October 2024 that a mistake may have occurred in the classification as a district centre.</p> <p>Audley is identified as a 'District Centre', with Wolstanton, Chesterton and Silverdale. This is an obvious error and Audley should be classed as a 'Local Centre', as in previous versions of the Plan.</p> <p>2. There has been an active Facebook group, PAPG operating to gather support and organised a workshop in September to help guide residents through the documentation.</p> <p>3. Based on Proposed Draft 2024 NPPF giving Newcastle a higher Minimum Housing Need Target at 593 set against the current 400.</p> <p>The guidance re-imposed national housing targets for England and applied an increase of 21% in the target (from 305,000 to 370,000). However, the government also proposed to redistribute the highest target for London to the rest of England. The proposed guidance argues the average level of housing should be around 0.8 % per year.</p> <p>4 Extract from BDP Lime Park p41 The four neighbourhoods would be:</p> <p>1. Keele Square SP11(1) A development of around 256 homes accessed from the existing roundabout on Keele Road. The neighbourhood is on gently sloping land and is planned around a landscape square which will also form a local centre.</p> <p>2. Keele Woods SP11(2) A development of 315 homes based on two points of access from Keele Road, one through the former golf clubhouse and the other through the driving range. It may be that both are not required depending on ecology and other constraints, but it is useful to keep the two options. This neighbourhood is also based around a green space with arms of development extending along the former fairways retaining the backs of tree planting.</p> <p>3. Ashbourne Drive SP11(3) This is proposed as a neighbourhood of 233 homes in the north-west part of the site, accessed from Ashbourne Drive. This scheme also has a village green and is planned to preserve the significant bank of trees running east to west through the site.</p> <p>4. Park Road SP11(4) The final, slightly smaller neighbourhood of just under 100 homes is on Park Road. This is physically separated from the rest of the site by a major bank of trees and would therefore feel like a very different place. The layout preserves the existing play area. This layout allows the site to be marketed either as one scheme or as four different development parcels providing maximum flexibility. The scheme going forward would need to be subject to a Design Code that would create distinct identities for each of the neighbourhoods. The public realm would be retained for public use and to maximise biodiversity net gain.</p>
Q7 Modification	<p>Modification1: The country park should remain incorporated in the greenbelt and the boundaries should be regularised showing distinction between land uses.</p> <p>The proposed new boundary for SP23 and the former site SP14 also known as The Cowfield is proposed as an open space so the same argument can be applied.</p> <p>Modification2: The former site SP14 should remain incorporated the greenbelt.</p> <p>The net effect of the modifications would protect up to 45 hectares of open space currently within the greenbelt and thereby reduce the harm of the development proposals on the greenbelt.</p> <p>Modification1: Access to SP11(3) via Ashbourne Drive/Underwood Road and to S11 (4) via Racecourse/Park Road should be pedestrian not vehicular. This would make a considerable saving to the infrastructure costs of SP11 and eliminate congestion in Silverdale village.</p> <p>Modification2: Transport infrastructure modelling to integrate SP11 with SP23 and should take account of traffic across Silverdale as well as the A525.</p>

	<p>Modification: Silverdale Parish Council considers itself a village under the following definition and a claim to be a rural parish should be at least recognised and explored within the Settlement Hierarchy Methodology.</p> <p>A village in the UK is a compact settlement of houses, smaller in size than a town, and generally based on agriculture or, in some areas, mining (such as Ouston, County Durham), quarrying or sea fishing. In addition, given SP11 includes land in Keele Parish, which is rural. Then part of that site lies within a rural parish. The methodology adopted in the Rural Topic Paper (2024) does not address boundary issues where a housing allocation covers two adjoining parishes.</p> <p>Modification: The proposals should make the trade-off explicit in terms of boundaries and density between new community provision and the housing allocation at SP11 sites 1,2,3 and 4. See also modification at SP23.</p> <p>Modification: The proposal should be excluded from the Allocation of Gypsy and Traveller Sites or as an alternative an access from Maries Way could avoid the conflict with the natural environment at the Acres and at Racecourse Community Woodland but that option must involve a full physical survey of the area to identify contaminants followed by remediation.</p>

Title	Policy SP23 Land at Cemetery Road / Park Road
Consultee Family Name	Jones
Consultee Given Name	Cllr David
Q4 Part of document	Policy
Q4 Policy	SP23
Q6 Details	<p>Cllr Dave Jones (Keele Ward) Response to Newcastle-under-Lyme Draft Local Plan</p> <p>I want to place on record my thanks to officers at the council over the work that has gone into the preparation of the regulation 19 local plan.</p> <p>As leader of the opposition group, I have submitted a formal response on behalf of the group that outline concerns with elements of the plan in general. Areas that we feel lack significant commitment from the council to ensure the impact of the proposed developments are mitigated sufficiently. In this response I will focus on concerns regarding the plan and the impact on the communities of Keele, Silverdale and the surrounding villages and centres. I have grouped these into specific themes:</p> <p>Significant Housing development in Keele and the surrounding areas (Sites SP11, SP23 and TB19): Taken together the plan seeks to develop approximately 1650 dwellings across these sites. These developments will place significant pressure on existing infrastructure, including the road network and health facilities. Within the plan, the only commitment to improving the road network is for a link road between the A525 and A53. I have significant concerns that given the extensive additional dwellings, combined with the pressures of commuter traffic to the university, this measure will fail to address the significant pressures on existing road network around Keele Bank, Silverdale and Milhouse. The SWECO report on transport modelling identifies this as a key issue. Under their modelled scenarios, assuming the link road does transfer the pressure off Keele Bank, and assuming a significant uptake of the new bus routes to Keele, that the additional burden of these dwellings will reduce the impact to the existing road network as at capacity. I have significant concerns that this ideal scenario will not unfold, and therefore these developments will have significant impact in worsening the current situation. The local plan refers to an integrated transport solution, with little detail as to how this will be implemented. We know that public transport in this part of the borough is heavily reliant on the bus network. I have significant concerns about the efficacy of public transport solutions, reliant on buses, due to the significant traffic pressures seen under current levels of dwellings. The introduction of 1650 dwellings will further increase the pressure, impacting on bus journey times and making the only public transport system less attractive.</p> <p>The cascade impact of these dwelling will be felt most acutely in the village of the Silverdale. With pressures on traffic exiting these developments via Keele Bank, most traffic will redirect through Silverdale village. The existing road network in Silverdale struggles with the pressure of continued development, and no improvements to the road network. The roads that link the northern segment of Silverdale village with the proposed developments on Keele Golf course are not designed for heavy traffic use. The undulated nature of the road network, coupled with on street parking will become a pressured rat run during peak commuting hours, place undue pressure on the residents of Silverdale.</p> <p>I am disappointed that a plan proposing to build a significant concentration of dwellings has not put forward a plan for improvement to the highway network. The lack of a tangible plan to mitigate these impacts, along with over-reliance on 106 funding to support transport improvements is a significant weakness that needs addressing before permission can be granted for these sites.</p> <p>The pressure on GP provision has not been appropriately assessed in this plan. The area benefits from two GP surgeries, one in Silverdale and one on the Keele University campus. I am led to believe that the new surgery proposed for the Golf Course developments will be a relocation of the Keele campus surgery, and therefore not additional provision. I have concerns that under the proposed developments, residents will struggle with provision of GP coverage.</p> <p>Further general concerns on the local plan are covered in the opposition group response. I would also draw the inspectors attention to the formal response submitted by Keele and Silverdale Parish Councils, Cllr Jacqueline Brown, and Save our Green Spaces (SoGS).</p>

Q6 Details	<p>Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.</p> <p>Natural England welcomes the opportunity to comment at this stage of the Local Plan and particularly supports the inclusion of policies on green and blue infrastructure, biodiversity, health and wellbeing, trees hedgerows and woodlands. We have reviewed the consultation documents and provide comments that relate to the soundness of the Local Plan and that are most relevant to our interest in the Natural Environment.</p> <p>Natural England has adopted a robust precautionary approach within this plan response. Whilst we welcome the content of the Local Plan, Natural England advises that the plan is currently at risk of being</p>

unsound and/or not legally compliant due to the potential impacts on air quality in relation to internationally designated nature conservation sites and the justification for the potential loss of 263ha best and most versatile (BMV) agricultural land. Further detail is provided below.

Natural England have also provided other advice within this submission relating to further improvements that could strengthen plan policies and specific strategic site options and related mitigation.

Do you consider that the Newcastle Under Lyme Plan is Sound and Legally Compliant?

Natural England notes that the plan is at the pre-submission stage and as such your authority is seeking confirmation on the soundness of the plan. Having reviewed the plan and supporting documents, Natural England considers the pre-submission plan in its current form is not sound or legally compliant, this is due to a lack of evidence with regards to air quality and the cumulative loss of BMV agricultural land both in a local and national context.

Air quality

Natural England notes that the Sustainability Appraisal states that "Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)

As Natural England understands it the current evidence base used to conduct the HRA cannot rule out adverse impacts on designated sites. The HRA states at page 22 3.4.16 "At the time of writing, the traffic modelling run for the final suite of Regulation 19 allocations had not been undertaken." Appendix A lists the local plans for neighbouring LPA's concluding that 'in combination' with plans and projects (approved and those yet to be implemented) they may trigger in-combination effects on European sites as a result of air quality, particularly as we understand it in the key commuting areas.

Natural England notes that Annual Average Daily Traffic (AADT) data and traffic modelling in the Strategic Transport Assessment (STA) concludes a potential reduction in travel and related air pollution at allocated sites as a result of a predicted preference in the use of public transport. We are surprised by this projected decrease in both traffic and related air pollution, particularly as one employment allocation site includes a 200-bay lorry park and increased congestion is predicted at junction 16 of the M6 where it joins the A500 in a rural location with no existing rural transport provision. The Sustainability Appraisal also notes that: "There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work". (p 206)

Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot therefore currently be ruled out at the following internationally designated sites:

- Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI
- Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI

The HRA outlines that the main source of ammonia emissions is agricultural practice, and that material increases in NH3 emissions are unlikely to be associated with the proposed local plan. At Black Firs and Cranberry Bog and Oakhanger Moss, any increase in nitrogen deposition has the potential to exacerbate pollution levels and thereby undermine the reasons for notification of these sites as a Ramsar.

Ammonia can be emitted from vehicle exhaust emissions as a by-product of the catalytic conversion process designed to reduce emissions of nitrogen oxide. As traffic composition transitions toward more petrol and electric cars (i.e., fewer diesel cars on the road), catalytic converters may aid in reducing NOx emissions but result in increased ammonia emissions. Ammonia emissions from road traffic therefore could make a significant difference to nitrogen deposition close to roads.

Natural England therefore advise that ammonia sourced from traffic emissions should be included for assessment within the local plan HRA, as the impact from this source on designated sites is currently unclear. For further information please see this report from Air Quality Consultants (AQC) that looks at ammonia emissions from roads for assessing impacts on nitrogen-sensitive habitats. Whilst we are aware that the current CREAM model created by AQC used to assess ammonia emissions from road traffic has not been peer reviewed, at this time it has been recognised as a Best Available Tool and we deem it appropriate to be used where any caveats associated with this model are also considered within the assessment. An assessment based on the best available approach is necessary. The next stage of assessment can then consider uncertainties in the model and site specifics to decide if mitigation needs to be considered.

Further work is therefore required to inform the Habitat Regulations Assessment. Natural England will engage with the Local Planning Authority in order to produce a Statement of Common Ground (SoCG) on this matter.

'Best and most versatile' (BMV) agricultural land

Natural England notes that "the proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land. A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of 'best and most versatile' (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services". (page 74 Sustainability Appraisal).

Under the Town and Country Planning (Development Management Procedure) (England) Order 2015 (DMPO) Natural England is a statutory consultee on development that would lead to the loss of over 20ha of 'best and most versatile' (BMV) agricultural land (land graded as 1, 2 and 3a in the Agricultural Land Classification (ALC) system, where this is not in accordance with an approved plan.

Natural England would like to understand how the local planning authority have produced the evidence base and options assessment which informs the strategic site allocations.

Natural England will engage with the local planning authority to consider the cumulative impacts of the loss of BMV both in the local and national context and the challenges related to environmental impact, infrastructure, and the requirement to deliver a balance between the need for development and the potential urbanisation of the countryside including the potential mitigation measures that need to be considered.

NPPF paragraph 174e states:

Planning policies and decisions should contribute to and enhance the natural and local environment by:

- ... preventing new and existing development from contributing to, being put at unacceptable risk from, or being adversely affected by, unacceptable levels of soil, air, water or noise pollution or land instability.

Development should, wherever possible, help to improve local environmental conditions such as air and water quality, taking into account relevant information such as river basin management plans.

Natural England provides guidance to inform further assessment of air quality and the loss of BMV agricultural land in our response to the content of the plans Strategic Policies as set out below.

Do you consider that the Newcastle-under-Lyme Borough Council Regulation 19 pre-submission draft Plan is compliant with Duty to Co-operate?

In terms of working with neighbouring authorities, Natural England notes that initially the plan was intended to be produced jointly with the City of Stoke-on-Trent, the plan does not however currently present an evidence base that demonstrates that a collaborative approach has been adopted and that the Duty to Co-operate has been fully complied with.

The Sustainability Appraisal states that: "Overall, there is potential for a cumulative adverse effect on biodiversity, owing to the fragmentation of the ecological network... Where a large amount of development is located on previously undeveloped land surrounding rural settlements, this is likely to produce a long-term irreversible negative cumulative effect regarding the urbanisation of the countryside" (p 71)

Natural England would therefore like to further understand how the areas identified to meet the City of Stoke-on-Trent's unmet employment needs are justified and appropriate and whether meeting some of the employment needs of the City of Stoke-on-Trent has led to the need to release or safeguard more land from the Green Belt in Newcastle under Lyme. If this is the case, what are the exceptional circumstances for doing this and how does this align with the allocated sites options assessment?

Recreational Pressure

In terms of the South Pennine Moors SAC and recreational impacts, the Local Plan does comply with the Duty to Co-operate. Natural England recommends that reference is made to the 'Recreation use of the South Pennine Moors and implications for strategic housing growth' report by Footprint Ecology Ref 778 date 27th March 2024. This report should both inform the evidence base and ensure that policies relating to open space/green infrastructure are as rigorous and robust as possible.

The report concludes that more data/evidence is required to determine if recreational use is causing an impact across to the South Pennine Moors and to get a better understanding of the scale and location of any impact. Natural England notes that the report records 7,000 additional dwellings in Newcastle-under-Lyme over the plan period rather than the 8,000 included in this regulation 19 submission. Newcastle-under-Lyme Borough Council should therefore continue to work with local authority and other partners to ensure coordinated and continued cross boundary action.

Other matters

Natural England has specific concerns related to allocations in the Green Belt. Notwithstanding that, Natural England considers most of the policies within the plan to be sound and deliverable. The plan is consistent with national policy with regard to those policies that are within Natural England's remit. Further information on strengthening policies including but not limited to Soils and best and most versatile (BMV) agricultural land, preventing loss and fragmentation of habitats and supporting green infrastructure are provided below.

Vision and Strategy

Natural England notes that the Plan's vision and emerging development strategy set out a framework for the future development of Newcastle-under-Lyme and addresses the needs in relation to housing, the economy, community facilities and infrastructure, including specific reference to a proposed employment site allocation.

This vision and the related objectives should also set out the environmental ambition for the plan area and form the basis for nature recovery and enhancement, supported by the policies and proposals in the plan.

Natural England advises that the vision should also incorporate more on the local ecology and landscape features which underpin local distinctiveness such as the "strong rural character with long open views across the surrounding rural landscape, towards more distant hills often framed by trees" (p 69) Part 3 Site Specific Landscape & Visual Appraisal. "Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms" (p 187) Sustainability Appraisal.

Strategic Objectives

Natural England welcome strategic objective SO-4 relating to carbon reduction and climate change, however we do not feel that this group of thirteen strategic objectives value or reflect the Boroughs whole ecology and landscape including but not limited to the protection of soil and best and most versatile (BMV) agricultural land. We would suggest that additional objectives are added relating to: air quality, water quality and quantity, soils and landscape.

Natural England would also like to see stronger reference to the Nature Recovery Network which is one of the specific aims of the Environment Act 2021 and will underpin the approach to the enhancement of nature.

Air quality is a major threat to habitats and species. Many ecological sites are exceeding their critical loads and levels for ammonia, nitrogen deposition and acid deposition. The strengthening of the policies and the rationale behind site allocations within this plan will ensure that new development does not contribute to the further deterioration of habitats and species due to air pollution. Further advice on strengthening the plans evidence base with regards to air quality is provided in the links below:

Natural England's approach to advising competent authorities on the assessment of road traffic emissions under the Habitats Regulations (NEA001)

CIEEM Advisory Note: Ecological Assessment of Air Quality Impacts

Strategic Policies

5 Planning for Sustainable Development

Policy PSD5: Green Belt

Natural England notes that this policy “aims to protect the Borough’s essential open spaces, prioritise the use of brownfield land, and guide potential future development in accordance with the National Planning Policy Framework (NPPF)”.

Natural England however notes that amendments to the Green Belt boundary are proposed in the form of 14 site allocations to accommodate both the growth requirements of the borough and the employment requirements of wider Stoke-on-Trent conurbation. Natural England’s has some site-specific concerns about the potential impacts of some of the green belt sites selected on the natural environment with regards to habitat loss, fragmentation and justification for the loss of BMV agricultural land.

We note the LPA’s intention to release and compensate for the loss of green belt and prioritise the use of suitable brownfield land. However, the site allocations in the green belt would result in the potential loss of 263ha of Best and Most Versatile (BMV) agricultural land. The council should satisfy itself that it is making a balanced decision for sustainable development, the Sustainability Appraisal concludes that: “The Green Belt Study assessed land parcels against the contribution they make to the five purposes of the Green Belt on a four-point scale... Three allocated sites (AB12, AB33 and TK10) are located in areas which make a ‘strong’ overall contribution to the purposes of the Green Belt where “the site contributes to the purpose in a strong and undeniable way, whereby removal of the site from the Green Belt will detrimentally undermine this purpose” (p101)

“Site allocations on previously undeveloped land or that would result in a net loss of GI / vegetation could result in a reduced capability of the environment to provide ecosystem services including carbon storage, the storage and filtration of water including natural flood protection, as well as reduced availability and connectivity of habitats within the green network enabling movement of species. (p 165)

Strategic Site Allocations

Natural England suggests that the HRA should include a “requirement for project-level/site specific HRA’s and targeted ecological surveys”.

The Sustainability Appraisal concludes that:

“Some 12 allocated sites partially coincide with priority habitats, where 3.43% of the total site allocation areas coinciding with priority habitats which include deciduous woodland, good quality semi-improved grassland and Site BL18 coincides with lowland fens which is a very high distinctiveness habitat in the BNG handbook (2024). These habitats can support a range of species of principal importance. Allocated Site KL15 is adjacent to ‘The Butts and Hands Wood’ ancient woodland, with a further 20 allocated sites located in close proximity to ancient woodlands. P158

“Six allocated sites (Sites CT20, HD10, KL13, RC8, SP11(2) and SP23) are located within areas of ‘high’ or ‘very high’ habitat distinctiveness that provide high biodiversity value. Whilst in many cases these habitats can be conserved alongside development, it is likely that in some cases fragmentation or loss of habitats and connections between habitats will occur”

“The majority of allocated sites are located on previously undeveloped land, which would result in the loss of soil resources and the ecosystem services they provide. (p 159) The development of new buildings on previously undeveloped land would be expected to result in a direct loss of soil resource, with little or no scope for mitigation” (p 216)

“The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution. (p 68)

For all sites, Natural England advises that the hydrological catchment within which the site sits is taken into consideration, with regards to the potential impact of the developments proposed on the adjoining watercourses and wider catchments, including but not limited to surface water runoff (including during construction), existing and required capacity of Waste Water Treatment Works (WwTW) and water supply and flooding issues. Each site will require site specific investigation, and the council should understand the impact of all the sites put forward individually and in combination.

Natural England has specific concerns and or requires further information about the following ‘Strategic Site Allocations’ which could potentially impact on designated sites as a result of air and water quality and/or lead to the loss and / or fragmentation of priority habitats and BMV agricultural land:

BL18 – Clough Hall Playing Fields, Talke

Natural England would like to further understand this larger residential development proposal with regards to the potential impacts on the lowland fen habitat.

KL13 & KL15 – Land South of A525 between Keele University and Newcastle

Natural England notes this proposal for Employment development is immediately adjacent to ancient woodland priority habitat.

HM28 – Land off East Lawns, Betley

Existing and projected water quality issues at Betley Mere will need to be considered with regards to this allocation.

LW53 – Loggerheads

Natural England notes this residential housing development proposal is located within the IRZ of protected sites (Burnt Wood SSSI) which states that development proposals of 50 or more homes outside existing settlements/urban areas in these zones should be consulted upon with Natural England.

SP11 – Former Keele Municipal Golf Course

This Larger residential development is categorised in the Landscape Assessment as having a Major adverse impact on the local Landscape.

AB2 – Land Adjoining Corner of A500 and M6 Southbound

Natural England notes this proposed employment allocation released entirely from the green belt, which comprises 70ha of grade 2 BMV agricultural land. The Landscape study concludes that the: "Proposed development scenario is likely to have a major adverse effect on the SA objective with no satisfactory mitigation possible" (p 15). With regards to potential Air Quality impacts on protected sites Natural England notes from the options analysis that "The loss or potential moving of a layby to enable access to the site could be problematic indicating potential issues with site access and traffic flow. An increase in HGV and personal vehicle traffic is anticipated, which could lead to potential congestion and air pollution in the area". Natural England would therefore also like to understand the evidence base further including the rationale for an alternative site TK30 @ Talke A34 / A500 roundabout being ruled out.

Policy PSD6: Health and Wellbeing

Natural England welcome this policy direction in terms of safeguarding health and amenity and supporting healthy communities, through the protection and provision of high-quality open spaces, including allotments and the promotion of active travel transport choices. Further information on joining up Nature Recovery and Green Infrastructure (GI) with health priorities is set out below. If more cities and towns can be creatively designed and managed, with nature and communities at their heart, we will see nature and people thrive. This is something we set out to inspire at Natural England when developing the Green Infrastructure Framework and Design Guide. Natural England's People and Nature survey tells us that, for 82% of people 'being in nature makes me happy'. With the cost-of-living crisis, 'free' places like local parks and greenspace, have become even more important. The value of these spaces for the economy is estimated at £28.7 billion per year.

Green infrastructure in towns and cities provides places to relax, exercise, and spend time outdoors; cools urban areas; reduces flooding by allowing water to permeate the ground rather than overwhelm our drains; increases biodiversity and helps to reduce inequalities in access to nature. Options assessments for development sites and related green and blue Infrastructure within and between developments, green spaces and designated sites should; include soft transition and consider potential direct and indirect implications on sustainable use for example visitor pressure and transport / access options.

The natural environment affords the best 'natural' play opportunities for children while offering multifunctional nature-based solutions to climate change etc. These can be blended into wildlife rich green infrastructure and green open spaces that can act as destination play sites for local children (See best practice at Play England and Play Wales) that have proven health and wellbeing value.

Evidence for nature play and health:

Play, naturally: a review of children's natural play

Nature for health and wellbeing | The Wildlife Trusts

Good practice in social prescribing for mental health: the role of nature-based interventions - NECR228 (naturalengland.org.uk)

6 Climate and Renewable Energy

Whilst Natural England welcomes this group of policies we recommend including Policy CRE1: Climate Change and Policy CRE2: Renewable Energy within the Sustainable Environment (SE) group of policies to achieve a collective strategic focus on sustainable development and working toward achieving net zero alongside the SE policies relating to Pollution and Air Quality (SE1) and requirements for sustainable water management measures to reduce water use, natural flood protection features alongside the specific policies on Sustainable Drainage Systems (Policy SE4:)

Natural England continues to work with the LPAs across the region on understanding air pollution across area boundaries (see comments and links in objectives section.)

10 Infrastructure and Transport Policy.

Policy IN4 Cycleways, Bridleways and Public Rights of Way

Natural England welcomes the inclusion of this group of policies which seek to maintain and enhance the network of public rights of way that cross the borough. We note that the sustainability appraisal states that "the borough has relatively poor accessibility to the cycle network and is the lowest performing in the county for walking zones" (p 206) and that, "eight allocated sites (AB2, AB12, AB33, HD10, KL15, MD29, SP11(3) and TK10) do not currently have safe pedestrian or cycle access adjacent to the site, where site end users may be reliant upon less sustainable modes of transport including private car use". (p 180)

11 Sustainable Environment

Natural England welcomes this group of policies and has the following policy specific comments:

Policy SE1: Pollution and Air Pollution.

Natural England welcomes this policy that notes that development proposals which are likely to result in detrimental impacts on air quality, will not be permitted unless it can be demonstrated that mitigation measures effectively address these impacts. (Comments on Air Quality are also provided on page 2 and 4 of this letter). The promotion of sustainable and active travel options, low-emission technologies and enhancement of green infrastructure to absorb air pollution is also noted. (see comment above re integrating the group: 6 Policies Climate and Renewable Energy).

Policy SE7: Biodiversity Net Gain

Natural England supports the inclusion of a policy on BNG. We suggest the following minor amendments to further improve the plan policy.

The BNG policy should make it clear that biodiversity net gain is not applied to irreplaceable habitats, and that any mitigation and/or compensation requirements for Habitats sites should be dealt with separately from biodiversity net gain provision. The policy should also set out how biodiversity net gain will be delivered and managed through the lifetime of the scheme and including monitoring requirements. This should include indicators to demonstrate the amount and type of gain provided through development. The indicators should be as specific as possible to help build an evidence base to take forward for future reviews of the plan, for example the total number and type of biodiversity units created, the number of developments achieving biodiversity net gains and a record of on-site and off-site contributions.

Natural England notes that the Sustainability Appraisal states "Despite the BNG provisions at the site level, there remains potential for a cumulative adverse impact on biodiversity at the landscape scale, owing to incremental habitat losses. As a result of development within the Local Plan undeveloped land will be lost which will include the loss of soil resources, habitats recognised as being of 'high' and 'very

high' distinctiveness, and potentially ecological links between biodiversity assets, whereby the policies will not be expected to fully mitigate the fragmentation of the ecological network. Fragmentation of the ecological network across Newcastle-under-Lyme is expected to be a long-term and permanent significant effect." (p 162)

Policy SE8: Biodiversity and Geodiversity

Natural England supports the inclusion of this policy to protect the Boroughs internationally, nationally and locally designated sites important for their biodiversity value and to enhance the natural environment and work with partners toward Nature Recovery.

We particularly welcome the plans recognition of the value of "wider ecological networks" stating that "Other sites, both individually and collectively, that are not designated can also contribute towards protecting and enhancing diversity of species locally".

Policy SE10: Landscape

Natural England welcomes this policy aimed at ensuring that "development proposals should protect and enhance the character, quality, beauty, and tranquillity of the Borough". We note from the sustainability appraisal that "The entirety of the south of the borough is identified as being high in relation to landscape sensitivity, which starts in Audley in the north and covers the southern area of the borough, including Loggerheads and Almington." We agree that "Alteration of the landscape character is a long-term and permanent significant effect... There is potential for a cumulative adverse effect on landscape character resulting from the development proposed in the Plan". (p193) SA.

Natural England has divided England into 159 distinct natural areas called National Character Areas (NCAs) Newcastle-under-Lyme falls within two NCAs: Shropshire, Cheshire and Staffordshire Plain: gently rolling plains dominated by intensive dairy farming, beef and arable production; The Potteries and Churnet Valley: strong contrast between the industrialised landscape of the Potteries and the pastoral, strongly dissected hills and small plateaux that flank the Churnet and Dove valleys.

Natural agrees with the following statement in the sustainability appraisal: "Although various policies aim to ensure that development conserves and enhances landscape character and distinctiveness, when combined with Local Plan policies that support infrastructural improvements such as for transportation, water, and waste, this is likely to lead to a long-term and irreversible cumulative adverse effect on landscape character and tranquillity and associated indicators such as dark skies." (p72)

Policy SE11: Trees, hedgerows, and woodland

Natural England welcomes this plans recognition that "Trees, hedgerows, and woodlands are integral to the distinctive character and ecological health of the Borough of Newcastle-under-Lyme, defining landscapes across both urban and rural settlements." And that "This policy prioritises the protection of existing natural assets, seeking to not only preserve, but actively enhance, these valuable features wherever possible".

Policy SE13: Soil and Agricultural Land

Natural England has concerns about the justification for the loss of BMV agricultural land within this plan. "The proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land, A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of 'best and most versatile' (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services." (page74) (SA)

Natural England notes that policy SE13 states: "Outside of sites allocated for development in the Local Plan, development proposals should avoid the loss of best and most versatile agricultural land (BMV) unless it can be demonstrated that the benefits of development clearly outweigh the loss of the land and every effort has been made to mitigate for the overall impact of the development on best and most versatile agricultural land."

With regards to Soil and Agricultural Land Quality, Natural England advises that The Local Plan should give appropriate weight to the roles performed by the area's soils. These should be valued as a finite multi-functional resource which underpin our wellbeing and prosperity. Decisions about development should take full account of the impact on soils, their intrinsic character and the sustainability of the many ecosystem services they deliver.

The 25 Year Environment Plan (25YEP) sets out government action to help the natural world regain and retain good health, including highlighting the need to:

- protect the best agricultural land
- put a value on natural capital, including healthy soil
- ensure all soils are managed sustainably by 2030
- restore and protect peatland

Soil is a finite resource which plays an essential role within sustainable ecosystems, performing an array of functions supporting a range of ecosystem services, including storage of carbon and water, the infiltration and transport of water, nutrient cycling, a buffer against pollution and provision of food. In order to safeguard soil resources as part of the overall sustainability of the development, it is important that the soil resource is able to retain as many of its important functions as possible. This can be achieved through careful soil management and appropriate, beneficial soil re-use, with consideration on how any adverse impacts on soils can be avoided or minimised.

The conservation and sustainable management of soils is reflected in the National Planning Policy Framework (NPPF), particularly in paragraph 180(a), 180(b) and 181 (footnote 62). When planning authorities are considering land use change, the permanency of the impact on soils is an important consideration. Particular care over planned changes to the most potentially productive soil is needed, for the ecosystem services it supports including its role in agriculture and food production.

Plan policies should therefore take account of the impact on land and soil resources and the wide range of vital functions (ecosystem services) they provide in line with paragraph 180(b) of the NPPF.

Soil Plan Policies

We strongly advise that at a minimum, the plan includes core policies for:

- the protection of best and most versatile (BMV) agricultural land (Grades 1, 2 and 3a in the Agricultural Land Classification (ALC)); and
- for the protection of and sustainable management of soils as a resource for the future.

-Areas of poorer quality land (ALC grades 3b, 4, 5) should be preferred to areas of higher quality land (grades 1, 2 and 3a).

-Recognise that development has an irreversible adverse impact on the finite national and local stock of BMV land.

-Conforms to NPPF and Planning Practice Guidance (Natural Environment and Minerals).

-Requires detailed ALC surveys to support plan allocations and for subsequent planning applications (for all sites larger than 5 ha). ALC surveys to support plan allocations and for subsequent planning applications for smaller sites (1 – 5 ha) would be welcomed.

-Recognise that development (soil sealing) has a major and usually irreversible adverse impact on soils.

-Soils of high environmental value (e.g., wetland and carbon stores such as peatland, low nutrient soils; or soils of high environmental value in the local context) should also be considered as part of ecological connectivity (Nature Recovery Network / Green Infrastructure).

-Requires soil handling and sustainable soil management strategies based on a detailed assessment of the soil resource based on best practice guidance (for all sites larger than 5 ha), ideally as part of the planning application process for major sites to help inform master-planning, and to safeguard the continued delivery of ecosystem services through careful soil management and appropriate, beneficial soil re-use. Soil handling and sustainable soil management strategies for smaller sites (1 – 5 ha) would be welcomed.

-Reference should be made to Defra's Construction Code of Practice for the Sustainable Use of Soils on Construction Sites

-In addition, for minerals and other temporary forms of development, plans for reinstatement, restoration and aftercare will be required (or for solar, a commitment to do so if the operational life is in decades); normally this will be return to the former land quality (ALC grade)

-Refers to soils issues within relevant policy areas such as renewable energy, climate change, green infrastructure and biodiversity net gain, flood schemes, managed realignment, development design and landscaping.

Policy SE14: Green and Blue Infrastructure

Natural England supports this policy. Well-designed cross boundary multi-functional green infrastructure contributes greatly to a number of benefits both for people and nature. Your green and blue (for example cross boundary canals) infrastructure should dovetail with your biodiversity net gain strategies to maximise benefits.

We would advise that the Local Authority also considers Natural England's Green Infrastructure Framework of Principles and Standards for England. As stated in our document, "Green infrastructure (GI) is part of the solution to many of the challenges we face; health inequalities, biodiversity crisis, climate change, nature recovery and levelling up. The GI framework supports local authorities, developers, parks and greenspace managers and local communities to enhance and create new good quality green infrastructure."

We would also suggest reference is made to the emerging Local Nature Recovery Strategy. Preparing Local Nature Recovery Strategies (LNRS) is a statutory requirement under the Environment Act 2021. LNRS are designed to work closely alongside other measures in the Act including supporting the delivery of mandatory biodiversity net gain and providing a focus for a strengthened duty on all public authorities to conserve and enhance biodiversity. They will also underpin the Nature Recovery Network, alongside work to develop partnerships and to integrate nature into our incentives and land management activities. Each LNRS will be specific and tailored to its area. The responsible authorities and people involved in preparing a strategy can choose how they want it to look, but every strategy must contain:

1. A local habitat map.
2. A written statement of biodiversity priorities. Statutory guidance for responsible authorities explains in detail what these 2 things should contain. Together they set out what the strategy is aiming to achieve and what practical actions will help do this. They will also propose where actions could be carried out for best effect and to connect and expand existing areas that are important for nature. We expect local nature recovery strategies to propose actions such as the:
 - creation of wetlands
 - restoration of peatlands
 - planting of trees and hedgerows
 - more sustainable management of existing woodlands and other habitats like grasslands
 These actions are intended to help nature itself and to also help improve the wider natural environment.

Whilst the Staffordshire Local Nature Recovery Strategy (LNRS) is currently a work in progress, Newcastle-under-Lyme Borough Council Regulation 19 pre-submission should still be consistent with NPPF Paragraph 185 in terms of setting out local habitat priorities and identifying potential measures by which they can be achieved, alongside mapping areas that could become of particular importance in the future.

Natural England encourages Newcastle Under Lyme Borough Council via their Local Nature Recovery Strategy to actively develop cross border cooperation between other Local Planning Authorities (LPA) (for example Staffordshire Moorlands Borough Council) in coordinating land development projects that impact on local biodiversity sites to ensure that local biodiversity corridors are maintained and link up other local important sites for nature conservation.

This is a good way of achieving nature recovery and preparing to deliver the LNRS alongside enabling the local authority and its partners to identify, map and safeguard site areas, including green and blue infrastructure opportunities and interlinkages.

Habitats Regulations Assessment

Natural England notes that this Local Plan is not directly connected with or necessary to the management of any European site. A screening assessment has been undertaken which identified a number of Likely Significant Effects (LSE) associated with the Local Plan. Taking no account of mitigation measures, the HRA concludes that Local Plan has the potential to affect the following European sites:

- Cannock Chase SAC
- Humber Estuary SAC, SPA and Ramsar
- Mersey Estuary SPA and Ramsar
- Midland Meres and Mosses Phase 1 Ramsar
- Midland Meres and Mosses Phase 2 Ramsar

-Pasturefields Salt Marsh SAC

-Peak District Dales SAC

-Peak District Moors (South Pennine Moors Phase 1) SPA

-Severn Estuary SAC, SPA and Ramsar

-South Pennine Moors SAC

-West Midland Mosses SAC

We welcome that your HRA includes the Humber Estuary SAC, SPA and Ramsar site which is hydrologically connected to the river Trent. If the Local Plan resulted in significant water pollution, this European site could be affected and has therefore been screened in, in relation to water quality only, on a precautionary basis. Natural England however notes that the Sustainability Appraisal identifies "A long-term cumulative adverse effect ...in terms of water quality" (p 148) as a result of the plan, this is not fully reflected in the current HRA.

Natural England note that the Sustainability Appraisal states: that "the entirety of the borough falls within IRZs of one or more SSSIs. All five SSSIs within the borough are in 'unfavourable' condition: Burnt Wood SSSI, Maer Pool SSSI, Black Firs and Cranberry Bog SSSI (Midlands Meres and Mosses Phase 2 Ramsar), Betley Mere SSSI (Midlands Meres and Mosses Phase 1 Ramsar) and Metallic Tileries, Parkhouse SSSI."

Natural England are also aware of the extensive network of ancient woodland spread across the borough, totalling 707.60 hectares, as well as a large quantity of priority habitats, totalling 1,791 hectares.

Natural England agree that the following designated sites and related priority habitats in adjoining LPA areas may also be affected by development through several pathways, including fragmentation, recreational pressure and/or pollution (including Air and Water Quality). Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI, Wybunbury Moss SAC SSSI, Tyrley Canal Cutting SSSI, King's and Hargreaves Wood SSSI, Gannister Quarry SSSI, Roe Park Woods SSSI, Wetley Moore SSSI, Churnet Valley SSSI, Hatherton Flush SSSI, Sounds Heath SSSI, Ford Green Redebed SSSI, and Cop Mere SSSI.

It is noted that the Appropriate Assessment stage of the HRA assessed potential impacts by topic;

-Impacts on designated features affected by a possible deterioration in air quality

-Impacts on water quality and quantity associated with increased levels of built development.

-Impacts associated with increased recreational pressure at European sites; and

-Consideration of impacts at associated functionally linked land.

Natural England notes that the HRA also factored the following into the assessment process "the protective framework provided by the Local Plan and existing protection measures set out in high level strategic policy and existing planning policy frameworks that serve to help overcome the identified potential adverse effects" and that "taking into consideration these factors, it is concluded that the Local Plan would have no adverse impact on site integrity at any European site, either alone or in-combination.

Natural England disagree agree with this conclusion that for those Habitats sites in the area of search with features sensitive to air pollution, adverse effects on their integrity, alone or in-combination, can be ruled out for the reasons set out at the beginning of this letter on page 2 and repeated in part below:

Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot currently be ruled out at the following internationally designated sites:

•Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI

•Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI

Natural England are currently in discussion with a number of the Staffordshire and West Midlands LPA's with regards to the cumulative impacts of air quality. We advise that further work is required to inform the HRA. The HRA should demonstrate that there are no adverse effects on integrity of Habitat sites as a result of this Local Plan, alone and in combination with other plans and projects. With regards to allocated sites, it is unclear whether the individual sites put forward in the Local Plan have been assessed through the Habitat Regulations Assessment process and how mitigation will be applied here.

Sustainability Appraisal

Natural England has reviewed the Sustainability Appraisal (SA) and included comments taken from the document throughout our response.

The SA is a comprehensive document which should be reviewed in strengthening the HRA, particularly with regards to residual adverse effects that would be expected to remain in terms of wastewater following the implementation of the Local Plan policies. (p 141) Natural England notes that "Increased pressure on wastewater treatment has the potential to be a long term and potentially permanent significant effect" (p 142)

The SA recognises the local distinctiveness of the plan area;

"The Borough itself is largely rural in nature and supports some high-quality agricultural land, but is more heavily built up towards the north east surrounding Stoke-on-Trent. (p 8)

Newcastle-under-Lyme has a strong rural character with a high-quality landscape and countryside, with some areas identified as being sensitive to change as a result of new development. (p 19)

Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms make up the key features of some of these Landscape Character Types." (p 20)

Sets out the area specific barriers to achieving sustainable growth;

"Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)

Loss of tranquillity The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution.(p 68)

"The pre-mitigation SA assessments identified negative impacts in relation to air quality due to the proximity of sites to major roads, landscape character due to the location of sites within areas of high landscape sensitivity, close proximity to the PRoW network and potential for coalescence and urban sprawl, habitat sites, priority habitats, habitat distinctiveness, loss of undeveloped land, 'best and most versatile' (BMV) agricultural land, coinciding with mineral safeguarding areas (MSAs) and areas of surface

	<p>water flood risk (SWFR); and access to healthcare facilities, schools, the local cycle network and railway network. (p 40)</p> <p>There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work. (p 21)</p> <p>Trends in transport choice are unlikely to change significantly, and private car use would continue to increase as the selected method of transport to work, with potential adverse impacts on air quality in the borough.”(p 23)</p> <p>Considers the local and cumulative significance of soil loss alongside the ecological implications: “Loss of soil resources, BMV land and ecosystem services The proposed allocations would cumulatively result in the loss of up to approximately 342ha of previously undeveloped land, including up to 263ha of BMV agricultural land. The proposed development would be expected to reduce the ability of the local soil biome to effectively provide ecosystem services, to some extent. Additionally, the loss of permeable soils could potentially increase the risk of flooding and result in a loss of biodiversity across the Plan area. Loss of soil can also result in an increase in soil erosion and have subsequent impacts on agricultural yield.(p 68) The majority of the borough is ALC Grade 3 soil, with areas of ALC Grade 2 scattered across the borough. Grade 2 and potentially Grade 3 represents some of the borough’s BMV agricultural land and should be conserved wherever possible (p 21)</p> <p>A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of BMV land to be lost as a result of the development proposed in the Local Plan.” (p 59)’</p> <p>Other Advice</p> <p>Further general advice is provided within Natural England Advice Note – Local Plans February 2024, attached at (Appendix A) - see attachment</p>

Site G&T 8 Land West of Silverdale Business Park

Comment ID	NULLP6
Order	211
Title	Site G&T 8 Land West of Silverdale Business Park
Consultee Family Name	Barber
Consultee Given Name	Alan
Q4 Part of document	Paragraph
Q4 Paragraph number	138
Q5 Legally compliant	No
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>1. The area concerned has been used as allotment and since the late 19th century and appears on maps as designated land. The site was run by Newcastle Borough Council until 2015 when management was passed to ourselves. As such, my understanding, is that the this land can only be changed from allotment land to other is use is with permission of the Secretary of State for the Environment.</p> <p>2. The plan shows that access to the Traveller/Gypsy site would be via the main access gate off Park Road, which leads onto a Public Footpath (No 22) controlled by Staffordshire County Council.</p> <p>3. When the site was passed to us to "Self Manage" the area of land which the proposal covers was supposed to have been cleared by Newcastle Borough Council, however a large quantity of white asbestos (Chrysotile Asbestos) was buried with the full knowledge of the Council and never removed due to cost. It is common knowledge that when the garage, operating from the adjacent business park, used vehicle oil was illegally disposed in that area. This, with the asbestos, renders the land as contaminated.</p> <p>There are no services to this site other than via Cemetary Road or Park Road, which would again cost an enormous amount of money.</p>
Q7 Modification	<p>1. The site is unsuitable for human habitation due to the land being contaminated, which would cost an enormous amount of money to remove the same.</p> <p>2. The proposed access road from Park Road would require the locked access gate to be left open at all times giving no security to the allotment plot holders. The Borough Council themselves have a sign on the gate threatening anyone leaving the gate unlocked faced eviction from the site. If this gate is left open it would allow anyone access, whether their intentions were good or bad.</p> <p>3. The proposed access road from Park Road then leads onto the Public Footpath, this footpath is far too narrow to allow access to towed caravans and other heavy vehicles, no more so than refuse collection wagons. The only way this could be made is by taking land off some of the plots. It is also a rough unmade road this would require tarmac resurfacing, which would again cost an enormous amount of money.</p> <p>4. To give security to the allotments then fencing would be required around its entirety, again costing an enormous amount of money.</p> <p>5. There are no objections from plot holders per sea to this plan but far better access would be provided by access from Cemetary Road, however, our security arrangements should be provided no matter.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	As the Secretary of the Allotment Association I feel I would be best placed to give the supporting evidence as to why this proposal should be changed.

Q4 Part of document	Policy
Q4 Policy	Site 8 (G & T)
Q5 Sound	No
Q6 Details	<p>Concerns about access roads to the proposed sites:</p> <p>SP11(4), SP23 and G and T8 access to these sites will greatly increase traffic along The Racecourse by Silverdale Primary Academy creating potential accidents with children along the busy road. Access then on to the High Street will need to be made sound.</p> <p>The proposed sites listed above are on green belt land which I believed couldn't be built upon. The old golf course is an area of woods and grass land which has been naturalised over the last 20 years - it is such a shame to destroy the 'lungs' of Newcastle. This area should be preserved not reduced by half surrounded by a housing development.</p>

	Concerned about the drainage and sewage removal which will overload the already struggling old pipe work of the village of Silverdale.
Q7 Modification	<p>If it is absolutely necessary to build on such wonderful green belt land I hope that the number of houses is greatly reduced to lessen the impact on the village of Silverdale and surrounding area with pollution and detriment to its infrastructure.</p> <p>There are many brown sites in Newcastle that should be used for building houses and flats before considering green belt land.</p>
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)

Q6 Details	<p>Dear Sir / Madam,</p> <p>I wrote to give my comments on the Local Plan, with specific comments on the proposal to place five gypsy and traveller caravan plots on the site of the Acre Allotments in Silverdale.</p> <p>Firstly on the Local Plan as a whole: I support more housing for the Borough. As a parent of children who will soon look to rent their own homes, I am firmly of the view we need as much good quality, affordable housing in areas with public transport links as possible. It is sensible for the Borough to choose these sites itself rather than have Government intervention on their placement. As a resident of (redacted by admin) I will be directly affected by the proposal to build housing opposite to my house and I still support it.</p> <p>In terms of the Acre Allotment site in Silverdale, of which I am Treasurer, I understand the need and requirement to provide alternative provision to the existing site at Cemetery Road. Speaking from my personal position, not on behalf of the Committee or other plot holders, I do not have a problem with the use of a currently unused area of the allotment site being used for this purpose. I would, however, draw your attention to the following:</p> <ul style="list-style-type: none"> - The proposed access from Park Lane is completely unsuitable. The path / unsurfaced road through the allotments is not wide enough, is in poor condition and is also a public footpath. Its use would require the existing gates to the allotment site to be left open, making the site insecure and the car park open to unauthorised camping, flytipping etc. It would be far more sensible to open the existing access from Cemetery Road and create a short section of road to access the proposed traveller plots. - We believe, from previous surveys and discussions with the Borough council, that the proposed land earmarked for the proposed traveller plots to be contaminated, possibly with asbestos. We were quoted many thousands of pounds to clear it some years ago. The council should assess the possible contamination with some urgency: it may make the use of the land financially unviable.

Q6 Details	I wish to register my opposition to this part of the draft plan. 1) The area designated is land identified for the provision & sole use for garden allotments. 2) Access to the proposed development site is shown to be via the Racecourse area of Silverdale. This will lead to an increase of motorised traffic that passes directly the Racecourse Academy Primary school. 3) Although 5 pitches are planned, the size of the site is such that more could be allocated in the future.
Q7 Modification	1) a- Find an alternative location. b- Keep the area for its intended purpose of allotments under the guidance of Silverdale Parish Council. There is a shortage of allotment sites both locally & nationally I'm of the opinion that allotments will increase in the value to individuals in the future. 2) Conduct an in depth traffic impact assessment to include the potential increased risk of harm at and around the areas surrounding the Racecourse Academy Primary school 3) Formally limit the number of allocated pitches.

Q6 Details	<p>Introduction</p> <p>Regulation 19 consultation is the final point in the progress towards Planning Inspection, a public enquiry to consider whether the documentation is sound. This council consultation ends 7 October but ran parallel with government's 30 July planning reforms (ended on 24 September) focusing on growth of the national housing target, anticipating larger increases in housing for districts without a local plan in place, such as Newcastle.</p> <p>Officers and members are urging that the current 2024 plan is approved to avoid the district being held hostage by uncontrolled development that threaten the green belt and other areas, coupled with spectre of even higher numbers in a future revised Local Plan (appendix 3).</p> <p>Although future changes to National Planning Practice Framework (NPPF) will not be announced for many weeks, housing and infrastructure-led economic growth form the central plank of the Starmer government's national economic policy. Many of the previous government's planning policies are being reversed, including the re-introduction of mandatory housing targets and the proposed sharper methodology for assessing housing need at district level (based on stock numbers projected at 0.8 per cent annual increase and adjusted for relative housing affordability).</p> <p>National planning policy is fundamentally uncertain in the crucial period leading up to the completion of the Newcastle under Lyme documentation Final Local Plan.</p> <p>Key Points: Borough</p> <p>The main borough wide changes since the 2023 consultation are:</p> <p>An increase in the overall target for new housing to 400 per annum (total 8,000 over 20 years). An increased employment land provision and with it the inclusion of the Audley AB2 site and the housing demand component from this greater employment growth.</p> <p>The Local Plan excludes Silverdale from the 'rural centres' settlement hierarchy (PSD 2: Settlement Hierarchy Policy and PSD 3: Distribution of Development).</p> <p>The Rural Area Topic Paper puts certain rural villages in a stronger position for protection from the impact of new development. Our neighbour, Keele Parish is classified as rural. But the methodology takes no</p>

account of Silverdale Parish Council's rural/urban complexion. Silverdale is uniquely omitted from the list of Newcastle under Lyme's parishes. This parish is considered wholly urban and assimilated within the town without analysis in the Topic Paper.

In terms of land use, more than half of Silverdale's 361 hectares is green belt, a fact not entertained in the Local Plan nor in the Topic Paper.

Silverdale Key Points: (comparing consultations 2024 with 2023)

Overall Development Strategy (PSD1)

As mentioned earlier, PSD1 has a target of 400 per annum, which Silverdale Parish Council believes is too high.

In addition, Silverdale's share of the 8,000 proposed new homes is 14 per cent compared with Silverdale's share of total population, which is 4 per cent. The proposed growth bears a disproportionate weight on this parish. 1,100 homes (some 2,200 people at the ratio of 1:2.2) equate to the size of four communities, each as large as Heritage Park.

Silverdale PC accepts that some housing growth is needed to meet local housing needs and welcomes the two significant brownfield site allocations. It is the unprecedented scale of the change to the parish's physical and social structures that is our concern and how the increase in population would place far more pressure on health, education and other facilities and this one of the main concerns for many residents, who also question how the new facilities can be incorporated into the space populated by previous proposals.

The provision of a safe and adequate access would be essential for all the allocated sites, including T&G 8.

Housing Site Allocations SP11, SP23 and T&G 8

Overall, loss of green belt land released from green belt at the former Golf Course and on land between Job's Wood and Park Road is unchanged. New boundaries are proposed at Redheath Plantation/Keele Driving Range on SP11 and at the Cemetery Road end of SP23. SP12 (Cope's Field) has been incorporated into SP11 within the Keele Country. The proposed loss of green belt at SP11 in 2024 is 69 hectares, marginally less than 2023.

Additional proposals in 2024 cover a single-entry primary school, local centre/ health centre and a country park (Lime Park) with 4 new settlements. The published plans show vehicular access from Keele Rd via a spur into 3 parcels SP11 (1,2 and 3) and access from Ashbourne Drive to SP (1,2 and 3). Racecourse is the main access point to SP 11(4). Access to SP23 from Cemetery Road is another route but not clearly explained.

Gypsy and Traveller Allocation

Site T&G 8 allocated 5 pitches to land adjacent to Silverdale was a late inclusion into the Scrutiny Committee without proper consultation. See 4.2.

BDP Masterplan 27 August

Uploaded to the consultation portal as a late addition, Keele Park Masterplan arrived in the evidence basis as part of an objection to the Housing Policy Hou1 (see appendix 4). The report amounted to the landowner/promoter vision for the SP11 site with the consultants. It provides further grounds for SPC to make stronger representations concerning the infrastructure weaknesses in the proposals.

The inclusion of new community and educational facilities and the country park were welcomed but the house numbers at 1,100 were still an additional 40% increase in the size of Silverdale's stock of houses in 2021. Silverdale objects to the proposed intensity of development and re-focus its criticism on the infrastructure by exploring grey areas arising from design of SP11 overlapping SP23 design.

Transport congestion problems in the High Street, Pepper St and B5044 were introduced at Ashbourne Drive and at Racecourse (with the pressure of a primary school location). Members were dismayed there was no description of the improvements required to these poor surface quality local roads with narrow widths. Proposals as they stand will increase traffic flows through the centre of Silverdale and exacerbate movement problems at peak times. Additional concerns related to the possibility of rat runs through SP11 to and from Silverdale to A525. It was noted a new spur was identified for A525 but the number of homes accessed from Silverdale was the same as from Keele. The consistency of the treatment for SP23 alongside SP11 is questioned by the current presentation of the Local Plan.

BDP Lyme Park document, uploaded to the planning portal on 27 August indicated the rationale for SP11 yet the proposal for infrastructure did not address SP23 as clearly as SP11.

Silverdale's response

Silverdale Parish Council argues the current Local Plan is unsafe on specific planning policy grounds and then makes modifications as follows:

1.Green Belt

The proposed Keele Park Development with the main land use as a country park is not sound because the current land use is parkland and it is illogical to remove the protection of 40 hectares of parkland from the greenbelt to provide 30 hectares of development as undesignated land. The decision to show parcels of land as circular spaces especially at SP11(3) does not permit a clear boundary between mixed housing development and parkland as is required. It is unclear how the range of density options will be utilised in the 4 distinct communities.

Modification1: The country park should remain incorporated in the greenbelt and the boundaries should be regularised showing distinction between land uses.

The proposed new boundary for SP23 and the former site SP14 also known as The Cowfield is proposed as an open space so the same argument can be applied.

Modification2: The former site SP14 should remain incorporated the greenbelt.

The net effect of the modifications would protect up to 45 hectares of open space currently within the greenbelt and thereby reduce the harm of the development proposals on the greenbelt.

The proposed vehicular access to SP11 and SP23 suggests only minor improvements are required. No roundabouts. This is not a sound engineering proposition because, Silverdale's inner roads are all below

A grade. The B5044 is the main surface providing through routes from the east to the west at Scot Hay and to the northwest A525. An additional route through the string of developments SP11 will have knock on effects to traffic in these principal routes.

Modification1:

Access to SP11(3) via Ashbourne Drive/Underwood Road and to S11 (4) via Racecourse/Park Road should be pedestrian not vehicular. This would make a considerable saving to the infrastructure costs of SP11 and eliminate congestion in Silverdale village.

Modification2:

Transport infrastructure modelling to integrate SP11 with SP23 and should take account of traffic across Silverdale as well as the A525.

3.Relationship between new centres and existing centres

Silverdale has not been included as a rural parish and part of SP11 is contained in Keele which is designated as rural so that presents a classification problem for the borough council in the settlement hierarchy. The BDP report is not explicit how the new centre at SP11(2) and SP11(1) relates to Silverdale Local Centre.

Modification:. Silverdale Parish Council considers itself a village under the following definition and a claim to be a rural parish should be at least recognised and explored within the Settlement Hierarchy Methodology.

A village in the UK is a compact settlement of houses, smaller in size than a town, and generally based on agriculture or, in some areas, mining (such as Ouston, County Durham), quarrying or sea fishing. In addition, given SP11 includes land in Keele Parish, which is rural. Then part of that site lies within a rural parish. The methodology adopted in the Rural Topic Paper (2024) does not address boundary issues where a housing allocation covers two adjoining parishes.

4. Housing Allocation

4.1 At 1,090 the total capacity, 1,100 houses remain unchanged, despite several new facilities and confining development with the introduction of new parcels (Local Plan p70).

The BDP consultant report (see Appendix 4) asserts that certain range of housing densities will prevail in the parcels at SP11 but the addition of more development mix other than residential into a smaller area entails density and site boundary considerations. Spaces for new facilities as well as housing density are not disaggregated from land allocated to the country park.

Modification: The proposals should make the trade-off explicit in terms of boundaries and density between new community provision and the housing allocation at SP11 sites 1,2,3 and 4. See also modification at SP23.

4.2 Gypsy and Traveller Allocation 5 pitches

Site T&G 8 inclusion at Scrutiny Committee without any prior consultation with Silverdale Parish Council prior to the July 2024 Scrutiny Committee.

The decision is challengeable in the law because the land was acquired for the specific purpose of being kept as allotments. The previous change required Secretary of State's approval and the proposed change similarly requires Secretary of State's consent. The proposed use passes directly through the centre of a current statutory allotment site. Acre Allotments was recorded in the 1900 OS Map and in previous years, having been previously designated so for the use of Silverdale's citizens.

The decision is perverse, because

1 There is a long lease in place between the Borough Council and Silverdale Parish Council for the use of part of land, including the access road.

2 The proposed road access to T&G8 would be shared with Acre Allotment Association, sub tenants of Silverdale Parish Council. The proposed sharing of the road access could only occur if the road was improved to allow transport by vehicles pulling trailers. The necessary road improvement would be a necessary condition and coupled with new mains supplies for the pitches would threaten the continuation of the Allotment Association.

3 Extensive remediation is required where there is a history of unregulated deposit of different kinds of toxic waste harmful to human ranging from unremediated cattle and pig faeces to heavy metal contamination (from mining and waste accumulation) and also buried asbestos.

4 The development of this site would be unsustainable and environmentally harmful in another context. Northwest of the proposed access road is the Racecourse Community Woodland, between Mill Street and Park Street, containing many mature native trees and there are local springs which generate an ecology that would be harmed by the traffic and development proposed.

5 The single lane traffic access to the Acre Allotment Association is unsuitable. The access road is best classified as a country lane so the proposed development would fall foul of the policy of biodiversity impacts on rural lanes, where they need to be widened, including destruction of adjoining landscape.

Modification: The proposal should be excluded from the Allocation of Gypsy and Traveller Sites or as an alternative an access from Maries Way could avoid the conflict with the natural environment at the Acres and at Racecourse Community Woodland but that option must involve a full physical survey of the area to identify contaminants followed by remediation.

Appendices

1.Audley Parish Council have commented through their consultant on 3 October 2024 that a mistake may have occurred in the classification as a district centre.

Audley is identified as a 'District Centre', with Wolstanton, Chesterton and Silverdale. This is an obvious error and Audley should be classed as a 'Local Centre', as in previous versions of the Plan.

2. There has been an active Facebook group, PAPG operating to gather support and organised a workshop in September to help guide residents through the documentation.

3. Based on Proposed Draft 2024 NPPF giving Newcastle a higher Minimum Housing Need Target at 593 set against the current 400.

	<p>The guidance re-imposed national housing targets for England and applied an increase of 21% in the target (from 305,000 to 370,000). However, the government also proposed to redistribute the highest target for London to the rest of England. The proposed guidance argues the average level of housing should be around 0.8 % per year.</p> <p>4 Extract from BDP Lime Park p41 The four neighbourhoods would be:</p> <p>1. Keele Square SP11(1) A development of around 256 homes accessed from the existing roundabout on Keele Road. The neighbourhood is on gently sloping land and is planned around a landscape square which will also form a local centre.</p> <p>2. Keele Woods SP11(2) A development of 315 homes based on two points of access from Keele Road, one through the former golf clubhouse and the other through the driving range. It may be that both are not required depending on ecology and other constraints, but it is useful to keep the two options. This neighbourhood is also based around a green space with arms of development extending along the former fairways retaining the backs of tree planting.</p> <p>3. Ashbourne Drive SP11(3) This is proposed as a neighbourhood of 233 homes in the north-west part of the site, accessed from Ashbourne Drive. This scheme also has a village green and is planned to preserve the significant bank of trees running east to west through the site.</p> <p>4. Park Road SP11(4) The final, slightly smaller neighbourhood of just under 100 homes is on Park Road. This is physically separated from the rest of the site by a major bank of trees and would therefore feel like a very different place. The layout preserves the existing play area. This layout allows the site to be marketed either as one scheme or as four different development parcels providing maximum flexibility. The scheme going forward would need to be subject to a Design Code that would create distinct identities for each of the neighbourhoods. The public realm would be retained for public use and to maximise biodiversity net gain.</p>
Q7 Modification	<p>Modification1: The country park should remain incorporated in the greenbelt and the boundaries should be regularised showing distinction between land uses. The proposed new boundary for SP23 and the former site SP14 also known as The Cowfield is proposed as an open space so the same argument can be applied.</p> <p>Modification2: The former site SP14 should remain incorporated the greenbelt. The net effect of the modifications would protect up to 45 hectares of open space currently within the greenbelt and thereby reduce the harm of the development proposals on the greenbelt.</p> <p>Modification1: Access to SP11(3) via Ashbourne Drive/Underwood Road and to S11 (4) via Racecourse/Park Road should be pedestrian not vehicular. This would make a considerable saving to the infrastructure costs of SP11 and eliminate congestion in Silverdale village.</p> <p>Modification2: Transport infrastructure modelling to integrate SP11 with SP23 and should take account of traffic across Silverdale as well as the A525.</p> <p>Modification: Silverdale Parish Council considers itself a village under the following definition and a claim to be a rural parish should be at least recognised and explored within the Settlement Hierarchy Methodology. A village in the UK is a compact settlement of houses, smaller in size than a town, and generally based on agriculture or, in some areas, mining (such as Ouston, County Durham), quarrying or sea fishing. In addition, given SP11 includes land in Keele Parish, which is rural. Then part of that site lies within a rural parish. The methodology adopted in the Rural Topic Paper (2024) does not address boundary issues where a housing allocation covers two adjoining parishes.</p> <p>Modification: The proposals should make the trade-off explicit in terms of boundaries and density between new community provision and the housing allocation at SP11 sites 1,2,3 and 4. See also modification at SP23.</p> <p>Modification: The proposal should be excluded from the Allocation of Gypsy and Traveller Sites or as an alternative an access from Maries Way could avoid the conflict with the natural environment at the Acres and at Racecourse Community Woodland but that option must involve a full physical survey of the area to identify contaminants followed by remediation.</p>

Q4 Part of document	Policy
Q4 Policy	G&T 8
Q6 Details	I write this letter on behalf of all the residents I serve. Newcastle under Lyme Council is proposing to seize established Allotment Gardens, abolish a 200 year public footpath all to meet their Gypsy Travellers requirement for 5 travellers. It has come to my attention from other people that this Allotment land is

	contaminated with asbestos on the surface and buried underground. This land sits on natural springs and has tendencies to become water logged. The Councils proposal will require; terminating existing allotment garden holders, either abolishing or rerouting an established public footpath, developing a completely new road (approx quarter mile) requiring new sewerage and drainage, clearing the asbestos, above and below ground and the provision of street lighting, all negating any conservational benefits of the green fields that this proposed development will consume. The Council have not considered the cost but it will be staggering. The Council have not even- considered the impact on the local village and primary school that this development will cut across if a new road is installed. This site is land locked and the Council will need to acquire access.
Q7 Modification	<p>My Alternative Proposal</p> <p>There is a 21 caravan Gypsy site 500 metres away from this proposal, with all the services in place. There is land at the side of this site that could be acquired to meet the 5 Gypsy travellers that the Councils are proposing to house. It abuts a main road with all the needed services. I believe there should be a complete investigation of this proposal when there is a much cheaper alternative in close proximity. This would allow the allotment gardens to remain as they have for the last 200 years. I have enclosed 2 maps to help.</p>

Title	Talke and Butt Lane
Consultee Company / Organisation	United Utilities
Consultee Family Name	Leyssens
Consultee Given Name	Andrew
Q4 Part of document	Policy
Q4 Policy	RC8
Q6 Details	<p>Site Ref RC8 Land at Liverpool Road, Kidsgrove</p> <p>Within the shp files you have provided to us for our assessment, we note the inclusion of the above site which appears to be a site that is already consented. See Appendix 4: Commitments since 31 March 2023.</p> <p>For completeness, we wish to note that this site is in a location where sewer flooding incidents have occurred in the wider vicinity. As such, if this site is formally allocated, we would recommend the following policy wording:</p> <p>'There are flood incidents from the public sewer in the wider area. Applicants must engage with United Utilities to consider the detailed design of the site and drainage details. The risk of sewer flooding could affect the developable area of the site and the detail of the design.</p> <p>We would also recommend following explanatory text:</p> <p>'Applicants must engage with United Utilities prior to any masterplanning to assess the flood risk and ensure development is not located in an area at risk of flooding from the public sewer. Applicants should consider site topography and any exceedance flow paths. Resultant layouts and levels should take account of such existing circumstances. Applicants must demonstrate that the proposed development would be safe and not lead to increased flood risk. Applicants should not assume that changes in levels or changes to the public sewer, including diversion, will be acceptable as such proposals could increase / displace flood risk. It may be necessary to apply the sequential approach and incorporate mitigating measures subject to the detail of the development proposal. Careful consideration will need to be given to the approach to drainage including the management of surface water; the point of connection; whether the proposal will be gravity or pumped; the proposed finished floor and ground levels; the management of exceedance paths from existing and proposed drainage systems and any appropriate mitigating measures to manage any risk of sewer surcharge.'</p>

Q6 Details	<p>Building on green fields is detrimental to everyone in the area. It destroys natural habitat but more importantly people of all ages need somewhere to walk, run, play, meet up and so on.</p> <p>Places where people can meet up have slowly gone. Local pubs = shut. Youth clubs etc = shut. People are bored and fed up. If you take any more off people locally many will have nothing.</p> <p>I grew up in (redacted by admin) and played in fields bordering the canal. I had a Good healthy childhood. Later I moved to (redacted by admin). Again, many used this as a place to meet up etc. Sadly, Bathpool Park and its carparks have a poor reputation now due to dodgy meet ups such as [redacted by admin] and illegal drugs. Conclusion is that it is not a safe place for children, normal dog walkers or any law-abiding citizen.</p> <p>Barnet's field* (which I always believed was gifted to Clough Hall High School for the purpose of outdoor activities and sports) is now one of very few areas of green space left. Walkers from Talke Pits come down the bank to walk here as well.</p> <p>Yes, we need more houses. But not on common green areas.</p> <p>Brownfield sites – there are many. Stop wasting time ripping up greenbelt areas such as the new area between Talke and Tunstall. This was a lovely quiet area with a pond and wildlife. Rubbish about relocating Newts etc – leave them where they are. Stop building more warehouses that will remain empty or cause more exhaust fumes due to traffic.</p> <p>*Re the area at Barnett's field. Where is the infrastructure for such a development? The A34 road is already too busy and narrow to take the current traffic without adding to it. The area will Become a soulless estate like the one in west avenue (although they still have a few areas with trees) Butt lane shops – not many and nowhere to park now that the insurance company have moved in.</p> <p>Kidsgrove has been ruined by Tesco and Home and Bargains taking over. We need local shops and local areas where people can go to spend time and relax. This whole planning document is outrageous and basically just a plan to build on any and all areas where there is grass.</p> <p>Next will be proposals to stop the spread of obesity that will come when there is nowhere for children, adults and families to go.</p> <p>I strongly object to this application for housing. This is destruction of the areas natural environment and fails to address housing where it is actually needed. Please STOP building here. There is very very little safe grassy areas left for us (for us read 'us' your taxpayers and voters).</p>

Q5 Legally compliant	No
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>I had assumed this was a consultation paper, designed for the local community to respond to the planned proposal of building houses on plot BL18- locally known as Barney's Field. My objection is outlined below. I hope you are human and not a robot and understand that any type of development on this land would have a negative impact on the local community.</p> <p>Please don't build on this land. The area has been used by the local community for decades, this is evident by the numerous paths throughout the area.</p> <p>Both young and old use this land, it gives access to the wooded area adjacent to the field, the fishing pond and a short cut to Bathpool Country Park.</p> <p>There are not many green open spaces available and given the health benefits of having access to green open spaces it would be devastating to everyone to lose this.</p> <p>Whilst we have Clough Hall Park and Bathpool Country Park, both don't have a large amount of open space.</p> <p>Initially this land was used by Clough Hall School as a sports field, with football and rugby teams also benefitting from it. Once the school reinvented itself the land was allowed to become overgrown. Many attempts were made to the council to cut the grass so the football pitch and rugby pitch could be used by the local community of an evening and weekend, but this did not happen.</p> <p>Since then wildlife has moved in and made a home there. Often you can see birds of prey hovering over the field, looking for the next meal. Rabbits, foxes, frogs, ferrets and a deer have all been spotted.</p> <p>There is a natural spring which runs through the center of the land, and whilst the council have tried to contain it, water as always finds its own route and now floods a lot of the land over the winter months.</p> <p>We don't want this land being tarmacked over to accomodate more cars. And your suggestion of including plans for a football pitch is very biased. Teenagers need somewhere safe to meet not more football pitches, bring back youth clubs and help them see that they are valued.</p> <p>The A34 around Talke and Butt Lane gets very congested with traffic and installing another set of lights, or a roundabout would only add to the congestion especially when the M6 is closed or gridlocked.</p> <p>There are too many brownfield lands standing idle and unused that could be a better solution and would bring new life into an area. Improving visibility and aesthetics to an area that had become unsightly, possible used to dump rubbish and vandalized due to its lack of use.</p>
Q7 Modification	See above as this form does not meet the consultation feedback from local communities, but rather aimed at people who work in the profession.
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)

Newcastle under Lyme draft local plan – regulation 18: Consultation response

Dear Sir/Madam,

The following is a robust objection to all developments on green field sites covering all the proposals within Audley Parish and many more elsewhere as recommended in the draft local plan. In writing this response, I am aware of the need to adopt a local plan in order for local authorities to maintain democratic control of development in the area. This requirement appears to be a symptom of the subsection in the NPPF titled “The presumption in favour of sustainable development” (paragraphs 11-14). However, from a resident’s point of view, this gives the impression that local authorities must demonstrate a willingness to develop a particular area in order to avoid it being developed. This is, in essence, a commitment to eventual development even if it is not needed. And this is a source of great anxiety amongst residents that undesirable development is out of control, a situation clearly being fuelled by the existence of paragraphs 11-14. On this basis therefore, this subsection of the NPPF needs to be challenged.

This response may differ from others in that it comments on local planning within a strategic context. As I see it, there are three main types of development, which are likely to blight the future generations in the UK: (i) infrastructure (example, HS2), (ii) commercial (examples, AB2 and TK30 in the NuLBC local plan) and (iii) residential (example, recent housing developments either side of the A513, Beaconside, Stafford). Infrastructure is within the remit of Westminster rather than local authorities, so that is not a particular concern here. My main focus is encroachment of developments, both residential and commercial, in green spaces allowed for in the draft local plan. And any new developments in rural areas will, at the very least, result in:

- Loss of light or overshadowing

- Increased risk of flooding due to ‘run-off’

- Loss of visual amenity

- Limitations to physical activity

- Generation of extra traffic, overloading already busy local roads

- Extra noise, pollution, disturbance and danger from increased traffic

- Loss of trees and other biodiversity – bats, lizards etc.

- Loss of natural carbon capture

- Decrease in food production capacity

Increased local population placing further pressure on local schools, GP’s surgeries and other services, which are already oversubscribed.

The United Kingdom as a whole is currently gripped by a pandemic of overdevelopment, which threatens nature and the already depleted biodiversity we see in this country. And it has now reached the stage where it should be considered a national emergency. I for one, do not feel that I have any influence over the shape of our surroundings. There are numerous drivers for this trend many of which are not being addressed by government at any level. At the heart of this is a significant disconnection between the opinions of politicians and public as to what is actually needed. There appears to be cross-party support for activities driving economic growth at all costs, irrespective of the consequences to the natural environment. Aggravating this divide is the aforementioned paragraphs 11-14 of the NPPF. At a local level, what is not in doubt, is that whenever there is land removed from the green belt there is rarely, if ever, an equivalent area so returned, so the process is irreversible. And in the absence of any agreed lower limit on the area of protected green spaces within the UK, no release of green belt land, or development on green spaces, can be considered sustainable. Unless, of course, the use of agricultural land for just that purpose is also considered “developed”, i.e. it has an economic and sustainable use. And the local plan does appear to acknowledge this¹, so why not include agricultural use into the local plan implying no change in particular areas? If this is not the case, we are committed to a process where the end point is a UK completely covered in tarmac and concrete. Anyone arguing against this interpretation needs to state and justify precisely where that end point is. If they cannot, this renders the term ‘sustainable development’ an oxymoron.

One particular trend of major concern is the growing UK population. At the time of writing this stands at just under 69 million, and is set to reach 74 million before 2050. Studies in the US (Pimental and Giampietro, 1994; Lal, 1989) suggest that comfortable/sustainable living requires 0.5 Ha (1.2 acres) per capita. If we are generous, sustainable living in the UK was possible with a population of 57 million, a figure I remember from the late 1960s. With a total area of the UK at just over 60 million acres, a land area of one acre per capita for sustainable living in the UK seems feasible. As we have seen, anything more puts a strain on the environment as a whole. On this basis therefore, the UK is currently overpopulated by about 15%, and there appears to be no initiatives to address this issue. On this point, Westminster appears to be in a state of denial, thus fuelling the current avalanche of overdevelopment nationwide. Residential developments have a knock on effect by requiring other types of development to provide infrastructure, services and employment. Notwithstanding overpopulation, this gives the impression that there is not enough housing stock to accommodate the current population. Recent data, in the form of an infographic (“Housing crisis fact check”) from the Community Planning Alliance², convincingly shows that this is far from the case. In short, what is perceived as the current “housing shortage” is little more than a myth propagated by the construction industry and related interests. This is justified by item 3 on the infographic stating that “there are 1.5 million more dwellings than households” in England and Wales alone^{3,4}. On this basis therefore, no further house building is needed in the UK subject to efforts addressing projected population growth. In other words, what we have at present is a substantial housing surplus. Therefore, locally there are strong grounds for objections to development of the sites

AB12(p74)

AB15(p75)

AB32(p75)

AB33(p75).

Ignoring the 1.5 million surplus dwellings nationwide, the current (regulation18) draft of the local plan quotes a minimum housing requirement of 7160 in the Borough over the period 2020-40, of which 1206 are already completed. Of these, only 40% are to be 'affordable' (1-2 bedroom dwellings). Therefore, of the minimum requirement, only 2864 dwellings will be affordable. If we assume that those already built are affordable (they probably aren't) then the borough will only need 1658 homes built between now and 2040. This is because, due to being beyond affordability, most locals will be unable to buy or rent the other 60%. Therefore, they are not needed, and the proposed mix is entirely incompatible with general affordability. Given the surplus dwellings throughout England and Wales however, it is likely that none will be needed, especially considering the imminent removal of mandatory housing targets by the DLUHC under Michael Gove MP, and any specific affordable housing needs can be catered for by using brownfield sites only. All of the green areas in the local plan could therefore be planned in for their present use.

Infographic from the Community Planning Alliance summarising UK housing stock in relation to the population.

Another statistic from the infographic is that nationwide we could build up to 1.2 million homes on brownfield sites (item 2)2,5. And like any other local authority, NuLBC is legally obliged to and does keep a register of its brownfield sites, although it is likely that some may slip through the net.

If there is an imperative, it is to increase further democratic control of the development process both locally and nationally. And both local and national authorities would do well to remember that they have a responsibility to the people they represent and not to the commercial viability of developers, the construction industry or overseas investors. In short, no new housing development is required, especially given that the borough has exceeded its housing targets in recent years. This calls into question the need for housing developments outside Audley Parish mentioned in the local plan. These include

BL18 (p75)

CT1 (p76, 750 dwellings)

RC8 (p76, 6 dwellings, potential flood risk.)

KS3 (p77)

LW53 (p77)

MD29 (p78, 150 dwellings, likely to conflict with HS2 construction?)

NC13 (p78)

NC77 (p78)

SP11 (p78, 900 dwellings, former Keele golf course)

SP12 (p79)

SP23 (p79)

TB19 (p79)

TB23 (p79, 124 dwellings, adjacent to Walley's Quarry.)

TK10 (p80)

TK17 (p80)

TK27 (p80).

Other sites which may also be questioned are

KS17 (p77, would include loss of playing fields and other village amenities. This may be classed as infill.)

KL13 (p77,93, part built already within the grounds of Keele University Campus).

The other class of developments locally is commercial. All too often we hear in the news from both local and Westminster sources, the mantra that economic growth is the imperative. But the actual imperative is stability, and we have reached the point where growth at any cost has become toxic, especially given the impossibility of unrestrained growth in a land of finite area. Have our political masters never heard of the circular economy?

Since the beginning of deindustrialisation in the 1980s, the diversity of employment opportunities has declined. We have seen an unhealthy move away from manufacturing/production of goods that we need as a nation, to one entirely reliant on trade with overseas partners, leaving us open to blackmail and the current spike of rampant imported inflation. Look what happened during lockdown. Over recent decades this has led to the demolition of old factories for residential developments and the rise of logistics centres (warehousing) for the temporary storage of imported goods, which will ultimately be operated by robots and AIs leading to even less employment. The problem with warehousing of course is its large consumption of land area. My question is, what is the driver for the proposed "big box" developments on AB2 and TK30 locally? Both of these proposals lie entirely within the greenbelt, although the TK30 land has already been quarried in parts. Neither of these proposals is either desirable or needed. However, if we are forced to accept one or the other then TK30, being about 5% smaller, is the lesser of two evils. With the green light given to the development of the 44 Ha Chatterley Valley site on Peacock Hay Road, and the numerous empty warehouses existing across the potteries, North Staffordshire and Cheshire East. It is dubious to say the least to claim that either AB2 or TK30 are needed. These sites are 70 Ha and 66 Ha respectively. However, in the recently published "Housing and Economic Needs Assessment Update", the borough as a whole only needs a maximum of 34 Ha6. So why are we saddled with 154 Ha total covered by AB2, TK30 and KL15?

If the local plan caters for agricultural developments, AB2 and TK30 could be planned for their existing use. The majority of the area covered by these sites is high grade (3a) agricultural land. In the case of TK30 the quarried areas could be reclaimed for agriculture or, if this proves difficult, used in other ways to enhance biodiversity. If the land in question is council owned, and the motivation is to sell off council assets, then once sold, they cannot be sold again, and any control is lost. Moreover, once farmland is developed for other purposes then it is near to impossible for it to be reclaimed later for that use – and so the ratchet inexorably turns. On this

basis therefore, I would urge the LPA to remove the warehousing proposals AB2 and TK30 from the local plan.

The purpose of this consultation is to supply feedback to the Borough Council. Another question is, does Westminster similarly consult with local authorities on planning issues, or is there any other mechanism where local councils can supply feedback to Westminster, providing a better feel for the mood of the nation? If so, why do we not see a root and branch reform of the NPPF rather than the tinkering around the edges approach seen in the July 2021 version? Most especially, there should be a removal of paragraphs 11-14 and its supporting statements elsewhere in the document, which is tantamount to a developer's charter. And there should be more flexibility within the NPPF allowing local plans to include parcels of land for their current purpose, given that there is almost none in this country that is not currently in use. As far as I can see this plan is nowhere near compatible with efforts required to address the current climate crisis. Moreover, given their scale, the proposed developments represent too greater shock to the environment and local communities over the short 20-year period suggested for their completion. And with the sufficient housing and unused commercial sites we already have, there is no need for any encroachment into our green spaces.

Yours sincerely
Jim Austin

Newcastle under Lyme draft local plan – regulation 18: Consultation response

Dear Sir/Madam,

The following is a robust objection to all developments on green field sites covering all the proposals within Audley Parish and many more elsewhere as recommended in the draft local plan. In writing this response, I am aware of the need to adopt a local plan in order for local authorities to maintain democratic control of development in the area. This requirement appears to be a symptom of the subsection in the NPPF titled “The presumption in favour of sustainable development” (paragraphs 11-14). However, from a resident’s point of view, this gives the impression that local authorities must demonstrate a willingness to develop a particular area in order to avoid it being developed. This is, in essence, a commitment to eventual development even if it is not needed. And this is a source of great anxiety amongst residents that undesirable development is out of control, a situation clearly being fuelled by the existence of paragraphs 11-14. On this basis therefore, this subsection of the NPPF needs to be challenged.

This response may differ from others in that it comments on local planning within a strategic context. As I see it, there are three main types of development, which are likely to blight the future generations in the UK: (i) infrastructure (example, HS2), (ii) commercial (examples, AB2 and TK30 in the NuLBC local plan) and (iii) residential (example, recent housing developments either side of the A513, Beaconside, Stafford). Infrastructure is within the remit of Westminster rather than local authorities, so that is not a particular concern here. My main focus is encroachment of developments, both residential and commercial, in green spaces allowed for in the draft local plan. And any new developments in rural areas will, at the very least, result in:

- Loss of light or overshadowing

- Increased risk of flooding due to ‘run-off’

- Loss of visual amenity

- Limitations to physical activity

- Generation of extra traffic, overloading already busy local roads

- Extra noise, pollution, disturbance and danger from increased traffic

- Loss of trees and other biodiversity – bats, lizards etc.

- Loss of natural carbon capture

- Decrease in food production capacity

Increased local population placing further pressure on local schools, GP’s surgeries and other services, which are already oversubscribed.

The United Kingdom as a whole is currently gripped by a pandemic of overdevelopment, which threatens nature and the already depleted biodiversity we see in this country. And it has now reached the stage where it should be considered a national emergency. I for one, do not feel that I have any influence over the shape of our surroundings. There are numerous drivers for this trend many of which are not being addressed by government at any level. At the heart of this is a significant disconnection between the opinions of politicians and public as to what is actually needed. There appears to be cross-party support for activities driving economic growth at all costs, irrespective of the consequences to the natural environment. Aggravating this divide is the aforementioned paragraphs 11-14 of the NPPF. At a local level, what is not in doubt, is that whenever there is land removed from the green belt there is rarely, if ever, an equivalent area so returned, so the process is irreversible. And in the absence of any agreed lower limit on the area of protected green spaces within the UK, no release of green belt land, or development on green spaces, can be considered sustainable. Unless, of course, the use of agricultural land for just that purpose is also considered “developed”, i.e. it has an economic and sustainable use. And the local plan does appear to acknowledge this¹, so why not include agricultural use into the local plan implying no change in particular areas? If this is not the case, we are committed to a process where the end point is a UK completely covered in tarmac and concrete. Anyone arguing against this interpretation needs to state and justify precisely where that end point is. If they cannot, this renders the term ‘sustainable development’ an oxymoron.

One particular trend of major concern is the growing UK population. At the time of writing this stands at just under 69 million, and is set to reach 74 million before 2050. Studies in the US (Pimental and Giampietro, 1994; Lal, 1989) suggest that comfortable/sustainable living requires 0.5 Ha (1.2 acres) per capita. If we are generous, sustainable living in the UK was possible with a population of 57 million, a figure I remember from the late 1960s. With a total area of the UK at just over 60 million acres, a land area of one acre per capita for sustainable living in the UK seems feasible. As we have seen, anything more puts a strain on the environment as a whole. On this basis therefore, the UK is currently overpopulated by about 15%, and there appears to be no initiatives to address this issue. On this point, Westminster appears to be in a state of denial, thus fuelling the current avalanche of overdevelopment nationwide. Residential developments have a knock on effect by requiring other types of development to provide infrastructure, services and employment. Notwithstanding overpopulation, this gives the impression that there is not enough housing stock to accommodate the current population. Recent data, in the form of an infographic (“Housing crisis fact check”) from the Community Planning Alliance², convincingly shows that this is far from the case. In short, what is perceived as the current “housing shortage” is little more than a myth propagated by the construction industry and related interests. This is justified by item 3 on the infographic stating that “there are 1.5 million more dwellings than households” in England and Wales alone^{3,4}. On this basis therefore, no further house building is needed in the UK subject to efforts addressing projected population growth. In other words, what we have at present is a substantial housing surplus. Therefore, locally there are strong grounds for objections to development of the sites

AB12(p74)

AB15(p75)

AB32(p75)

AB33(p75).

Ignoring the 1.5 million surplus dwellings nationwide, the current (regulation18) draft of the local plan quotes a minimum housing requirement of 7160 in the Borough over the period 2020-40, of which 1206 are already completed. Of these, only 40% are to be 'affordable' (1-2 bedroom dwellings). Therefore, of the minimum requirement, only 2864 dwellings will be affordable. If we assume that those already built are affordable (they probably aren't) then the borough will only need 1658 homes built between now and 2040. This is because, due to being beyond affordability, most locals will be unable to buy or rent the other 60%. Therefore, they are not needed, and the proposed mix is entirely incompatible with general affordability. Given the surplus dwellings throughout England and Wales however, it is likely that none will be needed, especially considering the imminent removal of mandatory housing targets by the DLUHC under Michael Gove MP, and any specific affordable housing needs can be catered for by using brownfield sites only. All of the green areas in the local plan could therefore be planned in for their present use.

Infographic from the Community Planning Alliance summarising UK housing stock in relation to the population.

Another statistic from the infographic is that nationwide we could build up to 1.2 million homes on brownfield sites (item 2)2,5. And like any other local authority, NuLBC is legally obliged to and does keep a register of its brownfield sites, although it is likely that some may slip through the net.

If there is an imperative, it is to increase further democratic control of the development process both locally and nationally. And both local and national authorities would do well to remember that they have a responsibility to the people they represent and not to the commercial viability of developers, the construction industry or overseas investors. In short, no new housing development is required, especially given that the borough has exceeded its housing targets in recent years. This calls into question the need for housing developments outside Audley Parish mentioned in the local plan. These include

BL18 (p75)

CT1 (p76, 750 dwellings)

RC8 (p76, 6 dwellings, potential flood risk.)

KS3 (p77)

LW53 (p77)

MD29 (p78, 150 dwellings, likely to conflict with HS2 construction?)

NC13 (p78)

NC77 (p78)

SP11 (p78, 900 dwellings, former Keele golf course)

SP12 (p79)

SP23 (p79)

TB19 (p79)

TB23 (p79, 124 dwellings, adjacent to Walley's Quarry.)

TK10 (p80)

TK17 (p80)

TK27 (p80).

Other sites which may also be questioned are

KS17 (p77, would include loss of playing fields and other village amenities. This may be classed as infill.)

KL13 (p77,93, part built already within the grounds of Keele University Campus).

The other class of developments locally is commercial. All too often we hear in the news from both local and Westminster sources, the mantra that economic growth is the imperative. But the actual imperative is stability, and we have reached the point where growth at any cost has become toxic, especially given the impossibility of unrestrained growth in a land of finite area. Have our political masters never heard of the circular economy?

Since the beginning of deindustrialisation in the 1980s, the diversity of employment opportunities has declined. We have seen an unhealthy move away from manufacturing/production of goods that we need as a nation, to one entirely reliant on trade with overseas partners, leaving us open to blackmail and the current spike of rampant imported inflation. Look what happened during lockdown. Over recent decades this has led to the demolition of old factories for residential developments and the rise of logistics centres (warehousing) for the temporary storage of imported goods, which will ultimately be operated by robots and AIs leading to even less employment. The problem with warehousing of course is its large consumption of land area. My question is, what is the driver for the proposed "big box" developments on AB2 and TK30 locally? Both of these proposals lie entirely within the greenbelt, although the TK30 land has already been quarried in parts. Neither of these proposals is either desirable or needed. However, if we are forced to accept one or the other then TK30, being about 5% smaller, is the lesser of two evils. With the green light given to the development of the 44 Ha Chatterley Valley site on Peacock Hay Road, and the numerous empty warehouses existing across the potteries, North Staffordshire and Cheshire East. It is dubious to say the least to claim that either AB2 or TK30 are needed. These sites are 70 Ha and 66 Ha respectively. However, in the recently published "Housing and Economic Needs Assessment Update", the borough as a whole only needs a maximum of 34 Ha6. So why are we saddled with 154 Ha total covered by AB2, TK30 and KL15?

If the local plan caters for agricultural developments, AB2 and TK30 could be planned for their existing use. The majority of the area covered by these sites is high grade (3a) agricultural land. In the case of TK30 the quarried areas could be reclaimed for agriculture or, if this proves difficult, used in other ways to enhance biodiversity. If the land in question is council owned, and the motivation is to sell off council assets, then once sold, they cannot be sold again, and any control is lost. Moreover, once farmland is developed for other purposes then it is near to impossible for it to be reclaimed later for that use – and so the ratchet inexorably turns. On this

	<p>basis therefore, I would urge the LPA to remove the warehousing proposals AB2 and TK30 from the local plan.</p> <p>The purpose of this consultation is to supply feedback to the Borough Council. Another question is, does Westminster similarly consult with local authorities on planning issues, or is there any other mechanism where local councils can supply feedback to Westminster, providing a better feel for the mood of the nation? If so, why do we not see a root and branch reform of the NPPF rather than the tinkering around the edges approach seen in the July 2021 version? Most especially, there should be a removal of paragraphs 11-14 and its supporting statements elsewhere in the document, which is tantamount to a developer's charter. And there should be more flexibility within the NPPF allowing local plans to include parcels of land for their current purpose, given that there is almost none in this country that is not currently in use. As far as I can see this plan is nowhere near compatible with efforts required to address the current climate crisis. Moreover, given their scale, the proposed developments represent too greater shock to the environment and local communities over the short 20-year period suggested for their completion. And with the sufficient housing and unused commercial sites we already have, there is no need for any encroachment into our green spaces.</p> <p>Yours sincerely Jim Austin</p> <p>Notes</p> <ol style="list-style-type: none"> 1. Q4 Part of document	Policy
Q4 Policy	BL18
Q6 Details	<p>Local Plan BL18</p> <p>Dear Sirs,</p> <p>Having lived in this area for my entire life I most strongly oppose your proposed plan to develop 150 houses on the above land. You currently state 150 or is this just the first phase of your not yet disclosed future Plan ?</p> <p>The land has and should remain a Green Area and Playing fields for the local community, it has always been used as such for as long as I can remember. While we are pleased to hear the retention of the two pitches there are still many problems with regard to the infrastructure, amenities and access to this site. Your documents detail a most wonderful development and appear on paper to resolve many of the problems we have highlighted in the past, without specific detail. Unfortunately as yet no official plan or visual document of the area is available for our perusal and none of our questions regarding the problems we envisage have been answered until such time we have no option but to object !</p> <p>An additional problem to the building of properties on this land is as follows:</p> <p>Access:</p> <p>Where on earth do you plan access to this location ?</p> <p>Beech Drive, Park Avenue ,Unity Way, St Saviours Street, Mitchell Drive, are all nothing more that rat runs for Kidsgrove Traffic trying to avoid congestion and traffic lights when coming from Newcastle Road to Kidsgrove and vice versa ! Not to mention when there has been an accident on the motorway when everything comes to a complete standstill. Having lived in (redacted by admin) for the last 28 years, the</p>

volume and speed of traffic using this residential road has increased significantly, we have bungalows for the elderly sited here, also this road is used by the many children attending the local schools, there has been no form of traffic calming along this road as long as we have resided here, yet you plan to increase this volume and put these children and residents at risk. The state of the pavements and verges are a disgrace in this area, made worse by both residential and commercial vehicles parking on the pavements. Indeed we very often find it difficult to access our driveways due to such vehicles.

Visit our area on a Kidsgrove Athletic Football Club Match Day when this and surrounding roads are totally blocked with visiting supporters cars and buses!

Drainage:

Residents of Beech Drive who's property back into BL18 Barneys Field/ Clough Hall Playing Fields have ongoing problems with their gardens being flooded, yet you are proposing to make it worse with this development.

Facilities:

Doctors, Schools, Dentist, Shops, Jobs & Social activities :

Try to get a Doctors Appointment! Talke, Butt Lane and Kidsgrove Doctors cannot accommodate the volume of people that already live here, yet you are planning to bring to a high volume of new residents to this area! If you are fortunate to get an appointment with the Doctor you can be directed to any one of the following surgeries Chesterton, Tunstall, Lyme Brook, Longton. Recently having waited 10 weeks for an urgent appointment for an Ultra Sound X-ray, only to be directed to Stafford !! The same is said for Dentists - have you tried to get NHS treatment from a Dentist in this area lately? Our Dentist is currently unable to accept any new patients, as I understand are others? Where is the improvement for these essential services detailed in the your plan?

Schools: many primary schools in the area are over subscribed with 30 or more children in many classes, so where are the children living in these proposed houses going to go to school?

Building 150 Properties with an average of 2.4 people to each property brings not just affordable housing to this area but a complete nightmare for not only those people buying them, but to the existing residents in the area, who are already suffering with lack of essential services and dangerous roads.

Perhaps we are missing something and the planning does include a Dr Surgery a New Primary School a Dentist, Jobs for everyone more shops and other facilities and improved services ? But even that does not resolve the problem of additional traffic in an already congested area !

This area including Kidsgrove is changing from a comfortable semi rural location into a concrete jungle, we need to save our Green Spaces and Plan sensibly for the sake of our community and it's needs. Indeed we are nothing more than the poor relations of Newcastle Borough Council or so it seems!!

Q4 Policy	BL18
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>The allocation is unsound as currently drafted with no replacement provision proposed in line with SE6 and it not being demonstrated that the site is surplus to requirement.</p> <p>The site has historically been marked out for playing pitches and the PPS also identifies that within Kidsgrove analysis area, where the site is located within, there are current shortfalls in football and cricket ,which are exacerbated when taking account of future demand. As identified, within the Council's Playing Pitch Strategy Stage E update there has been growth in football and cricket from that previously identified within the PPS 2020, which could exacerbate shortfalls in demand. Similarly, the Council's Infrastructure Development Plan identifies the need for additional pitch provision.</p> <p>Whilst noting criteria 8 states the retention and improvement of playing pitches, with appropriate ancillary facilities for football use, there will be a loss of playing field provision with site having been marked out for more than two playing pitches, marked out in circa 2011, which were identified within the Council's PPS. Further to this there is no clarity of the playing pitch improvement and ancillary provision proposed.</p> <p>As such, should the allocation be retained, there should be a criteria for policy requiring that the site is replaced in line with the requirements of Policy SE6.</p>
Q7 Modification	Should the allocation be retained a criteria should be inserted policy BL18 requiring that the playing field site is replaced in line with the requirements of Policy SE6 to ensure that the allocation is justified and consistent with NPPF paragraph 103.

Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)

Q4 Part of document	Policy
Q4 Policy	BL18
Q6 Details	<p>I wish the Planning Inspectorate to consider my following representations in response to the Newcastle -Under-Lyme Borough Council – Final Draft Local Plan Consultation (Regulation 19)</p> <p>I wish the Planning Inspectorate to remove all policies from the plan which involve any development on Green Belt Land.</p> <p>The specific policies are: -</p> <ul style="list-style-type: none"> • AB2, AB33, AB15 & AB12 – Audley Ward • BW 1 – Bradwell Ward • CT 1 – Crackley Bank & Red Street Ward • KL13 & KL 15 -Keele Ward • SP11(2) & SP11(3) – Silverdale Ward • TK 10, TK 27 & BL18 – Talke & Butt Lane Ward <p>All of these developments impact green belt land, are unsound and should be removed from the plan.</p> <p>They will all have a negative effect on the Net Biodiversity gain of each local area. Which in turn has a knock-on effect across the Borough. Open spaces are essential for the environment by absorbing carbon dioxide from our atmosphere, which helps reduce climate control. They also provide habitats for a wide range of plants and animals. Open spaces are also important to human health as they can reduce stress, improve mental health, and assist in people sleeping better. They provide areas for physical activity which improve both physical and mental health. Removal of green belt will decrease the air quality within that area, increase respiratory issues for humans and wildlife, and also increase noise pollution.</p> <p>With specific reference to policies AB2, AB33, AB15 and AB12. I ask the Planning inspectorate to remove policies based on the following justifications:</p> <ul style="list-style-type: none"> • AB2 - It is simply the case that the small village of Audley and its surrounding countryside lanes could not cope with the large increase of traffic caused by these policies. The large number of HGV's travelling to the proposed AB2 site would definitely increase the traffic within the Audley area due to the daily traffic jams along the A500 and at M6 Junction 16. Traffic will spill on to local roads e.g. A5500, increasing Noise and air pollution • AB12 - Proposed access to site AB12 via Diglake Street is untenable. This street is small and it is already difficult to drive down due to parked cars on both sides of the terraced street. A new development of houses would make it virtually impassable causing gridlock, increased air pollution, increased noise pollution and limiting access for the emergency services. <p>The proposed new car park for resident's in Diglake Street due to the proposed AB12 policy would be detrimental to Blue badge Holders, People with mobility issues and Carers of babies and children.</p> <p>AB12 will not be close to any amenities with little or no access to a regular bus route.</p> <ul style="list-style-type: none"> • AB33 – Primary Vehicular access to Park Lane is unsound. This is an already busy junction. AB33 will not be close to any amenities with little or no access to a regular bus route. Creating more traffic therefore noise pollution and air pollution. With an increased danger to pedestrians. <p>With poor access to health care and education.</p> <ul style="list-style-type: none"> • AB15 – The proposed site at AB15 is unsound because of the poor access to health care, education, local amenities and public transport. <p>I therefore would like the Planning inspectorate to remove Policies AB2, AB12, AB33 & AB15 from the plan.</p>

Q4 Policy	BL18
Q6 Details	<p>I am writing to you with regard to the final draft local plan in particular the proposed development at site BL18. I feel that due diligence has not been followed, and the required investigations have not been taken before putting this site forward, the reasons for my concerns are listed below.</p> <ol style="list-style-type: none"> 1 I do not believe that you have fully considered the impact on wildlife, this land is home to at least eight protected species some of which also have their habitat protected. 2 I am also unsure that a study of the Flora has been undertaken. This land is home to several protected trees and is also known to have issues with Japanese knotweed which would require extensive work to be undertaken in order to eradicate it before building were to commence. To sell this land for development without disclosing this fact would be complete dereliction of the council's duty. This could also result in any properties becoming unsalable as people would be unable to obtain mortgages. 3 I believe that the site is unsuitable for building as it is home to several fresh water springs and as a result becomes extremely waterlogged. There is already a network of large land drains in place

	<p>but despite this several houses along Beech Drive still suffer from flooding issues. I Recently (redacted by admin) and this Required piling to be carried out, the land on the proposed site in as bad a state if not worse than mine.</p> <p>4 Privacy issues already exist for residents of Beech Drive as even when walking along the lower reaches of the site people can look down into their bedrooms, this problem will be severely exacerbated if houses were to be built on this land, due to the increased number of people and this could be abused by certain people spying from the privacy of their own homes.</p> <p>5 I believe that the impact of the additional traffic that would be created by this development on already congested roads has not received sufficient consideration and that your proposed alteration at Talke traffic lights are totally inadequate as they will only provide benefits for traffic traveling in a northerly direction, and traffic travelling in a southerly direction is regularly congested to the point where it can easily take up to twenty minutes (in some cases more) to travel from Talke traffic lights to Talke roundabout, especially when there is an accident on the M6. I also believe that wherever the site access is provided it will create major problems.</p> <p>6 I believe that the increase in the population in this area will also lead to further increases in crime, the rate of which has increased considerably in recent years and the police are making no impact on this. Only three weeks ago there was a drugs raid in Sycamore Close, where a young person was arrested and machetes and knives were taken. He was released on bail and is now dealing again.</p> <p>7 I also believe that insufficient consideration has been given to other services given the total all the proposed developments in the Kidsgrove, Butt Lane and Talke area for example Schools, nurseries doctors, dentists, Ambulance Service, and Fire Service. It is already virtually impossible for people to find an NHS dentist in the area.</p> <p>8 The development of this site could take away the only local facility where dog owners could exercise their dogs without having to keep them on a lead, as it is forbidden for dogs to be off the lead in both Clough Hall Park and Bath Pool Park.</p> <p>9 For all the above reasons I believe that you have selected the wrong site for this development and that a far better site would be where the Arnold Clarke storage facility is, situated adjacent to the A34 to the south of West Avenue and this would connect with the recent development on the old GEC car parks, This would be making good use of a brown field site instead of it just being used to store cars without providing any jobs</p> <p>Finally I would be grateful to receive any comments you may have regarding the above and would also like to be notified of any opportunity to meet with or attend any meetings with the government inspectors when they are reviewing the plan</p>

Q4 Policy	BL18
Q6 Details	<p>Policy BL18 Land at Clough Hall</p> <p>We request that the following criterion is added to this policy: 'Development layout will consider proximity to the sewers within and adjacent to the site and provide for access for maintenance, repair and replacement, and appropriate offset distances from the assets.' We request that criterion 4 is amended as follows: '4. A sequential approach will be taken within the site to direct development to areas at lowest risk of flooding taking account flood risk from all sources including surface water flooding and sewer flooding.' We also recommend the following amendments to paragraph 13.205 and 13.206. '13.205 Parts of the site are affected by surface water flooding. A sequential approach will be taken within the site to direct development to areas of lowest flood risk. There are sewers present on / adjacent to the site. which are identified as at risk of flooding. There are also records of flooding incidents in the wider area. The sewers and the risk of flooding from them will need careful assessment and consideration in the detailed design, masterplanning and drainage details for the site. Applicants must engage with United Utilities to consider the detailed design of the site and drainage details and ensure that development is not located in an area at risk of flooding from the public sewer. Applicants must demonstrate that the proposed development would be safe and not lead to increased flood risk. Applicants should not assume that the sewers can be diverted, or that any levels can change on top of the sewers, as such proposals can negatively affect hydraulic performance and increase or displace flood risk. Any risk of sewer flooding could affect the developable area of the site and the detail of the design. Applicants should consider site topography and any exceedance flow paths. Careful consideration will need to be given to the site topography and the approach to drainage including the management of surface water; the point of connection; whether the proposal will be gravity or pumped; the proposed finished floor and ground levels; overland flow paths and the management of exceedance paths from existing and proposed drainage systems and any appropriate mitigating measures to manage any risk of sewer surcharge. Resultant layouts and levels should take account of such existing circumstances. In accordance with national and Local Plan policy, an effective drainage strategy will be established, and a sequential approach applied within the site directing development to areas of lowest flood risk.</p> <p>13.206 The site is located in an area that was previously subject to mining operations. Appropriate land contamination studies and coal mining assessments will be required to support the appropriate delivery</p>

	of the site. This will need careful assessment and consideration in the detailed design, masterplanning and drainage details for the site. Applicants should engage with the relevant provider to consider the detailed design of the site and drainage details. Applicants should consider site topography and any exceedance flow paths. Resultant layouts and levels should take account of such existing circumstances. In accordance with national and Local Plan policy, an effective drainage strategy will be established, and a sequential approach applied within the site directing development to areas of lowest flood risk. ¹

Q4 Part of document	Policy
Q4 Policy	BL18
Q5 DTC compliant	No
Q6 Details	<p>Comment with reference to: FINAL DRAFT LOCAL PLAN - Policy BL18 Land at Clough Hall (pages 141 & 142). Paragraphs 13.205 & 13.206</p> <p>Whilst it is accepted that the Local Plan now appears to address objections previously raised from the initial consultation, it is necessary to comment further on the paragraphs concerning the risks of surface water flooding and site drainage. Paragraph 13.206 specifically calls for 'an effective drainage strategy' which is of ongoing associated concern with regards to Clough Hall Lake which has been neglected for many, many years by the Borough Council.</p> <p>Clough Hall Lake backs onto gardens of houses on Park Avenue. The Lake is understood to be part of an historic drainage system which takes water from the Leg O Mutton Lake adjacent to the proposed BL18 Development. Water passes from this area through the Clough Hall Lake and down past St Thomas' Church and into the canal system. This drainage system is essential in minimising the risk of flooding.</p> <p>Despite numerous representations from local residents over the years the Borough Council has neglected to maintain the Clough Hall Lake which is now at risk of becoming overgrown, silted up. and choked with reeds. Trees have not been cut back for at least 30 years and no attempt has been made to clear weed and reeds as part of routine maintenance.</p> <p>It is hoped that any development proposals will take into consideration Clough Hall Lake as part of 'an effective drainage strategy' and the Borough Council recognise their responsibility for the local environment and infrastructure. Action is necessary as part of this development proposal.</p>

Q4 Policy	BL18
Q6 Details	<p>I am writing to express that I fully and wholeheartedly oppose all plans to develop our rare and precious green spaces into housing estates, but particularly wish to focus on Barnet's field (referred to as "Land at Clough Hall" on the local plan) in my objection. The green spaces in our city are already few and far between, and require our protection and support to thrive, not erasure from existence.</p> <p>I use and appreciate Barnet's field on a daily basis and would be utterly bereft if it were gone. It was my sanctuary growing up on (redacted by admin) as a child, a haven which taught me a deep appreciation for nature and wildlife which has carried on into my adult years. Now I live on (redacted by admin), I visit this oasis daily to walk with my dog, and I never fail to come across at least one other person utilizing and enjoying this space. On my walks in the field, I have seen abundant flora and fauna, many of whom are rare species, which I have been documenting as I fear so much for the future of this habitat oasis. I am happy to provide a list and photos of these. There are native wild orchids, birds, invertebrates, wildlife and fungi who share this habitat with us, and call it their home. In a world which is becoming severely more nature-depleted by the day, I beg you to reconsider your decision to destroy this beautiful place when we desperately need to conserve what little natural and rewilded spaces we have left for the benefit of all our futures. The UK is one of the most nature-depleted countries in the world, and nature is still declining rapidly. See https://stateofnature.org.uk/</p> <p>https://naturalengland.blog.gov.uk/2023/09/29/state-of-nature/</p> <p>Newcastle-under-Lyme borough council could be leading the way by protecting these much needed areas, setting a precedent for the rest of the UK to follow suit. A u-turn on this plan could be an opportunity</p>

to loudly declare your dedication to saving the little nature we have left. With no exaggeration, I have noticed far more butterflies congregated here than anywhere else I visit, and I visit many national parks, nature reserves etc. for walks every weekend. I have taken videos showing this, because it amazes me so much. Butterfly Conservation recently declared that there is a "Butterfly emergency" - <https://butterfly-conservation.org/news-and-blog/uk-butterfly-emergency-declared> - and in light of this, surely protecting such an abundant habitat for them is extremely important.

Almost every day I see children out using and appreciating the field, playing with friends and gaining an appreciation for outdoor spaces which so many young people heartbreakingly do not have the opportunity to any more. As the age-old saying goes, children are our future, and the more of them who can gain an appreciation for nature, the better for the survival of our planet as a whole.

The huge, established mature trees surrounding the plot are a credit to the area, a beautiful spectacle which are treasured and appreciated by many neighbours and visitors to the area. So many people comment and compliment how beautiful they make driving into Talke and the surrounding area, they are an asset to the community not to mention habitats for thousands of species - each tree is a dynamic ecosystem which supports upwards of 2,300 species. Some studies even suggest the figure is more like 2.3 million - see <https://tree.opentreeoflife.org/about/synthesis-release/v14.9>

The younger oak trees on the field were I believe planted by schoolchildren as a part of a project to help renature the area and they are absolutely thriving and happy, they have been an absolute joy to watch grow and mature over the years and it sickens me to the core to think they are under threat of being bulldozed to create housing on what is clearly highly unsuitable land. It is notable that oak trees support more wildlife than any other species of tree, making these even more of a valuable and important asset to the area.

The land itself is extremely boggy, particularly in the colder months, something which has over the years become worse and worse with the removal of surrounding trees on higher land beside the field. You cannot walk across the field without wellingtons or sturdy boots after rainfall, it has made it the perfect habitat for bog plants such as the orchids I mentioned before, but surely renders it absolutely useless as a building plot.

The neighbours of the field have embraced having a natural beauty spot on their doorstep, some creating beautiful house extensions with balconies and garden buildings optimized to enjoy the tranquility and views provided by this habitat. Many moved to the surrounding houses because of the natural surroundings, with the beautiful trees and walks so nearby, and the nature they attract. Please think about the wellbeing these current constituents, many of whom have lived there for decades, and consider how this development would affect them. Although I object on a moral and environmental level, the development would surely devalue these surrounding properties, too.

The A34 is congested at the best of times already, living on (redacted by admin) I use it daily to commute to work and have to leave much earlier to accommodate for the excess traffic which already uses the road to enable me to get to work on time. Adding more housing and therefore more people and cars will create further congestion in the area and therefore pollution and local upset.

I feel I could write for months and still not be able to express or include every detail about why locally, environmentally and personally these green spaces mean so much. There are so many brownfield sites in our area, derelict buildings, abandoned projects, and so on, which would be better repurposed for housing, and I cannot understand why our green spaces are being targeted before these. Derelict buildings and wasteland detract massively from our area, whereas green spaces enhance them enormously. Enough has already been taken from nature; regenerate old sites and let the wild be wild.

Q4 Part of document	Policy
Q4 Policy	BL18
Q6 Details	<p>Dear Inspector,</p> <p>Newcastle Under Lyme needs a local plan, to allow structured development of housing across the Borough and secure sites that are in green belt land.</p> <p>However, I feel that the local plan we see being put forward has sites in , that are not just unpopular but also have real infrastructure concerns and based on assumptions that I feel cannot be substantiated.</p> <p>Having attended various resident group meetings , I have found that they are very knowledgeable and who knows better than local residents , the problems that they face now and how the new developments will affect them and not against a local plan but sites that are in the plan.</p> <p>The main sites that I have concern over AB2, AB33,AB12,AB15, CT1, BL8,BL18,BL32, TK6,Tk17 and TK27.</p> <p>These are in Audley , Red Street and Butt Lane /Talke , areas that I have links with and know well.</p> <p>Documents are now accessible, but residents and councillors have by timings of release , which in some cases have not allowed proper time for scrutiny and meaningful consultation.</p> <p>All these sites have traffic issues already and note recommendations regarding A500 , Talke Interchange, A34 ,A527 , which will need major financial assistance .</p>

	<p>I believe all the sites listed have questions about infrastructure and would question how sound the reasoning and financial constraints of the projects to be deliverable.</p> <p>I would like to mention two sites in particular , which are AB2 and CT1.</p> <p>AB2 is a 80-hectare project for warehousing /factory that is not in keeping with the rural area , with only 22 hectares needed for warehouse , the rest is for lorry car park and substation.</p> <p>Having experienced problems in my Ward , Holditch and Chesterton , with warehouse now occupied by Boughey Distribution I believe this is not a sound proposal.</p> <p>Residents constantly complain about traffic and noise , plus air quality.</p> <p>When it was built people complained , before it was even occupied residents about construction, and we also had problems concerning getting Road adopted by Staffordshire County Council .</p> <p>Without this happening , warehouse contract would not have been signed , and quite possibly would still be empty now .</p> <p>AB2 in Audley , is potentially 3 times bigger than Chesterton warehouse , and have grave reservations regarding the soundness of this development plus I believe that there may be another more appropriate alternative.</p> <p>CT1 Red Street has been scaled down but worth noting , that area has a history of being used for mining , as well as this mentioned in the report doctors which closed and now a dentist.</p> <p>Due to the problems with documentation being available for consultation , and real reservations about infrastructure and financial viability , I would ask you to consider if this plan is sound and complaint.</p>

Title	Policy BL18 Land at Clough Hall
Consultee Company / Organisation	Natural England
Consultee Position	Senior Officer
Consultee Family Name	McLaughlin
Consultee Given Name	Sally
Q4 Part of document	Policy
Q4 Policy	BL18
Q6 Details	<p>Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.</p> <p>Natural England welcomes the opportunity to comment at this stage of the Local Plan and particularly supports the inclusion of policies on green and blue infrastructure, biodiversity, health and wellbeing, trees hedgerows and woodlands. We have reviewed the consultation documents and provide comments that relate to the soundness of the Local Plan and that are most relevant to our interest in the Natural Environment.</p> <p>Natural England has adopted a robust precautionary approach within this plan response. Whilst we welcome the content of the Local Plan, Natural England advises that the plan is currently at risk of being unsound and/or not legally compliant due to the potential impacts on air quality in relation to internationally designated nature conservation sites and the justification for the potential loss of 263ha best and most versatile (BMV) agricultural land. Further detail is provided below.</p> <p>Natural England have also provided other advice within this submission relating to further improvements that could strengthen plan policies and specific strategic site options and related mitigation.</p> <p>Do you consider that the Newcastle Under Lyme Plan is Sound and Legally Compliant?</p> <p>Natural England notes that the plan is at the pre-submission stage and as such your authority is seeking confirmation on the soundness of the plan. Having reviewed the plan and supporting documents, Natural England considers the pre-submission plan in its current form is not sound or legally compliant, this is due to a lack of evidence with regards to air quality and the cumulative loss of BMV agricultural land both in a local and national context.</p> <p>Air quality</p> <p>Natural England notes that the Sustainability Appraisal states that "Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)</p> <p>As Natural England understands it the current evidence base used to conduct the HRA cannot rule out adverse impacts on designated sites. The HRA states at page 22 3.4.16 "At the time of writing, the traffic modelling run for the final suite of Regulation 19 allocations had not been undertaken." Appendix A lists the local plans for neighbouring LPA's concluding that 'in combination' with plans and projects (approved and those yet to be implemented) they may trigger in-combination effects on European sites as a result of air quality, particularly as we understand it in the key commuting areas.</p> <p>Natural England notes that Annual Average Daily Traffic (AADT) data and traffic modelling in the Strategic Transport Assessment (STA) concludes a potential reduction in travel and related air pollution at allocated sites as a result of a predicted preference in the use of public transport. We are surprised by this projected decrease in both traffic and related air pollution, particularly as one employment allocation site includes a 200-bay lorry park and increased congestion is predicted at junction 16 of the M6 where it joins the A500 in a rural location with no existing rural transport provision. The Sustainability Appraisal also notes that: "There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work". (p 206)</p>

Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot therefore currently be ruled out at the following internationally designated sites:

- Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI
- Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI

The HRA outlines that the main source of ammonia emissions is agricultural practice, and that material increases in NH₃ emissions are unlikely to be associated with the proposed local plan. At Black Firs and Cranberry Bog and Oakhanger Moss, any increase in nitrogen deposition has the potential to exacerbate pollution levels and thereby undermine the reasons for notification of these sites as a Ramsar.

Ammonia can be emitted from vehicle exhaust emissions as a by-product of the catalytic conversion process designed to reduce emissions of nitrogen oxide. As traffic composition transitions toward more petrol and electric cars (i.e., fewer diesel cars on the road), catalytic converters may aid in reducing NO_x emissions but result in increased ammonia emissions. Ammonia emissions from road traffic therefore could make a significant difference to nitrogen deposition close to roads.

Natural England therefore advise that ammonia sourced from traffic emissions should be included for assessment within the local plan HRA, as the impact from this source on designated sites is currently unclear. For further information please see this report from Air Quality Consultants (AQC) that looks at ammonia emissions from roads for assessing impacts on nitrogen-sensitive habitats. Whilst we are aware that the current CREAM model created by AQC used to assess ammonia emissions from road traffic has not been peer reviewed, at this time it has been recognised as a Best Available Tool and we deem it appropriate to be used where any caveats associated with this model are also considered within the assessment. An assessment based on the best available approach is necessary. The next stage of assessment can then consider uncertainties in the model and site specifics to decide if mitigation needs to be considered.

Further work is therefore required to inform the Habitat Regulations Assessment. Natural England will engage with the Local Planning Authority in order to produce a Statement of Common Ground (SoCG) on this matter.

'Best and most versatile' (BMV) agricultural land

Natural England notes that "the proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land. A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of 'best and most versatile' (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services". (page 74 Sustainability Appraisal).

Under the Town and Country Planning (Development Management Procedure) (England) Order 2015 (DMPO) Natural England is a statutory consultee on development that would lead to the loss of over 20ha of 'best and most versatile' (BMV) agricultural land (land graded as 1, 2 and 3a in the Agricultural Land Classification (ALC) system, where this is not in accordance with an approved plan.

Natural England would like to understand how the local planning authority have produced the evidence base and options assessment which informs the strategic site allocations.

Natural England will engage with the local planning authority to consider the cumulative impacts of the loss of BMV both in the local and national context and the challenges related to environmental impact, infrastructure, and the requirement to deliver a balance between the need for development and the potential urbanisation of the countryside including the potential mitigation measures that need to be considered.

NPPF paragraph 174e states:

Planning policies and decisions should contribute to and enhance the natural and local environment by: ... preventing new and existing development from contributing to, being put at unacceptable risk from, or being adversely affected by, unacceptable levels of soil, air, water or noise pollution or land instability. Development should, wherever possible, help to improve local environmental conditions such as air and water quality, taking into account relevant information such as river basin management plans.

Natural England provides guidance to inform further assessment of air quality and the loss of BMV agricultural land in our response to the content of the plans Strategic Policies as set out below.

Do you consider that the Newcastle-under-Lyme Borough Council Regulation 19 pre-submission draft Plan is compliant with Duty to Co-operate?

In terms of working with neighbouring authorities, Natural England notes that initially the plan was intended to be produced jointly with the City of Stoke-on-Trent, the plan does not however currently present an evidence base that demonstrates that a collaborative approach has been adopted and that the Duty to Co-operate has been fully complied with.

The Sustainability Appraisal states that: "Overall, there is potential for a cumulative adverse effect on biodiversity, owing to the fragmentation of the ecological network... Where a large amount of development is located on previously undeveloped land surrounding rural settlements, this is likely to produce a long-term irreversible negative cumulative effect regarding the urbanisation of the countryside" (p 71)

Natural England would therefore like to further understand how the areas identified to meet the City of Stoke-on-Trent's unmet employment needs are justified and appropriate and whether meeting some of the employment needs of the City of Stoke-on-Trent has led to the need to release or safeguard more land from the Green Belt in Newcastle under Lyme. If this is the case, what are the exceptional circumstances for doing this and how does this align with the allocated sites options assessment?

Recreational Pressure

In terms of the South Pennine Moors SAC and recreational impacts, the Local Plan does comply with the Duty to Co-operate. Natural England recommends that reference is made to the 'Recreation use of the South Pennine Moors and implications for strategic housing growth' report by Footprint Ecology Ref 778 date 27th March 2024. This report should both inform the evidence base and ensure that policies relating to open space/green infrastructure are as rigorous and robust as possible.

The report concludes that more data/evidence is required to determine if recreational use is causing an impact across to the South Pennine Moors and to get a better understanding of the scale and location of any impact. Natural England notes that the report records 7,000 additional dwellings in Newcastle-under-Lyme over the plan period rather than the 8,000 included in this regulation 19 submission. Newcastle-under-Lyme Borough Council should therefore continue to work with local authority and other partners to ensure coordinated and continued cross boundary action.

Other matters

Natural England has specific concerns related to allocations in the Green Belt. Notwithstanding that, Natural England considers most of the policies within the plan to be sound and deliverable. The plan is consistent with national policy with regard to those policies that are within Natural England's remit. Further information on strengthening policies including but not limited to Soils and best and most versatile (BMV) agricultural land, preventing loss and fragmentation of habitats and supporting green infrastructure are provided below.

Vision and Strategy

Natural England notes that the Plan's vision and emerging development strategy set out a framework for the future development of Newcastle-under-Lyme and addresses the needs in relation to housing, the economy, community facilities and infrastructure, including specific reference to a proposed employment site allocation.

This vision and the related objectives should also set out the environmental ambition for the plan area and form the basis for nature recovery and enhancement, supported by the policies and proposals in the plan.

Natural England advises that the vision should also incorporate more on the local ecology and landscape features which underpin local distinctiveness such as the "strong rural character with long open views across the surrounding rural landscape, towards more distant hills often framed by trees" (p 69) Part 3 Site Specific Landscape & Visual Appraisal. "Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms" (p 187) Sustainability Appraisal.

Strategic Objectives

Natural England welcome strategic objective SO-4 relating to carbon reduction and climate change, however we do not feel that this group of thirteen strategic objectives value or reflect the Boroughs whole ecology and landscape including but not limited to the protection of soil and best and most versatile (BMV) agricultural land. We would suggest that additional objectives are added relating to: air quality, water quality and quantity, soils and landscape.

Natural England would also like to see stronger reference to the Nature Recovery Network which is one of the specific aims of the Environment Act 2021 and will underpin the approach to the enhancement of nature.

Air quality is a major threat to habitats and species. Many ecological sites are exceeding their critical loads and levels for ammonia, nitrogen deposition and acid deposition. The strengthening of the policies and the rationale behind site allocations within this plan will ensure that new development does not contribute to the further deterioration of habitats and species due to air pollution. Further advice on strengthening the plans evidence base with regards to air quality is provided in the links below:

Strategic Policies

5 Planning for Sustainable Development

Policy PSD5: Green Belt

Natural England notes that this policy "aims to protect the Borough's essential open spaces, prioritise the use of brownfield land, and guide potential future development in accordance with the National Planning Policy Framework (NPPF)".

Natural England however notes that amendments to the Green Belt boundary are proposed in the form of 14 site allocations to accommodate both the growth requirements of the borough and the employment requirements of wider Stoke-on-Trent conurbation. Natural England's has some site-specific concerns about the potential impacts of some of the green belt sites selected on the natural environment with regards to habitat loss, fragmentation and justification for the loss of BMV agricultural land.

We note the LPA's intention to release and compensate for the loss of green belt and prioritise the use of suitable brownfield land. However, the site allocations in the green belt would result in the potential loss of 263ha of Best and Most Versatile (BMV) agricultural land. The council should satisfy itself that it is making a balanced decision for sustainable development, the Sustainability Appraisal concludes that:

"The Green Belt Study assessed land parcels against the contribution they make to the five purposes of the Green Belt on a four-point scale...Three allocated sites (AB12, AB33 and TK10) are located in areas which make a 'strong' overall contribution to the purposes of the Green Belt where "the site contributes to the purpose in a strong and undeniable way, whereby removal of the site from the Green Belt will detrimentally undermine this purpose" (p101)

"Site allocations on previously undeveloped land or that would result in a net loss of GI / vegetation could result in a reduced capability of the environment to provide ecosystem services including carbon storage, the storage and filtration of water including natural flood protection, as well as reduced availability and connectivity of habitats within the green network enabling movement of species. (p 165)

Strategic Site Allocations

Natural England suggests that the HRA should include a “requirement for project-level/site specific HRA’s and targeted ecological surveys”.

The Sustainability Appraisal concludes that:

“Some 12 allocated sites partially coincide with priority habitats, where 3.43% of the total site allocation areas coinciding with priority habitats which include deciduous woodland, good quality semi-improved grassland and Site BL18 coincides with lowland fens which is a very high distinctiveness habitat in the BNG handbook (2024). These habitats can support a range of species of principal importance. Allocated Site KL15 is adjacent to ‘The Butts and Hands Wood’ ancient woodland, with a further 20 allocated sites located in close proximity to ancient woodlands. P158

“Six allocated sites (Sites CT20, HD10, KL13, RC8, SP11(2) and SP23) are located within areas of ‘high’ or ‘very high’ habitat distinctiveness that provide high biodiversity value. Whilst in many cases these habitats can be conserved alongside development, it is likely that in some cases fragmentation or loss of habitats and connections between habitats will occur”

“The majority of allocated sites are located on previously undeveloped land, which would result in the loss of soil resources and the ecosystem services they provide. (p 159) The development of new buildings on previously undeveloped land would be expected to result in a direct loss of soil resource, with little or no scope for mitigation” (p 216)

“The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution. (p 68)

For all sites, Natural England advises that the hydrological catchment within which the site sits is taken into consideration, with regards to the potential impact of the developments proposed on the adjoining watercourses and wider catchments, including but not limited to surface water runoff (including during construction), existing and required capacity of Waste Water Treatment Works (WwTW) and water supply and flooding issues. Each site will require site specific investigation, and the council should understand the impact of all the sites put forward individually and in combination.

Natural England has specific concerns and or requires further information about the following ‘Strategic Site Allocations’ which could potentially impact on designated sites as a result of air and water quality and/or lead to the loss and / or fragmentation of priority habitats and BMV agricultural land:

BL18 – Clough Hall Playing Fields, Talke

Natural England would like to further understand this larger residential development proposal with regards to the potential impacts on the lowland fen habitat.

KL13 & KL15 – Land South of A525 between Keele University and Newcastle

Natural England notes this proposal for Employment development is immediately adjacent to ancient woodland priority habitat.

HM28 – Land off East Lawns, Betley

Existing and projected water quality issues at Betley Mere will need to be considered with regards to this allocation.

LW53 – Loggerheads

Natural England notes this residential housing development proposal is located within the IRZ of protected sites (Burnt Wood SSSI) which states that development proposals of 50 or more homes outside existing settlements/urban areas in these zones should be consulted upon with Natural England.

SP11 – Former Keele Municipal Golf Course

This Larger residential development is categorised in the Landscape Assessment as having a Major adverse impact on the local Landscape.

AB2 – Land Adjoining Corner of A500 and M6 Southbound

Natural England notes this proposed employment allocation released entirely from the green belt, which comprises 70ha of grade 2 BMV agricultural land. The Landscape study concludes that the: “Proposed development scenario is likely to have a major adverse effect on the SA objective with no satisfactory mitigation possible” (p 15). With regards to potential Air Quality impacts on protected sites Natural England notes from the options analysis that “The loss or potential moving of a layby to enable access to the site could be problematic indicating potential issues with site access and traffic flow. An increase in HGV and personal vehicle traffic is anticipated, which could lead to potential congestion and air pollution in the area”. Natural England would therefore also like to understand the evidence base further including the rationale for an alternative site TK30 @ Talke A34 / A500 roundabout being ruled out.

Policy PSD6: Health and Wellbeing

Natural England welcome this policy direction in terms of safeguarding health and amenity and supporting healthy communities, through the protection and provision of high-quality open spaces, including allotments and the promotion of active travel transport choices Further information on joining up Nature Recovery and Green Infrastructure (GI) with health priorities is set out below. If more cities and towns can be creatively designed and managed, with nature and communities at their heart, we will see nature and people thrive. This is something we set out to inspire at Natural England when developing the Green Infrastructure Framework and Design Guide. Natural England’s People and Nature survey tells us that, for 82% of people ‘being in nature makes me happy’. With the cost-of-living crisis, ‘free’ places like local parks and greenspace, have become even more important. The value of these spaces for the economy is estimated at £28.7 billion per year.

Green infrastructure in towns and cities provides places to relax, exercise, and spend time outdoors; cools urban areas; reduces flooding by allowing water to permeate the ground rather than overwhelm our drains; increases biodiversity and helps to reduce inequalities in access to nature. Options assessments for development sites and related green and blue Infrastructure within and between developments, green spaces and designated sites should; include soft transition and consider potential direct and indirect implications on sustainable use for example visitor pressure and transport / access options.

The natural environment affords the best ‘natural’ play opportunities for children while offering multifunctional nature-based solutions to climate change etc. These can be blended into wildlife rich green infrastructure and green open spaces that can act as destination play sites for local children (See best practice at Play England and Play Wales) that have proven health and wellbeing value.

Evidence for nature play and health:

Play, naturally: a review of children's natural play

Nature for health and wellbeing | The Wildlife Trusts

Good practice in social prescribing for mental health: the role of nature-based interventions - NECR228 (naturalengland.org.uk)

6 Climate and Renewable Energy

Whilst Natural England welcomes this group of policies we recommend including Policy CRE1: Climate Change and Policy CRE2: Renewable Energy within the Sustainable Environment (SE) group of policies to achieve a collective strategic focus on sustainable development and working toward achieving net zero alongside the SE policies relating to Pollution and Air Quality (SE1) and requirements for sustainable water management measures to reduce water use, natural flood protection features alongside the specific policies on Sustainable Drainage Systems (Policy SE4:)

Natural England continues to work with the LPAs across the region on understanding air pollution across area boundaries (see comments and links in objectives section.)

10 Infrastructure and Transport Policy.

Policy IN4 Cycleways, Bridleways and Public Rights of Way

Natural England welcomes the inclusion of this group of policies which seek to maintain and enhance the network of public rights of way that cross the borough. We note that the sustainability appraisal states that "the borough has relatively poor accessibility to the cycle network and is the lowest performing in the county for walking zones" (p 206) and that, "eight allocated sites (AB2, AB12, AB33, HD10, KL15, MD29, SP11(3) and TK10) do not currently have safe pedestrian or cycle access adjacent to the site, where site end users may be reliant upon less sustainable modes of transport including private car use". (p 180)

11 Sustainable Environment

Natural England welcomes this group of policies and has the following policy specific comments:

Policy SE1: Pollution and Air Pollution.

Natural England welcomes this policy that notes that development proposals which are likely to result in detrimental impacts on air quality, will not be permitted unless it can be demonstrated that mitigation measures effectively address these impacts. (Comments on Air Quality are also provided on page 2 and 4 of this letter). The promotion of sustainable and active travel options, low-emission technologies and enhancement of green infrastructure to absorb air pollution is also noted. (see comment above re integrating the group: 6 Policies Climate and Renewable Energy).

Policy SE7: Biodiversity Net Gain

Natural England supports the inclusion of a policy on BNG. We suggest the following minor amendments to further improve the plan policy.

The BNG policy should make it clear that biodiversity net gain is not applied to irreplaceable habitats, and that any mitigation and/or compensation requirements for Habitats sites should be dealt with separately from biodiversity net gain provision. The policy should also set out how biodiversity net gain will be delivered and managed through the lifetime of the scheme and including monitoring requirements. This should include indicators to demonstrate the amount and type of gain provided through development.

The indicators should be as specific as possible to help build an evidence base to take forward for future reviews of the plan, for example the total number and type of biodiversity units created, the number of developments achieving biodiversity net gains and a record of on-site and off-site contributions.

Natural England notes that the Sustainability Appraisal states "Despite the BNG provisions at the site level, there remains potential for a cumulative adverse impact on biodiversity at the landscape scale, owing to incremental habitat losses. As a result of development within the Local Plan undeveloped land will be lost which will include the loss of soil resources, habitats recognised as being of 'high' and 'very high' distinctiveness, and potentially ecological links between biodiversity assets, whereby the policies will not be expected to fully mitigate the fragmentation of the ecological network. Fragmentation of the ecological network across Newcastle-under-Lyme is expected to be a long-term and permanent significant effect." (p 162)

Policy SE8: Biodiversity and Geodiversity

Natural England supports the inclusion of this policy to protect the Boroughs internationally, nationally and locally designated sites important for their biodiversity value and to enhance the natural environment and work with partners toward Nature Recovery.

We particularly welcome the plans recognition of the value of "wider ecological networks" stating that "Other sites, both individually and collectively, that are not designated can also contribute towards protecting and enhancing diversity of species locally".

Policy SE10: Landscape

Natural England welcomes this policy aimed at ensuring that "development proposals should protect and enhance the character, quality, beauty, and tranquillity of the Borough". We note from the sustainability appraisal that "The entirety of the south of the borough is identified as being high in relation to landscape sensitivity, which starts in Audley in the north and covers the southern area of the borough, including Loggerheads and Alington." We agree that "Alteration of the landscape character is a long-term and permanent significant effect... There is potential for a cumulative adverse effect on landscape character resulting from the development proposed in the Plan". (p193) SA.

Natural England has divided England into 159 distinct natural areas called National Character Areas (NCAs) Newcastle-under-Lyme falls within two NCAs: Shropshire, Cheshire and Staffordshire Plain: gently rolling plains dominated by intensive dairy farming, beef and arable production; The Potteries and Churnet Valley: strong contrast between the industrialised landscape of the Potteries and the pastoral, strongly dissected hills and small plateaux that flank the Churnet and Dove valleys.

Natural agrees with the following statement in the sustainability appraisal: "Although various policies aim to ensure that development conserves and enhances landscape character and distinctiveness, when combined with Local Plan policies that support infrastructural improvements such as for transportation, water, and waste, this is likely to lead to a long-term and irreversible cumulative adverse effect on landscape character and tranquillity and associated indicators such as dark skies." (p72)

Policy SE11: Trees, hedgerows, and woodland

Natural England welcomes this plans recognition that “Trees, hedgerows, and woodlands are integral to the distinctive character and ecological health of the Borough of Newcastle-under-Lyme, defining landscapes across both urban and rural settlements.” And that “This policy prioritises the protection of existing natural assets, seeking to not only preserve, but actively enhance, these valuable features wherever possible”.

Policy SE13: Soil and Agricultural Land

Natural England has concerns about the justification for the loss of BMV agricultural land within this plan. “The proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land, A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of ‘best and most versatile’ (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services.” (page74) (SA)

Natural England notes that policy SE13 states: “Outside of sites allocated for development in the Local Plan, development proposals should avoid the loss of best and most versatile agricultural land (BMV) unless it can be demonstrated that the benefits of development clearly outweigh the loss of the land and every effort has been made to mitigate for the overall impact of the development on best and most versatile agricultural land.”

With regards to Soil and Agricultural Land Quality, Natural England advises that The Local Plan should give appropriate weight to the roles performed by the area’s soils. These should be valued as a finite multi-functional resource which underpin our wellbeing and prosperity. Decisions about development should take full account of the impact on soils, their intrinsic character and the sustainability of the many ecosystem services they deliver.

The 25 Year Environment Plan (25YEP) sets out government action to help the natural world regain and retain good health, including highlighting the need to:

- protect the best agricultural land
- put a value on natural capital, including healthy soil
- ensure all soils are managed sustainably by 2030
- restore and protect peatland

Soil is a finite resource which plays an essential role within sustainable ecosystems, performing an array of functions supporting a range of ecosystem services, including storage of carbon and water, the infiltration and transport of water, nutrient cycling, a buffer against pollution and provision of food. In order to safeguard soil resources as part of the overall sustainability of the development, it is important that the soil resource is able to retain as many of its important functions as possible. This can be achieved through careful soil management and appropriate, beneficial soil re-use, with consideration on how any adverse impacts on soils can be avoided or minimised.

The conservation and sustainable management of soils is reflected in the National Planning Policy Framework (NPPF), particularly in paragraph 180(a), 180(b) and 181 (footnote 62). When planning authorities are considering land use change, the permanency of the impact on soils is an important consideration. Particular care over planned changes to the most potentially productive soil is needed, for the ecosystem services it supports including its role in agriculture and food production.

Plan policies should therefore take account of the impact on land and soil resources and the wide range of vital functions (ecosystem services) they provide in line with paragraph 180(b) of the NPPF.

Soil Plan Policies

We strongly advise that at a minimum, the plan includes core policies for:

- the protection of best and most versatile (BMV) agricultural land (Grades 1, 2 and 3a in the Agricultural Land Classification (ALC)); and
- for the protection of and sustainable management of soils as a resource for the future.
- Areas of poorer quality land (ALC grades 3b, 4, 5) should be preferred to areas of higher quality land (grades 1, 2 and 3a).
- Recognise that development has an irreversible adverse impact on the finite national and local stock of BMV land.
- Conforms to NPPF and Planning Practice Guidance (Natural Environment and Minerals).
- Requires detailed ALC surveys to support plan allocations and for subsequent planning applications (for all sites larger than 5 ha). ALC surveys to support plan allocations and for subsequent planning applications for smaller sites (1 – 5 ha) would be welcomed.
- Recognise that development (soil sealing) has a major and usually irreversible adverse impact on soils.
- Soils of high environmental value (e.g., wetland and carbon stores such as peatland, low nutrient soils; or soils of high environmental value in the local context) should also be considered as part of ecological connectivity (Nature Recovery Network / Green Infrastructure).
- Requires soil handling and sustainable soil management strategies based on a detailed assessment of the soil resource based on best practice guidance (for all sites larger than 5 ha), ideally as part of the planning application process for major sites to help inform master-planning, and to safeguard the continued delivery of ecosystem services through careful soil management and appropriate, beneficial soil re-use. Soil handling and sustainable soil management strategies for smaller sites (1 – 5 ha) would be welcomed.
- Reference should be made to Defra’s Construction Code of Practice for the Sustainable Use of Soils on Construction Sites
- In addition, for minerals and other temporary forms of development, plans for reinstatement, restoration and aftercare will be required (or for solar, a commitment to do so if the operational life is in decades); normally this will be return to the former land quality (ALC grade)
- Refers to soils issues within relevant policy areas such as renewable energy, climate change, green infrastructure and biodiversity net gain, flood schemes, managed realignment, development design and landscaping.

Policy SE14: Green and Blue Infrastructure

Natural England supports this policy. Well-designed cross boundary multi-functional green infrastructure contributes greatly to a number of benefits both for people and nature. Your green and blue (for example cross boundary canals) infrastructure should dovetail with your biodiversity net gain strategies to maximise benefits.

We would advise that the Local Authority also considers Natural England's Green Infrastructure Framework of Principles and Standards for England. As stated in our document, "Green infrastructure (GI) is part of the solution to many of the challenges we face; health inequalities, biodiversity crisis, climate change, nature recovery and levelling up. The GI framework supports local authorities, developers, parks and greenspace managers and local communities to enhance and create new good quality green infrastructure."

We would also suggest reference is made to the emerging Local Nature Recovery Strategy. Preparing Local Nature Recovery Strategies (LNRS) is a statutory requirement under the Environment Act 2021. LNRS are designed to work closely alongside other measures in the Act including supporting the delivery of mandatory biodiversity net gain and providing a focus for a strengthened duty on all public authorities to conserve and enhance biodiversity. They will also underpin the Nature Recovery Network, alongside work to develop partnerships and to integrate nature into our incentives and land management activities. Each LNRS will be specific and tailored to its area. The responsible authorities and people involved in preparing a strategy can choose how they want it to look, but every strategy must contain:

1. A local habitat map.

2. A written statement of biodiversity priorities. Statutory guidance for responsible authorities explains in detail what these 2 things should contain. Together they set out what the strategy is aiming to achieve and what practical actions will help do this. They will also propose where actions could be carried out for best effect and to connect and expand existing areas that are important for nature. We expect local nature recovery strategies to propose actions such as the:

- creation of wetlands
 - restoration of peatlands
 - planting of trees and hedgerows
 - more sustainable management of existing woodlands and other habitats like grasslands
- These actions are intended to help nature itself and to also help improve the wider natural environment.

Whilst the Staffordshire Local Nature Recovery Strategy (LNRS) is currently a work in progress, Newcastle-under-Lyme Borough Council Regulation 19 pre-submission should still be consistent with NPPF Paragraph 185 in terms of setting out local habitat priorities and identifying potential measures by which they can be achieved, alongside mapping areas that could become of particular importance in the future.

Natural England encourages Newcastle Under Lyme Borough Council via their Local Nature Recovery Strategy to actively develop cross border cooperation between other Local Planning Authorities (LPA) (for example Staffordshire Moorlands Borough Council) in coordinating land development projects that impact on local biodiversity sites to ensure that local biodiversity corridors are maintained and link up other local important sites for nature conservation.

This is a good way of achieving nature recovery and preparing to deliver the LNRS alongside enabling the local authority and its partners to identify, map and safeguard site areas, including green and blue infrastructure opportunities and interlinkages.

Habitats Regulations Assessment

Natural England notes that this Local Plan is not directly connected with or necessary to the management of any European site. A screening assessment has been undertaken which identified a number of Likely Significant Effects (LSE) associated with the Local Plan. Taking no account of mitigation measures, the HRA concludes that Local Plan has the potential to affect the following European sites:

- Cannock Chase SAC
- Humber Estuary SAC, SPA and Ramsar
- Mersey Estuary SPA and Ramsar
- Midland Meres and Mosses Phase 1 Ramsar
- Midland Meres and Mosses Phase 2 Ramsar
- Pasturefields Salt Marsh SAC
- Peak District Dales SAC
- Peak District Moors (South Pennine Moors Phase 1) SPA
- Severn Estuary SAC, SPA and Ramsar
- South Pennine Moors SAC
- West Midland Mosses SAC

We welcome that your HRA includes the Humber Estuary SAC, SPA and Ramsar site which is hydrologically connected to the river Trent. If the Local Plan resulted in significant water pollution, this European site could be affected and has therefore been screened in, in relation to water quality only, on a precautionary basis. Natural England however notes that the Sustainability Appraisal identifies "A long-term cumulative adverse effect ...in terms of water quality" (p 148) as a result of the plan, this is not fully reflected in the current HRA.

Natural England note that the Sustainability Appraisal states: that "the entirety of the borough falls within IRZs of one or more SSSIs. All five SSSIs within the borough are in 'unfavourable' condition: Burnt Wood SSSI, Maer Pool SSSI, Black Firs and Cranberry Bog SSSI (Midlands Meres and Mosses Phase 2 Ramsar), Betley Mere SSSI (Midlands Meres and Mosses Phase 1 Ramsar) and Metallic Tileries, Parkhouse SSSI."

Natural England are also aware of the extensive network of ancient woodland spread across the borough, totalling 707.60 hectares, as well as a large quantity of priority habitats, totalling 1,791 hectares.

Natural England agree that the following designated sites and related priority habitats in adjoining LPA areas may also be affected by development through several pathways, including fragmentation, recreational pressure and/or pollution (including Air and Water Quality). Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI, Wyburnbury Moss SAC SSSI, Tyrley Canal Cutting SSSI, King's and Hargreaves Wood SSSI, Gannister Quarry SSSI, Roe Park Woods SSSI, Wetley Moore SSSI, Churnet Valley SSSI, Hatherton Flush SSSI, Sounds Heath SSSI, Ford Green Redebed SSSI, and Cop Mere SSSI.

It is noted that the Appropriate Assessment stage of the HRA assessed potential impacts by topic;

- Impacts on designated features affected by a possible deterioration in air quality
- Impacts on water quality and quantity associated with increased levels of built development.
- Impacts associated with increased recreational pressure at European sites; and

	<p>-Consideration of impacts at associated functionally linked land.</p> <p>Natural England notes that the HRA also factored the following into the assessment process “the protective framework provided by the Local Plan and existing protection measures set out in high level strategic policy and existing planning policy frameworks that serve to help overcome the identified potential adverse effects” and that “taking into consideration these factors, it is concluded that the Local Plan would have no adverse impact on site integrity at any European site, either alone or in-combination.</p> <p>Natural England disagree agree with this conclusion that for those Habitats sites in the area of search with features sensitive to air pollution, adverse effects on their integrity, alone or in-combination, can be ruled out for the reasons set out at the beginning of this letter on page 2 and repeated in part below:</p> <p>Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot currently be ruled out at the following internationally designated sites:</p> <ul style="list-style-type: none"> •Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI •Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI <p>Natural England are currently in discussion with a number of the Staffordshire and West Midlands LPA's with regards to the cumulative impacts of air quality. We advise that further work is required to inform the HRA. The HRA should demonstrate that there are no adverse effects on integrity of Habitat sites as a result of this Local Plan, alone and in combination with other plans and projects. With regards to allocated sites, it is unclear whether the individual sites put forward in the Local Plan have been assessed through the Habitat Regulations Assessment process and how mitigation will be applied here.</p> <p>Sustainability Appraisal</p> <p>Natural England has reviewed the Sustainability Appraisal (SA) and included comments taken from the document throughout our response.</p> <p>The SA is a comprehensive document which should be reviewed in strengthening the HRA, particularly with regards to residual adverse effects that would be expected to remain in terms of wastewater following the implementation of the Local Plan policies. (p 141) Natural England notes that “Increased pressure on wastewater treatment has the potential to be a long term and potentially permanent significant effect” (p 142)</p> <p>The SA recognises the local distinctiveness of the plan area;</p> <p>“The Borough itself is largely rural in nature and supports some high-quality agricultural land, but is more heavily built up towards the north east surrounding Stoke-on-Trent. (p 8)</p> <p>Newcastle-under-Lyme has a strong rural character with a high-quality landscape and countryside, with some areas identified as being sensitive to change as a result of new development. (p 19)</p> <p>Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms make up the key features of some of these Landscape Character Types.” (p 20)</p> <p>Sets out the area specific barriers to achieving sustainable growth;</p> <p>“Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)</p> <p>Loss of tranquillity The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution.(p 68)</p> <p>“The pre-mitigation SA assessments identified negative impacts in relation to air quality due to the proximity of sites to major roads, landscape character due to the location of sites within areas of high landscape sensitivity, close proximity to the PRoW network and potential for coalescence and urban sprawl, habitat sites, priority habitats, habitat distinctiveness, loss of undeveloped land, ‘best and most versatile’ (BMV) agricultural land, coinciding with mineral safeguarding areas (MSAs) and areas of surface water flood risk (SWFR); and access to healthcare facilities, schools, the local cycle network and railway network. (p 40)</p> <p>There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work. (p 21)</p> <p>Trends in transport choice are unlikely to change significantly, and private car use would continue to increase as the selected method of transport to work, with potential adverse impacts on air quality in the borough.”(p 23)</p> <p>Considers the local and cumulative significance of soil loss alongside the ecological implications:</p> <p>“Loss of soil resources, BMV land and ecosystem services The proposed allocations would cumulatively result in the loss of up to approximately 342ha of previously undeveloped land, including up to 263ha of BMV agricultural land. The proposed development would be expected to reduce the ability of the local soil biome to effectively provide ecosystem services, to some extent. Additionally, the loss of permeable soils could potentially increase the risk of flooding and result in a loss of biodiversity across the Plan area. Loss of soil can also result in an increase in soil erosion and have subsequent impacts on agricultural yield.(p 68) The majority of the borough is ALC Grade 3 soil, with areas of ALC Grade 2 scattered across the borough. Grade 2 and potentially Grade 3 represents some of the borough's BMV agricultural land and should be conserved wherever possible (p 21)</p> <p>A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of BMV land to be lost as a result of the development proposed in the Local Plan.” (p 59)</p> <p>Other Advice</p> <p>Further general advice is provided within Natural England Advice Note – Local Plans February 2024, attached at (Appendix A) - see attachment</p>

Title	Policy TK6 Site at Coalpit Hill Talke
Consultee Family Name	Grocott
Consultee Given Name	David
Q4 Part of document	Policy
Q4 Policy	TK6
Q6 Details	<p>Dear Inspector,</p> <p>Newcastle Under Lyme needs a local plan, to allow structured development of housing across the Borough and secure sites that are in green belt land.</p>

However, I feel that the local plan we see being put forward has sites in , that are not just unpopular but also have real infrastructure concerns and based on assumptions that I feel cannot be substantiated.

Having attended various resident group meetings , I have found that they are very knowledgeable and who knows better than local residents , the problems that they face now and how the new developments will affect them and not against a local plan but sites that are in the plan.

The main sites that I have concern over AB2, AB33,AB12,AB15, CT1, BL8,BL18,BL32, TK6,Tk17 and TK27.

These are in Audley , Red Street and Butt Lane /Talke , areas that I have links with and know well.

Documents are now accessible, but residents and councillors have by timings of release , which in some cases have not allowed proper time for scrutiny and meaningful consultation.

All these sites have traffic issues already and note recommendations regarding A500 , Talke Interchange, A34 ,A527 , which will need major financial assistance .

I believe all the sites listed have questions about infrastructure and would question how sound the reasoning and financial constraints of the projects to be deliverable.

I would like to mention two sites in particular , which are AB2 and CT1.

AB2 is a 80-hectare project for warehousing /factory that is not in keeping with the rural area , with only 22 hectares needed for warehouse , the rest is for lorry car park and substation.

Having experienced problems in my Ward , Holditch and Chesterton , with warehouse now occupied by Boughey Distribution I believe this is not a sound proposal.

Residents constantly complain about traffic and noise , plus air quality.

When it was built people complained , before it was even occupied residents about construction, and we also had problems concerning getting Road adopted by Staffordshire County Council .

Without this happening , warehouse contract would not have been signed , and quite possibly would still be empty now .

AB2 in Audley , is potentially 3 times bigger than Chesterton warehouse , and have grave reservations regarding the soundness of this development plus I believe that there may be another more appropriate alternative.

CT1 Red Street has been scaled down but worth noting , that area has a history of being used for mining , as well as this mentioned in the report doctors which closed and now a dentist.

Due to the problems with documentation being available for consultation , and real reservations about infrastructure and financial viability , I would ask you to consider if this plan is sound and complaint.

Q6 Details	<p>[Admin Note, the following statement has been supported by a form of authority with appropriately 172 signatures].</p> <p>Re: Newcastle-under-Lyme Borough Council (" the Council") Final Draft Local Plan 2020/2040 - Regulation 19 Consultation Please accept this letter as our representation in response to the above consultation, for onward submission to the Inspector.</p> <p>CONTENTS</p> <p>To assist you and the Inspector, the following is the order of our representation:</p> <ol style="list-style-type: none"> 1. Introductory comments. 2. Personal details. 3. Approach. 4. Legally and procedurally compliant. 5. Soundness (including each of the four heads, as set out in the National Planning Policy Framework). 6. Suggested modifications. 7. Conclusion. <p>1. INTRODUCTORY COMMENTS</p> <p>We are the Talke Action Group ("TAG"), set up primarily to co-ordinate engagement with the Local Plan preparation process by the residents of the village of Talke/Talke Pits ("the Village"), part of the ward of Talke and Butt Lane in the borough of Newcastle-under-Lyme ("the Borough"). We are registered with the Council as a Consultee herein.In an effort to assist the Inspector, and as requested in the Planning Inspectorate's Guidance Note (Para 5.3 - "Where groups or individuals share a common view on the plan...etc."), this letter of representation ("this letter") is respectfully submitted both on behalf of ourselves and also on behalf of all those individuals ("the signatories") who have signed the attached Forms of Authority, whereby they endorse this letter and the contents hereof as representing their joint and individual view. Accordingly, the term "our representation" as used herein reflects that this letter is the representation herein on behalf of both ourselves and the signatories, and the words "we" and "us" are similarly used.</p>

- In said attached Forms of Authority this letter is referred to as "the letter of representation".
- Each of the signatories has so given said informed authority and endorsement following one-to-one drop-in engagement sessions during the Consultation period, between members of TAG and each signatory.
- Our representation is submitted in letter form pursuant to advice that a letter is a proper and appropriate means of submission of Reg.19 representations, given by Councillor Fear, the Council's portfolio holder for Strategic Planning ("the Portfolio Holder").

3. APPROACH

- In this letter, with regard to the concepts in parts 4 and 5 above, our representation follows the wording of para. 35 of the National Planning Policy Framework in force at this time.
- Pursuant to that wording, we do not consider that this Final Draft Local Plan ("the FDL Plan") has "been prepared in accordance with legal and procedural requirements" or that it is "sound". We are therefore raising objections to the FDL Plan under the pertinent heads.
- However, we are of the view that the Borough does need a Local plan, so that we do not wish to see the Plan struck down completely. Accordingly, where appropriate for each of the objections raised, this letter suggests relevant modifications.
- As we are residents of the Village, and are therefore largely not aware of detailed circumstance prevailing in other communities, most of our representations herein relate to the TK sites selected in the FDL Plan for development in the Village, namely sites TK6, TK10, TK17 and TK27 ("the TK sites"). However, because many of the reasons for which we consider the FDL Plan to be either not sound, or not legally/procedurally compliant, or both, relate to the FDL Plan as a whole insofar as they affect the TK sites, some representations are made regarding the FDL Plan as a whole but then show how they relate specifically to the Village and to the TK sites specifically. As in c) above, modifications are then suggested.

Note: As the FDL Plan is a Council-derived document, we use the term "the Council" to refer also to the Council officers - elected and/or employed - engaged in guiding the FDL Plan through the process.

NOT LEGALLY OR PROCEDURALLY COMPLIANT

We do not believe the FDL Plan is legally/procedurally compliant.

4.1 The consultation process

Insofar as the residents of the Village are concerned, the consultation process has been drastically inadequate. Many, if not most of the residents, were until recently entirely unaware that a local plan was in the pipeline and equally unaware of the promulgation of the First Draft Local Plan or the FDL Plan. In our view, this inadequate consultation by the Council renders the FDL Plan non-compliant because :

a) Community engagement

(i) The Council may have given the appearance of complying, by sticking to minimum legal requirements regarding local plan community engagement, for example posting legal notices at the relevant sites and posting documents online. However, the Village population comprises a substantially larger than average percentage of older people, who do not or cannot engage with the internet. The Council will know this. Therefore, in accordance with its own Statement of Community Involvement (SCI), at para.1.13 (Equal Opportunity"), the Council should have taken additional steps "in the way in which (they) consult ... to meet the specific local needs". This the Council has not done during the whole process.

(ii) This could - and indeed the SCI (at Table 2, p16) states that it will - be done by the distribution of "leaflets and posters". This does not appear to have been done for this local community with its "specific local need".

(iii) Having regard to this failure to consult in a way which meets specific local needs, there are other instances by which the Council has further failed in any meaningful way, insofar as the Village and its demographic is concerned, to comply with its own SCI, for example para 1.9, Community Involvement ("Inform people...and provide information...at the earliest opportunity"); para1.15, Equal Opportunity (allowing the process to be "accessible to those who are unfamiliar with the terms, processes and structures of the planning system..."); para 2.1 ("Early and meaningful engagement...with...neighbourhoods...is essential"); and para 2.2 ("A range of methods and techniques will be used to involve communities...")

(iv) One clear item of evidence of the Council's failure to comply with its own SCI, and therefore to be legally compliant, relates to SCI para 1.14 (Equal Opportunity), which indicates that the Council will endeavour "to work in an inclusive manner" to deliver "planning services from the perspective of a range of potential users", including by "Organizing consultation events to maximise involvement..ie workshops." Yet, when holding such workshops was suggested at the relevant Scrutiny Committee meeting on 11.7.24, it was rejected out of hand using the spurious excuse that residents wouldn't be available!

(v) The Planning Inspectorate's own guidance/requirement document, in the part 3 "Legal Compliance" section, states clearly that "the process of community involvement for the plan in question should be in general accordance with the LPA's Statement of Community Involvement". To the extent that the FDL Plan, insofar as the Village is concerned and as evidenced in (i)-(iv) above, is not so in accordance, it is not legally compliant.

(vi) Lastly under this head we would like to point out that, although the Council loudly touts, as evidence of its engagement compliance, that it has allowed a consultation period which is longer than the minimum required (8 weeks instead of 6 weeks), it might as well be 1 week or 28 weeks - it makes no difference how long the consultation period is if ordinary residents have not been properly engaged with, taking into account not only the demographic of the Village per se but also the Council's obligations under their own SCI, both generally and given said demographic.

Conclusion: Because of the Council's failure, as above, to consult properly with the residents of the Village, given its specific demographic, the FDL Plan is not legally/procedurally compliant.

b) Consideration of consultation objections

It is self-evident, even to lay-persons such as we, that for a consultation to be meaningful and valid, the views, including any objections, of the consultees must be properly considered. If the consultation is treated by an LPA as merely a procedural formality, and the consultees' views arising thereout are not properly and fully considered, it is not a meaningful consultation, and the plan out of which the meaningless

consultation arises cannot be legally compliant. We believe that this is the case with the FDL Plan, for the following reasons:

(i) In the Council's document in response to the Reg.18 consultation in respect of the First Draft of the Local Plan, where any proposed development site had had questions had been raised as to that site's suitability for development, the vast majority of the responses thereto was not a considered reply addressing any query, but merely a standard comment, the gist of which is that the site had been selected notwithstanding any objections raised nor addressing any such, and merely suggesting that any problems arising with any actual development could be dealt with when a planning application is made. The use of such an identical pro-forma response indicates clearly a lack of meaningful consideration of representations arising out of the consultation.

(ii) Further, those unconsidered responses not only evidence a lack of consideration of consultees' views, in itself rendering the consultation meaningless and the FDL Plan not legally compliant, but also fails to take into account circumstances where "planning" at the development stage will not solve the problem raised; or to offer any other solution. As examples, and with regard to the Village:

- what is the solution where there will be insufficient local school and/or health clinic places available as a consequence of development, but s106 funding would be of no use because there is no space in or around the existing facility for more staff to be employed or for an extension to be built?

- although construction of a roundabout might help with a substantially greater traffic flow at a dangerous junction, how will "planning" solve the problem of much greater traffic on the already dangerously congested main road through the village, which cannot be widened?

- How will planning considerations relating specifically and only to individual developments solve the larger problem of waste discharge in the locality? Viz: A report in 2023 covered the dumping of sewage into waterways by Severn Trent Water, revealing that during 2022 sewage was discharged into local waterways for 31,228 hours with 6,370 dumps in total. Alarming, the biggest polluter was the Liverpool Road works in Kidsgrove which discharged for 4,139 hours in 187 spills. This plant, which covers, inter alia, the Village as well as Butt Lane and Kidsgrove, clearly cannot cope with present demand. How will this plant cope with sewage from the hundreds of houses in the TK, BL and Kidsgrove sites? The Council appears not to have considered or addressed or informed consultees of how this will be dealt with.

We stress that we are not asking the Inspector to examine these issues. We raise them as exemplars and evidence that the Council has either deliberately ignored or simply failed properly to consider and/or to address consultees' views.

(iii) This apparent failure properly and fully to consider the views of consultees, and consequently having nothing of substance to report back to them, both further represent yet another failure by the Council to comply with its own SCI, this time Para 1.9, the aim to "Respond to any comments received, giving proper consideration and explanations of how these views will be incorporated into the planning documents and decisions."

(iv) A disturbing sequence of documents seems to indicate that the relevant officers had decided, well in advance of any scrutiny or vote, that the FDL Plan should be recommended for approval to a full meeting of the Council. For example, way back in January 2024, a report by the Corporate Leadership Team to the Cabinet recommended that the Cabinet "(a)uthorises the Deputy Chief Executive, in consultation with the Strategic Planning Portfolio Holder, to recommend to Council at its meeting on 24 July that it approves the Final Draft Local Plan (at Regulation 19 stage)...for public consultation.." Please note that the Cabinet decided, on 16 January 2024, to recommend approval of the FDL Plan to the full Council meeting on 24 July 2024, over 6 months before that meeting, and indeed before the FDL Plan was promulgated and possibly even before it was prepared. (On 18 March 2024, the Corporate Leadership Team presented this decision by the Cabinet to the relevant Scrutiny Committee for their meeting on the same day, and they appear to have had no issue with it.) This sequence of events cannot but reflect a lack of meaningful consideration of anything arising out of the Reg 18 consultation, rendering the consultation extremely, if not fatally, flawed.

Conclusion: Because the representations arising out of the Regulation 18 consultation were not adequately considered, the consultation has not been properly and/or meaningfully conducted, and therefore the FDL Plan is not legally/procedurally compliant.

4.2 Procedural Compliance

Although it again appears on the surface that the Council has carefully followed all the over-arching procedural steps required in this process, there have been at least two somewhat alarming occurrences evidencing that this has not actually been the case on closer examination.

a) Site Selection

(i) In the Local Plan Issues and Options Report in 2022, preparatory to preparation of the First Draft Local Plan, the long list of possible sites indicated that three of the TK sites (TK10, TK17 and TK27) were "unsuitable" for development. By the time of promulgation of the First Draft Local Plan, they had somehow become suitable, without any apparent explanation. The implications of this are somewhat disturbing, let alone it representing another failure of the Council for its evidence base to be transparent and available, and for residents to be kept informed, as in 4.1 above. However, the following point might shed some light on the mysterious elevation of these three sites.

(ii) At the meeting of the relevant Scrutiny Committee meeting on 11 July 2024, the Portfolio Holder was repeatedly asked how the final list of sites included in the First Draft of the Local Plan were selected from the longer list and whether Cabinet Members were involved. The Portfolio Holder repeatedly obfuscated and ultimately refused to answer. However, it subsequently appears that said selection was made by the Portfolio Holder and two other senior councillors from the same side of the chamber.

(iii) Given these occurrences, it is open to conjecture as to whether or not it is a coincidence that a by far greater proportion of sites selected for development are situated in wards represented by councillors from the party in opposition to that of the Portfolio Holder's majority governing party.

Conclusion: Although the initial stages of the site selection process appear to have been conducted openly and compliantly, there are questions around the final stages of the site selection, rendering the process certainly procedurally (and possibly also legally) non-compliant.

b) Document Availability

(i) The FDL Plan was approved for consultation and submission at a full meeting of the Council on 24 July 2024. However, issues relating to document availability cloud its approval.

(ii) For Councillors to have been able to make an informed decision when voting, over 40 documents forming the evidence base and informing the FDL Plan, were required to be examined and considered. However, a large number of these documents were not made available to Councillors sufficiently timeously for them to be able to examine same and render themselves fully informed. Eight such documents (almost 20% of the total) were only uploaded to the relevant website the previous afternoon, leaving Councillors in outside employment around 24 hours to read and examine hundreds of pages of formal documentation whilst working during the day. (A further 7 documents were uploaded to the web the day before that, making a total of 15 documents - over one-third of the total number - only made available 48 hours before the meeting.)

(iii) The opposition Councillors therefore proposed an amendment, that the decision to approve the FDL Plan be slightly delayed until the next Council meeting only two months later, to allow all Councillors fully to consider all the relevant documents. This was defeated, with speakers from the Portfolio Holder's majority party insisting that the plan be approved on that day. Disturbingly, a senior councillor from that party stated categorically that all but two of the documents were made available timeously. The promulgated list of dates and times of uploading of all the documents shows that this statement was - knowingly or unknowingly - untrue.

(iv) It is not clear whether the above events were deliberate or not - we hope not. Nonetheless, it is the case that documents vital to the integrity of the FDL Plan were not made appropriately, timeously or compliantly to many of those being asked to make a decision on the FDL Plan and this in itself renders the process not procedurally compliant. This is even more the case because the Council could have obviated the difficulty by delaying the decision, but pointedly and deliberately chose not to.

(v) Speaking to the amendment referred to above, one councillor remarked: "The expectation that we approve a local plan without these essential documents is not only unreasonable but also undermines the principles of sound governance. This is a formal process that requires thorough scrutiny and understanding of all supporting evidence. We must be fully informed to ensure that the plan we endorse is both sound and legally compliant." They were not, so the plan is not.

c) Cross Party Engagement

(i) The Council's SCI, at para 2.23, requires the Council, in preparing a local plan, "to ensure cross party engagement on the plan making process..". In taking the steps in 4a and 4b above, the Council has again failed to comply with its own SCI.

Conclusion: Consequent on the above, the FDL is neither procedurally nor legally compliant.

4.3 Sustainability Assessment Objectives, Strategic Objectives, and Transport and Accessibility Policy Development as proposed on the TK sites would not only fail to comply with and meet the standards required by these policies and objectives, but would indeed be directly contrary to and inimical with same. (As details relating hereto are set out fully below, and as we would not wish the Inspector to have to read exactly the same content twice, we respectfully refer the Inspector to item 5.3,b ("Effective" head of "Soundness") below.)

Conclusion: Because of this, the FDL Plan, insofar as the TK sites are concerned, is not legally compliant.

5. SOUNDNESS

5.1 Positively prepared

No representations.

5.2 Justified

We do not believe the FDL Plan, insofar as the Village and the effect that development of the TK sites will have

thereon, is justified. This is for the following reasons:

a) Number of dwellings proposed for the TK sites

(i) The number of dwellings proposed to be built over the TK sites (over 300) is disproportionate for this small semi-rural village. It is not justifiable that the Village should bear the burden of 7% of the total Local Plan Housing Allocation of 4512 houses (para 5.5, FDL Plan), when neither its population nor its housing stock are anything like that percentage of the Borough as a whole. When looking at the figures for the Talke and Butt Lane ward as a whole, the figure of 520 dwellings proposed to be built (per FDL Plan, paras 13.194 - 13.231) in the ward represents 11.5% of the proposed development for the whole Borough. To impose this disproportionate burden on the village is not justified. (As to possible reasons for this high proportion of dwellings on the TK sites - all but 10 on greenbelt - being proposed to be imposed on the Village, we refer the Inspector back to point 4.2 above.)

Suggested Modification - Suggested Modification 1 below

b) The population of the Borough

The population of the Borough has only increased by 6.9% over the past four decades since 1981 (117,217 to 125,297, 1981-2022). The Council is allowing for an increase of 15% over the term. Even accepting that in matters of targets, some (but not all) issues are beyond the ambit of a Local authority, it is not justifiable that a greater proportion of what is already a possibly inflated target (ie above the national standard method calculation) should be borne by the Village. This is especially so when there are doubts about the motivation for and process of site selection, and there are brownfield sites (see c below) and empty homes (see 6.1,b,v below) available in the Borough which have not been selected.

Suggested Modification - Suggested Modification 1 below

c) Availability of brownfield sites

As indicated above (at point 4.2,a,i) the status of the Talke sites was changed from "unsuitable" to "suitable". At the same time, other sites (some brownfield) were changed from "suitable" to "unsuitable". These are however available and should be looked at again. For example, the unused and derelict Knutton Community Centre site was made available, but it appears that developers deemed the cost of eg decontamination to be too great and preferred untainted eg Green Belt land on which to build. The same is true of other available

brownfield sites in the Borough. It cannot be justified for Green Belt land to be sacrificed in order to increase

the profits of developers.

Suggested Modification - Suggested Modification 1 below

d) The effect on the nature of the Village

If all of the proposed 310 dwellings are built on the TK sites, and taking into account also development of sites such as the former TK5 site (see below at 6.1.b,iii) and any other windfall and/or buffer sites, this will represent an increase in the percentage of dwellings in the Village in the order of 20-30%! This volume of development is simply too great for Talke/Talke Pits. It would swamp the Village. It would irreparably and irreversibly change the nature of the Village from a semi-rural village to a sprawling dormitory town - although without the infrastructure to support it (see e below), rendering it with the worst of all worlds. To destroy the Village in this way by such a weight of development cannot be justified. Suggested Modification - Suggested Modification 1 below.

e) Effect on local infrastructure

We appreciate that it is not within the ambit of this Regulation 19 Consultation for the Inspector to re-examine issues of local planning such as flooding or parking issues on the proposed development sites. However, where there are issues relating to off-site impacts, which have not been dealt with, either satisfactorily or at all, in the FDL Plan, then this goes to the Soundness of the FDL Plan under both heads of "Justified" and also "Effective" (as below).

The issue of the undealt-with problem of the knock-on effect of development of the TK sites on the Village as a whole, has been mentioned in passing at 4.1.b.ii above. It is not justifiable to propose a level of development on the Village which would exacerbate, and make critical, existing problems in a creaking and already inadequate infrastructure, without some level of pre-planning in the FDL Plan. Insofar as the Village is concerned, there appears to be none with regard to three major infrastructure problems which will arise should the TK site developments proceed, and which do not appear to be resolvable by specific planning arrangements for on-site or site-adjacent adaptations only. These are:

(i) As previously alluded to (4.1.b,ii), the volume of traffic (both local, and also that which uses the Village as

a rat-run to avoid congestion on the nearby arterial routes of the A34, the A500 and the M6) through and in the Village is already greatly excessive for the Village road network. The main road ("the main road") through the Village (comprising High Street, Crown Bank and Swan Bank, which all run seamlessly into each other to form one thoroughfare through the Village), is also already inadequate and at breaking point. The road, like Pit Lane, is narrow and often reduced to a point where two cars, let alone trucks, cannot pass. When not congested, vehicles speed through, and the road is dangerous for pedestrians and vehicles alike, as well as for ingress/egress from local residences. There would be no easy solution to this, even without further development, as the road cannot be widened.

The addition of hundreds more vehicles (anything between 310 and 620) on to the main road through, and other roads in, the Village cannot but seriously exacerbate an already critical situation, and render the local road network inoperable.

As above (4.1.b,ii - also Failure properly to consult) the FDL plan does not appear to make any provision for this, nor even to consider it. It cannot be justifiable to allocate development sites without appearing to have any great, or any, concern about, or to make provision for, the drastically adverse knock-on effect which such

development would have on the Village and its residents.

Suggested Modifications - Suggested Modifications 1 (or 2) below.

(ii) Similar concerns relate to the local health clinic (Talke Clinic, part of the North Newcastle Primary Care Network, "the Clinic"). Although we understand that their list is not, at date hereof, entirely full, the clinic as it is would simply not be able to take in the residents of 310 dwellings. However, the logistics are that the current building is full, so that no further health staff can physically be accommodated; and the site will not allow for further expansion. Accordingly, the usual solution of s106 funding to employ further staff and/or to expand the building, is not available.

Yet the Council again appears not to have considered nor to make any specific proposals to solve this problem (unlike elsewhere, eg at the proposed Keele site, where a health Hub is mooted). The only solution therefore appears to be that patients will need to attend GPs further afield, either at other practices in the North Newcastle PCT, or even at practices in other, further away, PCTs.

The over-arching Staffordshire and Stoke-on-Trent Integrated Care Board ("ICB") is quite clear - for them, such list-dispersal, with patients having to travel distances to see a doctor, is a very last option, a last resort. The Council, however, seems, by failing to consider and actively to address the issue, in fact by default to be planning for the last resort in respect of the TK sites and the Village.

Inclusion of the TK sites in the FDL Plan cannot be justified where the health infrastructure of the Village is so lacking and unaddressed.

Suggested Modifications - Suggested Modifications 1 (or 3) below.

(iii) Again, there is a similar concern around local schooling, especially for children of primary school age. There is only one primary school in the Village, namely Springhead school ("the School"), to which the same problems (no unused internal space; no suitable site expansion room), again rendering s106 funding largely irrelevant. So, once again, primary school children will need to be found places further afield.

Inclusion of the TK sites in the FDL Plan cannot be justified where the school infrastructure of the Village is so lacking and unaddressed.

Suggested Modifications - Suggested Modifications 1 (or 4) below.

(iv) A further effect of (ii) and (iii) above, if patients and primary-age schoolchildren are listed or placed further afield, is additional car-journeys, and even worse exacerbation of the local road infrastructure problems, in (i) above. This cannot be justified.

(v) Lastly under e) hereof, although both the Staffs and Stoke ICB (regarding health issues) and the Staffordshire County Council (regarding education and other issues) have been consulted herein by the Council, it does not appear that the Council has actually approached or otherwise consulted directly with either the Clinic or the School, to ascertain from them the situation on the ground, so as to attempt to deal with it and/or to modify their site selection by eg removal of the TK sites from the FDL Plan, in light of these potentially insurmountable impact consequences. This cannot be justifiable.

f) Use of Green Belt land

Given all of the above - the disproportionate weight of development allocated for the TK sites, the questionable motivation for the site selection, the availability of brownfield sites and empty houses in the Borough, the fact that the Council would still meet its development target even without inclusion of the

TK sites (see 6.1,b,i below), the detrimental effect that the proposed development on the TK sites would have on the Village, etc - it appears that there are no circumstances at all, let alone exceptional circumstances, which would necessitate or justify use of the Green Belt land proposed for the TK sites. Suggested Modification - Suggested Modification 1 below.

Conclusion: The FDL Plan, insofar as it relates to the TK sites, is not Sound under the head of "Justified".
5.3 Effective

We do not believe the FDL Plan, insofar as the Village and the effect that development of the TK sites will have

thereon, is effective. This is for the following reasons:

a) Viability

Because of the intractable infrastructure difficulties outlined above (at 5.2,e), we do not believe the development on the TK sites is viable. If it is not viable, it cannot be effected, and is accordingly not effective. Suggested Modifications - Suggested Modification 1 (or 2 - 4) below.

b) Sustainability Assessment (SA) Objectives, Strategic Objectives, and Transport and Accessibility Policy (Policy IN2)

As 4.3 above (not legally and/or procedurally compliant), development as proposed on the TK sites would not only fail to comply with and meet the standards required by these policies and objectives, but would indeed be directly contrary to and inimical with them. Some examples are:

- SO IV - to "reduce the Borough's carbon footprint..." : the introduction of many more vehicles into a rural environment will have the opposite effect.

- SO VI - to "support the vitality of rural villages, preserving and enhancing the special character (of)...each local community" : development of the TK sites will destroy the cohesion and vitality of the Village, and its special character.

- SO VI - to "provide choice in housing types for local people." : local residents do not want a choice of large development-based housing which will have the adverse and destructive effects referred to herein.

- 1N2 1 b - development must allow for "integration with existing infrastructure." : as herein, development of the TK sites will overwhelm the existing road infrastructure to a point of collapse.

- IN2 1,e - development must "not cause unacceptable highway safety problems in relation to local traffic circulation and existing parking..arrangements.." : as herein, this is exactly what development of the TK sites will cause

- IN2 1,f - Development must "not cause severe residual impacts on the road network, either direct and/or cumulative." : extremely severe such impacts on the local road network, both direct and cumulative is exactly what will happen if development of the TK sites goes ahead.

- SA Objective 1 - "To contribute to reduction of greenhouse gases.." : not to increase them in the locality by the introduction of many more vehicles into a rural environment.

- SA Objective 2 - "To improve air quality.." : by the introduction of many more vehicles into this rural environment?

- SA Objective 3 - "To protect, enhance and restore biodiversity ensuring that there is an overall net gain in the extent and quality of biodiversity." : development of the TK sites, by diminishing and concreting over Green Belt land, will self-evidently destroy and reduce biodiversity; and Parrots Drumble, a small remnant of ancient Woodland and a nature reserve, with its delicate wildlife and biodiversity balance, is extremely close to site TK10.

- SA Objective 4 - "To..maintain..land resources" : losing the agricultural land within the TK sites does precisely the opposite.

- SA Objective 7 - "To conserve, enhance and promote interest in local distinctiveness, the historic environment and landscapes, heritage, cultural assets and their settings" : aside of the loss of Village distinctiveness and heritage already cited, the last of local dry-stone walling and the Village's central Cross (original 12Century base are directly in the firing line of the increased traffic

- SA Objective 8 - "To strengthen the quality of the landscape.." : development of the Green Belt TK sites would, on the contrary, diminish and despoil not only the quality of the landscape per se, but also the visual and physical amenity it provides to the Village.

- SA Objective 9 - "To enhance the quality..and connectivity of open space.." : building over large parts of such Green Belt space self-evidently does exactly the opposite, reducing the quality and interrupting the connectivity of the of same.

- SA Objective 9 - "To improve the health and mental wellbeing of the population.." : increased traffic with greater pollution, the need for young children and patients to travel further afield to access school and health-care, a dangerous road environment, disintegration of an identifiable community, et al -how does this improve the health and welfare of the local population?

Accordingly, if the Council were to proceed with developing the TK sites, they would be in conflict with their own precepts. Not only does this render the FDL Plan not legally compliant (per 4.3 above), it also means that (unless the Council wishes deliberately to act in a non-legally-compliant manner), development of the TK sites cannot be affected as is. If such development cannot be affected then the FDL Plan, insofar as it relates to the TK sites, not effective.

Suggested Modification - Suggested Modification 1 below.

Conclusion: The FDL Plan, insofar as it relates to the TK sites, is not Sound under the head of "Effective".

5.4 Consistent with national policy

We do not believe that the FDL plan, insofar as the TK sites are concerned, is consistent with national policy,

for the following reasons :

a) Transport - please see above re the local road system in the Village.

b) Infrastructure - please see above re the Village infrastructure, namely school and health.

c) Landscape/Environment - please see above re unnecessary use of Green Belt land for the proposed TK sites.d) Location - please see above re overwhelming a rural village when other brownfield sites and empty houses are available.

e) Health - please see above re pollution, degradation of environment, list dispersal, etc. Suggested Modification - Suggested Modification 1 below.

Conclusion: The FDL Plan is not consistent with national policy, especially insofar as the TK sites are concerned, so that it is not Sound under this head.

6. SUGGESTED MODIFICATIONS

6.1 Suggested Modification 1

a) That all or some of the Talke sites be removed from the FDL Plan, or alternatively that the number of proposed dwellings for all or some of the Talke sites be reduced.

b) This can be compensated for as follows:

(i) The FDL Plan, at para 5.5 (Housing Requirement and Supply Information figures), indicates that, whereas

the Housing Requirement is 8000 dwellings over the duration of the plan ("the term"), the FDL plan allows for 8,663 units. The additional 663 units are made up of 372 expected additional units becoming available over the term - the windfall allowance - and a buffer of 291 units (figure not shown at para 5.5). The windfall allowance alone more than adequately compensates even if all the Talke sites were to be removed from the FDL Plan.

(ii) The use of brownfield sites excluded from the FDL Plan site selection, and especially those whose status was previously changed from "suitable" to "unsuitable", with no transparent explanation, should be revisited. Development of some or all of these could mitigate or obviate the need for the Talke Green Belt sites to be included in the FDL Plan.

(iii) What was site TK5 - a brownfield site at the top end of the main road through the Village, and very close to TK27 - was originally shown as "suitable" but, in 2022, unavailable for housing development, as it was then in active commercial employment use (by London Hoist). However, it has since become available and is in fact at date hereof on the market for sale by a local agent (Louis Taylor) with outline planning permission for 32 dwellings. This should be brought back into account and reduce the suggested quota for eg TK27 by a concomitant number.

(iv) As at (ii) above, there are a number of other brownfield sites over the Borough as a whole, to which similar considerations apply, namely that they are suitable for development, but are not included in the FDL Plan, such as the derelict Knutton Community Centre site. As in (ii) above, these could all be looked at again, in preference to Green Belt sites such as the Talke sites.

(v) Similarly, reducing or eliminating the Talke sites could be easily compensated for by use of homes currently empty in the Borough.

The Council's own website (Empty Houses page) asks "Did you know there are over 1,000 empty properties in Newcastle-under-Lyme?" Even using more modest figures, there were 503 empty homes in the Borough in 2022/3 (Government's national New Homes Bonus figures) and 511 in 2023 (Action on Empty Homes, based on Govt. Data published by the (then) Dept. for Levelling Up and Housing, Nov. 2023).

Yet, despite this number of empty homes being available, the council only brought back into use 39 homes in the year Oct 2021-Oct 2022, and a meagre 11 homes 2022-2023 (same sources, based on CTB figures); and they are now proposing that Green Belt land be sacrificed, when all this possible housing lies unused.

6.2 Suggested Modification 2

That drastic measures be taken to mitigate the impact of additional vehicles consequent on development of

the TK sites, for example:

a) Barriers be erected at either end of the main road allowing ingress/egress only for Village residents, emergency services, deliveries, workers, etc.

b) Entrance to and exit from TK27, currently via Coppice Road, should in turn require egress to/ingress from Coppice Road only to and from the main arterial A5011 (Linley Road). That would at any rate be necessitated by erection of aforementioned residential barrier between the top of Coppice Road and Swan Bank.

c) Similarly for TK10, having all the additional vehicles from a 170-dwelling site feeding into the main road at the Crown Bank/Swan Bank/Jamage Road junction would exacerbate the situation even further. This could be controlled by limiting access to and from Pit Lane to the bottom end (roundabout at Pit Lane/Jamage Road/Oaktree junction), and creating a one-way system; as well as widening Pit Lane to allow it to deal with the extra traffic in addition to the current already heavy HGV use and substantial outside traffic visiting the Affinity shopping hub on Pit Lane.

It is appreciated that these suggestions are probably impractical for a number of reasons, but that in itself serves to illustrate how intractable and insurmountable the problem is. It also suggests that development of the TK sites is unviable (per 5.3 above). The best solution therefore appears to be Suggested Modification 1 above.

6.3 Suggested Modification 3

That the Council be asked to consult with the ICB specifically about the Clinic, and directly with the Clinic itself,

as to possible solution and, if there is none, to accept that Suggested Modification 1 should apply.

6.4 Suggested Modification 4

That the Council be asked to consult with the SCC, and also directly with the School Organization Team, specifically about the School, as well as directly with the School itself, as to possible solution and, if there is none, to accept that Suggested Modification 1 should apply.

7. CONCLUSION

For all the reasons above, we believe that the FDL Plan is neither Sound nor (per para 35 NPPF) "in accordance with legal and procedural requirements".

Notwithstanding, we are not requesting that the FDL Plan be struck down. We recognize that the Borough needs a strong and robust local plan which, in most aspects, the FDL is.

However, nor are we "nimby"s. Had the proposals in the FDL Plan for a local contribution to the Borough's housing need been for a reasonable number of dwellings in, or in the vicinity of, the Village, and not on precious and valuable Green Belt land, this representation would in all probability not have been submitted. It is not, however, reasonable for not only the character, but the very nature, of the Village to be irreversibly damaged and probably destroyed, by the building of a number of houses way out of proportion to the size of the Village, and greatly out of kilter to the ratio of the population of the Village to the Borough as a whole. It is not unreasonable that an objection be raised to this.

	<p>We therefore request the Inspector, for all the reasons herein, to modify the FDL Plan and respectfully refer the Inspector to Suggested Modification 1 above.</p>
Q7 Modification	<p>SUGGESTED MODIFICATIONS</p> <p>6.1 Suggested Modification 1</p> <p>a) That all or some of the Talke sites be removed from the FDL Plan, or alternatively that the number of proposed dwellings for all or some of the Talke sites be reduced.</p> <p>b) This can be compensated for as follows:</p> <p>(1) The FDL Plan, at para 5.5 (Housing Requirement and Supply Information figures), indicates that, whereas the Housing Requirement is 8000 dwellings over the duration of the plan ("the term"), the FDL plan allows for 8,663 units. The additional 663 units are made up of 372 expected additional units becoming available over the term - the windfall allowance - and a buffer of 291 units (figure not shown at para 5.5). The windfall allowance alone more than adequately compensates even if all the Talke sites were to be removed from the FDL Plan.</p> <p>(ii) The use of brownfield sites excluded from the FDL Plan site selection, and especially those whose status was previously changed from "suitable" to "unsuitable", with no transparent explanation, should be revisited. Development of some or all of these could mitigate or obviate the need for the Talke Green Belt sites to be included in the FDL Plan.</p> <p>(iii) What was site TK5 - a brownfield site at the top end of the main road through the Village, and very close to TK27 - was originally shown as "suitable" but, in 2022, unavailable for housing development, as it was then in active commercial employment use (by London Hoist). However, it has since become available and is in fact at date hereof on the market for sale by a local agent (Louis Taylor) with outline planning permission for 32 dwellings. This should be brought back into account and reduce the suggested quota for eg TK27 by a concomitant number.</p> <p>(iv) As at (ii) above, there are a number of other brownfield sites over the Borough as a whole, to which similar considerations apply, namely that they are suitable for development, but are not included in the FDL Plan, such as the derelict Knutton Community Centre site. As in (ii) above, these could all be looked at again, in preference to Green Belt sites such as the Talke sites.</p> <p>(v) Similarly, reducing or eliminating the Talke sites could be easily compensated for by use of homes currently empty in the Borough.</p> <p>The Council's own website (Empty Houses page) asks "Did you know there are over 1,000 empty properties in Newcastle-under-Lyme?" Even using more modest figures, there were 503 empty homes in the Borough in 2022/3 (Government's national New Homes Bonus figures) and 511 in 2023 (Action on Empty Homes, based on Govt. Data published by the (then) Dept. for Levelling Up and Housing, Nov. 2023).</p> <p>Yet, despite this number of empty homes being available, the council only brought back into use 39 homes in the year Oct 2021-Oct 2022, and a meagre 11 homes 2022-2023 (same sources, based on CTB figures); and they are now proposing that Green Belt land be sacrificed, when all this possible housing lies unused.</p> <p>6.2 Suggested Modification 2</p> <p>That drastic measures be taken to mitigate the impact of additional vehicles consequent on development of the TK sites, for example:</p> <p>a) Barriers be erected at either end of the main road allowing ingress/egress only for Village residents, emergency services, deliveries, workers, etc.</p> <p>b) Entrance to and exit from TK27, currently via Coppice Road, should in turn require egress to/ingress from Coppice Road only to and from the main arterial A5011 (Linley Road). That would at any rate be necessitated by erection of aforementioned residential barrier between the top of Coppice Road and Swan Bank.</p> <p>c) Similarly for TK10, having all the additional vehicles from a 170-dwelling site feeding into the main road at the Crown Bank/Swan Bank/Jamage Road junction would exacerbate the situation even further. This could be controlled by limiting access to and from Pit Lane to the bottom end (roundabout at Pit Lane/Jamage Road/Oaktree junction), and creating a one-way system; as well as widening Pit Lane to allow it to deal with the extra traffic in addition to the current already heavy HGV use and substantial outside traffic visiting the Affinity shopping hub on Pit Lane.</p> <p>It is appreciated that these suggestions are probably impractical for a number of reasons, but that in itself serves to illustrate how intractable and insurmountable the problem is. It also suggests that development of the TK sites is unviable (per 5.3 above). The best solution therefore appears to be Suggested Modification 1 above.</p> <p>6.3 Suggested Modification 3</p> <p>That the Council be asked to consult with the ICB specifically about the Clinic, and directly with the Clinic itself, as to possible solution and, if there is none, to accept that Suggested Modification 1 should apply.</p> <p>6.4 Suggested Modification 4</p> <p>That the Council be asked to consult with the SCC, and also directly with the School Organization Team, specifically about the School, as well as directly with the School itself, as to possible solution and, if there is none, to accept that Suggested Modification 1 should apply.</p> <p>7. CONCLUSION</p> <p>For all the reasons above, we believe that the FDL Plan is neither Sound nor (per para 35 NPPF) "in accordance with legal and procedural requirements".</p> <p>Notwithstanding, we are not requesting that the FDL Plan be struck down. We recognize that the Borough needs a strong and robust local plan which, in most aspects, the FDL is.</p> <p>However, nor are we "nimby"s. Newcastle under Lyme draft local plan – regulation 18: Consultation response

Dear Sir/Madam,

The following is a robust objection to all developments on green field sites covering all the proposals within Audley Parish and many more elsewhere as recommended in the draft local plan. In writing this response, I am aware of the need to adopt a local plan in order for local authorities to maintain democratic control of development in the area. This requirement appears to be a symptom of the subsection in the NPPF titled “The presumption in favour of sustainable development” (paragraphs 11-14). However, from a resident’s point of view, this gives the impression that local authorities must demonstrate a willingness to develop a particular area in order to avoid it being developed. This is, in essence, a commitment to eventual development even if it is not needed. And this is a source of great anxiety amongst residents that undesirable development is out of control, a situation clearly being fuelled by the existence of paragraphs 11-14. On this basis therefore, this subsection of the NPPF needs to be challenged.

This response may differ from others in that it comments on local planning within a strategic context. As I see it, there are three main types of development, which are likely to blight the future generations in the UK: (i) infrastructure (example, HS2), (ii) commercial (examples, AB2 and TK30 in the NuLBC local plan) and (iii) residential (example, recent housing developments either side of the A513, Beaconside, Stafford). Infrastructure is within the remit of Westminster rather than local authorities, so that is not a particular concern here. My main focus is encroachment of developments, both residential and commercial, in green spaces allowed for in the draft local plan. And any new developments in rural areas will, at the very least, result in:

- Loss of light or overshadowing

- Increased risk of flooding due to ‘run-off’

- Loss of visual amenity

- Limitations to physical activity

- Generation of extra traffic, overloading already busy local roads

- Extra noise, pollution, disturbance and danger from increased traffic

- Loss of trees and other biodiversity – bats, lizards etc.

- Loss of natural carbon capture

- Decrease in food production capacity

Increased local population placing further pressure on local schools, GP’s surgeries and other services, which are already oversubscribed.

The United Kingdom as a whole is currently gripped by a pandemic of overdevelopment, which threatens nature and the already depleted biodiversity we see in this country. And it has now reached the stage where it should be considered a national emergency. I for one, do not feel that I have any influence over the shape of our surroundings. There are numerous drivers for this trend many of which are not being addressed by government at any level. At the heart of this is a significant disconnection between the opinions of politicians and public as to what is actually needed. There appears to be cross-party support for activities driving economic growth at all costs, irrespective of the consequences to the natural environment. Aggravating this divide is the aforementioned paragraphs 11-14 of the NPPF. At a local level, what is not in doubt, is that whenever there is land removed from the green belt there is rarely, if ever, an equivalent area so returned, so the process is irreversible. And in the absence of any agreed lower limit on the area of protected green spaces within the UK, no release of green belt land, or development on green spaces, can be considered sustainable. Unless, of course, the use of agricultural land for just that purpose is also considered “developed”, i.e. it has an economic and sustainable use. And the local plan does appear to acknowledge this¹, so why not include agricultural use into the local plan implying no change in particular areas? If this is not the case, we are committed to a process where the end point is a UK completely covered in tarmac and concrete. Anyone arguing against this interpretation needs to state and justify precisely where that end point is. If they cannot, this renders the term ‘sustainable development’ an oxymoron.

One particular trend of major concern is the growing UK population. At the time of writing this stands at just under 69 million, and is set to reach 74 million before 2050. Studies in the US (Pimental and Giampietro, 1994; Lal, 1989) suggest that comfortable/sustainable living requires 0.5 Ha (1.2 acres) per capita. If we are generous, sustainable living in the UK was possible with a population of 57 million, a figure I remember from the late 1960s. With a total area of the UK at just over 60 million acres, a land area of one acre per capita for sustainable living in the UK seems feasible. As we have seen, anything more puts a strain on the environment as a whole. On this basis therefore, the UK is currently overpopulated by about 15%, and there appears to be no initiatives to address this issue. On this point, Westminster appears to be in a state of denial, thus fuelling the current avalanche of overdevelopment nationwide. Residential developments have a knock on effect by requiring other types of development to provide infrastructure, services and employment. Notwithstanding overpopulation, this gives the impression that there is not enough housing stock to accommodate the current population. Recent data, in the form of an infographic (“Housing crisis fact check”) from the Community Planning Alliance², convincingly shows that this is far from the case. In short, what is perceived as the current “housing shortage” is little more than a myth propagated by the construction industry and related interests. This is justified by item 3 on the infographic stating that “there are 1.5 million more dwellings than households” in England and Wales alone^{3,4}. On this basis therefore, no further house building is needed in the UK subject to efforts addressing projected population growth. In other words, what we have at present is a substantial housing surplus. Therefore, locally there are strong grounds for objections to development of the sites

AB12(p74)

AB15(p75)

AB32(p75)

AB33(p75).

Ignoring the 1.5 million surplus dwellings nationwide, the current (regulation18) draft of the local plan quotes a minimum housing requirement of 7160 in the Borough over the period 2020-40, of which 1206 are already completed. Of these, only 40% are to be 'affordable' (1-2 bedroom dwellings). Therefore, of the minimum requirement, only 2864 dwellings will be affordable. If we assume that those already built are affordable (they probably aren't) then the borough will only need 1658 homes built between now and 2040. This is because, due to being beyond affordability, most locals will be unable to buy or rent the other 60%. Therefore, they are not needed, and the proposed mix is entirely incompatible with general affordability. Given the surplus dwellings throughout England and Wales however, it is likely that none will be needed, especially considering the imminent removal of mandatory housing targets by the DLUHC under Michael Gove MP, and any specific affordable housing needs can be catered for by using brownfield sites only. All of the green areas in the local plan could therefore be planned in for their present use.

Infographic from the Community Planning Alliance summarising UK housing stock in relation to the population.

Another statistic from the infographic is that nationwide we could build up to 1.2 million homes on brownfield sites (item 2)2,5. And like any other local authority, NuLBC is legally obliged to and does keep a register of its brownfield sites, although it is likely that some may slip through the net.

If there is an imperative, it is to increase further democratic control of the development process both locally and nationally. And both local and national authorities would do well to remember that they have a responsibility to the people they represent and not to the commercial viability of developers, the construction industry or overseas investors. In short, no new housing development is required, especially given that the borough has exceeded its housing targets in recent years. This calls into question the need for housing developments outside Audley Parish mentioned in the local plan. These include

BL18 (p75)

CT1 (p76, 750 dwellings)

RC8 (p76, 6 dwellings, potential flood risk.)

KS3 (p77)

LW53 (p77)

MD29 (p78, 150 dwellings, likely to conflict with HS2 construction?)

NC13 (p78)

NC77 (p78)

SP11 (p78, 900 dwellings, former Keele golf course)

SP12 (p79)

SP23 (p79)

TB19 (p79)

TB23 (p79, 124 dwellings, adjacent to Walley's Quarry.)

TK10 (p80)

TK17 (p80)

TK27 (p80).

Other sites which may also be questioned are

KS17 (p77, would include loss of playing fields and other village amenities. This may be classed as infill.)

KL13 (p77,93, part built already within the grounds of Keele University Campus).

The other class of developments locally is commercial. All too often we hear in the news from both local and Westminster sources, the mantra that economic growth is the imperative. But the actual imperative is stability, and we have reached the point where growth at any cost has become toxic, especially given the impossibility of unrestrained growth in a land of finite area. Have our political masters never heard of the circular economy?

Since the beginning of deindustrialisation in the 1980s, the diversity of employment opportunities has declined. We have seen an unhealthy move away from manufacturing/production of goods that we need as a nation, to one entirely reliant on trade with overseas partners, leaving us open to blackmail and the current spike of rampant imported inflation. Look what happened during lockdown. Over recent decades this has led to the demolition of old factories for residential developments and the rise of logistics centres (warehousing) for the temporary storage of imported goods, which will ultimately be operated by robots and AIs leading to even less employment. The problem with warehousing of course is its large consumption of land area. My question is, what is the driver for the proposed "big box" developments on AB2 and TK30 locally? Both of these proposals lie entirely within the greenbelt, although the TK30 land has already been quarried in parts. Neither of these proposals is either desirable or needed. However, if we are forced to accept one or the other then TK30, being about 5% smaller, is the lesser of two evils. With the green light given to the development of the 44 Ha Chatterley Valley site on Peacock Hay Road, and the numerous empty warehouses existing across the potteries, North Staffordshire and Cheshire East. It is dubious to say the least to claim that either AB2 or TK30 are needed. These sites are 70 Ha and 66 Ha respectively. However, in the recently published "Housing and Economic Needs Assessment Update", the borough as a whole only needs a maximum of 34 Ha6. So why are we saddled with 154 Ha total covered by AB2, TK30 and KL15?

If the local plan caters for agricultural developments, AB2 and TK30 could be planned for their existing use. The majority of the area covered by these sites is high grade (3a) agricultural land. In the case of TK30 the quarried areas could be reclaimed for agriculture or, if this proves difficult, used in other ways to enhance biodiversity. If the land in question is council owned, and the motivation is to sell off council assets, then once sold, they cannot be sold again, and any control is lost. Moreover, once farmland is developed for other purposes then it is near to impossible for it to be reclaimed later for that use – and so the ratchet inexorably turns. On this

	<p>basis therefore, I would urge the LPA to remove the warehousing proposals AB2 and TK30 from the local plan.</p> <p>The purpose of this consultation is to supply feedback to the Borough Council. Another question is, does Westminster similarly consult with local authorities on planning issues, or is there any other mechanism where local councils can supply feedback to Westminster, providing a better feel for the mood of the nation? If so, why do we not see a root and branch reform of the NPPF rather than the tinkering around the edges approach seen in the July 2021 version? Most especially, there should be a removal of paragraphs 11-14 and its supporting statements elsewhere in the document, which is tantamount to a developer's charter. And there should be more flexibility within the NPPF allowing local plans to include parcels of land for their current purpose, given that there is almost none in this country that is not currently in use. As far as I can see this plan is nowhere near compatible with efforts required to address the current climate crisis. Moreover, given their scale, the proposed developments represent too greater shock to the environment and local communities over the short 20-year period suggested for their completion. And with the sufficient housing and unused commercial sites we already have, there is no need for any encroachment into our green spaces.</p> <p>Yours sincerely Jim Austin</p> <p>Notes</p> <ol style="list-style-type: none"> 1. Q4 Part of document	Policy
Q4 Policy	TK10
Q6 Details	<p>I wish the Planning Inspectorate to consider my following representations in response to the Newcastle -Under-Lyme Borough Council – Final Draft Local Plan Consultation (Regulation 19)</p> <p>I wish the Planning Inspectorate to remove all policies from the plan which involve any development on Green Belt Land.</p> <p>The specific policies are: -</p> <ul style="list-style-type: none"> • AB2, AB33, AB15 & AB12 – Audley Ward • BW 1 – Bradwell Ward • CT 1 – Crackley Bank & Red Street Ward • KL13 & KL 15 -Keele Ward • SP11(2) & SP11(3) – Silverdale Ward • TK 10, TK 27 & BL18 – Talke & Butt Lane Ward <p>All of these developments impact green belt land, are unsound and should be removed from the plan.</p> <p>They will all have a negative effect on the Net Biodiversity gain of each local area. Which in turn has a knock-on effect across the Borough. Open spaces are essential for the environment by absorbing carbon dioxide from our atmosphere, which helps reduce climate control. They also provide habitats for a wide range of plants and animals. Open spaces are also important to human health as they can reduce stress, improve mental health, and assist in people sleeping better. They provide areas for physical activity</p>

	<p>which improve both physical and mental health. Removal of green belt will decrease the air quality within that area, increase respiratory issues for humans and wildlife, and also increase noise pollution.</p> <p>With specific reference to policies AB2, AB33, AB15 and AB12. I ask the Planning inspectorate to remove policies based on the following justifications:</p> <ul style="list-style-type: none"> AB2 - It is simply the case that the small village of Audley and its surrounding countryside lanes could not cope with the large increase of traffic caused by these policies. The large number of HGV's travelling to the proposed AB2 site would definitely increase the traffic within the Audley area due to the daily traffic jams along the A500 and at M6 Junction 16. Traffic will spill on to local roads e.g. A5500, increasing Noise and air pollution AB12 - Proposed access to site AB12 via Diglake Street is untenable. This street is small and it is already difficult to drive down due to parked cars on both sides of the terraced street. A new development of houses would make it virtually impassable causing gridlock, increased air pollution, increased noise pollution and limiting access for the emergency services. <p>The proposed new car park for resident's in Diglake Street due to the proposed AB12 policy would be detrimental to Blue badge Holders, People with mobility issues and Carers of babies and children.</p> <p>AB12 will not be close to any amenities with little or no access to a regular bus route.</p> <ul style="list-style-type: none"> AB33 – Primary Vehicular access to Park Lane is unsound. This is an already busy junction. AB33 will not be close to any amenities with little or no access to a regular bus route. Creating more traffic therefore noise pollution and air pollution. With an increased danger to pedestrians. <p>With poor access to health care and education.</p> <ul style="list-style-type: none"> AB15 – The proposed site at AB15 is unsound because of the poor access to health care, education, local amenities and public transport. <p>I therefore would like the Planning inspectorate to remove Policies AB2, AB12, AB33 & AB15 from the plan.</p>

Q6 Details	<p>Please see supporting representation by Knights on behalf of Dr D Hodgkinson for allocation reference TK10. With regard to allocations, Dr Hodgkinson supports the inclusion of allocation reference TK10 for 170 dwellings.</p> <p>This site, which covers an area in excess of 5ha, is located in Green Belt, but directly adjacent to its boundary with the urban area in Talke.</p> <p>The site is located at the very edge of the Green Belt. It is adjoined by residential development immediately to the east, which is outside the Green Belt/in the urban area. An industrial estate adjoins the site to the south, which again is located outside the Green Belt.</p> <p>This is a sustainable and accessible site, with excellent access to bus services which in turn provide good access to the centres of Hanley, Newcastle-under-Lyme and elsewhere. The site lends itself to an extension to the built-up area of Talke, providing an opportunity to deliver a reasonable number of family and affordable key worker homes to support the sustainability and development of the area.</p> <p>This site is a logical location to accommodate growth in this part of Newcastle-under-Lyme to align with this strategy. It is considered that development on this site would not contradict any of the five purposes of including land within the Green Belt and would provide a logical location to provide housing on the edge of the Urban Area.</p> <p>In visual terms, the site sits within a bowl, and within the site, the surrounding views comprise housing to the north and east, Talke Retail Park and the industrial park to the south and west. The large buildings located on Talke Retail Park and the industrial park dominate the views towards the south and west giving the site a contained feel, rather than a feel of tranquil open countryside in this location. There are therefore visual defensible boundaries to the site, and in visual terms, the visual impact of releasing the site from the Green Belt would be limited.</p> <p>With regard to the first sentence of the policy, it states that the site “is allocated for residential development for 170 dwellings”. In order to allow a degree of flexibility, it is suggested that the wording is amended slightly to read as follows: “is allocated for residential development for in the region of 170 dwellings”.</p> <p>With regard to the allocation criteria of Policy TK10, each of the relevant criteria will be considered below in turn.</p> <p>Criteria 1 states that the requirements of Policy SA1 should be satisfactorily addressed. Policy SA1 sets out a number of requirements for the proposed site allocations that need to be addressed, including the following:</p> <ul style="list-style-type: none"> (a) Masterplans (b) Affordable housing (c) Housing mix and density (d) Design (e) Historic environment (f) Social and community facilities (g) Landscape and green infrastructure (h) Biodiversity and Geodiversity (i) Highways (j) Environmental Health (k) Flood Risk (l) Utilities (m) Infrastructure (n) Minerals <p>In addition to the above, additional criteria 2 – 12 require other areas to be addressed through any planning application submission.</p> <p>In response to the above criteria, a copy of a submission to the Council’s Strategic Housing and Employment Land Availability Assessment is provided at Appendix 2 to demonstrate how various matters will be addressed and otherwise helps to demonstrate the suitability of the site for allocation.</p> <p>In light of the above considerations, Dr Hodgkinson supports the allocation of TK10. Dr Hodgkinson is currently in discussions with housing developers to bring this site forward, should the allocation be confirmed and adopted in the Local Plan with at least three developers expressing serious interest in the site.</p> <p>Dr Hogkinson will continue to engage with developers in due course following the close of this consultation in order to bring forward a development partner for the site to ensure that the site would be deliverable within the proposed plan period.</p> <p>DELIVERABILITY</p> <p>Allocation reference TK10, whilst being promoted by a private landowner, is deliverable. Dr Hodgkinson is a willing landowner and is prepared to make the land available for development. Dr Hodgkinson is already in discussions with developers to sell the site for development.</p> <p>In terms of delivery, it is anticipated that housing would be delivered at a rate of around 30-50 homes per annum.</p> <p>It is anticipated that upon the approval of an outline planning application, a reserved matters application would follow within 3-6 months of obtaining outline planning permission.</p> <p>It is estimated that the first site works would take place on the site within a year of obtaining outline planning permission.</p> <p>The site would therefore be deliverable within the plan period and would start delivering homes within the first five years following adoption of the Local Plan.</p>
Q7 Modification	Please see supporting representation by Knights on behalf of Dr D Hodgkinson for allocation reference TK10
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	Please see supporting representation by Knights on behalf of Dr D Hodgkinson for allocation reference TK10

Q6 Details	<p>[Admin Note, the following statement has been supported by a form of authority with appropriately 172 signatures].</p> <p>Re: Newcastle-under-Lyme Borough Council ("the Council") Final Draft Local Plan 2020/2040 - Regulation 19 Consultation Please accept this letter as our representation in response to the above consultation, for onward submission to the Inspector.</p> <p>CONTENTS</p> <p>To assist you and the Inspector, the following is the order of our representation:</p> <ol style="list-style-type: none"> 1. Introductory comments. 2. Personal details. 3. Approach. 4. Legally and procedurally compliant. 5. Soundness (including each of the four heads, as set out in the National Planning Policy Framework). 6. Suggested modifications. 7. Conclusion. <p>1. INTRODUCTORY COMMENTS</p> <p>We are the Talke Action Group ("TAG"), set up primarily to co-ordinate engagement with the Local Plan preparation process by the residents of the village of Talke/Talke Pits ("the Village"), part of the ward of Talke and Butt Lane in the borough of Newcastle-under-Lyme ("the Borough"). We are registered with the Council as a Consultee herein. In an effort to assist the Inspector, and as requested in the Planning Inspectorate's Guidance Note (Para 5.3 - "Where groups or individuals share a common view on the plan,...etc."), this letter of representation ("this letter") is respectfully submitted both on behalf of ourselves and also on behalf of all those individuals ("the signatories") who have signed the attached Forms of Authority, whereby they endorse this letter and the contents hereof as representing their joint and individual view. Accordingly, the term "our representation" as used herein reflects that this letter is the representation herein on behalf of both ourselves and the signatories, and the words "we" and "us" are similarly used.</p> <ul style="list-style-type: none"> · In said attached Forms of Authority this letter is referred to as "the letter of representation". · Each of the signatories has so given said informed authority and endorsement following one-to-one drop-in engagement sessions during the Consultation period, between members of TAG and each signatory. · Our representation is submitted in letter form pursuant to advice that a letter is a proper and appropriate means of submission of Reg.19 representations, given by Councillor Fear, the Council's portfolio holder for Strategic Planning ("the Portfolio Holder"). <p>3. APPROACH</p> <ol style="list-style-type: none"> a) In this letter, with regard to the concepts in parts 4 and 5 above, our representation follows the wording of para. 35 of the National Planning Policy Framework in force at this time. b) Pursuant to that wording, we do not consider that this Final Draft Local Plan ("the FDL Plan") has "been prepared in accordance with legal and procedural requirements" or that it is "sound". We are therefore raising objections to the FDL Plan under the pertinent heads. c) However, we are of the view that the Borough does need a Local plan, so that we do not wish to see the Plan struck down completely. Accordingly, where appropriate for each of the objections raised, this letter suggests relevant modifications. d) As we are residents of the Village, and are therefore largely not aware of detailed circumstance prevailing in other communities, most of our representations herein relate to the TK sites selected in the FDL Plan for development in the Village, namely sites TK6, TK10, TK17 and TK27 ("the TK sites"). However, because many of the reasons for which we consider the FDL Plan to be either not sound, or not legally/procedurally compliant, or both, relate to the FDL Plan as a whole insofar as they affect the TK sites, some representations are made regarding the FDL Plan as a whole but then show how they relate specifically to the Village and to the TK sites specifically. As in c) above, modifications are then suggested. <p>Note: As the FDL Plan is a Council-derived document, we use the term "the Council" to refer also to the Council officers - elected and/or employed - engaged in guiding the FDL Plan through the process.</p> <p>NOT LEGALLY OR PROCEDURALLY COMPLIANT</p> <p>We do not believe the FDL Plan is legally/procedurally compliant.</p> <p>4.1 The consultation process</p> <p>Insofar as the residents of the Village are concerned, the consultation process has been drastically inadequate. Many, if not most of the residents, were until recently entirely unaware that a local plan was in the pipeline and equally unaware of the promulgation of the First Draft Local Plan or the FDL Plan. In our view, this inadequate consultation by the Council renders the FDL Plan non-compliant because :</p>

a) Community engagement

(i) The Council may have given the appearance of complying, by sticking to minimum legal requirements regarding local plan community engagement, for example posting legal notices at the relevant sites and posting documents online. However, the Village population comprises a substantially larger than average percentage of older people, who do not or cannot engage with the internet. The Council will know this. Therefore, in accordance with its own Statement of Community Involvement (SCI), at para.1.13 (Equal Opportunity), the Council should have taken additional steps "in the way in which (they) consult ... to meet the specific local needs". This the Council has not done during the whole process.

(ii) This could - and indeed the SCI (at Table 2, p16) states that it will - be done by the distribution of "leaflets and posters". This does not appear to have been done for this local community with its "specific local need".

(iii) Having regard to this failure to consult in a way which meets specific local needs, there are other instances by which the Council has further failed in any meaningful way, insofar as the Village and its demographic is concerned, to comply with its own SCI, for example para 1.9, Community Involvement ("Inform people...and provide information...at the earliest opportunity"); para1.15, Equal Opportunity (allowing the process to be "accessible to those who are unfamiliar with the terms, processes and structures of the planning system..."); para 2.1 ("Early and meaningful engagement...with...neighbourhoods...is essential"); and para 2.2 ("A range of methods and techniques will be used to involve communities..")

(iv) One clear item of evidence of the Council's failure to comply with its own SCI, and therefore to be legally compliant, relates to SCI para 1.14 (Equal Opportunity), which indicates that the Council will endeavour "to work in an inclusive manner" to deliver "planning services from the perspective of a range of potential users", including by "Organizing consultation events to maximise involvement..ie workshops." Yet, when holding such workshops was suggested at the relevant Scrutiny Committee meeting on 11.7.24, it was rejected out of hand using the spurious excuse that residents wouldn't be available!

(v) The Planning Inspectorate's own guidance/requirement document, in the part 3 "Legal Compliance" section, states clearly that "the process of community involvement for the plan in question should be in general accordance with the LPA's Statement of Community Involvement". To the extent that the FDL Plan, insofar as the Village is concerned and as evidenced in (i)-(iv) above, is not so in accordance, it is not legally compliant.

(vi) Lastly under this head we would like to point out that, although the Council loudly touts, as evidence of its engagement compliance, that it has allowed a consultation period which is longer than the minimum required (8 weeks instead of 6 weeks), it might as well be 1 week or 28 weeks - it makes no difference how long the consultation period is if ordinary residents have not been properly engaged with, taking into account not only the demographic of the Village per se but also the Council's obligations under their own SCI, both generally and given said demographic.

Conclusion: Because of the Council's failure, as above, to consult properly with the residents of the Village, given its specific demographic, the FDL Plan is not legally/procedurally compliant.

b) Consideration of consultation objections

It is self-evident, even to lay-persons such as we, that for a consultation to be meaningful and valid, the views, including any objections, of the consultees must be properly considered. If the consultation is treated by an LPA as merely a procedural formality, and the consultees' views arising thereout are not properly and fully considered, it is not a meaningful consultation, and the plan out of which the meaningless consultation arises cannot be legally compliant. We believe that this is the case with the FDL Plan, for the following reasons:

(i) In the Council's document in response to the Reg.18 consultation in respect of the First Draft of the Local Plan, where any proposed development site had had questions had been raised as to that site's suitability for development, the vast majority of the responses thereto was not a considered reply addressing any query, but merely a standard comment, the gist of which is that the site had been selected notwithstanding any objections raised nor addressing any such, and merely suggesting that any problems arising with any actual development could be dealt with when a planning application is made. The use of such an identical pro-forma response indicates clearly a lack of meaningful consideration of representations arising out of the consultation.

(ii) Further, those unconsidered responses not only evidence a lack of consideration of consultees' views, in itself rendering the consultation meaningless and the FDL Plan not legally compliant, but also fails to take into account circumstances where "planning" at the development stage will not solve the problem raised; or to offer any other solution. As examples, and with regard to the Village:

- what is the solution where there will be insufficient local school and/or health clinic places available as a consequence of development, but s106 funding would be of no use because there is no space in or around the existing facility for more staff to be employed or for an extension to be built?

- although construction of a roundabout might help with a substantially greater traffic flow at a dangerous junction, how will "planning" solve the problem of much greater traffic on the already dangerously congested main road through the village, which cannot be widened?

- How will planning considerations relating specifically and only to individual developments solve the larger problem of waste discharge in the locality? Viz: A report in 2023 covered the dumping of sewage into waterways by Severn Trent Water, revealing that during 2022 sewage was discharged into local waterways for 31,228 hours with 6,370 dumps in total. Alarming, the biggest polluter was the Liverpool Road works in Kidsgrove which discharged for 4,139 hours in 187 spills. This plant, which covers, inter alia, the Village as well as Butt Lane and Kidsgrove, clearly cannot cope with present demand. How will this plant cope with sewage from the hundreds of houses in the TK, BL and Kidsgrove sites? The Council appears not to have considered or addressed or informed consultees of how this will be dealt with.

We stress that we are not asking the Inspector to examine these issues. We raise them as exemplars and evidence that the Council has either deliberately ignored or simply failed properly to consider and/or to address consultees' views.

(iii) This apparent failure properly and fully to consider the views of consultees, and consequently having nothing of substance to report back to them, both further represent yet another failure by the Council to comply with its own SCI, this time Para 1.9, the aim to "Respond to any comments received, giving proper

consideration and explanations of how these views will be incorporated into the planning documents and decisions."

(iv) A disturbing sequence of documents seems to indicate that the relevant officers had decided, well in advance of any scrutiny or vote, that the FDL Plan should be recommended for approval to a full meeting of the Council. For example, way back in January 2024, a report by the Corporate Leadership Team to the Cabinet recommended that the Cabinet "(a)authorises the Deputy Chief Executive, in consultation with the Strategic Planning Portfolio Holder, to recommend to Council at its meeting on 24 July that it approves the Final Draft Local Plan (at Regulation 19 stage)...for public consultation.." Please note that the Cabinet decided, on 16 January 2024, to recommend approval of the FDL Plan to the full Council meeting on 24 July 2024, over 6 months before that meeting, and indeed before the FDL Plan was promulgated and possibly even before it was prepared. (On 18 March 2024, the Corporate Leadership Team presented this decision by the Cabinet to the relevant Scrutiny Committee for their meeting on the same day, and they appear to have had no issue with it.) This sequence of events cannot but reflect a lack of meaningful consideration of anything arising out of the Reg 18 consultation, rendering the consultation extremely, if not fatally, flawed.

Conclusion: Because the representations arising out of the Regulation 18 consultation were not adequately considered, the consultation has not been properly and/or meaningfully conducted, and therefore the FDL Plan is not legally/procedurally compliant.

4.2 Procedural Compliance

Although it again appears on the surface that the Council has carefully followed all the over-arching procedural steps required in this process, there have been at least two somewhat alarming occurrences evidencing that this has not actually been the case on closer examination.

a) Site Selection

(i) In the Local Plan Issues and Options Report in 2022, preparatory to preparation of the First Draft Local Plan, the long list of possible sites indicated that three of the TK sites (TK10, TK17 and TK27) were "unsuitable" for development. By the time of promulgation of the First Draft Local Plan, they had somehow become suitable, without any apparent explanation. The implications of this are somewhat disturbing, let alone it representing another failure of the Council for its evidence base to be transparent and available, and for residents to be kept informed, as in 4.1 above. However, the following point might shed some light on the mysterious elevation of these three sites.

(ii) At the meeting of the relevant Scrutiny Committee meeting on 11 July 2024, the Portfolio Holder was repeatedly asked how the final list of sites included in the First Draft of the Local Plan were selected from the longer list and whether Cabinet Members were involved. The Portfolio Holder repeatedly obfuscated and ultimately refused to answer. However, it subsequently appears that said selection was made by the Portfolio Holder and two other senior councillors from the same side of the chamber.

(iii) Given these occurrences, it is open to conjecture as to whether or not it is a coincidence that a by far greater proportion of sites selected for development are situated in wards represented by councillors from the party in opposition to that of the Portfolio Holder's majority governing party.

Conclusion: Although the initial stages of the site selection process appear to have been conducted openly and compliantly, there are questions around the final stages of the site selection, rendering the process certainly procedurally (and possibly also legally) non-compliant.

b) Document Availability

(i) The FDL Plan was approved for consultation and submission at a full meeting of the Council on 24 July 2024. However, issues relating to document availability cloud its approval.

(ii) For Councillors to have been able to make an informed decision when voting, over 40 documents forming the evidence base and informing the FDL Plan, were required to be examined and considered. However, a large number of these documents were not made available to Councillors sufficiently timeously for them to be able to examine same and render themselves fully informed. Eight such documents (almost 20% of the total) were only uploaded to the relevant website the previous afternoon, leaving Councillors in outside employment around 24 hours to read and examine hundreds of pages of formal documentation whilst working during the day. (A further 7 documents were uploaded to the web the day before that, making a total of 15 documents - over one-third of the total number - only made available 48 hours before the meeting.)

(iii) The opposition Councillors therefore proposed an amendment, that the decision to approve the FDL Plan be slightly delayed until the next Council meeting only two months later, to allow all Councillors fully to consider all the relevant documents. This was defeated, with speakers from the Portfolio Holder's majority party insisting that the plan be approved on that day. Disturbingly, a senior councillor from that party stated categorically that all but two of the documents were made available timeously. The promulgated list of dates and times of uploading of all the documents shows that this statement was - knowingly or unknowingly - untrue.

(iv) It is not clear whether the above events were deliberate or not - we hope not. Nonetheless, it is the case that documents vital to the integrity of the FDL Plan were not made appropriately, timeously or compliantly to many of those being asked to make a decision on the FDL Plan and this in itself renders the process not procedurally compliant. This is even more the case because the Council could have obviated the difficulty by delaying the decision, but pointedly and deliberately chose not to.

(v) Speaking to the amendment referred to above, one councillor remarked: "The expectation that we approve a local plan without these essential documents is not only unreasonable but also undermines the principles of sound governance. This is a formal process that requires thorough scrutiny and understanding of all supporting evidence. We must be fully informed to ensure that the plan we endorse is both sound and legally compliant." They were not, so the plan is not.

c) Cross Party Engagement

(i) The Council's SCI, at para 2.23, requires the Council, in preparing a local plan, "to ensure cross party engagement on the plan making process..". In taking the steps in 4a and 4b above, the Council has again failed to comply with its own SCI.

Conclusion: Consequent on the above, the FDL is neither procedurally nor legally compliant.

4.3 Sustainability Assessment Objectives, Strategic Objectives, and Transport and Accessibility Policy Development as proposed on the TK sites would not only fail to comply with and meet the standards required by these policies and objectives, but would indeed be directly contrary to and inimical with same.

(As details relating hereto are set out fully below, and as we would not wish the Inspector to have to read exactly the same content twice, we respectfully refer the Inspector to item 5.3,b ("Effective" head of "Soundness") below.)

Conclusion: Because of this, the FDL Plan, insofar as the TK sites are concerned, is not legally compliant.

5. SOUNDNESS

5.1 Positively prepared

No representations.

5.2 Justified

We do not believe the FDL Plan, insofar as the Village and the effect that development of the TK sites will have

thereon, is justified. This is for the following reasons:

a) Number of dwellings proposed for the TK sites

(i) The number of dwellings proposed to be built over the TK sites (over 300) is disproportionate for this small semi-rural village. It is not justifiable that the Village should bear the burden of 7% of the total Local Plan Housing Allocation of 4512 houses (para 5.5, FDL Plan), when neither its population nor its housing stock are anything like that percentage of the Borough as a whole. When looking at the figures for the Talke and Butt Lane ward as a whole, the figure of 520 dwellings proposed to be built (per FDL Plan, paras 13.194 - 13.231) in the ward represents 11.5% of the proposed development for the whole Borough. To impose this disproportionate burden on the village is not justified. (As to possible reasons for this high proportion of dwellings on the TK sites - all but 10 on greenbelt - being proposed to be imposed on the Village, we refer the Inspector back to point 4.2 above.)

Suggested Modification - Suggested Modification 1 below

b) The population of the Borough

The population of the Borough has only increased by 6.9% over the past four decades since 1981 (117,217 to 125,297, 1981-2022). The Council is allowing for an increase of 15% over the term. Even accepting that in matters of targets, some (but not all) issues are beyond the ambit of a Local authority, it is not justifiable that a greater proportion of what is already a possibly inflated target (ie above the national standard method calculation) should be borne by the Village. This is especially so when there are doubts about the motivation for and process of site selection, and there are brownfield sites (see c below) and empty homes (see 6.1,b,v below) available in the Borough which have not been selected.

Suggested Modification - Suggested Modification 1 below

c) Availability of brownfield sites

As indicated above (at point 4.2,a,i) the status of the Talke sites was changed from "unsuitable" to "suitable". At the same time, other sites (some brownfield) were changed from "suitable" to "unsuitable". These are however available and should be looked at again. For example, the unused and derelict Knutton Community Centre site was made available, but it appears that developers deemed the cost of eg decontamination to be too great and preferred untainted eg Green Belt land on which to build. The same is true of other available

brownfield sites in the Borough. It cannot be justified for Green Belt land to be sacrificed in order to increase

the profits of developers.

Suggested Modification - Suggested Modification 1 below

d) The effect on the nature of the Village

If all of the proposed 310 dwellings are built on the TK sites, and taking into account also development of sites such as the former TK5 site (see below at 6.1,b,iii) and any other windfall and/or buffer sites, this will represent an increase in the percentage of dwellings in the Village in the order of 20-30%! This volume of development is simply too great for Talke/Talke Pits. It would swamp the Village. It would irreparably and irreversibly change the nature of the Village from a semi-rural village to a sprawling dormitory town - although without the infrastructure to support it (see e below), rendering it with the worst of all worlds. To destroy the Village in this way by such a weight of development cannot be justified.

Suggested Modification - Suggested Modification 1 below.

e) Effect on local infrastructure

We appreciate that it is not within the ambit of this Regulation 19 Consultation for the Inspector to re-examine issues of local planning such as flooding or parking issues on the proposed development sites. However, where there are issues relating to off-site impacts, which have not been dealt with, either satisfactorily or at all, in the FDL Plan, then this goes to the Soundness of the FDL Plan under both heads of "Justified" and also "Effective" (as below).

The issue of the undealt-with problem of the knock-on effect of development of the TK sites on the Village as a whole, has been mentioned in passing at 4.1.b.ii above. It is not justifiable to propose a level of development on the Village which would exacerbate, and make critical, existing problems in a creaking and already inadequate infrastructure, without some level of pre-planning in the FDL Plan. Insofar as the Village is concerned, there appears to be none with regard to three major infrastructure problems which will arise should the TK site developments proceed, and which do not appear to be resolvable by specific planning arrangements for on-site or site-adjacent adaptations only. These are:

(i) As previously alluded to (4.1,b,ii), the volume of traffic (both local, and also that which uses the Village as

a rat-run to avoid congestion on the nearby arterial routes of the A34, the A500 and the M6) through and in the Village is already greatly excessive for the Village road network. The main road ("the main road") through the Village (comprising High Street, Crown Bank and Swan Bank, which all run seamlessly into each other to form one thoroughfare through the Village), is also already inadequate and at breaking point. The road, like Pit Lane, is narrow and often reduced to a point where two cars, let alone trucks, cannot pass. When not congested, vehicles speed through, and the road is dangerous for pedestrians and vehicles alike, as well as for ingress/egress from local residences. There would be no easy solution to this, even without further development, as the road cannot be widened.

The addition of hundreds more vehicles (anything between 310 and 620) on to the main road through, and other roads in, the Village cannot but seriously exacerbate an already critical situation, and render the local road network inoperable.

As above (4.1,b,ii - also Failure properly to consult) the FDL plan does not appear to make any provision for this, nor even to consider it. It cannot be justifiable to allocate development sites without appearing to have any great, or any, concern about, or to make provision for, the drastically adverse knock-on effect which such development would have on the Village and its residents.

Suggested Modifications - Suggested Modifications 1 (or 2) below.

(ii) Similar concerns relate to the local health clinic (Talke Clinic, part of the North Newcastle Primary Care Network, "the Clinic"). Although we understand that their list is not, at date hereof, entirely full, the clinic as it is would simply not be able to take in the residents of 310 dwellings. However, the logistics are that the current building is full, so that no further health staff can physically be accommodated; and the site will not allow for further expansion. Accordingly, the usual solution of s106 funding to employ further staff and/or to expand the building, is not available.

Yet the Council again appears not to have considered nor to make any specific proposals to solve this problem (unlike elsewhere, eg at the proposed Keele site, where a health Hub is mooted). The only solution therefore appears to be that patients will need to attend GPs further afield, either at other practices in the North Newcastle PCT, or even at practices in other, further away, PCTs.

The over-arching Staffordshire and Stoke-on-Trent Integrated Care Board ("ICB") is quite clear - for them, such list-dispersal, with patients having to travel distances to see a doctor, is a very last option, a last resort. The Council, however, seems, by failing to consider and actively to address the issue, in fact by default to be planning for the last resort in respect of the TK sites and the Village.

Inclusion of the TK sites in the FDL Plan cannot be justified where the health infrastructure of the Village is so lacking and unaddressed.

Suggested Modifications - Suggested Modifications 1 (or 3) below.

(iii) Again, there is a similar concern around local schooling, especially for children of primary school age. There is only one primary school in the Village, namely Springhead school ("the School"), to which the same problems (no unused internal space; no suitable site expansion room), again rendering s106 funding largely irrelevant. So, once again, primary school children will need to be found places further afield.

Inclusion of the TK sites in the FDL Plan cannot be justified where the school infrastructure of the Village is so lacking and unaddressed.

Suggested Modifications - Suggested Modifications 1 (or 4) below.

(iv) A further effect of (ii) and (iii) above, if patients and primary-age schoolchildren are listed or placed further afield, is additional car-journeys, and even worse exacerbation of the local road infrastructure problems, in (i) above. This cannot be justified.

(v) Lastly under e) hereof, although both the Staffs and Stoke ICB (regarding health issues) and the Staffordshire County Council (regarding education and other issues) have been consulted herein by the Council, it does not appear that the Council has actually approached or otherwise consulted directly with either the Clinic or the School, to ascertain from them the situation on the ground, so as to attempt to deal with it and/or to modify their site selection by eg removal of the TK sites from the FDL Plan, in light of these potentially insurmountable impact consequences. This cannot be justifiable.

f) Use of Green Belt land

Given all of the above - the disproportionate weight of development allocated for the TK sites, the questionable motivation for the site selection, the availability of brownfield sites and empty houses in the Borough, the fact that the Council would still meet its development target even without inclusion of the TK sites (see 6.1,b,i below), the detrimental effect that the proposed development on the TK sites would have on the Village, etc - it appears that there are no circumstances at all, let alone exceptional circumstances, which would necessitate or justify use of the Green Belt land proposed for the TK sites.

Suggested Modification - Suggested Modification 1 below.

Conclusion: The FDL Plan, insofar as it relates to the TK sites, is not Sound under the head of "Justified".

5.3 Effective

We do not believe the FDL Plan, insofar as the Village and the effect that development of the TK sites will have thereon, is effective. This is for the following reasons:

a) Viability

Because of the intractable infrastructure difficulties outlined above (at 5.2,e), we do not believe the development on the TK sites is viable. If it is not viable, it cannot be effected, and is accordingly not effective. Suggested Modifications - Suggested Modification 1 (or 2 - 4) below.

b) Sustainability Assessment (SA) Objectives, Strategic Objectives, and Transport and Accessibility Policy (Policy IN2)

As 4.3 above (not legally and/or procedurally compliant), development as proposed on the TK sites would not only fail to comply with and meet the standards required by these policies and objectives, but would indeed be directly contrary to and inimical with them. Some examples are:

- SO IV - to "reduce the Borough's carbon footprint..." : the introduction of many more vehicles into a rural environment will have the opposite effect.
- SO VI - to "support the vitality of rural villages, preserving and enhancing the special character (of)...each local community" : development of the TK sites will destroy the cohesion and vitality of the Village, and its special character.
- SO VI - to "provide choice in housing types for local people." : local residents do not want a choice of large development-based housing which will have the adverse and destructive effects referred to herein.
- 1N2 1 b - development must allow for "integration with existing infrastructure." : as herein, development of the TK sites will overwhelm the existing road infrastructure to a point of collapse.
- IN2 1,e - development must "not cause unacceptable highway safety problems in relation to local traffic circulation and existing parking..arrangements.." : as herein, this is exactly what development of the TK sites will cause
- IN2 1,f - Development must "not cause severe residual impacts on the road network, either direct and/or cumulative." : extremely severe such impacts on the local road network, both direct and cumulative is exactly what will happen if development of the TK sites goes ahead.

- SA Objective 1 - "To contribute to reduction of greenhouse gases.." : not to increase them in the locality by the introduction of many more vehicles into a rural environment.
- SA Objective 2 - "To improve air quality.." : by the introduction of many more vehicles into this rural environment?
- SA Objective 3 - "To protect, enhance and restore biodiversity ensuring that there is an overall net gain in the extent and quality of biodiversity." : development of the TK sites, by diminishing and concreting over Green Belt land, will self-evidently destroy and reduce biodiversity; and Parrots Drumble, a small remnant of ancient Woodland and a nature reserve, with its delicate wildlife and biodiversity balance, is extremely close to site TK10.
- SA Objective 4 - "To..maintain..land resources" : losing the agricultural land within the TK sites does precisely the opposite.
- SA Objective 7 - "To conserve, enhance and promote interest in local distinctiveness, the historic environment and landscapes, heritage, cultural assets and their settings" : aside of the loss of Village distinctiveness and heritage already cited, the last of local dry-stone walling and the Village's central Cross (original 12Century base are directly in the firing line of the increased traffic
- SA Objective 8 - "To strengthen the quality of the landscape.." : development of the Green Belt TK sites would, on the contrary, diminish and despoil not only the quality of the landscape per se, but also the visual and physical amenity it provides to the Village.
- SA Objective 9 - "To enhance the quality..and connectivity of open space.." : building over large parts of such Geen Belt space self-evidently does exactly the opposite, reducing the quality and interrupting the connectivity of the of same.
- SA Objective 9 - "To improve the health and mental wellbeing of the population.." : increased traffic with greater pollution, the need for young children and patients to travel further afield to access school and health-care, a dangerous road environment, disintegration of an identifiable community, et al -how does this improve the health and welfare of the local population?

Accordingly, if the Council were to proceed with developing the TK sites, they would be in conflict with their own precepts. Not only does this render the FDL Plan not legally compliant (per 4.3 above), it also means that (unless the Council wishes deliberately to act in a non-legally-compliant manner), development of the TK sites cannot be affected as is. If such development cannot be affected then the FDL Plan, insofar as it relates to the TK sites, not effective.

Suggested Modification - Suggested Modification 1 below.

Conclusion: The FDL Plan, insofar as it relates to the TK sites, is not Sound under the head of "Effective".

5.4 Consistent with national policy

We do not believe that the FDL plan, insofar as the TK sites are concerned, is consistent with national policy,

for the following reasons :

- a) Transport - please see above re the local road system in the Village.
- b) Infrastructure - please see above re the Village infrastructure, namely school and health.
- c) Landscape/Environment - please see above re unnecessary use of Green Belt land for the proposed TK sites.
- d) Location - please see above re overwhelming a rural village when other brownfield sites and empty houses are available.
- e) Health - please see above re pollution, degradation of environment, list dispersal, etc. Suggested Modification - Suggested Modification 1 below.

Conclusion: The FDL Plan is not consistent with national policy, especially insofar as the TK sites are concerned, so that it is not Sound under this head.

6. SUGGESTED MODIFICATIONS

6.1 Suggested Modification 1

- a) That all or some of the Talke sites be removed from the FDL Plan, or alternatively that that the number of proposed dwellings for all or some of the Talke sites be reduced.
- b) This can be compensated for as follows:
 - (i) The FDL Plan, at para 5.5 (Housing Requirement and Supply Information figures), indicates that, whereas the Housing Requirement is 8000 dwellings over the duration of the plan ("the term"), the FDL plan allows for 8,663 units. The additional 663 units are made up of 372 expected additional units becoming available over the term - the windfall allowance - and a buffer of 291 units (figure not shown at para 5.5). The windfall allowance alone more than adequately compensates even if all the Talke sites were to be removed from the FDL Plan.
 - (ii) The use of brownfield sites excluded from the FDL Plan site selection, and especially those whose status was previously changed from "suitable" to "unsuitable", with no transparent explanation, should be revisited. Development of some or all of these could mitigate or obviate the need for the Talke Green Belt sites to be included in the FDL Plan.
 - (iii) What was site TK5 - a brownfield site at the top end of the main road through the Village, and very close to TK27 - was originally shown as "suitable" but, in 2022, unavailable for housing development, as it was then in active commercial employment use (by London Hoist). However, it has since become available and is in fact at date hereof on the market for sale by a local agent (Louis Taylor) with outline planning permission for 32 dwellings. This should be brought back into account and reduce the suggested quota for eg TK27 by a concomitant number.
 - (iv) As at (ii) above, there are a number of other brownfield sites over the Borough as a whole, to which similar considerations apply, namely that they are suitable for development, but are not included in the FDL Plan, such as the derelict Knutton Community Centre site. As in (ii) above, these could all be looked at again, in preference to Green Belt sites such as the Talke sites.
 - (v) Similarly, reducing or eliminating the Talke sites could be easily compensated for by use of homes currently empty in the Borough.

The Council's own website (Empty Houses page) asks "Did you know there are over 1,000 empty properties in Newcastle-under-Lyme?" Even using more modest figures, there were 503 empty homes in the Borough in 2022/3 (Government's national New Homes Bonus figures) and 511 in 2023 (Action on Empty Homes, based on Govt. Data published by the (then) Dept. for Levelling Up and Housing, Nov. 2023).

Yet, despite this number of empty homes being available, the council only brought back into use 39 homes in the year Oct 2021-Oct 2022, and a meagre 11 homes 2022-2023 (same sources, based on CTB figures); and they are now proposing that Green Belt land be sacrificed, when all this possible housing lies unused.

6.2 Suggested Modification 2
That drastic measures be taken to mitigate the impact of additional vehicles consequent on development of the TK sites, for example:

- a) Barriers be erected at either end of the main road allowing ingress/egress only for Village residents, emergency services, deliveries, workers, etc.
- b) Entrance to and exit from TK27, currently via Coppice Road, should in turn require egress to/ingress from Coppice Road only to and from the main arterial A5011 (Linley Road). That would at any rate be necessitated by erection of aforementioned residential barrier between the top of Coppice Road and Swan Bank.
- c) Similarly for TK10, having all the additional vehicles from a 170-dwelling site feeding into the main road at the Crown Bank/Swan Bank/Jamage Road junction would exacerbate the situation even further. This could be controlled by limiting access to and from Pit Lane to the bottom end (roundabout at Pit Lane/Jamage Road/Oaktree junction), and creating a one-way system; as well as widening Pit Lane to allow it to deal with the extra traffic in addition to the current already heavy HGV use and substantial outside traffic visiting the Affinity shopping hub on Pit Lane.

It is appreciated that these suggestions are probably impractical for a number of reasons, but that in itself serves to illustrate how intractable and insurmountable the problem is. It also suggests that development of the TK sites is unviable (per 5.3 above). The best solution therefore appears to be Suggested Modification 1 above.

6.3 Suggested Modification 3
That the Council be asked to consult with the ICB specifically about the Clinic, and directly with the Clinic itself, as to possible solution and, if there is none, to accept that Suggested Modification 1 should apply.

6.4 Suggested Modification 4
That the Council be asked to consult with the SCC, and also directly with the School Organization Team, specifically about the School, as well as directly with the School itself, as to possible solution and, if there is none, to accept that Suggested Modification 1 should apply.

7. CONCLUSION
For all the reasons above, we believe that the FDL Plan is neither Sound nor (per para 35 NPPF) "in accordance with legal and procedural requirements". Notwithstanding, we are not requesting that the FDL Plan be struck down. We recognize that the Borough needs a strong and robust local plan which, in most aspects, the FDL is. However, nor are we "nimby"s. Had the proposals in the FDL Plan for a local contribution to the Borough's housing need been for a reasonable number of dwellings in, or in the vicinity of, the Village, and not on precious and valuable Green Belt land, this representation would in all probability not have been submitted. It is not, however, reasonable for not only the character, but the very nature, of the Village to be irreversibly damaged and probably destroyed, by the building of a number of houses way out of proportion to the size of the Village, and greatly out of kilter to the ratio of the population of the Village to the Borough as a whole. It is not unreasonable that an objection be raised to this. We therefore request the Inspector, for all the reasons herein, to modify the FDL Plan and respectfully refer the Inspector to Suggested Modification 1 above.

Q7 Modification

SUGGESTED MODIFICATIONS

6.1 Suggested Modification 1

- a) That all or some of the Talke sites be removed from the FDL Plan, or alternatively that the number of proposed dwellings for all or some of the Talke sites be reduced.
- b) This can be compensated for as follows:
 - (i) The FDL Plan, at para 5.5 (Housing Requirement and Supply Information figures), indicates that, whereas the Housing Requirement is 8000 dwellings over the duration of the plan ("the term"), the FDL plan allows for 8,663 units. The additional 663 units are made up of 372 expected additional units becoming available over the term - the windfall allowance - and a buffer of 291 units (figure not shown at para 5.5). The windfall allowance alone more than adequately compensates even if all the Talke sites were to be removed from the FDL Plan.
 - (ii) The use of brownfield sites excluded from the FDL Plan site selection, and especially those whose status was previously changed from "suitable" to "unsuitable", with no transparent explanation, should be revisited. Development of some or all of these could mitigate or obviate the need for the Talke Green Belt sites to be included in the FDL Plan.
 - (iii) What was site TK5 - a brownfield site at the top end of the main road through the Village, and very close to TK27 - was originally shown as "suitable" but, in 2022, unavailable for housing development, as it was then in active commercial employment use (by London Hoist). However, it has since become available and is in fact at date hereof on the market for sale by a local agent (Louis Taylor) with outline planning permission for 32 dwellings. This should be brought back into account and reduce the suggested quota for eg TK27 by a concomitant number.
 - (iv) As at (ii) above, there are a number of other brownfield sites over the Borough as a whole, to which similar considerations apply, namely that they are suitable for development, but are not included in the FDL Plan, such as the derelict Knutton Community Centre site. As in (ii) above, these could all be looked at again, in preference to Green Belt sites such as the Talke sites.
 - (v) Similarly, reducing or eliminating the Talke sites could be easily compensated for by use of homes currently empty in the Borough.

The Council's own website (Empty Houses page) asks "Did you know there are over 1,000 empty properties in Newcastle-under-Lyme?" Even using more modest figures, there were 503 empty homes in the Borough in 2022/3 (Government's national New Homes Bonus figures) and 511 in 2023 (Action

on Empty Homes, based on Govt. Data published by the (then) Dept. for Levelling Up and Housing, Nov. 2023).

Yet, despite this number of empty homes being available, the council only brought back into use 39 homes in the year Oct 2021-Oct 2022, and a meagre 11 homes 2022-2023 (same sources, based on CTB figures); and they are now proposing that Green Belt land be sacrificed, when all this possible housing lies unused.

6.2 Suggested Modification 2

That drastic measures be taken to mitigate the impact of additional vehicles consequent on development of

the TK sites, for example:

- a) Barriers be erected at either end of the main road allowing ingress/egress only for Village residents, emergency services, deliveries, workers, etc.
- b) Entrance to and exit from TK27, currently via Coppice Road, should in turn require egress to/ingress from Coppice Road only to and from the main arterial A5011 (Linley Road). That would at any rate be necessitated by erection of aforementioned residential barrier between the top of Coppice Road and Swan Bank.
- c) Similarly for TK10, having all the additional vehicles from a 170-dwelling site feeding into the main road at the Crown Bank/Swan Bank/Jamage Road junction would exacerbate the situation even further. This could be controlled by limiting access to and from Pit Lane to the bottom end (roundabout at Pit Lane/Jamage Road/Oaktree junction), and creating a one-way system; as well as widening Pit Lane to allow it to deal with the extra traffic in addition to the current already heavy HGV use and substantial outside traffic visiting the Affinity shopping hub on Pit Lane.

It is appreciated that these suggestions are probably impractical for a number of reasons, but that in itself serves to illustrate how intractable and insurmountable the problem is. It also suggests that development of the TK sites is unviable (per 5.3 above). The best solution therefore appears to be Suggested Modification 1 above.

6.3 Suggested Modification 3

That the Council be asked to consult with the ICB specifically about the Clinic, and directly with the Clinic itself,

as to possible solution and, if there is none, to accept that Suggested Modification 1 should apply.

6.4 Suggested Modification 4

That the Council be asked to consult with the SCC, and also directly with the School Organization Team, specifically about the School, as well as directly with the School itself, as to possible solution and, if there is none, to accept that Suggested Modification 1 should apply.

7. CONCLUSION

For all the reasons above, we believe that the FDL Plan is neither Sound nor (per para 35 NPPF) "in accordance with legal and procedural requirements".

Notwithstanding, we are not requesting that the FDL Plan be struck down. We recognize that the Borough needs a strong and robust local plan which, in most aspects, the FDL is.

However, nor are we "nimby"s. Had the proposals in the FDL Plan for a local contribution to the Borough's housing need been for a reasonable number of dwellings in, or in the vicinity of, the Village, and not on precious and valuable Green Belt land, this representation would in all probability not have been submitted. It is not, however, reasonable for not only the character, but the very nature, of the Village to be irreversibly damaged and probably destroyed, by the building of a number of houses way out of proportion to the size of the Village, and greatly out of kilter to the ratio of the population of the Village to the Borough as a whole. It is not unreasonable that an objection be raised to this.

We therefore request the Inspector, for all the reasons herein, to modify the FDL Plan and respectfully refer the Inspector to Suggested Modification 1 above.

Newcastle under Lyme draft local plan – regulation 18: Consultation response

Dear Sir/Madam,

The following is a robust objection to all developments on green field sites covering all the proposals within Audley Parish and many more elsewhere as recommended in the draft local plan. In writing this response, I am aware of the need to adopt a local plan in order for local authorities to maintain democratic control of development in the area. This requirement appears to be a symptom of the subsection in the NPPF titled “The presumption in favour of sustainable development” (paragraphs 11-14). However, from a resident’s point of view, this gives the impression that local authorities must demonstrate a willingness to develop a particular area in order to avoid it being developed. This is, in essence, a commitment to eventual development even if it is not needed. And this is a source of great anxiety amongst residents that undesirable development is out of control, a situation clearly being fuelled by the existence of paragraphs 11-14. On this basis therefore, this subsection of the NPPF needs to be challenged.

This response may differ from others in that it comments on local planning within a strategic context. As I see it, there are three main types of development, which are likely to blight the future generations in the UK: (i) infrastructure (example, HS2), (ii) commercial (examples, AB2 and TK30 in the NuLBC local plan) and (iii) residential (example, recent housing developments either side of the A513, Beaconside, Stafford). Infrastructure is within the remit of Westminster rather than local authorities, so that is not a particular concern here. My main focus is encroachment of developments, both residential and commercial, in green spaces allowed for in the draft local plan. And any new developments in rural areas will, at the very least, result in:

- Loss of light or overshadowing

- Increased risk of flooding due to ‘run-off’

- Loss of visual amenity

- Limitations to physical activity

- Generation of extra traffic, overloading already busy local roads

- Extra noise, pollution, disturbance and danger from increased traffic

- Loss of trees and other biodiversity – bats, lizards etc.

- Loss of natural carbon capture

- Decrease in food production capacity

Increased local population placing further pressure on local schools, GP’s surgeries and other services, which are already oversubscribed.

The United Kingdom as a whole is currently gripped by a pandemic of overdevelopment, which threatens nature and the already depleted biodiversity we see in this country. And it has now reached the stage where it should be considered a national emergency. I for one, do not feel that I have any influence over the shape of our surroundings. There are numerous drivers for this trend many of which are not being addressed by government at any level. At the heart of this is a significant disconnection between the opinions of politicians and public as to what is actually needed. There appears to be cross-party support for activities driving economic growth at all costs, irrespective of the consequences to the natural environment. Aggravating this divide is the aforementioned paragraphs 11-14 of the NPPF. At a local level, what is not in doubt, is that whenever there is land removed from the green belt there is rarely, if ever, an equivalent area so returned, so the process is irreversible. And in the absence of any agreed lower limit on the area of protected green spaces within the UK, no release of green belt land, or development on green spaces, can be considered sustainable. Unless, of course, the use of agricultural land for just that purpose is also considered “developed”, i.e. it has an economic and sustainable use. And the local plan does appear to acknowledge this¹, so why not include agricultural use into the local plan implying no change in particular areas? If this is not the case, we are committed to a process where the end point is a UK completely covered in tarmac and concrete. Anyone arguing against this interpretation needs to state and justify precisely where that end point is. If they cannot, this renders the term ‘sustainable development’ an oxymoron.

One particular trend of major concern is the growing UK population. At the time of writing this stands at just under 69 million, and is set to reach 74 million before 2050. Studies in the US (Pimental and Giampietro, 1994; Lal, 1989) suggest that comfortable/sustainable living requires 0.5 Ha (1.2 acres) per capita. If we are generous, sustainable living in the UK was possible with a population of 57 million, a figure I remember from the late 1960s. With a total area of the UK at just over 60 million acres, a land area of one acre per capita for sustainable living in the UK seems feasible. As we have seen, anything more puts a strain on the environment as a whole. On this basis therefore, the UK is currently overpopulated by about 15%, and there appears to be no initiatives to address this issue. On this point, Westminster appears to be in a state of denial, thus fuelling the current avalanche of overdevelopment nationwide. Residential developments have a knock on effect by requiring other types of development to provide infrastructure, services and employment. Notwithstanding overpopulation, this gives the impression that there is not enough housing stock to accommodate the current population. Recent data, in the form of an infographic (“Housing crisis fact check”) from the Community Planning Alliance², convincingly shows that this is far from the case. In short, what is perceived as the current “housing shortage” is little more than a myth propagated by the construction industry and related interests. This is justified by item 3 on the infographic stating that “there are 1.5 million more dwellings than households” in England and Wales alone^{3,4}. On this basis therefore, no further house building is needed in the UK subject to efforts addressing projected population growth. In other words, what we have at present is a substantial housing surplus. Therefore, locally there are strong grounds for objections to development of the sites

AB12(p74)

AB15(p75)

AB32(p75)

AB33(p75).

Ignoring the 1.5 million surplus dwellings nationwide, the current (regulation18) draft of the local plan quotes a minimum housing requirement of 7160 in the Borough over the period 2020-40, of which 1206 are already completed. Of these, only 40% are to be 'affordable' (1-2 bedroom dwellings). Therefore, of the minimum requirement, only 2864 dwellings will be affordable. If we assume that those already built are affordable (they probably aren't) then the borough will only need 1658 homes built between now and 2040. This is because, due to being beyond affordability, most locals will be unable to buy or rent the other 60%. Therefore, they are not needed, and the proposed mix is entirely incompatible with general affordability. Given the surplus dwellings throughout England and Wales however, it is likely that none will be needed, especially considering the imminent removal of mandatory housing targets by the DLUHC under Michael Gove MP, and any specific affordable housing needs can be catered for by using brownfield sites only. All of the green areas in the local plan could therefore be planned in for their present use.

Infographic from the Community Planning Alliance summarising UK housing stock in relation to the population.

Another statistic from the infographic is that nationwide we could build up to 1.2 million homes on brownfield sites (item 2)2,5. And like any other local authority, NuLBC is legally obliged to and does keep a register of its brownfield sites, although it is likely that some may slip through the net.

If there is an imperative, it is to increase further democratic control of the development process both locally and nationally. And both local and national authorities would do well to remember that they have a responsibility to the people they represent and not to the commercial viability of developers, the construction industry or overseas investors. In short, no new housing development is required, especially given that the borough has exceeded its housing targets in recent years. This calls into question the need for housing developments outside Audley Parish mentioned in the local plan. These include

BL18 (p75)

CT1 (p76, 750 dwellings)

RC8 (p76, 6 dwellings, potential flood risk.)

KS3 (p77)

LW53 (p77)

MD29 (p78, 150 dwellings, likely to conflict with HS2 construction?)

NC13 (p78)

NC77 (p78)

SP11 (p78, 900 dwellings, former Keele golf course)

SP12 (p79)

SP23 (p79)

TB19 (p79)

TB23 (p79, 124 dwellings, adjacent to Walley's Quarry.)

TK10 (p80)

TK17 (p80)

TK27 (p80).

Other sites which may also be questioned are

KS17 (p77, would include loss of playing fields and other village amenities. This may be classed as infill.)

KL13 (p77,93, part built already within the grounds of Keele University Campus).

The other class of developments locally is commercial. All too often we hear in the news from both local and Westminster sources, the mantra that economic growth is the imperative. But the actual imperative is stability, and we have reached the point where growth at any cost has become toxic, especially given the impossibility of unrestrained growth in a land of finite area. Have our political masters never heard of the circular economy?

Since the beginning of deindustrialisation in the 1980s, the diversity of employment opportunities has declined. We have seen an unhealthy move away from manufacturing/production of goods that we need as a nation, to one entirely reliant on trade with overseas partners, leaving us open to blackmail and the current spike of rampant imported inflation. Look what happened during lockdown. Over recent decades this has led to the demolition of old factories for residential developments and the rise of logistics centres (warehousing) for the temporary storage of imported goods, which will ultimately be operated by robots and AIs leading to even less employment. The problem with warehousing of course is its large consumption of land area. My question is, what is the driver for the proposed "big box" developments on AB2 and TK30 locally? Both of these proposals lie entirely within the greenbelt, although the TK30 land has already been quarried in parts. Neither of these proposals is either desirable or needed. However, if we are forced to accept one or the other then TK30, being about 5% smaller, is the lesser of two evils. With the green light given to the development of the 44 Ha Chatterley Valley site on Peacock Hay Road, and the numerous empty warehouses existing across the potteries, North Staffordshire and Cheshire East. It is dubious to say the least to claim that either AB2 or TK30 are needed. These sites are 70 Ha and 66 Ha respectively. However, in the recently published "Housing and Economic Needs Assessment Update", the borough as a whole only needs a maximum of 34 Ha6. So why are we saddled with 154 Ha total covered by AB2, TK30 and KL15?

If the local plan caters for agricultural developments, AB2 and TK30 could be planned for their existing use. The majority of the area covered by these sites is high grade (3a) agricultural land. In the case of TK30 the quarried areas could be reclaimed for agriculture or, if this proves difficult, used in other ways to enhance biodiversity. If the land in question is council owned, and the motivation is to sell off council assets, then once sold, they cannot be sold again, and any control is lost. Moreover, once farmland is developed for other purposes then it is near to impossible for it to be reclaimed later for that use – and so the ratchet inexorably turns. On this

basis therefore, I would urge the LPA to remove the warehousing proposals AB2 and TK30 from the local plan.

The purpose of this consultation is to supply feedback to the Borough Council. Another question is, does Westminster similarly consult with local authorities on planning issues, or is there any other mechanism where local councils can supply feedback to Westminster, providing a better feel for the mood of the nation? If so, why do we not see a root and branch reform of the NPPF rather than the tinkering around the edges approach seen in the July 2021 version? Most especially, there should be a removal of paragraphs 11-14 and its supporting statements elsewhere in the document, which is tantamount to a developer's charter. And there should be more flexibility within the NPPF allowing local plans to include parcels of land for their current purpose, given that there is almost none in this country that is not currently in use. As far as I can see this plan is nowhere near compatible with efforts required to address the current climate crisis. Moreover, given their scale, the proposed developments represent too greater shock to the environment and local communities over the short 20-year period suggested for their completion. And with the sufficient housing and unused commercial sites we already have, there is no need for any encroachment into our green spaces.

Yours sincerely
Jim Austin

Q6 Details	<p>These representations are made in response to the Regulation 19 consultation on the final draft of the Newcastle-under-Lyme Local Plan 2020 – 2040. The representations are made by Pegasus Group on behalf of Araripe Limited and relate to their land interest at St Martins Road, Talke(hereafter referred to as the “Site”). The Site is greenfield land situated to the south of Talke. With regards to the Site, these representations should be read alongside the attachment.</p> <p>Araripe Limited strongly support the allocation of this site for residential development, and the site-specific requirements set out within the policy are broadly accepted. However, we consider that Policy TK17 is currently unsound, for the following reasons:</p> <ul style="list-style-type: none"> • The policy states that the site is allocated for 40 dwellings. This should be amended to read “approximately 40 dwellings”, to provide flexibility – a precise number of dwellings should not be prescribed, to ensure that the policy is effective. The illustrative masterplan in Appendix B shows 35 dwellings on the site, and through further masterplanning, there may be an opportunity to accommodate more than 40 units. • Point 6 notes that a sequential approach will need to be taken within the site to direct development to areas with the lowest risk of flooding. This implies that the sequential test needs to be carried out to identify alternative sites with a lower risk of flooding. However, as an allocated site, the sequential test would not need to be applied, in line with Paragraph 172 of the NPPF. As such, this should be amended to clarify that development within the site itself should be located away from the area which is at risk of surface water flooding (in the west). This will ensure that this point is justified and consistent with national policy. • Points 12 and 13 refer to financial contributions being required for education and Talke signals. This is not justified. Contributions should be based on the latest need when an application is submitted; it may not be necessary to make these contributions at that stage. <p>The Council's evidence base includes four separate Green Belt assessments. Green Belt Assessment Part 1 (2017) went through a two-stage process identifying general areas of Green Belt and then smaller parcels. Site TK17 fell within area 7 and parcel 33. The assessment set out in Green Belt Assessment Part 1 identified that parcel 33 made a weak contribution towards the purposes of including land within the Green Belt. Parcel 33 was one of only 13 out of 185 parcels assessed which fell into the ‘weak’ category.</p> <p>The Green Belt Assessment Part 2 (2020) went through a further detailed assessment of site TK17. It is worth noting that parcel TK17 considered in the Green Belt Assessment represents a much larger area of land than the draft allocation now identified in the Local Plan. It comprised all the land bounded by St Martin's Road to the north, the A34 Newcastle Road to the east, Talke Road to the south and the High Street to the west. The site capacity was identified as 150 dwellings. The Green Belt site review of this wider parcel went through a series of detailed criteria to establish a range of outcomes which went beyond merely the impact on the purposes of including land within the Green Belt. In particular, the analysis of the site against its suitability for development concluded that the site was suitable for development and would promote sustainable growth. Overall, the conclusion of this detailed assessment was that the site should be taken forward for further consideration with the focus on the potential contamination of part of the site due to the historic Talke Road landfill site.</p> <p>The assessment also concluded that the site made a weak contribution to Green Belt purposes and its development would not represent unrestricted sprawl, would not result in neighbouring towns merging and would not impact on the setting or character or the historic town of Talke. Development will only entail a small incursion into undeveloped countryside relative to the size of Talke.</p> <p>The Green Belt Assessment Part 3 assessed six additional sites within the Borough. It also considered the exceptional circumstances which should be identified to justify the release of sites from the Green Belt. In doing so, the study undertook a detailed analysis of the approaches pursued by other Local Authorities when proposing Green Belt release. The approach recommended that for strategic exceptional circumstances, the following should be considered.</p> <ul style="list-style-type: none"> • The housing and/or employment need • Constraints within the Borough Ensuring sustainable patterns of development • Lack of other reasonable options • Growth of a strategic facility or sector • Any other circumstances specific to the Borough <p>Meanwhile, site-level exceptional circumstances were identified as:</p> <ul style="list-style-type: none"> • Performance of the site against Green Belt purposes • Impact of removing the site on overall function and integrity of the wider Green Belt • Presence/creation of a recognisable and permanent boundary • Potential compensatory improvements to the remaining Green Belt • Sustainability of the site • Assessment of alternative sites • Any other circumstances specific to the site in question <p>In considering the proposed allocation TK17 the following is notable:</p> <ul style="list-style-type: none"> • The site has already been found to have a weak performance in terms of meeting the Green Belt purposes. This has been throughout the assessment process and even taking into account the larger

	<p>site which encompassed land further to the south. The reduction in the site area to that now identified as allocation TK17 further mitigates any Green Belt harm.</p> <ul style="list-style-type: none"> • The removal of the site from the Green Belt will have negligible impact on the remaining function and integrity of the wider Green Belt. There will remain a substantial retained area of land between the southern edge of Talke Pits and the northern edge of Newcastle upon Lyme. • The proposal at TK17 provides the opportunity to create a new recognisable and permanent Green Belt boundary formed by the southern edge of the built development. This already exists in a form of a low-level hedge but can be reinforced both through additional planting but also through the design of a new residential development which will occur. • The site can provide a new additional link into the Public Rights of Way Network which in turn provides access to the wider Green Belt. This could form part of the compensatory provision and facilitate additional recreational opportunities. • This site is located immediately on the edge of the built-up area of Talke. A bus stop is immediately adjacent to it. The site has been fully assessed through the Green Belt Part II process to be both sustainable and have potential for new housing development. • The site would make a contribution towards housing need. The TK17 site has a particular benefit in having the opportunity to provide for aspirational dwellings located in an urban fringe location which would not necessarily be the case elsewhere, particularly on previously developed land within the urban area. • The site has the opportunity to provide an enhanced approach to Talke Pits Village through a suitable design which could provide a gateway feature of high-quality new development, enhancing the approach to the village. <p>The Green Belt Assessment (Part 4) was published in July 2024 and consolidates the three previous Green Belt Assessments. It reiterates that the site makes a weak contribution to Green Belt purposes and represents a sustainable location for growth, and that it should therefore be considered for allocation. Its limited contribution as a Green Belt site means that it can be considered 'grey belt' land; the concept of 'grey belt' was introduced in the draft NPPF, and the release and development of grey belt sites is an emerging Government priority.</p> <p>In view of the above, it has been clearly demonstrated that the draft Allocation TK17 is suitable for removal from the Green Belt and allocation for new housing development. This is both within the strategic context of the Borough requiring Green Belt sites to meet its housing and employment need and because there are clear site-specific circumstances set out above which justify the removal of the site from the Green Belt and its allocation for residential development.</p> <p>In view of the above, Araripe Limited strongly support the identification of site TK17 as an allocation for residential development and removal from the Green Belt. This is clearly justified by the evidence base and exceptional circumstances exist to underpin the approach taken by the Borough Council. The site can deliver much-needed housing in the short-to-medium term, and thus its allocation contributes to ensuring a positively prepared and effective plan. However, as discussed above, minor amendments to Policy TK17 are still required for it to be found sound at examination. Please see attached representations.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	Sufficient land for housing should be planned for to meet the identified need for this within the Borough. Araripe Limited strongly support the allocation of Site TK17 for residential development, but several amendments are required to make Policy TK17 sound, as set out in paragraph 3.19 of the accompanying written representations. We would welcome the opportunity to participate in the hearing sessions to set these out, as well as to draw attention to the other matters which need to be addressed to ensure soundness elsewhere in the final draft plan, whilst emphasising site TK17's suitability, availability, and deliverability, being an optimum and sustainable location for high-quality residential development.

Q6 Details	<p>[Admin Note, the following statement has been supported by a form of authority with appropriately 172 signatures].</p> <p>Re: Newcastle-under-Lyme Borough Council (" the Council") Final Draft Local Plan 2020/2040 - Regulation 19 Consultation Please accept this letter as our representation in response to the above consultation, for onward submission to the Inspector.</p> <p>CONTENTS</p> <p>To assist you and the Inspector, the following is the order of our representation:</p> <ol style="list-style-type: none"> 1. Introductory comments. 2. Personal details. 3. Approach. 4. Legally and procedurally compliant. 5. Soundness (including each of the four heads, as set out in the National Planning Policy Framework). 6. Suggested modifications. 7. Conclusion. <p>1. INTRODUCTORY COMMENTS</p>

We are the Talke Action Group ("TAG"), set up primarily to co-ordinate engagement with the Local Plan preparation process by the residents of the village of Talke/Talke Pits ("the Village"), part of the ward of Talke and Butt Lane in the borough of Newcastle-under-Lyme ("the Borough"). We are registered with the Council as a Consultee herein. In an effort to assist the Inspector, and as requested in the Planning Inspectorate's Guidance Note (Para 5.3 - "Where groups or individuals share a common view on the plan,...etc."), this letter of representation ("this letter") is respectfully submitted both on behalf of ourselves and also on behalf of all those individuals ("the signatories") who have signed the attached Forms of Authority, whereby they endorse this letter and the contents hereof as representing their joint and individual view. Accordingly, the term "our representation" as used herein reflects that this letter is the representation herein on behalf of both ourselves and the signatories, and the words "we" and "us" are similarly used.

- In said attached Forms of Authority this letter is referred to as "the letter of representation".
- Each of the signatories has so given said informed authority and endorsement following one-to-one drop-in engagement sessions during the Consultation period, between members of TAG and each signatory.
- Our representation is submitted in letter form pursuant to advice that a letter is a proper and appropriate means of submission of Reg.19 representations, given by Councillor Fear, the Council's portfolio holder for Strategic Planning ("the Portfolio Holder").

3. APPROACH

- a) In this letter, with regard to the concepts in parts 4 and 5 above, our representation follows the wording of para. 35 of the National Planning Policy Framework in force at this time.
- b) Pursuant to that wording, we do not consider that this Final Draft Local Plan ("the FDL Plan") has "been prepared in accordance with legal and procedural requirements" or that it is "sound". We are therefore raising objections to the FDL Plan under the pertinent heads.
- c) However, we are of the view that the Borough does need a Local Plan, so that we do not wish to see the Plan struck down completely. Accordingly, where appropriate for each of the objections raised, this letter suggests relevant modifications.
- d) As we are residents of the Village, and are therefore largely not aware of detailed circumstance prevailing in other communities, most of our representations herein relate to the TK sites selected in the FDL Plan for development in the Village, namely sites TK6, TK10, TK17 and TK27 ("the TK sites"). However, because many of the reasons for which we consider the FDL Plan to be either not sound, or not legally/procedurally compliant, or both, relate to the FDL Plan as a whole insofar as they affect the TK sites, some representations are made regarding the FDL Plan as a whole but then show how they relate specifically to the Village and to the TK sites specifically. As in c) above, modifications are then suggested.

Note: As the FDL Plan is a Council-derived document, we use the term "the Council" to refer also to the Council officers - elected and/or employed - engaged in guiding the FDL Plan through the process.

NOT LEGALLY OR PROCEDURALLY COMPLIANT

We do not believe the FDL Plan is legally/procedurally compliant.

4.1 The consultation process

Insofar as the residents of the Village are concerned, the consultation process has been drastically inadequate. Many, if not most of the residents, were until recently entirely unaware that a local plan was in the pipeline and equally unaware of the promulgation of the First Draft Local Plan or the FDL Plan. In our view, this inadequate consultation by the Council renders the FDL Plan non-compliant because :

a) Community engagement

(i) The Council may have given the appearance of complying, by sticking to minimum legal requirements regarding local plan community engagement, for example posting legal notices at the relevant sites and posting documents online. However, the Village population comprises a substantially larger than average percentage of older people, who do not or cannot engage with the internet. The Council will know this. Therefore, in accordance with its own Statement of Community Involvement (SCI), at para.1.13 (Equal Opportunity), the Council should have taken additional steps "in the way in which (they) consult ... to meet the specific local needs". This the Council has not done during the whole process.

(ii) This could - and indeed the SCI (at Table 2, p16) states that it will - be done by the distribution of "leaflets and posters". This does not appear to have been done for this local community with its "specific local need".

(iii) Having regard to this failure to consult in a way which meets specific local needs, there are other instances by which the Council has further failed in any meaningful way, insofar as the Village and its demographic is concerned, to comply with its own SCI, for example para 1.9, Community Involvement ("Inform people...and provide information...at the earliest opportunity"); para1.15, Equal Opportunity (allowing the process to be "accessible to those who are unfamiliar with the terms, processes and structures of the planning system..."); para 2.1 ("Early and meaningful engagement...with...neighbourhoods...is essential"); and para 2.2 ("A range of methods and techniques will be used to involve communities...")

(iv) One clear item of evidence of the Council's failure to comply with its own SCI, and therefore to be legally compliant, relates to SCI para 1.14 (Equal Opportunity), which indicates that the Council will endeavour "to work in an inclusive manner" to deliver "planning services from the perspective of a range of potential users", including by "Organizing consultation events to maximise involvement...ie workshops." Yet, when holding such workshops was suggested at the relevant Scrutiny Committee meeting on 11.7.24, it was rejected out of hand using the spurious excuse that residents wouldn't be available!

(v) The Planning Inspectorate's own guidance/requirement document, in the part 3 "Legal Compliance" section, states clearly that "the process of community involvement for the plan in question should be in general accordance with the LPA's Statement of Community Involvement". To the extent that the FDL Plan, insofar as the Village is concerned and as evidenced in (i)-(iv) above, is not so in accordance, it is not legally compliant.

(vi) Lastly under this head we would like to point out that, although the Council loudly touts, as evidence of its engagement compliance, that it has allowed a consultation period which is longer than the minimum required (8 weeks instead of 6 weeks), it might as well be 1 week or 28 weeks - it makes no difference how long the consultation period is if ordinary residents have not been properly engaged with, taking

into account not only the demographic of the Village per se but also the Council's obligations under their own SCI, both generally and given said demographic.

Conclusion: Because of the Council's failure, as above, to consult properly with the residents of the Village, given its specific demographic, the FDL Plan is not legally/procedurally compliant.

b) Consideration of consultation objections

It is self-evident, even to lay-persons such as we, that for a consultation to be meaningful and valid, the views, including any objections, of the consultees must be properly considered. If the consultation is treated by an LPA as merely a procedural formality, and the consultees' views arising thereout are not properly and fully considered, it is not a meaningful consultation, and the plan out of which the meaningless consultation arises cannot be legally compliant. We believe that this is the case with the FDL Plan, for the following reasons:

(i) In the Council's document in response to the Reg.18 consultation in respect of the First Draft of the Local Plan, where any proposed development site had had questions had been raised as to that site's suitability for development, the vast majority of the responses thereto was not a considered reply addressing any query, but merely a standard comment, the gist of which is that the site had been selected notwithstanding any objections raised nor addressing any such, and merely suggesting that any problems arising with any actual development could be dealt with when a planning application is made. The use of such an identical pro-forma response indicates clearly a lack of meaningful consideration of representations arising out of the consultation.

(ii) Further, those unconsidered responses not only evidence a lack of consideration of consultees' views, in itself rendering the consultation meaningless and the FDL Plan not legally compliant, but also fails to take into account circumstances where "planning" at the development stage will not solve the problem raised; or to offer any other solution. As examples, and with regard to the Village:

- what is the solution where there will be insufficient local school and/or health clinic places available as a consequence of development, but s106 funding would be of no use because there is no space in or around the existing facility for more staff to be employed or for an extension to be built?

- although construction of a roundabout might help with a substantially greater traffic flow at a dangerous junction, how will "planning" solve the problem of much greater traffic on the already dangerously congested main road through the village, which cannot be widened?

- How will planning considerations relating specifically and only to individual developments solve the larger problem of waste discharge in the locality? Viz: A report in 2023 covered the dumping of sewage into waterways by Severn Trent Water, revealing that during 2022 sewage was discharged into local waterways for 31,228 hours with 6,370 dumps in total. Alarming, the biggest polluter was the Liverpool Road works in Kidsgrove which discharged for 4,139 hours in 187 spills. This plant, which covers, inter alia, the Village as well as Butt Lane and Kidsgrove, clearly cannot cope with present demand. How will this plant cope with sewage from the hundreds of houses in the TK, BL and Kidsgrove sites? The Council appears not to have considered or addressed or informed consultees of how this will be dealt with.

We stress that we are not asking the Inspector to examine these issues. We raise them as exemplars and evidence that the Council has either deliberately ignored or simply failed properly to consider and/or to address consultees' views.

(iii) This apparent failure properly and fully to consider the views of consultees, and consequently having nothing of substance to report back to them, both further represent yet another failure by the Council to comply with its own SCI, this time Para 1.9, the aim to "Respond to any comments received, giving proper consideration and explanations of how these views will be incorporated into the planning documents and decisions."

(iv) A disturbing sequence of documents seems to indicate that the relevant officers had decided, well in advance of any scrutiny or vote, that the FDL Plan should be recommended for approval to a full meeting of the Council. For example, way back in January 2024, a report by the Corporate Leadership Team to the Cabinet recommended that the Cabinet "(a)uthorises the Deputy Chief Executive, in consultation with the Strategic Planning Portfolio Holder, to recommend to Council at its meeting on 24 July that it approves the Final Draft Local Plan (at Regulation 19 stage)...for public consultation..." Please note that the Cabinet decided, on 16 January 2024, to recommend approval of the FDL Plan to the full Council meeting on 24 July 2024, over 6 months before that meeting, and indeed before the FDL Plan was promulgated and possibly even before it was prepared. (On 18 March 2024, the Corporate Leadership Team presented this decision by the Cabinet to the relevant Scrutiny Committee for their meeting on the same day, and they appear to have had no issue with it.) This sequence of events cannot but reflect a lack of meaningful consideration of anything arising out of the Reg 18 consultation, rendering the consultation extremely, if not fatally, flawed.

Conclusion: Because the representations arising out of the Regulation 18 consultation were not adequately considered, the consultation has not been properly and/or meaningfully conducted, and therefore the FDL Plan is not legally/procedurally compliant.

4.2 Procedural Compliance

Although it again appears on the surface that the Council has carefully followed all the over-arching procedural steps required in this process, there have been at least two somewhat alarming occurrences evidencing that this has not actually been the case on closer examination.

a) Site Selection

(i) In the Local Plan Issues and Options Report in 2022, preparatory to preparation of the First Draft Local Plan, the long list of possible sites indicated that three of the TK sites (TK10, TK17 and TK27) were "unsuitable" for development. By the time of promulgation of the First Draft Local Plan, they had somehow become suitable, without any apparent explanation. The implications of this are somewhat disturbing, let alone it representing another failure of the Council for its evidence base to be transparent and available, and for residents to be kept informed, as in 4.1 above. However, the following point might shed some light on the mysterious elevation of these three sites.

(ii) At the meeting of the relevant Scrutiny Committee meeting on 11 July 2024, the Portfolio Holder was repeatedly asked how the final list of sites included in the First Draft of the Local Plan were selected from the longer list and whether Cabinet Members were involved. The Portfolio Holder repeatedly obfuscated and ultimately refused to answer. However, it subsequently appears that said selection was made by the Portfolio Holder and two other senior councillors from the same side of the chamber.

(iii) Given these occurrences, it is open to conjecture as to whether or not it is a coincidence that a by far greater proportion of sites selected for development are situated in wards represented by councillors from the party in opposition to that of the Portfolio Holder's majority governing party.

Conclusion: Although the initial stages of the site selection process appear to have been conducted openly and compliantly, there are questions around the final stages of the site selection, rendering the process certainly procedurally (and possibly also legally) non-compliant.

b) Document Availability

(i) The FDL Plan was approved for consultation and submission at a full meeting of the Council on 24 July 2024. However, issues relating to document availability cloud its approval.

(ii) For Councillors to have been able to make an informed decision when voting, over 40 documents forming the evidence base and informing the FDL Plan, were required to be examined and considered. However, a large number of these documents were not made available to Councillors sufficiently timeously for them to be able to examine same and render themselves fully informed. Eight such documents (almost 20% of the total) were only uploaded to the relevant website the previous afternoon, leaving Councillors in outside employment around 24 hours to read and examine hundreds of pages of formal documentation whilst working during the day. (A further 7 documents were uploaded to the web the day before that, making a total of 15 documents - over one-third of the total number - only made available 48 hours before the meeting.)

(iii) The opposition Councillors therefore proposed an amendment, that the decision to approve the FDL Plan be slightly delayed until the next Council meeting only two months later, to allow all Councillors fully to consider all the relevant documents. This was defeated, with speakers from the Portfolio Holder's majority party insisting that the plan be approved on that day. Disturbingly, a senior councillor from that party stated categorically that all but two of the documents were made available timeously. The promulgated list of dates and times of uploading of all the documents shows that this statement was - knowingly or unknowingly - untrue.

(iv) It is not clear whether the above events were deliberate or not - we hope not. Nonetheless, it is the case that documents vital to the integrity of the FDL Plan were not made appropriately, timeously or compliantly to many of those being asked to make a decision on the FDL Plan and this in itself renders the process not procedurally compliant. This is even more the case because the Council could have obviated the difficulty by delaying the decision, but pointedly and deliberately chose not to.

(v) Speaking to the amendment referred to above, one councillor remarked: "The expectation that we approve a local plan without these essential documents is not only unreasonable but also undermines the principles of sound governance. This is a formal process that requires thorough scrutiny and understanding of all supporting evidence. We must be fully informed to ensure that the plan we endorse is both sound and legally compliant." They were not, so the plan is not.

c) Cross Party Engagement

(i) The Council's SCI, at para 2.23, requires the Council, in preparing a local plan, "to ensure cross party engagement on the plan making process..". In taking the steps in 4a and 4b above, the Council has again failed to comply with its own SCI.

Conclusion: Consequent on the above, the FDL is neither procedurally nor legally compliant.

4.3 Sustainability Assessment Objectives, Strategic Objectives, and Transport and Accessibility Policy Development as proposed on the TK sites would not only fail to comply with and meet the standards required by these policies and objectives, but would indeed be directly contrary to and inimical with same. (As details relating hereto are set out fully below, and as we would not wish the Inspector to have to read exactly the same content twice, we respectfully refer the Inspector to item 5.3,b ("Effective" head of "Soundness") below.)

Conclusion: Because of this, the FDL Plan, insofar as the TK sites are concerned, is not legally compliant.

5. SOUNDNESS

5.1 Positively prepared

No representations.

5.2 Justified

We do not believe the FDL Plan, insofar as the Village and the effect that development of the TK sites will have thereon, is justified. This is for the following reasons:

a) Number of dwellings proposed for the TK sites

(i) The number of dwellings proposed to be built over the TK sites (over 300) is disproportionate for this small semi-rural village. It is not justifiable that the Village should bear the burden of 7% of the total Local Plan Housing Allocation of 4512 houses (para 5.5, FDL Plan), when neither its population nor its housing stock are anything like that percentage of the Borough as a whole. When looking at the figures for the Talke and Butt Lane ward as a whole, the figure of 520 dwellings proposed to be built (per FDL Plan, paras 13.194 - 13.231) in the ward represents 11.5% of the proposed development for the whole Borough. To impose this disproportionate burden on the village is not justified. (As to possible reasons for this high proportion of dwellings on the TK sites - all but 10 on greenbelt - being proposed to be imposed on the Village, we refer the Inspector back to point 4.2 above.)

Suggested Modification - Suggested Modification 1 below

b) The population of the Borough

The population of the Borough has only increased by 6.9% over the past four decades since 1981 (117,217 to 125,297, 1981-2022). The Council is allowing for an increase of 15% over the term. Even accepting that in matters of targets, some (but not all) issues are beyond the ambit of a Local authority, it is not justifiable that a greater proportion of what is already a possibly inflated target (ie above the national standard method calculation) should be borne by the Village. This is especially so when there are doubts about the motivation for and process of site selection, and there are brownfield sites (see c below) and empty homes (see 6.1,b,v below) available in the Borough which have not been selected.

Suggested Modification - Suggested Modification 1 below

c) Availability of brownfield sites

As indicated above (at point 4.2,a,i) the status of the Talke sites was changed from "unsuitable" to "suitable". At the same time, other sites (some brownfield) were changed from "suitable" to "unsuitable". These are however available and should be looked at again. For example, the unused and derelict

Knutton Community Centre site was made available, but it appears that developers deemed the cost of eg decontamination to be too great and preferred untainted eg Green Belt land on which to build. The same is true of other available brownfield sites in the Borough. It cannot be justified for Green Belt land to be sacrificed in order to increase the profits of developers.

Suggested Modification - Suggested Modification 1 below

d) The effect on the nature of the Village

If all of the proposed 310 dwellings are built on the TK sites, and taking into account also development of sites such as the former TK5 site (see below at 6.1.b.iii) and any other windfall and/or buffer sites, this will represent an increase in the percentage of dwellings in the Village in the order of 20-30%! This volume of development is simply too great for Talke/Talke Pits. It would swamp the Village. It would irreparably and irreversibly change the nature of the Village from a semi-rural village to a sprawling dormitory town - although without the infrastructure to support it (see e below), rendering it with the worst of all worlds. To destroy the Village in this way by such a weight of development cannot be justified.

Suggested Modification - Suggested Modification 1 below.

e) Effect on local infrastructure

We appreciate that it is not within the ambit of this Regulation 19 Consultation for the Inspector to re-examine issues of local planning such as flooding or parking issues on the proposed development sites. However, where there are issues relating to off-site impacts, which have not been dealt with, either satisfactorily or at all, in the FDL Plan, then this goes to the Soundness of the FDL Plan under both heads of "Justified" and also "Effective" (as below).

The issue of the undealt-with problem of the knock-on effect of development of the TK sites on the Village as a whole, has been mentioned in passing at 4.1.b.ii above. It is not justifiable to propose a level of development on the Village which would exacerbate, and make critical, existing problems in a creaking and already inadequate infrastructure, without some level of pre-planning in the FDL Plan. Insofar as the Village is concerned, there appears to be none with regard to three major infrastructure problems which will arise should the TK site developments proceed, and which do not appear to be resolvable by specific planning arrangements for on-site or site-adjacent adaptations only. These are:

(i) As previously alluded to (4.1.b.ii), the volume of traffic (both local, and also that which uses the Village as

a rat-run to avoid congestion on the nearby arterial routes of the A34, the A500 and the M6) through and in the Village is already greatly excessive for the Village road network. The main road ("the main road") through the Village (comprising High Street, Crown Bank and Swan Bank, which all run seamlessly into each other to form one thoroughfare through the Village), is also already inadequate and at breaking point. The road, like Pit Lane, is narrow and often reduced to a point where two cars, let alone trucks, cannot pass. When not congested, vehicles speed through, and the road is dangerous for pedestrians and vehicles alike, as well as for ingress/egress from local residences. There would be no easy solution to this, even without further development, as the road cannot be widened.

The addition of hundreds more vehicles (anything between 310 and 620) on to the main road through, and other roads in, the Village cannot but seriously exacerbate an already critical situation, and render the local road network inoperable.

As above (4.1.b.ii - also Failure properly to consult) the FDL plan does not appear to make any provision for this, nor even to consider it. It cannot be justifiable to allocate development sites without appearing to have any great, or any, concern about, or to make provision for, the drastically adverse knock-on effect which such

development would have on the Village and its residents.

Suggested Modifications - Suggested Modifications 1 (or 2) below.

(ii) Similar concerns relate to the local health clinic (Talke Clinic, part of the North Newcastle Primary Care Network, "the Clinic"). Although we understand that their list is not, at date hereof, entirely full, the clinic as it is would simply not be able to take in the residents of 310 dwellings. However, the logistics are that the current building is full, so that no further health staff can physically be accommodated; and the site will not allow for further expansion. Accordingly, the usual solution of s106 funding to employ further staff and/or to expand the building, is not available.

Yet the Council again appears not to have considered nor to make any specific proposals to solve this problem (unlike elsewhere, eg at the proposed Keele site, where a health Hub is mooted). The only solution therefore appears to be that patients will need to attend GPs further afield, either at other practices in the North Newcastle PCT, or even at practices in other, further away, PCTs.

The over-arching Staffordshire and Stoke-on-Trent Integrated Care Board ("ICB") is quite clear - for them, such list-dispersal, with patients having to travel distances to see a doctor, is a very last option, a last resort. The Council, however, seems, by failing to consider and actively to address the issue, in fact by default to be planning for the last resort in respect of the TK sites and the Village.

Inclusion of the TK sites in the FDL Plan cannot be justified where the health infrastructure of the Village is so lacking and unaddressed.

Suggested Modifications - Suggested Modifications 1 (or 3) below.

(iii) Again, there is a similar concern around local schooling, especially for children of primary school age. There is only one primary school in the Village, namely Springhead school ("the School"), to which the same problems (no unused internal space; no suitable site expansion room), again rendering s106 funding largely irrelevant. So, once again, primary school children will need to be found places further afield.

Inclusion of the TK sites in the FDL Plan cannot be justified where the school infrastructure of the Village is so lacking and unaddressed.

Suggested Modifications - Suggested Modifications 1 (or 4) below.

(iv) A further effect of (ii) and (iii) above, if patients and primary-age schoolchildren are listed or placed further afield, is additional car-journeys, and even worse exacerbation of the local road infrastructure problems, in (i) above. This cannot be justified.

(v) Lastly under e) hereof, although both the Staffs and Stoke ICB (regarding health issues) and the Staffordshire County Council (regarding education and other issues) have been consulted herein by the

Council, it does not appear that the Council has actually approached or otherwise consulted directly with either the Clinic or the School, to ascertain from them the situation on the ground, so as to attempt to deal with it and/or to modify their site selection by eg removal of the TK sites from the FDL Plan, in light of these potentially insurmountable impact consequences. This cannot be justifiable.

f) Use of Green Belt land

Given all of the above - the disproportionate weight of development allocated for the TK sites, the questionable motivation for the site selection, the availability of brownfield sites and empty houses in the Borough, the fact that the Council would still meet its development target even without inclusion of the TK sites (see 6.1,b,i below), the detrimental effect that the proposed development on the TK sites would have on the Village, etc - it appears that there are no circumstances at all, let alone exceptional circumstances, which would necessitate or justify use of the Green Belt land proposed for the TK sites. Suggested Modification - Suggested Modification 1 below.

Conclusion: The FDL Plan, insofar as it relates to the TK sites, is not Sound under the head of "Justified".

5.3 Effective

We do not believe the FDL Plan, insofar as the Village and the effect that development of the TK sites will have

thereon, is effective. This is for the following reasons:

a) Viability

Because of the intractable infrastructure difficulties outlined above (at 5.2,e), we do not believe the development on the TK sites is viable. If it is not viable, it cannot be effected, and is accordingly not effective. Suggested Modifications - Suggested Modification 1 (or 2 - 4) below.

b) Sustainability Assessment (SA) Objectives, Strategic Objectives, and Transport and Accessibility Policy (Policy IN2)

As 4.3 above (not legally and/or procedurally compliant), development as proposed on the TK sites would not only fail to comply with and meet the standards required by these policies and objectives, but would indeed be directly contrary to and inimical with them. Some examples are:

- SO IV - to "reduce the Borough's carbon footprint..." : the introduction of many more vehicles into a rural environment will have the opposite effect.
- SO VI - to "support the vitality of rural villages, preserving and enhancing the special character (of)...each local community" : development of the TK sites will destroy the cohesion and vitality of the Village, and its special character.
- SO VI - to "provide choice in housing types for local people." : local residents do not want a choice of large development-based housing which will have the adverse and destructive effects referred to herein.
- 1N2 1 b - development must allow for "integration with existing infrastructure." : as herein, development of the TK sites will overwhelm the existing road infrastructure to a point of collapse.
- IN2 1,e - development must "not cause unacceptable highway safety problems in relation to local traffic circulation and existing parking..arrangements.." : as herein, this is exactly what development of the TK sites will cause
- IN2 1,f - Development must "not cause severe residual impacts on the road network, either direct and/or cumulative." : extremely severe such impacts on the local road network, both direct and cumulative is exactly what will happen if development of the TK sites goes ahead.
- SA Objective 1 - "To contribute to reduction of greenhouse gases.." : not to increase them in the locality by the introduction of many more vehicles into a rural environment.
- SA Objective 2 - "To improve air quality.." : by the introduction of many more vehicles into this rural environment?
- SA Objective 3 - "To protect, enhance and restore biodiversity ensuring that there is an overall net gain in the extent and quality of biodiversity." : development of the TK sites, by diminishing and concreting over Green Belt land, will self-evidently destroy and reduce biodiversity; and Parrots Drumble, a small remnant of ancient Woodland and a nature reserve, with its delicate wildlife and biodiversity balance, is extremely close to site TK10.
- SA Objective 4 - "To..maintain..land resources" : losing the agricultural land within the TK sites does precisely the opposite.
- SA Objective 7 - "To conserve, enhance and promote interest in local distinctiveness, the historic environment and landscapes, heritage, cultural assets and their settings" : aside of the loss of Village distinctiveness and heritage already cited, the last of local dry-stone walling and the Village's central Cross (original 12Century base are directly in the firing line of the increased traffic
- SA Objective 8 - "To strengthen the quality of the landscape.." : development of the Green Belt TK sites would, on the contrary, diminish and despoil not only the quality of the landscape per se, but also the visual and physical amenity it provides to the Village.
- SA Objective 9 - "To enhance the quality..and connectivity of open space.." : building over large parts of such Green Belt space self-evidently does exactly the opposite, reducing the quality and interrupting the connectivity of the of same.
- SA Objective 9 - "To improve the health and mental wellbeing of the population.." : increased traffic with greater pollution, the need for young children and patients to travel further afield to access school and health-care, a dangerous road environment, disintegration of an identifiable community, et al -how does this improve the health and welfare of the local population?

Accordingly, if the Council were to proceed with developing the TK sites, they would be in conflict with their own precepts. Not only does this render the FDL Plan not legally compliant (per 4.3 above), it also means that (unless the Council wishes deliberately to act in a non-legally-compliant manner), development of the TK sites cannot be affected as is. If such development cannot be affected then the FDL Plan, insofar as it relates to the TK sites, not effective.

Suggested Modification - Suggested Modification 1 below.

Conclusion: The FDL Plan, insofar as it relates to the TK sites, is not Sound under the head of "Effective".

5.4 Consistent with national policy

We do not believe that the FDL plan, insofar as the TK sites are concerned, is consistent with national policy,

for the following reasons :

a) Transport - please see above re the local road system in the Village.

b) Infrastructure - please see above re the Village infrastructure, namely school and health.

c) Landscape/Environment - please see above re unnecessary use of Green Belt land for the proposed TK sites.

d) Location - please see above re overwhelming a rural village when other brownfield sites and empty houses are available.

e) Health - please see above re pollution, degradation of environment, list dispersal, etc. Suggested Modification - Suggested Modification 1 below.

Conclusion: The FDL Plan is not consistent with national policy, especially insofar as the TK sites are concerned, so that it is not Sound under this head.

6. SUGGESTED MODIFICATIONS

6.1 Suggested Modification 1

a) That all or some of the Talke sites be removed from the FDL Plan, or alternatively that the number of proposed dwellings for all or some of the Talke sites be reduced.

b) This can be compensated for as follows:

(i) The FDL Plan, at para 5.5 (Housing Requirement and Supply Information figures), indicates that, whereas the Housing Requirement is 8000 dwellings over the duration of the plan ("the term"), the FDL plan allows for 8,663 units. The additional 663 units are made up of 372 expected additional units becoming available over the term - the windfall allowance - and a buffer of 291 units (figure not shown at para 5.5). The windfall allowance alone more than adequately compensates even if all the Talke sites were to be removed from the FDL Plan.

(ii) The use of brownfield sites excluded from the FDL Plan site selection, and especially those whose status was previously changed from "suitable" to "unsuitable", with no transparent explanation, should be revisited. Development of some or all of these could mitigate or obviate the need for the Talke Green Belt sites to be included in the FDL Plan.

(iii) What was site TK5 - a brownfield site at the top end of the main road through the Village, and very close to TK27 - was originally shown as "suitable" but, in 2022, unavailable for housing development, as it was then in active commercial employment use (by London Hoist). However, it has since become available and is in fact at date hereof on the market for sale by a local agent (Louis Taylor) with outline planning permission for 32 dwellings. This should be brought back into account and reduce the suggested quota for eg TK27 by a concomitant number.

(iv) As at (ii) above, there are a number of other brownfield sites over the Borough as a whole, to which similar considerations apply, namely that they are suitable for development, but are not included in the FDL Plan, such as the derelict Knutton Community Centre site. As in (ii) above, these could all be looked at again, in preference to Green Belt sites such as the Talke sites.

(v) Similarly, reducing or eliminating the Talke sites could be easily compensated for by use of homes currently empty in the Borough.

The Council's own website (Empty Houses page) asks "Did you know there are over 1,000 empty properties in Newcastle-under-Lyme?" Even using more modest figures, there were 503 empty homes in the Borough in 2022/3 (Government's national New Homes Bonus figures) and 511 in 2023 (Action on Empty Homes, based on Govt. Data published by the (then) Dept. for Levelling Up and Housing, Nov. 2023).

Yet, despite this number of empty homes being available, the council only brought back into use 39 homes in the year Oct 2021-Oct 2022, and a meagre 11 homes 2022-2023 (same sources, based on CTB figures); and they are now proposing that Green Belt land be sacrificed, when all this possible housing lies unused.

6.2 Suggested Modification 2

That drastic measures be taken to mitigate the impact of additional vehicles consequent on development of the TK sites, for example:

a) Barriers be erected at either end of the main road allowing ingress/egress only for Village residents, emergency services, deliveries, workers, etc.

b) Entrance to and exit from TK27, currently via Coppice Road, should in turn require egress to/ingress from Coppice Road only to and from the main arterial A5011 (Linley Road). That would at any rate be necessitated by erection of aforementioned residential barrier between the top of Coppice Road and Swan Bank.

c) Similarly for TK10, having all the additional vehicles from a 170-dwelling site feeding into the main road at the Crown Bank/Swan Bank/Jamage Road junction would exacerbate the situation even further. This could be controlled by limiting access to and from Pit Lane to the bottom end (roundabout at Pit Lane/Jamage Road/Oaktree junction), and creating a one-way system; as well as widening Pit Lane to allow it to deal with the extra traffic in addition to the current already heavy HGV use and substantial outside traffic visiting the Affinity shopping hub on Pit Lane.

It is appreciated that these suggestions are probably impractical for a number of reasons, but that in itself serves to illustrate how intractable and insurmountable the problem is. It also suggests that development of the TK sites is unviable (per 5.3 above). The best solution therefore appears to be Suggested Modification 1 above.

6.3 Suggested Modification 3

That the Council be asked to consult with the ICB specifically about the Clinic, and directly with the Clinic itself, as to possible solution and, if there is none, to accept that Suggested Modification 1 should apply.

6.4 Suggested Modification 4

That the Council be asked to consult with the SCC, and also directly with the School Organization Team, specifically about the School, as well as directly with the School itself, as to possible solution and, if there is none, to accept that Suggested Modification 1 should apply.

7. CONCLUSION

For all the reasons above, we believe that the FDL Plan is neither Sound nor (per para 35 NPPF) "in accordance with legal and procedural requirements".

Notwithstanding, we are not requesting that the FDL Plan be struck down. We recognize that the Borough needs a strong and robust local plan which, in most aspects, the FDL is.

	<p>However, nor are we "nimby"s. Had the proposals in the FDL Plan for a local contribution to the Borough's housing need been for a reasonable number of dwellings in, or in the vicinity of, the Village, and not on precious and valuable Green Belt land, this representation would in all probability not have been submitted. It is not, however, reasonable for not only the character, but the very nature, of the Village to be irreversibly damaged and probably destroyed, by the building of a number of houses way out of proportion to the size of the Village, and greatly out of kilter to the ratio of the population of the Village to the Borough as a whole. It is not unreasonable that an objection be raised to this.</p> <p>We therefore request the Inspector, for all the reasons herein, to modify the FDL Plan and respectfully refer the Inspector to Suggested Modification 1 above.</p>

Newcastle under Lyme draft local plan – regulation 18: Consultation response

Dear Sir/Madam,

The following is a robust objection to all developments on green field sites covering all the proposals within Audley Parish and many more elsewhere as recommended in the draft local plan. In writing this response, I am aware of the need to adopt a local plan in order for local authorities to maintain democratic control of development in the area. This requirement appears to be a symptom of the subsection in the NPPF titled “The presumption in favour of sustainable development” (paragraphs 11-14). However, from a resident’s point of view, this gives the impression that local authorities must demonstrate a willingness to develop a particular area in order to avoid it being developed. This is, in essence, a commitment to eventual development even if it is not needed. And this is a source of great anxiety amongst residents that undesirable development is out of control, a situation clearly being fuelled by the existence of paragraphs 11-14. On this basis therefore, this subsection of the NPPF needs to be challenged.

This response may differ from others in that it comments on local planning within a strategic context. As I see it, there are three main types of development, which are likely to blight the future generations in the UK: (i) infrastructure (example, HS2), (ii) commercial (examples, AB2 and TK30 in the NuLBC local plan) and (iii) residential (example, recent housing developments either side of the A513, Beaconside, Stafford). Infrastructure is within the remit of Westminster rather than local authorities, so that is not a particular concern here. My main focus is encroachment of developments, both residential and commercial, in green spaces allowed for in the draft local plan. And any new developments in rural areas will, at the very least, result in:

- Loss of light or overshadowing

- Increased risk of flooding due to ‘run-off’

- Loss of visual amenity

- Limitations to physical activity

- Generation of extra traffic, overloading already busy local roads

- Extra noise, pollution, disturbance and danger from increased traffic

- Loss of trees and other biodiversity – bats, lizards etc.

- Loss of natural carbon capture

- Decrease in food production capacity

Increased local population placing further pressure on local schools, GP’s surgeries and other services, which are already oversubscribed.

The United Kingdom as a whole is currently gripped by a pandemic of overdevelopment, which threatens nature and the already depleted biodiversity we see in this country. And it has now reached the stage where it should be considered a national emergency. I for one, do not feel that I have any influence over the shape of our surroundings. There are numerous drivers for this trend many of which are not being addressed by government at any level. At the heart of this is a significant disconnection between the opinions of politicians and public as to what is actually needed. There appears to be cross-party support for activities driving economic growth at all costs, irrespective of the consequences to the natural environment. Aggravating this divide is the aforementioned paragraphs 11-14 of the NPPF. At a local level, what is not in doubt, is that whenever there is land removed from the green belt there is rarely, if ever, an equivalent area so returned, so the process is irreversible. And in the absence of any agreed lower limit on the area of protected green spaces within the UK, no release of green belt land, or development on green spaces, can be considered sustainable. Unless, of course, the use of agricultural land for just that purpose is also considered “developed”, i.e. it has an economic and sustainable use. And the local plan does appear to acknowledge this¹, so why not include agricultural use into the local plan implying no change in particular areas? If this is not the case, we are committed to a process where the end point is a UK completely covered in tarmac and concrete. Anyone arguing against this interpretation needs to state and justify precisely where that end point is. If they cannot, this renders the term ‘sustainable development’ an oxymoron.

One particular trend of major concern is the growing UK population. At the time of writing this stands at just under 69 million, and is set to reach 74 million before 2050. Studies in the US (Pimental and Giampietro, 1994; Lal, 1989) suggest that comfortable/sustainable living requires 0.5 Ha (1.2 acres) per capita. If we are generous, sustainable living in the UK was possible with a population of 57 million, a figure I remember from the late 1960s. With a total area of the UK at just over 60 million acres, a land area of one acre per capita for sustainable living in the UK seems feasible. As we have seen, anything more puts a strain on the environment as a whole. On this basis therefore, the UK is currently overpopulated by about 15%, and there appears to be no initiatives to address this issue. On this point, Westminster appears to be in a state of denial, thus fuelling the current avalanche of overdevelopment nationwide. Residential developments have a knock on effect by requiring other types of development to provide infrastructure, services and employment. Notwithstanding overpopulation, this gives the impression that there is not enough housing stock to accommodate the current population. Recent data, in the form of an infographic (“Housing crisis fact check”) from the Community Planning Alliance², convincingly shows that this is far from the case. In short, what is perceived as the current “housing shortage” is little more than a myth propagated by the construction industry and related interests. This is justified by item 3 on the infographic stating that “there are 1.5 million more dwellings than households” in England and Wales alone^{3,4}. On this basis therefore, no further house building is needed in the UK subject to efforts addressing projected population growth. In other words, what we have at present is a substantial housing surplus. Therefore, locally there are strong grounds for objections to development of the sites

AB12(p74)

AB15(p75)

AB32(p75)

AB33(p75).

Ignoring the 1.5 million surplus dwellings nationwide, the current (regulation18) draft of the local plan quotes a minimum housing requirement of 7160 in the Borough over the period 2020-40, of which 1206 are already completed. Of these, only 40% are to be 'affordable' (1-2 bedroom dwellings). Therefore, of the minimum requirement, only 2864 dwellings will be affordable. If we assume that those already built are affordable (they probably aren't) then the borough will only need 1658 homes built between now and 2040. This is because, due to being beyond affordability, most locals will be unable to buy or rent the other 60%. Therefore, they are not needed, and the proposed mix is entirely incompatible with general affordability. Given the surplus dwellings throughout England and Wales however, it is likely that none will be needed, especially considering the imminent removal of mandatory housing targets by the DLUHC under Michael Gove MP, and any specific affordable housing needs can be catered for by using brownfield sites only. All of the green areas in the local plan could therefore be planned in for their present use.

Infographic from the Community Planning Alliance summarising UK housing stock in relation to the population.

Another statistic from the infographic is that nationwide we could build up to 1.2 million homes on brownfield sites (item 2)2,5. And like any other local authority, NuLBC is legally obliged to and does keep a register of its brownfield sites, although it is likely that some may slip through the net.

If there is an imperative, it is to increase further democratic control of the development process both locally and nationally. And both local and national authorities would do well to remember that they have a responsibility to the people they represent and not to the commercial viability of developers, the construction industry or overseas investors. In short, no new housing development is required, especially given that the borough has exceeded its housing targets in recent years. This calls into question the need for housing developments outside Audley Parish mentioned in the local plan. These include

BL18 (p75)

CT1 (p76, 750 dwellings)

RC8 (p76, 6 dwellings, potential flood risk.)

KS3 (p77)

LW53 (p77)

MD29 (p78, 150 dwellings, likely to conflict with HS2 construction?)

NC13 (p78)

NC77 (p78)

SP11 (p78, 900 dwellings, former Keele golf course)

SP12 (p79)

SP23 (p79)

TB19 (p79)

TB23 (p79, 124 dwellings, adjacent to Walley's Quarry.)

TK10 (p80)

TK17 (p80)

TK27 (p80).

Other sites which may also be questioned are

KS17 (p77, would include loss of playing fields and other village amenities. This may be classed as infill.)

KL13 (p77,93, part built already within the grounds of Keele University Campus).

The other class of developments locally is commercial. All too often we hear in the news from both local and Westminster sources, the mantra that economic growth is the imperative. But the actual imperative is stability, and we have reached the point where growth at any cost has become toxic, especially given the impossibility of unrestrained growth in a land of finite area. Have our political masters never heard of the circular economy?

Since the beginning of deindustrialisation in the 1980s, the diversity of employment opportunities has declined. We have seen an unhealthy move away from manufacturing/production of goods that we need as a nation, to one entirely reliant on trade with overseas partners, leaving us open to blackmail and the current spike of rampant imported inflation. Look what happened during lockdown. Over recent decades this has led to the demolition of old factories for residential developments and the rise of logistics centres (warehousing) for the temporary storage of imported goods, which will ultimately be operated by robots and AIs leading to even less employment. The problem with warehousing of course is its large consumption of land area. My question is, what is the driver for the proposed "big box" developments on AB2 and TK30 locally? Both of these proposals lie entirely within the greenbelt, although the TK30 land has already been quarried in parts. Neither of these proposals is either desirable or needed. However, if we are forced to accept one or the other then TK30, being about 5% smaller, is the lesser of two evils. With the green light given to the development of the 44 Ha Chatterley Valley site on Peacock Hay Road, and the numerous empty warehouses existing across the potteries, North Staffordshire and Cheshire East. It is dubious to say the least to claim that either AB2 or TK30 are needed. These sites are 70 Ha and 66 Ha respectively. However, in the recently published "Housing and Economic Needs Assessment Update", the borough as a whole only needs a maximum of 34 Ha6. So why are we saddled with 154 Ha total covered by AB2, TK30 and KL15?

If the local plan caters for agricultural developments, AB2 and TK30 could be planned for their existing use. The majority of the area covered by these sites is high grade (3a) agricultural land. In the case of TK30 the quarried areas could be reclaimed for agriculture or, if this proves difficult, used in other ways to enhance biodiversity. If the land in question is council owned, and the motivation is to sell off council assets, then once sold, they cannot be sold again, and any control is lost. Moreover, once farmland is developed for other purposes then it is near to impossible for it to be reclaimed later for that use – and so the ratchet inexorably turns. On this

	<p>basis therefore, I would urge the LPA to remove the warehousing proposals AB2 and TK30 from the local plan.</p> <p>The purpose of this consultation is to supply feedback to the Borough Council. Another question is, does Westminster similarly consult with local authorities on planning issues, or is there any other mechanism where local councils can supply feedback to Westminster, providing a better feel for the mood of the nation? If so, why do we not see a root and branch reform of the NPPF rather than the tinkering around the edges approach seen in the July 2021 version? Most especially, there should be a removal of paragraphs 11-14 and its supporting statements elsewhere in the document, which is tantamount to a developer's charter. And there should be more flexibility within the NPPF allowing local plans to include parcels of land for their current purpose, given that there is almost none in this country that is not currently in use. As far as I can see this plan is nowhere near compatible with efforts required to address the current climate crisis. Moreover, given their scale, the proposed developments represent too greater shock to the environment and local communities over the short 20-year period suggested for their completion. And with the sufficient housing and unused commercial sites we already have, there is no need for any encroachment into our green spaces.</p> <p>Yours sincerely Jim Austin</p> <p>Notes</p> <ol style="list-style-type: none"> 1. Title	Policy TK27 Land off Coppice Road, Talke
Consultee Family Name	Hoban
Consultee Given Name	Che
Q4 Part of document	Policy
Q4 Policy	TK27
Q6 Details	<p>I wish the Planning Inspectorate to consider my following representations in response to the Newcastle -Under-Lyme Borough Council – Final Draft Local Plan Consultation (Regulation 19)</p> <p>I wish the Planning Inspectorate to remove all policies from the plan which involve any development on Green Belt Land.</p> <p>The specific policies are: -</p> <ul style="list-style-type: none"> • AB2, AB33, AB15 & AB12 – Audley Ward • BW 1 – Bradwell Ward • CT 1 – Crackley Bank & Red Street Ward • KL13 & KL 15 -Keele Ward • SP11(2) & SP11(3) – Silverdale Ward • TK 10, TK 27 & BL18 – Talke & Butt Lane Ward <p>All of these developments impact green belt land, are unsound and should be removed from the plan.</p> <p>They will all have a negative effect on the Net Biodiversity gain of each local area. Which in turn has a knock-on effect across the Borough. Open spaces are essential for the environment by absorbing carbon dioxide from our atmosphere, which helps reduce climate control. They also provide habitats for a wide range of plants and animals. Open spaces are also important to human health as they can reduce stress, improve mental health, and assist in people sleeping better. They provide areas for physical activity</p>

	<p>which improve both physical and mental health. Removal of green belt will decrease the air quality within that area, increase respiratory issues for humans and wildlife, and also increase noise pollution.</p> <p>With specific reference to policies AB2, AB33, AB15 and AB12. I ask the Planning inspectorate to remove policies based on the following justifications:</p> <ul style="list-style-type: none"> AB2 - It is simply the case that the small village of Audley and its surrounding countryside lanes could not cope with the large increase of traffic caused by these policies. The large number of HGV's travelling to the proposed AB2 site would definitely increase the traffic within the Audley area due to the daily traffic jams along the A500 and at M6 Junction 16. Traffic will spill on to local roads e.g. A5500, increasing Noise and air pollution AB12 - Proposed access to site AB12 via Diglake Street is untenable. This street is small and it is already difficult to drive down due to parked cars on both sides of the terraced street. A new development of houses would make it virtually impassable causing gridlock, increased air pollution, increased noise pollution and limiting access for the emergency services. <p>The proposed new car park for resident's in Diglake Street due to the proposed AB12 policy would be detrimental to Blue badge Holders, People with mobility issues and Carers of babies and children.</p> <p>AB12 will not be close to any amenities with little or no access to a regular bus route.</p> <ul style="list-style-type: none"> AB33 – Primary Vehicular access to Park Lane is unsound. This is an already busy junction. AB33 will not be close to any amenities with little or no access to a regular bus route. Creating more traffic therefore noise pollution and air pollution. With an increased danger to pedestrians. <p>With poor access to health care and education.</p> <ul style="list-style-type: none"> AB15 – The proposed site at AB15 is unsound because of the poor access to health care, education, local amenities and public transport. <p>I therefore would like the Planning inspectorate to remove Policies AB2, AB12, AB33 & AB15 from the plan.</p>

Policy TK27: Land off Coppice Road, Talke

5.1 SLG is promoting the land off Coppice Road, Talke as a draft allocation for residential development. We strongly support the allocation in the draft plan.

5.2 Details of the site and the proposed allocation were provided in response to the Issues and Options and the First Draft consultations, including a comprehensive Development Prospectus, a copy of which is provided at Appendix EP1 of these representations.

5.3 The representations firstly address the principle of allocating the site and the Council's site selection process, before addressing the specific criteria within the allocation policy.

Principle of the allocation

Exceptional circumstances for Green Belt release

5.4 The Council has published a paper entitled: Exceptional circumstances for green belt release (Green Belt Assessment Part 2, ED008b). We agree with the paper's conclusion that exceptional circumstances exist. It is apparent from the evidence base in relation to both housing need and supply that a significant amount of Green Belt release will be needed to meet housing needs. There is also a specific need to release Green Belt around Kidsgrove, to provide an appropriate level of growth within the urban centre in accordance with the spatial strategy. Therefore, there are exceptional circumstances at the strategic level to justify

Green Belt release.

5.5 At a site-level, paragraph 4.4 of the Green Belt Assessment Part 3 (ED008a) sets out a range of exceptional circumstances for the Council to consider. In relation to Site TK27 the following factors comprise the site level exceptional circumstances:

- The Site Selection process demonstrates that there are no available sites that make a lesser contribution to the Green Belt purposes.
- The impact of removing the site on the overall function and integrity of the wider Green Belt would be limited.
- The evidence base and the enclosed Development Prospectus demonstrates that a recognisable and permanent boundary already exists and could be enhanced.
- The site is located in an accessible location and is well-served by public transport. A full assessment of accessibility is provided within the enclosed Development Prospectus.
- The site would make a valuable contribution to addressing the housing needs of the borough and Kidsgrove.
- The site is deliverable in the short term and can contribute to the 5-year housing land supply.

5.6 These factors are discussed in further detail below.

Site Selection process

5.7 The Site Selection Report (ED029) sets out a 7-stage methodology that the Council has applied in allocating sites. The Site Selection report sets out a logical approach to site selection in Kidsgrove and the approach taken is considered to be robust. The allocation of the site accords with the Council's methodology.

5.8 Once it has been established that Green Belt release is required, the key stage in the methodology is 'Stage 7'. This is when the Council selects sites based on a range of evidence, including:

- Sustainability Appraisal
- Habitats Regulations Assessment
- Strategic Housing and Employment Land Availability Assessment
- Landscape and Settlement Character Assessment work and Landscape work on sites
- Strategic Flood Risk Assessment
- Green Belt Assessment, parts 1, 2, 3 & 4
- Climate Change Adaptation and Mitigation Report
- Infrastructure Delivery Plan
- Strategic Employment Sites Study
- Viability Study
- Open Space and Green Infrastructure Strategy
- Playing Pitch Strategy
- Nature Recovery Mapping Report
- Heritage Impact Assessment
- Strategic Transport Assessment

5.9 The Council has taken into account a wide range of evidence in selecting the sites. Whilst the final selection of sites will always come down to a matter of planning judgement, the evidence underpinning the site selection process is robust and comprehensive. The plan and the final selection of sites is justified, in that it represents an appropriate strategy taking into account the reasonable alternatives, and based on proportionate evidence.

5.10 The selection of allocations in Kidsgrove is discussed in Section 7 of the Site Selection Report. Table 13 identifies the sites that are within 400m of a bus stop and addresses their contribution to the Green Belt purposes. Site TK27 makes a moderate contribution and is considered in Table 15. Green Belt considerations are discussed further below.

Green Belt

Paragraph 147 of the Framework

5.11 A key factor when reviewing Green Belt boundaries is the need to promote sustainable patterns of development. This includes having regard to all requirements of the Framework, including meeting housing and employment land needs. Paragraph 147 of the Framework also states:

"Where it has been concluded that it is necessary to release Green Belt land for development, plans should give first consideration to land which has been previously developed and/or is well-served by public transport. They should also set out ways in which the impact of removing land from the Green Belt can be offset through compensatory improvements to the environmental quality and accessibility of remaining Green Belt land."

5.12 The site is highly accessible by public transport with four bus services an hour passing the site on weekdays.

These services connect the site to the centres of both Hanley and Kidsgrove. The bus services also provide access to Kidsgrove train station, which benefits from direct services to a range of locations including Stoke, Crewe, Manchester Piccadilly and London Euston.

5.13 Therefore, in accordance with paragraph 147 of the Framework, the site is well served by public transport and should be given first consideration for release from the Green Belt.

Green Belt Assessment

5.14 In the Green Belt Assessment Part 1 (ED008c) undertaken by consultants Arup, the site was assessed as part of a larger tract of land to the west of Kidsgrove (parcel 36). It was considered to make a 'moderate contribution' to the Green Belt purposes. This means:

"on the whole the parcel contributes to a few of the elements of the Green Belt purpose however does not fulfil all elements".

5.15 The site is assessed individually in the Green Belt Assessment Part 2 (ED008b) (parcel TK27). The assessment concludes as follows:

"The site makes a moderate contribution to Green Belt purposes. Development of the site would not represent unrestricted sprawl, it would not result in neighbouring towns merging and it would not impact upon the setting or character of the historic town of Talke. Development would entail a small incursion into undeveloped countryside relative to the size of Talke. Overall, the removal of the site from the Green Belt will not harm the overall function and integrity of the Green Belt. A new recognisable and permanent Green Belt boundary would be created consisting of Merelake Road to the south and through strengthening the existing western boundary. It is recommended that if the site is taken forward the accompanying policy should recognise this." (our emphasis)

5.16 The Green Belt Assessment Part 4 (ED008) retains this assessment. Therefore, the conclusions of the Green Belt Assessment are:

- The site does not make a 'significant contribution' to any of the Green Belt purposes.
- The site makes a 'moderate contribution' to the Green Belt purposes overall.
- The release of the site would not harm the overall function and integrity of the Green Belt.
- The site should be considered for release.

5.17 Notwithstanding these conclusions, we consider that the site makes a 'weak contribution' to the Green Belt purposes. Indeed, the Council's Green Belt assessment does not indicate that the site makes anything more than a weak contribution against any of the Green Belt purposes. The site is surrounded on 3 sides by permanent built development in the form of road infrastructure and residential development, and natural screening in the form of hedgerows and trees, as well as the marked change in topography beyond the western boundary, provides defensible boundaries and a strong sense of containment. This could be supplemented through a comprehensive landscaping scheme.

5.18 Importantly, the site is not found to make any perceptible contribution to preventing towns merging into one another, namely Kidsgrove and Alsager or Bignall End, and there would be no physical or perceived closing of the gap between these towns if the site were to be developed. This is in contrast to other possible site options around Kidsgrove, such as those to the south of the settlement (where there are potential issues of merger between Kidsgrove and Newcastle-under-Lyme) and to the north-east of the settlement (where there are potential issues of merger between Kidsgrove and the villages of Harseahead and Mow Cop).

Creation of a defensible boundary

5.19 As part of our discussions with the Council in 2018, the Council sought additional analysis of the western boundary of the site, to demonstrate the strength of the boundary following development. This additional information was provided through our representations to the Issues and Strategic Options consultation and is summarised within the Development Prospectus at Appendix EP1 (see pages 10 and 25). The information, which includes photographs and an illustrative cross-section, demonstrates that a robust defensible boundary already exists and can be enhanced. Appendix F of the Green Belt Assessment Part 4 endorses this conclusion, stating in relation to parcel TK27:

"A new recognisable and permanent Green Belt boundary would be created consisting of Merelake Road to the south and through strengthening the existing western boundary."

Green Belt: conclusions

5.20 The site is well served by public transport and makes, at most, a moderate contribution to the Green Belt purposes. It does not make any contribution to preventing the merging of settlements. The development of the site would also result in defensible and permanent Green Belt boundaries. Therefore, having regard to paragraph 147 of the Framework and the unequivocal recommendation of the Green Belt Assessment to consider the site for release, the evidence base in relation to the Green Belt provides clear justification to release the site from the Green Belt to meet identified housing needs.

Technical considerations

5.21 A range of technical assessments have been undertaken to support the proposed allocation of the site.

These are summarised below. They have also been used to inform the concept masterplan set out in the

Development Prospectus which is enclosed at Appendix EP1.

Highways and accessibility

5.22 The site has been assessed from a highways and accessibility perspective by Croft Transport Solutions (now

Eddisons), as set out within the Development Prospectus at Appendix EP1 of these representations and the Preliminary Transport Technical Note provided with our previous representations to the Issues and Strategic Options consultation. In summary:

- The site has an extensive frontage to Coppice Road, so a suitable vehicular access to the site can be achieved in a number of potential locations along Coppice Road. All of the land required to form the access falls within either the site boundary or the current limits of adopted highway.
- The site would generate a modest number of additional vehicular trips onto the local highway network. There are no particular capacity constraints to the local highway network. This analysis of the existing highway network has specifically included consideration of both the Coppice Road/Coalpit Hill/Merelake Road and the Coppice Road/A5011 junctions. Both would be able to accommodate the proposals.
- The site represents a highly accessible location close to a good range of shops, employment opportunities, education provision and other facilities and services. These are identified on the map at page 15 of the Development Prospectus. The site is also well-served by public transport with four bus services an hour passing the site on weekdays, connecting the site to the centres of both Hanley and Kids Grove, and Kids Grove railway station. An existing public footpath adjoins Coppice Road to the north of the site, providing access to those facilities on foot.

5.23 There is therefore no reason in highways terms why the site could not be developed.

Ecology

5.24 Ecological considerations can be summarised as follows:

- The site is presently used for grazing. The main features of ecological value within the site are likely to be the existing trees and hedgerows which mark the site's boundaries. It will be possible to retain these features as part of any development, save for the removal of a short section of hedgerow in order to form the site access.
- As well as retaining existing trees and hedgerows, landscape planting associated with the new development could include native species, increasing the ecological value of the site and achieving a biodiversity net gain. Any ponds associated with the site's surface water drainage scheme could also be designed in a manner that maximised their benefit for wildlife.
- No statutorily protected or non-statutorily protected sites exist on the site or immediately adjacent to the site. No statutorily protected sites exist within 2km of the site. The nearest non-statutorily protected site is the Bathpool Park Local Nature Reserve which lies around 1km to the east of the site, on the opposite side of Talke.
- Hacking Ecology has assessed the site and concluded that a 10% net gain in biodiversity can be delivered within the site's boundary in the context of the concept masterplan provided within the Development Prospectus at Appendix EP1.

5.25 There are therefore no ecological reasons why the site should not be developed.

Ground Conditions

5.26 The site is greenfield and is not known to be subject to any contamination that would preclude development.

5.27 In common with much of the local area, there are records of historic mine workings in the vicinity of the

site. An assessment of the impact of these workings on any development has been carried by e3p consulting engineers (provided with our representations to the Issues and Strategic Options consultation). Like large parts of the borough, the site is impacted by past mine workings. However, the part of the site that may need ground stabilization works is limited, at circa 11% of the site area. Even if that whole part of the site needed treating, this would not impair the viability of any development.

Flood Risk and Drainage

5.28 The site is located within Flood Zone 1 where the risk of flooding is considered to be low. Any development

of the site would incorporate a sustainable drainage system ('SuDS'). This would be designed to limit flows

to the greenfield run-off rate plus an allowance for climate change, so as not to increase the risk of flooding

either on the site or elsewhere. There are therefore no flood risk or drainage reasons why the site should not be developed.

Landscape and Visual Impact

5.29 An analysis of the landscape considerations is set out within the Development Prospectus at Appendix EP1.

In summary:

- The site is an agricultural field located between the current edge of the urban area and Merelake Road. It has an edge of settlement character and is contained by roads on all but one boundary. Hedgerows border the land to all sides, interspersed with a number of large trees mainly along the southern boundary. The western boundary includes a large hedgerow, with a small area of woodland in the field beyond. These features provide defensible boundaries and a strong sense of containment. This could be supplemented through a comprehensive landscaping scheme.
- The site slopes away from Coppice Road towards Merelake Road; on the opposite side of Merelake Road, the land rises again. The result is a site with a tightly constrained visual envelope, with few long range views of the site. It is not visually prominent.

- There are no public footpaths through the site or immediately adjacent to it. Views of the site are largely limited to close range views from Merelake Road, Coppice Road and Barrie Gardens (to the north of Coppice Road).
- The development of any greenfield site will inevitably result in a change to the landscape character. It is the impact of that change which needs to be considered. In this case, the development of the site would not be incongruous in the location and setting at the edge of the settlement as the site is located between existing development and a road.
- The site would retain its key character elements of hedgerows and hedgerow trees, maintaining much of the visual screening already afforded the site. There is little visual relationship between the wider landscape and the site due to the topography, built form and intervening vegetation, which all limit views directly into the site.

5.30 The site is also assessed in the Landscape & Settlement Character Assessment Study Part 3: Site Specific Landscape & Visual Appraisal (ED017). This concludes that the landscape sensitivity of the site is 'medium', and the overall significance of the residual effects in relation to Sustainability Appraisal Objective 8 is 'moderate adverse'. The overall conclusion on site TK27 in the assessment is as follows: "Smaller residential development on this site would have a moderate adverse effect on the SA objective to strengthen the quality of the landscape and urban townscape and deliver well designed development which respects the local character and distinctiveness."

5.31 This assessment compares favourably with other sites and draft allocations in the plan, and the impacts are not considered to be 'significant'. There are therefore no landscape or visual impact reasons why the site should not be developed, and the allocation of the site accords with the Council's landscape evidence.

Heritage

5.32 The Heritage Site Assessments report (ED016) commissioned by the LPA have concluded that the site scores 'Low' in relation to heritage sensitivity. The impact assessment concludes: "The development of the site would result in the removal/alteration of agricultural land which currently makes a neutral contribution to the wider setting of local heritage assets. Depending on its design, the development of the site is anticipated to make similarly neutral contribution to the setting/significance of these heritage assets. The development will result in groundworks which have the potential to affect any hitherto undetected archaeological deposits within the site. These deposits are likely to relate to the former medieval and postmedieval agricultural use of the site, though may also include deposits/materials relating to the prehistoric period and early medieval periods. While views towards the majority of heritage assets within the Talke Conservation Area (DST5730) from the north-west are already obscured by areas of topography, housing and tree-planting, there are still partial/glimpsed views of the churchyard of the Church of St Martin (1374385) from Coppice Road, immediately north of the site. It is possible that that the development of the site may impede or detract from these views, especially from the areas of post-1950s housing immediately north of the site."

5.33 The preliminary concept masterplan provided on page 24 of the Development Prospectus shows an area of public open space to the east which would retain views to the south east, although views of the churchyard are screened by existing vegetation to the north of Audley Road.

5.34 The recommendations relating to a programme of archaeological recording could be implemented as part of a scheme and would not impact upon the viability of the site.

5.35 There are therefore no heritage reasons why the site should not be allocated, with further detailed consideration given during the planning application stage.

Agricultural Land Quality

5.36 Reading Agricultural have undertaken an Agricultural Land Classification (ALC) assessment of the site. The report concludes that approximately two thirds of the site comprise Grade 3a agricultural land, which is "Smaller residential development on this site would have a moderate adverse effect on the SA objective to strengthen the quality of the landscape and urban townscape and deliver well designed development which respects the local character and distinctiveness."

5.31 This assessment compares favourably with other sites and draft allocations in the plan, and the impacts are not considered to be 'significant'. There are therefore no landscape or visual impact reasons why the site should not be developed, and the allocation of the site accords with the Council's landscape evidence.

Heritage

5.32 The Heritage Site Assessments report (ED016) commissioned by the LPA have concluded that the site scores 'Low' in relation to heritage sensitivity. The impact assessment concludes: "The development of the site would result in the removal/alteration of agricultural land which currently makes a neutral contribution to the wider setting of local heritage assets. Depending on its design, the development of the site is anticipated to make similarly neutral contribution to the setting/significance of these heritage assets. The development will result in groundworks which have the potential to affect any hitherto undetected archaeological deposits within the site. These deposits are likely to relate to the former medieval and postmedieval agricultural use of the site, though may also

include deposits/materials relating to the prehistoric period and early medieval periods.

While views towards the majority of heritage assets within the Talke Conservation Area (DST5730) from the north-west are already obscured by areas of topography, housing and tree-planting, there are still partial/glimpsed views of the churchyard of the Church of St Martin (1374385) from Coppice Road, immediately north of the site. It is possible that the development of the site may impede or detract from these views, especially from the areas of post-1950s housing immediately north of the site."

5.33 The preliminary concept masterplan provided on page 24 of the Development Prospectus shows an area

of public open space to the east which would retain views to the south east, although views of the churchyard are screened by existing vegetation to the north of Audley Road.

5.34 The recommendations relating to a programme of archaeological recording could be implemented as part

of a scheme and would not impact upon the viability of the site.

5.35 There are therefore no heritage reasons why the site should not be allocated, with further detailed consideration given during the planning application stage.

Agricultural Land Quality

5.36 Reading Agricultural have undertaken an Agricultural Land Classification (ALC) assessment of the site. The

report concludes that approximately two thirds of the site comprise Grade 3a agricultural land, which is the lowest category of 'best and most versatile' (BMV) agricultural land. The remainder is Grade 3b (i.e.

not BMV). The following points are relevant:

- The loss of around 1.8ha of Grade 3a agricultural land would not be considered 'significant' in the context of footnote 58 of the Framework.

- Much of this part of the borough consists of BMV. Any greenfield allocation is likely to result in the loss of at least some BMV agricultural land.

- In practical terms the land is unlikely to be farmed to its maximum potential. The size, topography and severance from wider holdings (being surrounded by highways, housing and a large hedgerow) all limit its ability to be efficiently farmed.

5.37 Therefore, agricultural land quality is not a constraint to the site's development, and it should be given no

more than limited weight in the site selection process.

Services

5.38 Searches of the main utilities providers have been carried out. These have confirmed that all main services

are available in this locality, and that connections can be made to the site.

Deliverability

5.39 There are no physical, technical or legal/ownership constraints to development, and the site could come

forward immediately for development.

5.40 SLG is an experienced land promoter with an established track record of delivering sites for residential development. It would be SLG's intention to sell the site to developer at the earliest opportunity. Indeed, SLG has in the recent past secured planning permission for 350 new homes on a greenfield site in Stokeon-

Trent, which is currently being developed by both Persimmon and Bellway (thereby maximising the delivery rate).

5.41 The site will therefore deliver in full during the plan period, and it would also contribute to the deliverable

5-year supply in the short term. SLG would be happy to enter into a Statement of Common Ground with the Council to confirm its intentions in terms of delivery.

Quantum of development

5.42 Policy TK27 states that the site is allocated for 90 dwellings. The enclosed Development Prospectus presents a concept masterplan, which demonstrates one way in which the site could deliver for approximately 90 dwellings in a high-quality scheme which reflects urban design best practice and considering all relevant technical matters, including access, drainage, services and green and blue infrastructure (as discussed above). Therefore, the proposed quantum of development is realistic based

on the available evidence.

Development criteria

5.43 As with all of the allocations, Policy TK27 sets out a series of development criteria. Generally, the criteria

are considered to be proportionate and reasonable in the context of the allocation. However, we propose the following amendments to the criteria

Criterion 8

5.44 Criterion 8 is set out below:

"Improvements required at Coppice Road / Merelake Road / Coal Pit Lane junction for highway safety reasons. Offsite footway improvements required on the site frontage and from the site to local school, bus stops and shops"

5.45 We consider that this criterion is not justified, as it is yet to be determined (such that it is specified as a

fixed requirement by policy) that improvements will be required at Coppice Road / Merelake Road / Coal Pit Lane. The need for such improvement is not specified within the Strategic Transport Assessment (ED011).

5.46 Although SLG are content to deliver highways improvements should they be required, the need for any

off-site improvements to any nearby junctions is clearly a matter that will need to be considered through

	<p>the Transport Assessment, prepared in consultation with the Local Highways Authority. A Transport Assessment is already required under Policies SA1 and IN2.</p> <p>5.47 Therefore, we proposed that the criterion should be replaced with the following text, to make clear that the issue is to be considered through the Transport Assessment:</p> <p>An assessment of the need for off-site highway improvements, including at the Coppice Road / Merelake Road / Coal Pit Lane junction, and offsite footway improvements.</p> <p>Criterion 9</p> <p>5.48 Criterion 9 requires financial contributions to improvements in the capacity of local schools and health facilities. We do not object to the principle of potentially providing such contributions, but given the fluid nature of school and health facility capacity, and to ensure any such contribution is lawful, the need for such contributions will need to be assessed at the planning application stage. We therefore consider that the policy should be amended as follows:</p> <p>Consideration of the need for proportionate financial contributions to improvements in the capacity of local schools and health facilities.</p> <p>Criterion 10</p> <p>5.49 Criterion 10 requires financial contributions to improvements to Talke Signals (A34 Newcastle Rd / Congleton Rd / Coalpit Hill). We recognise that this is identified as a potential plan-wide mitigation measure within the Strategic Transport Assessment (ED011, see section 8.6.1.1). Nevertheless, the need for improvements and the details of any scheme will still need to be determined through Transport Assessments. Any contributions will also need to be made on a proportionate basis, noting that there are several planned developments in Talke which would likely impact upon this junction to a greater degree than Site TK27. Certainly, on an individual basis site TK27 is unlikely to have any material impact on this junction. Therefore, to ensure any such contribution is lawful, the degree to which the proposal impacts upon the junction should be considered through the Transport Assessment.</p> <p>6. Summary and conclusions</p> <p>6.1 Site TK27: Land off Coppice Road, Talke is proposed as an allocation for a residential development of approximately 90 dwellings in the draft plan. We strongly support the allocation of the site. The allocation accords with the evidence base, including the site selection methodology and the Site Selection report.</p> <p>6.2 The site is well served by public transport and makes, at most, a moderate contribution to the Green Belt purposes. The development of the site would also result in defensible and permanent Green Belt boundaries. Therefore, having regard to paragraph 147 of the Framework and the unequivocal recommendation of the Green Belt Assessment to consider the site for release, the evidence base in relation to the Green Belt clear justification to release the site from the Green Belt to meet the identified housing needs of the borough and Kidsgrove.</p> <p>6.3 SLG has previously submitted a Development Prospectus, which provides a thorough analysis of the site context and the technical considerations for developing it and is provided at Appendix EP1. This demonstrates that the site could be delivered for 90 dwellings taking into account all relevant technical matters, including access, drainage, services and green and blue infrastructure.</p> <p>6.4 SLG is an experienced land promoter with an established track record of delivering sites for residential development. The site would deliver in full during the plan period, and it would also contribute to the deliverable 5-year supply in the short term. SLG would be happy to enter into a Statement of Common Ground with the Council to confirm its intentions in terms of delivery.</p> <p>6.5 The proposed allocation is therefore sound in the context of paragraph 35 of the Framework, in that it is:</p> <ul style="list-style-type: none"> • Positively prepared – The allocation of the site would contribute to meeting the overall housing requirement, and the distribution of housing to Kidsgrove. • Justified – The allocation represents an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence (i.e., the Council's own evidence base, and also the supporting evidence provided by SLG). • Effective – The site is deliverable during the plan period. • Consistent with national policy – All relevant aspects of national policy have been considered through the site selection process, including in relation to the consideration of technical matters such as highways, drainage and ecology. <p>6.6 Whilst we strongly support the allocation, some minor amendments are required to Policy TK27 to ensure that the development criteria within the policy reflect the evidence base. Our representations set out proposed modifications to the criteria which the Council could incorporate into the plan.</p>
Q7 Modification	<p>5.50 We therefore propose that criterion 10 is amended as follows:</p> <p><u>Consideration of the need for proportionate financial</u> Financial to improvements to Talke Signals (A34 Newcastle Rd / Congleton Rd / Coalpit Hill).</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	We wish to attend the hearings and make oral submissions, respond to the Inspector's questions and to the Council's case. The issues are complex and there is a need for detailed examination of the evidence.

Q6 Details	<p>[Admin Note, the following statement has been supported by a form of authority with appropriately 172 signatures].</p> <p>Re: Newcastle-under-Lyme Borough Council (" the Council") Final Draft Local Plan 2020/2040 - Regulation 19 Consultation Please accept this letter as our representation in response to the above consultation, for onward submission to the Inspector.</p>

CONTENTS

To assist you and the Inspector, the following is the order of our representation:

1. Introductory comments.
2. Personal details.
3. Approach.
4. Legally and procedurally compliant.
5. Soundness (including each of the four heads, as set out in the National Planning Policy Framework).
6. Suggested modifications.
7. Conclusion.

1. INTRODUCTORY COMMENTS

We are the Talke Action Group ("TAG"), set up primarily to co-ordinate engagement with the Local Plan preparation process by the residents of the village of Talke/Talke Pits ("the Village"), part of the ward of Talke and Butt Lane in the borough of Newcastle-under-Lyme ("the Borough"). We are registered with the Council as a Consultee herein. In an effort to assist the Inspector, and as requested in the Planning Inspectorate's Guidance Note (Para 5.3 - "Where groups or individuals share a common view on the plan...etc."), this letter of representation ("this letter") is respectfully submitted both on behalf of ourselves and also on behalf of all those individuals ("the signatories") who have signed the attached Forms of Authority, whereby they endorse this letter and the contents hereof as representing their joint and individual view. Accordingly, the term "our representation" as used herein reflects that this letter is the representation herein on behalf of both ourselves and the signatories, and the words "we" and "us" are similarly used.

- In said attached Forms of Authority this letter is referred to as "the letter of representation".
- Each of the signatories has so given said informed authority and endorsement following one-to-one drop-in engagement sessions during the Consultation period, between members of TAG and each signatory.
- Our representation is submitted in letter form pursuant to advice that a letter is a proper and appropriate means of submission of Reg.19 representations, given by Councillor Fear, the Council's portfolio holder for Strategic Planning ("the Portfolio Holder").

3. APPROACH

- a) In this letter, with regard to the concepts in parts 4 and 5 above, our representation follows the wording of para. 35 of the National Planning Policy Framework in force at this time.
- b) Pursuant to that wording, we do not consider that this Final Draft Local Plan ("the FDL Plan") has "been prepared in accordance with legal and procedural requirements" or that it is "sound". We are therefore raising objections to the FDL Plan under the pertinent heads.
- c) However, we are of the view that the Borough does need a Local plan, so that we do not wish to see the Plan struck down completely. Accordingly, where appropriate for each of the objections raised, this letter suggests relevant modifications.
- d) As we are residents of the Village, and are therefore largely not aware of detailed circumstance prevailing in other communities, most of our representations herein relate to the TK sites selected in the FDL Plan for development in the Village, namely sites TK6, TK10, TK17 and TK27 ("the TK sites"). However, because many of the reasons for which we consider the FDL Plan to be either not sound, or not legally/procedurally compliant, or both, relate to the FDL Plan as a whole insofar as they affect the TK sites, some representations are made regarding the FDL Plan as a whole but then show how they relate specifically to the Village and to the TK sites specifically. As in c) above, modifications are then suggested.

Note: As the FDL Plan is a Council-derived document, we use the term "the Council" to refer also to the Council officers - elected and/or employed - engaged in guiding the FDL Plan through the process.

NOT LEGALLY OR PROCEDURALLY COMPLIANT

We do not believe the FDL Plan is legally/procedurally compliant.

4.1 The consultation process

Insofar as the residents of the Village are concerned, the consultation process has been drastically inadequate. Many, if not most of the residents, were until recently entirely unaware that a local plan was in the pipeline and equally unaware of the promulgation of the First Draft Local Plan or the FDL Plan. In our view, this inadequate consultation by the Council renders the FDL Plan non-compliant because :

a) Community engagement

(i) The Council may have given the appearance of complying, by sticking to minimum legal requirements regarding local plan community engagement, for example posting legal notices at the relevant sites and posting documents online. However, the Village population comprises a substantially larger than average percentage of older people, who do not or cannot engage with the internet. The Council will know this. Therefore, in accordance with its own Statement of Community Involvement (SCI), at para.1.13 (Equal Opportunity), the Council should have taken additional steps "in the way in which (they) consult ... to meet the specific local needs". This the Council has not done during the whole process.

(ii) This could - and indeed the SCI (at Table 2, p16) states that it will - be done by the distribution of "leaflets and posters". This does not appear to have been done for this local community with its "specific local need".

(iii) Having regard to this failure to consult in a way which meets specific local needs, there are other instances by which the Council has further failed in any meaningful way, insofar as the Village and its demographic is concerned, to comply with its own SCI, for example para 1.9, Community Involvement ("Inform people...and provide information...at the earliest opportunity"); para1.15, Equal Opportunity (allowing the process to be "accessible to those who are unfamiliar with the terms, processes and structures of the planning system..."); para 2.1 ("Early and meaningful engagement...with...neighbourhoods...is essential"); and para 2.2 ("A range of methods and techniques will be used to involve communities..")

(iv) One clear item of evidence of the Council's failure to comply with its own SCI, and therefore to be legally compliant, relates to SCI para 1.14 (Equal Opportunity), which indicates that the Council will endeavour "to work in an inclusive manner" to deliver "planning services from the perspective of a range of potential users", including by "Organizing consultation events to maximise involvement..ie workshops."

Yet, when holding such workshops was suggested at the relevant Scrutiny Committee meeting on 11.7.24, it was rejected out of hand using the spurious excuse that residents wouldn't be available!

(v) The Planning Inspectorate's own guidance/requirement document, in the part 3 "Legal Compliance" section, states clearly that "the process of community involvement for the plan in question should be in general accordance with the LPA's Statement of Community Involvement". To the extent that the FDL Plan, insofar as the Village is concerned and as evidenced in (i)-(iv) above, is not so in accordance, it is not legally compliant.

(vi) Lastly under this head we would like to point out that, although the Council loudly touts, as evidence of its engagement compliance, that it has allowed a consultation period which is longer than the minimum required (8 weeks instead of 6 weeks), it might as well be 1 week or 28 weeks - it makes no difference how long the consultation period is if ordinary residents have not been properly engaged with, taking into account not only the demographic of the Village per se but also the Council's obligations under their own SCI, both generally and given said demographic.

Conclusion: Because of the Council's failure, as above, to consult properly with the residents of the Village, given its specific demographic, the FDL Plan is not legally/procedurally compliant.

b) Consideration of consultation objections

It is self-evident, even to lay-persons such as we, that for a consultation to be meaningful and valid, the views, including any objections, of the consultees must be properly considered. If the consultation is treated by an LPA as merely a procedural formality, and the consultees' views arising thereout are not properly and fully considered, it is not a meaningful consultation, and the plan out of which the meaningless consultation arises cannot be legally compliant. We believe that this is the case with the FDL Plan, for the following reasons:

(i) In the Council's document in response to the Reg.18 consultation in respect of the First Draft of the Local Plan, where any proposed development site had had questions had been raised as to that site's suitability for development, the vast majority of the responses thereto was not a considered reply addressing any query, but merely a standard comment, the gist of which is that the site had been selected notwithstanding any objections raised nor addressing any such, and merely suggesting that any problems arising with any actual development could be dealt with when a planning application is made. The use of such an identical pro-forma response indicates clearly a lack of meaningful consideration of representations arising out of the consultation.

(ii) Further, those unconsidered responses not only evidence a lack of consideration of consultees' views, in itself rendering the consultation meaningless and the FDL Plan not legally compliant, but also fails to take into account circumstances where "planning" at the development stage will not solve the problem raised; or to offer any other solution. As examples, and with regard to the Village:

- what is the solution where there will be insufficient local school and/or health clinic places available as a consequence of development, but s106 funding would be of no use because there is no space in or around the existing facility for more staff to be employed or for an extension to be built?

- although construction of a roundabout might help with a substantially greater traffic flow at a dangerous junction, how will "planning" solve the problem of much greater traffic on the already dangerously congested main road through the village, which cannot be widened?

- How will planning considerations relating specifically and only to individual developments solve the larger problem of waste discharge in the locality? Viz: A report in 2023 covered the dumping of sewage into waterways by Severn Trent Water, revealing that during 2022 sewage was discharged into local waterways for 31,228 hours with 6,370 dumps in total. Alarming, the biggest polluter was the Liverpool Road works in Kidsgrove which discharged for 4,139 hours in 187 spills. This plant, which covers, inter alia, the Village as well as Butt Lane and Kidsgrove, clearly cannot cope with present demand. How will this plant cope with sewage from the hundreds of houses in the TK, BL and Kidsgrove sites? The Council appears not to have considered or addressed or informed consultees of how this will be dealt with.

We stress that we are not asking the Inspector to examine these issues. We raise them as exemplars and evidence that the Council has either deliberately ignored or simply failed properly to consider and/or to address consultees' views.

(iii) This apparent failure properly and fully to consider the views of consultees, and consequently having nothing of substance to report back to them, both further represent yet another failure by the Council to comply with its own SCI, this time Para 1.9, the aim to "Respond to any comments received, giving proper consideration and explanations of how these views will be incorporated into the planning documents and decisions."

(iv) A disturbing sequence of documents seems to indicate that the relevant officers had decided, well in advance of any scrutiny or vote, that the FDL Plan should be recommended for approval to a full meeting of the Council. For example, way back in January 2024, a report by the Corporate Leadership Team to the Cabinet recommended that the Cabinet "(a)uthorises the Deputy Chief Executive, in consultation with the Strategic Planning Portfolio Holder, to recommend to Council at its meeting on 24 July that it approves the Final Draft Local Plan (at Regulation 19 stage)...for public consultation.." Please note that the Cabinet decided, on 16 January 2024, to recommend approval of the FDL Plan to the full Council meeting on 24 July 2024, over 6 months before that meeting, and indeed before the FDL Plan was promulgated and possibly even before it was prepared. (On 18 March 2024, the Corporate Leadership Team presented this decision by the Cabinet to the relevant Scrutiny Committee for their meeting on the same day, and they appear to have had no issue with it.) This sequence of events cannot but reflect a lack of meaningful consideration of anything arising out of the Reg 18 consultation, rendering the consultation extremely, if not fatally, flawed.

Conclusion: Because the representations arising out of the Regulation 18 consultation were not adequately considered, the consultation has not been properly and/or meaningfully conducted, and therefore the FDL Plan is not legally/procedurally compliant.

4.2 Procedural Compliance

Although it again appears on the surface that the Council has carefully followed all the over-arching procedural steps required in this process, there have been at least two somewhat alarming occurrences evidencing that this has not actually been the case on closer examination.

a) Site Selection

(i) In the Local Plan Issues and Options Report in 2022, preparatory to preparation of the First Draft Local Plan, the long list of possible sites indicated that three of the TK sites (TK10, TK17 and TK27) were "unsuitable" for development. By the time of promulgation of the First Draft Local Plan, they had somehow become suitable, without any apparent explanation. The implications of this are somewhat disturbing, let alone it representing another failure of the Council for its evidence base to be transparent and available, and for residents to be kept informed, as in 4.1 above. However, the following point might shed some light on the mysterious elevation of these three sites.

(ii) At the meeting of the relevant Scrutiny Committee meeting on 11 July 2024, the Portfolio Holder was repeatedly asked how the final list of sites included in the First Draft of the Local Plan were selected from the longer list and whether Cabinet Members were involved. The Portfolio Holder repeatedly obfuscated and ultimately refused to answer. However, it subsequently appears that said selection was made by the Portfolio Holder and two other senior councillors from the same side of the chamber.

(iii) Given these occurrences, it is open to conjecture as to whether or not it is a coincidence that a by far greater proportion of sites selected for development are situated in wards represented by councillors from the party in opposition to that of the Portfolio Holder's majority governing party.

Conclusion: Although the initial stages of the site selection process appear to have been conducted openly and compliantly, there are questions around the final stages of the site selection, rendering the process certainly procedurally (and possibly also legally) non-compliant.

b) Document Availability

(i) The FDL Plan was approved for consultation and submission at a full meeting of the Council on 24 July 2024. However, issues relating to document availability cloud its approval.

(ii) For Councillors to have been able to make an informed decision when voting, over 40 documents forming the evidence base and informing the FDL Plan, were required to be examined and considered. However, a large number of these documents were not made available to Councillors sufficiently timeously for them to be able to examine same and render themselves fully informed. Eight such documents (almost 20% of the total) were only uploaded to the relevant website the previous afternoon, leaving Councillors in outside employment around 24 hours to read and examine hundreds of pages of formal documentation whilst working during the day. (A further 7 documents were uploaded to the web the day before that, making a total of 15 documents - over one-third of the total number - only made available 48 hours before the meeting.)

(iii) The opposition Councillors therefore proposed an amendment, that the decision to approve the FDL Plan be slightly delayed until the next Council meeting only two months later, to allow all Councillors fully to consider all the relevant documents. This was defeated, with speakers from the Portfolio Holder's majority party insisting that the plan be approved on that day. Disturbingly, a senior councillor from that party stated categorically that all but two of the documents were made available timeously. The promulgated list of dates and times of uploading of all the documents shows that this statement was - knowingly or unknowingly - untrue.

(iv) It is not clear whether the above events were deliberate or not - we hope not. Nonetheless, it is the case that documents vital to the integrity of the FDL Plan were not made appropriately, timeously or compliantly to many of those being asked to make a decision on the FDL Plan and this in itself renders the process not procedurally compliant. This is even more the case because the Council could have obviated the difficulty by delaying the decision, but pointedly and deliberately chose not to.

(v) Speaking to the amendment referred to above, one councillor remarked: "The expectation that we approve a local plan without these essential documents is not only unreasonable but also undermines the principles of sound governance. This is a formal process that requires thorough scrutiny and understanding of all supporting evidence. We must be fully informed to ensure that the plan we endorse is both sound and legally compliant." They were not, so the plan is not.

c) Cross Party Engagement

(i) The Council's SCI, at para 2.23, requires the Council, in preparing a local plan, "to ensure cross party engagement on the plan making process..". In taking the steps in 4a and 4b above, the Council has again failed to comply with its own SCI.

Conclusion: Consequent on the above, the FDL is neither procedurally nor legally compliant.

4.3 Sustainability Assessment Objectives, Strategic Objectives, and Transport and Accessibility Policy Development as proposed on the TK sites would not only fail to comply with and meet the standards required by these policies and objectives, but would indeed be directly contrary to and inimical with same. (As details relating hereto are set out fully below, and as we would not wish the Inspector to have to read exactly the same content twice, we respectfully refer the Inspector to item 5.3.b ("Effective" head of "Soundness") below.)

Conclusion: Because of this, the FDL Plan, insofar as the TK sites are concerned, is not legally compliant.

5. SOUNDNESS

5.1 Positively prepared

No representations.

5.2 Justified

We do not believe the FDL Plan, insofar as the Village and the effect that development of the TK sites will have

thereon, is justified. This is for the following reasons:

a) Number of dwellings proposed for the TK sites

(i) The number of dwellings proposed to be built over the TK sites (over 300) is disproportionate for this small semi-rural village. It is not justifiable that the Village should bear the burden of 7% of the total Local Plan Housing Allocation of 4512 houses (para 5.5, FDL Plan), when neither its population nor its housing stock are anything like that percentage of the Borough as a whole. When looking at the figures for the Talke and Butt Lane ward as a whole, the figure of 520 dwellings proposed to be built (per FDL Plan, paras 13.194 - 13.231) in the ward represents 11.5% of the proposed development for the whole Borough. To impose this disproportionate burden on the village is not justified. (As to possible reasons for this high proportion of dwellings on the TK sites - all but 10 on greenbelt - being proposed to be imposed on the Village, we refer the Inspector back to point 4.2 above.)

Suggested Modification - Suggested Modification 1 below

b) The population of the Borough

The population of the Borough has only increased by 6.9% over the past four decades since 1981 (117,217 to 125,297, 1981-2022). The Council is allowing for an increase of 15% over the term. Even accepting that in matters of targets, some (but not all) issues are beyond the ambit of a Local authority, it is not justifiable that a greater proportion of what is already a possibly inflated target (ie above the national standard method calculation) should be borne by the Village. This is especially so when there are doubts about the motivation for and process of site selection, and there are brownfield sites (see c below) and empty homes (see 6.1,b,v below) available in the Borough which have not been selected.

Suggested Modification - Suggested Modification 1 below

c) Availability of brownfield sites

As indicated above (at point 4.2,a,i) the status of the Talke sites was changed from "unsuitable" to "suitable". At the same time, other sites (some brownfield) were changed from "suitable" to "unsuitable". These are however available and should be looked at again. For example, the unused and derelict Knutton Community Centre site was made available, but it appears that developers deemed the cost of eg decontamination to be too great and preferred untainted eg Green Belt land on which to build. The same is true of other available

brownfield sites in the Borough. It cannot be justified for Green Belt land to be sacrificed in order to increase

the profits of developers.

Suggested Modification - Suggested Modification 1 below

d) The effect on the nature of the Village

If all of the proposed 310 dwellings are built on the TK sites, and taking into account also development of sites such as the former TK5 site (see below at 6.1,b,iii) and any other windfall and/or buffer sites, this will represent an increase in the percentage of dwellings in the Village in the order of 20-30%! This volume of development is simply too great for Talke/Talke Pits. It would swamp the Village. It would irreparably and irreversibly change the nature of the Village from a semi-rural village to a sprawling dormitory town - although without the infrastructure to support it (see e below), rendering it with the worst of all worlds. To destroy the Village in this way by such a weight of development cannot be justified.

Suggested Modification - Suggested Modification 1 below.

e) Effect on local infrastructure

We appreciate that it is not within the ambit of this Regulation 19 Consultation for the Inspector to re-examine issues of local planning such as flooding or parking issues on the proposed development sites. However, where there are issues relating to off-site impacts, which have not been dealt with, either satisfactorily or at all, in the FDL Plan, then this goes to the Soundness of the FDL Plan under both heads of "Justified" and also "Effective" (as below).

The issue of the undealt-with problem of the knock-on effect of development of the TK sites on the Village as a whole, has been mentioned in passing at 4.1.b.ii above. It is not justifiable to propose a level of development on the Village which would exacerbate, and make critical, existing problems in a creaking and already inadequate infrastructure, without some level of pre-planning in the FDL Plan. Insofar as the Village is concerned, there appears to be none with regard to three major infrastructure problems which will arise should the TK site developments proceed, and which do not appear to be resolvable by specific planning arrangements for on-site or site-adjacent adaptations only. These are:

(i) As previously alluded to (4.1,b,ii), the volume of traffic (both local, and also that which uses the Village as

a rat-run to avoid congestion on the nearby arterial routes of the A34, the A500 and the M6) through and in the Village is already greatly excessive for the Village road network. The main road ("the main road") through the Village (comprising High Street, Crown Bank and Swan Bank, which all run seamlessly into each other to form one thoroughfare through the Village), is also already inadequate and at breaking point. The road, like Pit Lane, is narrow and often reduced to a point where two cars, let alone trucks, cannot pass. When not congested, vehicles speed through, and the road is dangerous for pedestrians and vehicles alike, as well as for ingress/egress from local residences. There would be no easy solution to this, even without further development, as the road cannot be widened.

The addition of hundreds more vehicles (anything between 310 and 620) on to the main road through, and other roads in, the Village cannot but seriously exacerbate an already critical situation, and render the local road network inoperable.

As above (4.1,b,ii - also Failure properly to consult) the FDL plan does not appear to make any provision for this, nor even to consider it. It cannot be justifiable to allocate development sites without appearing to have any great, or any, concern about, or to make provision for, the drastically adverse knock-on effect which such

development would have on the Village and its residents.

Suggested Modifications - Suggested Modifications 1 (or 2) below.

(ii) Similar concerns relate to the local health clinic (Talke Clinic, part of the North Newcastle Primary Care Network, "the Clinic"). Although we understand that their list is not, at date hereof, entirely full, the clinic as it is would simply not be able to take in the residents of 310 dwellings. However, the logistics are that the current building is full, so that no further health staff can physically be accommodated; and the site will not allow for further expansion. Accordingly, the usual solution of s106 funding to employ further staff and/or to expand the building, is not available.

Yet the Council again appears not to have considered nor to make any specific proposals to solve this problem (unlike elsewhere, eg at the proposed Keele site, where a health Hub is mooted). The only solution therefore appears to be that patients will need to attend GPs further afield, either at other practices in the North Newcastle PCT, or even at practices in other, further away, PCTs.

The over-arching Staffordshire and Stoke-on-Trent Integrated Care Board ("ICB") is quite clear - for them, such list-dispersal, with patients having to travel distances to see a doctor, is a very last option, a last resort. The Council, however, seems, by failing to consider and actively to address the issue, in fact by default to be planning for the last resort in respect of the TK sites and the Village.

Inclusion of the TK sites in the FDL Plan cannot be justified where the health infrastructure of the Village is so lacking and unaddressed.

Suggested Modifications - Suggested Modifications 1 (or 3) below.

(iii) Again, there is a similar concern around local schooling, especially for children of primary school age. There is only one primary school in the Village, namely Springhead school ("the School"), to which the same problems (no unused internal space; no suitable site expansion room), again rendering s106 funding largely irrelevant. So, once again, primary school children will need to be found places further afield.

Inclusion of the TK sites in the FDL Plan cannot be justified where the school infrastructure of the Village is so lacking and unaddressed.

Suggested Modifications - Suggested Modifications 1 (or 4) below.

(iv) A further effect of (ii) and (iii) above, if patients and primary-age schoolchildren are listed or placed further afield, is additional car-journeys, and even worse exacerbation of the local road infrastructure problems, in (i) above. This cannot be justified.

(v) Lastly under e) hereof, although both the Staffs and Stoke ICB (regarding health issues) and the Staffordshire County Council (regarding education and other issues) have been consulted herein by the Council, it does not appear that the Council has actually approached or otherwise consulted directly with either the Clinic or the School, to ascertain from them the situation on the ground, so as to attempt to deal with it and/or to modify their site selection by eg removal of the TK sites from the FDL Plan, in light of these potentially insurmountable impact consequences. This cannot be justifiable.

f) Use of Green Belt land

Given all of the above - the disproportionate weight of development allocated for the TK sites, the questionable motivation for the site selection, the availability of brownfield sites and empty houses in the Borough, the fact that the Council would still meet its development target even without inclusion of the TK sites (see 6.1,b,i below), the detrimental effect that the proposed development on the TK sites would have on the Village, etc - it appears that there are no circumstances at all, let alone exceptional circumstances, which would necessitate or justify use of the Green Belt land proposed for the TK sites. Suggested Modification - Suggested Modification 1 below.

Conclusion: The FDL Plan, insofar as it relates to the TK sites, is not Sound under the head of "Justified".
5.3 Effective

We do not believe the FDL Plan, insofar as the Village and the effect that development of the TK sites will have

thereon, is effective. This is for the following reasons:

a) Viability

Because of the intractable infrastructure difficulties outlined above (at 5.2,e), we do not believe the development on the TK sites is viable. If it is not viable, it cannot be effected, and is accordingly not effective. Suggested Modifications - Suggested Modification 1 (or 2 - 4) below.

b) Sustainability Assessment (SA) Objectives, Strategic Objectives, and Transport and Accessibility Policy (Policy IN2)

As 4.3 above (not legally and/or procedurally compliant), development as proposed on the TK sites would not only fail to comply with and meet the standards required by these policies and objectives, but would indeed be directly contrary to and inimical with them. Some examples are:

- SO IV - to "reduce the Borough's carbon footprint..." : the introduction of many more vehicles into a rural environment will have the opposite effect.

- SO VI - to "support the vitality of rural villages, preserving and enhancing the special character (of)...each local community" : development of the TK sites will destroy the cohesion and vitality of the Village, and its special character.

- SO VI - to "provide choice in housing types for local people." : local residents do not want a choice of large development-based housing which will have the adverse and destructive effects referred to herein.

- 1N2 1 b - development must allow for "integration with existing infrastructure." : as herein, development of the TK sites will overwhelm the existing road infrastructure to a point of collapse.

- IN2 1,e - development must "not cause unacceptable highway safety problems in relation to local traffic circulation and existing parking..arrangements.." : as herein, this is exactly what development of the TK sites will cause

- IN2 1,f - Development must "not cause severe residual impacts on the road network, either direct and/or cumulative." : extremely severe such impacts on the local road network, both direct and cumulative is exactly what will happen if development of the TK sites goes ahead.

- SA Objective 1 - "To contribute to reduction of greenhouse gases.." : not to increase them in the locality by the introduction of many more vehicles into a rural environment.

- SA Objective 2 - "To improve air quality.." : by the introduction of many more vehicles into this rural environment?

- SA Objective 3 - "To protect, enhance and restore biodiversity ensuring that there is an overall net gain in the extent and quality of biodiversity." : development of the TK sites, by diminishing and concreting over Green Belt land, will self-evidently destroy and reduce biodiversity; and Parrots Drumble, a small remnant of ancient Woodland and a nature reserve, with its delicate wildlife and biodiversity balance, is extremely close to site TK10.

- SA Objective 4 - "To..maintain..land resources" : losing the agricultural land within the TK sites does precisely the opposite.

- SA Objective 7 - "To conserve, enhance and promote interest in local distinctiveness, the historic environment and landscapes, heritage, cultural assets and their settings" : aside of the loss of Village distinctiveness and heritage already cited, the last of local dry-stone walling and the Village's central Cross (original 12Century base are directly in the firing line of the increased traffic

- SA Objective 8 - "To strengthen the quality of the landscape.." : development of the Green Belt TK sites would, on the contrary, diminish and despoil not only the quality of the landscape per se, but also the visual and physical amenity it provides to the Village.

- SA Objective 9 - "To enhance the quality..and connectivity of open space.." : building over large parts of such Geen Belt space self-evidently does exactly the opposite, reducing the quality and interrupting the connectivity of the of same.

- SA Objective 9 - "To improve the health and mental wellbeing of the population.." : increased traffic with greater pollution, the need for young children and patients to travel further afield to access school

and health-care, a dangerous road environment, disintegration of an identifiable community, et al –how does this improve the health and welfare of the local population?

Accordingly, if the Council were to proceed with developing the TK sites, they would be in conflict with their own precepts. Not only does this render the FDL Plan not legally compliant (per 4.3 above), it also means that (unless the Council wishes deliberately to act in a non-legally-compliant manner), development of the TK sites cannot be affected as is. If such development cannot be affected then the FDL Plan, insofar as it relates to the TK sites, is not effective.

Suggested Modification - Suggested Modification 1 below.

Conclusion: The FDL Plan, insofar as it relates to the TK sites, is not Sound under the head of "Effective".

5.4 Consistent with national policy

We do not believe that the FDL plan, insofar as the TK sites are concerned, is consistent with national policy,

for the following reasons :

a) Transport - please see above re the local road system in the Village.

b) Infrastructure - please see above re the Village infrastructure, namely school and health.

c) Landscape/Environment - please see above re unnecessary use of Green Belt land for the proposed TK sites. d) Location - please see above re overwhelming a rural village when other brownfield sites and empty houses are available.

e) Health - please see above re pollution, degradation of environment, list dispersal, etc. Suggested Modification - Suggested Modification 1 below.

Conclusion: The FDL Plan is not consistent with national policy, especially insofar as the TK sites are concerned, so that it is not Sound under this head.

6. SUGGESTED MODIFICATIONS

6.1 Suggested Modification 1

a) That all or some of the Talke sites be removed from the FDL Plan, or alternatively that the number of proposed dwellings for all or some of the Talke sites be reduced.

b) This can be compensated for as follows:

(1) The FDL Plan, at para 5.5 (Housing Requirement and Supply Information figures), indicates that, whereas

the Housing Requirement is 8000 dwellings over the duration of the plan ("the term"), the FDL plan allows for 8,663 units. The additional 663 units are made up of 372 expected additional units becoming available over the term - the windfall allowance - and a buffer of 291 units (figure not shown at para 5.5). The windfall allowance alone more than adequately compensates even if all the Talke sites were to be removed from the FDL Plan.

(ii) The use of brownfield sites excluded from the FDL Plan site selection, and especially those whose status was previously changed from "suitable" to "unsuitable", with no transparent explanation, should be revisited. Development of some or all of these could mitigate or obviate the need for the Talke Green Belt sites to be included in the FDL Plan.

(iii) What was site TK5 - a brownfield site at the top end of the main road through the Village, and very close to TK27 - was originally shown as "suitable" but, in 2022, unavailable for housing development, as it was then in active commercial employment use (by London Hoist). However, it has since become available and is in fact at date hereof on the market for sale by a local agent (Louis Taylor) with outline planning permission for 32 dwellings. This should be brought back into account and reduce the suggested quota for eg TK27 by a concomitant number.

(iv) As at (ii) above, there are a number of other brownfield sites over the Borough as a whole, to which similar considerations apply, namely that they are suitable for development, but are not included in the FDL Plan, such as the derelict Knutton Community Centre site. As in (ii) above, these could all be looked at again, in preference to Green Belt sites such as the Talke sites.

(v) Similarly, reducing or eliminating the Talke sites could be easily compensated for by use of homes currently empty in the Borough.

The Council's own website (Empty Houses page) asks "Did you know there are over 1,000 empty properties in Newcastle-under-Lyme?" Even using more modest figures, there were 503 empty homes in the Borough in 2022/3 (Government's national New Homes Bonus figures) and 511 in 2023 (Action on Empty Homes, based on Govt. Data published by the (then) Dept. for Levelling Up and Housing, Nov. 2023).

Yet, despite this number of empty homes being available, the council only brought back into use 39 homes in the year Oct 2021-Oct 2022, and a meagre 11 homes 2022-2023 (same sources, based on CTB figures); and they are now proposing that Green Belt land be sacrificed, when all this possible housing lies unused.

6.2 Suggested Modification 2

That drastic measures be taken to mitigate the impact of additional vehicles consequent on development of

the TK sites, for example:

a) Barriers be erected at either end of the main road allowing ingress/egress only for Village residents, emergency services, deliveries, workers, etc.

b) Entrance to and exit from TK27, currently via Coppice Road, should in turn require egress to/ingress from Coppice Road only to and from the main arterial A5011 (Linley Road). That would at any rate be necessitated by erection of aforementioned residential barrier between the top of Coppice Road and Swan Bank.

c) Similarly for TK10, having all the additional vehicles from a 170-dwelling site feeding into the main road at the Crown Bank/Swan Bank/Jamage Road junction would exacerbate the situation even further. This could be controlled by limiting access to and from Pit Lane to the bottom end (roundabout at Pit Lane/Jamage Road/Oaktree junction), and creating a one-way system; as well as widening Pit Lane to allow it to deal with the extra traffic in addition to the current already heavy HGV use and substantial outside traffic visiting the Affinity shopping hub on Pit Lane.

It is appreciated that these suggestions are probably impractical for a number of reasons, but that in itself serves to illustrate how intractable and insurmountable the problem is. It also suggests that

	<p>development of the TK sites is unviable (per 5.3 above). The best solution therefore appears to be Suggested Modification 1 above.</p> <p>6.3 Suggested Modification 3</p> <p>That the Council be asked to consult with the ICB specifically about the Clinic, and directly with the Clinic itself,</p> <p>as to possible solution and, if there is none, to accept that Suggested Modification 1 should apply.</p> <p>6.4 Suggested Modification 4</p> <p>That the Council be asked to consult with the SCC, and also directly with the School Organization Team, specifically about the School, as well as directly with the School itself, as to possible solution and, if there is none, to accept that Suggested Modification 1 should apply.</p> <p>7. CONCLUSION</p> <p>For all the reasons above, we believe that the FDL Plan is neither Sound nor (per para 35 NPPF) "in accordance with legal and procedural requirements".</p> <p>Notwithstanding, we are not requesting that the FDL Plan be struck down. We recognize that the Borough needs a strong and robust local plan which, in most aspects, the FDL is.</p> <p>However, nor are we "nimby"s. Had the proposals in the FDL Plan for a local contribution to the Borough's housing need been for a reasonable number of dwellings in, or in the vicinity of, the Village, and not on precious and valuable Green Belt land, this representation would in all probability not have been submitted. It is not, however, reasonable for not only the character, but the very nature, of the Village to be irreversibly damaged and probably destroyed, by the building of a number of houses way out of proportion to the size of the Village, and greatly out of kilter to the ratio of the population of the Village to the Borough as a whole. It is not unreasonable that an objection be raised to this.</p> <p>We therefore request the Inspector, for all the reasons herein, to modify the FDL Plan and respectfully refer the Inspector to Suggested Modification 1 above.</p>
Q7 Modification	<p>SUGGESTED MODIFICATIONS</p> <p>6.1 Suggested Modification 1</p> <p>a) That all or some of the Talke sites be removed from the FDL Plan, or alternatively that that the number of proposed dwellings for all or some of the Talke sites be reduced.</p> <p>b) This can be compensated for as follows:</p> <p>(1) The FDL Plan, at para 5.5 (Housing Requirement and Supply Information figures), indicates that, whereas</p> <p>the Housing Requirement is 8000 dwellings over the duration of the plan ("the term"), the FDL plan allows for 8,663 units. It is appreciated that these suggestions are probably impractical for a number of reasons, but that in itself serves to illustrate how intractable and insurmountable the problem is. It also suggests that development of the TK sites is unviable (per 5.3 above). The best solution therefore appears to be Suggested Modification 1 above.

6.3 Suggested Modification 3

That the Council be asked to consult with the ICB specifically about the Clinic, and directly with the Clinic itself,

as to possible solution and, if there is none, to accept that Suggested Modification 1 should apply.

6.4 Suggested Modification 4

That the Council be asked to consult with the SCC, and also directly with the School Organization Team, specifically about the School, as well as directly with the School itself, as to possible solution and, if there is none, to accept that Suggested Modification 1 should apply.

7. CONCLUSION

For all the reasons above, we believe that the FDL Plan is neither Sound nor (per para 35 NPPF) "in accordance with legal and procedural requirements".

Notwithstanding, we are not requesting that the FDL Plan be struck down. We recognize that the Borough needs a strong and robust local plan which, in most aspects, the FDL is.

However, nor are we "nimby"s. Had the proposals in the FDL Plan for a local contribution to the Borough's housing need been for a reasonable number of dwellings in, or in the vicinity of, the Village, and not on precious and valuable Green Belt land, this representation would in all probability not have been submitted. It is not, however, reasonable for not only the character, but the very nature, of the Village to be irreversibly damaged and probably destroyed, by the building of a number of houses way out of proportion to the size of the Village, and greatly out of kilter to the ratio of the population of the Village to the Borough as a whole. It is not unreasonable that an objection be raised to this.

We therefore request the Inspector, for all the reasons herein, to modify the FDL Plan and respectfully refer the Inspector to Suggested Modification 1 above.

Consultee Company / Organisation	National Grid Electricity
Consultee Family Name	Buxton
Consultee Given Name	Nick
Agent Family Name	White
Agent Given Name	Lucy
Q4 Part of document	Policy
Q4 Policy	TB19
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>Site Allocation TB19: Land South of Newcastle Golf Club, Thistleberry</p> <p>In response to the draft Local Plan, National Grid expressed concerns regarding the absence of any reference within the policy allocation to the presence of 132kV overhead lines which run through the centre of the site, roughly north to south. The overhead lines represent essential infrastructure for the delivery of electricity to homes and businesses in Newcastle-Under-Lyme and surrounding area. The diversion or undergrounding of the line is unlikely to achieve a visual benefit to the scheme due to the need for new terminal towers at either end of the undergrounded section and the need for a protected easement over the undergrounded cables where development is not permitted.</p> <p>NGED welcomes the amendment to Policy TB19 through the Regulation 19 version of the Plan which incorporates reference to the NGED infrastructure. However, reference to the overhead lines is only included within the supporting text to the Policy TB19. In order to ensure the presence of the lines is given adequate weight as a policy consideration in the design of the proposals, NGED requests that the provisions at paragraph 13.250 are introduced into the Policy Text under Policy TB19.</p> <p>NGED supported the policy requirement for a masterplan-led approach to the site's development set out within the Regulation 18 draft of the Plan. However, this requirement appears to have been removed from the Regulation 19 version of the policy, despite the complex issues and constraints associated with the site. NGED objects to this omission and requests reinstatement of this requirement into Policy TB19. In the absence of the above, Policy TB19 is considered to be unsound in respect of deliverability of the allocation over the plan period.</p> <p>NGED also requests that the LPA ensures the steps outlined above have been followed to ensure the National Grid has sufficient capacity to accommodate the development strategy prior to submission of the plan for examination.</p> <p>Should Officers have any concerns or queries regarding the above, please contact me to discuss further</p>

Newcastle under Lyme draft local plan – regulation 18: Consultation response

Dear Sir/Madam,

The following is a robust objection to all developments on green field sites covering all the proposals within Audley Parish and many more elsewhere as recommended in the draft local plan. In writing this response, I am aware of the need to adopt a local plan in order for local authorities to maintain democratic control of development in the area. This requirement appears to be a symptom of the subsection in the NPPF titled “The presumption in favour of sustainable development” (paragraphs 11-14). However, from a resident’s point of view, this gives the impression that local authorities must demonstrate a willingness to develop a particular area in order to avoid it being developed. This is, in essence, a commitment to eventual development even if it is not needed. And this is a source of great anxiety amongst residents that undesirable development is out of control, a situation clearly being fuelled by the existence of paragraphs 11-14. On this basis therefore, this subsection of the NPPF needs to be challenged.

This response may differ from others in that it comments on local planning within a strategic context. As I see it, there are three main types of development, which are likely to blight the future generations in the UK: (i) infrastructure (example, HS2), (ii) commercial (examples, AB2 and TK30 in the NuLBC local plan) and (iii) residential (example, recent housing developments either side of the A513, Beaconside, Stafford). Infrastructure is within the remit of Westminster rather than local authorities, so that is not a particular concern here. My main focus is encroachment of developments, both residential and commercial, in green spaces allowed for in the draft local plan. And any new developments in rural areas will, at the very least, result in:

- Loss of light or overshadowing

- Increased risk of flooding due to ‘run-off’

- Loss of visual amenity

- Limitations to physical activity

- Generation of extra traffic, overloading already busy local roads

- Extra noise, pollution, disturbance and danger from increased traffic

- Loss of trees and other biodiversity – bats, lizards etc.

- Loss of natural carbon capture

- Decrease in food production capacity

Increased local population placing further pressure on local schools, GP’s surgeries and other services, which are already oversubscribed.

The United Kingdom as a whole is currently gripped by a pandemic of overdevelopment, which threatens nature and the already depleted biodiversity we see in this country. And it has now reached the stage where it should be considered a national emergency. I for one, do not feel that I have any influence over the shape of our surroundings. There are numerous drivers for this trend many of which are not being addressed by government at any level. At the heart of this is a significant disconnection between the opinions of politicians and public as to what is actually needed. There appears to be cross-party support for activities driving economic growth at all costs, irrespective of the consequences to the natural environment. Aggravating this divide is the aforementioned paragraphs 11-14 of the NPPF. At a local level, what is not in doubt, is that whenever there is land removed from the green belt there is rarely, if ever, an equivalent area so returned, so the process is irreversible. And in the absence of any agreed lower limit on the area of protected green spaces within the UK, no release of green belt land, or development on green spaces, can be considered sustainable. Unless, of course, the use of agricultural land for just that purpose is also considered “developed”, i.e. it has an economic and sustainable use. And the local plan does appear to acknowledge this¹, so why not include agricultural use into the local plan implying no change in particular areas? If this is not the case, we are committed to a process where the end point is a UK completely covered in tarmac and concrete. Anyone arguing against this interpretation needs to state and justify precisely where that end point is. If they cannot, this renders the term ‘sustainable development’ an oxymoron.

One particular trend of major concern is the growing UK population. At the time of writing this stands at just under 69 million, and is set to reach 74 million before 2050. Studies in the US (Pimental and Giampietro, 1994; Lal, 1989) suggest that comfortable/sustainable living requires 0.5 Ha (1.2 acres) per capita. If we are generous, sustainable living in the UK was possible with a population of 57 million, a figure I remember from the late 1960s. With a total area of the UK at just over 60 million acres, a land area of one acre per capita for sustainable living in the UK seems feasible. As we have seen, anything more puts a strain on the environment as a whole. On this basis therefore, the UK is currently overpopulated by about 15%, and there appears to be no initiatives to address this issue. On this point, Westminster appears to be in a state of denial, thus fuelling the current avalanche of overdevelopment nationwide. Residential developments have a knock on effect by requiring other types of development to provide infrastructure, services and employment. Notwithstanding overpopulation, this gives the impression that there is not enough housing stock to accommodate the current population. Recent data, in the form of an infographic (“Housing crisis fact check”) from the Community Planning Alliance², convincingly shows that this is far from the case. In short, what is perceived as the current “housing shortage” is little more than a myth propagated by the construction industry and related interests. This is justified by item 3 on the infographic stating that “there are 1.5 million more dwellings than households” in England and Wales alone^{3,4}. On this basis therefore, no further house building is needed in the UK subject to efforts addressing projected population growth. In other words, what we have at present is a substantial housing surplus. Therefore, locally there are strong grounds for objections to development of the sites

AB12(p74)

AB15(p75)

AB32(p75)

AB33(p75).

Ignoring the 1.5 million surplus dwellings nationwide, the current (regulation18) draft of the local plan quotes a minimum housing requirement of 7160 in the Borough over the period 2020-40, of which 1206 are already completed. Of these, only 40% are to be 'affordable' (1-2 bedroom dwellings). Therefore, of the minimum requirement, only 2864 dwellings will be affordable. If we assume that those already built are affordable (they probably aren't) then the borough will only need 1658 homes built between now and 2040. This is because, due to being beyond affordability, most locals will be unable to buy or rent the other 60%. Therefore, they are not needed, and the proposed mix is entirely incompatible with general affordability. Given the surplus dwellings throughout England and Wales however, it is likely that none will be needed, especially considering the imminent removal of mandatory housing targets by the DLUHC under Michael Gove MP, and any specific affordable housing needs can be catered for by using brownfield sites only. All of the green areas in the local plan could therefore be planned in for their present use.

Infographic from the Community Planning Alliance summarising UK housing stock in relation to the population.

Another statistic from the infographic is that nationwide we could build up to 1.2 million homes on brownfield sites (item 2)2,5. And like any other local authority, NuLBC is legally obliged to and does keep a register of its brownfield sites, although it is likely that some may slip through the net.

If there is an imperative, it is to increase further democratic control of the development process both locally and nationally. And both local and national authorities would do well to remember that they have a responsibility to the people they represent and not to the commercial viability of developers, the construction industry or overseas investors. In short, no new housing development is required, especially given that the borough has exceeded its housing targets in recent years. This calls into question the need for housing developments outside Audley Parish mentioned in the local plan. These include

BL18 (p75)

CT1 (p76, 750 dwellings)

RC8 (p76, 6 dwellings, potential flood risk.)

KS3 (p77)

LW53 (p77)

MD29 (p78, 150 dwellings, likely to conflict with HS2 construction?)

NC13 (p78)

NC77 (p78)

SP11 (p78, 900 dwellings, former Keele golf course)

SP12 (p79)

SP23 (p79)

TB19 (p79)

TB23 (p79, 124 dwellings, adjacent to Walley's Quarry.)

TK10 (p80)

TK17 (p80)

TK27 (p80).

Other sites which may also be questioned are

KS17 (p77, would include loss of playing fields and other village amenities. This may be classed as infill.)

KL13 (p77,93, part built already within the grounds of Keele University Campus).

The other class of developments locally is commercial. All too often we hear in the news from both local and Westminster sources, the mantra that economic growth is the imperative. But the actual imperative is stability, and we have reached the point where growth at any cost has become toxic, especially given the impossibility of unrestrained growth in a land of finite area. Have our political masters never heard of the circular economy?

Since the beginning of deindustrialisation in the 1980s, the diversity of employment opportunities has declined. We have seen an unhealthy move away from manufacturing/production of goods that we need as a nation, to one entirely reliant on trade with overseas partners, leaving us open to blackmail and the current spike of rampant imported inflation. Look what happened during lockdown. Over recent decades this has led to the demolition of old factories for residential developments and the rise of logistics centres (warehousing) for the temporary storage of imported goods, which will ultimately be operated by robots and AIs leading to even less employment. The problem with warehousing of course is its large consumption of land area. My question is, what is the driver for the proposed "big box" developments on AB2 and TK30 locally? Both of these proposals lie entirely within the greenbelt, although the TK30 land has already been quarried in parts. Neither of these proposals is either desirable or needed. However, if we are forced to accept one or the other then TK30, being about 5% smaller, is the lesser of two evils. With the green light given to the development of the 44 Ha Chatterley Valley site on Peacock Hay Road, and the numerous empty warehouses existing across the potteries, North Staffordshire and Cheshire East. It is dubious to say the least to claim that either AB2 or TK30 are needed. These sites are 70 Ha and 66 Ha respectively. However, in the recently published "Housing and Economic Needs Assessment Update", the borough as a whole only needs a maximum of 34 Ha6. So why are we saddled with 154 Ha total covered by AB2, TK30 and KL15?

If the local plan caters for agricultural developments, AB2 and TK30 could be planned for their existing use. The majority of the area covered by these sites is high grade (3a) agricultural land. In the case of TK30 the quarried areas could be reclaimed for agriculture or, if this proves difficult, used in other ways to enhance biodiversity. If the land in question is council owned, and the motivation is to sell off council assets, then once sold, they cannot be sold again, and any control is lost. Moreover, once farmland is developed for other purposes then it is near to impossible for it to be reclaimed later for that use – and so the ratchet inexorably turns. On this

basis therefore, I would urge the LPA to remove the warehousing proposals AB2 and TK30 from the local plan.

The purpose of this consultation is to supply feedback to the Borough Council. Another question is, does Westminster similarly consult with local authorities on planning issues, or is there any other mechanism where local councils can supply feedback to Westminster, providing a better feel for the mood of the nation? If so, why do we not see a root and branch reform of the NPPF rather than the tinkering around the edges approach seen in the July 2021 version? Most especially, there should be a removal of paragraphs 11-14 and its supporting statements elsewhere in the document, which is tantamount to a developer's charter. And there should be more flexibility within the NPPF allowing local plans to include parcels of land for their current purpose, given that there is almost none in this country that is not currently in use. As far as I can see this plan is nowhere near compatible with efforts required to address the current climate crisis. Moreover, given their scale, the proposed developments represent too greater shock to the environment and local communities over the short 20-year period suggested for their completion. And with the sufficient housing and unused commercial sites we already have, there is no need for any encroachment into our green spaces.

Yours sincerely
Jim Austin

Q6 Details	<p>Whilst there is planned allocated new housing to the north of the Borough it is in complete imbalance with significant outlier developments in the south for example at Loggerheads (LW53) and the aforementioned Lyme Park at Keele (SP11) and Land South Of Newcastle Golf Club (TB19) both in the Green Belt. Reasonable examination demonstrates that the Draft Plan Spatial Strategy is totally unbalanced and does not correlate with current and future economic activity or public transport connections.</p> <p>Whilst Keele Science Park (KL15) may in the longer term become deliverable, any growth aspirations of the University need to be carefully examined in the context of delivery in relation to its significant rationalisation announced in May 2024. This questionable need in relation to the planned Green Belt released scale of development on Council-owned land at Lyme Park (Keele) SP11 of 900 dwellings clearly needs significant further examination of justified exceptional circumstances. Site allocation TB19 has no validity whatsoever.</p>

Q7 Modification	<ul style="list-style-type: none"> Revisit sites like SP11 and TB19 to re-examine their economic and spatial credentials

Q6 Details	<p>This representation is submitted on behalf of Richborough in response to the Newcastle-under-Lyme Draft Local Plan ("DLP") consultation. Please also refer to attached representations for further detail.</p> <p>Richborough have recently secured outline planning permission on appeal for 200 dwellings at Baldwins Gate Farm (LW74, identified in the plan as a commitment) , and are also promoting draft site allocation reference TB19 for development in the order of 550 dwellings. The inclusion of this site as an allocation is supported.</p> <p>This allocation that Richborough are promoting will be considered in further detail below against the relevant criteria of the TB19 site allocation policy.</p> <p>The site forms an important component of the council's overall development strategy, and provide a strategic link between the growth of the urban area and the growth of Keele University and Science Park. TB19 in particular provides an important component of the growth around Keele University as it can facilitate the provision of a link from the A53 to Keele University.</p> <p>Policy TB19: Land at Whitmore Road</p> <p>The allocation of TB19 would provide new housing opportunities for those with links to the University such as graduates, research students and university professionals. The provision of higher quality / aspirational homes in particular would align well with the Science and Innovation Park. With businesses increasingly required, as part of their corporate social responsibility objectives, to limit or reduce distances travelled to work, there are strong grounds to provide a range of higher quality housing options for business owners and their employees in close proximity to where they work. The allocation would also be able to deliver the 30% affordable housing requirement set out at Policy HOU 1, facilitating the delivery of around 165 affordable housing units in a highly sustainable location.</p> <p>With regard to the first sentence of the policy, it states that the site "is allocated for residential development for 550 dwellings". In order to allow a degree of flexibility, it is suggested that the wording is amended slightly to read as follows: "is allocated for residential development for in the region of 550 dwellings".</p> <p>With regard to the allocation criteria of Policy TB19, each of the relevant criteria will be considered below in turn.</p> <p>Criteria 1 states that the requirements of Policy SA1 should be satisfactorily addressed. Policy SA1 sets out a number of requirements for the proposed site allocations that need to be addressed, including the following:</p>

	<p>(a) Masterplans (b) Affordable housing (c) Housing mix and density (d) Design (e) Historic environment (f) Social and community facilities (g) Landscape and green infrastructure (h) Biodiversity and Geodiversity (i) Highways (j) Environmental Health (k) Flood Risk (l) Utilities (m) Infrastructure (n) Minerals</p> <p>All of the above matters are addressed in more detail in the attached promotion document (Appendix 2) for the site by Richborough and demonstrate that the Policy SA1 requirements can be satisfactorily addressed.</p> <p>Criteria 2 of the policy requires access to be taken from the A53 (Whitmore Road). As set out in the promotion document, vehicular access to the site is proposed via two ghost island priority junctions from Whitmore Road. The two access points will be located at suitable offsets (in excess of 100m) from the Seabridge Lane junction. Based on surveyed 85th percentile speeds, visibility splays of 92m are achievable in both locations. Traffic would be likely to be split evenly between the two access junctions and no capacity issues are envisaged.</p> <p>Criteria 3 – 10 of the policy are addressed within the supporting promotion document as referenced above.</p> <p>With regard to criteria 11 and the provision of a link road to facilitate a connection to the A525, Richborough had already committed to providing bus, cycle and pedestrian link to the university. Discussions relating to this are ongoing between Richborough, the Highway Authority and the University in terms of facilitating such a link.</p> <p>With regard to financial contributions, it is anticipated that the development would be able to provide contributions towards local schools and health facilities subject to such requests being CIL compliant.</p> <p>With regard to the provision of the country park on the site, Criteria 6 of Policy PSD5 requires compensatory improvements to the environmental quality and accessibility of remaining Green Belt land to offset the impact of the removal of land from the Green Belt.</p> <p>In this case, Richborough propose to provide a Country Park to the west of the site, which would provide landscaping, biodiversity improvements and recreational opportunities. The proposed allocation of TB19 would therefore be able to deliver compensatory improvements to the environmental quality and accessibility of remaining Green Belt in accordance with national policy and Policy PSD5 of the Regulation 19 Local Plan.</p> <p>In light of the above considerations, Richborough supports the allocation of TB19, and are willing to work positively with the Council to deliver the masterplan-led approach to development outlined in the attached promotion document in order to deliver a high quality, sustainable development to assist the Council in delivering its strategic objectives set out in the emerging Local Plan.</p> <p>Richborough intends to engage with developers in due course following the close of this consultation in order to bring forward a development partner for the site to ensure that the site would be deliverable within the proposed plan period.</p> <p>DELIVERABILITY</p> <p>Allocation reference TB19 is being promoted by Richborough who are national land promoters with a strong track record of bringing deliverable sites forward for development. In recent years, Richborough has brought forward two sites in the Borough on the edge of the settlement of Baldwins Gate. The most recent approval of planning permission for 200 dwellings was granted in the summer of 2023. Bellway are their development partner for that site and are due to commence the development later this year. In terms of delivery, it is anticipated that the development of the TB19 site would be brought forward involving two developers, and it is anticipated that housing would be delivered at a rate of around 30-50 homes per annum per developer.</p> <p>It is anticipated that upon the approval of an outline planning application, a reserved matters application would follow within three months of obtaining outline planning permission.</p> <p>It is estimated that the first site works would take place on the site within a year of obtaining outline planning permission.</p> <p>The site would therefore be deliverable within the plan period and would start delivering homes within the first 5 years of adoption.</p>
Q7 Modification	Please see supporting representation by Knights on behalf of Richborough for allocation reference TB19
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)

Title	Policy TB19 Land South of Newcastle Golf Club, Thistleberry
Consultee Company / Organisation	Keele Parish Council
Consultee Position	Parish Clerk
Consultee Family Name	Powell
Consultee Given Name	Debra
Q4 Part of document	Policy
Q4 Policy	SP23
Q6 Details	<p>Keele Parish Council recognise that developing national policy with regard to the NPPF means that, in order for the plan to be considered under the existing regulations, the amount of housing delivered per annum must come within 200 of the proposed nationally set target. The proposed new algorithm is 593 per annum. Whilst we do not accept the proposed target of 400 houses per annum is robustly supported by the evidence provided, we recognise that, were the plan to fail at inspection, that this already inflated target would, in all likelihood, be subject to a mandatory increase. Thus we have no choice other than to support this target in the hope that the plan will pass.</p> <p>Whilst having no objection to the housing proposal as such, we note that 550 homes adds to the 800 homes on SP11, 200 on SP23 and other smaller local developments. This large number of new residents in this area will inevitably impact on local transport networks and services. We do not judge that sufficient evidence has been provided that such services and any potential improvement of them will meet need. We are all aware that this is a common issue with large scale development. This uncertainty is further exacerbated by a failure to indicate in housing proposals which urban or rural centre residents are expected to use.</p> <p>With regard to R19, please refer to our comments on the proposed link road between the A53 and A525, in the section SP11, above. We do not judge such a road, with full access to all vehicles, to be deliverable nor in alignment with the plan's environmental policies. We will seek to raise this matter at Inspection unless the final submission makes clear that access will be limited. We note, that without access to campus via such a road, there would also be no straightforward access to facilities on campus. With a public access road, there would be considerable extra traffic on the University's roads and pressure on very limited parking.</p>

Title	Policy TB19 Land South of Newcastle Golf Club, Thistleberry
Consultee Family Name	Jones
Consultee Given Name	Cllr David
Q4 Part of document	Policy
Q4 Policy	TB19
Q6 Details	<p>Cllr Dave Jones (Keele Ward) Response to Newcastle-under-Lyme Draft Local Plan</p> <p>I want to place on record my thanks to officers at the council over the work that has gone into the preparation of the regulation 19 local plan.</p> <p>As leader of the opposition group, I have submitted a formal response on behalf of the group that outline concerns with elements of the plan in general. Areas that we feel lack significant commitment from the council to ensure the impact of the proposed developments are mitigated sufficiently. In this response I will focus on concerns regarding the plan and the impact on the communities of Keele, Silverdale and the surrounding villages and centres. I have grouped these into specific themes:</p> <p>Significant Housing development in Keele and the surrounding areas (Sites SP11, SP23 and TB19): Taken together the plan seeks to develop approximately 1650 dwellings across these sites. These developments will place significant pressure on existing infrastructure, including the road network and</p>

health facilities. Within the plan, the only commitment to improving the road network is for a link road between the A525 and A53. I have significant concerns that given the extensive additional dwellings, combined with the pressures of commuter traffic to the university, this measure will fail to address the significant pressures on existing road network around Keele Bank, Silverdale and Milhouse.

The SWECO report on transport modelling identifies this as a key issue. Under their modelled scenarios, assuming the link road does transfer the pressure off Keele Bank, and assuming a significant uptake of the new bus routes to Keele, that the additional burden of these dwellings will reduce the impact to the existing road network as at capacity. I have significant concerns that this ideal scenario will not unfold, and therefore these developments will have significant impact in worsening the current situation.

The local plan refers to an integrated transport solution, with little detail as to how this will be implemented. We know that public transport in this part of the borough is heavily reliant on the bus network. I have significant concerns about the efficacy of public transport solutions, reliant on buses, due to the significant traffic pressures seen under current levels of dwellings. The introduction of 1650 dwellings will further increase the pressure, impacting on bus journey times and making the only public transport system less attractive.

The cascade impact of these dwelling will be felt most acutely in the village of the Silverdale. With pressures on traffic exiting these developments via Keele Bank, most traffic will redirect through Silverdale village. The existing road network in Silverdale struggles with the pressure of continued development, and no improvements to the road network. The roads that link the northern segment of Silverdale village with the proposed developments on Keele Golf course are not designed for heavy traffic use.

The undulated nature of the road network, coupled with on street parking will become a pressured rat run during peak commuting hours, place undue pressure on the residents of Silverdale.

I am disappointed that a plan proposing to build a significant concentration of dwellings has not put forward a plan for improvement to the highway network. The lack of a tangible plan to mitigate these impacts, along with over-reliance on 106 funding to support transport improvements is a significant weakness that needs addressing before permission can be granted for these sites.

The pressure on GP provision has not been appropriately assessed in this plan. The area benefits from two GP surgeries, one in Silverdale and one on the Keele University campus. I am led to believe that the new surgery proposed for the Golf Course developments will be a relocation of the Keele campus surgery, and therefore not additional provision. I have concerns that under the proposed developments, residents will struggle with provision of GP coverage.

Further general concerns on the local plan are covered in the opposition group response. I would also draw the inspectors attention to the formal response submitted by Keele and Silverdale Parish Councils, Cllr Jacqueline Brown, and Save our Green Spaces (SoGS).

Newcastle under Lyme draft local plan – regulation 18: Consultation response

Dear Sir/Madam,

The following is a robust objection to all developments on green field sites covering all the proposals within Audley Parish and many more elsewhere as recommended in the draft local plan. In writing this response, I am aware of the need to adopt a local plan in order for local authorities to maintain democratic control of development in the area. This requirement appears to be a symptom of the subsection in the NPPF titled “The presumption in favour of sustainable development” (paragraphs 11-14). However, from a resident’s point of view, this gives the impression that local authorities must demonstrate a willingness to develop a particular area in order to avoid it being developed. This is, in essence, a commitment to eventual development even if it is not needed. And this is a source of great anxiety amongst residents that undesirable development is out of control, a situation clearly being fuelled by the existence of paragraphs 11-14. On this basis therefore, this subsection of the NPPF needs to be challenged.

This response may differ from others in that it comments on local planning within a strategic context. As I see it, there are three main types of development, which are likely to blight the future generations in the UK: (i) infrastructure (example, HS2), (ii) commercial (examples, AB2 and TK30 in the NuLBC local plan) and (iii) residential (example, recent housing developments either side of the A513, Beaconside, Stafford). Infrastructure is within the remit of Westminster rather than local authorities, so that is not a particular concern here. My main focus is encroachment of developments, both residential and commercial, in green spaces allowed for in the draft local plan. And any new developments in rural areas will, at the very least, result in:

- Loss of light or overshadowing

- Increased risk of flooding due to ‘run-off’

- Loss of visual amenity

- Limitations to physical activity

- Generation of extra traffic, overloading already busy local roads

- Extra noise, pollution, disturbance and danger from increased traffic

- Loss of trees and other biodiversity – bats, lizards etc.

- Loss of natural carbon capture

- Decrease in food production capacity

Increased local population placing further pressure on local schools, GP’s surgeries and other services, which are already oversubscribed.

The United Kingdom as a whole is currently gripped by a pandemic of overdevelopment, which threatens nature and the already depleted biodiversity we see in this country. And it has now reached the stage where it should be considered a national emergency. I for one, do not feel that I have any influence over the shape of our surroundings. There are numerous drivers for this trend many of which are not being addressed by government at any level. At the heart of this is a significant disconnection between the opinions of politicians and public as to what is actually needed. There appears to be cross-party support for activities driving economic growth at all costs, irrespective of the consequences to the natural environment. Aggravating this divide is the aforementioned paragraphs 11-14 of the NPPF. At a local level, what is not in doubt, is that whenever there is land removed from the green belt there is rarely, if ever, an equivalent area so returned, so the process is irreversible. And in the absence of any agreed lower limit on the area of protected green spaces within the UK, no release of green belt land, or development on green spaces, can be considered sustainable. Unless, of course, the use of agricultural land for just that purpose is also considered “developed”, i.e. it has an economic and sustainable use. And the local plan does appear to acknowledge this¹, so why not include agricultural use into the local plan implying no change in particular areas? If this is not the case, we are committed to a process where the end point is a UK completely covered in tarmac and concrete. Anyone arguing against this interpretation needs to state and justify precisely where that end point is. If they cannot, this renders the term ‘sustainable development’ an oxymoron.

One particular trend of major concern is the growing UK population. At the time of writing this stands at just under 69 million, and is set to reach 74 million before 2050. Studies in the US (Pimental and Giampietro, 1994; Lal, 1989) suggest that comfortable/sustainable living requires 0.5 Ha (1.2 acres) per capita. If we are generous, sustainable living in the UK was possible with a population of 57 million, a figure I remember from the late 1960s. With a total area of the UK at just over 60 million acres, a land area of one acre per capita for sustainable living in the UK seems feasible. As we have seen, anything more puts a strain on the environment as a whole. On this basis therefore, the UK is currently overpopulated by about 15%, and there appears to be no initiatives to address this issue. On this point, Westminster appears to be in a state of denial, thus fuelling the current avalanche of overdevelopment nationwide. Residential developments have a knock on effect by requiring other types of development to provide infrastructure, services and employment. Notwithstanding overpopulation, this gives the impression that there is not enough housing stock to accommodate the current population. Recent data, in the form of an infographic (“Housing crisis fact check”) from the Community Planning Alliance², convincingly shows that this is far from the case. In short, what is perceived as the current “housing shortage” is little more than a myth propagated by the construction industry and related interests. This is justified by item 3 on the infographic stating that “there are 1.5 million more dwellings than households” in England and Wales alone^{3,4}. On this basis therefore, no further house building is needed in the UK subject to efforts addressing projected population growth. In other words, what we have at present is a substantial housing surplus. Therefore, locally there are strong grounds for objections to development of the sites

AB12(p74)

AB15(p75)

AB32(p75)

AB33(p75).

Ignoring the 1.5 million surplus dwellings nationwide, the current (regulation18) draft of the local plan quotes a minimum housing requirement of 7160 in the Borough over the period 2020-40, of which 1206 are already completed. Of these, only 40% are to be 'affordable' (1-2 bedroom dwellings). Therefore, of the minimum requirement, only 2864 dwellings will be affordable. If we assume that those already built are affordable (they probably aren't) then the borough will only need 1658 homes built between now and 2040. This is because, due to being beyond affordability, most locals will be unable to buy or rent the other 60%. Therefore, they are not needed, and the proposed mix is entirely incompatible with general affordability. Given the surplus dwellings throughout England and Wales however, it is likely that none will be needed, especially considering the imminent removal of mandatory housing targets by the DLUHC under Michael Gove MP, and any specific affordable housing needs can be catered for by using brownfield sites only. All of the green areas in the local plan could therefore be planned in for their present use.

Infographic from the Community Planning Alliance summarising UK housing stock in relation to the population.

Another statistic from the infographic is that nationwide we could build up to 1.2 million homes on brownfield sites (item 2)2,5. And like any other local authority, NuLBC is legally obliged to and does keep a register of its brownfield sites, although it is likely that some may slip through the net.

If there is an imperative, it is to increase further democratic control of the development process both locally and nationally. And both local and national authorities would do well to remember that they have a responsibility to the people they represent and not to the commercial viability of developers, the construction industry or overseas investors. In short, no new housing development is required, especially given that the borough has exceeded its housing targets in recent years. This calls into question the need for housing developments outside Audley Parish mentioned in the local plan. These include

BL18 (p75)

CT1 (p76, 750 dwellings)

RC8 (p76, 6 dwellings, potential flood risk.)

KS3 (p77)

LW53 (p77)

MD29 (p78, 150 dwellings, likely to conflict with HS2 construction?)

NC13 (p78)

NC77 (p78)

SP11 (p78, 900 dwellings, former Keele golf course)

SP12 (p79)

SP23 (p79)

TB19 (p79)

TB23 (p79, 124 dwellings, adjacent to Walley's Quarry.)

TK10 (p80)

TK17 (p80)

TK27 (p80).

Other sites which may also be questioned are

KS17 (p77, would include loss of playing fields and other village amenities. This may be classed as infill.)

KL13 (p77,93, part built already within the grounds of Keele University Campus).

The other class of developments locally is commercial. All too often we hear in the news from both local and Westminster sources, the mantra that economic growth is the imperative. But the actual imperative is stability, and we have reached the point where growth at any cost has become toxic, especially given the impossibility of unrestrained growth in a land of finite area. Have our political masters never heard of the circular economy?

Since the beginning of deindustrialisation in the 1980s, the diversity of employment opportunities has declined. We have seen an unhealthy move away from manufacturing/production of goods that we need as a nation, to one entirely reliant on trade with overseas partners, leaving us open to blackmail and the current spike of rampant imported inflation. Look what happened during lockdown. Over recent decades this has led to the demolition of old factories for residential developments and the rise of logistics centres (warehousing) for the temporary storage of imported goods, which will ultimately be operated by robots and AIs leading to even less employment. The problem with warehousing of course is its large consumption of land area. My question is, what is the driver for the proposed "big box" developments on AB2 and TK30 locally? Both of these proposals lie entirely within the greenbelt, although the TK30 land has already been quarried in parts. Neither of these proposals is either desirable or needed. However, if we are forced to accept one or the other then TK30, being about 5% smaller, is the lesser of two evils. With the green light given to the development of the 44 Ha Chatterley Valley site on Peacock Hay Road, and the numerous empty warehouses existing across the potteries, North Staffordshire and Cheshire East. It is dubious to say the least to claim that either AB2 or TK30 are needed. These sites are 70 Ha and 66 Ha respectively. However, in the recently published "Housing and Economic Needs Assessment Update", the borough as a whole only needs a maximum of 34 Ha6. So why are we saddled with 154 Ha total covered by AB2, TK30 and KL15?

If the local plan caters for agricultural developments, AB2 and TK30 could be planned for their existing use. The majority of the area covered by these sites is high grade (3a) agricultural land. In the case of TK30 the quarried areas could be reclaimed for agriculture or, if this proves difficult, used in other ways to enhance biodiversity. If the land in question is council owned, and the motivation is to sell off council assets, then once sold, they cannot be sold again, and any control is lost. Moreover, once farmland is developed for other purposes then it is near to impossible for it to be reclaimed later for that use – and so the ratchet inexorably turns. On this

	<p>basis therefore, I would urge the LPA to remove the warehousing proposals AB2 and TK30 from the local plan.</p> <p>The purpose of this consultation is to supply feedback to the Borough Council. Another question is, does Westminster similarly consult with local authorities on planning issues, or is there any other mechanism where local councils can supply feedback to Westminster, providing a better feel for the mood of the nation? If so, why do we not see a root and branch reform of the NPPF rather than the tinkering around the edges approach seen in the July 2021 version? Most especially, there should be a removal of paragraphs 11-14 and its supporting statements elsewhere in the document, which is tantamount to a developer's charter. And there should be more flexibility within the NPPF allowing local plans to include parcels of land for their current purpose, given that there is almost none in this country that is not currently in use. As far as I can see this plan is nowhere near compatible with efforts required to address the current climate crisis. Moreover, given their scale, the proposed developments represent too greater shock to the environment and local communities over the short 20-year period suggested for their completion. And with the sufficient housing and unused commercial sites we already have, there is no need for any encroachment into our green spaces.</p> <p>Yours sincerely Jim Austin</p> <p>Notes</p> <ol style="list-style-type: none"> 1. Title	Policy TB23 Land West of Galingale View, Thistleberry
Consultee Company / Organisation	Persimmon Homes (North West) Limited
Agent Company / Organisation	Asteer Planning LLP
Agent Family Name	Power
Agent Given Name	Jon
Q4 Part of document	Policy
Q4 Policy	TB23
Q6 Details	<p>Please see attached representations.</p> <p>Policy TB23 of the Regulation 19 Plan sets out the policy requirements for the delivery of the site, and is shown on the Regulation 19 Policies Map</p> <p>The site is identified as being within Thistleberry, which is part of the Newcastle-under- Lyme Strategic Centre – the top tier of the settlement hierarchy. It is identified to accommodate approximately 124 units. The masterplan at Appendix 1 demonstrates a deliverable scheme that considers the site constraints and a high quality design, could accommodate approximately 103 units – however, Persimmon support the proposed site capacity in the Regulation 19 Plan and could deliver the mix and type of product (i.e. at a slightly higher density) that could deliver 124 units on the site.</p> <p>Persimmon strongly support the draft allocation of the site and, as demonstrated in the Vision Document attached as Appendix 1 and summarised in the next section; we consider the site to be fully deliverable and wholly suitable for allocation in the emerging Local Plan.</p> <p>The detailed draft requirements for the site are set out under Policy TB23. Table 1 below (see attachment) provides Persimmon's comments and proposed modifications to each requirement:</p>

Satisfactorily addressing the allocation requirements set out in Policy SA1 (General Requirements) - Persimmon's comments on the relevant parts Policy SA1 (General Requirements) are provided in Table 2.

2. No dwellings being occupied before the cessation of the disposal of non-hazardous waste at the Whalley's Quarry Landfill Site, currently anticipated December 2026 - Persimmon support this requirement and would not look to commence any development prior to this date, after which the quarry will be capped.

3. Primary access to the development being via Galingale View, secondary access via Rosemary Hi and Barnacle Place - Persimmon fully supports this policy requirement, with access to the site from these highways being fully demonstrated in the Vision Document at Appendix 1 (see attachment).

4. Submission of a coal mining risk assessment, mitigation strategy and development to be located outside the coal mining development high risk zone, the extent of which will be defined by the submitted coal mining risk assessment - Persimmon generally supports this policy and makes the following comments: A Coal Mining Risk Assessment has been undertaken by Wardell Armstrong that confirms that there is no history of shallow coal mining, surface hazards or mine entries within the site. There is also no current or future proposed extraction of coal, by underground methods, and the site is not within 200m of surface mining where coal is being removed. The Apedale fault is recorded to cross the site, trending NNW – SSE, and the Coal Authority define a thin linear zone incorporating the fault as a Development High Risk zone. This designation is because the Apedale fault has reactivated during and after the cessation of mining activities. Notwithstanding this, bearing in mind that mining ceased in 1988, the risk associated with the future reactivation of this fault generating future ground subsidence is considered low to negligible. It is best practice to avoid building directly over/adjacent to significant geological faults where possible and the design ensures that a "no build" zone has been incorporated into the illustrative masterplan. Based on the above and for policy clarity, Persimmon consider that the extent of the coal mining risk zone should be informed by the Coal Mining Risk Assessment and our proposed modification to this policy requirement is shown across in red.

5. Submission of a land contamination assessment, odour assessment and associated mitigation strategy in relation to the impact of Walleys Quarry. Persimmon supports this requirement and would submit undertake a detailed assessment of land contamination and odour as part of a detailed planning application.

6. A sequential approach will be taken within the site to direct development to areas at lowest risk of flooding taking account flood risk from all sources including surface water flooding - The site is located in Flood Zone 1. However, a Flood Risk and drainage assessment will be submitted as part of a detailed planning application to ensure that any surface water drainage from the development will be fully assessed and could be adequately managed via Sustainable Urban Drainage Systems ("SuDS").

7 The enhancement of the existing Public Rights of Way and Green Infrastructure Network - There are no public rights of way on or adjacent to the site; however, as part of a detailed planning application for the site, persimmon will seek to enhance permeability and green infrastructure across the development.

8. Financial contributions to improvements in the capacity of local schools and health facilities - Whilst Persimmon does not object to making contributions to education and health, it is important that any requirements for contributions are fully justified and evidenced both in the Local Plan and at the application stage. Persimmon would seek to reserve the right to comment on any further evidence or discussion in relation to the need for education or health that is submitted prior to or during the Local Plan at Local Plan Examination.

Comments on Policy SA1 general requirements

1. Strategic Considerations -Masterplans - Persimmon consider this requirement to be unnecessary and onerous. A masterplan would be submitted as part of a planning application for the site (illustratively if in outline) to demonstrate how the site could be brought forward. It should be made explicitly clear that any masterplan does not need to be submitted or agreed in advance of any application – which would cause considerable delay to any development being brought forward.

2. Affordable Housing - The Policy requires 30% affordable housing on greenfield sites. In accordance with Policy HOU1 (Affordable Housing), Policy SA1 should make it explicitly clear that the affordable housing requirement can be subject to a robust viability assessment where this level of affordable housing cannot be delivered

3. Housing Density, Mix and Standards - Persimmon supports residential development delivering an appropriate mix of housing and densities in line with Policy HOU2, which requires sites within the strategic centre of Newcastle-under-Lyme to achieve a net density of around 30-50 dwellings per hectare. The supporting text to HOU2 recommends that, in terms of type of market housing, 75-80% should be provided as houses and 20-25% evenly split as bungalows and flatted units. Whilst this is not including in the policy wording, Persimmon would object to any prescriptive application of housing type on the Local Plan allocations. Persimmon consider that applying this to its allocations could render a significant number of sites unviable and undeliverable.

4. Design (including sustainability and energy efficiency) - Persimmon generally supports the Local Plan approach to design and sustainability. However, it is important that where specific requirement are imposed (such as M4[2] and M4[3] accessibility thresholds), that the requirements are fully evidenced, justified and viability tested. HOU3 (Housing Standards) requires 10% of market homes to be built to M4(3)(a) and 10% of affordable/social rented homes to be built to M4(3)(b). This is a significant % figure and should be fully evidenced and viability tested. There should also be flexibility in its application, particularly in terms of viability, to ensure that sites are not rendered unviable. Persimmon would seek to reserve the right to comment on any further evidence or discussion in relation to the viability of design policies or the viability testing of the Local Plan at Local Plan Examination.

5. Social and Community Facilities - In line with our comments above, it is important that any requirements for contributions are fully justified and evidenced both in the Local Plan and at the application stage.

Supporting Evidence

3.5 The Council's evidence base supports the allocation of the site and provides a sound basis for its inclusion in the Local Plan. The recently published Site Selection Report (2024) considers that the site is "available", achievable and "viable", and therefore suitable for residential development. The summary proforma for the site states that: "The site is located within the Newcastle urban area, and promoted for housing development and open space. The land is flat and is in close proximity to existing residential development. It is also close to Walley's Quarry which could raise amenity concerns. A small part of the site within the eastern boundary is identified as high quality / low value Natural and Semi-Natural Greenspace in the Open Space Strategy 2022. The developable area takes this into account. Flood zones 2 and 3 are confined to a very small area within the north-western boundary. Developable area calculation takes both of these into account. The site has access to some services and facilities. Access points along Galingale View. The site is considered to be available, viable and suitable for allocation in the Local Plan Taking into account and balancing the range of factors considered in the SSM and summarised above, alongside the outcomes of the Sustainability Appraisal / Habitats Regulations Assessment and relevant evidence base it is recommended that this site is included as an allocated site in the Local Plan subject to appropriate policy wording¹".

Persimmon supports this site assessment and has demonstrated how any site considerations can be mitigated as part of its Call for Sites submission and Vision Document (submitted in November 2022 and attached as Appendix 1). The following section provides a summary of the deliverability of the site.

LAND TO THE WEST OF GALINGALE VIEW: A DELIVERABLE SITE

Site Context and Location

The site is located in within the settlement boundary of the Strategic Centre of Newcastle-under-Lyme and sits within a western corridor that stretches to Keele University, its Science Innovation Park and the village of Keele.

The site is characterised by a linear parcel of low value grassland, set within an urban context, that naturally links into the existing and successful developments at Milliners Green and The Hamptons, which were built to support development on the western edge of Newcastle-under-Lyme in the mid-2000's. To the west of the site is the Walleys Quarry Landfill site, which is due to enter a phase of remediation where it will be ultimately reclaimed by nature, following the adoption of the Local Plan.

The site is sustainably located with excellent transport connectivity, with immediate access to the A525, and is accessible via regular bus services to Newcastle-under-Lyme, Stoke, Crewe and Nantwich. Stoke-on-Trent train station can be accessed via bus and provides up to 9 services an hour to destinations such as Manchester Piccadilly, Crewe, Birmingham New Street, London Euston, Derby and Bournemouth.

Deliverability

The site offers an opportunity to bring forward a deliverable site that can deliver a range of economic, social and environmental benefits. It is in a highly accessible location that will support a sustainable pattern of development within the Strategic Centre, underpinning the growth of the town centre and key employers in the west, such as Keele University and its Science Innovation Park.

The NPPF seeks to ensure that deliverable sites are provided in appropriate locations to meet housing needs and support economic growth. To be considered deliverable, sites should be available, suitable and achievable and should be available to be brought forward within a realistic timeframe once the Local Plan is adopted.

Persimmon is fully committed to the site and considers that it could be brought forward in the Local Plan period to meet the housing and employment needs of the Borough. In summary the site is:

Available

Persimmon has control over the entire site and has the track record in housing delivery to bring forward the site early in the Plan Period. Persimmon is a hugely experienced housebuilder and has an extensive track record in delivering a diverse range of highquality new housing developments across the UK.

Suitable

The site is entirely suitable for a residential development for the following reasons:

- It offers a highly accessible and sustainable location for development within the Newcastle-under-Lyme settlement boundary.
- It would contribute to a sustainable pattern of development as part of the Strategic Centre and is strategically located to support key employers on the western edge of the town, such as Keele University.
- It is within proximity to a range of services and facilities.
- The site has been assessed in the Council's 2024 SHELAA, which forms part of the evidence base for the emerging Local Plan, and is considered to be "developable".
- As part of its Vision Document, Persimmon has undertaken a comprehensive range of technical and environmental assessments to demonstrate that there are no environmental or technical constraints that would prevent the development of the site, subject to suitable mitigation and a sensitive approach to design.
- The site can deliver satisfactory vehicular access and has excellent access to the strategic highway network.

Achievable

An indicative masterplan has been developed that demonstrates how the site responds to its physical characteristics, technical considerations and surrounding context by providing a sensitive landscape-led, deliverable masterplan. An assessment of the site constraints illustrates that delivery of the entire site is achievable, and a professional team of technical experts has been retained to support the detailed design of the site moving forward.

Persimmon has reviewed the economic viability of the scheme in terms of the land value, attractiveness of the locality, level of potential market demand and projected rate of sales in NUL; as well as the cost factors associated with the site including site preparation costs and site constraints. The market attractiveness of the location has been demonstrated by Persimmon's successful developments at the Hampton's and Milliners Green. Persimmon can confirm that the development of the site is economically viable in accordance with the NPPF.

Significant Benefits

	<p>The allocation and subsequent delivery of this underutilised site will have significant benefits for the Borough, through the delivery of the quality and type of market and affordable housing that will meet its needs. Economic Benefits</p> <p>The allocation and delivery of the site will have significant economic benefits, both from its construction and occupation. Key economic benefits include:</p> <ul style="list-style-type: none"> • Generating investment during the construction phase of development, including to generate a total construction investment of £17.8m which could create 116 direct Full Time Equivalent ("FTE") jobs and 158 indirect/induced jobs. • Long term occupation / operational benefits including new resident expenditure, attracting new and high earning residents to NUL, generating flow on and supported jobs and, overall, generating increased economic output in the Borough. • Generating revenue for the Local Authority of at least £143,000 per annum in Council Tax revenue, £570,000 in New Homes Bonus (over 4 years) and more than £515,000 in Section 106 contributions. <p>Social Benefits</p> <p>The delivery of the site will have clear social benefits for existing and future residents, in terms of providing better choice, improving access to amenities and meeting a variety of identified housing needs. Key social benefits include:</p> <ul style="list-style-type: none"> • Delivering high quality market homes to meet the needs of the Borough's existing and future employees. • Providing viable and deliverable affordable homes to address the Borough's affordability crisis and to support the housing of graduates, key workers and other first time buyers. • Delivering new and accessible multifunctional open spaces, amenity spaces and green infrastructure to benefit existing and future residents and to improve connectivity. <p>Environmental Benefits</p> <p>The site is currently of limited biodiversity or recreational value. The development of the site has the potential to significantly uplift the biodiversity, accessibility and overall enjoyment and environmental value of the site. In addition, the site has the potential to be an exemplar in sustainable design and construction. Key environmental benefits include:</p> <ul style="list-style-type: none"> • An uplift in the biodiversity value of the site through Biodiversity Net Gain. The site will create new habitats for a range of species and provide an uplift in biodiversity that meets Government targets. • The provision of multi-functional green infrastructure and open space that will benefit existing residents and create new green corridors through the site. • The protection and enhancement of existing features of the site that add value, including mature tree belts. • The implementation of cutting edge net zero technologies which are being rolled out by Persimmon through the design, construction and operation of new homes. <p>In summary, Persimmon fully supports the allocation of site TB23 (Land West of Galingale View). The site is in a highly accessible location and will provide the quality, type and mix of homes that will support growth on the western edge of the Newcastle-under-Lyme Strategic Centre, underpinning the growth of key regional employers such as Keele University and the Keele University Science and Innovation Park. As has been demonstrated in these representations and Persimmon's submission to the Council's Call for Sites, that the site is inherently deliverable: being available, suitable and achievable in the context of the NPPF. Furthermore, the site can deliver significant economic, social and environmental benefits on an underutilised site that forms a natural and logical extension to Persimmon's successful developments at Milliners Green and The Hamptons.</p> <p>Persimmon would welcome ongoing engagement with the Council as the Local Plan progresses to Examination and has a team of technical and professional experts on hand to fully underpin the allocation of this site.</p>
Q7 Modification	Please see attached representations.

Consultee Family Name	Chadwick
Consultee Given Name	James
Q4 Part of document	Policy
Q4 Policy	TB23
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>Site TB23 (Land West of Galingale View, Thistleberry) lies east of Walleys Quarry and Landfill and is allocated for 124 houses on 4.365 ha of land.</p> <p>Walleys Quarry landfill site is an operational landfill site which has permission for landfilling until 2042. It is likely that operations will continue at the site throughout the duration of the local plan.</p>

	<p>The landfill gas utilisation plant, leachate control and monitoring equipment, and the groundwater monitoring equipment would be required during the restoration and aftercare phase.</p> <p>In addition, Section TB23 page 151, bullet point 2. has an incorrect spelling, ‘...waste at the Whalley’s Quarry Landfill Site...’, this should be changed to the correct spelling Walleys Quarry Landfill Site.</p> <p>Non-reactive hazardous waste is allowed until the end of 2026.</p>
Q7 Modification	<p>The Borough Council should be aware that operations at Walleys Quarry landfill site will not cease at the end of 2026. Condition 2 of planning permission N.12/09/216 MW dated 26 May 2016 states</p> <p>“The landfilling of non-hazardous waste and stable non-reactive hazardous wastes shall cease no later than 31 December 2026 and thereafter landfilling shall continue only with inert waste, such that the site is restored no later than 21 February 2042 in accordance with the requirements of Condition 37 and 39 below”.</p> <p>There is a landfill gas utilisation compound on the south-east extend of the landfill (the latest planning permission for the gas compound was granted in October 2013 ref. N.13/04/216 MW. Condition 16 states:</p> <p>“When the gas utilisation plant is no longer required for the generation of electricity from landfill gas within the landfill site, all buildings, plant, machinery and foundations shall be removed from the Site and the land restored in accordance with the final restoration scheme which is required by Condition 35 of planning permission IDO/N/1 or any subsequent Restoration and Aftercare Scheme as has previously been approved in writing by the Mineral Planning Authority”.</p> <p>Additional text should be added concerning the following:</p> <p>The Newcastle under Lyme Borough Council Environmental Health Team and the Environment Agency should be satisfied there would be no unacceptable risks from pollution (e.g. dust, odour, noise and light) to any occupants of the housing development as a result of the proximity to the neighbouring waste management facility; and the housing development would not constrain the continued operation of the neighbouring waste management facility (Walleys Quarry landfill site).</p> <p>In addition, Policy TB23 on page 151, bullet point 2. has an incorrect spelling, ‘...waste at the Whalley’s Quarry Landfill Site...’, this should be changed to the correct spelling for Walleys Quarry Landfill Site.</p>

Consultee Company / Organisation	Environment Agency
Consultee Family Name	Millband
Consultee Given Name	Emma
Q4 Part of document	Paragraph
Q4 Paragraph number	TB23 & SP23
Q5 Sound	No
Q6 Details	<p>TB23 & SP23</p> <p>In our letter of 14th August 2023 in response to the Reg 18 draft local plan consultation, we highlighted that the list of proposed sites does not fully identify site vulnerabilities in terms of land contamination, ground water vulnerability, proximity to regulated industrial process/ landfill and flood risk from unmodelled watercourses and recommended that these be clearly identified for transparency. It is unclear whether this has been done.</p> <p>We highlight again concerns regarding the allocation of sites TB23 and SP23 in proximity to Walley’s Quarry. Given the sensitivity of Walley’s Quarry we question the suitability of allocating additional housing sites in proximity of the landfill.</p>
Q7 Modification	<p>Removal of sites TB23 and SP23 from the allocated sites list.</p> <p>Review of all other allocations to ensure site vulnerabilities are fully identified and justified.</p>
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)

Q4 Part of document	Paragraph
Q4 Paragraph number	13.260
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>Please read in conjunction with our comments on Policy TB23.</p> <p>The text in paragraph 13.260 is incomplete and conflicts with that in Policy TB23, which sets out 'No dwellings being occupied before the cessation of the disposal of non-hazardous waste at the Whalley's Quarry Landfill Site, currently anticipated December 2026'</p> <p>Whereas paragraph 13.260 states 'Dwellings will not be occupied until the operation of Walleys Quarry as a landfill site.' The sentence is incomplete but we assume it would follow the pattern we have commented on for other allocations close to the quarry.</p> <p>As previously noted Condition 2 of planning permission N.12/09/216 MW dated 26 May 2016 states: "The landfilling of non-hazardous waste and stable non-reactive hazardous wastes shall cease no later than 31 December 2026 and thereafter landfilling shall continue only with inert waste, such that the site is restored no later than 21 February 2042"</p>
Q7 Modification	<p>Paragraph 13.260 needs to be corrected such that the sentence relating to the restriction on occupations is complete and aligns with the text in the Policy</p>

Q5 DTC compliant	No
Q6 Details	Being the [reacted by admin] of a music venue that sits opposite to the proposed development, my concerns are the possibility that the residential development may affect and limit the way in which we can operate. I would like to submit paragraph 103 Chapter 15 of the National Planning Policy Framework 'conserving and enhancing the natural environment' specifically: planning policies and decisions should ensure that new development can be integrated effectively with existing businesses and community facilities (such as places of worship, pubs, <u>music venues</u> and sports clubs). Our concern is that development may commence without consideration of the above.
Q7 Modification	We hope that mitigations are considered within the planning proposals that are sympathetic to the pre-existing surrounding businesses. Any aspect of the residential element that faces the takeaways, public houses and music venues should consider that these are contributing to the night time economy until the early hours of the morning, traffic and pedestrian footfall being part of this. Substantial sound proofing and positioning of any balconies in the proposal would be beneficial to a mutual co-existence. If this cannot be accommodated, i would have to oppose the development on the grounds stated in part 6 of the representation form.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	As a local business and resident, any proposals will have a big impact. I believe any proposal has to consider the pre-existing community and think that i am in a unique position to comment on this.

Q6 Details	<p>I am taking this opportunity to voice my concerns, as I feel this build will impact this company more than any other in the surrounding area. As a company we have traded for nearly 40 years and provide full time employment for 10 people.</p> <p>My main concerns are as follows</p> <ul style="list-style-type: none"> • The lack of communication from yourselves. I have received no letter or email. I found out about the consultation whilst at the barbers on Brunswick Street. • The massive lack of parking for the size of the building. Even if a quarter of the resident's drive there are not enough spaces for everyone. Where are people going to park? • The impact on the busy one way street due to potential rise in traffic and the effect it will have on an already very busy and dangerous junction at the end of North Street. (see attached Road 1) • What are the parking provisions for visitors and people using the units. • The impact the build will have on deliveries and collections from ourselves. (See attachment unloading 2 and unloading.) • Due to size of the 2 way entrance and exit on North Street and the close proximity of the unit fronts, I am struggling to see where my customers can park and load goods on to their vans. (See attachment Parking 1 and 2) • Where are the drains going to run because there are massive problems currently with the drains. • Putting in small unit/business What is the point you can't fill the shops in Newcastle. Where the potential customers going to Park? • York Place development will have new retails and start up units and they are the in the town centre and so the units should be dropped from this application. <p>I would like to propose a site meeting to discuss my concerns.</p>

	I would like to be kept informed of any meeting please as I feel this development is far too big and has not been thought out with the businesses and residents of the surrounding area and will have a serious and damaging effect on the local area.

Q4 Part of document	Policy
Q4 Policy	TC22
Q6 Details	<p>Dear Planning Team,</p> <p>I am writing to express my concerns about the policy for residential development at Marsh Parade, as outlined in Policy TC22. My primary concern is the lack of robust noise mitigation measures that could severely impact The Rigger, a well-established live music venue that contributes significantly to the cultural fabric of Newcastle-under-Lyme.</p> <p>While Policy TC22 includes a requirement for a noise and odour assessment (found on Page 155), it does not adequately address the specific risks posed to The Rigger, which is located in close proximity to the proposed development. As future residents move into these new dwellings, it is likely that they will file noise complaints against the venue. This could result in severe restrictions on The Rigger's ability to operate, leading to significant consequences for both the business and the local community that relies on it for live music and entertainment.</p> <p>Additionally, the policy does not appear to account for the "Agent of Change" principle as outlined in the National Planning Policy Framework (NPPF). This principle mandates that the developers, not existing businesses, are responsible for mitigating noise issues arising from new residential developments near existing venues. Without proper noise mitigation strategies and the inclusion of this principle in the proposal, The Rigger is at risk of facing unfair noise complaints, which could restrict or even force the venue to close.</p> <p>I urge the planning team to include stronger noise mitigation measures that specifically protect The Rigger. Including specifically mentioning the venues cultural significance and the inclusion of the Agent of Change principle in the 'Noise and odour assessment and mitigation strategy required in relation to nearby commercial uses under Policy TC22 ensuring that the responsibility for mitigating potential noise issues falls on the developers rather than existing businesses and culturally significant venues. Without these changes, The Rigger could face unfair restrictions due to increased noise complaints that would limit its ability to operate and serve the community.</p> <p>Thank you for considering my concerns. I hope the planning team will take the necessary steps to safeguard The Rigger and ensure that it continues to thrive as a vital part of our town's cultural landscape.</p> <p>Kind Regards, Katherine Tideswell</p>

Q4 Part of document	Policy
Q4 Policy	TC22
Q6 Details	<p>Dear Planning Team,</p> <p>I am writing to express my concerns about the policy for residential development at Marsh Parade, as outlined in Policy TC22. My primary concern is the lack of robust noise mitigation measures that could severely impact The Rigger, a well-established</p>

live music venue that contributes significantly to the cultural fabric of Newcastle-under-Lyme.

While Policy TC22 includes a requirement for a noise and odour assessment (found on Page 155), it does not adequately address the specific risks posed to The Rigger, which is located in close proximity to the proposed development. As future residents move into these new dwellings, it is likely that they will file noise complaints against the venue. This could result in severe restrictions on The Rigger's ability to operate, leading to significant consequences for both the business and the local community that relies on it for live music and entertainment.

Additionally, the policy does not appear to account for the "Agent of Change" principle as outlined in the National Planning Policy Framework (NPPF). This principle mandates that the developers, not existing businesses, are responsible for mitigating noise issues arising from new residential developments near existing venues. Without proper noise mitigation strategies and the inclusion of this principle in the proposal, The Rigger is at risk of facing unfair noise complaints, which could restrict or even force the venue to close.

As a local performer and producer of The Rigger, I know firsthand how vital this venue is to the community. Losing it due to increased noise complaints would have a devastating impact on not only my own career but the local economy and creative scene. The Rigger is not only a venue for live music - it serves as a gathering place, a platform for local talent, and a key contributor to Newcastle-under-Lyme's identity as a cultural hub.

I urge the planning team to include stronger noise mitigation measures that specifically protect The Rigger. Including specifically mentioning the venues cultural significance and the inclusion of the Agent of Change principle in the 'Noise and odour assessment and mitigation strategy required in relation to nearby commercial uses' under Policy TC22 ensuring that the responsibility for mitigating potential noise issues falls on the developers rather than existing businesses and culturally significant venues. Without these changes, The Rigger could face unfair restrictions due to increased noise complaints that would limit its ability to operate and serve the community.

Thank you for considering my concerns. I hope the planning team will take the necessary steps to safeguard The Rigger and ensure that it continues to thrive as a vital part of our town's cultural landscape.

Title	Policy TC22 Marsh Parade, Newcastle (Former Zanzibar Night Club)
Consultee Family Name	Cooke
Consultee Given Name	Matthew
Q4 Part of document	Policy
Q4 Policy	TC22

Q6 Details	<p>I'm writing to share my concerns about the residential development planned for Marsh Parade under Policy TC22. I'm particularly worried about the lack of effective noise mitigation measures that could seriously affect The Rigger, a grassroots live music venue that plays a huge role in the cultural scene of Newcastle-under-Lyme. While I see that the policy includes a requirement for a noise and odour assessment (as mentioned on Page 155), it doesn't fully address the unique challenges The Rigger faces, especially given its close proximity to the proposed development. As new residents move in, it's likely they'll file noise complaints against The Rigger, which could lead to significant restrictions on its operations. This would not only impact the venue but also the local community that relies on it for live music and entertainment. Moreover, it seems that the policy overlooks the "Agent of Change" principle outlined in the National Planning Policy Framework (NPPF). This principle clearly states that the responsibility for managing noise issues should lie with the developers, not the existing businesses. Without proper noise mitigation strategies and the inclusion of this principle in the policy, The Rigger could face unwarranted noise complaints, which might threaten its very existence. Losing this venue due to increased noise complaints would be a huge blow to our local economy and cultural identity. The Rigger isn't just a spot for live music; it's a gathering place that nurtures local talent and contributes to what makes Newcastle-under-Lyme special.</p>

Title	Policy TC22 Marsh Parade, Newcastle (Former Zanzibar Night Club)
Consultee Family Name	Gomes
Consultee Given Name	Tamara
Q4 Part of document	Policy
Q4 Policy	TC22
Q5 Legally compliant	No
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>- Insufficient Noise Mitigation Protections: The draft Policy TC22 does not sufficiently address the potential conflict between the proposed residential development at Marsh Parade and The Rigger, a grassroots music venue that has been in operation for over 20 years. While the policy mentions a noise and odour assessment, it does not account for the specific risk of noise complaints from future residents, which could severely impact the venue's ability to operate. It lacks detail and does not provide any plans for robust noise mitigation strategies tailored to the risks posed by the close proximity of The Rigger to the new development. When the noise and odour assessment is carried out the Local Plan must ensure that any residential development near established cultural assets like The Rigger includes detailed, enforceable noise mitigation measures.</p> <p>- Failure to Incorporate the "Agent of Change" Principle: The draft Local Plan does not adequately reflect the "Agent of Change" principle, as outlined in the National Planning Policy Framework (NPPF). This principle stipulates that developers, rather than existing businesses, are responsible for mitigating noise issues when new residential developments are built near established venues. Without this principle being clearly applied, The Rigger faces an unfair risk of noise complaints, which could limit its ability to host live music events and threaten its role as a key cultural institution in Newcastle-under-Lyme.</p> <p>- Non-Compliance with the Duty to Co-operate: Lack of Consultation with the Venue: Despite ongoing efforts by The Rigger over the past 12 months requesting meetings to discuss mitigation, there has been no replies to these requests resulting in insufficient consultation with the venue. As a long-standing and critical part of Newcastle-under-Lyme's cultural and social ecosystem, The Rigger should have been included earlier in discussions to ensure the proposed development adequately addresses the venue's concerns. This lack of consultation raises concerns about whether the council has fulfilled its Duty to Cooperate obligations as part of the Local Plan process.</p> <p>- Legal Compliance: The Local Plan does not meet the legal requirements set out in the NPPF to protect and enhance cultural assets. The Rigger, a nationally recognised, award winning live music venue, contributes significantly to local culture and the economy. The absence of clear strategies in the Local Plan to safeguard The Rigger's future goes against the NPPF guidelines aimed at sustaining and enhancing cultural heritage. This oversight must be addressed to ensure venues like The Rigger continue to play their vital role in supporting the town's cultural identity and economy.</p>
Q7 Modification	<p>Explicit Reference to the Agent of Change Principle: The Local Plan must explicitly incorporate the "Agent of Change" principle, in line with the National Planning Policy Framework (NPPF), ensuring developers of the Marsh Parade site are fully responsible for mitigating noise impacts and issues when proposing residential developments near established cultural venues. This could include specific wording in Policy TC22 requiring that developers implement measures to prevent future noise complaints from residents, thereby protecting The Rigger from unfair restrictions or forced closure. Doing this would prevent the burden of addressing noise issues from being unfairly placed on The Rigger or any other existing cultural spaces and businesses in the local area. This would be protect the already established venue from future noise complaints, ensuring its continued ability to operate without restrictive conditions.</p> <p>Incorporate Robust Noise Mitigation Measures: The Local Plan must include a clear requirement for detailed, enforceable noise mitigation strategies in any residential development proposal adjacent to established cultural venues like The Rigger. The existing reference to a noise and odour assessment is insufficient. This assessment should specifically mention The Rigger and address the unique risks posed</p>

	<p>by the close proximity of The Rigger and other similar venues and businesses, ensuring that comprehensive noise mitigation measures are implemented before any development is approved. This could include soundproofing requirements for new residential buildings or the creation of designated quiet zones within developments.</p> <p>Strengthening Noise Mitigation Requirements: The policy should include specific provisions that require a detailed noise impact assessment at the planning application stage, with particular attention to the impact on The Rigger. This should include:</p> <ul style="list-style-type: none"> - Comprehensive soundproofing for all residential units within earshot of the venue. - A noise management plan, developed in consultation with the venue, which outlines measures to prevent potential conflicts between residents and the venue. <p>Site-Specific Requirements to Protect The Rigger: The Local Plan must introduce site-specific requirements aimed at safeguarding The Rigger, given its significant role in the community. These provisions could include:</p> <ul style="list-style-type: none"> - Acoustic barriers or buffers to physically reduce noise transmission from The Rigger to the new residential properties. - Setbacks or thoughtful placement of the residential units within the development to minimise sound exposure. - Building design elements, such as window positioning or the use of sound-absorbing materials, to further reduce noise-related issues. <p>Amend Supporting Text to Acknowledge the Venue's Cultural Importance: The Local Plan's supporting text should highlight the significance of The Rigger as a cultural and economic asset to Newcastle. This would underscore the need for development proposals to take these assets into consideration when submitting applications.</p> <p>Strengthen the Protection of Cultural Assets: The Local Plan must include specific strategies aimed at safeguarding cultural assets, such as The Rigger, as required by the NPPF. This could involve designating these venues as protected sites or creating a framework for ongoing support and preservation, ensuring that the cultural and economic contributions of venues like The Rigger are preserved. The omission of these protections currently leaves the plan legally non-compliant with the NPPF's requirements to enhance and sustain cultural heritage</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	<p>Protecting an Established Business and Cultural Asset: We are best positioned to provide detailed insights into how noise complaints or restrictions could impact our ability to continue operating as a live music venue, which has been a staple of the community for over 2 decades.</p> <p>Understanding of Potential Noise Conflicts: We have detailed knowledge of the operational needs of a live music venue and the types of sound mitigation measures that would be most effective in preventing noise conflicts with future residents. Without our input, the Local Plan may fail to adequately protect the venue from harmful noise complaints.</p> <p>Safeguarding Newcastle's Cultural and Economic Landscape: We are invested in the broader cultural and economic landscape of Newcastle, and we believe that our participation in the hearing sessions will help ensure that the Local Plan delivers balanced outcomes that protect both new residents and existing cultural assets.</p>

Title	Policy TC22 Marsh Parade, Newcastle (Former Zanzibar Night Club)
Consultee Family Name	Paterson
Consultee Given Name	Andrew
Q4 Part of document	Policy
Q4 Policy	TC22
Q6 Details	<p>I have frequented The Rigger for over 30 years & in that time have made life long friendships, & for over 25 years, been luck enough (redacted by admin). It not only acts as a meeting point for social interaction, it plays host to the next generation of talent breaking into the larger music/performance scene of the UK. Without venues like the Rigger, the rising performers simply would not be discovered & have that stepping stone onto the next level of their career within the national network of essential venues.</p> <p>As a local resident, performer & visitor of The Rigger, I know firsthand how vital this venue is to the community. Losing it due to increased noise complaints would have a devastating impact on (redacted by admin), the local economy & the town's cultural scene. The Rigger is not only a venue for live music - it serves as a gathering place, a platform for local talent, and a key contributor to Newcastle-under-Lyme's identity as a cultural hub.</p> <p>I urge the planning team to include stronger noise mitigation measures that specifically protect The Rigger. Including specifically mentioning the venues cultural significance and the inclusion of the Agent of Change principle in the 'Noise and odour assessment and mitigation strategy required in relation to nearby commercial uses' under Policy TC22 ensuring that the responsibility for mitigating potential noise issues falls on the developers rather than existing businesses and culturally significant venues. Without these changes, The Rigger could face unfair restrictions due to increased noise complaints that would limit its ability to operate and serve the community.</p>

	Thank you for considering my concerns. I hope the planning team will take the necessary steps to safeguard The Rigger and ensure that it continues to thrive as a vital part of our town's cultural landscape.

Consultee Company / Organisation	Music Venue Trust
Consultee Position	National Co-ordinator
Consultee Family Name	Bent
Consultee Given Name	Lloyd
Q4 Part of document	Policy
Q4 Policy	TC22
Q6 Details	<p>NEWCASTLE-UNDER-LYME BOROUGH COUNCIL MARSH PARADE DEVELOPMENT BRIEF COMMENTS BY MUSIC VENUE TRUST IN SUPPORT OF THE RIGGER GRASSROOTS MUSIC VENUE</p> <p>(1). MUSIC VENUE TRUST'S POSITION</p> <p>These comments have been prepared by Music Venue Trust (MVT) and respond to the consultation being undertaken by Newcastle-under-Lyme Borough Council on the draft Local Plan 2020-2040. Music Venue Trust's key concern is the impact of proposals that may come forward in the future following the adoption of this draft Local Plan as a Supplementary Planning Document (SPD); proposals that could impact on The Rigger, a grassroots music venue (GMV) and a key cultural asset in Newcastle-under-Lyme.</p> <p>MVT would like to first focus on policy TC22 (p.154): Marsh Parade, Newcastle (former Zanzibar nightclub), which allocates the land for the development of 70 dwellings and commercial units. While MVT does not oppose the development of this land in principle, we'd like to ensure that any development that does take place is done in a way that ensures the continued operation and financial viability of The Rigger and protects any potential residents from negative impact of noise typical of a thriving grassroots music venue like The Rigger which could lead to noise complaints that impact the operation of the GMV.</p> <p>MVT is pleased to see policies SE1 (p.67) and SE12 (p.90) of the draft Local Plan refer to the Agent of Change principle, as well as reference to noise assessments within policy TC22. However, no reference is made to supporting grassroots music venues and other similar cultural businesses. We would like to see more specificity with regards to issues like noise assessment and insulation when developing residential units in close proximity to existing GMVs. A key area to consider would be the need to have opening windows in residential accommodation without this subjecting the residents to unacceptable noise levels, nor prompting noise complaints from residents relating to the operation of the pre-existing GMV. Details about deeds of easement as a means to prevent noise complaints negatively impacting the operation of the existing GMV should also be addressed in order to protect the venue.</p> <p>The Rigger is a nationally recognised grassroots music venue which has been in operation for 20 years, establishing itself as central to the cultural fabric of Newcastle-under-Lyme. As such, any Local Plan adopted should set out criteria which must be followed in order to protect existing business, particularly those with cultural value. The operators of the music venue have sought to establish contact with the council in order to address noise mitigation measures for the proposed residential units on the site of the former Zanzibar nightclub, however the operators have still not been consulted. As the Local Plan potentially impacts The Rigger, the operators of the venue should be consulted in order to ensure any impact is not negative.</p> <p>MVT and the operators of The Rigger would strongly object to any future planning application in the vicinity of the venue that may impact the venue's operation or future viability.</p> <p>(2). THE AGENT OF CHANGE PRINCIPLE</p> <p>At a national level, the Agent of Change principle in the National Planning Policy Framework is very clear that the responsibility to effectively mitigate the impact of the proposed redevelopment on existing businesses falls to the developers who act as the 'Agent of Change'.</p> <p>The intention of the agent of change principle can best be seen in highlighting the following passages from the National Planning Policy Framework:</p> <p>The agent of change principle was introduced by the NPPF in 2018. Paragraph 193 of the updated NPPF (December 2023) states:</p> <p>"Planning policies and decisions should ensure that new development can be integrated effectively with existing businesses and community facilities (such as places of worship, pubs, music venues and sports clubs). Existing businesses and facilities should not have unreasonable restrictions placed on them as a result of development permitted after they were established. Where the operation of an existing business or community facility could have a significant adverse effect on new development (including changes of use) in its vicinity, the applicant (or 'agent of change') should be required to provide suitable mitigation before the development has been completed."</p> <p>Other guidance within the NPPF is also a material planning consideration. Paragraph 97 states that:</p> <p>"To deliver the social, recreational and cultural facilities and services the community needs, planning policies and decisions should... guard against the unnecessary loss of valued facilities and services, particularly where this would reduce the community's ability to meet its day-to-day needs"</p>

(3). MVT AND THE GMV SECTOR

About us:

Music Venue Trust is a UK registered charity established in 2014 that acts to protect, secure and improve the UK's Grassroots Music Venue circuit. Music Venue Trust provides advice to the government, the cultural sector and the music industry on issues impacting the network of venues and is the nominated representative that speaks on behalf of the Music Venues Alliance, an association of over 800 venues from across the UK.

Economic & Cultural Responsibility and Impact of the GMV sector:

Music Venue Trust recognises that Grassroots Music Venues (GMVs) contribute to creating a rich cultural environment for the local community, boost the local economy and increase footfall to high streets. GMVs provide new and emerging artists and musicians with a space to hone their craft, develop their fanbase and increase access to cultural opportunities for the local community: MVT makes the case to Government and industry that they are the 'research and development' arm of the music industry. However, in the aftermath of the Covid-19 Pandemic, the economic resilience of Grassroots Music Venues has been pushed to the limit. In Music Venue Trust's 2023 Annual report we announced at Parliament the startling statistic that the average profit margin of a GMV is 0.5%, and that at its core, the provision purely of live music is a loss-making activity - one that is essentially subsidised nationally by GMVs to the tune of £114.8 million. It is other revenue streams, like the provision of food & beverages, which enable GMVs to provide their cultural activity.

GMVs and incoming neighbourhood developments:

Our concerns for The Rigger are informed by experience and statistical analysis of the sector. The Music Venue Trust's Annual Report for 2023 shows a sharp increase in the number of noise complaints placed against grassroots music venues, and a correlation between areas of redevelopment and spikes of noise complaints.

Through this we're directly observing the impact noise complaints have on Grassroots Music Venues, the financial outlay operators have had to make as a direct result and the escalation of policing of the spaces by Environmental Health Officers. Music Venue Trust's Annual Reports for 2022 and 2023 showed an increase in the number of noise complaints placed against grassroots music venues from pre-pandemic levels, and a correlation between areas of redevelopment and spikes of noise complaints.

Over the past 20 years 35% of Grassroots Music Venues (GMVs) have closed in the UK and this is still ongoing; at the start of 2023 Music Venue Trust reported that the UK was continuing to lose GMVs at an average rate of one a week. Set against this challenging climate, we urge Newcastle-under-Lyme Borough Council to take meaningful steps to protect Newcastle-under-Lyme's successful existing GMV, The Rigger, and not add to the ongoing loss of grassroots music venue spaces both nationally and locally.

(4). Concluding points

- The Local Plan must stipulate that noise assessments be carried out by developers, with participation from the neighbouring GMV to ensure a survey captures true 'worst case scenario' data. The survey must then appropriately detail noise mitigation measures specifically in place to ensure the continued viable operation of the GMV The Rigger.
- The venue operator should be considered a key stakeholder and consulted with at every stage of the residential planning process.
- The Agent of Change principle needs to be thoroughly considered with specific reference to the impact of the development on a Grassroots Music Venue.

Consultee Family Name	Danemann
Consultee Given Name	Rachel
Q4 Part of document	Paragraph
Q5 Sound	No
Q6 Details	<p>Please see attached representations.</p> <p>Policy Omission: Monitoring and Review</p> <p>The Plan is not considered to be sound as it is not justified or effective or in line with national policy</p> <p>The Plan is unsound because HBF as it does not contain a clear plan for monitoring its delivery and taking effective action if under delivery of housing is observed. Monitoring is an essential part of the plan monitor manage approach.</p> <p>However, HBF do not support the inclusion of policies within a Local Plan that merely triggers a review of the Local Plan if monitoring shows housing delivery is not occurring as expected. Such a policy does nothing to address the housing crisis or undersupply of homes. There are other more effective and immediate measures that could be introduced into policy that would enable the Council to address housing under deliver, much more quickly than would be possible through the production of another plan, or plan review.</p> <p>HBF recommends that the Council include an appropriate monitoring framework which sets out the monitoring indicators along with the relevant policies, the data source and where they will be reported, this should also include the targets that the Plan is hoping to achieve and actions to be taken if the targets are not met. HBF recommends that the Council provide more details as to how the plan will actually be monitored, and identifies when, why and how actions will be taken to address any issues identified.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	HBF requests to participate in the Hearing Sessions for the Local Plan Examination, the HBF considers that their involvement is necessary to ensure that the home building industry is able to respond to any housing related issues raised during the hearing sessions.

Q4 Paragraph number	Table 12
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>Table 12 of the Parking Standards (on page 185) includes a section relating to Pedal Cycles. It includes the following - "The most appropriate facility for cycle parking will be a 'Sheffield stand'. The siting of the stand should be in a location that is convenient, under cover and secure through natural observation (for example, at entrance to building. For residential developments, cycle sheds may be more appropriate). Location of pedal cycle parking facilities should be agreed in writing by the Local Planning Authority."</p> <p>Cycle theft is a significant local and national issue, which is likely to persist. In the light of paragraphs 96(b) and 135(f), the Local Plan could and should do more to encourage/deliver more secure forms of cycle storage and reduce criminal opportunity.</p>
Q7 Modification	<p>It recommended that the aforementioned extract is replaced as follows:</p> <p>"The most appropriate facility for cycle parking may well be a 'Sheffield stand'. The siting of the stand should be in a location that is convenient, under cover and subject to natural observation (for example, at entrance to building. For residential developments, cycle sheds may be more appropriate. However, for apartment blocks, an integral cycle store should be incorporated featuring suitably robust doorsets, access control and adequate lighting, which is an inherently more secure arrangement). For public cycle parking, attention is directed to the document Standards for Public Cycle Parking jointly published by the Bicycle Association, Sustrans and Secured by Design. Location of pedal cycle parking facilities should be agreed in writing by the Local Planning Authority."</p>
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)

Order	267
Title	Appendix 6: Indicative Housing Trajectory
Consultee Company / Organisation	Gladman Developments Ltd
Consultee Position	Planning Manager
Consultee Family Name	Wilding
Consultee Given Name	Robert
Q4 Part of document	Paragraph
Q4 Paragraph number	Appendix 6
Q6 Details	<p>Gladman Developments Ltd (Gladman) welcome the opportunity to comment on the Newcastle-under-Lyme Final Draft Local Plan 2020-2040 (Regulation 19) consultation and request to be updated on the progress of the emerging Local Plan. Please refer to attached representations. Gladman has fully engaged fully in the preparation of the emerging Newcastle-under-Lyme Local Plan 2040 to date. Feedback from the First Draft Local Plan (Regulation 18) consultation has been addressed and incorporated into the Final Draft Local Plan consultation document.</p> <p>In the sections below, Gladman have made specific comments where we consider the Final Draft Local Plan requires modifications or further clarification to ensure that it is capable of being found sound. Comments are focussed mainly on the consultation document, with references to the Duty to Cooperate and Sustainability Appraisal documents. Our representations also include details of Gladman's land interest at land south of Eccleshall Road, Loggerheads, which we are promoting as suitable for identification as a housing allocation in the emerging Local Plan. Please refer to attachment for more information.</p> <p>Appendix 6: Housing Trajectory</p> <p>The Final Draft Local Plan consultation document includes an indicative housing trajectory (in bar chart graph form) at Appendix 6, which sets out the projected rate of housing delivery against the housing requirement over the 2020-2040 plan period. However, there are no dedicated site-by-site breakdown or site analysis projections provided at this stage to demonstrate that all the sites which have been identified as draft housing allocations by the Council will realistically deliver in full by the end of the plan period.</p> <p>There is no detail as to where the housing numbers are derived from an approved outline application, a full application, or an application with reserved matters, or whether they are allocations, or indeed informed by the expected windfall allowance. This is not a clearly evidenced nor robust trajectory and does not provide a sufficient piece of evidence to inform the Local Plan. The housing delivery could not reasonably be expected to be assessed against this throughout the plan period, therefore making it highly difficult to monitor the effectiveness of the Local Plan and the housing land supply position. It is pertinent to note that the total supply from Local Plan allocations comprise 56.4% of the Council's minimum overall housing requirement.</p> <p>Paragraph 74 of the NPPF states that:</p> <p>"strategic policies should include a trajectory illustrating the expected rate of housing delivery over the plan period, and all plans should consider whether it is appropriate to set out the anticipated rate of development for specific sites."</p>

Q6 Details	<p>I am writing to formally object to the proposed local plan to build housing and warehousing on greenbelt land within [specific area]. This objection is based on both legal guidelines and the potential harm such development will cause to the local area.</p> <p>First, it is important to highlight the legal framework governing greenbelt land. According to the National Planning Policy Framework (NPPF), greenbelt land is designated to prevent urban sprawl by keeping land permanently open and maintaining the character of the countryside. The NPPF stipulates that development on greenbelt land should only be permitted in exceptional circumstances and that any such development must demonstrate clear, substantial, and sustainable benefits to the public, which I believe this proposal does not adequately provide.</p> <p>Additionally, the local authority is required to show that all reasonable alternatives to greenbelt development have been fully explored, including the use of brownfield sites or underutilised urban land. There is a lack of evidence in the current proposal that these alternatives have been sufficiently considered, which raises concerns about the legitimacy of the decision to encroach on greenbelt land.</p> <p>Furthermore, the proposed development would have significant detrimental impacts on the local environment and community. The greenbelt in our area is not only a vital part of our local ecosystem, providing habitats for wildlife and contributing to biodiversity, but it also serves as a critical space for recreation and well-being for residents. The introduction of housing and warehousing would increase pollution, strain existing infrastructure, and degrade the quality of life for current residents. It would also contribute to the loss of open space that is increasingly important in the face of climate change, contradicting the government's commitment to environmental sustainability.</p> <p>In conclusion, I strongly urge the council to reconsider this proposal, taking into account the legal requirements for greenbelt protection and the long-term negative impacts that such development would have on the local area. Instead, I recommend exploring more sustainable development options that do not compromise our greenbelt or the integrity of our community.</p>
Q7 Modification	<p>I am writing to formally object to the proposed local plan to build housing and warehousing on greenbelt land within [specific area]. Q6 Details	<p>Map 1 Audley Ward</p> <p>Not legally compliant, Is unsound, Fails to comply with duty to co-operate.</p> <p>I believe the amount of new build houses in and around Audley will completely spoil this village. The roads already cannot take the amount of traffic passing through and around the village. Also the building of a huge warehouse which I understand no company or business has requested be built will bring unwanted traffic and unwanted vans/lorries passing through the village. These buildings will bring chaos to already burdened roads. The little roundabout coming in to the village has required several re-tarmac work in the four years I have lived here. These buildings will stop the use of the local lanes for all users such as runners/walkers/dog walker/horse riders and will also spoil the local wildlife by bringing vehicles and exhaust fumes to the countryside. I object to all the planned buildings.</p>

Q5 DTC compliant	No
Q6 Details	<p>The plan for AB2 employment site does not appear to be Positively Prepared, documents indicate that the site has been identified by the developers as being within a designated corridor of development along the M6 Northwestern corridor. It appears that this has been a primary driver in the selection of AB2 rather than local need or its value to the wider economic growth within the borough.</p> <p>The size of the proposed AB2 site is far in excess of the stated employment needs of both the Audley Parish and Newcastle Under Lyme Borough. The local statistics for population growth are fluctuating and the population stability is unstable in part due to the inclusion of the student population is this not a sound and justified reason to look to develop the greenbelt.</p> <p>The plan is ineffective, in that the types of jobs offered by the employment site are inconsistent with building a skilled workforce. The documents state that there are 9 million workers within in an hours reach of the proposed site meaning that the economic and employment benefits of the proposed development will largely be felt outside the borough.</p> <p>The plan fails to give substantial weight to the value of using suitable brownfield land – as stated in the National Planning Policy Framework (NPPF), The proposed use of Prime agricultural land cannot be justified when the borough has many suitable brownfields sites available. These areas are in better reach of the local employment market.</p> <p>The local authority is required to show that all reasonable alternatives to greenbelt development have been fully explored, including the use of brownfield sites or underutilised urban land. There is a lack of evidence in the current proposal that these alternatives have been sufficiently considered, which raises concerns about the legitimacy of the decision to encroach on greenbelt land.</p> <p>Due consideration has not been made within the plan for the impact on the local transport infrastructure, the plan suggested that there is a labour market of 9 million people within an hour's drive of the proposed site the proposed site has little to no existing public transport links meaning that travel will primarily be by road.</p> <p>M6 junction 16/ A500 junction on which the proposed site sits is already a very congested link with regular issues forcing traffic to re-route into the local villages and A50 and A34 routes. There is lack of clarity that the impact on the transport infrastructure has been thoroughly considered with additional traffic that 2500 employee journeys and service vehicles and HGVs utilising the proposed lorry park will have on the existing infrastructure.</p> <p>The AB2 development is contradictory to the National Planning policy for promoting of sustainable transport.</p>

	<p>According to the National Planning Policy Framework (NPPF), greenbelt land is designated to prevent urban sprawl by keeping land permanently open and maintaining the character of the countryside. The NPPF stipulates that development on greenbelt land should only be permitted in exceptional circumstances and that any such development must demonstrate clear, substantial, and sustainable benefits to the public, which I believe this proposal does not provide.</p> <p>The plan would contribute to the loss of open space that is increasingly important in the face of climate change, contradicting the government's commitment to environmental sustainability.</p> <p>I believe that the proposed development of AB2 has not been positively prepared in relation the needs of the borough, it is not justified in that other options for development have not been full explored and will not be effective in delivering the outlined economic needs of the borough.</p>

Q4 Part of document	Policies Map
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>My below submission is to express that I do not consider AB12 to be a 'sound' site allocation for development and should be removed from the local plan. My detailed reasons are as follows;</p> <p>Firstly and most concerning is the main access to the site made via Diglake Street. This immediately makes the proposed site not feasible and unsound for development. The street comprises of mainly terraced housing with no off road parking. Residents currently park part on the road and pavement with pedestrians often forced to walk in the road. An increase in the volume of cars would create a greater risk to the safety of pedestrians. The junction at the top of Diglake Street, approaching Ravens Lane has restrictive views of oncoming cars travelling up and down Ravens Lane with existing housing been at the very top of the limiting viewing angels. Cars parked on Ravens Lane close to this junction require car drivers to 'edge out' for improved viewing of oncoming traffic increasing the risk of a collision. Further use caused from more housing will only increase this collision risk, thus making proper and safe access to the site not deliverable and unsound. The current suggestions of a car park at the bottom of the street is unreasonable and untenable expecting accessible, elderly, young and parent residents to park up to 200 metres from their residence. This large development in such a small area is unsound, not effective, well justified or positively prepared and should be removed from the local plan.</p> <p>Secondly, the proposed site is home to wildlife including foxes, badgers and birds that can often be seen in the existing hedgerows that surround the perimeter of the site and also runs through the site. The houses to the south and west of the site, act as natural light barriers from Ravens lane. Building on this site will ruin the natural habitat and will expand the light and noise pollution from Bignall End onto the green belt north of the site towards Great Oak Road that sits outside the allocated AB12 site. Therefore</p>

	<p>making this site unsound. The site is in a flood zone 1 and the LPA's SFRA shows it will be at increased risk of flooding during its lifetime, there are other sites in the borough that are in zones with lower flood risk and would be a better choice requiring less impact to resolve the potential flooring risks of AB12</p> <p>Thirdly, the proposed development site sits in direct view of the Grade II listed Wedgwood Monument located around 3/4 of a mile away. This heritage site is elevated in comparison to AB12 and is clearly visible. The proposed site would visually impair the view and impact the enjoyment and heritage of the monument. This further supports that the site is not well founded and unsound.</p> <p>Lastly, the increased volume of houses will impact the already congested village that cannot cope with with further traffic, schooling or medical provisions. The main high street in Audley known as Church Street has minimal parking with patrons parking constantly on double yellow lines and on the zebra crossing. Increasing the number of housing will only increase this stress on the village until ultimately there is a fatality.</p> <p>When considering all of the above, I am of the strong opinion that AB12 is unsound, not effective, well justified or positively prepared and should be removed from the local plan.</p>
Q7 Modification	The modification to the plan to remove AB12 will make the plan more sound.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)

Q4 Part of document	Policies Map
Q5 Sound	No
Q6 Details	<p>This application is not sound. This is a huge area of green belt land which is home to acres of natural wildlife. It is a beautiful area which local people use for exercise, and mental health stimulation. Whether that be walking, jogging or cycling. Green belt areas of this size should be protected at all costs, for the benefit of farming, nature, and the health of local people.</p> <p>This area is also situated on one of the busiest M6 junctions (16) This is already badly congested every day, with traffic trying to avoid it by bypassing through Audley, route being Alsager road, then B5500. This planning application would compound this significantly. Only last week there was a fatal accident which resulted in the closure of the A500 with traffic being diverted through aforementioned route. A warehouse park of this size would make this junction almost unusable. There are warehousing estates only 2-3 miles south on the A34, and on Peacocks hay road which could be further developed.</p>

Q4 Part of document	Policies Map
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>This representation is submitted on behalf of Evolution 500 Limited by Knights in response to the Newcastle-under-Lyme Borough Council Local Plan Regulation 19 consultation. Please also see attached representations.</p> <p>Our representations concern in particular the land to the west of Newcastle Road, Talke shown in the image at Figure 1 below ("the site", see attachment). We identify and promote this site as suitable for electric vehicle charging station, which could accommodate public electric vehicle charging facilities and associated development/uses for visiting members of the public.</p> <p>These representations follow a response to the previous Regulation 18 version of the Local Plan in August 2023, along with our Call for Sites submission at the same time, plus our subsequent (May 2024) provision of additional supporting material relating to the site's development potential for the uses mentioned at paragraph 1.3 above. A copy of the indicative site layout plan (see Appendix 1) and Transport Technical Note (Appendix 2) that accompanied our submissions in August 2023 and May 2024 are provided with this representation. The Transport Technical Note sets out the findings of SCP Transport's review of the highway and transport aspects of the proposed allocation of the land for an electric vehicle charging station.</p>

	<p>As detailed above given the need for a significant expansion of public EV charging facilities and suitability of the land west of Newcastle Road, Talke for such infrastructure we consider the site should be removed from the Green Belt and allocated for such development in the Plan. As such we also request that the Policies Map be amended accordingly.</p> <p>We therefore conclude that the land in question can be released without harm to the wider Green Belt and its purposes. We therefore object to the non-inclusion of the land as a site to be removed from the Green Belt.</p> <p>With regard to NPPF para 35 the Local Plans must be prepared in accordance with the 'Tests of Soundness'. We consider this element of the Local Plan does not accord with the tests of soundness set out at NPPF paragraph 35 as it is:</p> <p>a) Not "Positively prepared", as it fails to ensure the area's future infrastructure needs are fully met;</p> <p>b) Not "Effective", as it would not help ensure the infrastructure needed is delivered over the plan period.</p>
Q7 Modification	See attached representations
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	To explain the respondent's case and provide details in respect of the proposals for the development of the site.

Title	Appendix 7: Final Draft Local Plan Site Allocation Maps
Consultee Given Name	Seddon Homes
Agent Company / Organisation	Knights PLC
Agent Family Name	Wedderburn
Agent Given Name	Matthew
Q4 Part of document	Policies Map
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>This report has been prepared on behalf of Seddon Homes Limited by Knights, in respect of the Newcastle-under-Lyme Local Plan regulation 19 consultation. Please see attached representations.</p> <p>The policies map identifies 14 sites to be deleted from the Green Belt and allocated for housing development in the Local Plan. We object to the omission of the land south of High Street, Newchapel from the sites deleted from the Green Belt.</p> <p>We have set out above the reasons why we consider that the land to the south of High Street, Newchapel and request that it be added to the allocated sites in the draft plan. We consider that the land south of High Street, Newchapel should be removed from the Green Belt for the reasons detailed below.</p> <p>The Green Belt at this point forms part of the wider North Staffordshire Green Belt, originally defined in 1967. Although there were some alterations made via the North Staffordshire Green Belt Local Plan (adopted 1983) and the Stoke-on-Trent City Plan (adopted in 1993) there has been no other amendments made since that time as the Joint Core Strategy adopted in 2009 did not alter the Green Belt boundary and the City Plan Green Belt policies remained as saved policies. The Green Belt boundary is therefore of some considerable age</p> <p>The dwellings along High Street, Pennyfields Road and Marsh Avenue are included in a settlement boundary that extends around a wider urban area of Kidsgrove and Talke. The Land south of High Street Newchapel site however is currently within the Green Belt. The allocation of the land for housing development would therefore require a modification to the Green Belt boundary. This can be achieved through the development plan review process, however under paragraph 141 of the NPPF exceptional circumstances are required for this. The NPPF states that such circumstances need to be fully evidenced and justified through the development plan process.</p> <p>As set out in Section 2 above, the Housing Spatial Strategy Topic Paper prepared as part of the evidence base refers to the Housing and Economic Needs Assessment (2023) and concludes that exceptional circumstances test in NPPF paragraph is met in order to address objectively assessed development needs over the plan period to 2040 and this provides a justified basis for Policy PSD5: Green Belt to amend the Green Belt boundary in order to bring forward of site allocations within the Green Belt. We endorse this conclusion.</p> <p>In respect of Land south of High Street Newchapel site can also be released without harm to the wider Green Belt and its purposes.</p> <p>Ove Arup and Partners ('Arup') was appointed by Newcastle under- Lyme Borough Council and Stoke-on-Trent City Council to prepare a site review methodology and complete site assessments for the Green Belt sites being considered for release through the emerging joint Local Plan. Their report of December 2020 (based on an initial study from November 2017) sets out that the Local Plan strategic objectives were applied to these sites, assessing them for their 'strategic fit' and creating a shorter list of "contender sites". A Green Belt assessment of these contender sites was then undertaken by Ove Arup and a June 2023 report then provided advice on safeguarded land, compensatory improvements, exceptional circumstances and the additional site assessments.</p>

The land promoted in this representation forms the northern part of contender site NC11. Appendix F of the 2020 Ove Arup study provides a detailed table setting out the assessment of the contender sites against the Green Belt purposes. It is important to stress therefore that the site was assessed as part of a much wider parcel of land, rather than on its own merit as a specific development site within the green belt (the land has, for example, development to 3 sides, being contained by properties along High Street to the northeast, Marsh Ave and Pennyfields road to the north west and Station Road to the south east). The site is well contained by built form on three sides and a strongly defined and permanent defensible boundary to the Green Belt can be achieved;

The NPPF sets out the purposes of the Green Belt as a list at paragraph 143. This text is reproduced below, followed by the text from Appendix F of the Council's Ove Arup Dec 2020 report referring to contender site NC11 and then Seddon Homes' position on the contribution of the Land south of High Street site to these aims (please see attached representations)

Paragraph 148 of the NPPF states that, when defining Green Belt boundaries, local planning authorities should define boundaries "using physical features that are readily recognisable and likely to be permanent". As described above the Land south of High Street site is enclosed by development on 3 sides and open to the countryside in only a southwesterly direction where the land slopes away. This remaining side forms a straight edge with a clear field boundary comprising a fence / hedgerow, with the churchyard at the south east corner. As such new housing here would be read as a continuation of the pattern of development already seen in the area. Development of the site would allow creation of a far more clearly defined edge to the built form and to the Green Belt.

A Landscape and Visual Appraisal of the Land south of High Street, Newchapel, Kidsgrove has been prepared by PGLA Landscape Architects for Seddon Homes to analyse the potential effects that residential development at would have on the surrounding landscape and visual amenity. This report forms Appendix 1 to these representations.

The LVA notes that the site sits in South Kidsgrove Coalfield Farmlands Landscape Character Area as assessed in the NULBC Landscape and Visual Assessment work.. This LCA has been assessed as having a medium sensitivity. The attached report by PGLA considers the landscape character baseline, the sensitivity of visual receptors, the magnitude of change and the potential significance of effects in accordance with the Guidelines for Landscape and Visual Impact Assessments, third edition.

In landscape terms the nature of effects (magnitude of change) has been assessed as imperceptible and the overall effects will be negligible. In visual terms it was concluded likely that the site will only be briefly visible when directly adjacent to the site at the access points, with little to no overlooking of the proposed development and little to no visual connection with the surrounding road network. There will be localised views of the proposed development, from the public footpaths however, these can be mitigated with the introduction of landscape treatments including a substantial landscape buffer to the boundaries. The existing intermittent hedges along the boundary will be retained where possible and reinforced with native planting to extend the landscape buffer with the settlement edge and the wider landscape. The site will also be viewed in the context of the existing settlement edge and will not be seen as incongruous to its surroundings.

Mitigation can also be included and boundary vegetation and planting will mature along with street tree planting and reduce any adverse effects of the development over time.

In conclusion, the LVA identifies that the long-term residual effects of the development are not likely to exceed minor adverse to the overall landscape and visual amenity. Potential adverse effects that have been identified to be present at the operational stage, especially within the site and its setting will be reduced and offset by the mitigation provided in the potential planting scheme described within the landscape strategy. Therefore, the report "demonstrates that the site has the potential to accommodate the proposed residential development without causing undue harm to the landscape character, visual amenity of the site and surrounding countryside and the openness of the Green Belt".

In terms of potential amendment of Green belt boundaries here, the Land south of High Street site is well-contained within the landscape, with significant existing defensible boundaries that would endure beyond the plan period. Although the area southwest of the site is open countryside, the release of this infill site will not create a precedent for continuing unchecked development into the Green Belt. Being bound by existing built features and with a clear straight edge to the remaining side the Land south of High Street site is therefore defined by physical features that can provide a strong and permanent boundary to the Green Belt.

We therefore conclude that the Land south of High Street Newchapel site can be released without harm to the wider Green Belt and its purposes. We therefore object to the non-inclusion of the land as a site to be removed from the Green Belt.

With regard to NPPF para 35 the Local Plans must be prepared in accordance with the 'Tests of Soundness'. We consider this element of the Local Plan does not accord with the tests of soundness set out at NPPF paragraph 35 as it is:

- a) Not "Positively prepared", as it fails to ensure the area's objectively assessed needs are fully met;
- d) Not "Effective", as it would not help ensure sufficient housing is delivered over the plan period,
- e) Not "Consistent with national policy" as it fails to reflect the specific requirements of NPPF paragraph 69 that planning policies identify a sufficient supply and mix of sites, taking into account their availability, suitability and likely economic viability. .

CONCLUSION

To assist in delivering local housing targets the Council should allocate the land at High Street, Newchapel as a residential development site. We therefore make representations in response to the following sections of the plan on behalf of Seddon Homes Limited: Support the release of land from the Green Belt for housing development via Policy PSD5.

- Object to the omission of land to the south of High Street, Newchapel as a site allocation in Chapter 13, paragraphs 13.157 – 13.163.
- Object to the omission on the Policies Map of the land south of High Street, Newchapel as an amendment to the Green Belt and housing site allocation.

The land south of High Street, Newchapel should be brought forward for housing development during the plan period (including the small parcel of Council-owned land). The land south of High Street site is

	available, suitable, and deliverable with a housebuilder in place and should be allocated for housing development in the Local Plan to assist in meeting the housing requirement.
Q7 Modification	Please see attached representations
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	To explain the respondent's case and provide details in respect of the progress of the proposals for the development of the site for housing.

Q4 Part of document	Paragraph
Q4 Paragraph number	13.157
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>This report has been prepared on behalf of Gleeson Regeneration Limited by Knights, in respect of the Newcastle-under-Lyme Local Plan regulation 19 consultation.</p> <p>These representations respond to:</p> <ul style="list-style-type: none"> • Chapter 13 - Site Allocations. • Policies map <p>These representations refer in particular to land at Slacken Lane, Kidsgrove, shown on plan ref. UA22-005/P/SLP01-A at Appendix 1 ("The Site"). The land shown at Appendix 1 is subject to planning application ref 24/00089/FUL for housing development: application (170 dwellings, including 43 affordable homes) submitted in February 2024 and awaiting determination at the time of writing.</p> <p>The policies map should be amended to show the land at Slacken Lane, Kidsgrove as a housing site allocation, rather than shaded green</p> <p>The Local Plan consultations documents include a policies map in the form of a booklet containing various maps. Page 4 is entitled 'Urban Centre – Kidsgrove' and shows the land at Slacken Lane. The land is not shown as a housing site allocation and instead is shown shaded green</p> <p>We object to the omission on the Proposals Map of the land at Slacken Lane, Kidsgrove as a housing site allocation and to the shading of the land green as open space.</p> <p>As shown on the plan at Figure 1 above, the land is almost entirely surrounded by existing built development that is part of the urban area of Kidsgrove. The site comprises undeveloped land that is part of the urban area, rather than being part of the wider countryside.</p> <p>The site at Slacken Lane is primarily made ground created by past tipping of colliery waste. It is not public open space - it is private land. Whilst there are informal paths used by dog walkers and other local residents, rights of access are confined to the footpath along the southern edge. It is essentially a former waste site without any formal open space use and is simply vacant land awaiting remediation for development, as is commonly seen in urban areas where past industrial activity has taken place.</p> <p>We also query the need to identify additional supply of 'Natural and Semi-Natural Greenspace'. Paragraph 4.54 of the RSK Open Space and Green Infrastructure Strategy report (evidence base document ref. ED022) sets out that "Natural and semi-natural greenspace clearly provides the greatest total quantity of open space by typology" and "is well distributed within the Borough". In the report the Borough is divided into 3 sub areas and as paragraph 4.21 notes, "All three sub-areas have a high quantity of natural and semi-natural greenspace". The quantity standard proposed in Table 5.4 is 1.8 ha per 1000 population. The Urban North sub-area (where the Site is located) is identified at the plan base date as having 2.30 ha per 1000 population, therefore well in excess of the proposed standard.</p> <p>The Site is 5.9 ha in size. Table 4.2 in the RSK report identifies a total for natural and semi-natural greenspace (of all sizes) within NuLBC of 1886.67 hectares. The Site would therefore represent around 0.3% of this total (and around 2.5% of that available in the surrounding Urban North sub-area). As such we therefore strongly refute any suggestion that the site is required to meet the proposed open space standards.</p> <p>We also question the suitability of the site for safe open space use. Staffordshire Police have dealt with reports of anti-social behaviour on the land including motorbike use along both the public footpath and the informal paths, with risks of a collision between a bike and a person walking, particularly as many of the informal paths are narrow and have limited forward visibility due to vegetation. The area is also difficult to police as there are a number of points of access/egress and the vegetation cover prevents</p>

	<p>surveillance opportunities. There are also dilapidated buildings to the southeast, off Second Avenue which attract unauthorised activity and pose a potential fire hazard.</p> <p>It should also be emphasised that good quality public open space would be created as part of the development. These improvements could be secured by planning condition and a planning obligation could ensure their maintenance and retention where necessary.</p> <p>As set out above the site sits within the urban area development boundary so we strongly consider it to be 'suitable' and it is clearly 'available' given planning application ref 24/00089/FUL. We also note the significant technical work undertaken as part of the planning application that that clearly underlies its deliverability.</p> <p>As noted above the site is to be brought forward by Gleeson Homes, a leading housebuilder and can begin to deliver housing within 18 months of planning consent being granted. The proposed development would provide a policy compliant proportion of affordable housing, proving significant assistance to the Council in meeting the targets for affordable housing. Given the company's profile and Gleeson's aspiration to bring forward the Slacken Lane land, this provides clear evidence that the site is viable for housing development and that it should be expected to be brought forward during the plan period. We therefore object to the non-inclusion of the land as a site to be removed from the Green Belt.</p> <p>With regard to NPPF para 35 the Local Plans must be prepared in accordance with the 'Tests of Soundness'. We consider this element of the Local Plan does not accord with the tests of soundness set out at NPPF paragraph 35 as it is:</p> <p>a) Not "Positively prepared", as it fails to ensure the area's objectively assessed needs are fully met;</p> <p>a) Not "Effective", as it would not help ensure sufficient housing is delivered over the plan period;</p> <p>b) Not "Consistent with national policy" as it fails to reflect the specific requirements of NPPF paragraph 69 that planning policies identify a sufficient supply and mix of sites, taking into account their availability, suitability and likely economic viability.</p> <p>CONCLUSION</p> <p>To assist in delivering local housing targets the Council should allocate the land at Slacken Lane as a residential development site. We therefore make representations in response to the following sections of the plan on behalf of Gleeson Regeneration Limited:</p> <ul style="list-style-type: none"> • To object to the omission of land at Slacken Lane, Kidsgrove as a site allocation in Chapter 13, paragraphs 13.157 – 13.163. • To object to the omission on the Proposals Map of the land at Slacken Lane, Kidsgrove as a housing site allocation and to the shading of the land green as open space. <p>The land at Slacken Lane is subject to a current planning application. It is available, suitable, and deliverable with a housebuilder in place and should be allocated for housing development in the Local Plan to assist in meeting the housing requirement.</p>
Q7 Modification	Please see accompanying statement of representations
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	Please see accompanying statement of representations

Consultee Company / Organisation	Loggerheads Parish Council
Consultee Position	Planning and Environment Committee
Consultee Family Name	Love
Consultee Given Name	Jeff
Q4 Part of document	Policies Map
Q5 Sound	No
Q6 Details	<p>On Page 10 of the policies Map, Site Reference LW53 sits outside the Development Boundaries which were set as the village envelope that was agreed as part of the Loggerheads Neighbourhood Plan. No justification for amendment of this envelope boundary has been given, there has been no prior engagement with the Parish Council or with local residents concerning this change to the agreed envelope and it has been amended purely to include LW53 as a potentially suitable site for development.</p> <p>As is obvious from looking at the relevant Map, LW53 is clearly inconsistent with the development boundary agreed in the neighbourhood plan, which accurately reflects the nature of the Village and was itself modified when the plan was made to permit</p>
Q7 Modification	To restore the Development boundary to the envelope agreed in the Loggerheads Neighbourhood Plan.

Q6 Details	<p>AB2 - This is neither justified or sound, the council claim to require strategic employment land, however the allocated site exceeds this requirement significantly.</p> <p>AB2 - The volumes of traffic in and around this area are already excessive and needs to be actively addressed by our local council. By creating an industrial area of this size will add to this issue significantly. The stretch of motorway and A500 dual carriage way already has accidents on a regular basis and the additional traffic to service a site of this nature will only increase the occurrence of serious accidents.</p> <p>AB12 - This encroaches onto greenbelt land in a City where a large number of brownfield sites are left redundant and should be utilised as part of any regeneration first and foremost.</p> <p>Access to AB12 is extremely limited. As a resident of Diglake street it is already very difficult to park anywhere near my own home and the number of vehicles passing up and down the street causes major concern for my children - the dangers of this narrow road will increase significantly with additional cars/vehicles that come with more homes.</p> <p>AB12 - The road adjacent to the site, Ravens Lane is extremely busy throughout the day and considerably so during the school drop off/pick up times and during the many occasions there are issues on the A500</p>

	<p>and M6 motorway. The area and village road network cannot cope with any additional traffic in the area without causing major disruption and a danger to local residents and children.</p> <p>AB12, AB33, AB15 - The village of Bignall End/Audley has only small village schools, a medical centre where is is difficult to get an appointment and small shops - all not able to service additional homes in the area. My children accessing these locations on the village roads is already a danger, any increase in this is a major concern.</p> <p>AB12 - The proposal documents an access route running through the park at the bottom of Diglake street. This park offers the families and children a safe place to play in a neighbourhood where the houses do not have their own gardens but small yards. The park is well used by local people and it is unjustified to take any of this community open space to accommodate access to the proposed site.</p>
Q7 Modification	To make the the Local Plan compliant and sound I would advise for the proposed developments AB2, AB33, AB15 & AB12 be removed and not considered viable options.
