Q5 Legally compliant	Yes
Q5 Sound	No
Q6 Details	<p>I am sure that everyone involved in creating the Local Plan has committed to set out a positive proposal for the area. It cannot be an easy task. My comments relate wholly to AB2 (subregional exemplar business park) and I would argue that the premise of choosing the site based on it's good transport links is unsound. As a resident on Barthomley Road for over 20 years I have seen traffic worsen year on year with more people diverting from the M6 and A500 when there are delays and using local roads, including Barthomley Road as a cut through to get back to the J16 roundabout through Barthomley village. The road is a national speed limit but is used by many different groups, the farming community incl tractors and milk tankers, and many walkers (lots of public rights of way) horse riders, cyclists, runners etc and it is unsafe as it is at the moment nevermind when traffic will inevitably increase with `AB2.</p> <p>Also, as this is a rural location, any increase in traffic causes extra risk to our local wildlife, including badgers, bats, foxes, hares, swallows, dragonflies etc.</p>
Q7 Modification	<p>I feel the choice of site is completely wrong, based on existing traffic issues locally whenever there is a problem on either the M6 or the A500. One often affects the other. Nothing I have read in the Local Plan seems to accept this and to offer a strategy. Barthomley Parish have put restrictions on Audley Road banning vehicles over a certain weight. There is currently no restriction like that from Audley Parish. Perhaps a dark/quiet lane status for these farm roads that are already being badly affected with motorway traffic.</p> <p>The Local Plan only sets a minimum of hectares for AB2. I would suggest that a sensible maximum is set instead in keeping with its green belt status to show the councils' sparing use of our valuable resources and retaining them for future generations.</p>

Q4 Part of document	Policy
Q4 Policy	Borough local plan at Regulation 19 stage
Q5 Legally compliant	No

Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>As the ward Cllr for Bradwell, whilst i am satisfied with the proposed housing development plan, i am dissapointed that the plan fails to establish or provide suitable information on the following areas;</p> <p>Integrated Care - Bradwell Hospital care hub, GP centres</p> <p>Integrated Transport Plan</p> <p>Green Space Preservation</p> <p>Investment in Community facilities</p> <p>Roads and Infastructure</p> <p>Flood and drainage improvments</p> <p>Education Provision</p>
Q7 Modification	<p>Integrated Care - Bradwell Hospital care hub, GP centres</p> <p>Bradwell has the largest proportion of dwellings and residents in the whole borough, and an elderly demographic, despite this it still has no GP practice - at present residents must get taxi's to Chesteron or Silverdale to see a doctor which is causing pysical and financial hardship.</p> <p>Under the County Council and combined healthcare plans, a new integrated Care Hub at Bradwell Hospital for North Staffordshire with intermediate step down care and wider health provisions is planned - yet the plan makes no reference to this - land supply, transport links, accessibillty , demands on the local infastrucure. This seems a glaring omission.</p> <p>Integrated Transport Plan</p> <p>The local plan again makes no reference to bus, rail or road demands and the infastructure needed at present never mind that which will be required with an additioanl 8000 homes. Many hundreds of residents report issues of social isolation, and difficulty accessing health and educational provisions, due to the poor to none existant bus network. There appears no plan to address this.</p> <p>Green Space Preservation</p> <p>Residents and community groups have long campgained to have protected green space preservatons orders on the Bradwell dingle, Bradwell woods, the crematorium field and behind the listed Bradwell Lodge. The plan has no future strategy for protected green spaces.</p> <p>Investment in Community facilities</p> <p>The community facilities in the ward are very dated, defective and not fit for purpose. Despite an increasing population under the plan, there appears no strategy on upgrading facilities</p> <p>Roads and Infastructure</p> <p>The roads across the ward urgently need resurfacing - pavements are defective with several accidetns having been reported. The drainage channel underneath bradwell Lane - a main A road and aerterial route has collapsed causing repeated flooding. The plan like all of the areas above, proposes increase in housing yet does not evidence any duty to cooperate or collaborate with neighbouring authorities or tiers of local government.</p> <p>Flood and drainage improvments</p> <p>as above</p> <p>Education Provision</p> <p>Schools (Sun academy, Bursely academy, The Orme (Wolstanton high) are all at capacity. No plan to provide investment, capacity or resilience.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	If the inspector has questions on the areas identified above then i am happy to take part in a hearing session.

Q6 Details	<p>Response to the Newcastle-under-Lyme Local Plan Regulation 19 Stage</p> <p>Tho whom it may concern,</p> <p>As a Borough Councillor, I wish to formally object to the Newcastle-under-Lyme Local Plan at the Regulation 19 stage. My concerns relate to both procedural flaws and substantive shortcomings in the plan.</p> <ol style="list-style-type: none"> 1. Delay in Supporting Documentation Supporting documents were delayed, giving councillors insufficient time to review them before 24th July 2024 full council vote. This compromised our ability to make informed decisions. This is evidenced by the freedom of information request completed by the Labour group and outlined in their response. I have included the screenshot below (Officer addendum - see attached document). 2. Infrastructure and Transport Issues The plan lacks a thorough consideration of infrastructure, particularly transport. Public transport provisions are unclear, and existing cuts to bus services, especially in Audley, make the council's assumption of a 10% uptake unsound. Studies suggest a 3% uptake is more realistic, especially with no train stations nearby. Furthermore, the transport modelling for site AB2 doesn't appear to align with M6 Junction 16 plans, and consultation with Highways England and neighbouring authorities appears insufficient. 3. Flawed Consultation Process The website states email responses won't be accepted, contradicting the council's 24th July 2024 decision to allow them. This inconsistency harms public engagement and transparency. 4. AB2 Green Belt and Brownfield Land The plan allocates 80 hectares to site AB2, exceeding the 22 hectares required by 58 hectares. Using this Green Belt land, while 22 hectares of brownfield sites are available, is unjustified and inflates housing needs. 5. Uncertainty with HS2 Funding and St Modwen's Involvement Assumptions about HS2 funding for the M6 are speculative, and the council is relying on technical support which is based upon unconfirmed assumptions provided by St Modwen. I was also contacted by St Modwen, raising concerns about the integrity of the process and whether proper planning regulations are being followed. 6. Lack of Employment Site Development The exclusion of the Peacocks Hay development is concerning, especially as no employment sites have been delivered, which undermines the Borough's economic sustainability. This site would need to have consideration taken towards the housing needs. 7. Road Plan Soundness and Maintenance There's no clear plan for road adoption and maintenance. Authorities, including (but not limited to) Staffordshire County Council and Highways England, should be approached to clarify responsibility, as this uncertainty impacts the plan's long-term soundness. 8. Traffic Survey Discrepancies The council's transport report lacks sufficient evidence. An independent traffic survey by PAPG contradicts many of the assumptions, particularly regarding traffic flow, further questioning the plan's viability. <p>Given these concerns, I urge the council to reconsider the soundness of the plan and ensure that proper procedures are followed.</p>

Q6 Details	<p>[Admin Note, the following statement has been supported by a form of authority with approximately 172 signatures].</p> <p>Re: Newcastle-under-Lyme Borough Council (" the Council") Final Draft Local Plan 2020/2040 - Regulation 19 Consultation Please accept this letter as our representation in response to the above consultation, for onward submission to the Inspector.</p> <p>CONTENTS</p> <p>To assist you and the Inspector, the following is the order of our representation:</p> <ol style="list-style-type: none"> 1. Introductory comments. 2. Personal details. 3. Approach. 4. Legally and procedurally compliant. 5. Soundness (including each of the four heads, as set out in the National Planning Policy Framework). 6. Suggested modifications. 7. Conclusion.

1. INTRODUCTORY COMMENTS

We are the Talke Action Group ("TAG"), set up primarily to co-ordinate engagement with the Local Plan preparation process by the residents of the village of Talke/Talke Pits ("the Village"), part of the ward of Talke and Butt Lane in the borough of Newcastle-under-Lyme ("the Borough"). We are registered with the Council as a Consultee herein. In an effort to assist the Inspector, and as requested in the Planning Inspectorate's Guidance Note (Para 5.3 - "Where groups or individuals share a common view on the plan...etc."), this letter of representation ("this letter") is respectfully submitted both on behalf of ourselves and also on behalf of all those individuals ("the signatories") who have signed the attached Forms of Authority, whereby they endorse this letter and the contents hereof as representing their joint and individual view. Accordingly, the term "our representation" as used herein reflects that this letter is the representation herein on behalf of both ourselves and the signatories, and the words "we" and "us" are similarly used.

- In said attached Forms of Authority this letter is referred to as "the letter of representation".
- Each of the signatories has so given said informed authority and endorsement following one-to-one drop-in engagement sessions during the Consultation period, between members of TAG and each signatory.

- Our representation is submitted in letter form pursuant to advice that a letter is a proper and appropriate means of submission of Reg.19 representations, given by Councillor Fear, the Council's portfolio holder for Strategic Planning ("the Portfolio Holder").

3. APPROACH

a) In this letter, with regard to the concepts in parts 4 and 5 above, our representation follows the wording of para. 35 of the National Planning Policy Framework in force at this time.

b) Pursuant to that wording, we do not consider that this Final Draft Local Plan ("the FDL Plan") has "been prepared in accordance with legal and procedural requirements" or that it is "sound". We are therefore raising objections to the FDL Plan under the pertinent heads.

c) However, we are of the view that the Borough does need a Local plan, so that we do not wish to see the Plan struck down completely. Accordingly, where appropriate for each of the objections raised, this letter suggests relevant modifications.

d) As we are residents of the Village, and are therefore largely not aware of detailed circumstance prevailing in other communities, most of our representations herein relate to the TK sites selected in the FDL Plan for development in the Village, namely sites TK6, TK10, TK17 and TK27 ("the TK sites"). However, because many of the reasons for which we consider the FDL Plan to be either not sound, or not legally/procedurally compliant, or both, relate to the FDL Plan as a whole insofar as they affect the TK sites, some representations are made regarding the FDL Plan as a whole but then show how they relate specifically to the Village and to the TK sites specifically. As in c) above, modifications are then suggested.

Note: As the FDL Plan is a Council-derived document, we use the term "the Council" to refer also to the Council officers - elected and/or employed - engaged in guiding the FDL Plan through the process.

NOT LEGALLY OR PROCEDURALLY COMPLIANT

We do not believe the FDL Plan is legally/procedurally compliant.

4.1 The consultation process

Insofar as the residents of the Village are concerned, the consultation process has been drastically inadequate. Many, if not most of the residents, were until recently entirely unaware that a local plan was in the pipeline and equally unaware of the promulgation of the First Draft Local Plan or the FDL Plan. In our view, this inadequate consultation by the Council renders the FDL Plan non-compliant because :

a) Community engagement

(i) The Council may have given the appearance of complying, by sticking to minimum legal requirements regarding local plan community engagement, for example posting legal notices at the relevant sites and posting documents online. However, the Village population comprises a substantially larger than average percentage of older people, who do not or cannot engage with the internet. The Council will know this. Therefore, in accordance with its own Statement of Community Involvement (SCI), at para.1.13 (Equal Opportunity), the Council should have taken additional steps "in the way in which (they) consult ... to meet the specific local needs". This the Council has not done during the whole process.

(ii) This could - and indeed the SCI (at Table 2, p16) states that it will - be done by the distribution of "leaflets and posters". This does not appear to have been done for this local community with its "specific local need".

(iii) Having regard to this failure to consult in a way which meets specific local needs, there are other instances by which the Council has further failed in any meaningful way, insofar as the Village and its demographic is concerned, to comply with its own SCI, for example para 1.9, Community Involvement ("Inform people...and provide information...at the earliest opportunity"); para1.15, Equal Opportunity (allowing the process to be "accessible to those who are unfamiliar with the terms, processes and structures of the planning system..."); para 2.1 ("Early and meaningful engagement...with...neighbourhoods...is essential"); and para 2.2 ("A range of methods and techniques will be used to involve communities...")

(iv) One clear item of evidence of the Councils failure to comply with its own SCI, and therefore to be legally compliant, relates to SCI para 1.14 (Equal Opportunity), which indicates that the Council will endeavour "to work in an inclusive manner" to deliver "planning services from the perspective of a range of potential users", including by "Organizing consultation events to maximise involvement...ie workshops." Yet, when holding such workshops was suggested at the relevant Scrutiny Committee meeting on 11.7.24, it was rejected out of hand using the spurious excuse that residents wouldn't be available!

(v) The Planning Inspectorate's own guidance/requirement document, in the part 3 "Legal Compliance" section, states clearly that "the process of community involvement for the plan in question should be in general accordance with the LPA's Statement of Community Involvement". To the extent that the FDL Plan, insofar as the Village is concerned and as evidenced in (i)-(iv) above, is not so in accordance, it is not legally compliant.

(vi) Lastly under this head we would like to point out that, although the Council loudly touts, as evidence of its engagement compliance, that it has allowed a consultation period which is longer than the minimum required (8 weeks instead of 6 weeks), it might as well be 1 week or 28 weeks - it makes no difference

how long the consultation period is if ordinary residents have not been properly engaged with, taking into account not only the demographic of the Village per se but also the Council's obligations under their own SCI, both generally and given said demographic.

Conclusion: Because of the Council's failure, as above, to consult properly with the residents of the Village, given its specific demographic, the FDL Plan is not legally/procedurally compliant.

b) Consideration of consultation objections

It is self-evident, even to lay-persons such as we, that for a consultation to be meaningful and valid, the views, including any objections, of the consultees must be properly considered. If the consultation is treated by an LPA as merely a procedural formality, and the consultees' views arising thereout are not properly and fully considered, it is not a meaningful consultation, and the plan out of which the meaningless consultation arises cannot be legally compliant. We believe that this is the case with the FDL Plan, for the following reasons:

(i) In the Council's document in response to the Reg.18 consultation in respect of the First Draft of the Local Plan, where any proposed development site had had questions had been raised as to that site's suitability for development, the vast majority of the responses thereto was not a considered reply addressing any query, but merely a standard comment, the gist of which is that the site had been selected notwithstanding any objections raised nor addressing any such, and merely suggesting that any problems arising with any actual development could be dealt with when a planning application is made. The use of such an identical pro-forma response indicates clearly a lack of meaningful consideration of representations arising out of the consultation.

(ii) Further, those unconsidered responses not only evidence a lack of consideration of consultees' views, in itself rendering the consultation meaningless and the FDL Plan not legally compliant, but also fails to take into account circumstances where "planning" at the development stage will not solve the problem raised; or to offer any other solution. As examples, and with regard to the Village:

- what is the solution where there will be insufficient local school and/or health clinic places available as a consequence of development, but s106 funding would be of no use because there is no space in or around the existing facility for more staff to be employed or for an extension to be built?

- although construction of a roundabout might help with a substantially greater traffic flow at a dangerous junction, how will "planning" solve the problem of much greater traffic on the already dangerously congested main road through the village, which cannot be widened?

- How will planning considerations relating specifically and only to individual developments solve the larger problem of waste discharge in the locality? Viz: A report in 2023 covered the dumping of sewage into waterways by Severn Trent Water, revealing that during 2022 sewage was discharged into local waterways for 31,228 hours with 6,370 dumps in total. Alarming, the biggest polluter was the Liverpool Road works in Kidsgrove which discharged for 4,139 hours in 187 spills. This plant, which covers, inter alia, the Village as well as Butt Lane and Kidsgrove, clearly cannot cope with present demand. How will this plant cope with sewage from the hundreds of houses in the TK, BL and Kidsgrove sites? The Council appears not to have considered or addressed or informed consultees of how this will be dealt with.

We stress that we are not asking the Inspector to examine these issues. We raise them as exemplars and evidence that the Council has either deliberately ignored or simply failed properly to consider and/or to address consultees' views.

(iii) This apparent failure properly and fully to consider the views of consultees, and consequently having nothing of substance to report back to them, both further represent yet another failure by the Council to comply with its own SCI, this time Para 1.9, the aim to "Respond to any comments received, giving proper consideration and explanations of how these views will be incorporated into the planning documents and decisions."

(iv) A disturbing sequence of documents seems to indicate that the relevant officers had decided, well in advance of any scrutiny or vote, that the FDL Plan should be recommended for approval to a full meeting of the Council. For example, way back in January 2024, a report by the Corporate Leadership Team to the Cabinet recommended that the Cabinet "(a)uthorises the Deputy Chief Executive, in consultation with the Strategic Planning Portfolio Holder, to recommend to Council at its meeting on 24 July that it approves the Final Draft Local Plan (at Regulation 19 stage)...for public consultation.." Please note that the Cabinet decided, on 16 January 2024, to recommend approval of the FDL Plan to the full Council meeting on 24 July 2024, over 6 months before that meeting, and indeed before the FDL Plan was promulgated and possibly even before it was prepared. (On 18 March 2024, the Corporate Leadership Team presented this decision by the Cabinet to the relevant Scrutiny Committee for their meeting on the same day, and they appear to have had no issue with it.) This sequence of events cannot but reflect a lack of meaningful consideration of anything arising out of the Reg 18 consultation, rendering the consultation extremely, if not fatally, flawed.

Conclusion: Because the representations arising out of the Regulation 18 consultation were not adequately considered, the consultation has not been properly and/or meaningfully conducted, and therefore the FDL Plan is not legally/procedurally compliant.

4.2 Procedural Compliance

Although it again appears on the surface that the Council has carefully followed all the over-arching procedural steps required in this process, there have been at least two somewhat alarming occurrences evidencing that this has not actually been the case on closer examination.

a) Site Selection

(i) In the Local Plan Issues and Options Report in 2022, preparatory to preparation of the First Draft Local Plan, the long list of possible sites indicated that three of the TK sites (TK10, TK17 and TK27) were "unsuitable" for development. By the time of promulgation of the First Draft Local Plan, they had somehow become suitable, without any apparent explanation. The implications of this are somewhat disturbing, let alone it representing another failure of the Council for its evidence base to be transparent and available, and for residents to be kept informed, as in 4.1 above. However, the following point might shed some light on the mysterious elevation of these three sites.

(ii) At the meeting of the relevant Scrutiny Committee meeting on 11 July 2024, the Portfolio Holder was repeatedly asked how the final list of sites included in the First Draft of the Local Plan were selected from the longer list and whether Cabinet Members were involved. The Portfolio Holder repeatedly obfuscated

and ultimately refused to answer. However, it subsequently appears that said selection was made by the Portfolio Holder and two other senior councillors from the same side of the chamber.

(iii) Given these occurrences, it is open to conjecture as to whether or not it is a coincidence that a by far greater proportion of sites selected for development are situated in wards represented by councillors from the party in opposition to that of the Portfolio Holder's majority governing party.

Conclusion: Although the initial stages of the site selection process appear to have been conducted openly and compliantly, there are questions around the final stages of the site selection, rendering the process certainly procedurally (and possibly also legally) non-compliant.

b) Document Availability

(i) The FDL Plan was approved for consultation and submission at a full meeting of the Council on 24 July 2024. However, issues relating to document availability cloud its approval.

(ii) For Councillors to have been able to make an informed decision when voting, over 40 documents forming the evidence base and informing the FDL Plan, were required to be examined and considered. However, a large number of these documents were not made available to Councillors sufficiently timeously for them to be able to examine same and render themselves fully informed. Eight such documents (almost 20% of the total) were only uploaded to the relevant website the previous afternoon, leaving Councillors in outside employment around 24 hours to read and examine hundreds of pages of formal documentation whilst working during the day. (A further 7 documents were uploaded to the web the day before that, making a total of 15 documents - over one-third of the total number - only made available 48 hours before the meeting.)

(iii) The opposition Councillors therefore proposed an amendment, that the decision to approve the FDL Plan be slightly delayed until the next Council meeting only two months later, to allow all Councillors fully to consider all the relevant documents. This was defeated, with speakers from the Portfolio Holder's majority party insisting that the plan be approved on that day. Disturbingly, a senior councillor from that party stated categorically that all but two of the documents were made available timeously. The promulgated list of dates and times of uploading of all the documents shows that this statement was - knowingly or unknowingly - untrue.

(iv) It is not clear whether the above events were deliberate or not - we hope not. Nonetheless, it is the case that documents vital to the integrity of the FDL Plan were not made appropriately, timeously or compliantly to many of those being asked to make a decision on the FDL Plan and this in itself renders the process not procedurally compliant. This is even more the case because the Council could have obviated the difficulty by delaying the decision, but pointedly and deliberately chose not to.

(v) Speaking to the amendment referred to above, one councillor remarked: "The expectation that we approve a local plan without these essential documents is not only unreasonable but also undermines the principles of sound governance. This is a formal process that requires thorough scrutiny and understanding of all supporting evidence. We must be fully informed to ensure that the plan we endorse is both sound and legally compliant." They were not, so the plan is not.

c) Cross Party Engagement

(i) The Council's SCI, at para 2.23, requires the Council, in preparing a local plan, "to ensure cross party engagement on the plan making process..". In taking the steps in 4a and 4b above, the Council has again failed to comply with its own SCI.

Conclusion: Consequent on the above, the FDL is neither procedurally nor legally compliant.

4.3 Sustainability Assessment Objectives, Strategic Objectives, and Transport and Accessibility Policy Development as proposed on the TK sites would not only fail to comply with and meet the standards required by these policies and objectives, but would indeed be directly contrary to and inimical with same. (As details relating hereto are set out fully below, and as we would not wish the Inspector to have to read exactly the same content twice, we respectfully refer the Inspector to item 5.3.b ("Effective" head of "Soundness") below.)

Conclusion: Because of this, the FDL Plan, insofar as the TK sites are concerned, is not legally compliant.

5. SOUNDNESS

5.1 Positively prepared

No representations.

5.2 Justified

We do not believe the FDL Plan, insofar as the Village and the effect that development of the TK sites will have thereon, is justified. This is for the following reasons:

a) Number of dwellings proposed for the TK sites

(i) The number of dwellings proposed to be built over the TK sites (over 300) is disproportionate for this small semi-rural village. It is not justifiable that the Village should bear the burden of 7% of the total Local Plan Housing Allocation of 4512 houses (para 5.5, FDL Plan), when neither its population nor its housing stock are anything like that percentage of the Borough as a whole. When looking at the figures for the Talke and Butt Lane ward as a whole, the figure of 520 dwellings proposed to be built (per FDL Plan, paras 13.194 - 13.231) in the ward represents 11.5% of the proposed development for the whole Borough. To impose this disproportionate burden on the village is not justified. (As to possible reasons for this high proportion of dwellings on the TK sites - all but 10 on greenbelt - being proposed to be imposed on the Village, we refer the Inspector back to point 4.2 above.)

Suggested Modification - Suggested Modification 1 below

b) The population of the Borough

The population of the Borough has only increased by 6.9% over the past four decades since 1981 (117,217 to 125,297, 1981-2022). The Council is allowing for an increase of 15% over the term. Even accepting that in matters of targets, some (but not all) issues are beyond the ambit of a Local authority, it is not justifiable that a greater proportion of what is already a possibly inflated target (ie above the national standard method calculation) should be borne by the Village. This is especially so when there are doubts about the motivation for and process of site selection, and there are brownfield sites (see c below) and empty homes (see 6.1,b,v below) available in the Borough which have not been selected.

Suggested Modification - Suggested Modification 1 below

c) Availability of brownfield sites

As indicated above (at point 4.2,a,i) the status of the Talke sites was changed from "unsuitable" to "suitable". At the same time, other sites (some brownfield) were changed from "suitable" to "unsuitable". These are however available and should be looked at again. For example, the unused and derelict Knutton Community Centre site was made available, but it appears that developers deemed the cost of eg decontamination to be too great and preferred untainted eg Green Belt land on which to build. The same is true of other available brownfield sites in the Borough. It cannot be justified for Green Belt land to be sacrificed in order to increase

the profits of developers.

Suggested Modification - Suggested Modification 1 below

d) The effect on the nature of the Village

If all of the proposed 310 dwellings are built on the TK sites, and taking into account also development of sites such as the former TK5 site (see below at 6.1,b,iii) and any other windfall and/or buffer sites, this will represent an increase in the percentage of dwellings in the Village in the order of 20-30%! This volume of development is simply too great for Talke/Talke Pits. It would swamp the Village. It would irreparably and irreversibly change the nature of the Village from a semi-rural village to a sprawling dormitory town - although without the infrastructure to support it (see e below), rendering it with the worst of all worlds. To destroy the Village in this way by such a weight of development cannot be justified.

Suggested Modification - Suggested Modification 1 below.

e) Effect on local infrastructure

We appreciate that it is not within the ambit of this Regulation 19 Consultation for the Inspector to re-examine issues of local planning such as flooding or parking issues on the proposed development sites. However, where there are issues relating to off-site impacts, which have not been dealt with, either satisfactorily or at all, in the FDL Plan, then this goes to the Soundness of the FDL Plan under both heads of "Justified" and also "Effective" (as below).

The issue of the undealt-with problem of the knock-on effect of development of the TK sites on the Village as a whole, has been mentioned in passing at 4.1.b.ii above. It is not justifiable to propose a level of development on the Village which would exacerbate, and make critical, existing problems in a creaking and already inadequate infrastructure, without some level of pre-planning in the FDL Plan. Insofar as the Village is concerned, there appears to be none with regard to three major infrastructure problems which will arise should the TK site developments proceed, and which do not appear to be resolvable by specific planning arrangements for on-site or site-adjacent adaptations only. These are:

(i) As previously alluded to (4.1,b,ii), the volume of traffic (both local, and also that which uses the Village as

a rat-run to avoid congestion on the nearby arterial routes of the A34, the A500 and the M6) through and in the Village is already greatly excessive for the Village road network. The main road ("the main road") through the Village (comprising High Street, Crown Bank and Swan Bank, which all run seamlessly into each other to form one thoroughfare through the Village), is also already inadequate and at breaking point. The road, like Pit Lane, is narrow and often reduced to a point where two cars, let alone trucks, cannot pass. When not congested, vehicles speed through, and the road is dangerous for pedestrians and vehicles alike, as well as for ingress/egress from local residences. There would be no easy solution to this, even without further development, as the road cannot be widened.

The addition of hundreds more vehicles (anything between 310 and 620) on to the main road through, and other roads in, the Village cannot but seriously exacerbate an already critical situation, and render the local road network inoperable.

As above (4.1,b,ii - also Failure properly to consult) the FDL plan does not appear to make any provision for this, nor even to consider it. It cannot be justifiable to allocate development sites without appearing to have any great, or any, concern about, or to make provision for, the drastically adverse knock-on effect which such

development would have on the Village and its residents.

Suggested Modifications - Suggested Modifications 1 (or 2) below.

(ii) Similar concerns relate to the local health clinic (Talke Clinic, part of the North Newcastle Primary Care Network, "the Clinic"). Although we understand that their list is not, at date hereof, entirely full, the clinic as it is would simply not be able to take in the residents of 310 dwellings. However, the logistics are that the current building is full, so that no further health staff can physically be accommodated; and the site will not allow for further expansion. Accordingly, the usual solution of s106 funding to employ further staff and/or to expand the building, is not available.

Yet the Council again appears not to have considered nor to make any specific proposals to solve this problem (unlike elsewhere, eg at the proposed Keele site, where a health Hub is mooted). The only solution therefore appears to be that patients will need to attend GPs further afield, either at other practices in the North Newcastle PCT, or even at practices in other, further away, PCTs.

The over-arching Staffordshire and Stoke-on-Trent Integrated Care Board ("ICB") is quite clear - for them, such list-dispersal, with patients having to travel distances to see a doctor, is a very last option, a last resort. The Council, however, seems, by failing to consider and actively to address the issue, in fact by default to be planning for the last resort in respect of the TK sites and the Village.

Inclusion of the TK sites in the FDL Plan cannot be justified where the health infrastructure of the Village is so lacking and unaddressed.

Suggested Modifications - Suggested Modifications 1 (or 3) below.

(iii) Again, there is a similar concern around local schooling, especially for children of primary school age. There is only one primary school in the Village, namely Springhead school ("the School"), to which the same problems (no unused internal space; no suitable site expansion room), again rendering s106 funding largely irrelevant. So, once again, primary school children will need to be found places further afield.

Inclusion of the TK sites in the FDL Plan cannot be justified where the school infrastructure of the Village is so lacking and unaddressed.

Suggested Modifications - Suggested Modifications 1 (or 4) below.

(iv) A further effect of (ii) and (iii) above, if patients and primary-age schoolchildren are listed or placed further afield, is additional car-journeys, and even worse exacerbation of the local road infrastructure problems, in (i) above. This cannot be justified.

(v) Lastly under e) hereof, although both the Staffs and Stoke ICB (regarding health issues) and the Staffordshire County Council (regarding education and other issues) have been consulted herein by the Council, it does not appear that the Council has actually approached or otherwise consulted directly with either the Clinic or the School, to ascertain from them the situation on the ground, so as to attempt to deal with it and/or to modify their site selection by eg removal of the TK sites from the FDL Plan, in light of these potentially insurmountable impact consequences. This cannot be justifiable.

f) Use of Green Belt land

Given all of the above - the disproportionate weight of development allocated for the TK sites, the questionable motivation for the site selection, the availability of brownfield sites and empty houses in the Borough, the fact that the Council would still meet its development target even without inclusion of the TK sites (see 6.1,b,i below), the detrimental effect that the proposed development on the TK sites would have on the Village, etc - it appears that there are no circumstances at all, let alone exceptional circumstances, which would necessitate or justify use of the Green Belt land proposed for the TK sites.

Suggested Modification - Suggested Modification 1 below.

Conclusion: The FDL Plan, insofar as it relates to the TK sites, is not Sound under the head of "Justified".

5.3 Effective

We do not believe the FDL Plan, insofar as the Village and the effect that development of the TK sites will have thereon, is effective. This is for the following reasons:

a) Viability

Because of the intractable infrastructure difficulties outlined above (at 5.2,e), we do not believe the development on the TK sites is viable. If it is not viable, it cannot be effected, and is accordingly not effective. Suggested Modifications - Suggested Modification 1 (or 2 - 4) below.

b) Sustainability Assessment (SA) Objectives, Strategic Objectives, and Transport and Accessibility Policy (Policy IN2)

As 4.3 above (not legally and/or procedurally compliant), development as proposed on the TK sites would not only fail to comply with and meet the standards required by these policies and objectives, but would indeed be directly contrary to and inimical with them. Some examples are:

- SO IV - to "reduce the Borough's carbon footprint..." : the introduction of many more vehicles into a rural environment will have the opposite effect.
- SO VI - to "support the vitality of rural villages, preserving and enhancing the special character (of)...each local community" : development of the TK sites will destroy the cohesion and vitality of the Village, and its special character.
- SO VI - to "provide choice in housing types for local people." : local residents do not want a choice of large development-based housing which will have the adverse and destructive effects referred to herein.
- 1N2 1 b - development must allow for "integration with existing infrastructure." : as herein, development of the TK sites will overwhelm the existing road infrastructure to a point of collapse.
- IN2 1,e - development must "not cause unacceptable highway safety problems in relation to local traffic circulation and existing parking..arrangements.." : as herein, this is exactly what development of the TK sites will cause
- IN2 1,f - Development must "not cause severe residual impacts on the road network, either direct and/or cumulative." : extremely severe such impacts on the local road network, both direct and cumulative is exactly what will happen if development of the TK sites goes ahead.
- SA Objective 1 - "To contribute to reduction of greenhouse gases.." : not to increase them in the locality by the introduction of many more vehicles into a rural environment.
- SA Objective 2 - "To improve air quality.." : by the introduction of many more vehicles into this rural environment?
- SA Objective 3 - "To protect, enhance and restore biodiversity ensuring that there is an overall net gain in the extent and quality of biodiversity." : development of the TK sites, by diminishing and concreting over Green Belt land, will self-evidently destroy and reduce biodiversity; and Parrots Drumble, a small remnant of ancient Woodland and a nature reserve, with its delicate wildlife and biodiversity balance, is extremely close to site TK10.
- SA Objective 4 - "To..maintain..land resources" : losing the agricultural land within the TK sites does precisely the opposite.
- SA Objective 7 - "To conserve, enhance and promote interest in local distinctiveness, the historic environment and landscapes, heritage, cultural assets and their settings" : aside of the loss of Village distinctiveness and heritage already cited, the last of local dry-stone walling and the Village's central Cross (original 12Century base are directly in the firing line of the increased traffic
- SA Objective 8 - "To strengthen the quality of the landscape.." : development of the Green Belt TK sites would, on the contrary, diminish and despoil not only the quality of the landscape per se, but also the visual and physical amenity it provides to the Village.
- SA Objective 9 - "To enhance the quality..and connectivity of open space.." : building over large parts of such Green Belt space self-evidently does exactly the opposite, reducing the quality and interrupting the connectivity of the of same.
- SA Objective 9 - "To improve the health and mental wellbeing of the population.." : increased traffic with greater pollution, the need for young children and patients to travel further afield to access school and health-care, a dangerous road environment, disintegration of an identifiable community, et al -how does this improve the health and welfare of the local population?

Accordingly, if the Council were to proceed with developing the TK sites, they would be in conflict with their own precepts. Not only does this render the FDL Plan not legally compliant (per 4.3 above), it also means that (unless the Council wishes deliberately to act in a non-legally-compliant manner), development of the TK sites cannot be affected as is. If such development cannot be affected then the FDL Plan, insofar as it relates to the TK sites, not effective.

Suggested Modification - Suggested Modification 1 below.

Conclusion: The FDL Plan, insofar as it relates to the TK sites, is not Sound under the head of "Effective".

5.4 Consistent with national policy

We do not believe that the FDL plan, insofar as the TK sites are concerned, is consistent with national policy,

for the following reasons :

- a) Transport - please see above re the local road system in the Village.
- b) Infrastructure - please see above re the Village infrastructure, namely school and health.
- c) Landscape/Environment - please see above re unnecessary use of Green Belt land for the proposed TK sites.
- d) Location - please see above re overwhelming a rural village when other brownfield sites and empty houses are available.
- e) Health - please see above re pollution, degradation of environment, list dispersal, etc. Suggested Modification - Suggested Modification 1 below.

Conclusion: The FDL Plan is not consistent with national policy, especially insofar as the TK sites are concerned, so that it is not Sound under this head.

6. SUGGESTED MODIFICATIONS

6.1 Suggested Modification 1

- a) That all or some of the Talke sites be removed from the FDL Plan, or alternatively that the number of proposed dwellings for all or some of the Talke sites be reduced.

- b) This can be compensated for as follows:

(1) The FDL Plan, at para 5.5 (Housing Requirement and Supply Information figures), indicates that, whereas

the Housing Requirement is 8000 dwellings over the duration of the plan ("the term"), the FDL plan allows for 8,663 units. The additional 663 units are made up of 372 expected additional units becoming available over the term - the windfall allowance - and a buffer of 291 units (figure not shown at para 5.5). The windfall allowance alone more than adequately compensates even if all the Talke sites were to be removed from the FDL Plan.

(ii) The use of brownfield sites excluded from the FDL Plan site selection, and especially those whose status was previously changed from "suitable" to "unsuitable", with no transparent explanation, should be revisited. Development of some or all of these could mitigate or obviate the need for the Talke Green Belt sites to be included in the FDL Plan.

(iii) What was site TK5 - a brownfield site at the top end of the main road through the Village, and very close to TK27 - was originally shown as "suitable" but, in 2022, unavailable for housing development, as it was then in active commercial employment use (by London Hoist). However, it has since become available and is in fact at date hereof on the market for sale by a local agent (Louis Taylor) with outline planning permission for 32 dwellings. This should be brought back into account and reduce the suggested quota for eg TK27 by a concomitant number.

(iv) As at (ii) above, there are a number of other brownfield sites over the Borough as a whole, to which similar considerations apply, namely that they are suitable for development, but are not included in the FDL Plan, such as the derelict Knutton Community Centre site. As in (ii) above, these could all be looked at again, in preference to Green Belt sites such as the Talke sites.

(v) Similarly, reducing or eliminating the Talke sites could be easily compensated for by use of homes currently empty in the Borough.

The Council's own website (Empty Houses page) asks "Did you know there are over 1,000 empty properties in Newcastle-under-Lyme?" Even using more modest figures, there were 503 empty homes in the Borough in 2022/3 (Government's national New Homes Bonus figures) and 511 in 2023 (Action on Empty Homes, based on Govt. Data published by the (then) Dept. for Levelling Up and Housing, Nov. 2023).

Yet, despite this number of empty homes being available, the council only brought back into use 39 homes in the year Oct 2021-Oct 2022, and a meagre 11 homes 2022-2023 (same sources, based on CTB figures); and they are now proposing that Green Belt land be sacrificed, when all this possible housing lies unused.

6.2 Suggested Modification 2

That drastic measures be taken to mitigate the impact of additional vehicles consequent on development of

the TK sites, for example:

- a) Barriers be erected at either end of the main road allowing ingress/egress only for Village residents, emergency services, deliveries, workers, etc.
- b) Entrance to and exit from TK27, currently via Coppice Road, should in turn require egress to/ingress from Coppice Road only to and from the main arterial A5011 (Linley Road). That would at any rate be necessitated by erection of aforementioned residential barrier between the top of Coppice Road and Swan Bank.
- c) Similarly for TK10, having all the additional vehicles from a 170-dwelling site feeding into the main road at the Crown Bank/Swan Bank/Jamage Road junction would exacerbate the situation even further. This could be controlled by limiting access to and from Pit Lane to the bottom end (roundabout at Pit Lane/Jamage Road/Oaktree junction), and creating a one-way system; as well as widening Pit Lane to allow it to deal with the extra traffic in addition to the current already heavy HGV use and substantial outside traffic visiting the Affinity shopping hub on Pit Lane.

It is appreciated that these suggestions are probably impractical for a number of reasons, but that in itself serves to illustrate how intractable and insurmountable the problem is. It also suggests that development of the TK sites is unviable (per 5.3 above). The best solution therefore appears to be Suggested Modification 1 above.

6.3 Suggested Modification 3

That the Council be asked to consult with the ICB specifically about the Clinic, and directly with the Clinic itself,

as to possible solution and, if there is none, to accept that Suggested Modification 1 should apply.

6.4 Suggested Modification 4

That the Council be asked to consult with the SCC, and also directly with the School Organization Team, specifically about the School, as well as directly with the School itself, as to possible solution and, if there is none, to accept that Suggested Modification 1 should apply.

	<p>7. CONCLUSION</p> <p>For all the reasons above, we believe that the FDL Plan is neither Sound nor (per para 35 NPPF) "in accordance with legal and procedural requirements".</p> <p>Notwithstanding, we are not requesting that the FDL Plan be struck down. We recognize that the Borough needs a strong and robust local plan which, in most aspects, the FDL is.</p> <p>However, nor are we "nimby"s. Had the proposals in the FDL Plan for a local contribution to the Borough's housing need been for a reasonable number of dwellings in, or in the vicinity of, the Village, and not on precious and valuable Green Belt land, this representation would in all probability not have been submitted. It is not, however, reasonable for not only the character, but the very nature, of the Village to be irreversibly damaged and probably destroyed, by the building of a number of houses way out of proportion to the size of the Village, and greatly out of kilter to the ratio of the population of the Village to the Borough as a whole. It is not unreasonable that an objection be raised to this.</p> <p>We therefore request the Inspector, for all the reasons herein, to modify the FDL Plan and respectfully refer the Inspector to Suggested Modification 1 above.</p>
Q7 Modification	<p>SUGGESTED MODIFICATIONS</p> <p>6.1 Suggested Modification 1</p> <p>a) That all or some of the Talke sites be removed from the FDL Plan, or alternatively that the number of proposed dwellings for all or some of the Talke sites be reduced.</p> <p>b) This can be compensated for as follows:</p> <p>(1) The FDL Plan, at para 5.5 (Housing Requirement and Supply Information figures), indicates that, whereas the Housing Requirement is 8000 dwellings over the duration of the plan ("the term"), the FDL plan allows for 8,663 units. That the Council be asked to consult with the SCC, and also directly with the School Organization Team, specifically about the School, as well as directly with the School itself, as to possible solution and, if there is none, to accept that Suggested Modification 1 should apply.

7. CONCLUSION

For all the reasons above, we believe that the FDL Plan is neither Sound nor (per para 35 NPPF) "in accordance with legal and procedural requirements".

Notwithstanding, we are not requesting that the FDL Plan be struck down. We recognize that the Borough needs a strong and robust local plan which, in most aspects, the FDL is.

However, nor are we "nimby"s. Had the proposals in the FDL Plan for a local contribution to the Borough's housing need been for a reasonable number of dwellings in, or in the vicinity of, the Village, and not on precious and valuable Green Belt land, this representation would in all probability not have been submitted. It is not, however, reasonable for not only the character, but the very nature, of the Village to be irreversibly damaged and probably destroyed, by the building of a number of houses way out of proportion to the size of the Village, and greatly out of kilter to the ratio of the population of the Village to the Borough as a whole. It is not unreasonable that an objection be raised to this.

We therefore request the Inspector, for all the reasons herein, to modify the FDL Plan and respectfully refer the Inspector to Suggested Modification 1 above.

1 Consultation (not part of the Plan)

Comment ID	NULLP340
Order	6
Number	1
Title	Consultation (not part of the Plan)
Consultee Family Name	Withington
Consultee Given Name	Clare
Q4 Part of document	Paragraph
Q5 Legally compliant	No
Q5 Sound	No
Q6 Details	<p>The consultation is not meaningful and is flawed as it doesn't comply with Gunning principles.</p> <ul style="list-style-type: none"> • Gunning Principle 2: Sufficient information needs to be supplied for the public to give the consultation 'intelligent consideration'. • Gunning Principle 3: There needs to be an adequate time for the consultees to consider the proposal and respond. <p>Issues and Options consultation - The first lot of posters put up specifically precluded the option for people to write in either by post or email – and only provided details to make comments via portal “<i>The document is available to view and respond to online at www.consult.newcastle-staffs.gov.uk</i>”. When it was extended the next poster did not allow emails to be considered.</p> <p><i>“Responding - We kindly ask that all representations are made online via the link above. Representations to our email inbox will not be accepted. If you do not have access to the internet, you can submit your comments by post to:”</i></p> <p>In the earlier consultations there were problems with people being able to access the portal (people couldn't register or download the document due to IT issues - also the portal timed out after a short period of time meaning responses were lost and also cut short due to a character (not word!) limit!). There were missing documents from the evidence base which were uploaded part way through the consultation – this also resulted in the Issues and Options consultation being extended from deadline of 13th December 21 to 24th January 2022 following missing out Betley (a rural service centre) totally out of the Issues and Options document.</p> <p>In earlier iterations of the Local Plan the AB2 site boundary and plan were not included within the Issues and Options Plan, it was just marked by a star on a map (along with Keele Strategic employment site). It was only through interrogating the officers that a meaningful development plan for AB2 showing the proposed boundary (69 ha) was obtained and circulated by the Parish Council (not the Borough) to allow people to properly comment. At that stage they didn't think it was needed as it was just a proposal not a site allocation... so how could people comment meaningfully at that stage?</p> <ul style="list-style-type: none"> • Gunning Principle 4: Conscientious consideration must be given to the consultation responses before decisions are made. <p>Earlier consultations responses have not been taken into consideration - and there is no clear audit trail to show how these have been considered and why they have not been taken into account.</p> <p>There have been two officer reports considered by Cabinet regarding the consultation outcomes :</p> <p>1) The Cabinet report 19 July 2022 on Consultation response to Local Plan Issues and Options.</p> <p>This report provides an officer's summary (only) of the issues raised with percentages showing for and against. It does not set out how the Issues and Options consultation response has been considered during the production of the First and Final Draft Local Plan. However it is clear that no views on the Growth Strategy for Housing and Employment have been taken into consideration:</p> <p>In the Issues and Option Stage views given were for a majority support for Option 1 – national minimum, standard methodology target - equating to 7000 homes and need for 46ha employment land (noting that there was already a supply of 64ha providing a surplus of land).</p> <p>In the First Draft Local Plan this was set out as :</p> <p>Policy PSD 1: Overall Development Strategy</p> <ol style="list-style-type: none"> 1. A minimum of 7,160 dwellings will be delivered in the Borough over the Plan period 2020-2040 which equates to 358 dwellings per annum. 2. Provision will be made for a minimum of 69 hectares of employment land to support the local economy. The existing employment land supply of around 50 hectares will be allocated to secure its future use. (<i>Noting a further 19 hectares was required</i>) <p>In the Final Draft Local Plan this is now:</p> <p>Policy PSD 1: Overall Development Strategy</p> <ol style="list-style-type: none"> 1 A minimum of 8,000 dwellings will be delivered in the Borough over the Plan period 2020 – 2040 which equates to 400 dwellings per annum. 2 Provision will be made for a minimum of 63 hectares of employment land over the Plan period 2020 – 2040. <p>These are minimums with no upper limit set?</p> <p>This clearly discounts the views of the previous consultations and also evidence base.</p> <p>In the Issues and Options consultation it was stated that the 63 ha minimum of employment land in the Final Draft (according to earlier draft versions) could be met from an existing land supply of 64ha.</p>

	<p>However in the Final Draft with AB2A total site allocation of 80ha (previously 69ha) which includes 22 ha of employment land (the other 58 ha removed from green belt for ancillary uses to support the employment), plus KL15 of 11 ha of employment land - this takes the figure up to 96 ha.</p> <p>If you take into account the total amount of land allocated for employment/ancillary uses this is a total of 155 ha in the Local Plan. (64 ha existing land supply plus 80 ha for AB2a and 11 ha for KL15)</p> <p>At Issues and Option Stage, the Officer's report notes the majority objection to the inclusion of AB2. In addition two petitions were submitted to the Borough Council; one containing 294 signatures, with the other containing 1376 signatures. Both of these petitions were in response to Question 18 of the Issues and Strategic Options document; "should site AB2 – Land south east of Junction 16 be considered for Green Belt release?" A further 757 identical letters with regard to the same issue were submitted to the Borough Council in response to the consultation.</p> <p>The petitions & letters combined with the representations made via the consultation portal give a total of 6076 comments made on the Newcastle-under-Lyme Local Plan Issues and Strategic Options Consultation</p> <p>2) The Cabinet report Janary 2024 on Consultation reponse to the First Draft Local Plan.</p> <p>The officers report from Jan 2024 summarises a lot of points and provides an officer's view (biased?) considered by members when making a decision to move the plan forward. In almost all responses the officer provides one or two paragraphs of a generic response to a raft of issues raised rather than addressing each valid point individually. Most are responded to with the same standard approach... <i>"The council will review the policy wording and approach in the light of consultation responses received"</i> - which appears throughout the document as a standard response.</p> <p>A further petition requesting a review of the Council's housing targets - with approx 1850 signatures on the online petition was submitted.</p> <p>Despite all of the above the housing numbers have grown to a minimum of 8000 and the AB2 site is now even larger from 69 ha to 80 ha . All of which exceeds Turley's Employment Need Assessment in 2020 which stated that employment land was needed to support that growth of 8000 approx was 52.6ha, although the current supply was 64.8ha - for <i>Growth Option 2: Sustainable growth target (Experian baseline)</i> - <i>Plan for a housing target which aligns with projections for economic growth (Experian model projections)</i></p>
Q7 Modification	Lisen to the views of the people of Newcastle under Lyme and remove the excessive amount of land to be taken from the Green Belt through AB2 and instead look to achieve the national minimum - standard methodology target for both housing and employment.

Consultee Family Name	Harrison
Consultee Given Name	Emma
Q4 Part of document	Paragraph
Q6 Details	<p>The consultation itself is seriously flawed. The staff at the arranged public events had little to no knowledge of the sites proposed or the local area, they were unable to answer even the most basic questions put to them and simply kept referring us to the information on the boards or the one member of staff who seemed remotely capable of answering anything.</p> <p>I'm not sure how it could be called a consultation meeting when no staff noted any comments made by anyone, the one gentleman who was able to respond gave generic answers and dismissed all concerns about the effect on the local area with 'well these things have to go somewhere' rather than knowing why particular sites had been chosen or the issues around specific sites.</p> <p>The plan is written in such a way that the average person has no real way of understanding the finer points, it seems to be designed to confuse. The portal to object is so difficult to navigate that it is virtually impossible to use (hence the email after several failed attempts to access). Working through the literature to find appropriate places to list objections is overly complicated and time consuming. It's almost as if they hope that people will give up.</p> <p>The figures used to back up the excessive building have been proved to be incorrect, the council's refusal to look into this means that the entire document is tainted and based around falsehoods.</p> <p>Opposition Councilors raised issues with access to reports prior to the vote on the plan, this was rejected by the ruling party and voted through regardless of any issues raised. It has become apparent that councilors hadn't even read the plan when they voted, decisions as important as this should be done after scrutiny of facts not just to follow the party line.</p>

Q6 Details	<p>Please note the contents of the attached letter which sets out the Council's comments in this regard. Please do not dilute the comments in any officer reports as the document needs to be read in context alongside the previous responses made.</p> <p>Consultation (Legal Compliance)</p> <p>We note that few of the issues raised at the Regulation 18 stage have been addressed. One of the issues raised was the failure to run a 'Gunning' compliant consultation. We note that this was ignored. It is unclear how our previous comments on Site AB2 were taken into account, or whether they were taken into account.</p> <p>Our view remains that the Regulation 18 consultation was unlawful.</p>
Q7 Modification	As above
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	As set out in this response and the previous 2 responses - the Parish Council has strong objections in particular to the inclusion of AB2.

Q6 Details	<p>The consultation itself is seriously flawed. The staff at the arranged public events had little to no knowledge of the sites proposed or the local area, they were unable to answer even the most basic questions put to them and simply kept referring us to the information on the boards or the one member of staff who seemed remotely capable of answering anything.</p> <p>I'm not sure how it could be called a consultation meeting when no staff noted any comments made by anyone, the one gentleman who was able to respond gave generic answers and dismissed all concerns about the effect on the local area with 'well these things have to go somewhere' rather than knowing why particular sites had been chosen or the issues around specific sites.</p> <p>The plan is written in such a way that the average person has no real way of understanding the finer points, it seems to be designed to confuse. The portal to object is so difficult to navigate that it is virtually impossible to use (hence the email after several failed attempts to access). Working through the literature to find appropriate places to list objections is overly complicated and time consuming. It's almost as if they hope that people will give up.</p> <p>The figures used to back up the excessive building have been proved to be incorrect, the council's refusal to look into this means that the entire document is tainted and based around falsehoods.</p> <p>Opposition Councilors raised issues with access to reports prior to the vote on the plan, this was rejected by the ruling party and voted through regardless of any issues raised. It has become apparent that councilors hadn't even read the plan when they voted, decisions as important as this should be done after scrutiny of facts not just to follow the party line.</p>

Q6 Details	<p>Please see attached representations. HBF are unclear if the duty to cooperate has been met</p> <p>From the information available we do not know if there has been discussion about any requirement to meet unmet need of a neighbour, or if indeed the housing standard method calculation includes any allowance for this. We therefore cannot tell if the Duty to Cooperate has been met. It is surprising there is no mention of the Duty to Cooperate, unmet housing need or neighbouring authorities within the Plan itself. More information is needed for the plan to be effective and fully justified. Compliance with the Duty to Cooperate is also an essential part of effective plan-making and national policy.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	HBF requests to participate in the Hearing Sessions for the Local Plan Examination, the HBF considers that their involvement is necessary to ensure that the home building industry is able to respond to any housing related issues raised during the hearing sessions.

Q5 Legally compliant	No
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>There are a number of reasons as to why this Local Plan is not legally compliant, unsound and fails to comply with the duty to co-operate. I will list these in turn:</p> <p>The local plan will not be consistent with the incoming National Planning Policy Framework (NPPF).</p> <ol style="list-style-type: none"> 1 There is no evidence that the Brownfield sites in the area are being investigated before condemning the greenbelt sites. For e.g. there are dwellings which are unused in the areas which could be repurposed which have not been considered. 2 There is no evidence of a traffic survey or any effort to mitigate the concerns raised regarding school traffic or the existing extensive traffic problems already in the area (especially Chapel Lane, which has no footpaths). At the planning meetings, it was inferred that Traffic Modelling had been carried out, but upon looking at the plan it is clear this only covers the M6 and A500 which is nowhere near our location. Parking is already a considerable issue, with cars parked up to and beyond our road (Freedom Drive). There has been no consideration of how the Local Plan will exacerbate these issues even further, causing extensive disruption to residents and the associated road safety concerns. <p>The consultation was poorly managed and communicated.</p> <ol style="list-style-type: none"> 1 I was not aware of the first consultation and only became aware of the second period when someone photographed and posted on Facebook a paper notice attached to the gate of NC13 before it got wet and blew away less than a week later. The meetings at Kildgrove Town Hall were also terribly managed. I personally queued up for 20 minutes to speak to a representative of Newcastle Council and when I eventually spoke to him, he did not know where NC13 was. This shows the lack of consideration for residents trying to discuss the consultation. 2 After speaking to a number of local residents, it is clear that the consultation process has been completely inaccessible for elderly people in particular. The planning portal was difficult to navigate and make comments and particularly for those who do not have IT skills and knowledge, this is a very exclusionary and intimidating practice. 3 In summary, I felt that the whole consultation process was a tick box exercise rather than an opportunity to engage thoroughly with residents about their concerns. <p>The Local Plan has not adequately considered the loss of the local heritage of the area.</p> <ol style="list-style-type: none"> 1 This particularly relates to the well-known views across NC13, affectionately known locally as 'The Promenade'. You can even see the Welsh Hills on a clear day, which will be lost as a consequence of the Local Plan. When walking from Packmoor to Mow Cop, NC13 is the only proper Greenfield site, highlighting the importance of maintaining this. Despite the plan stating 'buildings are designed to ensure they are not intrusive to the significant views in the surrounding area', this is factually incorrect. Building houses in NC13 will of course be intrusive and to state otherwise is offensive to local people's intelligence. 2 As a result of NC13, the area will no longer constitute as semi-rural due to the increase in habitants and loss of Greenfields and will rather be closer to an urban location. 3 The Local Plan provides no specific information about how local services, including Thursfield Primary School and doctor's surgeries, will be affected and consequently compensated for the increase in residents as a result of NC13. It merely states 'financial contributions to improvements in the capacity of local schools and health facilities'- it is not clear what this actually means and if this contribution will be sufficient. <p>The Council Planning meetings were unfair and a foregone conclusion before any debates were heard.</p> <ol style="list-style-type: none"> 1 Labour Councillors during these meetings stated that due to the sheer volume of documents and evidence, there was not ample time to adequately consider the application (they were given just a few days to look at this). Their suggestions to delay the process until everybody had time to review the documents properly were ignored. A vote was taken with 25 Conservative Councillors and 16 Labour Councillors present. The vote was carried out and was voted 25 against the motion and 16 for. Following this, there were debates between all parties and although there were valid points on both sides, the final vote on whether the plan would progress to full planning was 25 to 16 again. This was clearly a politically motivated vote and an example of 'towing the party line' rather than a genuine consideration of the validity of the Local Plan.

Q6 Details	<p>Regulation 19 Publication – Not Compliant with Duty to Co-operate When the plan was first introduced, the publication and consultation for it was limited. We were unaware of the impact for our area until the second phase. Under the planning processes laid out in the Town and Country Planning Regulations 2012, Regulation 18 notices were put up. One was placed on the lamppost, part way down Bells Hollow which is a single lane road with limited footfall and inability to be seen from a moving vehicle. The second on a lamp post part way down Talke Road, which only has a footpath on one side and is a National Speed Limit Road. This was to cover the entire neighbourhoods affected by the original CT sites as listed in the first draft which is unacceptable. These two locations were not in areas of high footfall and we feel that there was inadequate publication of the regulation 18 notices in our Ward. As a community we printed the Reg 18 Notices and placed them in more high footfall areas and distributed to households in the vicinity to generate knowledge of the plans. These are steps that should have been taken by the local authority not the community. Furthermore, no community consultations were held in Red Street. Bearing in mind that we have an aging population, the majority of which do not drive, and the very limited bus routes, we feel that the local population were not adequately informed at Regulation 18 Stage. A complaint was lodged to this fact with the council but no response was received. It is not realistic to expect elderly residents to make informed decisions about their locality if they are not engaged. As a community, we organised a community meeting, which was positively attended and the council again were asked to include Red Street as part of the consultation at Reg 18 as one of the largest areas to be considered for housing, it needed to be part of their plan. Most people reported that they would not have been aware of the proposals without the input from the local community and the failing of the council to execute their duty under the regulations. Regulation 19 notices were sent to residents who had submitted responses to the Regulation 18 notice and included an email address with their response, but again, no Regulation 19 notices were published in the vicinity of Red Street to publicise the community consultation dates or the fact that responses can be submitted to the Final Local Plan. This is not sound decision making from a Local Plan communication perspective.</p> <p>We have since found the reg 19 notices – one is half way down Bells Hollow and facing into a field and un-readable from the road. The second is half way down Liverpool Road towards Talke, again on an open gate so unreadable from the road. Both of these Reg 19 notices are not in places of high footfall and therefore have done nothing to raise awareness in the area. This is further evidence that the Regulation 19 Publication is not compliant with Duty to Co-operate.</p>

Title	Consultation (not part of the Plan)
Consultee Family Name	Stratton
Consultee Given Name	Catherine
Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p>Local Plan</p> <p>I believe the process of the local plan is generally unsound from an accessibility perspective. The plan was only available in braille from 25th September, giving little time for anyone who required braille to read through the whole plan. This documentation was only printed in braille following my request 8th August 2024 and no foresight had been made to make a copy generally available at the Newcastle library.</p> <p>At meetings, held by the council, there was no interpreter available, so anyone deaf would have had to rely on friends/family. The posters at the meeting used small fonts making it difficult to read the information.</p> <p>There was also no provision for an easy-read translation, despite this being requested.</p> <p>It was mentioned by Councillor Fear at a Council meeting that the local plan was accessible to all but as mentioned above, the reality shows that it wasn't.</p> <p>I also put in a Freedom of Information request to Newcastle Borough Council on the number of people registered blind in the area. The response was that they didn't know. This would suggest that there was little consideration to how the Council were going to engage with members of the public who have a disability/learning difficulties so they could be included in responding to the plan.</p> <p>Site AB2 'Land at Junction 16 of the M6'</p> <p>I consider the local plan is unsound in proposing it.</p> <p>The site put forward is significantly bigger than initially stated as required in the document. AB2 is 80 hectares of land but only 22 hectares of land is required for employment. The proportions would put the housing/employment land ratio out of balance and could result in further housing being required in the small village of Audley.</p> <p>AB2 would sit on a heavy section of the M6 which is prone to high numbers of accidents. Typically the stretch between Junction 14 to Junction 18 bottlenecks frequently due to high numbers of traffic and high numbers of accidents occurring. Junction 16 roundabout and the approaches from the A500 are traffic-heavy and it can often take over 10 minutes to join the motorway from Audley (a distance of a mile).</p>

	<p>There is no easy access to AB2 currently, except from Park Lane, a narrow single-track country road. In the plan, it mentions that this would still be used as an emergency exit/entrance, the road is unsuitable for multiple, large vehicles.</p> <p>There is no public transport that goes near to AB2. There is limited public transport to Audley Village centre, a good mile or so from the site. This would mean increased traffic in the area, increasing CO emissions and noise pollution. AB2 is a strong green belt contender with established vegetation trapping CO emissions and noise pollution from the M6.</p> <p>Less than a mile away from AB2, in a neighbouring council area (Cheshire East) are two large areas being made into warehouses. One is currently under construction (million square feet) and one was constructed with 5 warehouses currently sitting empty due to no electricity. Within Newcastle-under-Lyme warehouses are sitting empty, there was one in Talke that sat empty for over 10 years, it was taken on eventually by JCB but will now be empty again. Some other sites/locations would be less disruptive and retain this area of green belt.</p> <p>Site AB15 'Land North of Vernon Avenue'</p> <p>I consider the local plan is unsound in proposing it.</p> <p>Vernon Avenue has already seen growth on the road with the addition of Barleyfields, planning permission granted for 2 additional buildings and then just off Vernon Avenue, 3 bungalows. All this has had a significant impact on an already busy road that provides access to Vernon Close, Meadowside Avenue and Westfield Avenue.</p> <p>With cars parked on either side of the road, the road can at times be narrow to drive down and is often treated as a rat run. During 2021 a child was knocked down and injured and I am surprised the numbers aren't higher.</p> <p>The site is proposed to have 33 homes built on it. That would mean a potential increase of at least 50 extra cars to an already busy housing estate. It is located at the bottom of a hill meaning there isn't easy access to the village. In the Sustainability Appraisal on page J9 it mentions site assessments presented in Appendix H indicate poor access across indicators for health and transport and accessibility</p> <p>In the Sustainability Appraisal, Page 120, it confirms that AB15 lies outside the 800m sustainable distance for access to primary school. This could result in increased traffic in the village with parents taking their children to school.</p> <p>In the Sustainability Appraisal, page 19 it quotes "AB15 is situated within an area of 'high' sensitivity and has a 'moderate' overall contribution to the purposes of the Green Belt according to the LSCA and Green Belt assessment"</p> <p>In the supporting evidence, Green Belt Assessment Part 4 Page D-3 it mentions that AB15 is a Moderate Contribution to Green Belt "The site falls within 250m of the Audley Conservation Area, therefore the site makes a moderate contribution to preserving the setting and special character of towns" On Page F-6 from the same report, there is a question regarding is the site in active use with a response of No. It is used every year from April to October housing 6 young cows. Local children love to come and see the cows.</p> <p>I would like to ask why other weaker sites weren't put forward to the local plan,</p> <p>Audley is a thriving busy village with schools and doctors at capacity. The local sewage works site is also at capacity. Adding 250 new homes to a small rural village would change the very nature and characteristics of the village. There are currently applications for other sites proposing 5-bedroom executive homes, these are neither affordable nor required housing for the housing needs of the village. Audley is an ex-mining village, with predominantly terraced houses. The elderly are requiring bungalows and the younger generation are requiring affordable housing (which does not include Shared Ownership). Sadly, the types of properties that could be built can't be defined.</p> <p>Thank you for taking the time to read my comments, I urge the council to review the sites in question.</p>

Title	Consultation (not part of the Plan)
Consultee Family Name	Jones
Consultee Given Name	Cllr David
Q6 Details	<p>Introduction</p> <p>The Labour group on Newcastle-under-Lyme Borough council represents the authority's principal opposition group. The group comprises of 18 of the 44 total council members on the authority. Throughout the local plan process, the Labour group has scrutinised the plan, when afforded opportunity to do so, during scrutiny committee, planning committee and full council. Though several recommendations have been proposed, these have not been taken into account by the administration, and therefore the final version of the plan (at Regulation 19 stage) has not taken account of opposition suggestions. This response outlines several concerns that we feel critical to the success of the plan, and pertinent to the planning inspector during official examination of the plan.</p> <p>Overview</p> <p>The Labour group acknowledges the significant amount of work put into preparation of the regulation 19 pre-submission draft local plan. The Labour group acknowledges the need for a functional and sustainable local plan to ensure development within the borough is guided towards areas of unmet need, or suitability.</p>

We wish to be clear that there are many areas of the proposed plan that we agree with and support. However, there are areas of the plan where we have concerns. Whilst these concerns make up most of our comments, they are presented with due respect to several areas of the plan where we agree. We are committed to getting good value for money on behalf of our residents and delivering economic growth, but also protecting green spaces. Therefore, we are unable to support the plan in its current form, where the plans aspirations are unlikely to be matched by realised commitments. Our specific concerns, and proposals to help alleviate these are as follows:

Housing Targets

During Regulation 18 examination of the local plan the Labour group raised concerns over the adoption of a housing target of a minimum of 8,000 dwellings from 2020-40 equating to 400 dwellings per annum. Our objections to this housing target were based on a national minimum housing target calculation of 330 p.a. We further note that the housing and economic needs assessment commissioned by the council models a housing need of 347 p.a.1. In providing evidence for the adopted housing target of 400 dwellings p.a. the council relies on modelling provided by the housing and economic needs assessment update that suggests a forecast job creation of at mid-point between modelling forecasts 207 p.a.1, with a blended approach suggesting 237 p.a.

The Labour group notes the concern raised over available modelling data in the Turley Report:

"These are though becoming dated, with each provider having released new forecasts in the last year which envisage the creation of between 194 and 364 new jobs per annum between 2023 and 2040. Either would represent an improvement on the past trend, with Newcastle-under-Lyme having created only 20 jobs per annum on average since 2009, but the higher forecast – from Cambridge Econometrics – appears particularly optimistic given that it adds 100 jobs per year to its previous forecast, presented in the HENAU. This appears due to an unexplained upgrading of the growth prospects of three sectors that have not actually created any jobs in Newcastle-under-Lyme over the past five years, suggesting a need for caution before assuming that these sectors will indeed create far more jobs than forecast only a year ago."

Turley (March 2024) Housing and Economic Needs Assessment Update: Newcastle-under-Lyme

Based on these job growth forecasts, the report recommends a housing need of 400 dwellings p.a. The Labour group notes that the Regulation 19 Draft Plan identifies a housing need of 400 dwellings p.a. Consistent with this assumed significant growth forecast in jobs p.a., whilst noting that such housing numbers would be dependant on a 1085% increase in job creation p.a. The Labour group has significant concerns that the level of house building will not match job growth, and thus raises objection to the sustainability of these developments.

Delivering Affordable and Social Housing

The Regulation 19 Draft Plan does not set specific targets for delivery of affordable or social housing. With no clear target on delivery, the Labour group has significant concerns that over the lifetime of the plan limited development of these much-needed dwellings will occur.

The Turley report identifies a calculated need of 278 affordable homes p.a. Whilst challenged on this number, the report does highlight the growing demand on the housing register but assumes that this growth will be met through rising earnings and private sector offerings. The Labour group challenges this assertion, given that wage growth has vastly tracked behind house price, and average rental costs, growth; and that mortgage affordability has been impacted by a significant rise in the Bank of England base rates. The Labour group has concerns that such assumptions will lead to an under-delivery of affordable homes.

The Regulation 19 Draft Plan recommends a number of policies for delivery of affordable and social housing. These are formed under Policy HOU1 Affordable Housing and include:

"On-site affordable housing provision will be required on sites of 10 dwellings or more, or sites of 0.5ha or more at the following percentages:

- a. 30% of all units on greenfield sites.*
- b. 15% of all units on brownfield sites within the 'low value zone' as shown on the policies map.*
- c. 25% of units on brownfield sites within the 'high value zone' as shown on the policies map."*

"Given the acute need for social rented accommodation, the HNA Update (2024) recommends the tenure split of affordable homes to be 65% social rented, 10% other affordable housing product and 25% affordable home ownership through First Homes. Opportunities should also be taken to include a proportion of affordable older persons accommodation as part of the affordable housing provision, particularly involving care provision. Planning permission may be granted for an alternative tenure split provided that robust evidence demonstrates that a different split is more suitable. This will be informed by market conditions and local housing need at the time"

Unfortunately, at the time of writing we have not been able to locate within the Policies Map document any reference to distribution of sites across 'low vale' and 'high value' zones. However, on the assumption that delivery across non-greenfield sites will amount to 20% of dwellings in developments of 10 dwellings or more, or 0.5ha in size. On this assumption of the 400 dwellings-built p.a. only 80 p.a will be affordable or social housing. This is dramatically below the number of affordable of social rent dwellings needed. Whilst the plan mentions delivering affordable housing, the Labour Group finds no tangible commitments that provide reassurance of its delivery. Current housing policy has largely failed to produce affordable housing due to systemic issues affecting supply, demand, and financing. The introduction of 'Right to Buy' has seen local authorities struggle to replace housing stock, while lengthy approval processes, excessive regulations, and permitting delays have hindered new builds. Rising construction costs, driven by increased material prices, labour shortages, and supply chain issues, have pushed developers towards high-end housing. Limited government support, insufficient subsidies, and poorly targeted incentives have compounded the problem, with the previous government (2010-2024) failing to allocate adequate funding or attract developers. Housing is increasingly treated as an investment asset, with speculative bubbles inflating prices and reducing affordability. Ineffective policies, such as underfunded public housing and rent controls, exacerbate these challenges. In areas like Newcastle-under-Lyme and wider North Staffordshire, wages lag behind housing costs, leading to an affordability gap. Existing rental assistance schemes are often inadequate, failing to cover the full rent cost, and there is a failure to address the

needs of the homeless and vulnerable populations, leaving affordable housing out of reach for those who need it most.

The Labour group believes the policies within the Regulation 19 Local Plan will not lead to the delivery of 278 affordable homes p.a. That whilst the commitment to secure between 15-30% of dwellings as affordable homes is a good first step. To meet the demand required, the policy would need to see 70% of new developments as affordable or socially rented. Whilst the Labour group accepts that this percentage would potentially deter developers, we have significant concern that the current 15-30% range will not be met. Rising construction costs has seen a significant number of developments across the borough seek to vary their social housing contributions under 106 agreements. This has led to significant under delivery of these much-needed homes across the borough. The Labour group proposes a recommendation to improve the deliverability of affordable and social housing.

Labour group proposal

That for developments on public owned land, the minimum percentage of dwellings allocated for affordable and social rented homes is increased to 50%. Given that several large housing developments will occur on either Borough or County Council owned land, and increased allocation in these areas, where land purchase is not necessary will address significant shortfall between anticipated built and need.

Further, whilst outside of the material considerations for the local plan, the Labour group proposes that the Council explore alternative options for delivery of affordable and social housing, including the reintroduction of council stock should delivery continue to be deficient.

The Council generally works with housing developers and other stakeholders to facilitate affordable housing projects – but these have not and will not meet the demand or provide the foundations required for the next twenty years. The argument for our council returning to build council houses revolves around several key points, emphasising the need for more affordable housing, the limitations of private market solutions, and the role of public investment in addressing the housing crisis.

If council builds and retains its housing stock, we create long-term assets that generate rental income and remain under public control. This is a sustainable approach to housing provision, as opposed to relying solely on private developers who may prioritise short-term profit over community needs.

Our proposal to return to council housebuilding is seen by our group as a crucial solution to the affordable housing crisis. By taking control of housing supply, council can directly address the needs of vulnerable residents, provide stability, and counter the failures of market-driven housing policies. Investing in council housing is also a long-term, sustainable approach that can contribute to the overall health and well-being of communities within the Borough.

Transport

It is important for local planning authorities to undertake an assessment of the transport implications in developing or reviewing their Local Plan so that a robust transport evidence base may be developed to support the preparation and/or review of that Plan.

Bus services connect the main towns in Staffordshire & Stoke-on-Trent and provide cross boundary links with neighbouring authorities and towns. Whilst bus services have declined in recent years, they continue to provide vital connections between people, services and places of work and enable people to make more sustainable travel choices.

Staffordshire & Stoke-on-Trent's bus network is operated by several private operators including Arriva Midlands, First Potteries (operating 70% of services in Stoke-on-Trent), D & G, and National Express West Midlands who are significantly increasing their presence in the county. Diamond Bus, Stagecoach and Select Buses also operate services on selected routes.

Key public transport issues include congestion and unreliable journey times, limited frequency of services and falling bus patronage levels affecting commercial viability. To reduce per capita road transport emissions, Staffordshire County Council wish to improve walking, cycling and bus facilities, and are promoting their use to encourage a modal shift away from car use.

Rail connectivity in Staffordshire is currently delivered through a comprehensive rail network and several different franchises. The West Coast Main Line is 700 miles in length from London Euston to Glasgow via Birmingham providing fast services from several Staffordshire stations to London. It is one of the busiest freight routes in Europe and part of the Trans-European Transport Network (TEN-T) route, carrying 40% of all UK rail freight traffic. There are at least 14 train operator companies using this line. Cross Country operate services from the South Coast, Reading, and Birmingham to Manchester calling at Stafford and Stoke-on-Trent. The Crewe to Derby Line which runs via Stoke-on-Trent and Uttoxeter currently suffers from overcrowding.

The local plan makes no proposals to address these issues other than a reference to:

High Speed Two (HS2) services will pass through Staffordshire when Phase 1 is operational. HS2 services will stop at Stafford Station and will improve journey times and connectivity to London and Birmingham. Phase 2b will provide further improvements in journey times and capacity from Stafford to London, Birmingham and the North West, while 27 releasing capacity on West Coast Main Line services for other Staffordshire & Stoke-on Trent stations."

Since the publication of the draft plan the HS2 project has been scrapped by the previous Conservative government.

"The need for a link between the M54 and the M6 was identified in the 2014 Road Investment Strategy (RIS) to relieve congestion on the A460, A449 and A5. The preferred option was announced in 2018 (and a planning application submitted in 2020) which includes a dual carriageway link between M54 J1 and M6 J11 and associated improvements. 6.9. The Midlands Connect studies for the A50 / A500 and A5 have already begun to consider how congestion issues can be addressed and growth supported along these key corridors. The case for investment and opportunities to deliver transport interventions to accelerate growth in the region are being explored. This will lead to preferred investment priorities along these routes which will likely need to be delivered to fully realise the growth potential of Staffordshire & Stoke-on-Trent."

No further announcements on this road infrastructure have been announced.

Critically however, there is no mention of improved transport links to the Town centre or the Royal Stoke Hospital or the new planned Integrated Care Hub at Bradwell or a plan to improve connection to the rural areas of the borough.

As part of the evidence base for the local plan the Council commissioned a Strategic Transport Assessment by Sweco UK Limited. The SWECO report outlines the existing pressures on the highways network throughout the borough, including the following locations:

- “• Slow moving traffic observed in and around Newcastle-under-Lyme centre,
- Some limited speed reductions in southern areas of Newcastle-under-Lyme Borough, Madeley and Audley,
- Slow moving traffic on the A34 Newcastle Road from the A500 to north of Clough Hall Drive though largely no queuing. Some traffic congestion on signalised roundabout”

SWECO (July 2024) Strategic Transport Assessment

The draft local plan makes no reference to these existing pressures, nor does it provide any solutions to these pressures.

The SWECO report also notes the existing pressures on links to the strategic road network, notably the M6 and A500.

“• M16 J16 - Observed data shows traffic congestion along the A500 eastbound approach with decreased speeds (0-10mph AM, 10-0mph PM)

- M6 J15 - The speed data indicates that queued traffic (speed 1-10mph) is observed along the A500 approach to the A500 Queensway\ Newcastle Road roundabout in the PM peak,
- A500\Alsager Road – Can be inferred from data to be operating without any capacity related congestion,
- Talke Interchange - Some relatively slow-moving traffic, along the section between the Newcastle Road\Talke Road roundabout. However, the data indicates that this is slow moving traffic, but in general the data does not show any large reductions in speed due to queuing,
- A500/A527 - Data indicates that traffic is operating without the presence of queues long term queues during the peak hour,
- A500/A34 -In the AM peak observed speeds of around 20-30mph are in line with the speed limits in place on the A34. This is with the exception of the A34 northbound approach to the gyratory which shows lower observed speeds of around 10-20mph. In the PM peak lower speeds of 10-20mph are also observed on the southbound approach to the gyratory.”

SWECO (July 2024) Strategic Transport Assessment

Again, there are no proposals within the local plan to address these existing pressures on connectivity to the wider strategic road network.

The SWECO report modelled the impact of housing and strategic site developments on traffic flow and made the following conclusions.

Keele:

“It can be seen that there is a further worsening from the core-only scenario with now severe congestion forecast in both directions of Keele Road between the University and Gallowstree Lane roundabout. Evidence of re-routing is seen with increases in V/C forecast for Mill Street in Silverdale. Moderate junction delay issues begin to become apparent at the signalised junction of Cemetery Road/Church Lane/B5044. These patterns are also visible in the difference plots (Figure 8-15 and Figure 8-16) where volume has increased around the B5044 (Silverdale), A525 (Keele Road) and A53. It should be noted that the NSMM model is developed within the CUBE modelling software application. A limitation of the CUBE software is that it does not model blocking back (traffic queuing back to previous road links with potential to impact other links and junctions). Therefore, there is the possibility of additional related impacts to queuing traffic on Keele Road, for example to the Keele University roundabout.”

SWECO (July 2024) Strategic Transport Assessment

The report recommends mitigations at Keele:

“A new link road running between University Avenue/Barkers Wood Road to Whitmore Road. The link road will be a 30mph 7.3m wide road connecting the A525 with the A53 to provide an additional route to distribute trips and relieve pressure on the A525.

A new circular bus service serving Newcastle-under-Lyme bus station, Keele University, KL15, KL13, TB19, and SP11 sites via Keele Road, the new link road and Whitmore Road.”

The report notes the impact of these mitigation measures:

For Keele, the mitigation measure of a new link road added between the University and Whitmore Road is seen to have a positive impact on the reduction of traffic on Keele Road between the University Roundabout and Gallowstree Lane.

It can be seen that during the AM period, westbound traffic is most improved whilst in the PM period, eastbound traffic is most improved. This is likely to be of significant improvement for University traffic and related bus services.

It can also be seen that the mitigation brings volume back or nearly back to capacity for each direction and period. There is potential for additional improvements to be made with high impact travel plans and other local bus service improvements.”

SWECO (July 2024) Strategic Transport Assessment

The Labour group notes that this report only mitigates the impact of the proposed developments, and in doing so “brings volume back or nearly back to capacity for each direction and period”. The Labour group has significant concerns that the mitigation measures proposed in the report are not sufficient to provide long-term sustainable traffic flow in the area.

The report recommends the following mitigations at Audley:

“Bus provision connecting employees within Stoke-on-Trent, Newcastle-under-Lyme and Crewe with AB2 employment. It is assumed the service is timed to meet the needs of any shift patterns and enable some connection with other existing public transport services. This is expected to be a replacement for 10% of car trips originating in nearby zones that could use this and other existing public transport services to access AB2 within 1 hour.”

SWECO (July 2024) Strategic Transport Assessment

The report recommends the following mitigation measures in Talke:

“Extension of the NW-bound Newcastle Road two-lane approach to the signalised junction at Newcastle Road/Coalpit Hill. This will give additional space for right-turning traffic that is leading to junction delay issues in scenario 2 – core local plan sites.

Cedar Avenue – Community improvements to Cedar Avenue to increase attractiveness of walking, wheeling, and cycling (not able to model in the strategic NSMM transport model).”

SWECO (July 2024) Strategic Transport Assessment

The Labour group notes the Local plan has identified mitigation measures at Keele and Talke:

“13. Transport infrastructure identified through the Strategic Transport Assessment will be supported.

This is to include: - a. a link road between A525 Keele Road and Whitmore Road. b. Improvements to Talke Signals (A34 Newcastle Road / Congleton Road / Coalpit Hill)”

SWECO (July 2024) Strategic Transport Assessment

Labour group notes that funding for these mitigation measures will be identified via 106 funding levied on developments in the area. The Labour group has significant concerns that mitigating the impact of these developments will require 106 funding, and that given the impact of rising cost of living, several developments have proceeded following waiver of the 106 funding requirements. We note within the councils own Infrastructure Baseline Report the following:

“At the same time, it is critical that any infrastructure expectations do not disincentivise development to such an extent that it becomes unviable, thus inhibiting Newcastle-under-Lyme’s growth opportunities.

This challenge is particularly acute in those parts of Newcastle-under-Lyme where land and property values are low and profit margins on development are small or even non-existent. In some parts of the Borough, the private sector will not be able to meet all of the infrastructure/policy requirements which are ultimately set out in the Local Plan. In such cases, an appropriate balance will need to be struck between competing interests and demands.”

NBC (July 2024) Infrastructure Baseline Report

The Labour group also notes the Strategic Transport Assessment provided by the SWECO report does not include assessment of the impact of public transport, outside of assumed reductions in car usage. The borough of Newcastle-under-Lyme, like many other post-industrial non-metropolitan districts, can be considered as a deprived public transport area. Within the borough, public transport is provided via the bus network, and thus subject to the impact of increased traffic and lack of mitigation. At present, travel from Newcastle to connecting rail network stations at Stoke is a 40-minute bus journey outside of periods of high traffic congestion, with a 1 hour journey to Crewe. The Labour group has concerns that the local plan, whilst referring to increased walking and cycling, has no reference to improving the outdated, inefficient, and poor provision of existing public transport across the borough.

Labour group proposal

The Labour group wants to see the local plan have firm detailed and costed plans for a fully integrated transport plan that serves the current and proposed needs of our communities. That such integrated transport plan involves the combining of different modes of transport to maximise ease and efficiency for the user in terms of time, cost, comfort, safety, accessibility and convenience. We are aware that the cuts to bus routes and times across the borough are leading to difficulties in accessing employment, education and health services. We also know that lack of connectivity leads to social isolation.

The Labour group expects to see how the borough plans to address the needs of residents within the borough, demonstrate how it supports the proposed growth in development and population in the plan by working with bus operators, planners and other local authorities such as Staffordshire County Council and Stoke on Trent City Council to get Newcastle moving and growing.

Education

The Borough of Newcastle is divided into two distinct areas for the purpose of school place planning: 1) Newcastle and 2) Kidsgrove. These areas are further broken down into smaller planning areas, which are used to determine the number of school places required. These smaller planning areas have been grouped based on the geographical location of schools and by analysing pupil movement between schools and catchment areas.

A two-tier education system, consisting of Primary (ages 4-11) and Secondary (ages 11-16/18) schools, operates across the Borough. Sixth form provision is available on-site at two secondary schools within the district and is mainly accessible at Newcastle College, with The King's Church of England School, Kidsgrove, also providing this provision. As of September 2020, Newcastle has 30 primary schools, 1 infant school, 1 junior school, and 7 secondary schools, while Kidsgrove has 9 primary schools and 2 secondary schools.

The Infrastructure Baseline Report provided by the Council within the local plan evidence base identifies most areas of the borough have existing capacity within local primary schools to satisfy the proposed developments within the local plan. It is noted however that Newcastle region 5 covering the villages of Silverdale and Knutton would have insufficient school places for the proposed developments on the former municipal golf course.

In the infrastructure delivery plan, the local plan proposes the development of a new primary school on the former municipal golf course:

“The relatively large amount of development set out in the plan for the Keele University corridor (with the inclusion of development site SP11) means there is an identified need for a new 1 Form of Entry (FE) primary school.”

Infrastructure delivery plan

The Labour group notes that the infrastructure baseline report does not include St John's primary school in Keele in meeting the numbers required by this development. Evidence from the school demonstrates the high number of pupils registered at the school from the villages of Silverdale and Knutton. Further, concerns have been raised by members of the governing bodies of the four existing catchment primary schools; St Johns Keele, St Luke's Silverdale, The Racecourse Silverdale and St Mary's Knutton regarding the impact of a new primary school on pupil numbers. More alarmingly, neither Staffordshire County Council, nor the Borough council have communicated with the existing primary schools, including discussions over expansion. The Labour group notes that the Borough council has held conversations with St Chads Kidsgrove, Sir John Offley Madeley and Baldwins Gate primary schools over expansions

to their existing estate to sustain development, and therefore raises concerns over the unequitable approach to the schools in the Keele, Knutton and Silverdale area.

Labour group proposal

The Labour group proposes that the prior to adoption of the local plan, that the Council undertakes a consultation with existing primary schools in the Keele, Knutton and Silverdale area to determine if existing capacity can be increased through expansion of the existing estate.

Health & Social Care

Health services in England are overseen by NHS England, which operates five regional teams to commission healthcare services. NHS Midlands and East support the commissioning of services in the West Midlands in partnership with Clinical Commissioning Groups (CCGs) and Acute Trusts.

Clinical Commissioning Groups, established by the Health and Social Care Act 2012, changed how primary care services are planned. They commission most NHS hospital and community services, including hospital care, rehabilitative care, urgent care, community health services, and mental health and learning disability services.

The six Clinical Commissioning Groups serving Staffordshire and Stoke-on-Trent are:

- Cannock Chase CCG
- East Staffordshire CCG
- North Staffordshire CCG
- South East Staffordshire and Seisdon Peninsula CCG
- Stafford and Surrounds CCG
- Stoke-on-Trent CCG

The focus for health and social care is on prevention and providing care outside hospitals where possible. 'Together We're Better' is the Sustainability and Transformation Partnership (STP) for Staffordshire and Stoke-on-Trent. The Staffordshire and Stoke Sustainability Transformation Plan (2016) identifies key challenges, including:

- High rates of obesity, diabetes, and smoking in certain areas.
- An ageing and growing population driving up demand.
- Frequent A&E attendance and a risk-averse staff culture.
- A notable proportion of patients with common mental health conditions.
- Higher than average urgent care activity at acute trusts due to poor primary and community infrastructure and citizen behaviours.

In January 2019, NHS England published The NHS Long Term Plan (LTP) and the Five-Year Framework for GP contract reform, setting out ambitions for the next ten years to improve patient care, health outcomes, and to deliver more coordinated primary and community care. The Five-Year Framework introduced Primary Care Networks (PCNs) as the foundation of Integrated Care Systems (ICSs).

Now established, PCNs are groups of one or more GP practices serving populations of 30,000 to 50,000 patients, providing a strategic view of primary care delivery and identifying estate requirements. ICSs, set to replace STPs in April 2021, will offer strategic oversight at the regional level, identifying opportunities for integrated working across health and social care partners. By April 2022, ICSs will become statutory bodies.

The infrastructure delivery plan notes the following:

"There are three Primary Care Networks (PCNs) in Newcastle-under-Lyme (Newcastle North, Newcastle Central and Newcastle South PCNs) that serve the residents of Newcastle-under-Lyme. These comprise 17 general practices. Of the practices in Newcastle-under-Lyme, only Silverdale Medical Centre is reported to have surplus capacity to accommodate patients with all other practices reporting insufficient capacity. In summation, there are capacity issues at many locations in Newcastle-under-Lyme with some of this attributed to the level of growth experienced by the borough in recent years and a historic lack of funding for the estate via mechanisms such as the planning system"

Infrastructure delivery plan

The Labour group notes all GP practices, outside of the practice in Silverdale, which must be noted is twinned with the Town Centre practice at Ryecroft, are currently at patient capacity. The Labour group further notes that the only proposal within the Local plan is for a new GP practice on the former Golf course, though we also note that this is a relocation of an existing local practice.

Social care

The Department of Health and Social Care oversees adult social care policy in England, with the Care Quality Commission acting as the independent regulator to ensure care services are safe, effective, compassionate, and high-quality.

In England, adult social care can be publicly or privately funded or provided voluntarily. Local authorities are responsible for publicly funded care and have a legal duty to provide care for those who meet nationally set needs and means tests, either by commissioning or directly delivering services.

Pressures on adult social care budgets have risen in recent years due to increasing demand (from a growing, ageing population with more long-term and multiple health conditions), reduced local government funding, and higher care costs.

Consequently, the adult social care sector is facing growing challenges, including a fragile provider market, increasing unmet needs, more strain on informal carers, reduced investment in prevention, pressure on an already overstretched care workforce, and a diminished capacity to help ease demand on the NHS.

In the infrastructure baseline report the following is noted:

"It should be noted that local demand for care services will vary based on the overall size of the population and specific population care needs, the affordability, quality and location of existing services. This is covered in more detail within Staffordshire County Council's market position statements and associated intelligence documents. Newcastle-under-Lyme currently has significant provision for extra care facilities, residential care homes & nursing homes, but it is anticipated that during the Local Plan period additional units within each of these sectors will be required."

Infrastructure baseline report

The Labour group notes that requirement of additional adult social care facilities during the local plan period. The Labour group further notes the lack of identified development within the local plan to meet the rising demands for adult social care.

Labour group proposals

The Labour group proposes that before adoption of the local plan:

- I. The Council work with Staffordshire County Council to identify suitable portions of developments sites within the local plan to meet the rising demand for adult social care provision.
- II. The council work with Primary care networks to increase GP capacity across the whole of the borough.

Strategic Employment Sites – the case against AB2 and the case for Chatterley Valley

The Labour group is opposed to the proposals for the AB2 employment site in Audley. Taking 80 hectares of land in the rural village of Audley out of the green belt and designating it as high-quality strategic employment site without the evidence base to do so and considering the significant recorded public opposition to the proposal appears to be flawed. The removal of green belt, the increase in traffic, noise and pollution combined with the lack of adequate local infrastructure across the locality is inappropriate, especially so when we already have Chatterley Valley strategic employment site that barely features in the Local Plan at all.

This is quite incredible considering Chatterley Valley has seen £3.5 Million investment from Staffordshire County Council into the site, alongside the £3.7 Million the borough council secured as part of the Kidsgrove Town Deal, and has seen infrastructure, utilities and access upgraded.

The Labour group further notes that under the duty to co-operate the Council did not approach Stoke-on-Trent Council, or Staffordshire County Council overuse of the Chatterley Valley development site in the local plan to meet the need for strategic employment sites. The Labour group is concerned that in the doing so, the Council has not legally satisfied the test within the Localism Act and therefore questions the proposal to meet the need for strategic employment sites through removal of land from the green belt.

Labour group proposals

Designating Chatterley Valley as a strategic enterprise zone would bring substantial economic, social, and environmental benefits to Newcastle-under-Lyme. It would unlock the area's potential for attracting investment, creating jobs, and fostering innovation while aligning with national strategies for regional development and sustainability. With its strong transport links and potential for brownfield redevelopment, Chatterley Valley is ideally positioned to become a thriving hub of economic activity.

Chatterley Valley is positioned near key transport links, making it ideal for a strategic enterprise zone. It lies close to the M6 motorway, the A500 (a key artery linking Stoke-on-Trent and Crewe), and major rail links, offering excellent access to the Northwest, the Midlands, and beyond. This location provides businesses with opportunities to easily transport goods and services across the UK, potentially reducing logistics costs and improving connectivity. The North Staffordshire region, including Newcastle-under-Lyme, has a long industrial heritage, particularly in ceramics, manufacturing, and logistics. This history has cultivated a skilled workforce that can readily adapt to new industries such as advanced manufacturing, logistics, and digital services. The creation of a strategic enterprise zone in Chatterley Valley would capitalize on this local expertise, attracting investment and providing job opportunities for the region.

Brownfield Redevelopment Potential

Chatterley Valley has a significant amount of underutilized and brownfield land, which presents a perfect opportunity for redevelopment without impacting greenfield sites. Developing this area would contribute to urban regeneration, transforming it into a hub for industries like green technology, logistics, or advanced manufacturing. Redeveloping brownfield sites aligns with sustainable development goals, boosting the region's environmental credentials.

Potential for Attracting Investment

Enterprise zones offer businesses tax incentives, simplified planning, and infrastructure support, all of which would make Chatterley Valley an attractive destination for both national and international investors. By designating it a strategic enterprise zone, the area could attract new companies and startups, as well as encourage the growth of existing businesses. This could significantly boost the local economy, creating jobs and increasing regional prosperity.

Locally, this would support Newcastle-under-Lyme Borough Council's economic plans, which focus on regeneration and business growth. The Labour Group want to see a borough strategy aimed at stimulating economic growth in the Midlands and the North to reduce regional disparities. Chatterley Valley could serve as a platform for innovation and the digital economy. With the rise of Industry 4.0, the area has potential to become a centre for businesses involved in automation, artificial intelligence, and digital services. The location could also foster collaboration with nearby Keele and North Staffordshire Universities, known for its research and innovation. Such collaborations could encourage knowledge transfer and innovation-led business growth.

Sustainability and Green Energy Opportunities

Given the global focus on sustainability and green energy, Chatterley Valley offers an opportunity for eco-friendly development. The site could house businesses focused on renewable energy, energy-efficient technologies, and sustainability initiatives. This would not only contribute to the Councils net-zero goals but also attract companies prioritising sustainable operations, helping to future-proof the local economy.

Adherence to genuine consultation and due process

The Council is well aware of the large number of complaints and concerns raised at the first consultation stage of the draft plan (1st November 2021 - 13th December 2021), these were largely but not confined to, complaints around lack of face-to-face briefings, forms not being made available as stated, and technical issues and failures of the on line portal. It was clear at that time that the consultation was targeted at highly competent, computer literate regular laptop users, who could cross reference up to 200 public documents through the portal avenue to answer 37 planning specific questions. The readability of the document was poor and out of line with good practise.

https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/100807/file47158.pdf,

Labour Councillors raised concerns that the consultation was too focused on the on-line portal and digital access, which we believed would lead to exclusion for thousands of elderly residents, as well as those who did not or could not afford their own laptops, tablets or computers. We felt this approach was contrary to the community engagement and digital exclusion policies previously agreed by the Council. The Labour welcomed the fact that these issues were focussed on in the second stage consultation and in the main remedied.

However, the Labour group raised a serious issue at a meeting of full council on 24-07-24, where Council was to approve that the plan be agreed and put forward to regulation 19 stage, that critical evidence based documents were still not available to members of council or the public.

The motion highlighting this failure is attached here:

**Labour Group Amendments to the Report Titled;
Newcastle-under-Lyme Borough Local Plan 2040 of the 24-07-24**

Background

The Newcastle Labour group of councillors met on Monday 22nd July to review the agenda for the meeting of full council taking place on 24-07-24. The agenda contained at item 5 - Newcastle-under-Lyme Borough Local Plan 2024. The item contains the paper which asks members and council to approve four recommendations as follows;

That Council: .

- 1. Approves the Final Draft Newcastle-under-Lyme Borough Local Plan 2040 (at Regulation 19 stage), the Sustainability Appraisal, Habitats Regulations Assessment and supporting documentation for public consultation in line with the approved Local Development Scheme;*
- 2. Authorises the Service Director (Planning), in consultation with the Strategic Planning Portfolio Holder to make any necessary minor typographical changes and modifications to the Final Draft Newcastle-under-Lyme Borough Local Plan 2040, Sustainability Appraisal and Habitat Regulations Assessment prior to consultation;*
- 3. Subject to the outcome of consultation, and if no matters are raised that materially impact upon the Plan strategy, authorises the Deputy Chief Executive in consultation with the Strategic Planning Portfolio Holder to submit the Final Draft Newcastle-under-Lyme Borough Local Plan 2040 and supporting documents to the Secretary of State for formal examination by the end of 2024;*
- 4. Authorises the Service Director (Planning) to write to the appointed Inspector(s) at the start of the examination of the Final Draft Newcastle under-Lyme Borough Local Plan 2040 requesting them, under section 20(7C) of the Planning and Compulsory Purchase Act 2004, to recommend any main modifications necessary to ensure the Plan sound and legally compliant.*

Issues identified

In relation to recommendation 1

When the Labour group met on the 22-07-24, some 48 hours before the meeting to consider the recommendations we observed that the following supporting documents (none exhaustive) were not available;

1. Infrastructure Delivery Plan
2. Infrastructure Delivery Schedule
3. Strategic Housing and Employment land availability assessment 2024
4. Site assessments
5. Green Belt Assessment
6. Strategic transport assessment
7. Water cycle study
8. Gypsy and traveller site selection report
9. Duty to co-operate statement of compliance
10. Housing supply and delivery position statement

Clearly, the expectation that members approve a local plan through to the regulation 19 representation period, which is the last stage of public engagement before submitting the draft plan to the Inspectorate for examination, is unreasonable and does not adhere to sound governance of the council.

This is a formal process that requires comments on the soundness and legal compliance of the plan. Members wish to be in a fully informed position in order to move the plan through its statutory process.

In relation to recommendation 3

Consultation is technically any activity that gives people a voice, in this context it is an exercise to provide local residents, businesses and stakeholders a voice and an opportunity to influence important decisions relating to the Borough's local plan.

Consultation requires listening to local people and learning from affected people before decisions are made or priorities are set.

Councils have a statutory requirement to consult their residents, this is especially true for planning or redevelopments. There are strict rules surrounding how consultations are conducted, and a failure to adhere to this could render the council liable for a judicial review.

It is in this regard that recommendation 3 is manifestly problematic – to agree to submit the Final Draft Newcastle-under-Lyme Borough Local Plan 2040 and supporting documents to the Secretary of State for formal examination by the end of 2024, without affording council the time and space to review the consultation, in full, and to take account of residents, business and stakeholders views in our plan before submitting to the Secretary of State, does not accord with the fundamental principles of consultation compliance. A failure to demonstrate that council has undertaken meaningful consultation could leave council open to complaints of pre-determination.

The most common failures of local authority plans are due to inconsistencies with National Planning Policy, lack of evidence base and inadequate engagement. The amendments below seek to remedy any possible flaws in the plan and process. It is our view that a failure to do so would open the authority to the risk of litigation, reputational damage, and a loss of trust and confidence by those engaging with the process.

Proposed amendments

Replace recommendation(s) 1 and 3 with the following;

1. Council agrees to bring the final draft plan, and supporting documents to the September 2024 full council meeting seeking councils approval of the Final Draft Newcastle-under-Lyme Borough Local Plan 2040 (at Regulation 19 stage), the Sustainability Appraisal, Habitats Regulations Assessment and supporting documentation for public consultation in line with the approved Local Development Scheme.

3. Following completion of the consultation, council will meet to receive and consider the responses. If council agrees that no amendments to the plan are required and no matters are raised that materially impact upon the Plan strategy, council authorises the Deputy Chief Executive in consultation with the Strategic Planning Portfolio Holder to submit the Final Draft Newcastle-under-Lyme Borough Local Plan 2040 and supporting documents to the Secretary of State for formal examination at the earliest opportunity.

ENDS

Amendment Proposer

Cllr Dave Jones

Amendment Seconder

Cllr Andrew Fox-Hewitt

In response to this motion highlighting critical failures of due process, the Conservative group voted to dismiss the recommendations and voted to proceed to approve the plan through to regulation 19 stage. The Leader of the Council, Cllr Simon Tagg stated at this meeting that it was not true that documents were unavailable prior to group meetings on the 22nd July,

Subsequently to the council meeting however, a complaint and request under the Freedom of Information Act was made to provide details of when documents were made available. The Council response is here; (Table available in attachment)

As can be seen from the response, a total of 9 documents were in fact unavailable. The Labour Group therefore has serious concerns with the adherence to due process the probity of the Leaders actions in response to these issues being identified.

Conclusion

In summary whilst there is much within the Local Plan the Labour group can support, there are several weaknesses that we feel need to be addressed before the Local Plan can be adopted. These include:

I. Clear targets and delivery plan to ensure the ever-increasing demand for affordable and social housing is met over the lifetime of this Local plan.

II. Development of an integrated transport plan, including costings and delivery plan that is not subject solely to 106 contributions.

III. Work with existing primary schools in Knutton, Silverdale and Keele to explore potential expansion of their existing estate to increase pupil capacity.

IV. Work with Staffordshire County Council to identify capacity within proposed developments for provision of adult social care facilities.

V. Work with Primary Care Networks to identify mechanisms to increase GP capacity across the borough.

VI. Work with Staffordshire County Council and Stoke-on-Trent City Council to identify capacity within the Chatterley Valley site to accommodate the need for employment sites.

Further, the failure to co-operate on sharing of a major strategic employment site at Chatterley Valley, and concerns raised over the consultation process and availability of essential documents; further questions the plans compliance with the Localism Act.

Order	6
Number	1
Title	Consultation (not part of the Plan)
Consultee Family Name	Wright
Consultee Given Name	Adam
Q4 Part of document	Policy
Q4 Policy	CT1
Q6 Details	<p>Local Draft Plan</p> <p>Stages of development of the Local Plan (Page 4)</p> <p>Regulation 19 Publication – Not Compliant with Duty to Co-operate</p> <p>When the plan was first introduced, the publication and consultation for it was limited. We were unaware of the impact for our area until the second phase. Under the planning processes laid out in the Town and Country Planning Regulations 2012, Regulation 18 notices were put up. One was placed on the lamppost, part way down Bells Hollow which is a single lane road with limited footfall and inability to be seen from a moving vehicle. The second on a lamp post part way down Talke Road, which only has a footpath on one side and is a National Speed Limit Road. This was to cover the entire neighbourhoods affected by the original CT sites as listed in the first draft which is a These two locations were not in areas of high footfall and we feel that there was inadequate publication of the regulation 18 notices in our Ward. As a community we printed the Reg 18 Notices and placed them in more high footfall areas and distributed to households in the vicinity to generate knowledge of the plans. These are steps that should have been taken by the local authority not the community.</p>

Furthermore, no community consultations were held in Red Street. Bearing in mind that we have an aging population, the majority of which do not drive, and the very limited bus routes, we feel that the local population were not adequately informed at Regulation 18 Stage. A complaint was lodged to this fact with the council but no response was received. It is not realistic to expect elderly residents to make informed decisions about their locality if they are not engaged.

As a community, we organised a community meeting, which was positively attended and the council again were asked to include Red Street as part of the consultation at Reg 18 as one of the largest areas to be considered for housing, it needed to be part of their plan. Most people reported that they would not have been aware of the proposals without the input from the local community and the failing of the council to execute their duty under the regulations.

Regulation 19 notices were sent to residents who had submitted responses to the Regulation 18 notice and included an email address with their response, but again, no Regulation 19 notices were published in the vicinity of Red Street to publicise the community consultation dates or the fact that responses can be submitted to the Final Local Plan. This is not sound decision making from a Local Plan communication perspective.

Local Draft Plan

Policy CT1 Land at Red Street and High Carr Farm, Chesterton (Pages 116, 117)

Green Belt - Unsound

Greenbelt land is in place for the following reasons:

- 1 to check the unrestricted sprawl of large built-up areas;
- 2 to prevent neighbouring towns merging into one another;
- 3 to assist in safeguarding the countryside from encroachment;
- 4 to preserve the setting and special character of historic towns; and
- 5 to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

The Green Belt Site Review Consolidated Report (16 July 2024) states that site CT1 should not be progressed if site TK17 is put forward. TK17 remains in the plan and the two sites being taken forward would constitute unrestricted sprawl and the merging of two settlements (Red Street and Talke/Butt Lane)

Furthermore, the Proforma for CT1 and CT4 states that it is within 800m of an existing Doctors Surgery. The Waterhayes Surgery, Crackley Bank is closed permanently and has been for some time, therefore the assessment is flawed.

The Proforma for CT1A also states that *“Consideration would also need to be given to the remaining area of Green Belt to the south (including site CT4) as development of this site could result in this area becoming relatively enclosed by development. Overall, based on the above factors, it is recommended that the site is taken forward for further consideration alongside site CT1 and CT4 and the area to the south of CT4 (see proforma for CT4).”* In the Regulation 19 plan, CT4 and CT1 have been removed leaving CT1A, therefore due judgement has not been completed on the area of greenbelt being enclosed by development and essentially cut off from the remaining greenbelt land in the area leading to a loss of biodiversity and isolation of wildlife in a pocket of land unconnected to the greenbelt. This is also true for Proforma CT1. According to the Green Belt Site Assessment, CT1 should only go ahead if CT4 is also included, which is not the case as CT4 has been removed from the Local Plan.

Additionally, site CT1A from the Green Belt Site Review is being taken forward in the Local Plan, however it is referenced as CT1 in the Local Plan document, which is misleading the public and making it difficult to cross reference.

Whilst CT1 has been classified as providing a weak contribution to the Green Belt, the assessment doesn't take into account the biodiversity within the site. We have a range of wildlife including mice, hedgehogs, nesting lapwings, foxes, badgers, Sparrow Hawks etc, plus meadows/hedgerows that provide homes for nesting birds such as Goldfinches and a wide range of insects, butterflies and moths. The development of this land would put at risk our local biodiversity.

Therefore the decision making is unsound as there is no justification for CT1 to be included in the Plan.

Historical Mining - Unsound

Historical mining at Talke O'The Hill Colliery has taken place on the site of CT1 between 1860 and 1930. The coal has been extracted using Pillar and Stall mining methods, leaving pillars of coal to support the land. Several sink holes and collapses have already been present on the land. Furthermore there is a

fault line (High Carr Fault) present at the south east part of CT1. Please see attached map in Appendix 1 highlighting the extent of the mining on one seam in the 1920's.

The housing that is in existence has been subject to pinning and bracing and therefore there are concerns regarding impact on the existing residences for detrimental impact of the level of work that is proposed for the area.

Whilst the Green Belt Assessment makes reference to historical mining, the extent was not established by the consultants or the borough council. The extent of the mining and the location of the fault line on the site for CT1 makes it an unsound basis for taking the site forward in the final plan.

Land Ownership - Unsound

Whilst the plan is for the area to be developed as a whole, the land itself is a significant area which is currently owned by several parties. Whilst there is to be no compulsory purchase of the land and the arrangement will be between land owner and developer, what are the safeguards to ensure that the plan is fulfilled as outlined? So for example if one land owner sells and one abstains, can any properties be built? Or would this be subject to a change in planning?

Infrastructure - Unsound

We do not believe that the review of impacts of a significant housing development have drawn reasonable conclusions as to the impacts to the volume of traffic. Red Street is a small village with one main route through. This route is often used as a rat-run for when the A34 is blocked. This traffic is often speeding through the village despite existing traffic calming measures. The addition of over 1000 additional vehicles will put undue pressure on the road network, increase pollution and put our residents at risk. Red Street has a small primary school, and the traffic associated with the school run is significant and again, with no automated or manned road crossings, our school children are being put at risk.

Whilst the plan makes provision for the developers to make staged payments to enhance schools and other infrastructure projects as well as a "community hub", we are concerned that these won't go ahead, especially if the development is split between several smaller companies. The recent Moss Grove estate promised additional street lighting along Deans Lane to safeguard pedestrians, but this was not delivered. Alongside support for extending the school provision under previous developments that again as not been provided. On clarification with the planning department, the definition of a community hub in this instance would be small retail units such as a shop, takeaway and hairdressers etc. This community hub would not have the doctors/dentist surgeries that are required to support such a large development, and many residents would have to rely on car journeys to reach such facilities. Given the information that was accessed and submitted under the last round of consultation are significantly over subscribed.

The overall plan is looking to put a significant amount of housing in a saturated area with a large proportion of the Boroughs commitment to housing being planned for Red Street, Talke, Audley, Bignall End and Chesterton/Bradwell. This will put significant strain on the infrastructure in the locality. The local primary school for CT1 is St Chad's which has capacity for 360 children with 265 on register in 2023. Having looked at the capacity in surround schools on the edge of the catchment area there is limited availability. However, these will be needed to accommodate the plan as a whole. In terms of High Schools the one for our Catchment is Chesterton High which is currently overly subscribed and operating at above capacity. Additional children on the number and types of houses that are being proposed is significantly underestimated in the proposal. If only half the houses have at least one child then over the proposed plan for Red Street that is an extra 250 children to be accommodated into local schools. Whilst the plan states that infrastructure will be considered as part of the final plan it is an aspect that needs careful consideration. Indeed, the children of 6 classes at St Chads are still based in portable buildings, which suffer extreme cold in winter and extreme heat in summer, following the Waterhayes development built in the 1990s.

In terms of other aspects of infrastructure, there are 3 local GP's surgeries, all with proposed increasing in housing in the localities, therefore the already significant wait for non-urgent appointments will be significantly stretched and increase the pull on resources for other areas of the NHS such as Walk In Centres and Emergency Departments. As for Dental provision, according to find an NHS dentist- nearest taking NHS patients is Manchester. Announced this week are the plans for one of the main dental practices in the locality -Wolstanton Dental Practice is converting to a private practice therefore reducing the provision for the area and only providing a NHS dental service of 2 days a week.

Infrastructure is significant part of any community and with a high number of elderly populations who are reliant on public transport to get about- the bus routes have been reduced cutting off access to the infrastructure. So for example there is no longer a bus service to Audley from Red Street where one of the two main GP surgeries are located. Also community based services such as the local doctors has recently closed so now it is Loomer Road or Audley for access to health services. This is just one example of how the reductions that have had to be made which have reduced the infrastructure in the area.

The local plan document doesn't set out a justification or a means of this being enforced to ensure that the infrastructure enhancements are of the correct nature or will actually go ahead.

Please set out the modification(s) you consider necessary to make the Local Plan legally compliant and sound in respect of any legal compliance or soundness matters you have identified at above:

We seek the removal of CT1 from the local plan. The Greenbelt assessment states that CT1 should not be in the plan if TK17 remains. TK17 has remained in the local plan. Additionally, the Greenbelt assessment states that CT1 and CT4 should be taken forward together. CT4 has been removed from the plan. Therefore, we are seeking removal of CT1 so that the plan falls in line with the site selection process and supporting information outlined in the Greenbelt assessment.

Q6 Details	<p>Local Draft Plan Stages of development of the Local Plan (Page 4) Regulation 19 Publication – Not Compliant with Duty to Co-operate</p> <p>When the plan was first introduced, the publication and consultation for it was limited. We were unaware of the impact for our area until the second phase. Under the planning processes laid out in the Town and Country Planning Regulations 2012, Regulation 18 notices were put up. One was placed on the lamppost, part way down Bells Hollow which is a single lane road with limited footfall and inability to be seen from a moving vehicle. The second on a lamp post part way down Talke Road, which only has a footpath on one side and is a National Speed Limit Road. This was to cover the entire neighbourhoods affected by the original CT sites as listed in the first draft which is a These two locations were not in areas of high footfall and we feel that there was inadequate publication of the regulation 18 notices in our Ward. As a community we printed the Reg 18 Notices and placed them in more high footfall areas and distributed to households in the vicinity to generate knowledge of the plans. These are steps that should have been taken by the local authority not the community.</p> <p>Furthermore, no community consultations were held in Red Street. Bearing in mind that we have an aging population, the majority of which do not drive, and the very limited bus routes, we feel that the local population were not adequately informed at Regulation 18 Stage. A complaint was lodged to this fact with the council but no response was received. It is not realistic to expect elderly residents to make informed decisions about their locality if they are not engaged.</p> <p>As a community, we organised a community meeting, which was positively attended and the council again were asked to include Red Street as part of the consultation at Reg 18 as one of the largest areas to be considered for housing, it needed to be part of their plan. Most people reported that they would not have been aware of the proposals without the input from the local community and the failing of the council to execute their duty under the regulations.</p> <p>Regulation 19 notices were sent to residents who had submitted responses to the Regulation 18 notice and included an email address with their response, but again, no Regulation 19 notices were published in the vicinity of Red Street to publicise the community consultation dates or the fact that responses can be submitted to the Final Local Plan. This is not sound decision making from a Local Plan communication perspective.</p>

Q6 Details	<p>Local Draft Plan Stages of development of the Local Plan (Page 4) Regulation 19 Publication – Not Compliant with Duty to Co-operate</p> <p>When the plan was first introduced, the publication and consultation for it was limited. We were unaware of the impact for our area until the second phase. Under the planning processes laid out in the Town and Country Planning Regulations 2012, Regulation 18 notices were put up. One was placed on the lamppost, part way down Bells Hollow which is a single lane road with limited footfall and inability to be seen from a moving vehicle. The second on a lamp post part way down Talke Road, which only has a footpath on one side and is a National Speed Limit Road. This was to cover the entire neighbourhoods affected by the original CT sites as listed in the first draft which is a These two locations were not in areas of high footfall and we feel that there was inadequate publication of the regulation 18 notices in our Ward. As a community we printed the Reg 18 Notices and placed them in more high footfall areas and distributed to households in the vicinity to generate knowledge of the plans. These are steps that should have been taken by the local authority not the community.</p> <p>Furthermore, no community consultations were held in Red Street. Bearing in mind that we have an aging population, the majority of which do not drive, and the very limited bus routes, we feel that the local population were not adequately informed at Regulation 18 Stage. A complaint was lodged to this fact with the council but no response was received. It is not realistic to expect elderly residents to make informed decisions about their locality if they are not engaged.</p>

Q6 Details	<p>The consultation process has been inadequate and appears to have been a tickbox exercise rather than a serious public consultation process. I and many of my neighbours were unaware that this local plan was in the pipeline. I believe the only notification provided by the council was a small notice attached to the field gate of NC13 that got wet and blew away in less than a week. More adequate notification should have been initiated e.g. by way of a leaflet drop to ensure residents were fully aware of these proposals. The planning portal itself difficult to navigate and provide comment. I suspect a number of people who are not IT savvy gave up trying.</p>

Q6 Details	<p>Thank you for the Invite to comment on the Final Draft Local Plan and supporting documents.</p> <p>It's nice to think we have a say in the future of our area – and I'm sure the 1000+ pages of documentation provided is to ensure we have access to all the facts!?</p> <p>As I'm not an expert on law and planning policy, I'm going to have to assume that the documentation will have been check for 'legal compliance' by the department (Sec. B5 of the form refers). Have to say the documentation provided and 'Representation Form' are difficult to access and navigate through, and instructions lack clarity. Some might even say it's a barrier preventing a true representative view from local communities! In short, the process is not user friendly, so will put a lot of people off commenting, in my view. So, although I'm not a complete technophobe, I've abandoned an attempt to complete and return the form, and have instead documented my views in this email and hope this will suffice.</p>

Q5 Legally compliant	No
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>he plan was first introduced with limited public consultation. I was unaware of the plan and the way it affected our area, until the second phase. The regulation notices that were posted, were not placed in easily accessible areas, and would not be seen by most of the local population.</p> <p>There were no consultations held with the community in Red Street, even though the community is diverse - it has a significant aging population, and a number the community have disabilities. Travelling to consultations outside the local area, would be difficult for some and many don't drive and bus routes are very limited. There was little attempt to ensure that all members of the community could easily access the local plan, this discriminated against some members of the local population. How can residents make informed contributions about their locality when they are not properly involved in the consultation process?</p> <p>The council did not have any plans to hold a meeting with residents in Red Street, who would be significantly affected by the proposed local plan. This is negligent, especially as they were specifically requested to engage directly with Red Street residents. Members of the community had to organise a local meeting - which was very well attended and enabled people to express their very serious concerns about the council's proposals. This should have been organised by the council, if they were to demonstrate a true spirit of consultation.</p> <p>Most people were not aware of the proposals until a late stage in the process. Many who submitted responses to the Regulation 18 notice only received an acknowledgement and response if they included an email address. This discriminates against those people whose main communication means do not include I.T. methods.</p> <p>No Regulation 19 notices were published in the vicinity of Red Street. There was no publicising by the council of community consultation dates. Most people were unaware that they needed to make further responses for the final Local Plan.</p>

Q6 Details	<p>Local Draft Plan Stages of development of the Local Plan (Page 4) Regulation 19 Publication – Not Compliant with Duty to Co-operate</p> <p>When the plan was first introduced, the publication and consultation for it was limited. We were unaware of the impact for our area until the second phase. Under the planning processes laid out in the Town and Country Planning Regulations 2012, Regulation 18 notices were put up. One was placed on the lamppost, part way down Bells Hollow which is a single lane road with limited footfall and inability to be seen from a moving vehicle. The second on a lamp post part way down Talke Road, which only has a footpath on one side and is a National Speed Limit Road. This was to cover the entire neighbourhoods affected by the original CT sites as listed in the first draft which is a These two locations were not in areas of high footfall and we feel that there was inadequate publication of the regulation 18 notices in our Ward. As a community we printed the Reg 18 Notices and placed them in more high footfall areas and distributed to households in the vicinity to generate knowledge of the plans. These are steps that should have been taken by the local authority not the community.</p> <p>Furthermore, no community consultations were held in Red Street. Bearing in mind that we have an aging population, the majority of which do not drive, and the very limited bus routes, we feel that the local population were not adequately informed at Regulation 18 Stage. A complaint was lodged to this</p>

	<p>fact with the council but no response was received. It is not realistic to expect elderly residents to make informed decisions about their locality if they are not engaged.</p> <p>As a community, we organised a community meeting, which was positively attended and the council again were asked to include Red Street as part of the consultation at Reg 18 as one of the largest areas to be considered for housing, it needed to be part of their plan. Most people reported that they would not have been aware of the proposals without the input from the local community and the failing of the council to execute their duty under the regulations.</p> <p>Regulation 19 notices were sent to residents who had submitted responses to the Regulation 18 notice and included an email address with their response, but again, no Regulation 19 notices were published in the vicinity of Red Street to publicise the community consultation dates or the fact that responses can be submitted to the Final Local Plan. This is not sound decision making from a Local Plan communication perspective.</p>

Q6 Details	<p>The plan was first introduced with limited public consultation. I was unaware of the plan and the way it affected our area, until the second phase. The regulation notices that were posted, were not placed in easily accessible areas, and would not be seen by most of the local population.</p> <p>There were no consultations held with the community in Red Street, even though the community is diverse - it has a significant aging population, and a number the community have disabilities. Travelling to consultations outside the local area, would be difficult for some and many don't drive and bus routes are very limited. There was little attempt to ensure that all members of the community could easily access the local plan, this discriminated against some members of the local population. How can residents make informed contributions about their locality when they are not properly involved in the consultation process?</p> <p>The council did not have any plans to hold a meeting with residents in Red Street, who would be significantly affected by the proposed local plan. This is negligent, especially as they were specifically requested to engage directly with Red Street residents. Members of the community had to organise a local meeting - which was very well attended and enabled people to express their very serious concerns about the council's proposals. This should have been organised by the council, if they were to demonstrate a true spirit of consultation.</p> <p>Most people were not aware of the proposals until a late stage in the process. Many who submitted responses to the Regulation 18 notice only received an acknowledgement and response if they included an email address. This discriminates against those people whose main communication means do not include I.T. methods.</p> <p>No Regulation 19 notices were published in the vicinity of Red Street. There was no publicising by the council of community consultation dates. Most people were unaware that they needed to make further responses for the final Local Plan.</p>

Q6 Details	<p>Local Draft Plan Stages of development of the Local Plan (Page 4)</p> <p>Regulation 19 Publication – Not Compliant with Duty to Co-operate</p> <p>When the plan was first introduced, the publication and consultation for it was limited. We were unaware of the impact for our area until the second phase. Under the planning processes laid out in the Town and Country Planning Regulations 2012, Regulation 18 notices were put up. One was placed on the lamppost, part way down Bells Hollow which is a single lane road with limited footfall and inability to be seen from a moving vehicle. The second on a lamp post part way down Talke Road, which only has a footpath on one side and is a National Speed Limit Road. This was to cover the entire neighbourhoods affected by the original CT sites as listed in the first draft which is a These two locations were not in areas of high footfall and we feel that there was inadequate publication of the regulation 18 notices in our Ward. As a community we printed the Reg 18 Notices and placed them in more high footfall areas and distributed to households in the vicinity to generate knowledge of the plans. These are steps that should have been taken by the local authority not the community.</p> <p>Furthermore, no community consultations were held in Red Street. Bearing in mind that we have an aging population, the majority of which do not drive, and the very limited bus routes, we feel that the local population were not adequately informed at Regulation 18 Stage. A complaint was lodged to this fact with the council but no response was received. It is not realistic to expect elderly residents to make informed decisions about their locality if they are not engaged.</p> <p>As a community, we organised a community meeting, which was positively attended and the council again were asked to include Red Street as part of the consultation at Reg 18 as one of the largest areas to be considered for housing, it needed to be part of their plan. Most people reported that they would not have been aware of the proposals without the input from the local community and the failing of the council to execute their duty under the regulations.</p> <p>Regulation 19 notices were sent to residents who had submitted responses to the Regulation 18 notice and included an email address with their response, but again, no Regulation 19 notices were published in the vicinity of Red Street to publicise the community consultation dates or the fact that responses can be submitted to the Final Local Plan. This is not sound decision making from a Local Plan communication perspective.</p>

Q5 DTC compliant	No
Q6 Details	<p>I was not made aware of any consultation in respect of the local plan for housing development. I never saw the regulation notices posted, and I imagine neither did the majority of people in the village, because of where they had been pinned. There should have been meetings organised by the council where we could have been properly advised and informed about planned proposals and policies.</p> <p>We are the residents and we have very serious and genuine concerns about this. I wasn't even aware that I needed to make further responses to the final local plan until a friend told me, who had heard this from someone else.</p> <p>I fully endorse the attached response form which outlines the objections to the local plan i.e. green belt - unsound historic mining - therefore- unsound land ownership - unsound infrastructure - unsound</p>

Q6 Details	<p>Local Draft Plan Stages of development of the Local Plan (Page 4) Regulation 19 Publication – Not Compliant with Duty to Co-operate</p> <p>When the plan was first introduced, the publication and consultation for it was limited. We were unaware of the impact for our area until the second phase. Under the planning processes laid out in the Town and Country Planning Regulations 2012, Regulation 18 notices were put up. One was placed on the lamppost, part way down Bells Hollow which is a single lane road with limited footfall and inability to be seen from a moving vehicle. The second on a lamp post part way down Talke Road, which only has a footpath on one side and is a National Speed Limit Road. This was to cover the entire neighbourhoods</p>

	<p>affected by the original CT sites as listed in the first draft which is a These two locations were not in areas of high footfall and we feel that there was inadequate publication of the regulation 18 notices in our Ward. As a community we printed the Reg 18 Notices and placed them in more high footfall areas and distributed to households in the vicinity to generate knowledge of the plans. These are steps that should have been taken by the local authority not the community.</p> <p>Furthermore, no community consultations were held in Red Street. Bearing in mind that we have an aging population, the majority of which do not drive, and the very limited bus routes, we feel that the local population were not adequately informed at Regulation 18 Stage. A complaint was lodged to this fact with the council but no response was received. It is not realistic to expect elderly residents to make informed decisions about their locality if they are not engaged.</p> <p>As a community, we organised a community meeting, which was positively attended and the council again were asked to include Red Street as part of the consultation at Reg 18 as one of the largest areas to be considered for housing, it needed to be part of their plan. Most people reported that they would not have been aware of the proposals without the input from the local community and the failing of the council to execute their duty under the regulations.</p> <p>Regulation 19 notices were sent to residents who had submitted responses to the Regulation 18 notice and included an email address with their response, but again, no Regulation 19 notices were published in the vicinity of Red Street to publicise the community consultation dates or the fact that responses can be submitted to the Final Local Plan. This is not sound decision making from a Local Plan communication perspective.</p>

The second on a lamp post part way down Talke Road, which only has a footpath on one side and is a National Speed Limit Road. This was to cover the entire neighbourhoods affected by the original CT sites as listed in the first draft which is a These two locations were not in areas of high footfall and we feel that there was inadequate publication of the regulation 18 notices in our Ward. As a community we printed the Reg 18 Notices and placed them in more high footfall areas and distributed to households in the vicinity to generate knowledge of the plans. These are steps that should have been taken by the local authority not the community.</p> <p>Furthermore, no community consultations were held in Red Street. Bearing in mind that we have an aging population, the majority of which do not drive, and the very limited bus routes, we feel that the local population were not adequately informed at Regulation 18 Stage. A complaint was lodged to this fact with the council but no response was received. It is not realistic to expect elderly residents to make informed decisions about their locality if they are not engaged.</p> <p>As a community, we organised a community meeting, which was positively attended and the council again were asked to include Red Street as part of the consultation at Reg 18 as one of the largest areas to be considered for housing, it needed to be part of their plan. Most people reported that they would not have been aware of the proposals without the input from the local community and the failing of the council to execute their duty under the regulations.</p> <p>Regulation 19 notices were sent to residents who had submitted responses to the Regulation 18 notice and included an email address with their response, but again, no Regulation 19 notices were published in the vicinity of Red Street to publicise the community consultation dates or the fact that responses can be submitted to the Final Local Plan. This is not sound decision making from a Local Plan communication perspective.</p>

Consultee Given Name	Gemma
Q6 Details	<p>Local Draft Plan Stages of development of the Local Plan (Page 4)</p> <p>Regulation 19 Publication – Not Compliant with Duty to Co-operate When the plan was first introduced, the publication and consultation for it was limited. We were unaware of the impact for our area until the second phase. Under the planning processes laid out in the Town and Country Planning Regulations 2012, Regulation 18 notices were put up. One was placed on the lamppost, part way down Bells Hollow which is a single lane road with limited footfall and inability to be seen from a moving vehicle. The second on a lamp post part way down Talke Road, which only has a footpath on one side and is a National Speed Limit Road. This was to cover the entire neighbourhoods affected by the original CT sites as listed in the first draft which is a These two locations were not in areas of high footfall and we feel that there was inadequate publication of the regulation 18 notices in our Ward. As a community we printed the Reg 18 Notices and placed them in more high footfall areas and distributed to households in the vicinity to generate knowledge of the plans. These are steps that should have been taken by the local authority not the community.</p> <p>Furthermore, no community consultations were held in Red Street. Bearing in mind that we have an aging population, the majority of which do not drive, and the very limited bus routes, we feel that the local population were not adequately informed at Regulation 18 Stage. A complaint was lodged to this fact with the council but no response was received. It is not realistic to expect elderly residents to make informed decisions about their locality if they are not engaged.</p> <p>As a community, we organised a community meeting, which was positively attended and the council again were asked to include Red Street as part of the consultation at Reg 18 as one of the largest areas to be considered for housing, it needed to be part of their plan. Most people reported that they would not have been aware of the proposals without the input from the local community and the failing of the council to execute their duty under the regulations.</p>

	Regulation 19 notices were sent to residents who had submitted responses to the Regulation 18 notice and included an email address with their response, but again, no Regulation 19 notices were published in the vicinity of Red Street to publicise the community consultation dates or the fact that responses can be submitted to the Final Local Plan. This is not sound decision making from a Local Plan communication perspective.

Q5 DTC compliant	No
Q6 Details	<p>I was not made aware of any consultation in respect of the local plan for housing development. I never saw the regulation notices posted, and I imagine neither did the majority of people in the village, because of where they had been pinned. There should have been meetings organised by the council where we could have been properly advised and informed about planned proposals and policies.</p> <p>We are the residents and we have very serious and genuine concerns about this. I wasn't even aware that I needed to make further responses to the final local plan until a friend told me, who had heard this from someone else.</p> <p>I fully endorse the attached response form which outlines the objections to the local plan i.e. green belt - unsound historic mining - therefore- unsound land ownership - unsound infrastructure - unsound</p>

A complaint was lodged to this fact with the council but no response was received. It is not realistic to expect elderly residents to make informed decisions about their locality if they are not engaged.</p> <p>As a community, we organised a community meeting, which was positively attended and the council again were asked to include Red Street as part of the consultation at Reg 18 as one of the largest areas to be considered for housing, it needed to be part of their plan. Most people reported that they would not have been aware of the proposals without the input from the local community and the failing of the council to execute their duty under the regulations.</p>

	Regulation 19 notices were sent to residents who had submitted responses to the Regulation 18 notice and included an email address with their response, but again, no Regulation 19 notices were published in the vicinity of Red Street to publicise the community consultation dates or the fact that responses can be submitted to the Final Local Plan. This is not sound decision making from a Local Plan communication perspective.

Q6 Details	<p>I think the Local Plan is an excellent document and commend it to the Planning Inspectorate. It addresses population increase, employment, environment and access to utilities. It will stop the unhindered development that is happening on prime agricultural land, such as Baldwin's Gate, and develop grey belt land such as the disused Keele Golf Club (a blight on the landscape). Development should take into consideration access to trunk roads and sewage as these are major factors in developing in a largely rural Borough. I believe this Local Plan addresses all these issues, is balanced and aims for a development rate in keeping with the identified need.</p> <p>Besides a resident, I was a [redacted by admin] when this plan was started and I am delighted to see it finalised. I am also a [redacted by admin]</p>

Q6 Details	<p>Thank you for your email re local plan consultations. I will be honest I found all the information a little wordy which for me reduced clarity. I cant comment on the legality of the plans. However, I do have concerns and these concerns are shared by many . Unfortunately the perception is that these concerns aren't really being addressed in the building boom. I worry about the environment we are guardians of this planet ,we do not own it and therefore we need to consider future generations and other inhabitants. The pandemic highlighted the importance of green space which is now being destroyed. The new estates do not address the need for affordable and social housing. The councils can't afford to maintain the existing roads yet there are plans to increase the volume of traffic which will also increase congestion. The infrastructure is unable to cope with the current demand yet the plans will increase demand . The villages are merging losing their identity as a consequence. Pollution adds to health problems and the plans will add to the pollution but doesn't add to the infrastructure needed to deal with the consequence of noise,light,traffic pollution and congestion. Legality isn't the only framework that needs to be considered. There should also be a moral and ethical framework which omits entitlement.</p>

Q6 Details	<p>Before any houses are built the existing infrastructure needs to be dealt with, the nhs is at breaking point, the police are at full stretch as are the fire service, the doctors have long waiting lists same with the schools, local tips full capacity. Who's going to pay for more nurses..doctors.. police..teachers..firemen..binmen..etc Roads cannot cope now with too much traffic and flooding, sewage wouldn't cope or water drainage in lower areas of silverdale. A large amount of the local population are elderly or nearing retirement, bungalows is what's needed. Are the Council prepared to pay for another Doctors Surgery/Schools/Bigger facilities for bin collection and then of course WHAT ABOUT the WILDLIFE? All this needs to taken in to account. Do I need to add that I am COMPLETELY AGAINST the sheer amount of houses.</p>

Consultee Company / Organisation	United Utilities
Consultee Family Name	Leyssens
Consultee Given Name	Andrew
Q6 Details	<p>Thank you for your consultation seeking the views of United Utilities Water Limited (U UW) as part of the Local Plan process. For confirmation, U UW has welcomed the meaningful dialogue to date and wishes to confirm no objection to the proposed local plan.</p> <p>U UW wishes to build a strong partnership with all local planning authorities (LPAs) to aid sustainable development and growth within its area of operation. We aim to proactively identify future development needs and share our information. This helps:</p> <ul style="list-style-type: none"> -ensure a strong connection between development and infrastructure planning; -deliver sound planning strategies; and -inform our future infrastructure investment submissions for determination by our regulator. <p>U UW wishes to highlight the benefit of early, constructive communication with the Council and site promoters to ensure a co-ordinated approach to the delivery of sustainable growth in sustainable locations. When preparing the local plan, new development should be focused in sustainable locations which are accessible to local services and infrastructure. We can most appropriately manage the impact of development on our infrastructure if development is identified in locations where infrastructure is available with existing capacity.</p> <p>We encourage you to direct future developers to our free pre-application service to discuss their schemes and highlight any potential issues by contacting:</p> <p>Developer Services – Wastewater Tel: 03456 723 723 Email: SewerAdoptions@uuplc.co.uk</p> <p>Developer Services – Water Tel: 0345 072 6067 Email: DeveloperServicesWater@uuplc.co.uk</p> <p>We have undertaken an initial site assessment of the sites included in the shp files that were provided to us for assessment. As agreed in my email exchange with Allan Clarke on 7th October, we will provide additional comment on the site allocations and the associated policy wording by the end of the week. This will include suggested amendments to the allocation policies to take account of any site-specific concerns identified by U UW.</p> <p>In the interim, the remainder of this letter, sets out our initial comments on the wider non-site specific policies of the plan.</p> <p>As noted above, with regards to the policies relating to the site-specific allocations, we will provide additional detailed comment on the proposed policies by separate cover and before the end of this week. We are grateful for this additional time.</p> <p>Moving forward, we respectfully request that the Council continues to consult with U UW for all future planning documents.</p>

Consultee Company / Organisation	Home Builders Federation
Consultee Position	Planning Manager - Local Plans (Midland and South West)
Consultee Family Name	Danemann
Consultee Given Name	Rachel
Q4 Part of document	Paragraph
Q4 Paragraph number	1.1
Q5 Sound	No
Q6 Details	<p>Please refer to attachment.</p> <p>The layout and the format of the plan are not sufficiently clear in differentiating between the text of the policy and the supporting text. This need to be resolved to ensure the plan is usable. This issue is typically addressed in other plans but putting policy text in boxes, behind a grey background and/or indifferent text. HBF do not have a preference but there are many simple ways that could address our concern.</p> <p>Similar presentational issues affect the Vision and Strategic Objectives. Is the Vision all three paras in the vision section 4.1- 4.3, or just 4.1? We would also expect to see the Strategic Objectives in some kind of differentiated presentation and form them to be supported with some explanatory text. It is unclear where the Vision and Objectives come from, for example have they been informed by the Council's Corporate Strategy, Climate Change Plan, Housing Strategy etc? Or have they been created for this Local Plan specifically. Clarity is needed so the justification is clear so the Plan can be effective.</p>
Q7 Modification	Please refer to attachment.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	HBF requests to participate in the Hearing Sessions for the Local Plan Examination, the HBF considers that their involvement is necessary to ensure that the home building industry is able to respond to any housing related issues raised during the hearing sessions.

Title	Introduction
Consultee Company / Organisation	Thistleberry Residents Association
Consultee Position	Chair
Consultee Family Name	Drakakis-Smith
Consultee Given Name	Angela
Q4 Part of document	Policy
Q6 Details	<p>THISTLEBERRY RESIDENTS ASSOCIATION LOCAL PLAN SUBMISSION</p> <p>The Thistleberry Residents Association wishes to submit the following comments and thoughts on what will hopefully be the final draft of the Local Plan and in the following way:</p> <p>8. The Future of the Plan System</p> <p>Although this is not contained within the remit of the Plan it might be the time to introduce such concepts in order to deal with the issues that prevent plans from a) being drawn up in a timely manner and b) from being implemented with good will, and in a timely manner.</p> <p>a. After reading the Plan it seems to be not necessarily a ground-up Plan in forward planning, but an attempt to fulfil all the legal, national, government requirements which have been imposed, using the tick-box vocabulary.</p> <p>b. It would appear that within LAs that there are short-term enthusiasms for projects which wears off as new projects are streamed. Enthusiasm seems to equate with levels of resources invested. This also means that some projects are not actually needed or required and add little value.</p> <p>c. The new NPPF rules reveal the tensions between national government and local authorities, particularly in the areas of control of development and resources.</p> <p>d. Local Authorities seem to have evolved their own ways of doing things which means that either practices and procedures need to be standardised, or that one size does not fit all and that each local council needs to formulate its own plan with reference to its unique needs without the interference of national government with national government being the final scrutineer/arbitrator. However, this might need a new and different kind of Councillor and MP.</p> <p>e. It would seem that, currently, national and local government might not be on the same wavelength. It seems that in some cases, national government is a driving force for implementation of its own wish lists, and that Local Government is a line of resistance with ideas of its own. A more collaborative and meaningful dialogue might produce a more meaningful dialogue and mutual compromises in order to bring about a better working relationship.</p>

f. Given how dynamic and fast-moving situations can be at the local level it is questionable whether or not setting a plan to cover 20 years is possible or even feasible so that it is fit for purpose.

g. Some of the proposals in the Plan have already happened so the Plan appears to be retrospective - rather than forward looking. The same could be said of the housing allocations and provision - some have already been built so there is a confusion between what has been, what is, what is needed and what might/should be. Whilst the five year 'banks' for land and quantities of units might go some way to prevent evasion, it is important that the methodology is also fully understood and implemented into a workable rolling system.

h. The system of local governance was outdated even in 1972 when it was introduced. However, the system still clings to 19th Century principles and rules. Some parish councils are particularly out of date even with those rules. Many parish councils do not have the policies to ensure they are acting legally or even democratically - a term which is losing its meaning. Increasingly it seems that governance has become so eroded, in some contexts it might no longer exist.

i. Rules and overarching policies are often vague (if they exist) and are differentially interpreted within and between councils. Councillors appear to lack the necessary support to place things back on track. Chairs and Clerks can be equally and increasingly ill-equipped to deal with the kind of governance required in a 21st Century which appears to be controlled by the internet, social media and hearsay. Truth is rapidly losing its appeal.

j. To inform the latest Plan perhaps there is a need to quantify the real successes (and failures) of its predecessor in order to avoid making the same mistakes in the next 20 year Plan period.

Sustainability Appraisal and Habitats Regulations Assessment

Comment ID	NULLP208
Order	9
Title	Sustainability Appraisal and Habitats Regulations Assessment
Consultee Company / Organisation	Sustainable Exercise Partnership (StEP)
Consultee Position	director
Consultee Family Name	Hartveld
Consultee Given Name	Adri
Q4 Part of document	Paragraph
Q4 Paragraph number	2.3
Q5 Legally compliant	No
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	This Draft Final Local Plan does NOT demonstrate sustainable development that helps combat climate change and facilitates carbon reduction. The proposed AB business park is in the wrong place, as well as the proposed housing development between Whitmore Road and Keele University. Both increase car dependency, air pollution and increase climate breakdown.
Q7 Modification	Site Allocation Policy AB2 "Land at Junction 16 of the M6" is wholly in the wrong location. It would be highly damaging to the environment. Amelioration through "Subject to point 13. measures to support travel to / from the development, particularly by sustainable modes, include cycling links into the development, bus routes and demand responsive travel schemes" is not going to work, because it's too far away from where future employees or future customers (of the future distribution businesses such as Amazon) live. The reality would be that employees living in e.g. Silverdale will be forced to travel by car and travel through Alsager Bank and Audley to get to this site. Amazon vans would travel a lot further to make the deliveries to their customers. Chesterton, Chatterley Valley and other brownfield sites in Stoke-on-Trent would be much better locations to increase good employment prospects, reduce car travel and facilitate active travel, to improve people's health.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	So far there appears to be a lack of consideration of the consequences of these "employment" and housing developments. I think we can help to improve the proposals.

Q5 DTC compliant	Yes
Q6 Details	<p>Dear Allan Clarke, Newcastle-under-Lyme Borough Council - Final Draft Local Plan Consultation</p> <p>Thank you for your consultation on the above document.</p> <p>We are the charity who look after and bring to life 2000 miles of canals & rivers. Our waterways contribute to the health and wellbeing of local communities and economies, creating attractive and connected places to live, work, volunteer and spend leisure time. These historic, natural and cultural assets form part of the strategic and local green-blue infrastructure network, linking urban and rural communities as well as habitats. By caring for our waterways and promoting their use we believe we can improve the wellbeing of our nation. The Canal & River Trust (the Trust) is a statutory consultee in the Development Management process, and as such we welcome the opportunity to input into planning policy related matters to ensure that our waterways are protected, safeguarded and enhanced within an appropriate policy framework. Our waterways are acknowledged within the draft Local Plan, as blue/green infrastructure, which can serve as a catalyst for regeneration; a sustainable travel resource for commuting and leisure; a natural health service acting as blue gyms and supporting physical and healthy outdoor activity; an ecological and biodiversity resource; a tourism, cultural, sport, leisure and recreation resource; a heritage landscape; a contributor to water supply and transfer, drainage and flood management. The waterway network is an accepted as part of the historic environment, the character, cultural and social focus of the Borough. The Glossary also includes canals within the definition of Blue Infrastructure and defining Canal Towpaths assists with this understanding.</p> <p>Based on the documents and information available the Trust has the following general advice on the consistency and factual accuracy of the draft local plan as part of its soundness. We request the following minor modifications to the wording of the draft Local Plan to provide greater clarification of the Trusts role within the delivery of the plans aims. We hope that the comments provided are clear and helpful and that your next revision will address these points.</p> <p>Paragraph 3.9</p> <p>Paragraph 3.9 currently includes the wording 21 Conservation Areas which cover rural villages, town centres, and parts of the Shropshire Union and Trent and Mersey canals.</p> <p>We suggest that you use Trent & Mersey with '&' to reduce confusion with the number of 'and' within the sentence and for consistency.</p>

Q6 Details	<p>Gladman Developments Ltd (Gladman) welcome the opportunity to comment on the Newcastle-under-Lyme Final Draft Local Plan 2020-2040 (Regulation 19) consultation and request to be updated on the progress of the emerging Local Plan. Please refer to attached representations. Gladman has fully engaged fully in the preparation of the emerging Newcastle-under-Lyme Local Plan 2040 to date. Feedback from the First Draft Local Plan (Regulation 18) consultation has been addressed and incorporated into the Final Draft Local Plan consultation document.</p> <p>In the sections below, Gladman have made specific comments where we consider the Final Draft Local Plan requires modifications or further clarification to ensure that it is capable of being found sound. Comments are focussed mainly on the consultation document, with references to the Duty to Cooperate and Sustainability Appraisal documents. Our representations also include details of Gladman's land interest at land south of Eccleshall Road, Loggerheads, which we are promoting as suitable for identification as a housing allocation in the emerging Local Plan. Please refer to attachment for more information.</p> <p>Vision and Strategic Objectives</p> <p>In principle, Gladman support the Council's vision and objectives to deliver sustainable new homes and jobs to meet local needs, provide more opportunities for people and to support the growth of businesses, town centres and our university, whilst preserving and enhancing the natural environment, reducing carbon footprint and respecting and improving the character and distinctiveness of market towns, villages and other rural areas. This is in general accordance with the sustainability objectives included in paragraph 8 of the NPPF</p>
Q7 Modification	Please see attached representations
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)

Title	Strategic Objectives for the Borough
Consultee Company / Organisation	Araripe Limited
Agent Company / Organisation	Pegasus Group
Agent Position	Executive Director
Agent Family Name	Onions
Agent Given Name	David
Q4 Part of document	Paragraph
Q4 Paragraph number	Strategic Objectives
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>These representations are made in response to the Regulation 19 consultation on the final draft of the Newcastle-under-Lyme Local Plan 2020 – 2040. The representations are made by Pegasus Group on behalf of Araripe Limited and relate to their land interest at St Martins Road, Talke(hereafter referred to as the "Site"). The Site is greenfield land situated to the south of Talke. With regards to the Site, these representations should be read alongside the attachment.</p> <p>The Plan identifies 13 Strategic Objectives for the Borough. Only one of these objectives, SO- 5 (V), specifically relates to housing. This refers to the provision of a mix of housing types and aspirational housing. This objective is supported by Araripe Limited, and is consistent with national policy, namely</p>

	<p>Paragraphs 60 and 63 of the NPPF. However, it is noteworthy that there is no objective which refers to providing sufficient homes in the Borough to meet its identified housing need across the plan period, and the role this can play in supporting economic growth. Such an objective would align with Section 5 of the NPPF, and the economic and social objectives for development set out within Paragraph 8. Araripe Limited have previously highlighted this within representations on the First Draft Local Plan, and the Council are urged to consider the addition of an objective to this effect prior to submitting the plan to the Secretary of State. Placing an emphasis on this would ensure that the key national planning objective of boosting the supply of homes is reflected in this overarching section of the Plan, ensuring its soundness in this respect.</p> <p>Objective S0-12 (XII) refers to the fact that the Green Belt will be protected, unless there are exceptional circumstances to justify the release of land from it. It is implied that the Green Belt must be protected in all other scenarios. This is inconsistent with both national policy and draft Policy PSD5, both of which make clear that Green Belt land which has not been released through the plan-making process can still be developed providing that there are very special circumstances to justify this, or the scheme would form an exception to inappropriate development (Paragraphs 152 – 156 of the NPPF). Thus, this objective is currently unsound, and reference should be added that, whilst the Green Belt can be protected as desired by the Council, some development may still be appropriate or permissible if very special circumstances exist.</p> <p>The remaining strategic objectives are considered to meet the tests of soundness set out in Paragraph 35 of the NPPF, and Araripe Limited do not raise any objections to them.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	<p>Sufficient land for housing should be planned for to meet the identified need for this within the Borough. Araripe Limited strongly support the allocation of Site TK17 for residential development, but several amendments are required to make Policy TK17 sound, as set out in paragraph 3.19 of the accompanying written representations. We would welcome the opportunity to participate in the hearing sessions to set these out, as well as to draw attention to the other matters which need to be addressed to ensure soundness elsewhere in the final draft plan, whilst emphasising site TK17's suitability, availability, and deliverability, being an optimum and sustainable location for high-quality residential development.</p>

Consultee Position	Secretary
Consultee Family Name	ARNP
Consultee Given Name	AR
Q5 Legally compliant	No
Q5 Sound	No
Q6 Details	<p>Sites AB2 and AB2A</p> <p>ARNP strongly objects to the proposed allocation of Site AB2/AB2A (A500/M6).</p> <p>The Green Belt Site Review Consolidated Report 16th July 2024 recommends exclusion of the site(s) from the process (Table 17, page 28). This issue was also considered in the Urban Vision Enterprise CIC Audley Parish Green Belt Review, V2.4, August 2022, commissioned by Staffordshire County Council, which found a strong contribution to green belt purposes, including safeguarding the countryside from encroachment and regeneration of urban land.</p> <p>These recent reports appear to have been ignored.</p> <p>Removal of the site(s) from the green belt would undermine the purposes for green belts set out in the NPPF, in particular by allowing major incursion and encroachment into the countryside and undermining of regeneration of the urban conurbation, by developing greenfield land in the countryside.</p> <p>The economic impact on the conurbation would be negative, due to:</p> <ul style="list-style-type: none"> the remoteness of the site(s); the impact on the viability of alternative urban sites in the conurbation. Harm to the rural economy, due to loss of the best and most versatile agricultural land and associated harm to local food growing capacity and agricultural employment. <p>The traffic impacts would be negative, including:</p> <ul style="list-style-type: none"> Generation of road-based traffic and lack of sustainable transport alternatives; Traffic impacts on the rural character of the area; Impacts on the amenity and safety of rural roads and lanes. <p>The development of this site would be unsustainable and environmentally harmful, due to:</p> <ul style="list-style-type: none"> biodiversity impacts on rural lanes, where they need to be widened, including destruction of adjoining landscapes; development of greenfield land in an unsustainable location, remote from the existing urban conurbation; a range of significant adverse impacts (visual, noise, light, disturbance, air quality). <p>The development would introduce a major urban employment site within a rural parish, near to small rural villages and remote from local services.</p> <p>The Strategic Employment Site Assessment - 2024 Update (Aspinall Verdi) has failed to deal with the previously highlighted contradiction with the ARUP and UVE green belt assessment reports.</p> <p>The updated Sustainability Appraisal July 2024 highlights adverse impacts of developing the site AB2. Paragraph D.5.2.11 states "The introduction of new large-scale developments has potential to be discordant with the landscape features of the associated character areas as identified in the LSCA34, especially given the location of Sites AB2 and KL15 within areas of 'high' sensitivity to development ...".</p> <p>The Table on page N37 identifies that site AB2 would have major negative impacts on: 'Natural Resources and Waste', 'Flooding' and also 'Landscape'. Minor negative impacts include: Air, Biodiversity, Flora and Fauna, Water, Health and Wellbeing and Transport and Accessibility. There is only one other site that scores so negatively, and this is not being taken forward.</p> <p>We note that positive impacts are identified for 'Climate Change' and 'Economy'. We believe that this finding is perverse. It is difficult to see how the development of a remote site, well outside of the urban conurbation, involving the loss of agricultural land and relying on road based travel could contribute positively against climate change. In addition, the harm to the rural economy and to economic and physical regeneration in the urban conurbation has clearly not been taken into account.</p> <p>Site variation AB2A is not mentioned so presumably has not been assessed.</p> <p>Tables N10 and N11 set out growth strategy options. We note that option 6D does not include site AB2 and delivers better scores/outcomes.</p> <p>The Newcastle-under-Lyme Landscape & Visual Appraisal March 2023 identifies the site as having a major adverse impact. Mitigation measures would not be effective given the scale of development.</p> <p>The Audley Rural Civil Parish Natural Capital Assessment report (Staffordshire Wildlife Trust, June 2024) identifies ecological and wildlife features within the site, including a high distinctiveness wildlife corridor and Strategic Significance Areas within the Nature Recovery Network. A copy of this report is included.</p> <p>The Strategic Housing & Employment Land Availability Assessment (SHELAA), Report September 2022 Appendix 4 (Sites not in Deliverable & Developable Supply) included Site AB2. The AB2 site assessment proforma recognised that the site was in the green belt and was isolated, disconnected from Audley and</p>

	<p>Bignall End, partly affected by flood zones, with access limitations and with poor access to a range of services and facilities. The site appears to be missing from the 2024 update report. There is still a big inconsistency between NUL Borough Council's position in September 2022 and the present. A site identified as not deliverable or developable is now suggested for allocation.</p> <p>Allocation of this site is not justified by the Economic Needs Assessment Newcastle-under- Lyme & Stoke-on-Trent June 2020 which stated, 'overall need implied under any of the aforementioned scenarios could be met through the current supply of circa 293ha of employment land'. This further highlights how allocation of site AB2 would undermine regeneration elsewhere.</p> <p>Development of AB2 would be harmful to the local economy, community and environment.</p> <p>The site assessment is not supported by evidence and assessments (though we note the site has been deleted from updates of some of those assessments). Allocation of the site conflicts with several of the proposed policies of the Local Plan.</p> <p>Housing Site Allocations AB12, AB15 and AB33</p> <p>Sites AB12, AB15 and AB33 are all within Audley Parish. ARNP accepts that some housing growth is needed to meet local housing need, including small (one bedroom) and family (4 bedroom) accommodation and homes suitable for older people and those with limited mobility. The sites are close to existing settlements and do not create coalescence between settlements. ARNP would emphasise that green belt release should only occur in exceptional circumstances, but accepts that there are no alternative sites that would not involve green belt release.</p> <p>The new housing would help to ensure that existing shops and other facilities in Audley and Bignall End remain viable. The increase in population would place more pressure on health, education and other facilities and this one of the main concerns for many residents. The provision of a safe and adequate access would be essential for all sites.</p>

Q6 Details	<p>Newcastle-Under-Lyme Local Plan Review - Regulation 19 Consultation (Final Draft)</p> <p>National Highways welcomes the opportunity to provide comments on the Final Draft Local Plan consultation (Regulation 19) prepared for Newcastle-Under-Lyme Borough Council, which is expected to cover the plan period up to 2040.</p> <p>National Highways has been appointed by the Secretary of State for Transport as a strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the Strategic Road Network (SRN). It is our role to maintain the safe and efficient operation of the SRN whilst acting as a delivery partner to national economic growth.</p> <p>In relation to this consultation, National Highways' principal interest is ensuring the safe and efficient operation of the SRN in the area, notably the M6, A50 and A500 network which routes through the Local Plan boundary.</p> <p>In responding to Local Plan consultations, we have regard to the Department of Transport's (DfT) revised Circular 01/2022 - Strategic Road Network and the delivery of sustainable development ('the Circular') which sets out how interactions with the SRN should be considered in the making of local plans. Paragraph 28 of the Circular sets out that:</p>

"The policies and allocations that result from plan-making must not compromise the SRN's prime function to enable the long-distance movement of people and goods. When the company assists local authorities in the development of their plans and strategies, the local authority should ensure that the SRN is not being relied upon for the transport accessibility of site allocations except where this relates to roadside facilities or SRN-dependent sectors (such as logistics and manufacturing). The company will also work with local authorities to explore opportunities to promote walking, wheeling, cycling, public transport and shared travel in plan-making, in line with the expectations set out in the NPPF and the Transport Decarbonisation Plan."

In addition to the DfT Circular 01/2022, the response set out below is also in accordance with the National Planning Policy Framework (NPPF) and other relevant policies.

Previous Consultations

National Highways was consulted during the Regulation 18 consultation in August 2023. The Regulation 18 identified a minimum requirement of 7,160 dwellings (358 per year) and 69 hectares of employment land to be delivered during the plan period between 2020 and 2040. It also included potential sites for allocation, and we provided an indication of the potential sites that were expected to have traffic and boundary impacts on the SRN.

In May 2024, National Highways was consulted to provide recommendations for the Infrastructure Delivery Plan preparation, where we provided comments on the infrastructure requirement.

Final Draft Local Plan Regulation 19 Consultation

The Final Draft Local Plan Regulation 19 includes locally specific policies and strategic / non-strategic site allocations to meet housing and employment needs across the Newcastle-Under-Lyme area for the plan period of up to 2040. Once adopted, this Local Plan will replace the policies in the Newcastle-Under-Lyme and Stoke-on-Trent Core Spatial Strategy (adopted 2009) and the saved policies of the Newcastle-Under-Lyme Local Plan (adopted 2003). Appendix 2 of the Local Plan consultation document outlines the list of previously adopted policies that will be retained or replaced.

In principle, National Highways supports the vision and objectives set out in the Regulation 19 Draft Local Plan which aim to deliver the growth in a sustainable manner.

Housing and employment requirements

Based on our review of the Regulation 19 consultation, we note that the Final Draft Local Plan outlines a minimum requirement to deliver 63 hectares of employment land and 8,000 dwellings (400 dwellings per annum) over the plan period of up to 2040 as stated in the 'Policy PSD1: Overall Development Strategy'. We welcome that the housing and employment requirement have primarily been determined using a Housing and Economic Development Needs Assessment (HEDNA) in 2024, which in this case is expected to provide a higher housing demand when compared against the Government's standard method.

We acknowledge that a Sustainability Appraisal (SA) process has been undertaken to evaluate the different growth options considered, assess the impacts and identify the residual effects based on the social, economic and environmental parameters.

As outlined in Table 2 of the Final Draft a total of 8,663 dwellings are planned to be delivered over the plan period of up to 2040 to meet housing demands. This also includes a supply buffer of around 8.3% to address any potential delivery challenges. We acknowledge that the supply also factors in the windfall allowance estimated based on the Council's Strategic Housing Land Availability Assessment (SHLAA), historical trends, and future projections.

Policy SA1: Site Allocations indicates that a significant portion of the housing supply will be delivered through strategic allocations. When comparing the allocation sites included in the Regulation 19 consultation against those set out in the Regulation 18 consultation, we note some minor changes in the scale of growth at individual sites, with a few sites being removed and others added. However, the total housing growth from all strategic allocations remains at 4,512 dwellings. The table below outlines these changes (tables included in the attachment)

In the case of employment supply, we note that AB2 (Land at M6 Junction 16) and KL15 (Land at Barkers Wood, Keele) are key strategic sites contributing significantly to meet the employment needs.

Sustainable transport

We acknowledge that the Final Draft Local Plan has focussed on decarbonisation policies such as 'Policy CRE 1: Climate change' and 'Policy CRE 2: Renewable energy' to address climate change impacts by reducing carbon emissions. This also includes developing energy-efficient buildings, designing to BREEAM Excellent standards, optimising water use, adopting water conservation measures, and utilising renewable or low-carbon energy sources.

'Policy IN2: Transport and Accessibility' emphasises that new developments must provide access through sustainable transport modes to protect the integrity of the highway network. The Council will work with developers to ensure that the proposals contribute to a transport network that is accessible, efficient, and safe. We support this policy and acknowledge that developments likely to generate significant traffic will be required to produce Transport Assessments and Travel Plans, in accordance with the requirements set out. We appreciate that focus is also given to developments that facilitate sustainable movement of freight traffic.

'Policy IN4: Cycleways, Bridleways, and Public Rights of Way' highlights the importance of enhancing walking, cycling, and public transport facilities within the Borough.

We welcome these policies and note that these align with the expectations set out in the National Planning Policy Framework and National Highways' Net Zero Strategy.

Transport Evidence Base

Considering the scale and location of the allocations included in the Draft Final Local Plan, we expect impacts on the SRN in the area either independently or cumulatively.

Strategic Transport Assessment (document reference ED011)

We acknowledge that a Strategic Transport Assessment (STA) dated July 2024 has been prepared using the North Staffordshire Multi-Modal (NSMM) transport model to assess the likely traffic impacts of the site allocations proposed in the Regulation 19 consultation. We note that the model has been run for the following five scenarios in the forecast year of 2040.

Based on our review of the STA, we have the following comments to make:

Section 4.5 of the STA states that while the model emphasises the use of pre/post-COVID data, we note that accident data for the years 2018-2022 includes COVID data with relatively lower traffic flows and possibly fewer accidents. How has the impact of COVID been taken into account?

Section 5.3 of the STA states that the 2015 NSMM model is overestimating the flows by 26-28% when compared against 2022/23 observed WebTRIS data. It also notes that only 15-35% of counts pass in this validation exercise. Despite this shortcoming, model forecasts for 2040 were proposed to be used to inform future testing, which National Highways agreed to as it presents the worst-case scenario with overestimation of the traffic.

Section 7 provides details of the reference case model development, but note that finer details of the method applied are missing. We therefore have the following queries relating to this section:

- Does this scenario include constraining other local authorities to NTEM/TEMPro?
- Does this scenario include any committed and under-construction developments within the local plan area?
- What is the background growth percentage between the base year and the forecast year 2040?

Regarding Figure 7-1, we are unable to find the basis for changing the junction delay definitions for slight, moderate, and severe delays from what was mentioned in the minutes of the meeting dated 15th May 2024. At present, delays of up to 3 minutes at junctions are reported as slight which is arguable. Based on the model outcomes, improvement measures to enhance public transport connectivity and infrastructure schemes on the local highway network are proposed in the STA. We also note that a detailed junction assessment will be undertaken for M6 J16 using a VISSIM model to accurately assess the traffic impacts of the AB2 allocation.

Regarding Section 8.3.2, bullet 1, we interpret that the new junction is the access to site AB2. Thus, we are surprised that the design of this new junction would still lead to 120-180 seconds of delays in the PM. A new access arrangement should work without that much stress.

We request that a summary table with delays (absolute numbers in seconds) at each of the approaches be prepared and shared with National Highways for M6 J16 and the new junction on A500 for site AM2. This is so we can understand the changes in delays between the base, reference case, and proposed scenarios.

We request that the basis for the 10% reduction in car users for the area around site AB2 set out within Section 8.6.6.1 be supported by further evidence.

We also request further details on how much total demand (in PCUs or vehicles) has been removed from the original matrix. Has a preliminary assessment been undertaken on the frequency of bus service that would be required to cater to that demand during peak hours to verify that this is a feasible option?

Regarding Section 8.6.3, while we do not have an issue with the bespoke approach to testing M6 J16 within VISSIM, considering that the NSMM is overestimating the traffic, the use of incremental addition of the difference from the NSMM may lead to an underestimation of traffic at this junction due to large delays in the NSMM reference case scenario. There is a possibility that any additional traffic from the AB2 site may divert to local or unrealistic routes within NSMM.

We therefore request that traffic flow distribution Select Link Analysis plots from site AB2 be shared with National Highways to verify that the routes assigned in the model are reasonable before being used for incremental addition for microsimulation assessment.

We also request that observed base and modelled reference case data be presented in a similar format as Table 8-6 for National Highways to understand the absolute traffic growth at each of the approaches.

National Highways Previous comments

While we are happy with the suggested incremental change in flow and delays analysis for 2040 forecast year models, we must establish a robust do – minimum reference case scenario developed using the base year model.

We note that our previous query dated May 2024 remains unanswered: “The further turning count comparison tables for the M6 J16 model are appreciated and provides comfort that many movements (particularly the A500 East approach) match the 2015 model. However the turning proportions provided for the M6 South to A500 East movement are of concern as these look significantly different to those that were modelled. National Highways would like to understand if there are any explanations of why these differences have occur and particularly why the model identifies such low percentage of car movements?”

STA Comments Summary

In summary, the modelling work to date is based on the NSMM model, which was previously approved by the DfT for other schemes. However, present-day validation using 2022/23 data shows that the model is overestimating traffic and not validating well. Hence, a bespoke approach is applied to assessing M6 J16, while the rest of the strategic assessment uses the forecast 2040 NSMM model which is still believed to be the best tool available. Analysis provided shows that parts of the A500 and junctions along it will be stressed by 2040 and that the level of stress will increase with the local plan. Strategic allocation sites tested will lead to some congestion but this would not lock out the network. The STA and IDP mention the possibility of developers' contributions for various infrastructure schemes including a new bus service along site AB2 among others that could potentially bring congestion levels down to a more comparable level with the reference case scenario, which should be acceptable.

We request responses to our queries above but are hopeful that the Local Plan can work with some support from the developers to mitigate any impact on the SRN.

Infrastructure Delivery Plan (IDP)

A total of 28 transport development schemes are listed in Table A.1 of Appendix A of the IDP to enhance the transport network and promote sustainable transport. The schemes that are of interest to National Highways are:

1. T9 (improvements between M6 J13 and J15) - part of the RIS 2 scheme
2. T14 to T20 schemes

We note that the finalisation of these schemes is subject to undertaking detailed junction capacity assessments. We appreciate that the list of potential allocations that are likely to impact the SRN has been included.

T14 specifically mentions a “Potential mitigation scheme involving widening and an additional lane at the gyratory on M6 J16. VISSIM modelling work is currently ongoing, and the need for any potential

	<p>mitigation measures can be confirmed after the completion of a detailed capacity assessment as part of the planning application stage.” It should be noted that there is no confirmed scheme from National Highways perspective at the moment, and we seek confirmation as to whether such a scheme is included in the Local Plan assessment within Scenario 5.</p> <p>We note that the funding mechanism to implement these mitigation schemes including T14 will likely be through developer funded Section 278 agreements. Considering that there could be cumulative impacts from different allocations in the area, a Section 278 agreement is likely to result in a piecemeal approach to the delivery of the improvement works. We would welcome some clarity on why a Section 278 agreement is preferred over a Section 106 agreement for the funding mechanism in this case.</p> <p>Duty to Cooperate</p> <p>We note that a Duty to Cooperate Interim Statement of Compliance has been submitted as part of the evidence base alongside the Final Draft Local Plan. We commend the Council's approach to collaborating with neighbouring local authorities, stakeholders, and other bodies to address issues related to local authority boundaries. This collaborative effort will help ensure that all parties' interests are considered and that a comprehensive solution is developed.</p> <p>National Highways is committed to working with Newcastle-Under-Lyme Council to develop and draft a Statement of Common Ground (SoCG) to address any strategic cross-boundary issues and reach an agreement on how the traffic impacts from the allocations identified in the Local Plan are to be dealt with. We understand that a final version of the Duty to Cooperate will be prepared to support the submission version by December 2024.</p> <p>Once again, National Highways appreciates the opportunity to comment on the Final Draft Local Plan Regulation 19 consultation and looks forward to working collaboratively with the Council to support the development and adoption of the Local Plan for Newcastle-Under-Lyme.</p>

Title	Vision for the Borough
Consultee Company / Organisation	Natural England
Consultee Position	Senior Officer
Consultee Family Name	McLaughlin
Consultee Given Name	Sally
Q4 Part of document	Paragraph
Q4 Paragraph number	Vision
Q6 Details	<p>Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.</p> <p>Natural England welcomes the opportunity to comment at this stage of the Local Plan and particularly supports the inclusion of policies on green and blue infrastructure, biodiversity, health and wellbeing, trees hedgerows and woodlands. We have reviewed the consultation documents and provide comments that relate to the soundness of the Local Plan and that are most relevant to our interest in the Natural Environment.</p> <p>Natural England has adopted a robust precautionary approach within this plan response. Whilst we welcome the content of the Local Plan, Natural England advises that the plan is currently at risk of being unsound and/or not legally compliant due to the potential impacts on air quality in relation to internationally designated nature conservation sites and the justification for the potential loss of 263ha best and most versatile (BMV) agricultural land. Further detail is provided below.</p> <p>Natural England have also provided other advice within this submission relating to further improvements that could strengthen plan policies and specific strategic site options and related mitigation.</p> <p>Do you consider that the Newcastle Under Lyme Plan is Sound and Legally Compliant?</p> <p>Natural England notes that the plan is at the pre-submission stage and as such your authority is seeking confirmation on the soundness of the plan. Having reviewed the plan and supporting documents, Natural England considers the pre-submission plan in its current form is not sound or legally compliant, this is due to a lack of evidence with regards to air quality and the cumulative loss of BMV agricultural land both in a local and national context.</p> <p>Air quality</p> <p>Natural England notes that the Sustainability Appraisal states that “Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)</p> <p>As Natural England understands it the current evidence base used to conduct the HRA cannot rule out adverse impacts on designated sites. The HRA states at page 22 3.4.16 “At the time of writing, the traffic modelling run for the final suite of Regulation 19 allocations had not been undertaken.” Appendix A lists the local plans for neighbouring LPA's concluding that ‘in combination’ with plans and projects (approved and those yet to be implemented) they may trigger in-combination effects on European sites as a result of air quality, particularly as we understand it in the key commuting areas.</p> <p>Natural England notes that Annual Average Daily Traffic (AADT) data and traffic modelling in the Strategic Transport Assessment (STA) concludes a potential reduction in travel and related air pollution at allocated sites as a result of a predicted preference in the use of public transport. We are surprised by this projected decrease in both traffic and related air pollution, particularly as one employment allocation site includes a 200-bay lorry park and increased congestion is predicted at junction 16 of the M6 where it joins the</p>

A500 in a rural location with no existing rural transport provision. The Sustainability Appraisal also notes that: "There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work". (p 206)

Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot therefore currently be ruled out at the following internationally designated sites:

- Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI
- Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI

The HRA outlines that the main source of ammonia emissions is agricultural practice, and that material increases in NH3 emissions are unlikely to be associated with the proposed local plan. At Black Firs and Cranberry Bog and Oakhanger Moss, any increase in nitrogen deposition has the potential to exacerbate pollution levels and thereby undermine the reasons for notification of these sites as a Ramsar.

Ammonia can be emitted from vehicle exhaust emissions as a by-product of the catalytic conversion process designed to reduce emissions of nitrogen oxide. As traffic composition transitions toward more petrol and electric cars (i.e., fewer diesel cars on the road), catalytic converters may aid in reducing NOx emissions but result in increased ammonia emissions. Ammonia emissions from road traffic therefore could make a significant difference to nitrogen deposition close to roads.

Natural England therefore advise that ammonia sourced from traffic emissions should be included for assessment within the local plan HRA, as the impact from this source on designated sites is currently unclear. For further information please see this report from Air Quality Consultants (AQC) that looks at ammonia emissions from roads for assessing impacts on nitrogen-sensitive habitats. Whilst we are aware that the current CREAM model created by AQC used to assess ammonia emissions from road traffic has not been peer reviewed, at this time it has been recognised as a Best Available Tool and we deem it appropriate to be used where any caveats associated with this model are also considered within the assessment. An assessment based on the best available approach is necessary. The next stage of assessment can then consider uncertainties in the model and site specifics to decide if mitigation needs to be considered.

Further work is therefore required to inform the Habitat Regulations Assessment. Natural England will engage with the Local Planning Authority in order to produce a Statement of Common Ground (SoCG) on this matter.

'Best and most versatile' (BMV) agricultural land

Natural England notes that "the proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land, A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of 'best and most versatile' (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services". (page 74 Sustainability Appraisal).

Under the Town and Country Planning (Development Management Procedure) (England) Order 2015 (DMPO) Natural England is a statutory consultee on development that would lead to the loss of over 20ha of 'best and most versatile' (BMV) agricultural land (land graded as 1, 2 and 3a in the Agricultural Land Classification (ALC) system, where this is not in accordance with an approved plan.

Natural England would like to understand how the local planning authority have produced the evidence base and options assessment which informs the strategic site allocations.

Natural England will engage with the local planning authority to consider the cumulative impacts of the loss of BMV both in the local and national context and the challenges related to environmental impact, infrastructure, and the requirement to deliver a balance between the need for development and the potential urbanisation of the countryside including the potential mitigation measures that need to be considered.

NPPF paragraph 174e states:

Planning policies and decisions should contribute to and enhance the natural and local environment by:

- ... preventing new and existing development from contributing to, being put at unacceptable risk from, or being adversely affected by, unacceptable levels of soil, air, water or noise pollution or land instability.

Development should, wherever possible, help to improve local environmental conditions such as air and water quality, taking into account relevant information such as river basin management plans.

Natural England provides guidance to inform further assessment of air quality and the loss of BMV agricultural land in our response to the content of the plans Strategic Policies as set out below.

Do you consider that the Newcastle-under-Lyme Borough Council Regulation 19 pre-submission draft Plan is compliant with Duty to Co-operate?

In terms of working with neighbouring authorities, Natural England notes that initially the plan was intended to be produced jointly with the City of Stoke-on-Trent, the plan does not however currently present an evidence base that demonstrates that a collaborative approach has been adopted and that the Duty to Co-operate has been fully complied with.

The Sustainability Appraisal states that: "Overall, there is potential for a cumulative adverse effect on biodiversity, owing to the fragmentation of the ecological network... Where a large amount of development is located on previously undeveloped land surrounding rural settlements, this is likely to produce a long-term irreversible negative cumulative effect regarding the urbanisation of the countryside" (p 71)

Natural England would therefore like to further understand how the areas identified to meet the City of Stoke-on-Trent's unmet employment needs are justified and appropriate and whether meeting some of the employment needs of the City of Stoke-on-Trent has led to the need to release or safeguard more land from the Green Belt in Newcastle under Lyme. If this is the case, what are the exceptional circumstances for doing this and how does this align with the allocated sites options assessment?

Recreational Pressure

In terms of the South Pennine Moors SAC and recreational impacts, the Local Plan does comply with the Duty to Co-operate. Natural England recommends that reference is made to the 'Recreation use of the South Pennine Moors and implications for strategic housing growth' report by Footprint Ecology Ref 778 date 27th March 2024. This report should both inform the evidence base and ensure that policies relating to open space/green infrastructure are as rigorous and robust as possible.

The report concludes that more data/evidence is required to determine if recreational use is causing an impact across to the South Pennine Moors and to get a better understanding of the scale and location

of any impact. Natural England notes that the report records 7,000 additional dwellings in Newcastle-under-Lyme over the plan period rather than the 8,000 included in this regulation 19 submission. Newcastle-under-Lyme Borough Council should therefore continue to work with local authority and other partners to ensure coordinated and continued cross boundary action.

Other matters

Natural England has specific concerns related to allocations in the Green Belt. Notwithstanding that, Natural England considers most of the policies within the plan to be sound and deliverable. The plan is consistent with national policy with regard to those policies that are within Natural England's remit. Further information on strengthening policies including but not limited to Soils and best and most versatile (BMV) agricultural land, preventing loss and fragmentation of habitats and supporting green infrastructure are provided below.

Vision and Strategy

Natural England notes that the Plan's vision and emerging development strategy set out a framework for the future development of Newcastle-under-Lyme and addresses the needs in relation to housing, the economy, community facilities and infrastructure, including specific reference to a proposed employment site allocation.

This vision and the related objectives should also set out the environmental ambition for the plan area and form the basis for nature recovery and enhancement, supported by the policies and proposals in the plan.

Natural England advises that the vision should also incorporate more on the local ecology and landscape features which underpin local distinctiveness such as the "strong rural character with long open views across the surrounding rural landscape, towards more distant hills often framed by trees" (p 69) Part 3 Site Specific Landscape & Visual Appraisal. "Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms" (p 187) Sustainability Appraisal.

Strategic Objectives

Natural England welcome strategic objective SO-4 relating to carbon reduction and climate change, however we do not feel that this group of thirteen strategic objectives value or reflect the Boroughs whole ecology and landscape including but not limited to the protection of soil and best and most versatile (BMV) agricultural land. We would suggest that additional objectives are added relating to: air quality, water quality and quantity, soils and landscape.

Natural England would also like to see stronger reference to the Nature Recovery Network which is one of the specific aims of the Environment Act 2021 and will underpin the approach to the enhancement of nature.

Air quality is a major threat to habitats and species. Many ecological sites are exceeding their critical loads and levels for ammonia, nitrogen deposition and acid deposition. The strengthening of the policies and the rationale behind site allocations within this plan will ensure that new development does not contribute to the further deterioration of habitats and species due to air pollution. Further advice on strengthening the plans evidence base with regards to air quality is provided in the links below:

Strategic Policies

5 Planning for Sustainable Development

Policy PSD5: Green Belt

Natural England notes that this policy "aims to protect the Borough's essential open spaces, prioritise the use of brownfield land, and guide potential future development in accordance with the National Planning Policy Framework (NPPF)".

Natural England however notes that amendments to the Green Belt boundary are proposed in the form of 14 site allocations to accommodate both the growth requirements of the borough and the employment requirements of wider Stoke-on-Trent conurbation. Natural England's has some site-specific concerns about the potential impacts of some of the green belt sites selected on the natural environment with regards to habitat loss, fragmentation and justification for the loss of BMV agricultural land.

We note the LPA's intention to release and compensate for the loss of green belt and prioritise the use of suitable brownfield land. However, the site allocations in the green belt would result in the potential loss of 263ha of Best and Most Versatile (BMV) agricultural land. The council should satisfy itself that it is making a balanced decision for sustainable development, the Sustainability Appraisal concludes that: "The Green Belt Study assessed land parcels against the contribution they make to the five purposes of the Green Belt on a four-point scale...Three allocated sites (AB12, AB33 and TK10) are located in areas which make a 'strong' overall contribution to the purposes of the Green Belt where "the site contributes to the purpose in a strong and undeniable way, whereby removal of the site from the Green Belt will detrimentally undermine this purpose" (p101)

"Site allocations on previously undeveloped land or that would result in a net loss of GI / vegetation could result in a reduced capability of the environment to provide ecosystem services including carbon storage, the storage and filtration of water including natural flood protection, as well as reduced availability and connectivity of habitats within the green network enabling movement of species. (p 165)

Strategic Site Allocations

Natural England suggests that the HRA should include a "requirement for project-level/site specific HRA's and targeted ecological surveys".

The Sustainability Appraisal concludes that:

"Some 12 allocated sites partially coincide with priority habitats, where 3.43% of the total site allocation areas coinciding with priority habitats which include deciduous woodland, good quality semi-improved grassland and Site BL18 coincides with lowland fens which is a very high distinctiveness habitat in the BNG handbook (2024). These habitats can support a range of species of principal importance. Allocated Site KL15 is adjacent to 'The Butts and Hands Wood' ancient woodland, with a further 20 allocated sites located in close proximity to ancient woodlands. P158

"Six allocated sites (Sites CT20, HD10, KL13, RC8, SP11(2) and SP23) are located within areas of 'high' or 'very high' habitat distinctiveness that provide high biodiversity value. Whilst in many cases these habitats can be conserved alongside development, it is likely that in some cases fragmentation or loss of habitats and connections between habitats will occur"

"The majority of allocated sites are located on previously undeveloped land, which would result in the loss of soil resources and the ecosystem services they provide. (p 159) The development of new buildings on previously undeveloped land would be expected to result in a direct loss of soil resource, with little or no scope for mitigation" (p 216)

"The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution. (p 68)

For all sites, Natural England advises that the hydrological catchment within which the site sits is taken into consideration, with regards to the potential impact of the developments proposed on the adjoining watercourses and wider catchments, including but not limited to surface water runoff (including during construction), existing and required capacity of Waste Water Treatment Works (WwTW) and water supply and flooding issues. Each site will require site specific investigation, and the council should understand the impact of all the sites put forward individually and in combination.

Natural England has specific concerns and or requires further information about the following 'Strategic Site Allocations' which could potentially impact on designated sites as a result of air and water quality and/or lead to the loss and / or fragmentation of priority habitats and BMV agricultural land:

BL18 – Clough Hall Playing Fields, Talke

Natural England would like to further understand this larger residential development proposal with regards to the potential impacts on the lowland fen habitat.

KL13 & KL15 – Land South of A525 between Keele University and Newcastle

Natural England notes this proposal for Employment development is immediately adjacent to ancient woodland priority habitat.

HM28 – Land off East Lawns, Betley

Existing and projected water quality issues at Betley Mere will need to be considered with regards to this allocation.

LW53 – Loggerheads

Natural England notes this residential housing development proposal is located within the IRZ of protected sites (Burnt Wood SSSI) which states that development proposals of 50 or more homes outside existing settlements/urban areas in these zones should be consulted upon with Natural England.

SP11 – Former Keele Municipal Golf Course

This Larger residential development is categorised in the Landscape Assessment as having a Major adverse impact on the local Landscape.

AB2 – Land Adjoining Corner of A500 and M6 Southbound

Natural England notes this proposed employment allocation released entirely from the green belt, which comprises 70ha of grade 2 BMV agricultural land. The Landscape study concludes that the: "Proposed development scenario is likely to have a major adverse effect on the SA objective with no satisfactory mitigation possible" (p 15). With regards to potential Air Quality impacts on protected sites Natural England notes from the options analysis that "The loss or potential moving of a layby to enable access to the site could be problematic indicating potential issues with site access and traffic flow. An increase in HGV and personal vehicle traffic is anticipated, which could lead to potential congestion and air pollution in the area". Natural England would therefore also like to understand the evidence base further including the rationale for an alternative site TK30 @ Talke A34 / A500 roundabout being ruled out.

Policy PSD6: Health and Wellbeing

Natural England welcome this policy direction in terms of safeguarding health and amenity and supporting healthy communities, through the protection and provision of high-quality open spaces, including allotments and the promotion of active travel transport choices Further information on joining up Nature Recovery and Green Infrastructure (GI) with health priorities is set out below. If more cities and towns can be creatively designed and managed, with nature and communities at their heart, we will see nature and people thrive. This is something we set out to inspire at Natural England when developing the Green Infrastructure Framework and Design Guide. Natural England's People and Nature survey tells us that, for 82% of people 'being in nature makes me happy'. With the cost-of-living crisis, 'free' places like local parks and greenspace, have become even more important. The value of these spaces for the economy is estimated at £28.7 billion per year.

Green infrastructure in towns and cities provides places to relax, exercise, and spend time outdoors; cools urban areas; reduces flooding by allowing water to permeate the ground rather than overwhelm our drains; increases biodiversity and helps to reduce inequalities in access to nature. Options assessments for development sites and related green and blue Infrastructure within and between developments, green spaces and designated sites should; include soft transition and consider potential direct and indirect implications on sustainable use for example visitor pressure and transport / access options.

The natural environment affords the best 'natural' play opportunities for children while offering multifunctional nature-based solutions to climate change etc. These can be blended into wildlife rich green infrastructure and green open spaces that can act as destination play sites for local children (See best practice at Play England and Play Wales) that have proven health and wellbeing value.

Evidence for nature play and health:
 Play, naturally: a review of children's natural play
 Nature for health and wellbeing | The Wildlife Trusts
 Good practice in social prescribing for mental health: the role of nature-based interventions - NECR228 (naturalengland.org.uk)

6 Climate and Renewable Energy
 Whilst Natural England welcomes this group of policies we recommend including Policy CRE1: Climate Change and Policy CRE2: Renewable Energy within the Sustainable Environment (SE) group of policies to achieve a collective strategic focus on sustainable development and working toward achieving net zero alongside the SE policies relating to Pollution and Air Quality (SE1) and requirements for sustainable water management measures to reduce water use, natural flood protection features alongside the specific policies on Sustainable Drainage Systems (Policy SE4:)

Natural England continues to work with the LPAs across the region on understanding air pollution across area boundaries (see comments and links in objectives section.)

10 Infrastructure and Transport Policy.
 Policy IN4 Cycleways, Bridleways and Public Rights of Way
 Natural England welcomes the inclusion of this group of policies which seek to maintain and enhance the network of public rights of way that cross the borough. We note that the sustainability appraisal states that "the borough has relatively poor accessibility to the cycle network and is the lowest performing in the county for walking zones" (p 206) and that, "eight allocated sites (AB2, AB12, AB33, HD10, KL15, MD29, SP11(3) and TK10) do not currently have safe pedestrian or cycle access adjacent to the site, where site end users may be reliant upon less sustainable modes of transport including private car use". (p 180)

11 Sustainable Environment
 Natural England welcomes this group of policies and has the following policy specific comments:
 Policy SE1: Pollution and Air Pollution.
 Natural England welcomes this policy that notes that development proposals which are likely to result in detrimental impacts on air quality, will not be permitted unless it can be demonstrated that mitigation measures effectively address these impacts. (Comments on Air Quality are also provided on page 2 and 4 of this letter). The promotion of sustainable and active travel options, low-emission technologies and enhancement of green infrastructure to absorb air pollution is also noted. (see comment above re integrating the group: 6 Policies Climate and Renewable Energy).

Policy SE7: Biodiversity Net Gain
 Natural England supports the inclusion of a policy on BNG. We suggest the following minor amendments to further improve the plan policy.
 The BNG policy should make it clear that biodiversity net gain is not applied to irreplaceable habitats, and that any mitigation and/or compensation requirements for Habitats sites should be dealt with separately from biodiversity net gain provision. The policy should also set out how biodiversity net gain will be delivered and managed through the lifetime of the scheme and including monitoring requirements. This should include indicators to demonstrate the amount and type of gain provided through development. The indicators should be as specific as possible to help build an evidence base to take forward for future reviews of the plan, for example the total number and type of biodiversity units created, the number of developments achieving biodiversity net gains and a record of on-site and off-site contributions. Natural England notes that the Sustainability Appraisal states "Despite the BNG provisions at the site level, there remains potential for a cumulative adverse impact on biodiversity at the landscape scale, owing to incremental habitat losses. As a result of development within the Local Plan undeveloped land will be lost which will include the loss of soil resources, habitats recognised as being of 'high' and 'very high' distinctiveness, and potentially ecological links between biodiversity assets, whereby the policies will not be expected to fully mitigate the fragmentation of the ecological network. Fragmentation of the ecological network across Newcastle-under-Lyme is expected to be a long-term and permanent significant effect." (p 162)

Policy SE8: Biodiversity and Geodiversity
 Natural England supports the inclusion of this policy to protect the Boroughs internationally, nationally and locally designated sites important for their biodiversity value and to enhance the natural environment and work with partners toward Nature Recovery.
 We particularly welcome the plans recognition of the value of "wider ecological networks" stating that "Other sites, both individually and collectively, that are not designated can also contribute towards protecting and enhancing diversity of species locally".

Policy SE10: Landscape
 Natural England welcomes this policy aimed at ensuring that "development proposals should protect and enhance the character, quality, beauty, and tranquillity of the Borough". We note from the sustainability appraisal that "The entirety of the south of the borough is identified as being high in relation to landscape sensitivity, which starts in Audley in the north and covers the southern area of the borough, including Loggerheads and Alington." We agree that "Alteration of the landscape character is a long-term and permanent significant effect... There is potential for a cumulative adverse effect on landscape character resulting from the development proposed in the Plan". (p193) SA.

Natural England has divided England into 159 distinct natural areas called National Character Areas (NCAs) Newcastle-under-Lyme falls within two NCAs: Shropshire, Cheshire and Staffordshire Plain: gently rolling plains dominated by intensive dairy farming, beef and arable production; The Potteries and Churnet Valley: strong contrast between the industrialised landscape of the Potteries and the pastoral, strongly dissected hills and small plateaux that flank the Churnet and Dove valleys.

Natural agrees with the following statement in the sustainability appraisal: "Although various policies aim to ensure that development conserves and enhances landscape character and distinctiveness, when combined with Local Plan policies that support infrastructural improvements such as for transportation,

water, and waste, this is likely to lead to a long-term and irreversible cumulative adverse effect on landscape character and tranquillity and associated indicators such as dark skies." (p72)

Policy SE11: Trees, hedgerows, and woodland
 Natural England welcomes this plans recognition that "Trees, hedgerows, and woodlands are integral to the distinctive character and ecological health of the Borough of Newcastle-under-Lyme, defining landscapes across both urban and rural settlements." And that "This policy prioritises the protection of existing natural assets, seeking to not only preserve, but actively enhance, these valuable features wherever possible".

Policy SE13: Soil and Agricultural Land
 Natural England has concerns about the justification for the loss of BMV agricultural land within this plan. "The proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land, A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of 'best and most versatile' (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services." (page74) (SA)

Natural England notes that policy SE13 states: "Outside of sites allocated for development in the Local Plan, development proposals should avoid the loss of best and most versatile agricultural land (BMV) unless it can be demonstrated that the benefits of development clearly outweigh the loss of the land and every effort has been made to mitigate for the overall impact of the development on best and most versatile agricultural land."

With regards to Soil and Agricultural Land Quality, Natural England advises that The Local Plan should give appropriate weight to the roles performed by the area's soils. These should be valued as a finite multi-functional resource which underpin our wellbeing and prosperity. Decisions about development should take full account of the impact on soils, their intrinsic character and the sustainability of the many ecosystem services they deliver.

The 25 Year Environment Plan (25YEP) sets out government action to help the natural world regain and retain good health, including highlighting the need to:

- protect the best agricultural land
- put a value on natural capital, including healthy soil
- ensure all soils are managed sustainably by 2030
- restore and protect peatland

Soil is a finite resource which plays an essential role within sustainable ecosystems, performing an array of functions supporting a range of ecosystem services, including storage of carbon and water, the infiltration and transport of water, nutrient cycling, a buffer against pollution and provision of food. In order to safeguard soil resources as part of the overall sustainability of the development, it is important that the soil resource is able to retain as many of its important functions as possible. This can be achieved through careful soil management and appropriate, beneficial soil re-use, with consideration on how any adverse impacts on soils can be avoided or minimised.

The conservation and sustainable management of soils is reflected in the National Planning Policy Framework (NPPF), particularly in paragraph 180(a), 180(b) and 181 (footnote 62). When planning authorities are considering land use change, the permanency of the impact on soils is an important consideration. Particular care over planned changes to the most potentially productive soil is needed, for the ecosystem services it supports including its role in agriculture and food production.

Plan policies should therefore take account of the impact on land and soil resources and the wide range of vital functions (ecosystem services) they provide in line with paragraph 180(b) of the NPPF.

Soil Plan Policies
 We strongly advise that at a minimum, the plan includes core policies for:

- the protection of best and most versatile (BMV) agricultural land (Grades 1, 2 and 3a in the Agricultural Land Classification (ALC)); and
- for the protection of and sustainable management of soils as a resource for the future.
- Areas of poorer quality land (ALC grades 3b, 4, 5) should be preferred to areas of higher quality land (grades 1, 2 and 3a).
- Recognise that development has an irreversible adverse impact on the finite national and local stock of BMV land.
- Conforms to NPPF and Planning Practice Guidance (Natural Environment and Minerals).
- Requires detailed ALC surveys to support plan allocations and for subsequent planning applications (for all sites larger than 5 ha). ALC surveys to support plan allocations and for subsequent planning applications for smaller sites (1 – 5 ha) would be welcomed.
- Recognise that development (soil sealing) has a major and usually irreversible adverse impact on soils.
- Soils of high environmental value (e.g., wetland and carbon stores such as peatland, low nutrient soils; or soils of high environmental value in the local context) should also be considered as part of ecological connectivity (Nature Recovery Network / Green Infrastructure).
- Requires soil handling and sustainable soil management strategies based on a detailed assessment of the soil resource based on best practice guidance (for all sites larger than 5 ha), ideally as part of the planning application process for major sites to help inform master-planning, and to safeguard the continued delivery of ecosystem services through careful soil management and appropriate, beneficial soil re-use.
- Soil handling and sustainable soil management strategies for smaller sites (1 – 5 ha) would be welcomed.
- Reference should be made to Defra's Construction Code of Practice for the Sustainable Use of Soils on Construction Sites
- In addition, for minerals and other temporary forms of development, plans for reinstatement, restoration and aftercare will be required (or for solar, a commitment to do so if the operational life is in decades); normally this will be return to the former land quality (ALC grade)
- Refers to soils issues within relevant policy areas such as renewable energy, climate change, green infrastructure and biodiversity net gain, flood schemes, managed realignment, development design and landscaping.

Policy SE14: Green and Blue Infrastructure
 Natural England supports this policy. Well-designed cross boundary multi-functional green infrastructure contributes greatly to a number of benefits both for people and nature. Your green and blue (for example

cross boundary canals) infrastructure should dovetail with your biodiversity net gain strategies to maximise benefits.

We would advise that the Local Authority also considers Natural England's Green Infrastructure Framework of Principles and Standards for England. As stated in our document, "Green infrastructure (GI) is part of the solution to many of the challenges we face; health inequalities, biodiversity crisis, climate change, nature recovery and levelling up. The GI framework supports local authorities, developers, parks and greenspace managers and local communities to enhance and create new good quality green infrastructure."

We would also suggest reference is made to the emerging Local Nature Recovery Strategy. Preparing Local Nature Recovery Strategies (LNRS) is a statutory requirement under the Environment Act 2021. LNRS are designed to work closely alongside other measures in the Act including supporting the delivery of mandatory biodiversity net gain and providing a focus for a strengthened duty on all public authorities to conserve and enhance biodiversity. They will also underpin the Nature Recovery Network, alongside work to develop partnerships and to integrate nature into our incentives and land management activities. Each LNRS will be specific and tailored to its area. The responsible authorities and people involved in preparing a strategy can choose how they want it to look, but every strategy must contain:

1. A local habitat map.

2. A written statement of biodiversity priorities. Statutory guidance for responsible authorities explains in detail what these 2 things should contain. Together they set out what the strategy is aiming to achieve and what practical actions will help do this. They will also propose where actions could be carried out for best effect and to connect and expand existing areas that are important for nature. We expect local nature recovery strategies to propose actions such as the:

- creation of wetlands
 - restoration of peatlands
 - planting of trees and hedgerows
 - more sustainable management of existing woodlands and other habitats like grasslands
- These actions are intended to help nature itself and to also help improve the wider natural environment.

Whilst the Staffordshire Local Nature Recovery Strategy (LNRS) is currently a work in progress, Newcastle-under-Lyme Borough Council Regulation 19 pre-submission should still be consistent with NPPF Paragraph 185 in terms of setting out local habitat priorities and identifying potential measures by which they can be achieved, alongside mapping areas that could become of particular importance in the future.

Natural England encourages Newcastle Under Lyme Borough Council via their Local Nature Recovery Strategy to actively develop cross border cooperation between other Local Planning Authorities (LPA) (for example Staffordshire Moorlands Borough Council) in coordinating land development projects that impact on local biodiversity sites to ensure that local biodiversity corridors are maintained and link up other local important sites for nature conservation.

This is a good way of achieving nature recovery and preparing to deliver the LNRS alongside enabling the local authority and its partners to identify, map and safeguard site areas, including green and blue infrastructure opportunities and interlinkages.

Habitats Regulations Assessment

Natural England notes that this Local Plan is not directly connected with or necessary to the management of any European site. A screening assessment has been undertaken which identified a number of Likely Significant Effects (LSE) associated with the Local Plan. Taking no account of mitigation measures, the HRA concludes that Local Plan has the potential to affect the following European sites:

- Cannock Chase SAC
- Humber Estuary SAC, SPA and Ramsar
- Mersey Estuary SPA and Ramsar
- Midland Meres and Mosses Phase 1 Ramsar
- Midland Meres and Mosses Phase 2 Ramsar
- Pasturefields Salt Marsh SAC
- Peak District Dales SAC
- Peak District Moors (South Pennine Moors Phase 1) SPA
- Severn Estuary SAC, SPA and Ramsar
- South Pennine Moors SAC
- West Midland Mosses SAC

We welcome that your HRA includes the Humber Estuary SAC, SPA and Ramsar site which is hydrologically connected to the river Trent. If the Local Plan resulted in significant water pollution, this European site could be affected and has therefore been screened in, in relation to water quality only, on a precautionary basis. Natural England however notes that the Sustainability Appraisal identifies "A long-term cumulative adverse effect ...in terms of water quality" (p 148) as a result of the plan, this is not fully reflected in the current HRA.

Natural England note that the Sustainability Appraisal states: that "the entirety of the borough falls within IRZs of one or more SSSIs. All five SSSIs within the borough are in 'unfavourable' condition: Burnt Wood SSSI, Maer Pool SSSI, Black Firs and Cranberry Bog SSSI (Midlands Meres and Mosses Phase 2 Ramsar), Betley Mere SSSI (Midlands Meres and Mosses Phase 1 Ramsar) and Metallic Tileries, Parkhouse SSSI."

Natural England are also aware of the extensive network of ancient woodland spread across the borough, totalling 707.60 hectares, as well as a large quantity of priority habitats, totalling 1,791 hectares.

Natural England agree that the following designated sites and related priority habitats in adjoining LPA areas may also be affected by development through several pathways, including fragmentation, recreational pressure and/or pollution (including Air and Water Quality). Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI, Wybunbury Moss SAC SSSI, Tyrley Canal Cutting SSSI, King's and Hargreaves Wood SSSI, Gannister Quarry SSSI, Roe Park Woods SSSI, Wetley Moore SSSI, Churnet Valley SSSI, Hatherton Flush SSSI, Sounds Heath SSSI, Ford Green Redebed SSSI, and Cop Mere SSSI.

It is noted that the Appropriate Assessment stage of the HRA assessed potential impacts by topic;

- Impacts on designated features affected by a possible deterioration in air quality

	<p>-Impacts on water quality and quantity associated with increased levels of built development.</p> <p>-Impacts associated with increased recreational pressure at European sites; and</p> <p>-Consideration of impacts at associated functionally linked land.</p> <p>Natural England notes that the HRA also factored the following into the assessment process “the protective framework provided by the Local Plan and existing protection measures set out in high level strategic policy and existing planning policy frameworks that serve to help overcome the identified potential adverse effects” and that “taking into consideration these factors, it is concluded that the Local Plan would have no adverse impact on site integrity at any European site, either alone or in-combination.</p> <p>Natural England disagree agree with this conclusion that for those Habitats sites in the area of search with features sensitive to air pollution, adverse effects on their integrity, alone or in-combination, can be ruled out for the reasons set out at the beginning of this letter on page 2 and repeated in part below:</p> <p>Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot currently be ruled out at the following internationally designated sites:</p> <ul style="list-style-type: none"> •Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI •Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI <p>Natural England are currently in discussion with a number of the Staffordshire and West Midlands LPA's with regards to the cumulative impacts of air quality. We advise that further work is required to inform the HRA. The HRA should demonstrate that there are no adverse effects on integrity of Habitat sites as a result of this Local Plan, alone and in combination with other plans and projects. With regards to allocated sites, it is unclear whether the individual sites put forward in the Local Plan have been assessed through the Habitat Regulations Assessment process and how mitigation will be applied here.</p> <p>Sustainability Appraisal</p> <p>Natural England has reviewed the Sustainability Appraisal (SA) and included comments taken from the document throughout our response.</p> <p>The SA is a comprehensive document which should be reviewed in strengthening the HRA, particularly with regards to residual adverse effects that would be expected to remain in terms of wastewater following the implementation of the Local Plan policies. (p 141) Natural England notes that “Increased pressure on wastewater treatment has the potential to be a long term and potentially permanent significant effect” (p 142)</p> <p>The SA recognises the local distinctiveness of the plan area;</p> <p>“The Borough itself is largely rural in nature and supports some high-quality agricultural land, but is more heavily built up towards the north east surrounding Stoke-on-Trent. (p 8)</p> <p>Newcastle-under-Lyme has a strong rural character with a high-quality landscape and countryside, with some areas identified as being sensitive to change as a result of new development. (p 19)</p> <p>Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms make up the key features of some of these Landscape Character Types.” (p 20)</p> <p>Sets out the area specific barriers to achieving sustainable growth;</p> <p>“Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)</p> <p>Loss of tranquillity The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution.(p 68)</p> <p>“The pre-mitigation SA assessments identified negative impacts in relation to air quality due to the proximity of sites to major roads, landscape character due to the location of sites within areas of high landscape sensitivity, close proximity to the PRoW network and potential for coalescence and urban sprawl, habitat sites, priority habitats, habitat distinctiveness, loss of undeveloped land, ‘best and most versatile’ (BMV) agricultural land, coinciding with mineral safeguarding areas (MSAs) and areas of surface water flood risk (SWFR); and access to healthcare facilities, schools, the local cycle network and railway network. (p 40)</p> <p>There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work. (p 21)</p> <p>Trends in transport choice are unlikely to change significantly, and private car use would continue to increase as the selected method of transport to work, with potential adverse impacts on air quality in the borough.”(p 23)</p> <p>Considers the local and cumulative significance of soil loss alongside the ecological implications:</p> <p>“Loss of soil resources, BMV land and ecosystem services The proposed allocations would cumulatively result in the loss of up to approximately 342ha of previously undeveloped land, including up to 263ha of BMV agricultural land. The proposed development would be expected to reduce the ability of the local soil biome to effectively provide ecosystem services, to some extent. Additionally, the loss of permeable soils could potentially increase the risk of flooding and result in a loss of biodiversity across the Plan area. Loss of soil can also result in an increase in soil erosion and have subsequent impacts on agricultural yield.(p 68) The majority of the borough is ALC Grade 3 soil, with areas of ALC Grade 2 scattered across the borough. Grade 2 and potentially Grade 3 represents some of the borough's BMV agricultural land and should be conserved wherever possible (p 21)</p> <p>A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of BMV land to be lost as a result of the development proposed in the Local Plan.” (p 59)</p> <p>Other Advice</p> <p>Further general advice is provided within Natural England Advice Note – Local Plans February 2024, attached at (Appendix A) - see attachment</p>

Title	Strategic Objectives for the Borough
Consultee Company / Organisation	Sport England
Consultee Position	Planning Manager
Consultee Family Name	Bahey
Consultee Given Name	Rajvir
Q4 Part of document	Paragraph
Q4 Paragraph number	4.12 SO-9
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>Sport England welcomes the principal of objective SO-9 (IX) in supporting physical activity, including sport and recreation. However, it is unclear why the objective continues to state "maintain the vast majority of the wide variety of open spaces in urban areas and improve green corridor linkages, one of the Borough's greatest unique assets to help enhance health and wellbeing".</p> <p>Sport England are unclear if there is a hierarchy for the protection of spaces? Why are green corridor linkages only being sought to be improved? Why does the objective only relates to the urban area as rural open spaces also play an important role in enhancing health and wellbeing.</p>
Q7 Modification	<p>Sport England considers that the objective would be more effective if the wording is amended to:</p> <p>"maintain and improve the wide variety of open spaces and green corridor linkages, one of the Borough's greatest unique assets to help enhance health and wellbeing"</p> <p>The proposed wording will recognise the importance of open spaces across the Borough which through the protection and improvement will help enhance health and wellbeing.</p>
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)

Q6 Details	<p>Dear Planning Policy</p> <p>COMMENTS FROM BETLEY, BALTERLEY AND WRINEHILL PARISH COUNCIL ON THE NEWCASTLE-UNDER-LYME LOCAL PLAN CONSULTATION 2024</p> <p>Please find below the Resolutions agreed by Betley, Balterley and Wrinehill Parish Council on the Newcastle-under-Lyme Local Plan Consultation 2024, which were agreed at an Extraordinary Meeting of the Parish Council held on 3rd October 2024:-</p> <p>RESOLVED</p> <ol style="list-style-type: none"> 1. The Local Plan be welcomed in principle; 2. The Strategic Objectives and Policies be supported; 3. Traffic through the village on the A531 has increased significantly over the last decade or so, and has now reached the point where at peak times it is already difficult to cross the road. If there was any further development in neighbouring wards the situation would be worse. Going forward, a significant increase in the traffic may require a radical solution; <p>(This resolution was unanimous).</p> <p>The Neighbourhood Plan will be monitored and revised against the adopted Local Plan, (expected by 2026 and rolled to same end date 2040).</p> <p>I trust these comments will be taken into consideration when making your final decisions on the proposals contained within the Local Plan.</p>

Agent Given Name	Alan

Q4 Part of document	Policy
Q4 Policy	Strategic Objectives
Q5 Legally compliant	Yes
Q5 Sound	Yes
Q5 DTC compliant	Yes
Q6 Details	<p>This representation is submitted on behalf of Richborough in response to the Newcastle-under-Lyme Draft Local Plan ("DLP") consultation.</p> <p>Richborough is an experienced land promoter that brings forward a range of deliverable developments sites in sustainable locations across the country, including in Newcastle-under-Lyme Borough for housing, employment and mixed use schemes in order to meet development needs.</p> <p>Richborough welcomes the opportunity to comment on the DLP and supports the Council's endeavours to prepare a new Local Plan for the Borough to guide development over the next 20 years. It is considered that the adoption of a new Local Plan is of the utmost importance for the Borough given that NULBC's extant Local Plan ("LP") was adopted in 2003 and is 20 years old. New housing allocations are very much needed in order to deliver a planned supply of open market and affordable housing in both the urban and rural areas the coming years.</p> <p>Adopting a local plan that reflects up to date housing and economic development needs and allocates a sufficient amount of sites to meet those needs in the Newcastle-under-Lyme Borough is essential. The adoption of a robust Local Plan that allocates a sufficient amount of development land gives the Council a choice about where to meet its housing and economic development needs, creates certainty, and ensures that future needs can be achieved in a sustainable way and delivers the associated physical and social infrastructure that is required to support such development.</p> <p>Richborough therefore supports the preparation of a new Local Plan and provides a number of comments in relation to the proposed draft policies, in addition to providing support for draft allocation reference SP23 which our client has a legal interest in / control over. SP23 forms a part of the Council's Local Plan strategy to deliver sustainable growth around Keele University and Richborough wholeheartedly support this part of the Council's growth strategy.</p> <p>Whilst it is the case that the Government has recently consulted upon a revised NPPF, it is the Government's position that local authorities should continue to progress with the delivery of up-to-date local plans. Richborough therefore welcomes this consultation and supports the Council in its efforts in bringing forward a new Local Plan.</p> <p>Further to the above, Richborough are mindful of the transitional arrangements proposed in the draft revised NPPF for the purposes of plan-making.</p> <p>Annex 1 to the draft NPPF contains implementation provisions as follows:</p> <p>"For the purposes of plan-making</p> <p>226. The policies in this Framework (published on [publication date]) will apply for the purpose of preparing local plans from [publication date + one month] unless one or more of the following apply:</p> <p>a. the emerging annual housing requirement in a local plan that reaches or has reached Regulation 19 (pre-submission stage) on or before [publication date + one month] is no more than 200 dwellings below the published relevant Local Housing Need figure;</p> <p>b. the local plan is a Part 2 plan that does not introduce new strategic policies setting the housing requirement unless the relevant Local Plan Part 1 has been prepared applying the policies in this version of the Framework;</p> <p>c. the local plan is or has been submitted for examination under Regulation 22 on or before [publication date + one month].</p> <p>Where a, b or c applies, the plan will be examined under the relevant previous version of the Framework.</p> <p>227. Where paragraph 226 c) applies, local plans that reach adoption with an annual housing requirement that is more than 200 dwellings lower than the relevant published Local Housing Need figure will be expected to commence plan-making in the new plan-making system at the earliest opportunity to address the shortfall in housing need.</p> <p>228. After applying the policies of this version of the Framework, local plans that have reached Regulation 19 (pre-submission stage) on or before [publication date + one month] with an emerging annual housing requirement that is more than 200 dwellings lower than the relevant Local Housing Need figure should proceed to examination within a maximum of 18 months from [publication date].</p> <p>229. For Spatial Development Strategies, this Framework applies to strategies that reach consultation under section 335(2) of the Greater London Authority Act 1999 on or after [publication date + one month]. Strategies that reach this stage on or before this date will be examined under the relevant previous version of the Framework."</p> <p>Accompanying this submission is a Counsel opinion from David Manley KC (Appendix 1). This sets out that the draft Regulation 19 Local Plan for Newcastle-under-Lyme would fall squarely within exception 226(a) (as the annual housing requirement proposed in the Regulation 19 Plan is less than 200 dwellings than the Local Housing Need figure) and that the plan as currently proposed should proceed to examination. Further to this, Government Guidance on the issue of transitional arrangements provided with the consultation document: "Proposed reforms to the National Planning Policy Framework and other changes to the planning system" (updated 2nd August 2024) states, inter alia:</p> <p>"Transitional arrangements for emerging plans in preparation</p> <p>4. We propose transitional arrangements to maintain the progress of plans at more advanced states of preparation, while maximising proactive planning for the homes our communities need. These will apply differently depending on what stage of preparation the plan has reached and the extent to which it is meeting the Government's housing growth aspirations. These transitional arrangements are set out in Annex 1 of the NPPF and outlined below</p> <p>6. To help local planning authorities with advanced plans to proceed to examination at pace and support the Government's ambition to build more homes, those plans that have reached Regulation 19 publication stage but not yet been submitted for examination one month after the revised framework is published, with a gap of no more than 200 dwellings per annum between the local planning authority's revised LHN</p>

	<p>figure and its proposed housing requirement (as set out in the Publication version of the plan), should also progress to examination under the version of the NPPF it has used when preparing the plan thus far.”</p> <p>The whole purpose of the transitional provisions as drafted is to strike a pragmatic balance between the need to increase housing provision on the one hand and the need to achieve Local Plan coverage and avoid wasted time and expense on the other.</p> <p>The advice from Counsel goes on to state that if the NPPF is issued in its draft form then it is an important material consideration and unless local circumstances clearly indicated a need to depart from NPPF advice it is the Government’s (and PINS’) expectation that it will be applied. It is therefore our position that the Newcastle-under-Lyme Regulation 19 Plan can be submitted for examination.</p> <p>Knights, on behalf of Richborough, would like to participate in the examination hearings in response to the various policies and allocations for which representations are made in this submission.</p> <p>The DLP includes a list of 12 strategic objectives. Strategic Objectives SO-III, SO-V, SO-V1 are relevant to the delivery of open market and affordable housing and seek to deliver a higher mix of residential uses into existing town centres, provide a mix of housing types across the Borough, and to support the vitality of rural villages by improving affordability and to provide choice in housing types for local people.</p> <p>2.2 Richborough generally supports the above objectives.</p>

Q6 Details	<p>Please see supporting representation by Knights on behalf of Aspire. The DLP includes a list of 12 strategic objectives. Strategic Objectives SO-3 (III), SO-5 (V), SO-6 (VI) are relevant to the delivery of open market and affordable housing and seek to deliver a higher mix of residential uses into existing town centres, provide a mix of housing types across the Borough, and to support the vitality of rural villages by improving affordability and to provide choice in housing types for local people.</p> <p>Aspire Housing support the above objectives, however it is considered that these objectives could be strengthened further to place greater emphasis on affordable housing delivery given the significant need for such housing identified in the Council’s evidence base which identifies an annual net need to deliver 278 affordable homes per annum. In addition, there are substantial levels of existing unmet affordable housing needs that currently remain unaddressed. Whilst it is acknowledged that tackling affordable housing needs will take time, there should be more emphasis placed on this issue through planning policy and the Council’s strategic objectives and this should be a golden thread of the council’s housing policies. As such, a specific affordable housing objective should be included as follows:</p> <p>To deliver a significant uplift in the delivery of affordable housing across the Borough, in both the urban and rural areas to meet identified needs and to enable more households to access suitable and affordable housing, including the delivery of a broad range of affordable housing types, either as part of the overall housing mix on open market housing sites, or as 100% affordable housing schemes, including homes for affordable rent, shared ownership, first homes and other forms of affordable housing and routes to affordable home ownership.</p>

Title	Strategic Objectives for the Borough

Consultee Company / Organisation	West Midlands Housing Association Planning Consortium
Consultee Family Name	Planning Consortium
Consultee Given Name	West Midlands Housing Association
Agent Company / Organisation	Tetlow King
Agent Position	Planner
Agent Family Name	Luong
Agent Given Name	Lisa
Q4 Part of document	Policy
Q4 Policy	Strategic Objectives
Q6 Details	<p>Tetlow King Planning (TKP) represents the West Midlands Housing Association Planning Consortium (WMHAPC) which includes leading Housing Associations across the West Midlands. Our clients' principal concern is to optimise the provision of affordable housing and to ensure the evolution and preparation of consistent policies that help deliver the wider economic and social outcomes needed throughout the West Midlands region.</p> <p>As significant developers and investors in local people, the WMHAPC is well placed to contribute to Local Plan objectives and act as long-term partners in the community. Our clients play an active role in affordable housing delivery in Newcastle-Under-Lyme and so welcome this opportunity to contribute to the new Local Plan.</p> <p>The current Newcastle-Under-Lyme Core Spatial Strategy was adopted in October 2009 and covers the period 2006 to 2026. As such, it is more than five years old and out-of-date when considered against the National Planning Policy Framework (NPPF, December 2023). We support the Council's intention for the new Local Plan to have a 20-year plan period which would cover the period between 2020-2040. However, as noted from the Council's latest Local Development Scheme, the Local Plan is anticipated to be adopted by the end of 2025 to which the time horizon from adoption would be reduced to 15-years. The Government undertook its eight-week consultation on the NPPF between 30 July and 24 September 2024. We encourage the Council to understand any implications of the proposed changes to the NPPF on the production of this new Local Plan, including the new standard methodology for Local Housing Need (LHN). Further comments on this are provided in response to draft Policy PSD1 below.</p> <p>Strategic Objectives for the Borough</p> <p>Pages 10 and 11 of the Final Draft Local Plan set out a series of Strategic Objectives for the Borough. The WMHAPC is again disappointed that the delivery of affordable housing that meets the needs of the Borough's residents does not feature as a Strategic Objective of the Local Plan, particularly given the affordability challenges present within the Borough. This was expressed as a concern in the last round of consultation on the draft Plan and so it is disheartening that the recommendation has not been realised in this current version of the Local Plan.</p> <p>We note Strategic Objective 'SO-5' which seeks to "Provide a mix of housing types which are attractive to people who want to live and work in the Borough and to provide aspirational housing, which is well designed, safe, secure, and adaptable." However, this objective does not refer to a mix of tenures. The WMHAPC strongly encourage the Council to include the provision of affordable housing as a Strategic Objective for the Council.</p>

Title	Strategic Objectives for the Borough
Consultee Company / Organisation	Natural England
Consultee Position	Senior Officer
Consultee Family Name	McLaughlin
Consultee Given Name	Sally
Q4 Part of document	Paragraph
Q4 Paragraph number	Objectives
Q6 Details	<p>Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.</p> <p>Natural England welcomes the opportunity to comment at this stage of the Local Plan and particularly supports the inclusion of policies on green and blue infrastructure, biodiversity, health and wellbeing, trees hedgerows and woodlands. We have reviewed the consultation documents and provide comments that relate to the soundness of the Local Plan and that are most relevant to our interest in the Natural Environment.</p> <p>Natural England has adopted a robust precautionary approach within this plan response. Whilst we welcome the content of the Local Plan, Natural England advises that the plan is currently at risk of being unsound and/or not legally compliant due to the potential impacts on air quality in relation to internationally</p>

designated nature conservation sites and the justification for the potential loss of 263ha best and most versatile (BMV) agricultural land. Further detail is provided below.

Natural England have also provided other advice within this submission relating to further improvements that could strengthen plan policies and specific strategic site options and related mitigation.

Do you consider that the Newcastle Under Lyme Plan is Sound and Legally Compliant?

Natural England notes that the plan is at the pre-submission stage and as such your authority is seeking confirmation on the soundness of the plan. Having reviewed the plan and supporting documents, Natural England considers the pre-submission plan in its current form is not sound or legally compliant, this is due to a lack of evidence with regards to air quality and the cumulative loss of BMV agricultural land both in a local and national context.

Air quality

Natural England notes that the Sustainability Appraisal states that "Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)

As Natural England understands it the current evidence base used to conduct the HRA cannot rule out adverse impacts on designated sites. The HRA states at page 22 3.4.16 "At the time of writing, the traffic modelling run for the final suite of Regulation 19 allocations had not been undertaken." Appendix A lists the local plans for neighbouring LPA's concluding that 'in combination' with plans and projects (approved and those yet to be implemented) they may trigger in-combination effects on European sites as a result of air quality, particularly as we understand it in the key commuting areas.

Natural England notes that Annual Average Daily Traffic (AADT) data and traffic modelling in the Strategic Transport Assessment (STA) concludes a potential reduction in travel and related air pollution at allocated sites as a result of a predicted preference in the use of public transport. We are surprised by this projected decrease in both traffic and related air pollution, particularly as one employment allocation site includes a 200-bay lorry park and increased congestion is predicted at junction 16 of the M6 where it joins the A500 in a rural location with no existing rural transport provision. The Sustainability Appraisal also notes that: "There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work". (p 206)

Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot therefore currently be ruled out at the following internationally designated sites:

- Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI
- Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI

The HRA outlines that the main source of ammonia emissions is agricultural practice, and that material increases in NH3 emissions are unlikely to be associated with the proposed local plan. At Black Firs and Cranberry Bog and Oakhanger Moss, any increase in nitrogen deposition has the potential to exacerbate pollution levels and thereby undermine the reasons for notification of these sites as a Ramsar.

Ammonia can be emitted from vehicle exhaust emissions as a by-product of the catalytic conversion process designed to reduce emissions of nitrogen oxide. As traffic composition transitions toward more petrol and electric cars (i.e., fewer diesel cars on the road), catalytic converters may aid in reducing NOx emissions but result in increased ammonia emissions. Ammonia emissions from road traffic therefore could make a significant difference to nitrogen deposition close to roads.

Natural England therefore advise that ammonia sourced from traffic emissions should be included for assessment within the local plan HRA, as the impact from this source on designated sites is currently unclear. For further information please see this report from Air Quality Consultants (AQC) that looks at ammonia emissions from roads for assessing impacts on nitrogen-sensitive habitats. Whilst we are aware that the current CREAM model created by AQC used to assess ammonia emissions from road traffic has not been peer reviewed, at this time it has been recognised as a Best Available Tool and we deem it appropriate to be used where any caveats associated with this model are also considered within the assessment. An assessment based on the best available approach is necessary. The next stage of assessment can then consider uncertainties in the model and site specifics to decide if mitigation needs to be considered.

Further work is therefore required to inform the Habitat Regulations Assessment. Natural England will engage with the Local Planning Authority in order to produce a Statement of Common Ground (SoCG) on this matter.

'Best and most versatile' (BMV) agricultural land

Natural England notes that "the proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land, A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of 'best and most versatile' (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services". (page 74 Sustainability Appraisal).

Under the Town and Country Planning (Development Management Procedure) (England) Order 2015 (DMPO) Natural England is a statutory consultee on development that would lead to the loss of over 20ha of 'best and most versatile' (BMV) agricultural land (land graded as 1, 2 and 3a in the Agricultural Land Classification (ALC) system, where this is not in accordance with an approved plan.

Natural England would like to understand how the local planning authority have produced the evidence base and options assessment which informs the strategic site allocations.

Natural England will engage with the local planning authority to consider the cumulative impacts of the loss of BMV both in the local and national context and the challenges related to environmental impact, infrastructure, and the requirement to deliver a balance between the need for development and the potential urbanisation of the countryside including the potential mitigation measures that need to be considered.

NPPF paragraph 174e states:

Planning policies and decisions should contribute to and enhance the natural and local environment by: ... preventing new and existing development from contributing to, being put at unacceptable risk from, or being adversely affected by, unacceptable levels of soil, air, water or noise pollution or land instability. Development should, wherever possible, help to improve local environmental conditions such as air and water quality, taking into account relevant information such as river basin management plans.

Natural England provides guidance to inform further assessment of air quality and the loss of BMV agricultural land in our response to the content of the plans Strategic Policies as set out below.

Do you consider that the Newcastle-under-Lyme Borough Council Regulation 19 pre-submission draft Plan is compliant with Duty to Co-operate?

In terms of working with neighbouring authorities, Natural England notes that initially the plan was intended to be produced jointly with the City of Stoke-on-Trent, the plan does not however currently present an evidence base that demonstrates that a collaborative approach has been adopted and that the Duty to Co-operate has been fully complied with.

The Sustainability Appraisal states that: "Overall, there is potential for a cumulative adverse effect on biodiversity, owing to the fragmentation of the ecological network... Where a large amount of development is located on previously undeveloped land surrounding rural settlements, this is likely to produce a long-term irreversible negative cumulative effect regarding the urbanisation of the countryside" (p 71)

Natural England would therefore like to further understand how the areas identified to meet the City of Stoke-on-Trent's unmet employment needs are justified and appropriate and whether meeting some of the employment needs of the City of Stoke-on-Trent has led to the need to release or safeguard more land from the Green Belt in Newcastle under Lyme. If this is the case, what are the exceptional circumstances for doing this and how does this align with the allocated sites options assessment?

Recreational Pressure

In terms of the South Pennine Moors SAC and recreational impacts, the Local Plan does comply with the Duty to Co-operate. Natural England recommends that reference is made to the 'Recreation use of the South Pennine Moors and implications for strategic housing growth' report by Footprint Ecology Ref 778 date 27th March 2024. This report should both inform the evidence base and ensure that policies relating to open space/green infrastructure are as rigorous and robust as possible.

The report concludes that more data/evidence is required to determine if recreational use is causing an impact across to the South Pennine Moors and to get a better understanding of the scale and location of any impact. Natural England notes that the report records 7,000 additional dwellings in Newcastle-under-Lyme over the plan period rather than the 8,000 included in this regulation 19 submission. Newcastle-under-Lyme Borough Council should therefore continue to work with local authority and other partners to ensure coordinated and continued cross boundary action.

Other matters

Natural England has specific concerns related to allocations in the Green Belt. Notwithstanding that, Natural England considers most of the policies within the plan to be sound and deliverable. The plan is consistent with national policy with regard to those policies that are within Natural England's remit. Further information on strengthening policies including but not limited to Soils and best and most versatile (BMV) agricultural land, preventing loss and fragmentation of habitats and supporting green infrastructure are provided below.

Vision and Strategy

Natural England notes that the Plan's vision and emerging development strategy set out a framework for the future development of Newcastle-under-Lyme and addresses the needs in relation to housing, the economy, community facilities and infrastructure, including specific reference to a proposed employment site allocation.

This vision and the related objectives should also set out the environmental ambition for the plan area and form the basis for nature recovery and enhancement, supported by the policies and proposals in the plan.

Natural England advises that the vision should also incorporate more on the local ecology and landscape features which underpin local distinctiveness such as the "strong rural character with long open views across the surrounding rural landscape, towards more distant hills often framed by trees" (p 69) Part 3 Site Specific Landscape & Visual Appraisal. "Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms" (p 187) Sustainability Appraisal.

Strategic Objectives

Natural England welcome strategic objective SO-4 relating to carbon reduction and climate change, however we do not feel that this group of thirteen strategic objectives value or reflect the Boroughs whole ecology and landscape including but not limited to the protection of soil and best and most versatile (BMV) agricultural land. We would suggest that additional objectives are added relating to: air quality, water quality and quantity, soils and landscape.

Natural England would also like to see stronger reference to the Nature Recovery Network which is one of the specific aims of the Environment Act 2021 and will underpin the approach to the enhancement of nature.

Air quality is a major threat to habitats and species. Many ecological sites are exceeding their critical loads and levels for ammonia, nitrogen deposition and acid deposition. The strengthening of the policies and the rationale behind site allocations within this plan will ensure that new development does not contribute to the further deterioration of habitats and species due to air pollution. Further advice on strengthening the plans evidence base with regards to air quality is provided in the links below:

 Strategic Policies
 5 Planning for Sustainable Development
 Policy PSD5: Green Belt
 Natural England notes that this policy “aims to protect the Borough’s essential open spaces, prioritise the use of brownfield land, and guide potential future development in accordance with the National Planning Policy Framework (NPPF)”.
 Natural England however notes that amendments to the Green Belt boundary are proposed in the form of 14 site allocations to accommodate both the growth requirements of the borough and the employment requirements of wider Stoke-on-Trent conurbation. Natural England’s has some site-specific concerns about the potential impacts of some of the green belt sites selected on the natural environment with regards to habitat loss, fragmentation and justification for the loss of BMV agricultural land.
 We note the LPA’s intention to release and compensate for the loss of green belt and prioritise the use of suitable brownfield land. However, the site allocations in the green belt would result in the potential loss of 263ha of Best and Most Versatile (BMV) agricultural land. The council should satisfy itself that it is making a balanced decision for sustainable development, the Sustainability Appraisal concludes that: “The Green Belt Study assessed land parcels against the contribution they make to the five purposes of the Green Belt on a four-point scale...Three allocated sites (AB12, AB33 and TK10) are located in areas which make a ‘strong’ overall contribution to the purposes of the Green Belt where “the site contributes to the purpose in a strong and undeniable way, whereby removal of the site from the Green Belt will detrimentally undermine this purpose” (p101)
 “Site allocations on previously undeveloped land or that would result in a net loss of GI / vegetation could result in a reduced capability of the environment to provide ecosystem services including carbon storage, the storage and filtration of water including natural flood protection, as well as reduced availability and connectivity of habitats within the green network enabling movement of species. (p 165)
 Strategic Site Allocations
 Natural England suggests that the HRA should include a “requirement for project-level/site specific HRA’s and targeted ecological surveys”.
 The Sustainability Appraisal concludes that:
 “Some 12 allocated sites partially coincide with priority habitats, where 3.43% of the total site allocation areas coinciding with priority habitats which include deciduous woodland, good quality semi-improved grassland and Site BL18 coincides with lowland fens which is a very high distinctiveness habitat in the BNG handbook (2024). These habitats can support a range of species of principal importance. Allocated Site KL15 is adjacent to ‘The Butts and Hands Wood’ ancient woodland, with a further 20 allocated sites located in close proximity to ancient woodlands. P158
 “Six allocated sites (Sites CT20, HD10, KL13, RC8, SP11(2) and SP23) are located within areas of ‘high’ or ‘very high’ habitat distinctiveness that provide high biodiversity value. Whilst in many cases these habitats can be conserved alongside development, it is likely that in some cases fragmentation or loss of habitats and connections between habitats will occur”
 “The majority of allocated sites are located on previously undeveloped land, which would result in the loss of soil resources and the ecosystem services they provide. (p 159) The development of new buildings on previously undeveloped land would be expected to result in a direct loss of soil resource, with little or no scope for mitigation” (p 216)
 “The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution. (p 68)
 For all sites, Natural England advises that the hydrological catchment within which the site sits is taken into consideration, with regards to the potential impact of the developments proposed on the adjoining watercourses and wider catchments, including but not limited to surface water runoff (including during construction), existing and required capacity of Waste Water Treatment Works (WwTW) and water supply and flooding issues. Each site will require site specific investigation, and the council should understand the impact of all the sites put forward individually and in combination.
 Natural England has specific concerns and or requires further information about the following ‘Strategic Site Allocations’ which could potentially impact on designated sites as a result of air and water quality and/or lead to the loss and / or fragmentation of priority habitats and BMV agricultural land:
 BL18 – Clough Hall Playing Fields, Talke
 Natural England would like to further understand this larger residential development proposal with regards to the potential impacts on the lowland fen habitat.
 KL13 & KL15 – Land South of A525 between Keele University and Newcastle
 Natural England notes this proposal for Employment development is immediately adjacent to ancient woodland priority habitat.
 HM28 – Land off East Lawns, Betley
 Existing and projected water quality issues at Betley Mere will need to be considered with regards to this allocation.
 LW53 – Loggerheads
 Natural England notes this residential housing development proposal is located within the IRZ of protected sites (Burnt Wood SSSI) which states that development proposals of 50 or more homes outside existing settlements/urban areas in these zones should be consulted upon with Natural England.
 SP11 – Former Keele Municipal Golf Course
 This Larger residential development is categorised in the Landscape Assessment as having a Major adverse impact on the local Landscape.
 AB2 – Land Adjoining Corner of A500 and M6 Southbound
 Natural England notes this proposed employment allocation released entirely from the green belt, which comprises 70ha of grade 2 BMV agricultural land. The Landscape study concludes that the: “Proposed

development scenario is likely to have a major adverse effect on the SA objective with no satisfactory mitigation possible" (p 15). With regards to potential Air Quality impacts on protected sites Natural England notes from the options analysis that "The loss or potential moving of a layby to enable access to the site could be problematic indicating potential issues with site access and traffic flow. An increase in HGV and personal vehicle traffic is anticipated, which could lead to potential congestion and air pollution in the area". Natural England would therefore also like to understand the evidence base further including the rationale for an alternative site TK30 @ Talke A34 / A500 roundabout being ruled out.

Policy PSD6: Health and Wellbeing

Natural England welcome this policy direction in terms of safeguarding health and amenity and supporting healthy communities, through the protection and provision of high-quality open spaces, including allotments and the promotion of active travel transport choices Further information on joining up Nature Recovery and Green Infrastructure (GI) with health priorities is set out below. If more cities and towns can be creatively designed and managed, with nature and communities at their heart, we will see nature and people thrive. This is something we set out to inspire at Natural England when developing the Green Infrastructure Framework and Design Guide. Natural England's People and Nature survey tells us that, for 82% of people 'being in nature makes me happy'. With the cost-of-living crisis, 'free' places like local parks and greenspace, have become even more important. The value of these spaces for the economy is estimated at £28.7 billion per year.

Green infrastructure in towns and cities provides places to relax, exercise, and spend time outdoors; cools urban areas; reduces flooding by allowing water to permeate the ground rather than overwhelm our drains; increases biodiversity and helps to reduce inequalities in access to nature. Options assessments for development sites and related green and blue Infrastructure within and between developments, green spaces and designated sites should; include soft transition and consider potential direct and indirect implications on sustainable use for example visitor pressure and transport / access options.

The natural environment affords the best 'natural' play opportunities for children while offering multifunctional nature-based solutions to climate change etc. These can be blended into wildlife rich green infrastructure and green open spaces that can act as destination play sites for local children (See best practice at Play England and Play Wales) that have proven health and wellbeing value.

Evidence for nature play and health:

Play, naturally: a review of children's natural play

Nature for health and wellbeing | The Wildlife Trusts

Good practice in social prescribing for mental health: the role of nature-based interventions - NECR228 (naturalengland.org.uk)

6 Climate and Renewable Energy

Whilst Natural England welcomes this group of policies we recommend including Policy CRE1: Climate Change and Policy CRE2: Renewable Energy within the Sustainable Environment (SE) group of policies to achieve a collective strategic focus on sustainable development and working toward achieving net zero alongside the SE policies relating to Pollution and Air Quality (SE1) and requirements for sustainable water management measures to reduce water use, natural flood protection features alongside the specific policies on Sustainable Drainage Systems (Policy SE4:)

Natural England continues to work with the LPAs across the region on understanding air pollution across area boundaries (see comments and links in objectives section.)

10 Infrastructure and Transport Policy.

Policy IN4 Cycleways, Bridleways and Public Rights of Way

Natural England welcomes the inclusion of this group of policies which seek to maintain and enhance the network of public rights of way that cross the borough. We note that the sustainability appraisal states that "the borough has relatively poor accessibility to the cycle network and is the lowest performing in the county for walking zones" (p 206) and that, "eight allocated sites (AB2, AB12, AB33, HD10, KL15, MD29, SP11(3) and TK10) do not currently have safe pedestrian or cycle access adjacent to the site, where site end users may reliant upon less sustainable modes of transport including private car use". (p 180)

11 Sustainable Environment

Natural England welcomes this group of policies and has the following policy specific comments:

Policy SE1: Pollution and Air Pollution.

Natural England welcomes this policy that notes that development proposals which are likely to result in detrimental impacts on air quality, will not be permitted unless it can be demonstrated that mitigation measures effectively address these impacts. (Comments on Air Quality are also provided on page 2 and 4 of this letter). The promotion of sustainable and active travel options, low-emission technologies and enhancement of green infrastructure to absorb air pollution is also noted. (see comment above re integrating the group: 6 Policies Climate and Renewable Energy).

Policy SE7: Biodiversity Net Gain

Natural England supports the inclusion of a policy on BNG. We suggest the following minor amendments to further improve the plan policy.

The BNG policy should make it clear that biodiversity net gain is not applied to irreplaceable habitats, and that any mitigation and/or compensation requirements for Habitats sites should be dealt with separately from biodiversity net gain provision. The policy should also set out how biodiversity net gain will be delivered and managed through the lifetime of the scheme and including monitoring requirements. This should include indicators to demonstrate the amount and type of gain provided through development. The indicators should be as specific as possible to help build an evidence base to take forward for future reviews of the plan, for example the total number and type of biodiversity units created, the number of developments achieving biodiversity net gains and a record of on-site and off-site contributions.

Natural England notes that the Sustainability Appraisal states "Despite the BNG provisions at the site level, there remains potential for a cumulative adverse impact on biodiversity at the landscape scale, owing to incremental habitat losses. As a result of development within the Local Plan undeveloped land will be lost which will include the loss of soil resources, habitats recognised as being of 'high' and 'very high' distinctiveness, and potentially ecological links between biodiversity assets, whereby the policies will not be expected to fully mitigate the fragmentation of the ecological network. Fragmentation of the

ecological network across Newcastle-under-Lyme is expected to be a long-term and permanent significant effect.” (p 162)

Policy SE8: Biodiversity and Geodiversity

Natural England supports the inclusion of this policy to protect the Boroughs internationally, nationally and locally designated sites important for their biodiversity value and to enhance the natural environment and work with partners toward Nature Recovery.

We particularly welcome the plans recognition of the value of “wider ecological networks” stating that “Other sites, both individually and collectively, that are not designated can also contribute towards protecting and enhancing diversity of species locally”.

Policy SE10: Landscape

Natural England welcomes this policy aimed at ensuring that “development proposals should protect and enhance the character, quality, beauty, and tranquillity of the Borough”. We note from the sustainability appraisal that “The entirety of the south of the borough is identified as being high in relation to landscape sensitivity, which starts in Audley in the north and covers the southern area of the borough, including Loggerheads and Almington.” We agree that “Alteration of the landscape character is a long-term and permanent significant effect... There is potential for a cumulative adverse effect on landscape character resulting from the development proposed in the Plan”. (p193) SA.

Natural England has divided England into 159 distinct natural areas called National Character Areas (NCAs) Newcastle-under-Lyme falls within two NCAs: Shropshire, Cheshire and Staffordshire Plain: gently rolling plains dominated by intensive dairy farming, beef and arable production; The Potteries and Churnet Valley: strong contrast between the industrialised landscape of the Potteries and the pastoral, strongly dissected hills and small plateaux that flank the Churnet and Dove valleys.

Natural agrees with the following statement in the sustainability appraisal: “Although various policies aim to ensure that development conserves and enhances landscape character and distinctiveness, when combined with Local Plan policies that support infrastructural improvements such as for transportation, water, and waste, this is likely to lead to a long-term and irreversible cumulative adverse effect on landscape character and tranquillity and associated indicators such as dark skies.” (p72)

Policy SE11: Trees, hedgerows, and woodland

Natural England welcomes this plans recognition that “Trees, hedgerows, and woodlands are integral to the distinctive character and ecological health of the Borough of Newcastle-under-Lyme, defining landscapes across both urban and rural settlements.” And that “This policy prioritises the protection of existing natural assets, seeking to not only preserve, but actively enhance, these valuable features wherever possible”.

Policy SE13: Soil and Agricultural Land

Natural England has concerns about the justification for the loss of BMV agricultural land within this plan.

“The proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land, A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of ‘best and most versatile’ (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services.” (page74) (SA)

Natural England notes that policy SE13 states: “Outside of sites allocated for development in the Local Plan, development proposals should avoid the loss of best and most versatile agricultural land (BMV) unless it can be demonstrated that the benefits of development clearly outweigh the loss of the land and every effort has been made to mitigate for the overall impact of the development on best and most versatile agricultural land.”

With regards to Soil and Agricultural Land Quality, Natural England advises that The Local Plan should give appropriate weight to the roles performed by the area’s soils. These should be valued as a finite multi-functional resource which underpin our wellbeing and prosperity. Decisions about development should take full account of the impact on soils, their intrinsic character and the sustainability of the many ecosystem services they deliver.

The 25 Year Environment Plan (25YEP) sets out government action to help the natural world regain and retain good health, including highlighting the need to:

- protect the best agricultural land
- put a value on natural capital, including healthy soil
- ensure all soils are managed sustainably by 2030
- restore and protect peatland

Soil is a finite resource which plays an essential role within sustainable ecosystems, performing an array of functions supporting a range of ecosystem services, including storage of carbon and water, the infiltration and transport of water, nutrient cycling, a buffer against pollution and provision of food. In order to safeguard soil resources as part of the overall sustainability of the development, it is important that the soil resource is able to retain as many of its important functions as possible. This can be achieved through careful soil management and appropriate, beneficial soil re-use, with consideration on how any adverse impacts on soils can be avoided or minimised.

The conservation and sustainable management of soils is reflected in the National Planning Policy Framework (NPPF), particularly in paragraph 180(a), 180(b) and 181 (footnote 62). When planning authorities are considering land use change, the permanency of the impact on soils is an important consideration. Particular care over planned changes to the most potentially productive soil is needed, for the ecosystem services it supports including its role in agriculture and food production.

Plan policies should therefore take account of the impact on land and soil resources and the wide range of vital functions (ecosystem services) they provide in line with paragraph 180(b) of the NPPF.

Soil Plan Policies

We strongly advise that at a minimum, the plan includes core policies for:

- the protection of best and most versatile (BMV) agricultural land (Grades 1, 2 and 3a in the Agricultural Land Classification (ALC)); and
- for the protection of and sustainable management of soils as a resource for the future.
- Areas of poorer quality land (ALC grades 3b, 4, 5) should be preferred to areas of higher quality land (grades 1, 2 and 3a).

-Recognise that development has an irreversible adverse impact on the finite national and local stock of BMV land.

-Conforms to NPPF and Planning Practice Guidance (Natural Environment and Minerals).

-Requires detailed ALC surveys to support plan allocations and for subsequent planning applications (for all sites larger than 5 ha). ALC surveys to support plan allocations and for subsequent planning applications for smaller sites (1 – 5 ha) would be welcomed.

-Recognise that development (soil sealing) has a major and usually irreversible adverse impact on soils.

-Soils of high environmental value (e.g., wetland and carbon stores such as peatland, low nutrient soils; or soils of high environmental value in the local context) should also be considered as part of ecological connectivity (Nature Recovery Network / Green Infrastructure).

-Requires soil handling and sustainable soil management strategies based on a detailed assessment of the soil resource based on best practice guidance (for all sites larger than 5 ha), ideally as part of the planning application process for major sites to help inform master-planning, and to safeguard the continued delivery of ecosystem services through careful soil management and appropriate, beneficial soil re-use. Soil handling and sustainable soil management strategies for smaller sites (1 – 5 ha) would be welcomed.

-Reference should be made to Defra's Construction Code of Practice for the Sustainable Use of Soils on Construction Sites

-In addition, for minerals and other temporary forms of development, plans for reinstatement, restoration and aftercare will be required (or for solar, a commitment to do so if the operational life is in decades); normally this will be return to the former land quality (ALC grade)

-Refers to soils issues within relevant policy areas such as renewable energy, climate change, green infrastructure and biodiversity net gain, flood schemes, managed realignment, development design and landscaping.

Policy SE14: Green and Blue Infrastructure

Natural England supports this policy. Well-designed cross boundary multi-functional green infrastructure contributes greatly to a number of benefits both for people and nature. Your green and blue (for example cross boundary canals) infrastructure should dovetail with your biodiversity net gain strategies to maximise benefits.

We would advise that the Local Authority also considers Natural England's Green Infrastructure Framework of Principles and Standards for England. As stated in our document, "Green infrastructure (GI) is part of the solution to many of the challenges we face; health inequalities, biodiversity crisis, climate change, nature recovery and levelling up. The GI framework supports local authorities, developers, parks and greenspace managers and local communities to enhance and create new good quality green infrastructure."

We would also suggest reference is made to the emerging Local Nature Recovery Strategy. Preparing Local Nature Recovery Strategies (LNRS) is a statutory requirement under the Environment Act 2021. LNRS are designed to work closely alongside other measures in the Act including supporting the delivery of mandatory biodiversity net gain and providing a focus for a strengthened duty on all public authorities to conserve and enhance biodiversity. They will also underpin the Nature Recovery Network, alongside work to develop partnerships and to integrate nature into our incentives and land management activities. Each LNRS will be specific and tailored to its area. The responsible authorities and people involved in preparing a strategy can choose how they want it to look, but every strategy must contain:

1. A local habitat map.
2. A written statement of biodiversity priorities. Statutory guidance for responsible authorities explains in detail what these 2 things should contain. Together they set out what the strategy is aiming to achieve and what practical actions will help do this. They will also propose where actions could be carried out for best effect and to connect and expand existing areas that are important for nature. We expect local nature recovery strategies to propose actions such as the:
 - creation of wetlands
 - restoration of peatlands
 - planting of trees and hedgerows
 - more sustainable management of existing woodlands and other habitats like grasslands
 These actions are intended to help nature itself and to also help improve the wider natural environment.

Whilst the Staffordshire Local Nature Recovery Strategy (LNRS) is currently a work in progress, Newcastle-under-Lyme Borough Council Regulation 19 pre-submission should still be consistent with NPPF Paragraph 185 in terms of setting out local habitat priorities and identifying potential measures by which they can be achieved, alongside mapping areas that could become of particular importance in the future.

Natural England encourages Newcastle Under Lyme Borough Council via their Local Nature Recovery Strategy to actively develop cross border cooperation between other Local Planning Authorities (LPA) (for example Staffordshire Moorlands Borough Council) in coordinating land development projects that impact on local biodiversity sites to ensure that local biodiversity corridors are maintained and link up other local important sites for nature conservation.

This is a good way of achieving nature recovery and preparing to deliver the LNRS alongside enabling the local authority and its partners to identify, map and safeguard site areas, including green and blue infrastructure opportunities and interlinkages.

Habitats Regulations Assessment

Natural England notes that this Local Plan is not directly connected with or necessary to the management of any European site. A screening assessment has been undertaken which identified a number of Likely Significant Effects (LSE) associated with the Local Plan. Taking no account of mitigation measures, the HRA concludes that Local Plan has the potential to affect the following European sites:

- Cannock Chase SAC
- Humber Estuary SAC, SPA and Ramsar
- Mersey Estuary SPA and Ramsar
- Midland Meres and Mosses Phase 1 Ramsar
- Midland Meres and Mosses Phase 2 Ramsar
- Pasturefields Salt Marsh SAC
- Peak District Dales SAC

-Peak District Moors (South Pennine Moors Phase 1) SPA

-Severn Estuary SAC, SPA and Ramsar

-South Pennine Moors SAC

-West Midland Mosses SAC

We welcome that your HRA includes the Humber Estuary SAC, SPA and Ramsar site which is hydrologically connected to the river Trent. If the Local Plan resulted in significant water pollution, this European site could be affected and has therefore been screened in, in relation to water quality only, on a precautionary basis. Natural England however notes that the Sustainability Appraisal identifies "A long-term cumulative adverse effect ...in terms of water quality" (p 148) as a result of the plan, this is not fully reflected in the current HRA.

Natural England note that the Sustainability Appraisal states: that "the entirety of the borough falls within IRZs of one or more SSSIs. All five SSSIs within the borough are in 'unfavourable' condition: Burnt Wood SSSI, Maer Pool SSSI, Black Firs and Cranberry Bog SSSI (Midlands Meres and Mosses Phase 2 Ramsar), Betley Mere SSSI (Midlands Meres and Mosses Phase 1 Ramsar) and Metallic Tileries, Parkhouse SSSI."

Natural England are also aware of the extensive network of ancient woodland spread across the borough, totalling 707.60 hectares, as well as a large quantity of priority habitats, totalling 1,791 hectares.

Natural England agree that the following designated sites and related priority habitats in adjoining LPA areas may also be affected by development through several pathways, including fragmentation, recreational pressure and/or pollution (including Air and Water Quality). Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI, Wybunbury Moss SAC SSSI, Tyrley Canal Cutting SSSI, King's and Hargreaves Wood SSSI, Gannister Quarry SSSI, Roe Park Woods SSSI, Wetley Moore SSSI, Churnet Valley SSSI, Hatherton Flush SSSI, Sounds Heath SSSI, Ford Green Redebed SSSI, and Cop Mere SSSI.

It is noted that the Appropriate Assessment stage of the HRA assessed potential impacts by topic;

-Impacts on designated features affected by a possible deterioration in air quality

-Impacts on water quality and quantity associated with increased levels of built development.

-Impacts associated with increased recreational pressure at European sites; and

-Consideration of impacts at associated functionally linked land.

Natural England notes that the HRA also factored the following into the assessment process "the protective framework provided by the Local Plan and existing protection measures set out in high level strategic policy and existing planning policy frameworks that serve to help overcome the identified potential adverse effects" and that "taking into consideration these factors, it is concluded that the Local Plan would have no adverse impact on site integrity at any European site, either alone or in-combination.

Natural England disagree agree with this conclusion that for those Habitats sites in the area of search with features sensitive to air pollution, adverse effects on their integrity, alone or in-combination, can be ruled out for the reasons set out at the beginning of this letter on page 2 and repeated in part below:

Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot currently be ruled out at the following internationally designated sites:

•Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI

•Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI

Natural England are currently in discussion with a number of the Staffordshire and West Midlands LPA's with regards to the cumulative impacts of air quality. We advise that further work is required to inform the HRA. The HRA should demonstrate that there are no adverse effects on integrity of Habitat sites as a result of this Local Plan, alone and in combination with other plans and projects. With regards to allocated sites, it is unclear whether the individual sites put forward in the Local Plan have been assessed through the Habitat Regulations Assessment process and how mitigation will be applied here.

Sustainability Appraisal

Natural England has reviewed the Sustainability Appraisal (SA) and included comments taken from the document throughout our response.

The SA is a comprehensive document which should be reviewed in strengthening the HRA, particularly with regards to residual adverse effects that would be expected to remain in terms of wastewater following the implementation of the Local Plan policies. (p 141) Natural England notes that "Increased pressure on wastewater treatment has the potential to be a long term and potentially permanent significant effect" (p 142)

The SA recognises the local distinctiveness of the plan area;

"The Borough itself is largely rural in nature and supports some high-quality agricultural land, but is more heavily built up towards the north east surrounding Stoke-on-Trent. (p 8)

Newcastle-under-Lyme has a strong rural character with a high-quality landscape and countryside, with some areas identified as being sensitive to change as a result of new development. (p 19)

Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms make up the key features of some of these Landscape Character Types." (p 20)

Sets out the area specific barriers to achieving sustainable growth;

"Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)

Loss of tranquillity The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution.(p 68)

"The pre-mitigation SA assessments identified negative impacts in relation to air quality due to the proximity of sites to major roads, landscape character due to the location of sites within areas of high landscape sensitivity, close proximity to the PRoW network and potential for coalescence and urban sprawl, habitat sites, priority habitats, habitat distinctiveness, loss of undeveloped land, 'best and most versatile' (BMV) agricultural land, coinciding with mineral safeguarding areas (MSAs) and areas of surface water flood risk (SWFR); and access to healthcare facilities, schools, the local cycle network and railway network. (p 40)

	<p>There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work. (p 21)</p> <p>Trends in transport choice are unlikely to change significantly, and private car use would continue to increase as the selected method of transport to work, with potential adverse impacts on air quality in the borough.”(p 23)</p> <p>Considers the local and cumulative significance of soil loss alongside the ecological implications:</p> <p>“Loss of soil resources, BMV land and ecosystem services The proposed allocations would cumulatively result in the loss of up to approximately 342ha of previously undeveloped land, including up to 263ha of BMV agricultural land. The proposed development would be expected to reduce the ability of the local soil biome to effectively provide ecosystem services, to some extent. Additionally, the loss of permeable soils could potentially increase the risk of flooding and result in a loss of biodiversity across the Plan area. Loss of soil can also result in an increase in soil erosion and have subsequent impacts on agricultural yield.(p 68) The majority of the borough is ALC Grade 3 soil, with areas of ALC Grade 2 scattered across the borough. Grade 2 and potentially Grade 3 represents some of the borough’s BMV agricultural land and should be conserved wherever possible (p 21)</p> <p>A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of BMV land to be lost as a result of the development proposed in the Local Plan.” (p 59)’</p> <p>Other Advice</p> <p>Further general advice is provided within Natural England Advice Note – Local Plans February 2024, attached at (Appendix A) - see attachment</p>

5 Planning for Sustainable Development

Comment ID	NULLP1273
Order	20
Number	5
Title	Planning for Sustainable Development
Consultee Company / Organisation	Thistleberry Residents Association
Consultee Position	Chair
Consultee Family Name	Drakakis-Smith
Consultee Given Name	Angela
Q4 Part of document	Policy
Q4 Policy	PSD1
Q6 Details	<p>2. RE Housing provision contained in Policies PSD1 – PSD 7 and with regard to housing allocations per borough/ward areas:</p> <p>a. The total allocations for the Borough has been increased from 5,000 units to 8,000. Under the changes to the NPPF rules, does this mean that national government has intervened to change the level of development that the NBC adopted based on the last consultation which took place for the last draft of the Plan?</p> <p>b. If the supporting documents are read and understood, these estimates are based on guestimates and over- estimates for some localities, which might include Newcastle Borough. The reliance for the estimates appears to be on the 2011 and 2021 (even the 2001 census is mentioned) census material. Some data had been updated to 2023 but seemed questionable. The post- Covid total population needs to be verified to be made part of any assessment in the interests of accuracy and unnecessary development.</p> <p>c. The issue of empty homes has not been mentioned, even though the number in this and other LAs would appear to be high. Pre- Covid, when enquiries were made of the NBC by the TRA, 1100 was a figure mentioned. Councils have all the necessary powers to bring such homes back into commission and resources should be allocated at both national and local levels to do this. This level of empty homes should not be regarded as acceptable or sustainable if there are shortages.</p> <p>d. Whilst the Plan makes some attempt to deal with the issue of affordable homes and social housing, whilst the term home (as a need) and house (as a commodity) are confused and left to the mercy of market forces to decide affordability, the issue will not be resolved, and need will not be satisfactorily met.</p> <p>e. Neither does the Plan factor in that the purchase of a house/home might be the easier part. The more difficult part is maintaining property so that it remains habitable and affordable.</p> <p>f. Does the LA know how many homes have been repossessed? Or how many residents have abandoned private ownership in favour of public or private rental as a more affordable option?</p> <p>g. In Newcastle-under-Lyme student flats and bedsits have been favoured over other types of housing. This Plan suggests it might perpetuate those kinds of development when other types are needed. Some student developments have already 'extended' their criteria to other users, since take up has not been as high as expected.</p> <p>h. Providing affordable homes, therefore, is not a stand-alone issue although it would appear that cross-cutting issues have been ignored, or not considered. Additional updated data and analysis are needed to ensure sound decision-making and effective solutions that transcend any political influences, allowing for more objective and sustainable outcomes necessary.</p> <p>8. The Future of the Plan System</p> <p>Although this is not contained within the remit of the Plan it might be the time to introduce such concepts in order to deal with the issues that prevent plans from a) being drawn up in a timely manner and b) from being implemented with good will, and in a timely manner.</p> <p>a. After reading the Plan it seems to be not necessarily a ground-up Plan in forward planning, but an attempt to fulfil all the legal, national, government requirements which have been imposed, using the tick-box vocabulary.</p> <p>b. It would appear that within LAs that there are short-term enthusiasms for projects which wears off as new projects are streamed. Enthusiasm seems to equate with levels of resources invested. This also means that some projects are not actually needed or required and add little value.</p> <p>c. The new NPPF rules reveal the tensions between national government and local authorities, particularly in the areas of control of development and resources.</p> <p>d. Local Authorities seem to have evolved their own ways of doing things which means that either practices and procedures need to be standardised, or that one size does not fit all and that each local council needs to formulate its own plan with reference to its unique needs without the interference of national government – with national government being the final scrutineer/arbitrator. However, this might need a new and different kind of Councillor and MP.</p> <p>e. It would seem that, currently, national and local government might not be on the same wavelength. It seems that in some cases, national government is a driving force for implementation of its own wish lists, and that Local Government is a line of resistance with ideas of its own. A more collaborative and meaningful dialogue might produce a more meaningful dialogue and mutual compromises in order to bring about a better working relationship.</p>

- f. Given how dynamic and fast-moving situations can be at the local level it is questionable whether or not setting a plan to cover 20 years is possible or even feasible so that it is fit for purpose.
- g. Some of the proposals in the Plan have already happened so the Plan appears to be retrospective – rather than forward looking. The same could be said of the housing allocations and provision – some have already been built so there is a confusion between what has been, what is, what is needed and what might/should be. Whilst the five year ‘banks’ for land and quantities of units might go some way to prevent evasion, it is important that the methodology is also fully understood and implemented into a workable rolling system.
- h. The system of local governance was outdated even in 1972 when it was introduced. However, the system still clings to 19th Century principles and rules. Some parish councils are particularly out of date even with those rules. Many parish councils do not have the policies to ensure they are acting legally or even democratically – a term which is losing its meaning. Increasingly it seems that governance has become so eroded, in some contexts it might no longer exist.
- i. Rules and overarching policies are often vague (if they exist) and are differentially interpreted within and between councils. Councillors appear to lack the necessary support to place things back on track. Chairs and Clerks can be equally and increasingly ill-equipped to deal with the kind of governance required in a 21 Century which appears to be controlled by the internet, social media and hearsay. Truth is rapidly losing its appeal.
- j. To inform the latest Plan perhaps there is a need to quantify the real successes (and failures) of its predecessor in order to avoid making the same mistakes in the next 20 year Plan period.

Policy PSD1: Overall Development Strategy

Title	Policy PSD1: Overall Development Strategy
Consultee Family Name	Rowley
Consultee Given Name	Ian
Q4 Part of document	Policy
Q4 Policy	PSD1
Q5 Sound	No
Q6 Details	<p>We agree some housing needs to be built, but are the housing target needs accurate, is old information being used? The figures used predicted the population would increase, predictions were wrong – population levels have decreased. We DO NOT agree to large storage units being built, why is greenbelt land being suggested? when brownfield sites exist in the county. Is it because developers do not like to use brownfield sites due to the additional costs of preparing the land? greenbelt land is cheaper to build on – creating more profits. As you travel around there are many large empty storage units in and around the Newcastle/Stoke area. How many local people are expected to be employed by the proposed storage units or will the labour be from outside the parish? Greenbelt land is a carbon storage capture area and a O2 producer, soil and trees are the biggest collectors of carbon so concreting these areas will increase the carbon footprint. Where will the water go from millions of square meters of roofing, nature drains the land naturally. Areas in the Parish now flood which have never done in the past, due to changes in the global weather patterns. There will be disruption in the local area during and after construction with noise and light pollution also poor air quality due to the pollution created by more large vehicles.</p> <p>Audley Parish has contributed to the industrial past with sacrifices made by the land and its people. Audley Parish was built on a Victorian footprint to facilitate its industrial past, roads in the area were not designed to take the present traffic levels, so any increase in additional traffic would cause gridlock! Local services will not be able to cope with more people and utility services will be stretched to supply these new developments. Audley Parish would lose its identity, as a collection of small individual villages which have established over many centuries.</p> <p>The world is on a knife edge with climate change – lots of these little takes of greenbelt land are mounting up to be larger worldwide problems. These developments will lead to further climate change, thus changing the quality of our environment forever. Greenbelt land is there for everyone to enjoy when they want. Monitoring cameras were installed over one weekend to register the footfall using the public footpaths across the land. This small snapshot would not have given a true record of the usage and therefore should be dismissed as evidence when the developers present their case. Once greenbelt has been taken, there is no going back!</p> <p>If a small number of houses must be built then building affordable housing for local people is important, but developers don't like building these as there is very little profit to be made. Larger houses attract bigger profits for developers, but large housing attracts people from outside the area, who do not contribute to our local economy. They will use the easy access to the A500 and M6 to travel to work in the larger conurbation areas. If local people cannot afford the property being built, they will move away, thus destroying the future fabric of the local community.</p> <p>Remember: You don't want history saying you were the ones who destroyed the local area and left nothing for our children and grandchildren. Don't let your legacy be that you contributed to the increase of global warming!</p> <p>LIFE IS MORE IMPORTANT THAN PROFIT</p>

Q4 Policy	PSD1
Q5 Legally compliant	No
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>The growth targets and projections are very confusing and misleading.</p> <p>In the Issues and Option Stage - 3 clear growth options were given. There was majority support for Option 1 – national minimum, standard methodology target - equating to 7000 homes and need for 46ha employment land (noting that there was already a supply of 64ha providing a surplus of land).</p> <p>However this later changed in the First Draft Local Plan Reg 18 to :</p> <p>Policy PSD 1: Overall Development Strategy</p>

	<p>1. A minimum of 7,160 dwellings will be delivered in the Borough over the Plan period 2020-2040 which equates to 358 dwellings per annum.</p> <p>2. Provision will be made for a minimum of 69 hectares of employment land to support the local economy. The existing employment land supply of around 50 hectares will be allocated to secure its future use. (Noting a further 19 hectares was required)</p> <p>In the Final Draft Local Plan Reg 19 this is now:</p> <p>Policy PSD 1: Overall Development Strategy</p> <ol style="list-style-type: none"> 1 A minimum of 8,000 dwellings will be delivered in the Borough over the Plan period 2020 – 2040 which equates to 400 dwellings per annum. 2 Provision will be made for a minimum of 63 hectares of employment land over the Plan period 2020 – 2040 <p>It states page 19 Reg 19 Draft Plan "The economic growth scenario applied in the Local Plan is informed by the latest Cambridge Econometrics (March 2023) and Experian (December 2023) economic forecasts for Newcastle-under-Lyme for the period 2023-2040. The economic forecast identifies jobs growth of approximately 237 per annum over the plan period. To meet projected growth in the Borough there is a need to provide for a minimum of 63 hectares of employment land."</p> <p>However with AB2A total site allocation of 80ha (previously 69ha) which includes 22 ha of employment land (the other 58 ha removed from green belt for ancillary uses to support the employment), plus KL15 of 11 ha of employment land - this takes the figure up to 96 ha - in addition to the existing supply of 64 ha identified.</p> <p>If you take into account the total amount of land allocated for employment/ancillary uses this is a total of 155 ha in the Local Plan. (64 ha existing land supply plus Green belt sites of 80 ha for AB2a and 11 ha for KL15)</p> <p>If there is already enough employment land to meet the 63 ha required from the existing supply as suggested at page 19 - why do we need to further add in AB2A and KL15? Also why is there no figure to measure the policy against which determines the total amount of employment land with AB2A and KL15 included? I find this very ambiguous and misleading especially as it states these targets are minimums with no upper limit set? Also it seems the evidence base seems to adjust to suit ... although the end result is still in conflict between the need and the proposed allocation.</p>
Q7 Modification	Remove AB2A from the Plan to reduce the amount of land being taken from Green Belt unnecessarily.

Q5 DTC compliant	Yes
Q6 Details	<p>The use of Greenbelt land should be kept to a bare minimum. The Local Plan seems to take little account of the impact to rural areas of building extensively on Greenbelt land. Many residents move into the parish of Audley and remain there because of the rural aspect of the area. Building large housing developments destroys this aspect and thereby the very character of the area.</p> <p>The volume of houses proposed is out of proportion to the housing need. Between 2011 and 2021, the population for Newcastle-Under-Lyme has decreased. Whilst some additional housing is required, there is no evidence to support a need for so many new houses.</p> <p>The current infrastructure is unable to support so many additional residents. The local primary school are close to full capacity and Audley Health Centre is already struggling to meet the needs of the local population. Roads are barely coping with the existing levels of traffic and on-street parking is becoming a hazard. The area is poorly served by Public Transport. It is also doubtful that the local sewerage and rainwater drains as well as the sewage treatment works could cope with the increase in volumes.</p>
Q7 Modification	Scale down the proposed number of housing sites and the overall number of housing. Alter the weighting of types of housing in favour of more social housing, affordable housing and housing for the elderly.
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)

Q6 Details	<p>This representation is drafted in a form that would assist the Local Plan Inspector in framing the Examination Matters and Issues, notwithstanding that in its current form the Draft Local Plan is unsound. All matters raised are in summary only, and would be taken forward in detail as Examination hearing statements as required in due course.</p> <p>The Draft Plan is unclear in a number of critical matters, which are raised in this representation. It should be re-drafted to take up these aspects.</p> <p>PSD1:</p> <p>The Draft Plan demonstrates a myopic understanding of the Borough and its fundamental relationship in an urban context to Unitary Stoke-on-Trent; probably borne out by the decision not to proceed with a Joint Plan because of intrinsic politics. This is for example demonstrated by its downplaying of 'Chatterley Valley Lowlands Road' (Policy BW1) as part of much more significant cross-boundary strategic area as part of the Ceramic Valley Enterprise Zone on the northern A500 to give impetus to urban growth. 'Land at Junction 16 M6' (Policy AB2) is equally to the north of the Borough and the wider conurbation. This northern spatial emphasis is clearly the economic activity driver – which is defied by the Draft Plan's residential growth balance being to the south.</p> <p>This demonstrates a fundamental spatial planning flaw that beset the early Cheshire East Local Plan 2010-30 (adopted in 2017) where two major changes to its spatial planning strategy driven by Inspector letters were required to achieve soundness.</p>
Q7 Modification	<p>Due to the scale and nature of the flaws identified in this representation so far in respect of Policies PSD1 and PSD3, the Council's new mandatory housing target, the NPPF planned changes in particular its advice in relation to Green Belt has major impact on Policy PSD5, there is need to fully re-evaluate the proposals in this regard. One straightforward matter is to re-prioritise the north of the Borough for development in order to re-balance the spatial economic strategy.</p> <p>The Green Belt Review 2017 needs fundamental review, including taking into account relevant NPPF changes like 'grey belt' and other more relaxed criteria-based approaches to appropriate development in the Green Belt. The current Review is rendered out of date by now not being consistent with current and proposed national policy.</p> <p>A distinct example of how a brownfield opportunity of appropriate development in the Green Belt (with others in locality) within a priority area for regeneration is demonstrated at the end of this representation. Plan changes</p> <p>Local Plan experience would say that it is highly questionable whether this version of the Draft Plan can proceed to Examination due to the significant matters raised above. In the event that the Draft Plan can take a positive forward direction the following actions are recommended:</p> <ul style="list-style-type: none"> • PSD1 – to thoroughly re-assess the Spatial Development Strategy in the manner that was undertaken by the Cheshire East Local Plan 2010-30 and how the Inspector dealt with the same aspect in his Interim report and further Interim report. The final outcome was sound and adopted. • PSD1 – to re-work the Plan requirement based on an up-to-date mandatory housing target, uplifting the current scale of housing development by around at least 50%. This is not a quick-fix matter. Solihull MBC has been pursuing such an uplift for such a length of time that PINS have recommended that their Draft Plan be withdrawn. <p>As a prime example of how the current Draft Plan has 'missed the boat' the following example demonstrates a totally discarded site which is surely amongst others which need a more justified approach and recognition rather than a simplistic dismissal.</p> <p>This particular site has been the subject of SHELAA submissions dating back to 2008 (ref 422) and has received analysis under the Green Belt Assessment (Part 2) Study as Site RC14.</p> <p>The aforementioned Assessment was very detailed in nature and in recognition of the site being assessed as making a weak contribution to Green Belt purposes and was recommended for further consideration. It's potential for sustainable small-scale growth adjacent to Kidsgrove and its local facilities was recognised.</p> <p>The site is clearly Brownfield / previously developed land with a substantial former farm complex of substantial buildings now in commercial use plus associated substantial hard standings. The site should form part of the Brownfield Land Register for Newcastle Borough.</p> <p>The Newcastle Borough Regulation 18 First Draft Local Plan (June 2023) Exceptional Circumstances for Green Belt release sets an important context. At 5.10 it states 'suitable previously developed land was prioritised for development during the site selection process'. It then refers to constraints typically associated with development of brownfield sites, such as lack of economic viability and land contamination. In relation to Site RC 14 – which does not form part of the Plan; 7.1 of the report confirms urban and brownfield sites have received site allocation focus, and that 'wherever a brownfield site was assessed to be suitable, this land has been allocated'. This is clearly not the case with Site RC 14. Perversely the Draft Plan at states that 'the lack of brownfield land ... within the urban boundary has resulted in the need to consider sites beyond the urban boundary'. This site being cross-boundary demonstrates an ever-greater justification for allocation in relation to Stoke's substantial housing requirements. Further,</p>

	<p>smaller sites such are critical to meeting early 5 year housing land supply requirements, with large strategic sites proven to have long lead-in times to delivery. This site could be fully developed within 3 years; at most 5 years. This is an example of how the Site selection process is flawed.</p> <p>The Draft Local Plan is scant in relation to its Spatial Growth reasoning, but clearly emanates from the more fulsome Issues & Options which showed strong reasoning behind Green Belt release around Kildsgrove, the Borough's second largest settlement with strong connectivity. The Green Belt Assessment Study in this context recommended that four sites (NC4, NC5, NC13 and RC14) be taken forward for further consideration. None of these sites are proposed allocations – only site KG6 is promoted in the Plan as offering estimated 6 dwellings. The Draft Plan Policy PSD 3: Settlement Hierarchy promoting substantial growth of Kildsgrove Urban Centre is totally imbalanced in this respect.</p> <p>The NPPF has a whole range of relevance to the allocation of Site RC 14. National policy calls for 'a variety and mix of land' (Para 60), a priority for sites that are deliverable in 5 years (69a) and that at least 10% of housing requirements should be made up of small sites (70) in recognition of main supply and delivery of housing requirements (74-77). Paras 24-27 highlight the need for joint co-operation in Plan making and the tests of soundness at Para 35. Para 1 refers to making effective use of land and emphasis to the role of small sites.</p> <p>The Levelling up & Regeneration Bill 2023 fingerposts 'local planning authorities to deliver as many houses as possible on land which has been previously developed'. Further, the Government announced on 13 February 2024 an even greater emphasis on prioritising such land and respect this in policy setting. They stated that 'the brownfield presumption will be strictly enforced' and announced 'a rocket boost to bringing forward as much previously used land as possible to deliver much needed housing'. This is stated to be followed up by an even stronger 'brownfield first presumption on development' through a planned revised NPPF and National Development Management Policies in 2024.</p> <p>The Draft Plan overlooks brownfield development opportunities in favour of in many instances open green belt sites with no logical circumstance in favour of allocation.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	<p>As a professionally qualified Planner I have been commissioned to represent a landowner in the Local Plan process for both Newcastle Borough and Stoke-on-Trent City Councils. I have significant experience in the Local Plan process including Plan Examinations.</p> <p>I wish to be offered the opportunity of further developing this representation through suitable topic hearing statements on key matters and issues, and appearance at Plan Examination sessions to ensure in particular participation on Plan soundness.</p>

Consultee Given Name	AR
Q5 Legally compliant	No
Q5 Sound	No
Q6 Details	<p>PSD1 Overall Development Strategy</p> <p>The targets for new housing in the borough and in the Audley Parish are unnecessarily high and will involve the destruction of valuable greenbelt and serve to further undermine the weaker housing markets in the Borough, Stoke-on-Trent and Crewe.</p> <p>Despite the completion of 2,240 dwellings between 2011/12 and 2020/21, the population actually decreased (from 123,871 to 123,300) and the number of households grew by only 849. Government data on empty homes indicates that there were 1,688 empty homes in the Borough in October 2023. The 2021 census indicates that there were 53,423 households in 2021, whereas council tax records indicate that there were 57,627 dwellings.</p> <p>In terms of housing costs, Newcastle-under-Lyme is one of England's lowest priced places to live. In 2023, the average cost of a first-time buyer's home was £176,000 compared to the national average of £241,502. The ONS official house price to income ratio was 5.52 in 2023, compared to the national average of 8.14. For Audley, the ratio is lower still, at 4.12. Private rents averaged £705 per month in 2023, compared to the national average of £1,279.</p> <p>The key issues in Audley and the Borough as a whole concern the range of housing options available and the need to tackle endemic under-occupation by older households. Audley lacks options for older households wishing to downsize or younger people wanting apartments. In Audley and the Borough, the population is ageing. In 2023, 9,731 people moved in from outside areas compared to only 7,719 out movers.</p> <p>The planned level of growth will simply accelerate problems of urban decay, especially in Stoke-on-Trent. There is no economic or social case for the numbers involved.</p>

Q6 Details	<p>Gladman Developments Ltd (Gladman) welcome the opportunity to comment on the Newcastle-under-Lyme Final Draft Local Plan 2020-2040 (Regulation 19) consultation and request to be updated on the progress of the emerging Local Plan. Please refer to attached representations. Gladman has fully engaged fully in the preparation of the emerging Newcastle-under-Lyme Local Plan 2040 to date. Feedback from the First Draft Local Plan (Regulation 18) consultation has been addressed and incorporated into the Final Draft Local Plan consultation document.</p> <p>In the sections below, Gladman have made specific comments where we consider the Final Draft Local Plan requires modifications or further clarification to ensure that it is capable of being found sound. Comments are focussed mainly on the consultation document, with references to the Duty to Cooperate and Sustainability Appraisal documents. Our representations also include details of Gladman's land interest at land south of Eccleshall Road, Loggerheads, which we are promoting as suitable for identification as a housing allocation in the emerging Local Plan. Please refer to attachment for more information.</p>

	<p>Plan Period</p> <p>Paragraph 22 of the NPPF sets out that strategic policies should look ahead over a minimum 15-year period from adoption. The term minimum is notable as it makes it explicit that the requirement is 15 years or more, not around 15 years which could justify a lower plan period being advanced.</p> <p>Gladman note that in terms of the timescales for the emerging Newcastle-under-Lyme Local Plan 2020-2040, the most recent Local Development Scheme (January 2024) anticipates that the emerging Local Plan will be adopted by the Council in Q4 2025. Gladman suggest there is merit in extending the plan period until 2041, allowing for a suitable buffer to account for any minor setbacks in the plan-making process whilst still ensuring that the Plan will look ahead over a minimum 15-year period from the date of adoption.</p> <p>An extended plan period would result in the need to allocate additional sites to meet an increased minimum overall housing requirement. Gladman are promoting a suitable site in land south of Eccleshall Road, Loggerheads, which is consistent with the settlement hierarchy set out in draft Policy PSD3, that represents a suitable and deliverable opportunity that can be delivered in the short-term to boost the Council's housing land supply position in the early years of the plan period.</p> <p>Policy PSD1: Overall Development Strategy</p> <p>Draft Policy PSD1 sets out provision will be made for a minimum of 8,000 dwellings to be delivered in the borough over the plan period 2020-2040, which is an increase of +860 dwellings in comparison to the First Draft Local Plan consultation (2023). Gladman welcome the recognition that the overall housing requirement is being expressed as a minimum.</p> <p>Gladman welcome the Council being proactive by using its 'Housing and Economic Needs Assessment' (HENA) 2024 derived figure (400 dwellings per annum) over the plan period rather than the current local housing need figure of 347 dwellings per annum, which resulted in an overall housing requirement of 6,950 dwellings. The modelling undertaken in the HENA suggests that exactly 400dpa could be needed to accommodate this growth and support the creation of 237 jobs every year to 2040. Such a level of housing provision would also align almost exactly with the average housing delivery in the borough over the last five monitoring years (399dpa). The NPPF supports the delivery of housing above the standard method where it is justified by a local economic strategy.</p> <p>Table 2: Housing Requirement Supply Information sets out that the Council has a total deliverable supply of 8,663 dwellings over the 2020-2040 plan period, which equates to an 8.3% flexibility allowance against its minimum overall housing requirement (8,000 dwellings)</p> <p>. Many representatives within the development industry advocate for a flexibility buffer of between 10-20% which is considered suitable to mitigate against delays in delivery as a result of changes in the economic context. The housing land supply contingency should be added to the minimum overall housing requirement and remain flexible in the event of delayed delivery and changes to the planning context. Gladman stress that it is necessary for the emerging Local Plan to provide flexibility in the deliverable land supply as there can be no guarantee that all sites with planning permission, or all sites which have been identified for allocation, will deliver as the Council currently anticipate.</p>

Title	Policy PSD1: Overall Development Strategy
Consultee Company / Organisation	Cross Heath, Wolstanton and May Bank Branch Labour Party
Consultee Position	Branch Secretary
Consultee Family Name	Gorton
Consultee Given Name	Richard
Q4 Part of document	Policy
Q4 Policy	PSD1
Q6 Details	<p>Cross Heath, Wolstanton and May Bank Branch Labour Party welcomes the opportunity to take part in the consultation exercise on the draft Local Plan launched by the Newcastle-under-Lyme Borough Council. The Branch Party currently has 130 members spread across the Cross Heath, Wolstanton and May Bank wards. The Branch supports the work of 4 Borough councillors and many of our members are directly involved in residents' associations, community groups and a diverse range of local clubs and societies. Our response to the Local Plan reflects the Branch Party's conviction that future planning decisions across Newcastle-under-Lyme should be guided by a strong Local Plan. We believe the adoption of a Local Plan is essential to conserve green spaces and protect the Borough from unwelcome development. Our approach is to suggest ways in which the draft Plan could be strengthened rather than use the consultation exercise to highlight political differences. We are concerned, however, that the draft Plan appears to have been prepared with little or no consultation with Staffordshire County Council, Stoke-on-Trent City Council or local NHS agencies. This absence of involvement may impede the Plan's delivery, as the Borough Council relies on the County Council for the provision of infrastructure and access to doctors and dentists will be regulated by local NHS agencies. Infrastructure and access to medical services must be key elements in delivering the excellent new housing promised in the Plan.</p>

	<p>We suspect that the draft Plan has been prepared with little or no input by key partners of the Borough Council.</p> <p>We believe that Newcastle -under-Lyme must adopt a Local Plan which recognizes the need for a range of new dwellings across the Borough. We want to see well-designed, energy efficient new homes which cater for the housing needs of existing residents and people who may wish to relocate to Newcastle-under-Lyme. The Local Plan should impress upon developers the importance of including flats, bungalows, two-bedroom houses, together with sheltered and assisted living accommodation in future applications for development. One concern we have over the sites suggested for development in the draft Plan is that these locations are likely to prompt planning applications which focus on the construction of three or four bedroom 'executive' houses located on the outskirts of the Borough, some distance from either the main places of work or essential amenities.</p> <p>While there is certain to be a demand for family homes, it is important that the housing needs of other groups are addressed, particularly the elderly and people under the age of 40, many of whom struggle to find decent, affordable housing. While we welcome the support given in the draft Plan to the inclusion of affordable housing in development applications, we believe that dwellings designated as 'affordable' family homes would still be beyond the income of many Newcastle residents. In our view the most effective way of providing affordable homes is by building social housing.</p> <p>Under the current planning system developers secure Section 106 agreements with the Borough Council which stipulate the number of affordable homes that should be provided. It is often the case that once Section 106 has been agreed, a developer will apply for it to be lifted by arguing that the agreement now makes the development less financially viable. We would ask the authors of the Local Plan to consider how Section 106 agreements should be enforced in future and what measures should be in place to discourage developers from not fulfilling commitments agreed with the Borough Council.</p> <p>We recognize that new homes will be needed in Newcastle and accept that as the Borough has few, if any brownfield sites available for redevelopment, some new build will have to take place on the Green Belt. We would question whether the forecast given in the draft Local Plan takes sufficient account of the emphasis now placed by ministers on the conversion of derelict and empty buildings into living accommodation. Providing good standards of design are observed and quality materials used, we think this approach has merit and may be a faster and more sustainable way of providing accommodation than demolishing an existing building and then clearing the site.</p> <p>The Branch believes that the soundness of the draft Plan would be strengthened if the Borough Council provided evidence that the key objectives and commitments set out in the Plan were shared by the Council's partners.</p> <p>The Regulation 19 stage of the draft Plan cites a housing need of 400 dwellings pa and assumes that this figure will be accompanied by a substantial growth in employment across the Borough. The Branch is not convinced that an increase in house building will coincide with a comparable increase in jobs. Therefore, we must question whether the draft Plan is sustainable.</p>
Q7 Modification	<p>The Branch believes that the soundness of the draft Plan would be strengthened if the Borough Council provided evidence that the key objectives and commitments set out in the Plan were shared by the Council's partners.</p> <p>Whilst the commitment in the Plan to affordable housing is welcome, we believe that the document should make it clear that for the purposes of the Local Plan, affordable housing means rents and charges which reflect income levels in Newcastle -under-Lyme.</p>
Q9 Hearing reasons	<p>Conclusion</p> <p>Cross Heath, Wolstanton and May Bank Branch Labour Party welcomes the opportunity to give its views in response to the Regulation 19 stage of the draft Local Plan. If it is felt to be appropriate, a member of the Branch would be prepared to take part in the public scrutiny of the draft Local Plan.</p>

Q6 Details

This representation is submitted on behalf of Richborough in response to the Newcastle-under-Lyme Draft Local Plan ("DLP") consultation.

Richborough is an experienced land promoter that brings forward a range of deliverable developments sites in sustainable locations across the country, including in Newcastle-under-Lyme Borough for housing, employment and mixed use schemes in order to meet development needs.

Richborough welcomes the opportunity to comment on the DLP and supports the Council's endeavours to prepare a new Local Plan for the Borough to guide development over the next 20 years. It is considered that the adoption of a new Local Plan is of the upmost importance for the Borough given that NULBC's extant Local Plan ("LP") was adopted in 2003 and is 20 years old. New housing allocations are very much needed in order to deliver a planned supply of open market and affordable housing in both the urban and rural areas the coming years.

Adopting a local plan that reflects up to date housing and economic development needs and allocates a sufficient amount of sites to meet those needs in the Newcastle-under-Lyme Borough is essential. The adoption of a robust Local Plan that allocates a sufficient amount of development land gives the Council a choice about where to meet its housing and economic development needs, creates certainty, and ensures that future needs can be achieved in a sustainable way and delivers the associated physical and social infrastructure that is required to support such development.

Richborough therefore supports the preparation of a new Local Plan and provides a number of comments in relation to the proposed draft policies, in addition to providing support for draft allocation reference SP23 which our client has a legal interest in / control over. SP23 forms a part of the Council's Local Plan strategy to deliver sustainable growth around Keele University and Richborough wholeheartedly support this part of the Council's growth strategy.

Whilst it is the case that the Government has recently consulted upon a revised NPPF, it is the Government's position that local authorities should continue to progress with the delivery of up-to-date local plans. Richborough therefore welcomes this consultation and supports the Council in its efforts in bringing forward a new Local Plan.

Further to the above, Richborough are mindful of the transitional arrangements proposed in the draft revised NPPF for the purposes of plan-making.

Annex 1 to the draft NPPF contains implementation provisions as follows:

"For the purposes of plan-making

226. The policies in this Framework (published on [publication date]) will apply for the purpose of preparing local plans from [publication date + one month] unless one or more of the following apply:

a. the emerging annual housing requirement in a local plan that reaches or has reached Regulation 19 (pre-submission stage) on or before [publication date + one month] is no more than 200 dwellings below the published relevant Local Housing Need figure;

b. the local plan is a Part 2 plan that does not introduce new strategic policies setting the housing requirement unless the relevant Local Plan Part 1 has been prepared applying the policies in this version of the Framework;

c. the local plan is or has been submitted for examination under Regulation 22 on or before [publication date + one month].

Where a, b or c applies, the plan will be examined under the relevant previous version of the Framework.

227. Where paragraph 226 c) applies, local plans that reach adoption with an annual housing requirement that is more than 200 dwellings lower than the relevant published Local Housing Need figure will be expected to commence plan-making in the new plan-making system at the earliest opportunity to address the shortfall in housing need.

228. After applying the policies of this version of the Framework, local plans that have reached Regulation 19 (pre-submission stage) on or before [publication date + one month] with an emerging annual housing requirement that is more than 200 dwellings lower than the relevant Local Housing Need figure should proceed to examination within a maximum of 18 months from [publication date].

229. For Spatial Development Strategies, this Framework applies to strategies that reach consultation under section 335(2) of the Greater London Authority Act 1999 on or after [publication date + one month]. Strategies that reach this stage on or before this date will be examined under the relevant previous version of the Framework."

Accompanying this submission is a Counsel opinion from David Manley KC (Appendix 1). This sets out that the draft Regulation 19 Local Plan for Newcastle-under-Lyme would fall squarely within exception 226(a) (as the annual housing requirement proposed in the Regulation 19 Plan is less than 200 dwellings than the Local Housing Need figure) and that the plan as currently proposed should proceed to examination. Further to this, Government Guidance on the issue of transitional arrangements provided with the consultation document: "Proposed reforms to the National Planning Policy Framework and other changes to the planning system" (updated 2nd August 2024) states, inter alia:

"Transitional arrangements for emerging plans in preparation

4. We propose transitional arrangements to maintain the progress of plans at more advanced states of preparation, while maximising proactive planning for the homes our communities need. These will apply differently depending on what stage of preparation the plan has reached and the extent to which it is meeting the Government's housing growth aspirations. These transitional arrangements are set out in Annex 1 of the NPPF and outlined below

6. To help local planning authorities with advanced plans to proceed to examination at pace and support the Government's ambition to build more homes, those plans that have reached Regulation 19 publication stage but not yet been submitted for examination one month after the revised framework is published, with a gap of no more than 200 dwellings per annum between the local planning authority's revised LHN figure and its proposed housing requirement (as set out in the Publication version of the plan), should also progress to examination under the version of the NPPF it has used when preparing the plan thus far."

The whole purpose of the transitional provisions as drafted is to strike a pragmatic balance between the need to increase housing provision on the one hand and the need to achieve Local Plan coverage and avoid wasted time and expense on the other.

The advice from Counsel goes on to state that if the NPPF is issued in its draft form then it is an important material consideration and unless local circumstances clearly indicated a need to depart from NPPF

	<p>advice it is the Government's (and PINS') expectation that it will be applied. It is therefore our position that the Newcastle-under-Lyme Regulation 19 Plan can be submitted for examination.</p> <p>Knights, on behalf of Richborough, would like to participate in the examination hearings in response to the various policies and allocations for which representations are made in this submission.</p> <p>The Council's overall development strategy seeks to deliver a minimum of 8,000 dwellings over the plan period at 400 dwellings per annum. At Regulation 18 stage, the Council sought to deliver 7,160 dwellings over the plan period (358 dwellings per annum).</p> <p>At Regulation 18 stage, we argued on behalf of Richborough that the housing requirement should be higher on the basis that the affordable housing need identified at that time (278 affordable homes per annum) amounted to around 77% of the housing requirement.</p> <p>As such, the increase of the requirement to 400 dwellings per annum is welcome and is supported, however the annual affordable housing need still equates to around 69% of the annual housing requirement for Newcastle-under-Lyme.</p> <p>The expression of the housing requirement as a minimum starting point is welcome.</p> <p>Given the high level of affordable housing need and the Council's aspirations to deliver economic growth, it is considered that the increase in the annual housing requirement is justified by the evidence and is therefore sound.</p> <p>It is therefore suggested that as a minimum, all of the proposed allocations identified in the current DLP must be retained in order to ensure that the housing requirement can be delivered over the plan period.</p>

Q4 Part of document	Policy
Q4 Policy	PSD1
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>These representations are made in response to the Regulation 19 consultation on the final draft of the Newcastle-under-Lyme Local Plan 2020 – 2040. The representations are made by Pegasus Group on behalf of Araripe Limited and relate to their land interest at St Martins Road, Talke(hereafter referred to as the "Site"). The Site is greenfield land situated to the south of Talke. With regards to the Site, these representations should be read alongside the attachment.</p> <p>The draft policy has been updated to require at least 8,000 dwellings to be delivered over the plan period, which equates to 400 per annum. This exceeds the requirement identified by the current Standard Method of 337 dpa; however, Paragraph 61 of the NPPF is clear that this should simply serve as a starting point for establishing the housing need for an area. The Housing and Economic Needs Assessment Further Update (HENAFU), dated April 2024, recommends that 400 dpa should be provided to support anticipated levels of job creation, and this element of the policy is therefore positively prepared and justified since it aligns with the need identified in the evidence base.</p> <p>Notwithstanding, it is worth highlighting that the draft NPPF proposes to update the Standard Method to identify a requirement equivalent to a 0.8% increase in existing dwelling stock and a revised and increased affordability adjustment. This would increase the minimum housing requirement within the borough by 256 dpa compared to the existing Standard Method, and 193 dpa compared to the emerging policy requirement of 400 dpa, to 593 dpa. This would equate to a shortfall of up to 3,860 homes over the plan period. For clarity, given the late stage the draft plan is at, and the fact that the difference with the housing requirement in the draft policy is less than 200, the plan will be examined under the current NPPF and its lower housing need for Newcastle-under-Lyme. As such, this will not affect the soundness of Policy PSD 1 during examination. However, this does underline the importance of the Council allocating sufficient sites to help ensure that the Borough's increasing need can be met to the greatest degree possible – 400 dpa should only treated as a minimum figure, as stated in the draft policy.</p> <p>Concern is raised regarding deliverability. Whilst a supply of 8,663 dwellings (including an 8.3% buffer) has been set out within the supporting text, and the HENAFU states (at paragraph 5.7) that an average of 399 dwellings have been provided in the Borough over the past five years, suggesting that 400 dpa is deliverable, this data is skewed by two years in which substantially higher levels of student</p>

	<p>accommodation were provided within the Borough. Reviewing the Council's indicative housing trajectory in Appendix 6 of the Final Draft Local Plan, the delivery of dwellings over the plan period is envisioned to be highly uneven, peaking at over 1,000 dpa in 2028, and dropping to around 20 dpa by 2040. Whilst it is not necessary to deliver an even number of dwellings each year across the plan period, in this case the variation is too significant, and unlikely to address the ever-increasing need towards 2040, with such low numbers of dwellings to be provided – as the policy states, 8,000 is only a minimum figure, and a substantial slow-down in delivery should be avoided. It is uncertain as to whether the high numbers in peak years can even be achieved, since the Council's housing delivery has consistently fallen below both Standard Method's requirement and the need of 400 dpa identified in the evidence base in recent years. Indeed, there are only four occasions in the twenty first century where net additions have exceeded 400 dpa as shown in Figure 3.1 of the HENAFU. Araripe Limited strongly support the Council's commitment within the policy to provide sufficient housing, and it is imperative for a range of deliverable sites to be identified and allocated to achieve this. The housing trajectory should be reviewed in light of the above and the policy must be deliverable in order to be effective and sound.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	<p>Sufficient land for housing should be planned for to meet the identified need for this within the Borough. Araripe Limited strongly support the allocation of Site TK17 for residential development, but several amendments are required to make Policy TK17 sound, as set out in paragraph 3.19 of the accompanying written representations. We would welcome the opportunity to participate in the hearing sessions to set these out, as well as to draw attention to the other matters which need to be addressed to ensure soundness elsewhere in the final draft plan, whilst emphasising site TK17's suitability, availability, and deliverability, being an optimum and sustainable location for high-quality residential development.</p>

Title	Policy PSD1: Overall Development Strategy
Consultee Family Name	Council
Consultee Given Name	Audley Parish
Q4 Part of document	Policy
Q4 Policy	PSD1
Q5 Legally compliant	No
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>Please note the contents of the attached letter which sets out the Council's comments in this regard. Please do not dilute the comments in any officer reports as the document needs to be read in context alongside the previous responses made.</p> <p>PSD1 Overall Development Strategy</p> <p>The targets for new housing in the borough and in the Audley Parish are unnecessarily high and will involve the destruction of valuable greenbelt and serve to further undermine the weaker housing markets in the Borough, Stoke-on-Trent and Crewe.</p> <p>Despite the completion of 2,240 dwellings between 2011/12 and 2020/21, the population actually decreased (from 123,871 to 123,300) and the number of households grew by only 849. Government data on empty homes indicates that there were 1,688 empty homes in the Borough in October 2023. The 2021 census indicates that there were 53,423 households in 2021, whereas council tax records indicate that there were 57,627 dwellings.</p> <p>In terms of housing costs, Newcastle-under-Lyme is one of England's lowest priced places to live. In 2023, the average cost of a first-time buyer's home was £176,000 compared to the national average of £241,502. The ONS official house price to income ratio was 5.52 in 2023, compared to the national average of 8.14. For Audley, the ratio is lower still, at 4.12. Private rents averaged £705 per month in 2023, compared to the national average of £1,279.</p> <p>The key issues in Audley and the Borough as a whole concern the range of housing options available and the need to tackle endemic under-occupation by older households. Audley lacks options for older households wishing to downsize or younger people wanting apartments. In Audley and the Borough, the population is ageing. In 2023, 9,731 people moved in from outside areas compared to only 7,719 out movers.</p> <p>The planned level of growth will simply accelerate problems of urban decay, especially in Stoke-on-Trent. There is no economic or social case for the numbers involved.</p>
Q7 Modification	As above
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	As set out in this response and the previous 2 responses - the Parish Council has strong objections in particular to the inclusion of AB2.

Q4 Part of document	Policy
Q4 Policy	PSD1
Q5 Legally compliant	No
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>We consider that the overall development strategy that underpins the draft Local Plan to be flawed for the following reasons. While the two key employment allocations in the draft Local Plan are acknowledged – ‘Land at Junction 16 of the M6’ (Policy AB2), and ‘Keele Science Park Phase 3’ (Policy KL13) – the importance of ‘Chatterley Valley, Lowlands Road’ (Policy BW1) appears to be downplayed. However, the Chatterley Valley site and the proposed Junction 16 allocation are both located off the A500 corridor, and therefore provide the economic context for growth in the north of the borough. A further key consideration relating to the proposed Chatterley Valley allocation is that it is located within the northern extremity of the Ceramic Valley initiative, a cross-boundary project led by the Borough Council, Stoke-on-Trent City Council and Staffordshire County Council. Therefore it is in this part of the North Staffordshire conurbation where the majority of recent and planned economic activity is taking place, and thus where a large proportion of the area’s employment opportunities will be located.</p> <p>Alongside this, Policy RET5 (Kidsgrove Town Centre) provides the policy context for the regeneration of Kidsgrove town centre, and while the principle of this is to be supported, the detail is in need of strengthening (this is considered below).</p> <p>However, the plan’s proposed housing land supply does not respond to this economic context, and neither does it respond to the Council’s new mandatory housing target (this is considered below) which should address historic under-delivery across the borough, particularly affordable housing. It should also be noted that significant levels of student accommodation are included within the proposed housing land supply. Therefore it is considered that the plan’s proposed housing supply will need to be increased accordingly. Having considered the above, Policy PSD1 will need to be addressed accordingly. Suggested amendments are detailed below. In addition, the shortcomings of Policy PSD1 also impact on Policy SD3 and resulting Site Allocations.</p>
Q7 Modification	<p>Point 1 will need to be amended to reflect the Council’s new mandatory housing target. This will need to be addressed as there is a significant difference between that, and the figure that the Regulation 19 draft is responding to.</p> <p>Initial indications suggest the following:</p> <ul style="list-style-type: none"> • 11,860 for the plan period 2020-2040 • 593 dwellings per annum <p>Therefore point 1 within Policy PSD1 should be modified as follows: “A minimum of 11,860 dwellings will be delivered in the Borough over the Plan period 2020–2040 which equates to 593 dwellings per annum.”</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	We consider that it is necessary for us to participate in the examination hearing session(s) as we are promoting a site that was allocated in the Regulation 18 draft, yet removed from the Regulation 19 draft despite nothing changing. In addition, we have further evidence to present within our hearing statement to reinforce the deliverability of the site, and the weaknesses of the plan as drafted.

Title	Policy PSD1: Overall Development Strategy
Consultee Company / Organisation	Jones Homes & Renew Land Baldwins Gate Ltd)
Consultee Family Name	Jones Homes & Renew Land Ltd
Agent Company / Organisation	Stantec

Agent Position	Planner
Agent Family Name	Connell
Agent Given Name	Lydia
Q4 Part of document	Policy
Q4 Policy	PSD1
Q6 Details	<p>These representations are submitted by Stantec on behalf of Jones Homes (North West) Ltd (Jones Homes) and Renew Land Baldwins Gate Ltd (Renew Land), together known as “the Promoters”, in response to the Final Publication Draft of the Newcastle-under-Lyme 2020- 2040 (‘Local Plan’) at Regulation 19 published by Newcastle-under-Lyme Borough Council (NuLBC) (‘the Council’) in August 2024. Please also see attached representations.</p> <p>This section of our representation provides sets our commentary on the NuLLP Regulation 19 draft in terms of NuLBC’s housing requirement.</p> <p>Standard Method for calculating housing need</p> <p>The principle of using the Standard Methodology to establish a starting point for the NuLLP is in accordance with national policy set out at paragraph 61 of the NPPF.</p> <p>The Government is clear at paragraph 61 of the NPPF that to determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment conducted using the standard methodology unless exceptional circumstances justify an alternative approach. Any needs that cannot be met within neighbouring areas should also be taken into account in establishing the amount of housing to be planned for.</p> <p>The Local Housing Need figure quoted within the draft plan is 347 dwellings per annum (as defined by the Standard Method at the time of writing). If applied over the Council’s proposed plan period (2020-2040) this would equate to a total housing need of 6,940 homes.</p> <p>The Housing and Economic Needs Assessment (2024) (HENA) provides an assessment of local housing and employment needs over the plan period (2020-204). To support forecast economic growth and associated increase in the working age population, the HENA identifies a need to deliver approximately 8,000 dwellings (400 dwellings per annum) over the plan period (2020 – 2040).</p> <p>Accordingly, the Draft Local Plan Policy PSD1 sets NUL’s proposed housing requirement for the plan period 2020-2040 as a minimum of 8,000 dwellings; or 400 dwellings per annum. This comprises an uplift of 53 dwellings per annum over the LHN figure stated within the Plan.</p> <p>The National Planning Policy Framework (NPPF) supports the delivery of housing above the standard method where this is justified by a local economic growth strategy. We have, in our previous representations to the draft Local Plan supported that uplift.</p> <p>Notwithstanding that previous support, we consider that there are exceptional circumstances which would justify the Council taking an alternative approach to planning for its housing requirement. Those circumstances arise in consideration of the Government’s emerging NPPF 2024 and its Written Ministerial Statement (WMS) which accompanied the release of the draft NPPF Proposed Changes to National Planning Policy Framework (NPPF) (2024)</p> <p>The proposed changes to the NPPF were published for consultation until the 24th September 2024.</p> <p>These place a greater emphasis on the delivery of new homes with the overall target raised from 300,000 to around 370,000 homes, a 22% increase against the previous method.</p> <p>To achieve this, the Government has committed to move away from the current standard method of identifying local housing need based on ONS 2014 figures for household projections and replace it with a method that takes as its baseline starting 0.8% of existing housing stock in each local authority area.</p> <p>The currently adopted standard method figure for Newcastle-under-Lyme is 330 new homes per year (rather than the 347 stated within the draft plan) with the proposed revised figure being 593, which is an 80% increase.</p> <p>The proposed implementation of the new NPPF is dealt with in Annex 1 including transitional arrangements for those authorities with emerging development plans. Paragraph 226 of the draft NPPF states that the policies in this Framework will apply for the purpose of preparing local plans from its publication date (+ one month) unless, amongst other scenarios, the emerging annual housing requirement in a local plan that reaches or has reached Regulation 19 (pre-submission stage) on or before the publication date (+ one month) and is no more than 200 dwellings below the published relevant Local Housing Need figure. Draft Policy PSD1 details that there is a proposed minimum local housing requirement of 400 dwellings per annum to be delivered in the Borough over the Plan period 2020-2040; as compared to the draft LHN figure of 593dpa.</p> <p>Therefore, as the gap between the emerging local plan and the draft NPPF is 193 dwellings which, whilst not greater than the 200 dwellings, is evidently right at the limit of divergence from the LHN figure for progressing with the current Local Plan.</p> <p>Clearly, it is in the Council’s gift to continue with its Local Plan under the current 2023 NPPF; which we do not dispute. However, we consider that the draft NPPF and the emerging revised standard method for calculating local housing needs does represent the exceptional circumstances which would justify providing a significantly higher housing requirement within the emerging Local Plan.</p> <p>The changes to the NPPF and the need for a significant shift from the current method were announced within Angela Rayner’s Written Ministerial Statement (which should be given weight in planning decisions) and states:</p> <p>“A mandated method alone is, however, insufficient to deliver on our scale of ambition and the current ‘standard method’ is not up to the job. It relies on decade-old population projections, an arbitrary ‘urban uplift’ that focuses too heavily on London and it lacks ambition across large parts of the country. We are therefore updating the standard method and raising the overall level of these targets – from around 300,000 to approximately 370,000. The new method provides a stable and balanced approach. It requires local authorities to plan for numbers of homes that are proportionate to the size of existing communities, by taking 0.8 per cent of existing stock as a floor, which is broadly consistent with the average rate of housing growth over recent years. It also then incorporates an uplift based on how out</p>

of step house prices are with local incomes, using an affordability multiplier of 0.6 per cent, up from 0.25 per cent in the previous method.”

It is clear from the above that the new Standard Method provides for a level of growth which is required for the borough to keep pace with the average level of growth across the country and to help address local affordability issues. In essence, the emerging standard method is the minimum level of growth to prevent the borough falling behind the average rate of growth for the country.

It is worth noting here that the HEDNA Update states at paragraph 3.4 that an average of 351 homes per annum had been completed over the eight most recent years then reported (2014-22) however this drops to 338 dwellings per annum, when incorporating the extra year of data now available (2022/23). It is clear that the borough is currently delivering significantly below that rate and requires a boost in the number and range of housing land supply opportunities to boost its immediate supply of housing.

The Government have made it clear that this is the direction of travel for the planning system in the coming years and with the requirement for Local Plan's to be reviewed at least every five years, it makes sense for the Council to begin to grapple with some, if not all of the additional requirement which the borough will need to provide for during the course of the plan period. Indeed, this will include the planning for the required physical and social infrastructure which the borough will need to support that development. Moreover, whilst the Government proposed so set the threshold for continuing to progress with current local plans at 200 dwellings of divergence from the emerging LHN figure, that divergence applies to all boroughs in the Country, even those with annual housing needs figures in the thousands per annum (where a divergence of 200 units could be considered a relatively insignificant difference). In Newcastle-under-Lyme, the emerging housing requirement within the Local Plan would represent only 2/3rd of the amount of growth which would be considered as the bare minimum of growth needed against the emerging method. That difference is stark and, we would argue, comprise the exceptional circumstances which would justify a review of the current plan's position.

Paragraph 33 of the current NPPF (proposed to be unchanged at paragraph 34 of the draft revised NPPF) set out: “Policies in local plans and spatial development strategies should be reviewed to assess whether they need updating at least once every five years, and should then be updated as necessary. Reviews should be completed no later than five years from the adoption date of a plan, and should take into account changing circumstances affecting the area, or any relevant changes in national policy. Relevant strategic policies will need updating at least once every five years if their applicable local housing need figure has changed significantly; and they are likely to require earlier review if local housing need is expected to change significantly in the near future.”

We acknowledge that this Regulation 19 Draft Local Plan was published at the same time as the draft NPPF 24 and the WMS was released for consultation. The Council could not reasonably have been expected to take the contents of the NPPF into account of the impact of the revised methodology for calculating LHN in publishing its Local Plan or within its Sustainability Appraisal.

However, as above, it is clear that local housing needs are going to change significantly in the near future for the borough and that the NPPF would require the Local Plan to be subject to an early review in that circumstance. Indeed, in the event that this Local Plan were to reach Examination alongside the publication of the NPPF, paragraph 227 of the draft NPPF expects the Council to “commence plan-making in the new plan-making system at the earliest opportunity to address the shortfall in housing need”.

We consider that, in the above circumstances, it would be appropriate for the Local Plan to take account of its likely shortfall against the emerging LHN and to consider whether those changes justify an alternative approach to setting a housing requirement for the borough. That consideration ought to be given some formal process and the sustainability impacts of that decision should be properly assessed.

In that regard, we consider that it would be appropriate to undertake an assessment of an uplift to address the emerging LHN figure within the Council's assessment of Reasonable Alternatives within the Sustainability Appraisal (SA). Assessment of Housing Growth Options

As above, we recognise that the Sustainability Appraisal (SA) of the Regulation 19 NuLLP was produced prior to the publication of the 2024 draft National Planning Policy Framework and therefore does not account for the potential impacts of changes in policy.

The Sustainability Appraisal (SA) of the Reg 19 NuLLP as currently drafted provides three updated housing options as shown in Figure 1 (Table N.4) below. Paragraph D.2.1.5 states that this was due the council's concerns that the standard method figure will not provide enough homes to align with the latest employment growth forecasts for the Plan period.

Figure 1: Table N.4: Newcastle-under-Lyme Housing Growth Options identified by NuLBC at the Regulation 19 stage (see attachment)

Paragraph N76 of the Sustainability Appraisal (SA) (July 2024) states that Option 2 has been identified as the best performing overall, seeking to provide the best balance between economic, social and environmental outcomes, through ensuring housing growth aligns with the economic and employment growth forecasts in contrast to Option 1, but providing a lower quantum of growth than Option 3 and thus reducing environmental impacts. Newcastle-under-Lyme Borough Council Local Plan 2020-2024 Representations on Regulation 19 Submission Draft Project: 33313360200 0-11

The SA also details in Table D.2.3 that there is therefore some concern over the realism of the higher growth option 3, particularly when balanced against site opportunities and constraints within the Borough.

Figure 2 (Table N.5) below presents the assessment of the housing growth options identified by NuLBC at the Regulation 19 stage. The assessment indicates that Options 2 and 3 were evaluated as having identical impacts which does not then necessarily support the selection of Option 2 on the basis of its reduced environmental impacts (from a lower level of growth). Figure 2: Table N.5: Impact matrix of the three housing growth options identified by NuLBC at the Regulation 19 stage (see attachment)

If both Options 2 and 3 have the same environmental impact score it is important to consider what other factors were promised in favour of Option 2. It stands to reason that more homes will have a bigger impact environmentally, but a lesser impact in terms of meeting social and economic needs. It is therefore hard to see how the balance was found.

Indeed, the SA sets out that the three housing growth options were assessed at each stage of the Local Plan's preparation have been “based on the numbers derived from the Housing and Economic Needs

	<p>Assessment (HEDNA) Update (2023) for housing growth in the Newcastle-under-Lyme Borough for the Plan period. These three options related to variations on the standard method at the time of their evaluation, and modelled employment forecasts relating to population growth.”</p> <p>In essence, the SA has taken the Standard Method as its starting point and then applied an incremental uplift to it to assist in meeting economic forecasts (Option 2) and then a similar uplift to test the effect of additional growth. With each increment the level of environmental harm is considered to have grown and therefore the SA concludes that whilst an uplift to meet economic aims can be justified, each incremental step up from that will result in an incrementally more harmful shift from the environment.</p> <p>Whilst there is some logic to that approach, the appropriateness of the baseline (the Standard Method) is not challenged because this is the baseline for meeting identified housing needs; accordingly, failing to meet those needs has also not been tested in the SA. To fail to meet basic housing needs would inevitably lead to negative impacts for sustainability overall, including the environment. A failure to meet housing needs will result in a failure of economic performance, decline of services and facilities and the creation of unsustainable patterns of movement (where people travel further for jobs and services) as well as a decline in investment in the places we live, play and keep well.</p> <p>In that sense then, the SA provides an oversimplified picture that more growth results in a worsened environmental picture. It is essential that the borough receives the right amount of growth to meet its needs for the plan period; not only to encourage growth, but to avoid decline. This is the aim of the emerging revised Standard Method which is based on a percentage of existing housing stock and overcoming barriers to affordability.</p> <p>In that context, we consider that the current growth options assessed in the SA, when considered against the emerging LHN would perform much worse socially, economically and environmentally because, as a baseline, they do not meet their housing needs. Conversely, if the SA assessed an option for growth that met the emerging minimum of 593dpa, the environmental impacts associated with those would be akin to those within Option 1 of the SA as drafted, because they are relative to the assumption that the borough is meeting its housing needs. Clearly, on undertaking that assessment it would be for the Council to form a judgement on the appropriate level of growth for the Local Plan to meet and without those reasonable alternatives being assessed within an SA it is not possible for that judgement to be made. However, it stands to reason that, if the emerging LHN of 593 dpa is not to be taken as the baseline, that there would be some considerable benefit to the housing requirement being increased some way to meet it.</p> <p>To do so would be in line with the stated Vision of the draft Local Plan at paragraph 4.1 which states: “By 2040, the Borough will have delivered sustainable new homes and jobs meeting local needs and providing more opportunities for people to enjoy quality of life. We will have delivered or on the journey to delivering a sub-regional exemplar business park at Junction 16 of the M6 Motorway to support sustainable economic growth and take advantage of the accessibility of the Borough to the wider strategic transport network. High quality and well-designed places and spaces will support healthy, safe and connected lifestyles.”</p> <p>We note above that the SA had some concerns over the realism of a higher growth option (in this case Option 3 for 435 dwellings per annum) when balanced against site opportunities and constraints within in the Borough. As will be explored within the remainder of these representations, it is our view that the Council has not fully explored the extent to which sustainable opportunities for housing growth exists within the borough which could meet an increased housing requirement; in particular, our Client’s Site at Woodside, Baldwin’s Gate.</p>

Title	Policy PSD1: Overall Development Strategy
Consultee Company / Organisation	Thistleberry Residents Association
Consultee Position	Chair
Consultee Family Name	Drakakis-Smith
Consultee Given Name	Angela
Q4 Part of document	Policy
Q4 Policy	PSD1
Q6 Details	<p>2. RE Housing provision contained in Policies PSD1 – PSD 7 and with regard to housing allocations per borough/ward areas:</p> <p>a. The total allocations for the Borough has been increased from 5,000 units to 8,000. Under the changes to the NPPF rules, does this mean that national government has intervened to change the level of development that the NBC adopted based on the last consultation which took place for the last draft of the Plan?</p> <p>b. If the supporting documents are read and understood, these estimates are based on guestimates and over- estimates for some localities, which might include Newcastle Borough. The reliance for the estimates appears to be on the 2011 and 2021 (even the 2001 census is mentioned) census material. Some data</p>

had been updated to 2023 but seemed questionable. The post- Covid total population needs to be verified to be made part of any assessment in the interests of accuracy and unnecessary development.

c. The issue of empty homes has not been mentioned, even though the number in this and other LAs would appear to be high. Pre- Covid, when enquiries were made of the NBC by the TRA, 1100 was a figure mentioned. Councils have all the necessary powers to bring such homes back into commission and resources should be allocated at both national and local levels to do this. This level of empty homes should not be regarded as acceptable or sustainable if there are shortages.

d. Whilst the Plan makes some attempt to deal with the issue of affordable homes and social housing, whilst the term home (as a need) and house (as a commodity) are confused and left to the mercy of market forces to decide affordability, the issue will not be resolved, and need will not be satisfactorily met.

e. Neither does the Plan factor in that the purchase of a house/home might be the easier part. The more difficult part is maintaining property so that it remains habitable and affordable.

f. Does the LA know how many homes have been repossessed? Or how many residents have abandoned private ownership in favour of public or private rental as a more affordable option?

g. In Newcastle-under-Lyme student flats and bedsits have been favoured over other types of housing. This Plan suggests it might perpetuate those kinds of development when other types are needed. Some student developments have already 'extended' their criteria to other users, since take up has not been as high as expected.

h. Providing affordable homes, therefore, is not a stand-alone issue although it would appear that cross-cutting issues have been ignored, or not considered. Additional updated data and analysis are needed to ensure sound decision-making and effective solutions that transcend any political influences, allowing for more objective and sustainable outcomes necessary.

8. The Future of the Plan System

Although this is not contained within the remit of the Plan it might be the time to introduce such concepts in order to deal with the issues that prevent plans from a) being drawn up in a timely manner and b) from being implemented with good will, and in a timely manner.

a. After reading the Plan it seems to be not necessarily a ground-up Plan in forward planning, but an attempt to fulfil all the legal, national, government requirements which have been imposed, using the tick-box vocabulary.

b. It would appear that within LAs that there are short-term enthusiasms for projects which wears off as new projects are streamed. Enthusiasm seems to equate with levels of resources invested. This also means that some projects are not actually needed or required and add little value.

c. The new NPPF rules reveal the tensions between national government and local authorities, particularly in the areas of control of development and resources.

d. Local Authorities seem to have evolved their own ways of doing things which means that either practices and procedures need to be standardised, or that one size does not fit all and that each local council needs to formulate its own plan with reference to its unique needs without the interference of national government – with national government being the final scrutineer/arbitrator. However, this might need a new and different kind of Councillor and MP.

e. It would seem that, currently, national and local government might not be on the same wavelength. It seems that in some cases, national government is a driving force for implementation of its own wish lists, and that Local Government is a line of resistance with ideas of its own. A more collaborative and meaningful dialogue might produce a more meaningful dialogue and mutual compromises in order to bring about a better working relationship.

f. Given how dynamic and fast-moving situations can be at the local level it is questionable whether or not setting a plan to cover 20 years is possible or even feasible so that it is fit for purpose.

g. Some of the proposals in the Plan have already happened so the Plan appears to be retrospective – rather than forward looking. The same could be said of the housing allocations and provision – some have already been built so there is a confusion between what has been, what is, what is needed and what might/should be. Whilst the five year 'banks' for land and quantities of units might go some way to prevent evasion, it is important that the methodology is also fully understood and implemented into a workable rolling system.

h. The system of local governance was outdated even in 1972 when it was introduced. However, the system still clings to 19th Century principles and rules. Some parish councils are particularly out of date even with those rules. Many parish councils do not have the policies to ensure they are acting legally or even democratically – a term which is losing its meaning. Increasingly it seems that governance has become so eroded, in some contexts it might no longer exist.

i. Rules and overarching policies are often vague (if they exist) and are differentially interpreted within and between councils. Councillors appear to lack the necessary support to place things back on track. Chairs and Clerks can be equally and increasingly ill-equipped to deal with the kind of governance required in a 21 Century which appears to be controlled by the internet, social media and hearsay. Truth is rapidly losing its appeal.

j. To inform the latest Plan perhaps there is a need to quantify the real successes (and failures) of its predecessor in order to avoid making the same mistakes in the next 20 year Plan period.

Consultee Family Name	Burgess
Consultee Given Name	Sarah
Q4 Part of document	Policy
Q4 Policy	PSD1
Q5 Sound	No
Q6 Details	<p>Policy PSD1 Overall Development Strategy – Windfall Housing numbers</p> <p>The current Regulation 19 document proposes an additional 8000 dwellings over the plan period which would exceed the requirements of the NPPF (December 2023) but would be significantly below the number of new dwellings to meet the requirements of the most recent New Standard Method. We suggest that it would be preferable to continue with the housing numbers included in the current Regulation 19 document and for the Inspector to proceed on the basis that additional sites to meet the new requirements will be found in an early review by the Council - subject to a later solely site-specific Examination (rather than a complete review of the plan).</p> <p>We have do have major concerns in respect of the Windfall Assumptions in Table 2 which includes a Total Windfall Allowance of only 372 over the remaining plan period. We acknowledge that this is an improvement over the Regulation 18 document - which made no windfall allowance whatever.</p>

We acknowledge that windfall numbers will fall once there is a Local Plan in place but not all sites where development would be acceptable and gain planning permission would be allocated and experience has shown that windfalls remain significant.

We accept what is said in Paragraph 4 of the policy which reads:

The Council will encourage the efficient use of land through windfall development, including the redevelopment / re-use of previously developed land and buildings, where the development: -

- 1 Considers the landscape / townscape character of the existing surroundings when determining the character and density of development;
- 2 supports the creation of high quality: beautiful and sustainable buildings and places;
- 3 Is physically well-related to existing settlements, infrastructure and sustainable transport modes; and
- 4 Does not require major investment in new infrastructure. Where this is unavoidable, the delivery of development should be co-ordinated (including the use of phasing) to coincide with new infrastructure provision

We agree with this approach and accept what is said in the Regulation 19 document:

5.5 Sites which are delivered without being identified or allocated in a Plan are known as 'windfall' development. Consistent with the NPPF, a windfall allowance has been made as part of the housing land supply for the Local Plan. The allowance is based on robust evidence established through the preparation of the Council's Strategic Housing Land Availability Assessment (SHLAA), the monitoring of historic windfall delivery rates and expected future trends.

Windfall Development and Allowance

5.7 The NPPF states that "Where an allowance is to be made for windfall sites as part of anticipated supply, there should be compelling evidence that they will provide a reliable source of supply. Any allowance should be realistic having regard to the strategic housing land availability assessment, historic windfall delivery rates and expected future trends. Plans should consider the case for setting out policies to resist inappropriate development of residential gardens, for example where development would cause harm to the local area" (NPPF, Paragraph 72, p20).

The Council has never prepared a Local Plan and has relied on the Joint Core Strategy, adopted in 2009, which did not make any allocations and only referred to acceptable locations for development:

" 1.3 This document concerns the strategy at the heart of the new plan making system

The Core Spatial Strategy.

This strategy sets out the overarching spatial planning

framework for the long term regeneration of the Borough of Newcastle-under-Lyme and City of Stoke-on-Trent for the period up to 2026 (the plan period). It seeks to ensure that public and private investment is properly co-ordinated with a focus on promoting the principles of sustainable development. It is a technical not marketing document and tries to balance competing claims for change.

1.4 Both Councils, based on the framework provided by this overall strategy are preparing other more detailed plans for parts of their areas or to deal with particular planning topics. More detail on the range of new planning documents that are being prepared can be found in the Local Development Schemes published each year by both planning authorities to programme plan making work. A glossary of technical terms is provided at Appendix 1."

Strategic Housing Targets

5.25 The table below shows the estimated build rates necessary to meet the housing needs of the plan area. The area spatial strategies that follow provide more detail regarding the distribution of housing throughout the plan area. They will also indicate how the area spatial strategies may accommodate additional housing provision arising from the RSS Revision process through to approval.

The Table shows a net requirement for NuL of 5700, projected demolitions of 557 and a gross requirement of 6257 and a gross annual requirement of 313 dwellings.

We have tried (unsuccessfully) to find published annual completion rates for Newcastle-under Lyme Borough with a breakdown of sites considered to be allocated and those regarded as being windfalls. We note, however, that the Council has published its assessment of windfall totals.

The Council has compelling evidence that windfall sites provide a reliable source of supply in Newcastle-under-Lyme. Table 3 below shows the past trends in windfall site completions since 2008. These typically comprise changes of use, conversions and sites not already identified in the published SHLAA.

Table 3: Calculation of the windfall allowance

Year	Windfall Completions Sites not identified in the SHLAA but Inc. COU/CON
2008-09	48
2009-10	47
2010-11	21
2011-12	27
2012-13	31
2013-14	33
2014-15	26
2015-16	61
2016-17	253
2017-18	40
2018-19	60
2019-20	32
2020-21	54
2021-22	120
2022-23	87
Total	940
Average per year	62.67

Considering the monitoring data presented in Table 3, a windfall allowance of 62.67 dwellings per year for years 2025/26 and 2026/27 of the five-year period has been included in the housing land supply calculation. A total windfall allowance of 125 is therefore applied for the last two years of the five-year supply period. This avoids double counting of existing planning approvals which are likely to be built during the preceding three years.

The historic average is quoted as 62.67, yet the proposed windfall allowance proposed in the plan is a total of only 372. Experience in other districts in the county has shown that, even with the existence of allocated sites, windfall numbers remain higher than anticipated.

- 1 NPPF (Dec 2023 Extract) - No change is proposed (other than paragraph number) in the recent consultation (July-September 2024) on the revised NPPF.

72.73. Where an allowance is to be made for windfall sites as part of anticipated supply, there should be compelling evidence that they will provide a reliable source of supply. Any allowance should be realistic having regard to the strategic housing land availability assessment, historic windfall delivery rates and expected future trends. ...

Q7 Modification	The Inspector is requested to propose a recommended Modification to the Plan that the windfall allowance is significantly increased.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	If the Inspector considers this issue at a hearing session, to explain why we consider it important and relate this to previous experience and to take part in any discussion.

<p>Q6 Details</p>	<p>Artificial Intelligence</p> <p>In the light of the Planning Inspectorate Guidance dated 6 September 2024 regarding the use of AI, we wish to state that AI has not been used in any of the representations from CPRE Staffordshire. We consider it to be highly unlikely that we will use AI in the Examination process. If AI is used, we will fully comply with the seven bullet points in the guidance.</p> <p>Taking part in the Local Plan process</p> <p>We have indicated in individual representations that we wish to be heard at the Examination. We will respond to any invitation from the Inspector to provide written statements. We are happy with the Inspector's preference for the most appropriate formats for the hearings; real, virtual, or blended. In virtual and/or blended sessions we are happy to use Zoom or Teams to participate. (We have not previously used telephone conference but can learn how to do this.) Generally, we would prefer virtual to 'in person'.</p> <p>Policy PSD1 Overall Development Strategy</p> <p>The proposals in PSD1 are highly unlikely to meet the New Government's housing requirements using the proposed new Standard Method because the methodology has changed radically.</p> <p>For local planning authorities in Staffordshire this will result in significantly increased housing requirements. In the case of NuLBC the requirements are expected to be 593 dwellings per year, whilst the proposal in the Regulation 19 documents is 400+ dwellings per year. (Table 2 on Page 14 of the current document shows 8663 new dwellings in the 20-year plan period.)</p> <p>We appreciate that this major change was unknown to NuLBC in preparing the plan but suggest that the Inspector could reasonably make a modification to the required number rather than allowing the Plan to remain demonstrably non-compliant and unsound.</p> <p>These representations are made in the early months of the new Government.</p> <p>The Plan is unusual in that the Regulation 19 consultation was committed to publication before the new Government published the consultation on the Draft NPPF; the Council's consultation started shortly after it.</p> <p>It is unclear whether the plan will be progressed by the LPA, having considered the representation as it has gone to publication, and then sent to the Inspectorate, or whether will be withdrawn for revision, for example to take account of policy changes in the revised NPPF. (We hope that the plan will be sent to the Inspectorate in its Regulation 19 form).</p> <p>At the time of making these representations, we cannot know whether, if the plan is sent to the Inspectorate in its existing form, the Inspectorate will be prepared to progress it to Examination. (We hope that it would be allowed to proceed.)</p> <p>As Council has never previously prepared and adopted a Local Plan, there is no statutory development plan currently effective in the Borough and we would suggest that it is highly desirable for the current document to proceed to Examination, with modifications made in accordance with the Inspector's recommendations, rather than re-starting the process and causing further delay.</p> <p>It seems highly likely that a new NPPF will be published before the Examination. It would be helpful for both the council and the Planning Inspectorate to accept that the Plan be considered under the new NPPF (and other guidance published by the Government) - and that this should be made clear to all representees well in advance of the Examination.</p> <p>(It seems to us that unless the Inspector takes the new NPPF into account in making recommended modifications the plan will inevitably be unsound as it would not be compliant with the then current NPPF).</p> <p>We realise that the anticipated (mandatory) housing requirements under the revised New Standard Method will be significantly higher than under either the existing NSM or the proposals included in the Regulation19 document. We have tried to take this into account in our representations. However, we foresee that if the plan were to be adopted as meeting NPPF requirements and the Inspector's recommended modifications but without fully meeting the NSM requirements, the Council could be required to prepare an early review purely to propose additional housing provision. This could be subject to a later, separate, Examination.</p>
<p>Q7 Modification</p>	<p>It seems highly likely that a new NPPF will be published before the Examination, and it would be helpful for both the Council and Planning Inspectorate to accept that the Plan be considered under the new NPPF (and other Government published guidance). This should be made clear to all representees well in advance of the Examination.</p> <p>As we realise that representations implying support will not be heard, this representation should be considered as saying that the current Regulation 19 plan is unsound (but that it could become sound if the Inspector's main recommendations took account of the NPPF and other Government policy in force at the time of the Examination).</p> <p>We recognise that the modifications will be dependant on the relevant Government policy at a specific date determined by the Inspectorate.</p>
<p>Q8 Hearing attendance</p>	<p>Yes, I wish to participate in hearing session(s)</p>

Q9 Hearing reasons	<p>If a hearing session takes place, we would wish to attend to put or support the case for new Government policy to be considered at the Examination.</p> <p>If there is open discussion between the LPA and Inspectorate in deciding how to proceed, we would like to be invited to observe.</p>

Q6 Details	<p>2. Chapter 5: Planning for Sustainable Development Policy PSD1: Overall Development Strategy</p> <p>2.1 SLG supports the overall development strategy and the proposed increase to the housing requirement from that set out in the First Draft Local Plan.</p> <p>2.2 The current Local Housing Need for Newcastle under Lyme is 330 dwellings per annum (dpa). However, national policy and guidance is clear that local housing need is used to determine the minimum number of homes needed. Paragraph 2a-010 of the NPPG provides the following guidance: "When might it be appropriate to plan for a higher housing need figure than the standard method indicates? The government is committed to ensuring that more homes are built and supports ambitious authorities who want to plan for growth. The standard method for assessing local housing need provides a minimum starting point in determining the number of homes needed in an area. It does not attempt to predict the impact that future government policies, changing economic circumstances or other factors might have on demographic behaviour. Therefore, there will be circumstances where it is appropriate to consider whether actual housing need is higher than the standard method indicates. This will need to be assessed prior to, and separate from, considering how much of the overall need can be accommodated (and then translated into a housing requirement figure for the strategic policies in the plan). Circumstances where this may be appropriate include, but are not limited to situations where increases in housing need are likely to exceed past trends because of:</p> <ul style="list-style-type: none"> • growth strategies for the area that are likely to be deliverable, for example where funding is in place to promote and facilitate additional growth (e.g. Housing Deals); • strategic infrastructure improvements that are likely to drive an increase in the homes needed locally; <p>or</p> <ul style="list-style-type: none"> • an authority agreeing to take on unmet need from neighbouring authorities, as set out in a statement of common ground; <p>There may, occasionally, also be situations where previous levels of housing delivery in an area, or previous assessments of need (such as a recently-produced Strategic Housing Market Assessment) are significantly greater than the outcome from the standard method. Authorities will need to take this into account when considering whether it is appropriate to plan for a higher level of need than the standard model suggests."</p> <p>2.3 Paragraph 2a-015 of the Framework provides the following in relation to how such an approach would be tested at examination: "If authorities use a different method how will this be tested at</p>

	<p>examination? Where a strategic policy-making authority can show that an alternative approach identifies a need higher than using the standard method, and that it adequately reflects current and future demographic trends and market signals, the approach can be considered sound as it will have exceeded the minimum starting point.”</p> <p>2.4 The PPG recognises at paragraph 2a-010 that the standard method does not attempt to predict the impact that future government policies, changing economic circumstances or other factors might have on demographic behaviour. If the amount of housing growth is not sufficient to align with jobs growth, this will serve to constrain economic growth and place significant strain on the housing market due to the additional demand. It would also worsen affordability further if the jobs growth is not matched with sufficient housing growth.</p> <p>2.5 The relationship between the amount of jobs growth, employment land and housing is summarised in the Warrington Local Plan Inspector's report (October 2023), which states at paragraph 62: “We do not suggest that there needs to be an absolute match between employment land provision, estimated jobs growth and labour supply or that such an absolute match is even possible. However, there needs to be broad alignment, at least, in order for the local economy and housing market to function effectively and to avoid substantial increases in unsustainable commuting patterns.”</p> <p>2.6 The need to provide enough housing to accommodate economic growth was also recognised in the Doncaster Local Plan, where LHN equated to 553 dpa but the plan requirement is 920 dpa. The Inspector's report (June 2021) states at paragraph 56: “The significant uplift is intended to allow additional people to live in the Borough to ensure a sufficient working population to take account of the number of additional jobs that the Plan aims to accommodate.”</p> <p>2.7 Similarly, a higher housing requirement than LHN was adopted in the St Helens Local Plan to align with economic growth aspirations. The Inspector's report (May 2022) states at paragraph 54: “The PPG also makes it clear that other circumstances might also justify a higher figure. In the case of St Helens, the 486 dpa is justified to correlate with the aspirations to achieve increased economic growth and jobs which are likely to lead to increased housing need and demand.”</p> <p>2.8 The circumstances in Newcastle under Lyme justify the application of an alternative method to determine local housing need, in accordance with the Framework and paragraph 2a-010 the NPPG. Specifically, the housing need associated with planned and projected employment growth is likely to significantly exceed that set out in the standard method. The PPG recognises at paragraph 2a-010 that the standard method does not attempt to predict the impact that future government policies, changing economic circumstances or other factors might have on demographic behaviour. If the amount of housing growth is not sufficient to align with jobs growth, this will serve to constrain economic growth and place significant strain on the housing market due to the additional demand. It would also worsen affordability further if the jobs growth is not matched with sufficient housing growth.</p> <p>2.9 The Housing and Economic Development Needs Assessment (2024) (HEDNA, ED001) provides an assessment of local housing and employment needs over the plan period (2020–2040). To support forecast economic growth and associated increase in the working age population, the HEDNA identifies a need to deliver approximately 8,000 dwellings (400 dwellings per annum) over the plan period (2020–2040).</p> <p>2.10 SLG considers that the HEDNA represents a robust assessment of housing need having regard to economic considerations. It therefore provides an appropriate basis for the proposed housing requirement.</p> <p>2.11 As the Council will be aware, the Government has consulted upon changes to the Framework including a new method for calculating local housing needs. The outcome of the proposed revised method for Newcastle-under-Lyme is that the local housing need is now 593 dpa. However, at present, the revised standard method can only be given limited weight. Furthermore, the draft changes to the Framework also propose transitional arrangements which mean that:</p> <ul style="list-style-type: none"> • Newcastle-under-Lyme can proceed with the Local Plan as currently drafted, provided that the Council moves quickly to submission and examination, as the housing requirement proposed is within 200 dwellings per annum of the revised standard method²; and, • Five year housing land supply (5YHLS) would be measured against the new Local Plan once it is adopted³. <p>2.12 It should also be noted that the progression of the plan, which releases sites now would help to address the local and national housing crisis, is an extremely positive step, particularly in the context of the significant work already undertaken by the Council in preparing the draft Local Plan. Working towards the adoption of an up-to-date Local Plan as soon as possible clearly accords with the Written Ministerial Statement (WMS) of 30 July 2024 (Building the homes we need), and it will ensure that growth is delivered as quickly as possible through the plan-led system. The alternative is that the growth proposed in this plan would not be achieved, and speculative applications would come forward in the absence of an up-to-date plan.</p>
Q7 Modification	See attached representations
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	We wish to attend the hearings and make oral submissions, respond to the Inspector's questions and to the Council's case. The issues are complex and there is a need for detailed examination of the evidence.

Title	Policy PSD1: Overall Development Strategy

Consultee Company / Organisation	Persimmon Homes (North West) Limited
Agent Company / Organisation	Asteer Planning LLP
Agent Family Name	Power
Agent Given Name	Jon
Q4 Part of document	Policy
Q4 Policy	PSD1
Q6 Details	<p>Please see attached representations</p> <p>Policy PSD1 (Overall Development Strategy)</p> <p>3.2 Policy PSD1 sets a minimum housing requirement of 400 dpa or 8,000 units during the Plan Period. This strategy is in excess of the Government's current LHN calculation, which identifies a requirement of 330 dpa (which is welcomed), but significantly (48%) below the housing requirement proposed alongside the emerging NPPF and new LHN (593 dpa).</p> <p>3.3 Persimmon has commissioned Lichfields, experts in analysing housing need, to undertake a "Housing Requirement Paper" that considers NUL's housing requirement in the context of its growth projections and the new NPPF – this is attached in full at Appendix 2. This in-depth analysis by Lichfields considers that, notwithstanding the proposed changes to LHN and the new NPPF, a requirement of 400 dpa does not fully address the economic growth prospects of NUL; nor does it meet the needs of all household groups as required by the NPPF. It is also significantly lower than the 593 dpa proposed by the Government's proposed changes to the Standard Methodology and LHN, as set out in Section 2, which should be considered a minimum, not a maximum, housing requirement.</p> <p>3.4 Lichfields analysis sets out clear and compelling reasons why the Council should be more ambitious with its housing requirement and make provision for a greater level of housing than Policy PSD1 of the Local Plan currently provides for. These reasons are explored in full in Appendix 2 and include:</p> <ol style="list-style-type: none"> 1. There is a misalignment at the heart of the Local Plan's strategy that must be remedied by an uplift to the housing requirement, as the employment land target of 63 ha would generate a significantly higher number of jobs than could be sustained by the 400 dpa housing target. Furthermore, the Council's forward supply of employment land is not 63 ha, but at least 104.6 ha. Persimmon respectfully requests that further information is provided by the Council as to the actual level of employment land supply it is providing for and what this would mean for additional job growth/housing need. 2. Whilst the Council argue that not all of these new jobs from the strategic employment sites will be taken up by local residents requiring new housing in NUL, no agreement is in place with any of NUL's neighbouring authorities to take on board any of its unmet need for in-commuters; 3. The proposed new housing requirement would see NUL's housing need increasing from 330 dpa to 593 dpa. This figure is also 48% higher than the emerging Local Plan figure of 400 dpa and is indicative of a radical change in housing policy from the new Labour Government that represents a very clear direction of change. NUL should consider adopting the new housing requirement to fully plan for its need across the Plan Period – recognising the significant implications it could have once the Local Plan is more than 5 years old (as discussed in the previous section). It also poses serious questions as to how the new requirement could be accommodated across NUL's wider HMA, which includes Stoke on Trent's significantly higher housing number of 1,043 dpa. Further work is required to understand the housing implications of strengthened cross boundary strategic planning across the HMA. Closer working and potentially, an acknowledgement by NUL Borough Council that it could take some of Stoke on Trent City's high level of unmet housing need would be beneficial. 4. The Council's evidence base points to an acute need for affordable housing within the Borough, with the net affordable housing need equating to 278 dpa, or c.70% of the annual dwelling growth required by the Council's Housing and Economic Needs Assessment ("HENA"). A higher housing requirement, and deliverable / viable sites, are necessary to help deliver as much of these affordable housing needs as possible. 5. There is a need for 15-16 care home bedspaces per annum as well as an annual need for 32 units of sheltered accommodation p.a.; 5 enhanced sheltered homes annually; and 6 additional Extra Care homes p.a. No provision is made in the emerging Local Plan to meet this C2 need, which should be additional to the C3 housing requirement of 400 dpa. 6. The 400 dpa housing requirement figure makes no allowance for Keele University's expansion plans to 2040. The University aims to increase its student numbers by 6,795 between 2022 and 2040, but only has plans for an additional 1,300 student rooms on campus. There should be at least 500 additional C3 dwellings (25 dpa) provided in NUL to address increased student demand. <p>3.5 In conclusion, Lichfields identify that NUL meets a number of the circumstances identified in the PPG which justify a housing requirement figure in excess of the minimum LHN, and indeed the 400 dpa recommended in the HENA and taken forward in the emerging Local Plan. In this context and in the context of new Government policy, Persimmon strongly requests that the Council revisits its housing and employment evidence to address the points identified above and to ensure that it robustly and holistically plans for its housing requirement across the Plan Period.</p> <p>3.6 Adopting an approach that will not meet NUL's future housing needs will not adequately recognise the role of Newcastle-under-Lyme as part of the wider joint housing and economic area within Stoke-on-Trent (or the wider HMA); where there has been evidence of considerable growth and higher delivery than predicted.</p> <p>3.7 Persimmon supports a positive economic strategy that elevates the Borough's aspirations for growth. The Local Plan provides a generational opportunity to support the sustainable growth of the Borough by providing the quality and quantity of housing and employment land that can catalyse jobs growth and</p>

	improve the performance of the Borough, whilst supporting the wider needs of the region under DtC and supporting the new Government's bold approach to addressing the UK housing crisis
Q7 Modification	Persimmon strongly requests that the Council revisits its housing and employment evidence to address the points identified above and to ensure that it robustly and holistically plans for its housing requirement across the Plan Period.

Title	Policy PSD1: Overall Development Strategy
Consultee Company / Organisation	Bloor Homes
Consultee Family Name	Bloor Homes
Agent Company / Organisation	Knights
Agent Family Name	Corinaldi-Knott
Agent Given Name	Alan
Q4 Part of document	Policy
Q4 Policy	PSD1
Q5 Legally compliant	Yes
Q5 Sound	Yes
Q5 DTC compliant	Yes
Q6 Details	<p>Please see supporting representation by Knights on behalf of Bloor Homes for allocation reference NC13</p> <p>This representation is submitted on behalf of Bloor Homes in response to the Newcastle-under-Lyme Draft Local Plan ("DLP") consultation.</p> <p>Bloor Homes are an experienced, privately owned housing developer, and welcome the opportunity to comment on the DLP. Bloor Homes supports the Council's endeavours to prepare a new Local Plan for the Borough to guide development over the next 20 years. It is considered that the adoption of a new Local Plan is of the upmost importance for the Borough, given that Newcastle-under-Lyme Borough Council's extant Local Plan ("LP") was adopted in 2003 and so is over 20 years old. New housing allocations are very much needed to deliver a planned supply of open market and affordable housing in both the urban and rural areas in the coming years.</p> <p>The 2003 LP operated a policy of housing restraint, given that the Structure Plan requirement in force at the time had already been met by completions and commitments¹. As a result of this, sites from the previous LP that did not receive planning permission were not taken forward as allocations in the extant LP². The saved LP proposals maps demonstrate that no housing allocations were made upon adoption in 2003, save for showing previously allocated sites for which permission had been granted for residential development but had yet to be implemented. Saved Policy H10 of the LP allowed permission to be "renewed" on these sites during the plan period up to 2011.</p> <p>The subsequently adopted Core Spatial Strategy ("CSS") was a strategic planning policy document that did not allocate any housing sites. It was intended to inform the preparation of detailed site allocation plans for each of the two authorities through a Site Allocations and Policies Development Plan Document³ ("SAPDPD").</p> <p>The extant LP does not reflect up to date housing needs, and in particular, does not reflect up to date affordable housing needs, nor does it contain any allocations to meet future needs.</p> <p>An up to date Local Plan that reflects up to date housing and economic development needs and allocates a sufficient amount of sites to meet for those needs is therefore essential.</p> <p>The Council must resist any pressure to remove the proposed draft allocations from the Draft Local Plan, however politically difficult that may be. The Local Plan gives the Council a choice about where to meet its housing and economic development needs, creates certainty, and ensures that future needs can be achieved in a sustainable way and delivers the associated physical and social infrastructure that is required to support such development</p> <p>Bloor Homes therefore supports the preparation of a new Local Plan, the annual housing requirement figure of 400 dwellings per annum, and the allocations proposed to help to meet the local housing requirement figure.</p> <p>This representation does not seek to make detailed comments in relation to specific development management policies proposed within the Regulation 19 Local Plan, and is submitted in support of draft allocation reference NC13, for which our client has an interest in / control over.</p> <p>Whilst it is the case that the Government is currently seeking to reform the planning system, with some reforms set to come through revisions to the NPPF and the standard method for calculating housing needs, it is the Government's position that the coverage of up-to-date Local Plans should increase. Bloor Homes therefore welcomes this consultation and supports the Council in its efforts in bringing forward a new Local Plan.</p> <p>Further to the above, Bloor Homes are mindful of the transitional arrangements proposed in the draft revised NPPF for the purposes of plan-making. Annex 1 to the draft NPPF contains implementation provisions as follows:</p> <p>"For the purposes of plan-making</p>

	<p>226. The policies in this Framework (published on [publication date]) will apply for the purpose of preparing local plans from [publication date + one month] unless one or more of the following apply:</p> <p>a. the emerging annual housing requirement in a local plan that reaches or has reached Regulation 19 (pre-submission stage) on or before [publication date + one month] is no more than 200 dwellings below the published relevant Local Housing Need figure;</p> <p>b. the local plan is a Part 2 plan that does not introduce new strategic policies setting the housing requirement unless the relevant Local Plan Part 1 has been prepared applying the policies in this version of the Framework;</p> <p>c. the local plan is or has been submitted for examination under Regulation 22 on or before [publication date + one month].</p> <p>Where a, b or c applies, the plan will be examined under the relevant previous version of the Framework.</p> <p>227. Where paragraph 226 c) applies, local plans that reach adoption with an annual housing requirement that is more than 200 dwellings lower than the relevant published Local Housing Need figure will be expected to commence plan-making in the new plan-making system at the earliest opportunity to address the shortfall in housing need.</p> <p>228. After applying the policies of this version of the Framework, local plans that have reached Regulation 19 (pre-submission stage) on or before [publication date + one month] with an emerging annual housing requirement that is more than 200 dwellings lower than the relevant Local Housing Need figure should proceed to examination within a maximum of 18 months from [publication date].</p> <p>229. For Spatial Development Strategies, this Framework applies to strategies that reach consultation under section 335(2) of the Greater London Authority Act 1999 on or after [publication date + one month]. Strategies that reach this stage on or before this date will be examined under the relevant previous version of the Framework."</p> <p>Accompanying this submission is a Counsel opinion from David Manley KC (Appendix 1). This sets out that the draft Regulation 19 Local Plan for Newcastle-under-Lyme would fall squarely within exception 226(a) (as the annual housing requirement proposed in the Regulation 19 Plan is less than 200 dwellings than the Local Housing Need figure) and that the plan as currently proposed should proceed to examination. Further to this, Government Guidance on the issue of transitional arrangements provided with the consultation document: "Proposed reforms to the National Planning Policy Framework and other changes to the planning system" (updated 2nd August 2024) states, inter alia:</p> <p>"Transitional arrangements for emerging plans in preparation</p> <p>4. We propose transitional arrangements to maintain the progress of plans at more advanced states of preparation, while maximising proactive planning for the homes our communities need. These will apply differently depending on what stage of preparation the plan has reached and the extent to which it is meeting the Government's housing growth aspirations. These transitional arrangements are set out in Annex 1 of the NPPF and outlined below.</p> <p>...</p> <p>6. To help local planning authorities with advanced plans to proceed to examination at pace and support the Government's ambition to build more homes, those plans that have reached Regulation 19 publication stage but not yet been submitted for examination one month after the revised framework is published, with a gap of no more than 200 dwellings per annum between the local planning authority's revised LHN figure and its proposed housing requirement (as set out in the Publication version of the plan), should also progress to examination under the version of the NPPF it has used when preparing the plan thus far."</p> <p>The whole purpose of the transitional provisions as drafted is to strike a pragmatic balance between the need to increase housing provision on the one hand and the need to achieve Local Plan coverage and avoid wasted time and expense on the other.</p> <p>The advice from Counsel goes on to state that if the NPPF is issued in its draft form then it is an important material consideration and unless local circumstances clearly indicated a need to depart from NPPF advice it is the Government's (and PINS') expectation that it will be applied. It is therefore our position that the Newcastle-under-Lyme Regulation 19 Plan can be submitted for examination.</p> <p>Knights, on behalf of Bloor Homes, would like to participate in the examination hearings in response to the various policies and allocations for which representations are made in this submission.</p> <p>The Council's overall development strategy seeks to deliver a minimum of 8,000 dwellings over the plan period at 400 dwellings per annum. At Regulation 18 stage, the Council sought to deliver 7,160 dwellings over the plan period (358 dwellings per annum).</p> <p>The increase of the housing requirement to 400 dwellings per annum is welcome and supported, although we note the annual affordable housing need (278 affordable homes per annum) equates to around 69% of the annual housing requirement for Newcastle-under-Lyme.</p> <p>The expression of the housing requirement as a minimum starting point is welcome.</p> <p>Given the high level of affordable housing need and the Council's aspirations to deliver economic growth, it is considered that the increase in the annual housing requirement is justified by the evidence and is therefore sound.</p> <p>It is therefore suggested that, as a minimum, all the proposed allocations identified in the current DLP must be retained in order to ensure that the housing requirement can be delivered over the plan period.</p>

Title	Policy PSD1: Overall Development Strategy
Consultee Company / Organisation	Bignall End
Consultee Family Name	Willard
Consultee Given Name	Gerald
Q4 Part of document	Policy
Q4 Policy	PSD1
Q5 Sound	No
Q6 Details	<p>Policy SD1 says: A minimum of 8,000 dwellings will be delivered in the Borough over the Plan period 2020 – 2040 which equates to 400 dwellings per annum. The government advises the following in respect of plan preparation in light of its new agenda which seeks a significant increase in housing targets. The Government now advises:</p> <ul style="list-style-type: none"> • For plans at an advanced stage of preparation (Regulation 19), it means allowing them to continue to examination unless there is a significant gap between the plan and the new local housing need figure, in which case we propose to ask authorities to rework their plans to take account of the higher figure. In the case of Newcastle under Lyme the existing method of housing growth seeks an annual allocation of 330 units (according to the governments records). The new housing targets imposed by Government seeks an increase to 593 units per annum. This is an increase of 80%. Even if the councils stated figure in the draft plan of 400 units per annum is taken the new national target of 593 annual units would leave the plan with a 48% undersupply of housing. This is a significant under supply.
Q7 Modification	The plan is unsound and should be updated to meet the new target because there is a significant gap in housebuilding rates between the draft plan and new Government targets.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	In seeking the following modifications to the plan, I do consider it necessary to participate in examination hearing session(s) in order advise the inspector of my clients concerns and to respond to any questions that the inspector may have.

Q4 Part of document	Policy
Q4 Policy	PSD1
Q6 Details	<p>Please see attached representations. The WMHAPC is pleased to see draft Policy PSD1 commit to delivering a minimum of 8,000 new dwellings in Newcastle-under-Lyme within the Plan period, based on the current standard method. We welcome the Council's revised housing requirement figure of 400 dwellings per annum (dpa), an increase on the previously proposed 358 dpa. This increase will help to accommodate growth and ambitious housing delivery where necessary to meet identified needs.</p> <p>The SWHAPC draws attention to the recent National Planning Policy Framework (NPPF) consultation. In respect of the proposed transitional arrangements, where a Local Plan has reached Regulation 19 stage, the annual housing requirement in the plan will be compared against the updated LHN for the authority area. Where the emerging annual housing requirement is within 200 dpa (or exceeds) the updated LHN, the plan may progress to Examination under the NPPF that is currently applicable to the plan. The updated LHN for Newcastle-Under-Lyme under the newly proposed Standard Method is 593 dpa. Given the Council has revised its proposed housing requirement to an increased figure of 400 dpa, the emerging plan's housing requirement is within the 200 dwelling requirement, and so it should be able to progress under the current NPPF.</p> <p>The Housing and Economic Development Needs Assessment (HEDNA) (April 2024) identifies an annual need for 278 affordable homes per annum in the Borough over the Plan period. This affordable housing needs figure represents 70% of the total proposed housing requirement. While down from the previous 78% of total housing needs under the 358 dpa figure, it remains a substantial proportion. The WMHAPC therefore encourages the Council to look for ways to facilitate the delivery of affordable housing in order to maximise provision across the Borough.</p> <p>We emphasise the importance of joint working between Newcastle-under-Lyme and Stoke-on-Trent in order to maximise the delivery of affordable housing for those in need across the region.</p>

Title	Policy PSD1: Overall Development Strategy
Consultee Given Name	McCarthy Stone
Agent Company / Organisation	Lichfields
Agent Family Name	Gavin
Agent Given Name	Alexandra
Q4 Part of document	Policy
Q4 Policy	PSD1
Q6 Details	In line with their representations made at the Regulation 18 stage, McCarthy Stone wish to reaffirm their support of the Draft Local Plan. At the outset, McCarthy Stone are supportive of the principle of draft Policy PSD1 (Overall Development Strategy), which plans for a minimum of 8,000 dwellings to be delivered in the Borough over the Plan period. Furthermore, McCarthy Stone welcomes part 3 of draft Policy PSD1, which states that the Council will make sufficient provision for housing by supporting the development of sites allocated in the Local Plan.

Title	Policy PSD1: Overall Development Strategy
Consultee Company / Organisation	Harworth Group PLC
Consultee Given Name	Harworth Group
Agent Company / Organisation	WSP
Agent Position	Associate Director
Agent Family Name	Stocks
Agent Given Name	Matthew
Q4 Part of document	Policy
Q4 Policy	PSD1
Q5 Sound	No
Q6 Details	<p>We consider that the Local Plan is not sound on the basis that it is (1) not positively prepared, (2) not justified, (3) not effective, and (4) not consistent with national policy. The Local Plan as drafted fails to provide sufficient housing and employment land, and the proposed length of the Local Plan is not long enough in line with national policy requirements. Our rationale is set out in the supporting covering letter.</p> <p>This representation is submitted on behalf of Harworth Group PLC (herein "Harworth") and Graham Ward Farms Limited to the Newcastle-under-Lyme Borough Council Final Draft Local Plan. This letter provides our comments as referenced in the completed Representation Form, in support of our response to questions 6 and 7 regarding the soundness of the Local Plan. Our comments go to the heart of the Local Plan and, whilst our Representation Form notes this relates to Policy PSD1: Overall Development Strategy, our amendments sought would require updates across the Local Plan document and Proposals Map.</p> <p>The specific matter which we dispute is the council's proposed approach to allocate two strategic employment sites (ref: AB2 - 'Land adjoining corner of A500 and M6 Southbound' and ref: KL15 - 'Land South of A525 between Keele University and Newcastle') and not 'Land off Talke Roundabout / A500', which was previously assessed in the Local Plan preparation under ref: TK30. We also consider the Local Plan does not cover a sufficient period of time. The Local Plan as drafted fails to provide sufficient housing and employment land. As such, we consider that the proposed approach to the Local Plan is (1) not positively prepared, (2) not justified, (3) not effective, and (4) not consistent with national policy. We consider that the extension of the Local Plan duration to 2042 as a minimum or ideally 2045, and the allocation of 'Land off Talke Roundabout / A500' (herein 'Talke Park') would resolve this soundness matter. We request that the council consider the contents of this letter and update the Local Plan prior to the submission for Examination. Otherwise, we would request that these comments are passed to the Planning Inspector(s).</p> <p>In addition to this letter and our completed representation form, this submission is supported by the following documentation:</p>

Updated Vision Document (October 2024);
 Updated Indicative Proposed Masterplan;
 Housing and Economic Growth Evidence (October 2024);
 Letter from Wendy Lancaster at Tyler Grange, with enclosed Accurate Visual Representations, dated 30th September 2024;
 Geo-environmental Desk Study (August 2023);
 Highways Access Appraisal (August 2023);
 Heritage Briefing Note (August 2023);
 Note on Socio-economic Benefits; and
 Ecology and Landscaping Combined Technical Note (August 2023).

Appended to this letter is a plan of land to the north of Peacock Hay Road, which is also within Harworth's ownership, demonstrating that they have available land in the authority to compensate for the removal of this site from the Green Belt and contribute towards biodiversity net gain.

HARWORTH GROUP PLC

Harworth is one of the leading land and property regeneration companies in the UK, owning and managing c.16,000 acres on c.100 sites in the North of England and the Midlands. The company originated as the property division of UK Coal and is therefore an expert at dealing with complex sites with abnormal ground conditions and topography.

Harworth is one of the key developers presently working in Newcastle under Lyme, currently delivering 'Chatterley Park' (previously referred to as 'Chatterley Valley' prior to the commencement of development), which is the authority's Regional Investment Site, and less than 1km from 'Talke Park'. Harworth fully acquired the land forming Chatterley Park in August 2017, and has subsequently secured planning permissions to allow earthworks to progress, with 1.2m sqft of industrial and logistics floorspace set to come forward, creating around 1,700 jobs.

At Chatterley Park, Harworth has received significant interest from large national and international businesses attracted by the central location, access to the motorway network and ability to service major conurbations in all of the North West, East and West Midlands. There has been a range of occupiers with an interest for a variety of unit sizes. Harworth have also identified interest for "mid-box" (50,000 – 150,000 sqft) units and smaller units (20,000 – 50,000 sqft) and a pent-up demand for an underserved and important segment of the market.

Whilst the larger and "mid box" units do attract distribution warehouses, there is range of occupiers with an interest in the range of unit sizes:

- national/international logistics companies;
- a pharmaceutical distributor;
- manufacturing businesses;
- a bespoke requirement for glass manufacturing;
- a vehicle preparation centre for an automotive occupier; and
- a local business in the medical field, looking to amalgamate operations across the North West centrally to the Stoke/Newcastle area.

The interest across all unit sizes includes occupiers looking to replace older premises, secure larger premises to align with growth of their business and/or amalgamate operations. This includes local businesses and national/ international businesses including one looking for a hub to service the north of England.

Talke Park is the logical extension/ next step to Chatterley Park in terms of its proximity to both that site and the strategic road network. The sites have a similar industrial history and topography, neither of which are deemed to be constraints by Harworth and Graham Ward Farms Limited to their proposed redevelopment of either site.

Harworth's proven track record in the area and strong relationship with stakeholders (including the Councils and potential occupiers) demonstrates that, in partnership with Graham Ward Farms Limited, it can deliver Talke Park and its associated benefits within the plan period. Harworth has an extensive track record of delivering large-scale employment, residential and mixed-use developments. Further information is provided in the submitted Vision document.

TESTS OF SOUNDNESS

In order to be deemed sound, paragraph 35 of the NPPF (2023) states that a Local Plan must be:

- a) Positively prepared – this strategy must, as a minimum, meet the area's objectively assessed needs. Paragraph 16 adds that a Local Plan should be "aspirational but deliverable". The government has recently closed its consultation on updates to the NPPF. Whilst the transitional arrangements may mean that the Local Plan is examined under the currently adopted NPPF, the Government has made it clear through their consultation that "sustained economic growth is the only route to improving the prosperity of our country and the living standards of working people"¹.
- b) Justified – an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence;
- c) Effective – deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and
- d) Consistent with national policy – enabling the delivery of sustainable development in accordance with the policies in the NPPF and other statements of national planning policy, where relevant.

SUMMARY ASSESSMENT AGAINST THE TESTS OF SOUNDNESS

We contest that the 'Final Local Plan' is:

- a) Not positively prepared – The allocation of two strategic sites is a low growth option and does not present an aspirational strategy. At a time when housing delivery is critical (evidenced by the government's proposed reforms to the planning system to make the standard method for assessing housing needs mandatory) and economic growth is deemed essential to improving prosperity and living standards, the LPA should be pursuing an ambitious strategy. In order to be positively prepared and "aspirational", the Council should target high growth scenarios, so far as any site allocations and policies are deliverable. The draft Local Plan fails to provide sufficient homes and does not plan for all types of employment growth. The Final Draft Local Plan proposes to allocate two strategic employment sites, which are

aimed at different uses (AB2 seeks to support a sub-regional logistics focused employment development and KL15 seeks

to support the expansion of the existing science park and create an innovation zone, linked to research and innovation of Keele University). The overall delivery for industrial and logistics sites is therefore very low and limited. In terms of housing, the Local Plan should allocate additional sites to meet the housing need and this would also allow for delays to sites coming forward.

b)Not justified – In the context of the above, we do not consider that the proposal represents an appropriate strategy, when a reasonable alternative would be to allocate 'Talke Park' (ref: TK30) as a strategic location, increasing housing numbers and employment land. The council's evidence base is flawed, and the conclusions reached are incorrect in deeming that the allocation of the site in this plan would be premature. Indeed, the Strategic Employment Sites Assessment – 2024 Update (June 2024), prepared by Aspinall Verdi notes that it "has the potential be a high-quality site for local employment in a future local plan", thereby indicating that the perceived "considerable issues" associated with the site's delivery (considered below) can be overcome, but that the lead-in time until development proceeds would not render the site suitable for allocation. This is not accurate, as outlined below. It is not justified to pursue low growth for housing and employment land.

c)Not effective – The Local Plan will not deliver the housing need of the authority. As detailed in the Housing and Economic Growth Evidence and summarised below, the Council will fail to meet its five year housing land supply upon adoption of the Local Plan. With the requirement for Green Belt release established to even meet the low growth option, this suggests that it will not be possible to meet the shortage on windfall sites; as such, additional site/s need to be allocated; and

d)Not consistent with national policy – The social objective of the NPPF concerns "ensuring that a sufficient number and range of homes can be provided to meet the needs of present and future generations". We consider that the Final Local Plan would not deliver a sufficient number of homes and therefore does not meet this fundamental requirement of sustainable development. The NPPF seeks for the planning system to help build a "strong, responsive and competitive economy, by ensuring that sufficient land of the right types is available in the right places and at the right time to support growth, innovation and improved productivity; and by identifying and coordinating the provision of infrastructure" (paragraph 8). The failure to allocate Talke Park represents a low growth scenario, which is not akin to a strong, responsive or competitive economy. Without this site, there would not be the right type of land in the right place to support businesses (considered below). The Council have acknowledged that Talke Parke is in a sustainable location and it therefore follows to allocate further housing and employment land in this location. Furthermore, the proposed length of the Local Plan is not long enough in line with national policy requirements. The NPPF states, at paragraph 22, that strategic policies should look ahead over a minimum 15-year period from adoption. The Local Plan the Plan seeks to cover the plan period 2020 – 2040. This approach would therefore only meet the minimum timeframe as required by the NPPF if adopted before the end of 2025. This is a short timeframe allowing for the review and potential update of the Local Plan prior to submission and matters arising during examination. We consider the Local Plan should therefore cover up to 2042 as a minimum and ideally to 2045. Further detail is set out below.

THE COUNCIL'S APPROACH TO TALKE PARK (REF: TK30)

The Land off Talke Roundabout / A500 (Talke Park) was identified as one of three potential strategic locations in the First Draft Local Plan (ref: TK30), potentially capable of delivering new homes and employment land. One of the evidence base documents supporting that consultation, the Strategic Employment Site Assessment Report (April 2023), which was prepared by Aspinall Verdi, concluded that there is a clear regional rationale for the allocation of at least two Strategic Sites in Newcastle-under-Lyme (paragraph 11.5).

The Final Draft Local Plan proposes two of the three sites are allocated. Talke Park is not proposed for allocation, and is proposed to remain in the Green Belt. The evidence base for the Final Draft Local Plan includes the Strategic Employment Sites Assessment – 2024 Update (June 2024), prepared by Aspinall Verdi. This provides their professional opinion that there is a need for two Strategic Sites in the new local plan, which should be AB2 ('Land at J16 of the M6') and KL15 ('Land at Barkers Wood, (Keele University) Keele'). We consider that some of the assumptions made in reaching this conclusion are incorrect, and subsequently the summary of our case is that:

1)

There is a need for three strategic sites in order to meet the housing and employment needs of the area; and

2)

Talke Park is a deliverable, sustainable site, and its allocation would represent growth aligning with the NPPF and aspirations of the government.

HOUSING AND EMPLOYMENT NEED ASSESSMENT

Harworth and Graham Ward Farms Limited have commissioned WSP to undertake a series of analyses into the housing and economic growth options for Newcastle under Lyme, and the approach taken to informing the Local Plan. The findings are presented in the Housing and Economic Growth Evidence which highlights Talke Park's role in generating local employment opportunities and providing housing for existing and new residents of Newcastle under Lyme.

The report identifies flaws in the Council's approach which relies upon an overly optimistic housing supply pipeline to meet long-term needs, which may lead to potential housing shortfall in the long-term. The government's consultation on changes to the NPPF includes a standard methodology to housing need. Whilst the transitional arrangements may mean that the Local Plan is not assessed against this higher housing target, this approach would need to be applied once the Local Plan has been adopted in order to assess their five-year housing land supply, and could therefore render policies out of date.

The report also highlights the Council's under-appreciation of emerging employment land needs, which may limit the Borough's growth potential. The strategic need and economic life of properties for warehousing and logistic sectors is overlooked, and the fast-growing and emerging sectors that are not captured by traditional UK SIC sectors are under-appreciated. Talke Park can provide a strategic employment site and a different offer to the proposed strategic sites AB2 and KL15 which can bring a variety of opportunities to existing and future employers in the area.

DELIVERABILITY OF TALKE PARK (REF: TK30)

The Strategic Employment Sites Assessment – 2024 Update (June 2024) (herein ‘SESA 2024’), prepared by Aspinall Verdi, concludes that there are “considerable issues to overcome” associated with the delivery of Talke Park, and “there will be a long lead in period before any development takes place”, suggesting this renders an allocation premature. We consider the perceived “issues” would not prevent development or cause a significant delay. Whilst the site is not an immediate short-term opportunity in the Local Plan, it can be delivered in the plan period. Our response to the comments made are set out in Table 1, which should be read alongside the Vision Document and the supporting technical reports (Geo-environmental Desk Study; Highways Access Appraisal; Heritage Briefing Note; Note on Socio-economic Benefits; and Ecology and Landscaping Combined Technical Note). These were prepared in support of the submission to the previous First Draft Local Plan consultation and, whilst some changes have been made to the Indicative Proposed Masterplan since that submission, the assessments are still applicable and accurate. Note that the masterplan has been underpinned by significant technical work such as an earthworks cut and fill model to demonstrate that the site is deliverable and this indicative layout could be achieved. This establishes that the site can provide up to 390 new homes, and 95,500sqm (1m sqft) of employment floorspace (see attachment, table 1, Response to commentary in the Strategic Employment Sites Assessment – 2024 Update)

GREEN BELT

The main current constraint to the development of Talke Park is its location within the Green Belt. The preparation of a new Local Plan for Newcastle-under-Lyme presents an opportunity for this to be reviewed and the LPA has demonstrated exceptional circumstances to justify the release of land from the Green Belt in order to meet its development needs over the plan period.

Our previous representations submitted to the Draft Local Plan were supported by an Ecology and Landscaping Combined Technical Note, which set out the high-level baseline and opportunities and constraints to development within the Site.

The council has now published a Green Belt Assessment Part 4 (July 2024) which specifically assesses Talke Park (TK30), finding that its development would not constitute unrestricted sprawl, would not result in neighbouring towns merging; and would not impact upon the setting or character of the historic town. Whilst it finds that it would represent an incursion into undeveloped countryside, this would be the case for any greenfield site. The Assessment concludes that Talke Park (TK30) did not make a greater contribution to the purposes of the Green Belt than AB2 which is proposed for allocation; indeed TK30 is recommended to be taken forward for consideration, whilst AB2 is not. Its current Green Belt status cannot therefore be a reason for the non-allocation of Talke Park.

The letter from Tyler Grange dated 26 September 2024 provides a number of indicative visuals which demonstrate that development within the site will not obstruct views to and from the Wedgwood Monument, and that the Monument would continue to be seen as a distinct element on high ground separate from and raised above the development. The illustrative mitigation strategy in Appendix 1 demonstrates where opportunities existing to create visual and physical enclosure through the use of green infrastructure. This, together with careful use of cladding tones and designs will further reduce the visual impact of the proposed buildings in views to and from the monument.

In addition to the land at Chatterley Valley and Talke Park, Harworth is in control of additional land in the authority, namely land to the north of Peacock Hay Road (north of Chatterley Valley). A plan is provided at Appendix A (taken from a previous SHLAA assessment). This land, extending to 6.65ha and would be available to offer Biodiversity Offset and any Green Belt compensation land required in association with the allocation of land at Talke Park.

SITE DELIVERY TIMEFRAMES

The Strategic Employment Sites Assessment – 2024 Update (June 2024), prepared by Aspinall Verdi considers that Talke Park “has the potential be a high-quality site for local employment in a future local plan”, thereby indicating that if the potential issues associated with the site’s delivery can be overcome (as the above table demonstrates is the case), it is the lead-in time until development proceeds which would render the site unsuitable for allocation. However, Harworth and Graham Ward Farms Limited are confident that the site can be delivered in the Local Plan period, whether this be up to 2040, or indeed longer (as considered below). The anticipated programme for delivery and rationale is set out below:

The key constraint to the development of the site, at this time, is its Green Belt designation. An application would not be progressed until the site were to be released from the Green Belt. Should this be proposed prior to the submission of the Local Plan for Examination, the following timeframe may be brought forward as pre-application discussions and surveys could be progressed with greater comfort that the allocation is likely to be brought forward;

Whilst the Local Development Scheme targets the adoption of the Local Plan in 2025 Q5, we anticipate that a more realistic target would be 2026 Q4. If this is the case, then an application could be progressed with the necessary surveys/ assessments and consultation, to lead to the submission of an outline or hybrid planning application by the end of 2027. Note the hybrid application approach was taken at Chatterley Valley to ensure full planning permission was secured for the earthworks, allowing them to get underway sooner. The application could be determined in 2028 Q2/ Q3;

Earthworks could then proceed with the submission of reserved matters application/s for the first phase/s in 2028 Q3/4. The application could be determined in 2029 Q2/ Q3;

The first units could then be constructed and available before the end of 2029. We would expect this to include the first homes;

Harworth and Graham Ward Farms Limited expect a delivery programme of circa 5-6 years for the employment units, which may run from 2029 to 2035. This would form a logical continuation of the anticipated construction and occupation programme at Chatterley Park, whereby it is envisaged this will be constructed and fully occupied by 2030;

Harworth and Graham Ward Farms Limited expect a delivery programme of circa 8 years for the homes, on the basis of 50 being delivered per year, which may run from 2029 to 2037;

Harworth and Graham Ward Farms Limited are confident that the site can be delivered within the Local Plan period, whether this be up to 2040, or indeed longer (as considered below).

In summary, Harworth and Graham Ward Farms Limited do not consider that the design, planning, earthworks and construction programme for the site will not prevent it from being delivered in the Local Plan period. Indeed, we do not anticipate that this would be significantly different to the delivery of

proposed strategic site AB2 given its location, so the availability of employment space will be limited, warranting the allocation of Talke Park.

BENEFITS

The allocation of Talke Park would:

Provide up to 390 new homes, housing needs/ growth;

Provide 95,500sqm (1m sqft)/ circa 21ha of employment floorspace, emp needs/ growth, providing up to 1,000 jobs in the construction phase and circa 3,600 permanent jobs once operational, of which around 1,000 would be taken by residents of Newcastle-Under-Lyme;

Meet local need for school places;

The Gross Value Added to the economy is estimated to be circa £15.3 million per year during the construction phase and £140 million per year during operation. It is also anticipated around £1.9 million per year in revenue would be generated through Council Tax and Business Rates receipts;

The location of Talke Park directly adjacent to the existing settlement limits offers clear benefits in terms of easy access to jobs, new homes, sustainable travel and green spaces. This local area would directly benefit from local expenditure of around £85,000 per year from the construction workforce over the construction phase, and around £5.3 million per year from the new residents;

Talke Park will promote sustainable communities, supporting improvements, connections and relationship with the wider area such as Wedgwood Monument;

Harworth and Graham Ward Farms Limited envisage the development to of high quality design and sustainability standards providing market leading approaches to ESG and Carbon Reduction, incorporating Net Zero design criteria and contributing to the delivery of Harworth's Net Zero Carbon Pathway2. This means that all commercial buildings Talke Park will be:

—Net Zero Carbon in operation (subject to occupier process requirements);

—Net Zero Carbon in construction and operation for any units build after 2030; and

—BREEAM Excellent.

DURATION OF THE LOCAL PLAN PERIOD

The NPPF states, at paragraph 22, that strategic policies should look ahead over a minimum 15 year period from adoption, in order to anticipate and respond to long-term requirements and opportunities, such as those arising from major improvements in infrastructure. It adds that, where larger scale developments such as new settlements or significant extensions to existing villages and towns form part of the strategy for the area (as is the case here where two strategic sites are currently proposed for allocation), policies should be set within a vision that looks further ahead (at least 30 years), to take into account the likely timescale for delivery.

The Local Plan the Plan seeks to cover the plan period 2020 – 2040. This approach would therefore only meet the minimum timeframe as required by the NPPF if adopted before the end of 2025. This is a short timeframe allowing for the review and potential update of the Local Plan prior to submission and matters arising during examination. The Local Plan is therefore at significant risk of not being consistent with national policy.

The Local Plan should therefore cover up to 2042 as a minimum and ideally to 2045. This will require additional land to be allocated for employment and residential use. The allocation of Talke Park would assist in addressing this subsequent shortfall.

CHANGES SOUGHT TO THE LOCAL PLAN

Harworth and Graham Ward Farms Limited seeks the allocation of TK30 as a Strategic Site, including the following:

Policy PSD1 – the inclusion of the site under point 3 as a strategic site “Land off Talke Roundabout / A500 to offer a sustainable urban extension providing a strategic employment location, new homes, and public space”.

Policy PSD5 – the site should be listed for removal from the Green Belt.

Update to Policy PSD3 – the figures in terms of housing and employment provision should be updated to account for the allocation of TK30.

Addition of a new Policy TK30 relating to the site's development. A suggested policy is provided below, which we would be happy to discuss further.

Policy TK30 ‘Land off Talke Roundabout / A500’

Land off Talke Roundabout / A500 is allocated as a sustainable urban extension providing employment land, new homes and public space. The site extends to circa 66 hectares and is allocated for uses including circa 390 new homes and 21 hectares (circa 95,500 sqm of floorspace) of employment land. Where ancillary non-employment uses are proposed, these will primarily support the onsite businesses and industrial processes. Development will be permitted subject to:

- 1.Satisfactorily addressing the site allocation requirements set out in Policy SA1 (General Requirements),
- 2.Safe and convenient access into the development via a new access on Talke Road for the employment development and provision of two access points on Deans Lane for the residential development,
- 3.In line with Policy SA1 (General Requirements), a masterplan and design code should be prepared and agreed for the site which will:

a.Consider sustainable travel links including cycle and pedestrian connectivity including to public transport links. Development should also consider walking and active travel for health and wellbeing purposes within the site,

b.provide for appropriate boundary treatments to the existing Green Belt,

c.Facilitate improvements to local footpaths and linkages to Wedgwood Monument

d.Achieve high quality design reflecting the landscape location of the site and creating a vibrant destination and attractive public realm. This should recognise the transitional location between the higher density urban and rural area,

e.Ensure the layout and development of the site is landscape led and buildings or structures are designed to ensure they are not intrusive in significant views from the surrounding area including the Wedgwood Monument.

4.Submission of a coal mining risk assessment, land contamination assessment and mitigation strategy,

5.Submission of a drainage strategy,

	<p>6.Appropriate measures to control impact of increased traffic movement or uses within the site on local amenity including noise and air quality on the surrounding area. This should include submission of a noise and air quality assessment and mitigation strategy,</p> <p>7.Submission of a Heritage Impact Assessment to demonstrate how the layout and design of the development will respond sensitively to the setting of Wedgwood Monument,</p> <p>8.Financial contributions to improvements in the capacity of local schools and health facilities.</p> <p>9.Provision of a new and / or enhanced bus service from Newcastle-under-Lyme to the site.</p> <p>10.Employment units to achieve at least BREEAM excellent standard with an aim for the most recent BREEAM outstanding standard,</p> <p>11.Retention and enhancement of mature trees and existing hedgerows on the site and its boundaries, with minimal breaks in hedgerows to facilitate vehicular traffic. Strengthened boundaries to the site, comprising landscape buffers, and the creation of new strong, defensible boundaries to the Green Belt,</p> <p>12.The development being subject to an agreed Employment and Skills Plan secured through a S.106 agreement.</p> <p>We also consider that the period which the Local Plan covers should be extended beyond 2040, and cover up to 2042 as a minimum and ideally to 2045. This will require additional land to be allocated for employment and residential use. The allocation of Talke Park would assist in addressing this subsequent shortfall.</p> <p>CONCLUSION</p> <p>We consider that, in its current form, the Final Draft Local Plan is not sound, on the basis that it is (1) not positively prepared, (2) not justified, and (3) not consistent with national policy. We consider that the allocation of 'Land off Talke Roundabout / A500' (herein 'Talke Park') would resolve this soundness matter. Harworth and Graham Ward Farms Limited are in control of the site and would therefore lead its design and delivery, as per Chatterley Park. Exceptional circumstances have been demonstrated to justify the release of land from the Green Belt. Allocating Talke Park would meet the Council's growth aspirations in terms of delivering sustainable new homes and jobs, meeting local needs and providing more economic opportunities for residents of Newcastle-under-Lyme. Harworth is an experienced land and property regeneration company which is currently investing in Newcastle under Lyme at the nearby Chatterley Valley site. The above commentary demonstrates why the site is suitable and available for allocation, notably:</p> <p>The Council's own evidence base supports the allocation of the site. The Strategic Employment Sites Assessment – 2024 Update (June 2024), prepared by Aspinall Verdi notes that it "has the potential be a high-quality site for local employment [albeit] in a future local plan". There is therefore recognition that the perceived issues associated with the site's delivery can be overcome, but the Council are uncertain on programme.</p> <p>The SWECO report which forms part of the evidence base notes that the Talke Site has the best walking accessibility score of the three potential strategic sites. That SWECO report, and Mosodi's independent assessment of the site, confirm that there are no highways or accessibility constraints to prevent the site being allocated.</p> <p>The council's Green Belt Assessment Part 4 (July 2024) concludes that the development of Talke Park would not constitute unrestricted sprawl, would not result in neighbouring towns merging; and would not impact upon the setting or character of the historic town.</p> <p>Harworth and Graham Ward Farms Limited are confident that the site can be delivered in the Local Plan period, whether this be up to 2040, or indeed longer.</p>
Q7 Modification	We consider that the period which the Local Plan covers should be extended beyond 2040, and cover up to 2042 as a minimum and ideally to 2045. We consider that the allocation of site ref: TK30 (the Land off Talke Roundabout / A500), as a strategic location, for housing and employment would resolve the soundness matters outlined at 6 above. Further detail is provided in the supporting covering letter.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	In order to accurately outline our client's position and aid the Inspector in providing any further information relating to site TK30, on the basis we consider the allocation of the site would resolve our concerns about the Local Plan being unsound.

Q6 Details	<p>Please see attached representations.</p> <p>Housing Requirement- dpa and total</p>

Although HBF supports the principle of the Council planning for a higher housing number than is required by the standard method, we do not believe sufficient explanation has been provided in the plan as to how the proposed housing requirement in the Plan has been arrived at.

We note that the supporting text states that the standard method calculation for Newcastle-under Lyme results in 6,490, an annual requirement of 347 dwellings per annum. However, further explanation and clarity on the standard method calculation is needed to explain and justify the figure that has been used. For example, setting out the date of the standard method being used and which affordability ratio has been applied. Similarly, it is unclear from the Plan whether the standard method calculation included any element of meeting the unmet needs of a neighbouring authority, or not. HBF believes this information should be clearly set out within the Plan in supporting text and not relegated to a different document (topic paper, background document etc.).

HBF support the Council's view that as the HEDNA identifies a need to deliver 8,000 homes to 2040 this justifies going above the standard method figure, but we would suggest there may be other reasons that justify going further still.

In our Reg 18 response HBF requested that the Council plan for a higher number of houses for a variety of reasons including supporting economic growth, the need to provide for a range and choice of sites, the need for a non-delivery buffer, the need to plan for small sites to ensure delivery across the plan period and a robust five-year housing land supply and housing trajectory. We therefore support the principle of the higher figure but ask for more information on how it has been arrived at, what other factors were considered, and if and why they were discounted.

HBF notes that Paragraphs 9 and 10 of the HNA (2020) concluded that a higher growth scenario of 410-445 dwellings per annum is 'robust and justified'. This is less than is currently being planned for.

HBF agree that Government's standard methodology identifies the minimum annual LHN, which is only a minimum starting point, and not the housing requirement figure, and support the Councils efforts to deliver more housing than the minimum LHN. We in particular welcome the clarification that the housing requirement in the policy is a minimum figure, a change we requested at Reg 18 stage. The wording for this part of the policy is now in line with national guidance.

We therefore welcome the increase to 8,000 new homes over the Plan period, and the consequential increase in annual housing requirement to 400 dwelling per hectare, but without understanding how the figures have been arrived it is difficult to conclude if this uplift is sufficient or not to deliver the objectives of economic growth which the Council is seeking to achieve, and the HBF supports.

As mentioned above, HBF would request the Plan period is extended to ensure a 15-year post-adoption period. This would further increase the housing requirement.

Buffer and Windfall

As the NPPF sets out the supply of specific deliverable sites should include a buffer of 5% to ensure choice and competition in the market. HBF support the delivery of this 5% through allocations in the Local Plan because this is the best way to provide certainty for developers whilst also enabling choice and competition within the land market. Indeed

, where there has been significant under-delivery a buffer of 20% is required.

Para 5.4 of this draft plan explains that "It is important that there is resilience in housing supply taking account of factors that may affect delivery and to ensure the overall housing requirement is delivered during the plan period. To address this, the Plan makes provision for a supply buffer of circa 8.3% above the housing requirement set out in this policy". Whilst HBF fully supports the inclusion of a buffer, we are unclear why the Council has chosen a buffer of 8.3% and therefore question if this is effective and justified.

Table 2 sets out calculations that arrives at a figure of 8,663 homes which is called in the table "Total Supply of Housing plus buffer". It is therefore unclear of the level of buffer being planned for is a 'policy choice' or the result of residual calculation of housing supply compared to requirement.

HBF remain of the view than any allowance for windfall sites should be in addition to the buffer added to the housing need figures derived from the Standard Method to provide choice and competition in the land market.

The Government has made it clear that it still supports the national target of 300,000 new homes per year. In the midst of a housing crisis and in light in the level of high housing need in HBF are pleased to see that the Council is following the requirements of the NPPF and setting their housing requirement using the standard method as minimum starting point, and planning for an increased number of homes to support economic growth. However, but for the Plan to be sound the Council needs to demonstrate it has considered the other factors which may further increase the housing requirements, including any factors raised under the Duty to Cooperate and/or unmet needs of neighbouring authorities and the wider West Midlands region.

Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	HBF requests to participate in the Hearing Sessions for the Local Plan Examination, the HBF considers that their involvement is necessary to ensure that the home building industry is able to respond to any housing related issues raised during the hearing sessions.

Q4 Policy	PSD1
Q6 Details	<p>Please see attached representations. Persimmon acknowledges that the Council's identified housing requirement (8,000 dwellings between 2020-2040) is a minimum requirement; however, would comment that the Council could consider a more ambitious level of housing growth during the Plan Period, to meet its needs, and to support the Government's emerging approach to catalysing housing delivery proposed in the draft National Planning Policy Framework ("NPPF") and updated Standard Method for calculating Local Housing Needs ("LHN"). Under-delivering on housing growth may not support the needs of the population, fail to meet the projected jobs growth in the Borough and not support the Council in fully meeting the emerging housing requirement throughout the Plan Period. Considering higher growth would:</p> <ul style="list-style-type: none"> • Be in line with emerging policy proposed by the Government in the NPPF and proposed LHN for NUL, which proposes an LHN for NUL of 593 dwellings per annum ("dpa") – which will increase NUL's housing requirement from either 330 dpa using the current 2023 Standard Method for calculating LHN (a 263 dpa or an 80% uplift) or from 400 dpa based on the Regulation 19 Plan (representing an increase of 193 dpa or an 48% uplift). • Support jobs growth, as identified by the Housing and Economic Needs Study and Experian ("HENA" 2023 and 2024 Update), and deliver the labour force necessary to support job growth, particularly in catalyst areas such as the University Growth Corridor (including better accommodating student growth); • Assist in addressing affordability issues and deliver increased affordable housing; and • Better recognise the role of NUL as part of the wider joint housing and economic area with Stoke-on-Trent.
Q7 Modification	Please see attached representations.

Q4 Part of document	Policy
Q4 Policy	PSD1
Q6 Details	Policy PSD1 – Overall Development Strategy This policy outlines that a minimum of 8,000 dwellings will be delivered in the Borough over the Plan period 2020-2040 which equates to 400 dwellings per annum. In terms of context for this figure, it is based on an employment growth forecast in the HEDNA Update 2024. It does not however reflect the existing SM figure of (330dpa). To support the Council in progressing with the Local Plan as drafted, Counsel has advised that the draft Plan falls squarely within exception 226(a) of the Draft NPPF and therefore the provisions provide imperative advice, namely that the Plan "will" be examined, in this case, under the provisions of the currently extant NPPF (Appendix 1) Accordingly Lone Star support the approach of Newcastle under Lyme in progressing a Plan to submission and examination in order to ensure that the Borough can have an up-to-date plan in place as soon as reasonably possible.

Q6 Details	<p>Representations in relation to draft Policy AB2 are set out in the Statement submitted alongside this form. That Statement lists and is accompanied by a series of 10 Appendices. Detailed representations have been submitted in relation to Policy AB2 (Land at Junction 16 of the M6). Those representations comment at length on the requirement for employment land, and explain Indurent's view that this is understated in the Council's evidence base and the Regulation 19 document, by some margin.</p> <p>Part 2 of draft Policy PSD1 (Overall Development Strategy) appropriately expresses the employment land requirement as a minimum, but for the reasons given in the representations made in relation to Policy AB2 that minimum figure (63ha) is considered to be too low. Just making a single adjustment to address one of the shortcomings in the evidence base (changing the assumed plot ratio from 40% to 35%) this would increase to 72ha, before the other points raised in the representations to Policy AB2 are even considered.</p> <p>Part 3 of draft Policy PSD1 is more appropriately drafted in that it confirms the strategic employment site allocations are intended to, "support a resilient supply of employment land and investment and growth, including serving the wider sub-regional economy", so performing an additional role relative to the basic provision identified in Part 2. Resilience in the supply is indeed important such that a full range of needs can be met over the Plan period. Moreover, the evidence submitted in relation to Policy AB2 identifies the importance of understanding the requirement on a FEMA wide basis, and of rectifying the long-term local weakness locally whereby the larger employment requirements have bypassed Newcastle-under-Lyme due to a lack of sites. That said, it is considered that some further clarification is required to the wording of this part of the draft policy. Amendments to address the points raised above are needed to ensure this part of the Plan is Positively Prepared, providing a strategy which as a minimum will meet the area's objectively assessed needs.</p>
Q7 Modification	The minimum requirement expressed in Part 2 of draft Policy PSD1 should be amended to reflect the detailed evidence presented here in relation to Policy AB2. Part 3 of draft Policy PSD1 should be amended to read, "This will include the allocation of two strategic employment sites that will be allocated in the Plan to support a resilient supply of employment land and investment and growth, including serving the wider sub-regional economy in addition to the minimum requirement identified in Part 2 of this policy:-"
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	The representations made, particularly in relation to draft Policy AB2, are detailed, extensive, and address a range of technical matters. It will assist the hearing process to have participants in attendance able to assist with any explanation that may be required in relation to this or related matters.

Q6 Details	<p>Please see supporting representation by Knights on behalf of Aspire. The Council's overall development strategy seeks to deliver a minimum of 8,000 dwellings over the plan period at 400 dwellings per annum. At Regulation 18 stage, the Council sought to deliver 7,160 dwellings over the plan period (358 dwellings per annum).</p> <p>At Regulation 18 stage, we argued on behalf of Aspire that the housing requirement should be higher on the basis that the affordable housing need identified at that time (278 affordable homes per annum) amounted to around 77% of the housing requirement.</p> <p>As such, the increase of the requirement to 400 dwellings per annum is welcome and is supported, however the annual affordable housing need still equates to around 69% of the annual housing requirement for Newcastle-under-Lyme.</p> <p>The expression of the housing requirement as a minimum starting point otherwise is welcome.</p> <p>Given the high level of affordable housing need, the fact that existing commitments will not reflect or address future needs, and the fact that not all housing sites will deliver affordable housing (for example, windfall sites of 10 dwellings or less, changes of use obtained under the General Permitted Development Order, infill development sites, or sites that can make use of the vacant building credit to offset some or all of their affordable housing contribution), it is questioned whether or not the annual housing requirement should be increased further, and in turn, whether or not some further housing sites should be allocated (or at least safeguarded) across the Borough in order to deliver the step-change in the delivery of affordable housing that is needed and to help to maintain a broader and more responsive supply of housing land to ensure that needs can continue to be addressed.</p> <p>The above approach is supported in the PPG which states that "The total affordable housing need can then be considered in the context of its likely delivery as a proportion of mixed market and affordable housing developments, taking into account the probable percentage of affordable housing to be delivered by eligible market housing led developments. An increase in the total housing requirement included in the plan may need to be considered where it could help deliver the required number of affordable homes." (Emphasis added)</p> <p>(Paragraph 008 reference ID 67-008-20190722)</p> <p>On behalf of Aspire, Knights are mindful of the current consultation on the proposed changes to national policy through a revised NPPF and also the consultation on the outcome of the revised standard method which identifies a local housing need figure for the Borough of 593 dwellings per annum. Whilst the proposed transitional arrangements set out in the revised NPPF consultation mean that the Regulation 19 DLP can still progress to examination because the DLP housing requirement is not 200 dwellings or more below the standard method figure, it is suggested that the Council consider elevating the housing requirement figure above 400 dwellings per annum in order to plan for higher delivery rates to help meet current and future needs.</p> <p>Table 2 on page 14 of the Regulation 19 DLP under the supporting text to this policy provides details of the housing completions and commitments and refers to a housing trajectory at Appendix 6. It would be useful for a schedule of sites that underpins the figures at Table 2 to be included as an Appendix within the Local Plan so that the supply can be properly considered and assessed at the Examination.</p> <p>Summary of recommendations:</p> <ul style="list-style-type: none"> (a) Consider whether or not the annual housing requirement should be increased further; (b) Consider the allocation of additional housing sites (c) Publish a schedule of sites that show completions and commitments that form part of the delivery trajectory as an appendix

Q6 Details	<p>Please see attached representations.HBF welcomes the Council's efforts to ensure that they have an up to Local Plan. Plan-making is a fundamental part of a Local Authority's role and is essential to support the delivery new homes and jobs. HBF agree that there are many factors that support the need for a new Local Plan for Newcastle-under-Lyme. However, HBF note that the Plan Period runs only to 2040. Para 22 of the NPPF requires that 'strategic policies should look ahead over a minimum 15-year period from adoption'.</p> <p>Although we note that the Plan is now at Reg 19 submission stage, it can and does take time to proceed through the remaining stages of plan preparation- the examination process, main modification consultation, Inspector's report and adoption of the Local Plan. HBF therefore question whether the plan period need extending. Extending the plan period by one or two years and rolling forward the housing requirement to these future years would seem a reasonable approach to address this issue.</p> <p>For this plan to be sound, the plan period needs extending. A plan period of less than 15 years on adoption fails to comply with the NPPF requirements for effective plan making.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	HBF requests to participate in the Hearing Sessions for the Local Plan Examination, the HBF considers that their involvement is necessary to ensure that the home building industry is able to respond to any housing related issues raised during the hearing sessions.

Title	Policy PSD1: Overall Development Strategy
Consultee Company / Organisation	Silverdale Parish Council
Consultee Position	Chair
Consultee Family Name	Adamczuk
Consultee Given Name	Henryk
Q4 Part of document	Policy
Q4 Policy	PSD1
Q6 Details	<p>Introduction</p> <p>Regulation 19 consultation is the final point in the progress towards Planning Inspection, a public enquiry to consider whether the documentation is sound. This council consultation ends 7 October but ran parallel with government's 30 July planning reforms (ended on 24 September) focusing on growth of the national housing target, anticipating larger increases in housing for districts without a local plan in place, such as Newcastle.</p> <p>Officers and members are urging that the current 2024 plan is approved to avoid the district being held hostage by uncontrolled development that threaten the green belt and other areas, coupled with spectre of even higher numbers in a future revised Local Plan (appendix 3).</p> <p>Although future changes to National Planning Practice Framework (NPPF) will not be announced for many weeks, housing and infrastructure-led economic growth form the central plank of the Starmer government's national economic policy. Many of the previous government's planning policies are being reversed, including the re-introduction of mandatory housing targets and the proposed sharper methodology for assessing housing need at district level (based on stock numbers projected at 0.8 per cent annual increase and adjusted for relative housing affordability).</p> <p>National planning policy is fundamentally uncertain in the crucial period leading up to the completion of the Newcastle under Lyme documentation Final Local Plan.</p> <p>Key Points: Borough</p> <p>The main borough wide changes since the 2023 consultation are:</p> <p>An increase in the overall target for new housing to 400 per annum (total 8,000 over 20 years). An increased employment land provision and with it the inclusion of the Audley AB2 site and the housing demand component from this greater employment growth.</p> <p>The Local Plan excludes Silverdale from the 'rural centres' settlement hierarchy (PSD 2: Settlement Hierarchy Policy and PSD 3: Distribution of Development).</p> <p>The Rural Area Topic Paper puts certain rural villages in a stronger position for protection from the impact of new development. Our neighbour, Keele Parish is classified as rural. But the methodology takes no account of Silverdale Parish Council's rural/urban complexion. Silverdale is uniquely omitted from the list of Newcastle under Lyme's parishes. This parish is considered wholly urban and assimilated within the town without analysis in the Topic Paper.</p> <p>In terms of land use, more than half of Silverdale's 361 hectares is green belt, a fact not entertained in the Local Plan nor in the Topic Paper.</p> <p>Silverdale Key Points: (comparing consultations 2024 with 2023)</p> <p>Overall Development Strategy (PSD1)</p>

As mentioned earlier, PSD1 has a target of 400 per annum, which Silverdale Parish Council believes is too high.

In addition, Silverdale's share of the 8,000 proposed new homes is 14 per cent compared with Silverdale's share of total population, which is 4 per cent. The proposed growth bears a disproportionate weight on this parish. 1,100 homes (some 2,200 people at the ratio of 1:2.2) equate to the size of four communities, each as large as Heritage Park.

Silverdale PC accepts that some housing growth is needed to meet local housing needs and welcomes the two significant brownfield site allocations. It is the unprecedented scale of the change to the parish's physical and social structures that is our concern and how the increase in population would place far more pressure on health, education and other facilities and this one of the main concerns for many residents, who also question how the new facilities can be incorporated into the space populated by previous proposals.

The provision of a safe and adequate access would be essential for all the allocated sites, including T&G 8.

Housing Site Allocations SP11, SP23 and T&G 8

Overall, loss of green belt land released from green belt at the former Golf Course and on land between Job's Wood and Park Road is unchanged. New boundaries are proposed at Redheath Plantation/Keele Driving Range on SP11 and at the Cemetery Road end of SP23. SP12 (Cope's Field) has been incorporated into SP11 within the Keele Country. The proposed loss of green belt at SP11 in 2024 is 69 hectares, marginally less than 2023.

Additional proposals in 2024 cover a single-entry primary school, local centre/ health centre and a country park (Lime Park) with 4 new settlements. The published plans show vehicular access from Keele Rd via a spur into 3 parcels SP11 (1,2 and 3) and access from Ashbourne Drive to SP (1,2 and 3). Racecourse is the main access point to SP 11(4). Access to SP23 from Cemetery Road is another route but not clearly explained.

Gypsy and Traveller Allocation

Site T&G 8 allocated 5 pitches to land adjacent to Silverdale was a late inclusion into the Scrutiny Committee without proper consultation. See 4.2.

BDP Masterplan 27 August

Uploaded to the consultation portal as a late addition, Keele Park Masterplan arrived in the evidence basis as part of an objection to the Housing Policy Hou1 (see appendix 4). The report amounted to the landowner/promoter vision for the SP11 site with the consultants. It provides further grounds for SPC to make stronger representations concerning the infrastructure weaknesses in the proposals.

The inclusion of new community and educational facilities and the country park were welcomed but the house numbers at 1,100 were still an additional 40% increase in the size of Silverdale's stock of houses in 2021. Silverdale objects to the proposed intensity of development and re-focus its criticism on the infrastructure by exploring grey areas arising from design of SP11 overlapping SP23 design.

Transport congestion problems in the High Street, Pepper St and B5044 were introduced at Ashbourne Drive and at Racecourse (with the pressure of a primary school location). Members were dismayed there was no description of the improvements required to these poor surface quality local roads with narrow widths. Proposals as they stand will increase traffic flows through the centre of Silverdale and exacerbate movement problems at peak times. Additional concerns related to the possibility of rat runs through SP11 to and from Silverdale to A525. It was noted a new spur was identified for A525 but the number of homes accessed from Silverdale was the same as from Keele. The consistency of the treatment for SP23 alongside SP11 is questioned by the current presentation of the Local Plan.

BDP Lyme Park document, uploaded to the planning portal on 27 August indicated the rationale for SP11 yet the proposal for infrastructure did not address SP23 as clearly as SP11.

Silverdale's response

Silverdale Parish Council argues the current Local Plan is unsafe on specific planning policy grounds and then makes modifications as follows:

1.Green Belt

The proposed Keele Park Development with the main land use as a country park is not sound because the current land use is parkland and it is illogical to remove the protection of 40 hectares of parkland from the greenbelt to provide 30 hectares of development as undesignated land. The decision to show parcels of land as circular spaces especially at SP11(3) does not permit a clear boundary between mixed housing development and parkland as is required. It is unclear how the range of density options will be utilised in the 4 distinct communities.

Modification1: The country park should remain incorporated in the greenbelt and the boundaries should be regularised showing distinction between land uses.

The proposed new boundary for SP23 and the former site SP14 also known as The Cowfield is proposed as an open space so the same argument can be applied.

Modification2: The former site SP14 should remain incorporated the greenbelt.

The net effect of the modifications would protect up to 45 hectares of open space currently within the greenbelt and thereby reduce the harm of the development proposals on the greenbelt.

The proposed vehicular access to SP11 and SP23 suggests only minor improvements are required. No roundabouts. This is not a sound engineering proposition because, Silverdale's inner roads are all below A grade. The B5044 is the main surface providing through routes from the east to the west at Scot Hay and to the northwest A525. An additional route through the string of developments SP11 will have knock on effects to traffic in these principal routes.

Modification1:

Access to SP11(3) via Ashbourne Drive/Underwood Road and to S11 (4) via Racecourse/Park Road should be pedestrian not vehicular. This would make a considerable saving to the infrastructure costs of SP11 and eliminate congestion in Silverdale village.

Modification2:

Transport infrastructure modelling to integrate SP11 with SP23 and should take account of traffic across Silverdale as well as the A525.

3.Relationship between new centres and existing centres

Silverdale has not been included as a rural parish and part of SP11 is contained in Keele which is designated as rural so that presents a classification problem for the borough council in the settlement hierarchy. The BDP report is not explicit how the new centre at SP11(2) and SP11(1) relates to Silverdale Local Centre.

Modification: Silverdale Parish Council considers itself a village under the following definition and a claim to be a rural parish should be at least recognised and explored within the Settlement Hierarchy Methodology.

A village in the UK is a compact settlement of houses, smaller in size than a town, and generally based on agriculture or, in some areas, mining (such as Ouston, County Durham), quarrying or sea fishing. In addition, given SP11 includes land in Keele Parish, which is rural. Then part of that site lies within a rural parish. The methodology adopted in the Rural Topic Paper (2024) does not address boundary issues where a housing allocation covers two adjoining parishes.

4. Housing Allocation

4.1 At 1,090 the total capacity, 1,100 houses remain unchanged, despite several new facilities and confining development with the introduction of new parcels (Local Plan p70).

The BDP consultant report (see Appendix 4) asserts that certain range of housing densities will prevail in the parcels at SP11 but the addition of more development mix other than residential into a smaller area entails density and site boundary considerations. Spaces for new facilities as well as housing density are not disaggregated from land allocated to the country park.

Modification: The proposals should make the trade-off explicit in terms of boundaries and density between new community provision and the housing allocation at SP11 sites 1,2,3 and 4. See also modification at SP23.

4.2 Gypsy and Traveller Allocation 5 pitches

Site T&G 8 inclusion at Scrutiny Committee without any prior consultation with Silverdale Parish Council prior to the July 2024 Scrutiny Committee.

The decision is challengeable in the law because the land was acquired for the specific purpose of being kept as allotments. The previous change required Secretary of State's approval and the proposed change similarly requires Secretary of State's consent. The proposed use passes directly through the centre of a current statutory allotment site. Acre Allotments was recorded in the 1900 OS Map and in previous years, having been previously designated so for the use of Silverdale's citizens.

The decision is perverse, because

1 There is a long lease in place between the Borough Council and Silverdale Parish Council for the use of part of land, including the access road.

2 The proposed road access to T&G8 would be shared with Acre Allotment Association, sub tenants of Silverdale Parish Council. The proposed sharing of the road access could only occur if the road was improved to allow transport by vehicles pulling trailers. The necessary road improvement would be a necessary condition and coupled with new mains supplies for the pitches would threaten the continuation of the Allotment Association.

3 Extensive remediation is required where there is a history of unregulated deposit of different kinds of toxic waste harmful to human ranging from unremediated cattle and pig faeces to heavy metal contamination (from mining and waste accumulation) and also buried asbestos.

4 The development of this site would be unsustainable and environmentally harmful in another context. Northwest of the proposed access road is the Racecourse Community Woodland, between Mill Street and Park Street, containing many mature native trees and there are local springs which generate an ecology that would be harmed by the traffic and development proposed.

5 The single lane traffic access to the Acre Allotment Association is unsuitable. The access road is best classified as a country lane so the proposed development would fall foul of the policy of biodiversity impacts on rural lanes, where they need to be widened, including destruction of adjoining landscape.

Modification: The proposal should be excluded from the Allocation of Gypsy and Traveller Sites or as an alternative an access from Maries Way could avoid the conflict with the natural environment at the Acres and at Racecourse Community Woodland but that option must involve a full physical survey of the area to identify contaminants followed by remediation.

Appendices

1.Audley Parish Council have commented through their consultant on 3 October 2024 that a mistake may have occurred in the classification as a district centre.

Audley is identified as a 'District Centre', with Wolstanton, Chesterton and Silverdale. This is an obvious error and Audley should be classed as a 'Local Centre', as in previous versions of the Plan.

2. There has been an active Facebook group, PAPG operating to gather support and organised a workshop in September to help guide residents through the documentation.

3. Based on Proposed Draft 2024 NPPF giving Newcastle a higher Minimum Housing Need Target at 593 set against the current 400.

The guidance re-imposed national housing targets for England and applied an increase of 21% in the target (from 305,000 to 370,000). However, the government also proposed to redistribute the highest target for London to the rest of England. The proposed guidance argues the average level of housing should be around 0.8 % per year.

4 Extract from BDP Lime Park p41

The four neighbourhoods would be:

1. Keele Square SP11(1)

	<p>A development of around 256 homes accessed from the existing roundabout on Keele Road. The neighbourhood is on gently sloping land and is planned around a landscape square which will also form a local centre.</p> <p>2. Keele Woods SP11(2) A development of 315 homes based on two points of access from Keele Road, one through the former golf clubhouse and the other through the driving range. It may be that both are not required depending on ecology and other constraints, but it is useful to keep the two options. This neighbourhood is also based around a green space with arms of development extending along the former fairways retaining the backs of tree planting.</p> <p>3. Ashbourne Drive SP11(3) This is proposed as a neighbourhood of 233 homes in the north-west part of the site, accessed from Ashbourne Drive. This scheme also has a village green and is planned to preserve the significant bank of trees running east to west through the site.</p> <p>4. Park Road SP11(4) The final, slightly smaller neighbourhood of just under 100 homes is on Park Road. This is physically separated from the rest of the site by a major bank of trees and would therefore feel like a very different place. The layout preserves the existing play area. This layout allows the site to be marketed either as one scheme or as four different development parcels providing maximum flexibility. The scheme going forward would need to be subject to a Design Code that would create distinct identities for each of the neighbourhoods. The public realm would be retained for public use and to maximise biodiversity net gain.</p>
Q7 Modification	<p>Modification1: The country park should remain incorporated in the greenbelt and the boundaries should be regularised showing distinction between land uses. The proposed new boundary for SP23 and the former site SP14 also known as The Cowfield is proposed as an open space so the same argument can be applied.</p> <p>Modification2: The former site SP14 should remain incorporated the greenbelt. The net effect of the modifications would protect up to 45 hectares of open space currently within the greenbelt and thereby reduce the harm of the development proposals on the greenbelt.</p> <p>Modification1: Access to SP11(3) via Ashbourne Drive/Underwood Road and to S11 (4) via Racecourse/Park Road should be pedestrian not vehicular. This would make a considerable saving to the infrastructure costs of SP11 and eliminate congestion in Silverdale village.</p> <p>Modification2: Transport infrastructure modelling to integrate SP11 with SP23 and should take account of traffic across Silverdale as well as the A525.</p> <p>Modification: Silverdale Parish Council considers itself a village under the following definition and a claim to be a rural parish should be at least recognised and explored within the Settlement Hierarchy Methodology. A village in the UK is a compact settlement of houses, smaller in size than a town, and generally based on agriculture or, in some areas, mining (such as Ouston, County Durham), quarrying or sea fishing. In addition, given SP11 includes land in Keele Parish, which is rural. Then part of that site lies within a rural parish. The methodology adopted in the Rural Topic Paper (2024) does not address boundary issues where a housing allocation covers two adjoining parishes.</p> <p>Modification: The proposals should make the trade-off explicit in terms of boundaries and density between new community provision and the housing allocation at SP11 sites 1,2,3 and 4. See also modification at SP23.</p> <p>Modification: The proposal should be excluded from the Allocation of Gypsy and Traveller Sites or as an alternative an access from Maries Way could avoid the conflict with the natural environment at the Acres and at Racecourse Community Woodland but that option must involve a full physical survey of the area to identify contaminants followed by remediation.</p>

Title	Policy PSD1: Overall Development Strategy
Consultee Company / Organisation	National Highways
Consultee Position	Assistant Spatial Planner
Consultee Family Name	Pyner
Consultee Given Name	David
Q4 Part of document	Policy
Q4 Policy	PSD1
Q6 Details	<p>Newcastle-Under-Lyme Local Plan Review - Regulation 19 Consultation (Final Draft) National Highways welcomes the opportunity to provide comments on the Final Draft Local Plan consultation (Regulation 19) prepared for Newcastle-Under-Lyme Borough Council, which is expected to cover the plan period up to 2040. National Highways has been appointed by the Secretary of State for Transport as a strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority</p>

and street authority for the Strategic Road Network (SRN). It is our role to maintain the safe and efficient operation of the SRN whilst acting as a delivery partner to national economic growth.

In relation to this consultation, National Highways' principal interest is ensuring the safe and efficient operation of the SRN in the area, notably the M6, A50 and A500 network which routes through the Local Plan boundary.

In responding to Local Plan consultations, we have regard to the Department of Transport's (DfT) revised Circular 01/2022 - Strategic Road Network and the delivery of sustainable development ('the Circular') which sets out how interactions with the SRN should be considered in the making of local plans. Paragraph 28 of the Circular sets out that:

"The policies and allocations that result from plan-making must not compromise the SRN's prime function to enable the long-distance movement of people and goods. When the company assists local authorities in the development of their plans and strategies, the local authority should ensure that the SRN is not being relied upon for the transport accessibility of site allocations except where this relates to roadside facilities or SRN-dependent sectors (such as logistics and manufacturing). The company will also work with local authorities to explore opportunities to promote walking, wheeling, cycling, public transport and shared travel in plan-making, in line with the expectations set out in the NPPF and the Transport Decarbonisation Plan."

In addition to the DfT Circular 01/2022, the response set out below is also in accordance with the National Planning Policy Framework (NPPF) and other relevant policies.

Previous Consultations

National Highways was consulted during the Regulation 18 consultation in August 2023. The Regulation 18 identified a minimum requirement of 7,160 dwellings (358 per year) and 69 hectares of employment land to be delivered during the plan period between 2020 and 2040. It also included potential sites for allocation, and we provided an indication of the potential sites that were expected to have traffic and boundary impacts on the SRN.

In May 2024, National Highways was consulted to provide recommendations for the Infrastructure Delivery Plan preparation, where we provided comments on the infrastructure requirement.

Final Draft Local Plan Regulation 19 Consultation

The Final Draft Local Plan Regulation 19 includes locally specific policies and strategic / non-strategic site allocations to meet housing and employment needs across the Newcastle-Under-Lyme area for the plan period of up to 2040. Once adopted, this Local Plan will replace the policies in the Newcastle-Under-Lyme and Stoke-on-Trent Core Spatial Strategy (adopted 2009) and the saved policies of the Newcastle-Under-Lyme Local Plan (adopted 2003). Appendix 2 of the Local Plan consultation document outlines the list of previously adopted policies that will be retained or replaced.

In principle, National Highways supports the vision and objectives set out in the Regulation 19 Draft Local Plan which aim to deliver the growth in a sustainable manner.

Housing and employment requirements

Based on our review of the Regulation 19 consultation, we note that the Final Draft Local Plan outlines a minimum requirement to deliver 63 hectares of employment land and 8,000 dwellings (400 dwellings per annum) over the plan period of up to 2040 as stated in the 'Policy PSD1: Overall Development Strategy'. We welcome that the housing and employment requirement have primarily been determined using a Housing and Economic Development Needs Assessment (HEDNA) in 2024, which in this case is expected to provide a higher housing demand when compared against the Government's standard method.

We acknowledge that a Sustainability Appraisal (SA) process has been undertaken to evaluate the different growth options considered, assess the impacts and identify the residual effects based on the social, economic and environmental parameters.

As outlined in Table 2 of the Final Draft a total of 8,663 dwellings are planned to be delivered over the plan period of up to 2040 to meet housing demands. This also includes a supply buffer of around 8.3% to address any potential delivery challenges. We acknowledge that the supply also factors in the windfall allowance estimated based on the Council's Strategic Housing Land Availability Assessment (SHLAA), historical trends, and future projections.

Policy SA1: Site Allocations indicates that a significant portion of the housing supply will be delivered through strategic allocations. When comparing the allocation sites included in the Regulation 19 consultation against those set out in the Regulation 18 consultation, we note some minor changes in the scale of growth at individual sites, with a few sites being removed and others added. However, the total housing growth from all strategic allocations remains at 4,512 dwellings. The table below outlines these changes (tables included in the attachment)

In the case of employment supply, we note that AB2 (Land at M6 Junction 16) and KL15 (Land at Barkers Wood, Keele) are key strategic sites contributing significantly to meet the employment needs.

Sustainable transport

We acknowledge that the Final Draft Local Plan has focussed on decarbonisation policies such as 'Policy CRE 1: Climate change' and 'Policy CRE 2: Renewable energy' to address climate change impacts by reducing carbon emissions. This also includes developing energy-efficient buildings, designing to BREEAM Excellent standards, optimising water use, adopting water conservation measures, and utilising renewable or low-carbon energy sources.

'Policy IN2: Transport and Accessibility' emphasises that new developments must provide access through sustainable transport modes to protect the integrity of the highway network. The Council will work with developers to ensure that the proposals contribute to a transport network that is accessible, efficient, and safe. We support this policy and acknowledge that developments likely to generate significant traffic will be required to produce Transport Assessments and Travel Plans, in accordance with the requirements set out. We appreciate that focus is also given to developments that facilitate sustainable movement of freight traffic.

'Policy IN4: Cycleways, Bridleways, and Public Rights of Way' highlights the importance of enhancing walking, cycling, and public transport facilities within the Borough.

We welcome these policies and note that these align with the expectations set out in the National Planning Policy Framework and National Highways' Net Zero Strategy.

Transport Evidence Base

Considering the scale and location of the allocations included in the Draft Final Local Plan, we expect impacts on the SRN in the area either independently or cumulatively.

Strategic Transport Assessment (document reference ED011)

We acknowledge that a Strategic Transport Assessment (STA) dated July 2024 has been prepared using the North Staffordshire Multi-Modal (NSMM) transport model to assess the likely traffic impacts of the site allocations proposed in the Regulation 19 consultation. We note that the model has been run for the following five scenarios in the forecast year of 2040.

Based on our review of the STA, we have the following comments to make:

Section 4.5 of the STA states that while the model emphasises the use of pre/post-COVID data, we note that accident data for the years 2018-2022 includes COVID data with relatively lower traffic flows and possibly fewer accidents. How has the impact of COVID been taken into account?

Section 5.3 of the STA states that the 2015 NSMM model is overestimating the flows by 26-28% when compared against 2022/23 observed WebTRIS data. It also notes that only 15-35% of counts pass in this validation exercise. Despite this shortcoming, model forecasts for 2040 were proposed to be used to inform future testing, which National Highways agreed to as it presents the worst-case scenario with overestimation of the traffic.

Section 7 provides details of the reference case model development, but note that finer details of the method applied are missing. We therefore have the following queries relating to this section:

- Does this scenario include constraining other local authorities to NTEM/TEMPro?
- Does this scenario include any committed and under-construction developments within the local plan area?
- What is the background growth percentage between the base year and the forecast year 2040?

Regarding Figure 7-1, we are unable to find the basis for changing the junction delay definitions for slight, moderate, and severe delays from what was mentioned in the minutes of the meeting dated 15th May 2024. At present, delays of up to 3 minutes at junctions are reported as slight which is arguable.

Based on the model outcomes, improvement measures to enhance public transport connectivity and infrastructure schemes on the local highway network are proposed in the STA. We also note that a detailed junction assessment will be undertaken for M6 J16 using a VISSIM model to accurately assess the traffic impacts of the AB2 allocation.

Regarding Section 8.3.2, bullet 1, we interpret that the new junction is the access to site AB2. Thus, we are surprised that the design of this new junction would still lead to 120-180 seconds of delays in the PM. A new access arrangement should work without that much stress.

We request that a summary table with delays (absolute numbers in seconds) at each of the approaches be prepared and shared with National Highways for M6 J16 and the new junction on A500 for site AM2. This is so we can understand the changes in delays between the base, reference case, and proposed scenarios.

We request that the basis for the 10% reduction in car users for the area around site AB2 set out within Section 8.6.6.1 be supported by further evidence.

We also request further details on how much total demand (in PCUs or vehicles) has been removed from the original matrix. Has a preliminary assessment been undertaken on the frequency of bus service that would be required to cater to that demand during peak hours to verify that this is a feasible option?

Regarding Section 8.6.3, while we do not have an issue with the bespoke approach to testing M6 J16 within VISSIM, considering that the NSMM is overestimating the traffic, the use of incremental addition of the difference from the NSMM may lead to an underestimation of traffic at this junction due to large delays in the NSMM reference case scenario. There is a possibility that any additional traffic from the AB2 site may divert to local or unrealistic routes within NSMM.

We therefore request that traffic flow distribution Select Link Analysis plots from site AB2 be shared with National Highways to verify that the routes assigned in the model are reasonable before being used for incremental addition for microsimulation assessment.

We also request that observed base and modelled reference case data be presented in a similar format as Table 8-6 for National Highways to understand the absolute traffic growth at each of the approaches.

National Highways Previous comments

While we are happy with the suggested incremental change in flow and delays analysis for 2040 forecast year models, we must establish a robust do – minimum reference case scenario developed using the base year model.

We note that our previous query dated May 2024 remains unanswered: “The further turning count comparison tables for the M6 J16 model are appreciated and provides comfort that many movements (particularly the A500 East approach) match the 2015 model. However the turning proportions provided for the M6 South to A500 East movement are of concern as these look significantly different to those that were modelled. National Highways would like to understand if there are any explanations of why these differences have occur and particularly why the model identifies such low percentage of car movements?”

STA Comments Summary

In summary, the modelling work to date is based on the NSMM model, which was previously approved by the DfT for other schemes. However, present-day validation using 2022/23 data shows that the model is overestimating traffic and not validating well. Hence, a bespoke approach is applied to assessing M6 J16, while the rest of the strategic assessment uses the forecast 2040 NSMM model which is still believed to be the best tool available. Analysis provided shows that parts of the A500 and junctions along it will be stressed by 2040 and that the level of stress will increase with the local plan. Strategic allocation sites tested will lead to some congestion but this would not lock out the network. The STA and IDP mention the possibility of developers' contributions for various infrastructure schemes including a new bus service along site AB2 among others that could potentially bring congestion levels down to a more comparable level with the reference case scenario, which should be acceptable.

We request responses to our queries above but are hopeful that the Local Plan can work with some support from the developers to mitigate any impact on the SRN.

Infrastructure Delivery Plan (IDP)

	<p>A total of 28 transport development schemes are listed in Table A.1 of Appendix A of the IDP to enhance the transport network and promote sustainable transport. The schemes that are of interest to National Highways are:</p> <p>1. T9 (improvements between M6 J13 and J15) - part of the RIS 2 scheme</p> <p>2. T14 to T20 schemes</p> <p>We note that the finalisation of these schemes is subject to undertaking detailed junction capacity assessments. We appreciate that the list of potential allocations that are likely to impact the SRN has been included.</p> <p>T14 specifically mentions a "Potential mitigation scheme involving widening and an additional lane at the gyratory on M6 J16. VISSIM modelling work is currently ongoing, and the need for any potential mitigation measures can be confirmed after the completion of a detailed capacity assessment as part of the planning application stage." It should be noted that there is no confirmed scheme from National Highways perspective at the moment, and we seek confirmation as to whether such a scheme is included in the Local Plan assessment within Scenario 5.</p> <p>We note that the funding mechanism to implement these mitigation schemes including T14 will likely be through developer funded Section 278 agreements. Considering that there could be cumulative impacts from different allocations in the area, a Section 278 agreement is likely to result in a piecemeal approach to the delivery of the improvement works. We would welcome some clarity on why a Section 278 agreement is preferred over a Section 106 agreement for the funding mechanism in this case.</p> <p>Duty to Cooperate</p> <p>We note that a Duty to Cooperate Interim Statement of Compliance has been submitted as part of the evidence base alongside the Final Draft Local Plan. We commend the Council's approach to collaborating with neighbouring local authorities, stakeholders, and other bodies to address issues related to local authority boundaries. This collaborative effort will help ensure that all parties' interests are considered and that a comprehensive solution is developed.</p> <p>National Highways is committed to working with Newcastle-Under-Lyme Council to develop and draft a Statement of Common Ground (SoCG) to address any strategic cross-boundary issues and reach an agreement on how the traffic impacts from the allocations identified in the Local Plan are to be dealt with. We understand that a final version of the Duty to Cooperate will be prepared to support the submission version by December 2024.</p> <p>Once again, National Highways appreciates the opportunity to comment on the Final Draft Local Plan Regulation 19 consultation and looks forward to working collaboratively with the Council to support the development and adoption of the Local Plan for Newcastle-Under-Lyme.</p>

Title	Policy PSD1: Overall Development Strategy
Consultee Family Name	Scott
Consultee Given Name	Carl
Q4 Part of document	Policy
Q4 Policy	PSD1
Q6 Details	<p>1.1 Audley Community Action Group (PAPG) is a community interest company. The CIC exists to protect and enhance the Green Belt in the civil parish of Audley, with over 1,300 supporters.</p> <p>1.2 We strongly object to the high number of houses planned for the borough. Also, the allocation of sites AB12, AB15 and AB33 in the Local Plan. We do not believe the overall housing figures, nor the site selections are sound, they can neither be justified nor is it likely to be effective. The grounds for the exceptional case for removing the land from the Green Belt have not been met.</p> <p>2.0 PSD1</p> <p>2.1 The housing target is too high and will negatively impact on the weaker housing markets in the borough and nearby settlements. It will also reduce the amount of valuable agricultural land in the green belt.</p> <p>2.2 The following tables, with numbers taken from ONS, show that both population growth and households growth are historically low in the borough (see attachment)</p> <p>2.3 The Local Plan has set a target of 8,663 new dwellings over a two decade period. Council tax records indicate that there are 57,627 dwellings in the borough, so the target is for a 15% increase over a two decade period. This will undermine the weaker housing markets in the borough and nearby settlements.</p> <p>2.4 The cost of housing in the borough is low by national standards (ONS figures for 2023 show that the average earnings/house prices ratio is 5.52 in the borough and 4.12 in Audley. This compares to the national figure of 8.14).</p> <p>2.5 ONS figures comparing 2011 to 2021 show that the earning/house price ratio has been rising much slower in the borough compared to region and England (see attachment)</p>

	<p>2.6 Looking at some demographic data (which is ignored in the consultants reports) we can begin to understand why the population is not increasing. The table below shows the data taken from Nomis. For the years 2018 to 2021 the table shows live births and the issuance of national insurance numbers (NINOs), usually to migrants and the number of deaths. This shows that in 2020 and 2021 deaths outstripped births easily and hence population growth has been driven overwhelmingly by inward migration (see attachment)</p> <p>2.7 In the borough, there is a problem of under occupation (with an aging population) and empty properties. Adding more homes is only likely to worsen the over-supply and to draw in better off residents from Stoke-on-Trent, undermining the city's regeneration policies.</p>
Q7 Modification	Please see attachment
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	To illuminate the issues raised by further explaining our concerns, the reasons for them and what we would like changed.

Title	Policy PSD1: Overall Development Strategy
Consultee Company / Organisation	Audley Community Action Group
Consultee Family Name	Roberts
Consultee Given Name	Gary
Q4 Part of document	Policy
Q4 Policy	AB2
Q5 Sound	No
Q6 Details	<p>1.1 Audley Community Action Group (PAPG) is a community interest company. The CIC exists to protect and enhance the Green Belt in the civil parish of Audley, with over 1,300 supporters.</p> <p>1.2 We strongly object to the site AB2/AB2A being included in the Local Plan on the grounds that it is not sound, it can neither be justified nor is it likely to be effective. The grounds for the exceptional case for removing the land from the Green Belt have not been met.</p> <p>1.3 Consequently, AB2/AB2A should be removed from the Local Plan.</p> <p>2.0 ECONOMY</p> <p>2.1 The Newcastle Under Lyme Housing and Economic Needs Assessment Further Update of April 2024 (Turley) stated, at 8.15, that "between 43.1 ha and 83.0 ha of employment land could be needed throughout the borough between 2023 and 2040." This is based on an ambitious growth scenario significantly higher than the 63 ha upper limit indicated by the earlier HEDNA. It is noted that the Local Plan has stated in PSD1 that a minimum of 63 hectares of employment land is needed (turning the HEDNA maximum requirement to a minimum requirement).</p> <p>2.2 It further stated by Turley, at 8.22, that "This report's modelling suggests that there is unlikely to be surplus labour to support job growth beyond the baseline forecast."</p> <p>2.3 Yet the Local Plan is proposing 104.6 ha of employment land BW1 (6.499 ha), CT20 (7.51 ha), KL13 (11 ha), TC45 (0.29 ha), TC7 (1.63), KL15 (13 ha) and AB2 (22 ha), as outlined in Table N10 of the Regulation 19 Sustainability Appraisal Report of July 2024.</p> <p>2.4 What is more, the LP proposes to remove 80 ha from the Green Belt at AB2. Both the SHELAA and Reg 18 documents stated that the 70 ha site can accommodate 54.38 ha of employment land (with 15.62 ha for mitigation, etc). Since then, the site has been increased to 80 ha (AB2A). On the same proportions as at the Reg 18, the site has 61.76 ha of employment land and 18.24 ha of non-employment land for roads, lorry park and mitigation (the developers have noted that the lorry park will be 1.8 ha and the proposed strategic open space will be about 3.6 ha, both easily accommodated in the 18.24 ha).</p> <p>2.5 This means that the site will lead to an imbalanced Local Plan with 39.76 ha of employment land in excess of the 104.6 ha identified in the Local Plan and 61.36 ha above the highest figure that Turley's identified as needed in its April 2024 report.</p> <p>2.6 The Local Plan makes vague references to a sub-regional employment site but does not back this up with any details. Given that there are high employment rates in both the borough and adjacent authorities, and given that Turley has noted that "there is unlikely to be surplus labour to support job growth beyond the baseline forecast", any such site would need to draw employees from a far wider area (as the site promoter's agents, Hatch Regeneris, have stated "At a distance of one hour's commute by road, a Junction 16 location has access to an estimated population of 9 million spanning the southern side of Greater Manchester, Cheshire, the northern area of the Birmingham city region and the Black Country, the wider Potteries area and Derby."). This is not sustainable and will create more disbenefits to the borough than any benefits.</p> <p>2.7 Competing and underused employment sites in the area do underline how ambitious the 83 ha figure is (let alone 104.6 ha or the reality of 144.36 ha that includes the extra 39.76 ha of employment land on site AB2/AB2A). Neighbouring LPA employment sites that are nearby include Radway Green Brownfield (10 ha), Radway Green Extension (25 ha), Radway Green North (12 ha), Basford West (22ha) and Basford East (19 ha). Many of these sites are not yet fully developed or are vacant (see attachment)</p> <p>2.8 Indeed, a brief survey of empty employment sites within 10 miles of AB2/AB2A site show high vacancy rates (see attachment)</p> <p>2.9 In addition, there are potential small sites not included in the Local Plan, which raises the question of the efficacy of the site selection process. An example being this site (see attachment)</p>

3.0 GREEN BELT

3.1 The ARUP Green Belt Site Review dated 16th July 2024 recommended excluding the sites from the process on the grounds that "Development would however represent a significant encroachment into the countryside and therefore removal of the site from the Green Belt could harm the overall function and integrity of the Green Belt" (pages 28 F2 and F4), yet the Borough Council has ignored this recommendation. As can be seen from the maps below, in terms of its importance to the integrity of the Green Belt, this site is in a strategically important gap between the urban areas of southern Cheshire East and the urban areas of north Staffordshire (see attachment)

3.2 This site has been found to make a strong contribution to the Green Belt in a previous review (Staffordshire County Council commissioned Audley Parish Green Belt Review V 2.4 conducted by Urban Vision Enterprise CIC in August 2022). This review has not been considered by the LPA.

3.3 AB2/AB2A will have a major adverse impact on the landscape according to the Newcastle under Lyme Landscape & Visual Appraisal of March 2023. The conditions in proposed Policy AB2: 9) "with roads, buildings or structures designed to ensure they are not intrusive in significant views from the surrounding area" and 13.19 "The height, scale and form of the development should reflect the character of the area ... The height of buildings should avoid breaking treed skylines" are not realistic and effective. The character of the area consists of small agricultural buildings and dwellings which are incompatible with industrial units and HGV parking. The promoter of the site has stated that it will include a 1m square feet big box warehouse, which will tower above trees. It also ignores the reality that many of the villages in the parish of Audley are on higher ground, looking down to the site. It is not possible to mitigate such a large site.

4.0 SUSTAINABILITY & IMPACT ON LOCALITY

4.1 Table N10 of the Regulation 19 Sustainability Appraisal Report of July 2024 gives a higher score to an alternative growth scenario (option 6d), which did not include AB2/AB2A. This considered option 6b (the one chosen by the LPA) at 104.6 ha, yet the reality is that it provides 144.36 ha of employment land. Therefore, its negative impact will be greater than that envisaged in that report. When one looks at the negative impact the site will have on both the borough and neighbouring settlements, it cannot be regarded as sustainable development

4.2 The following issues raised by Natural England in response to Reg18 have not been adequately addressed:

"If this site is considered for release and allocation the following should be taken into account:

Our mapping system shows that some of the site is priority habitat- Good quality semi-improved grassland. We refer you to paragraph 179 of the National Planning Policy Framework

(NPPF<https://www.gov.uk/government/publications/national-planning-policy-framework--2>).

Some of the site is best and most versatile land. See ALC report:

<http://publications.naturalengland.org.uk/publication/4792819662192640>. We refer you to paragraph 174b) National Planning Policy Framework

(NPPF<https://www.gov.uk/government/publications/national-planning-policy-framework--2>).

Potential for air quality impacts on designated sites. For example Midland Meres & mosses Phase 2 RAMSAR/ Oakhanger Moss SSSI. This site is 2.6km away and within 200m of the M6 and is one of the many sites that could be impacted by development at this location. We refer you to paragraph 175 National Planning Policy Framework

(NPPF<https://www.gov.uk/government/publications/national-planning-policy-framework--2>)" [summarised in the First Draft Local Plan Regulation 18 Consultation Report 2024 pg 142]

4.3 AB2/AB2A sites are working farms with grade 3a and 3b land. Much of the 3b land has been used to encourage greater biodiversity with the landowner receiving Government funds (map of schemes on this site below). This site goes against proposed policy SE13 to protect the best and most versatile land. There are sites with lower quality land in the other identified growth scenario options. It also goes against proposed policies SE7 biodiversity net gain and SE8 protection of specific species (which the schemes above are designed to protect) and still does not address the potential impact on Oakhangar Moss (see attachment)

4.4 The Regulation 19 Sustainability Appraisal Report of July 2024 (Pg N37) identifies major impacts on flooding and natural resources & waste. This conflicts with proposed policy SE3 flood risk management. The September 2022 SHELAA noted that the flood zones on site contributed to the site not being deliverable or developable.

4.5 There are very high levels of asthma and high blood pressure in Audley, well above both borough and national levels. The M6, A500 and rat running traffic through Audley and Signal End are highly likely to be strong factors here, particularly as traffic on the A500 is idling at peak times. As noted in proposed policy SE1 there is a "cumulative effect" on pollution, including air quality and noise. Whilst proposed policy PSD 6 will require a health impact assessment, it is felt that this should be undertaken before such a large amount of greenfield is taken out of the Green Belt and significantly higher traffic generated. After all, if the assessment shows that proposed uses on the site will result in unacceptably high adverse impacts, we will have lost 80 ha of Green Belt for no good reason.

4.6 Despite the proposed policy SE9 Historic Environment, the following issues raised by Historic England at Regulation 18 have not been adequately addressed: a need to "consider the impacts to nearby heritage assets including Audley Mill Grade II, Audley Conservation Area and heritage assets within." [First Draft Local Plan Regulation 18 Consultation Report 2024 pg 138] The high level of rat running at present, including unsuitable HGVs, is having a detrimental impact on the Conservation Area. Photos below illustrate the damage done by HGVs. This will be exacerbated if AB2/AB2A goes ahead, displacing more traffic onto the local roads (see attachment)

4.7 The inclusion of emergency access points and pedestrian access points on the narrow country lanes surrounding the AB2/AB2A site will have a detrimental impact on those lanes. Designating an access for emergency use only is very difficult to enforce (witness the large number of vehicles that illegally use the Sandbach Services service roads to access the A533). Also, people will use these roads to drop employees off at the pedestrian access points and some employees may, if running late, park up on the verges of these lanes to walk in. This will conflict with proposed policy IN4 Cycleways, Bridleways and Public Rights of Way as these lanes connect many Public Rights of Way (see map below). These lanes

	<p>are also widely used by walkers, cyclists and horse riders (there being only one Bridleway in the parish) for leisure and exercise (see attachment)</p> <p>4.8 Indeed, many businesses benefit from these rural lanes as visitors who use these lanes go onto local pubs and restaurants. There is a B&B and a dog "hotel" on these lanes, with horse riding establishments nearby. Proposed policy RUR1 rural economy seeks to protect and promote these businesses and conflicts with AB2/AB2A.</p> <p>4.9 Residents regularly experience long queues on the A500 at peak times. These queues often tailback to the Audley junction and, at times, have tailed back beyond the Talke junction (see attachment)</p> <p>Traffic regularly backs up beyond the Audley/Alsager A500 junction (often beyond the Cross Lane bridge) at peak times (see attachment)</p> <p>There are times when traffic backs up all the way from junction 16 of the M6 to the Talke junction A500/A34. Photographs taken from the Talke Road bridge.</p> <p>4.10 National Highways have stated that they recognise the problems but have not undertaken studies to ascertain the severity and thus the remedies: "We are aware of peak hour queueing on the A500(T). However, as there was a pinchpoint scheme in 2014/15 it has not reached the top of the priority list for further study." [in FOI response in attachment]</p> <p>4.11 The congestion at this junction was raised as a concern by Cheshire East Council, Audley Rural Parish Council, Alsager Town Council, Balterly, Betley and Wrinehill Parish Council and Barthomley Parish Council at Regulation 18. 4.12 Cheshire East Council identified the need to improve this junction in its Local Plan. However, due to the cancellation of HS2 amongst other things, it has now suspended plans to dual carriage the A500 west of the junction (see attachment)</p> <p>4.13 LUC's Infrastructure Delivery Plan of July 2024 recognises the problems at this junction: "3.34 The most immediate priorities (within the next 10 years, aligning with the third and fourth roads investment period (RIS3 and RIS4) identified are: Strategic improvements to M6 J15 to resolve congestion, improve safety and facilitate better flow of traffic on M6 and A500. This has been suggested for submission to RIS3." [pg 50]</p> <p>4.14 Aspinall Verdi's Strategic Employment Sites Assessment 2024 Update makes an assumption that there will be funds for junction 16 as a result of the cancellation of HS2: "6.9 The UK government has hinted that the £4.7bn earmarked for HS2 projects in Manchester and Leeds will now be redirected to transport initiatives in smaller towns and cities across the North of England and Midlands."</p> <p>4.15 It is clear from statements made by the Treasury that the Government's finances are in a poor state with many capital projects being cancelled. There is no HS2 pot of gold.</p> <p>4.16 National Highways has no current plans to improve junction 16 (Midlands capital projects below) (see attachment)</p> <p>4.17 As a result of the problems on the A500, many vehicles rat run through the villages in the parish. This will increase if AB2/AB2A goes ahead. The Ab2/AB2A site conflicts with the proposed policy IN2 where sites should a) "be located where travel can be minimised and are not car dependent ...e) Not cause unacceptable highway safety problems in relation to local traffic circulation ... f) not cause severe residual impacts on the road network, either direct and/or cumulative."</p> <p>4.18 From observation by residents, the following rat running routes have been identified (see attachment)</p> <p>4.18 We have commissioned a review of the Strategic Transport Assessment which follows and forms part of our representation on the Local Plan (see attachment)</p>
Q7 Modification	See attached representations
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	To illuminate the issues raised by further explaining our concerns, the reasons for them and what we would like changed.

Q5 DTC compliant	No
Q6 Details	<p>Draft Policy PSD 1: Overall Development Strategy</p> <p>Draft Policy PSD 1 sets a minimum housing requirement of 8,000 homes across the plan-period between 2020 to 2040: equating to an average delivery of 400 dwellings per annum [dpa]. This is above the figure derived from the standard method for assessing local housing need as detailed in the latest Housing</p>

and Economic Development Needs Assessment (2024) [HENA] prepared by Turley. This also presents an uplift compared to the Regulation 18 version of the plan which we understand is to take account of forecast job growth.

In accordance with paragraph 61 of the National Planning Policy Framework [the Framework] (2023), MHDL supports the delivery of housing above the standard method figure. However, we note that the Government has recently published an update to the standard method which moves away from a demographic-based approach using the 2014-based Sub-National Household Projections, and instead aligns with the current stock of housing in a particular area, with a further uplift to address affordability issues. The resultant figure (subject to consultation) for NuL is now 593 dpa, an increase of 193 dpa, or 48%, over and above the 400 dpa target in Policy PSD1.

Whilst it is marginally within the 200 dpa differential threshold set out in the draft Framework (July 2024) that would automatically require NuL Borough Council to revisit its housing requirement, it is nevertheless indicative of a radical change in housing policy from the new Labour Government.

Nevertheless, in light of this new evidence and to address the true level of need, we disagree with the scale of the uplift and consider that Newcastle-under-Lyme Borough should plan for a higher housing requirement for the following reasons:

- **Affordable housing need:** The PPG states that Local Planning Authorities [LPAs] may need to consider increases to overall levels of housing in order to help deliver the required number of affordable homes (ID: 2a-024). Compared against this delivery, the latest HENA (2024) identifies that to meet this need in full would require – in broad terms – the delivery of around 1,112 dpa (including market and affordable). It then goes on to state that if the Council plans for 400 dwellings per annum to support forecast job growth, even this would meet little more than a third of the evidenced need (para 5.22). Despite this, there is no consideration of whether the Council should seek to increase its housing requirement to help address those needs in accordance with the PPG. By planning for the minimum number of homes identified by the standard method, a considerable shortfall of affordable homes will accrue in the Borough over the plan period. This would manifest in significant real world negative socio-economic effects on both current and future residents across the borough. For example, people in need of affordable housing will not be able to access it in the first instance and those needing more suitable accommodation to meet their needs will continue to go with those needs unmet. More people would fall into affordable housing need because of upward effects on market housing prices, without a corresponding beneficial impact on income via the economic aspects of the plan. This could also result in drivers for unsustainable patterns of development, for example increased commuting, reduced social cohesion, and related environmental effects. Consequently, draft Policy PSD 1 fails to accord with the Framework (for example, paragraphs 15, 20, 60 – 62 inclusive) as it fails to deliver for affordable housing needs.
- **Job growth:** whilst we understand that the minimum housing requirement set by Draft Policy PSD 1 has been uplifted to take account of forecast job growth, we consider that this still does not go far enough. For example, evidence suggests that with a housing requirement of 400 dpa, then the employment land need would be 48.2 ha; however, the Council is actually allocating 63 ha. Indeed, Table 2 of the Council's Employment Spatial Strategy Topic Paper (July 2024), states that including the 48.9 ha of existing employment land supply with the potential strategic site allocations would bring the total employment land supply up to 104.6 ha. Consequently, draft Policy PSD1 fails to accord with the Framework (for example, paragraphs 15, 20, 60 – 62 inclusive) as it fails to demonstrate how the housing requirement figure can sustain the actual forecast job growth.
- **Potential unmet needs:** Turley has concluded in previous reports for the two Councils (both the 2015 Stoke-on-Trent and Newcastle-under-Lyme Strategic Housing Market Assessment [SHMA] and the 2017 SHMA Update) that the two authorities comprise a shared Housing Market Area [HMA]. Neighbouring Stoke-on-Trent is a city subject to the 35% uplift to the standard method; and needs to plan for a minimum of 704dpa (noting there may also be reasons for the city needing to plan for more homes than this minimum figure – for example, to support job growth in the city and meet affordable housing needs). We note that the PPG [ID: 2a-034] states that the 35% uplift in the standard method is expected to be met in the cities that it applies too. However, given the combined urban areas that both areas share, Newcastle-under-Lyme should be expected to help meet that need. Stoke on Trent has over the past couple of years, started to fail to meet its housing targets. Over the past three years, the City has delivered 463, 455 and 429 dwellings¹, below the outdated 2009 Local Plan target of 570 dpa, and well below the current standard method target of 704 dpa. Taking account of the emerging standard method, this would result in an increased target of 1,043 dpa. It would therefore be justified for Newcastle to accommodate any arising unmet need in-so-far as is possible, in line with the Framework (paragraph 35). As such we consider that draft Policy PSD1 fails to accord with the Framework (for example, paragraphs 15, 20, 60 – 62 inclusive) as it fails to properly consider unmet need in Stoke on Trent.
- **Past and projected housing delivery rates:** The PPG [ID: 2a-010], notes that previous levels of housing delivery previous housing delivery can be a reason to plan for more homes than the minimum number of homes needed (as derived from the standard method). In recent years, the Borough has recorded an average of 509 completions (between 2019/20 and 2021/22), with a peak of 630 completions in 2020/21: significantly above the current minimum local housing need. While delivery rates at these levels have only occurred in recent years, the Borough has and clearly can sustain higher levels of housing delivery as evidenced by recent completions. This represents another reason why the Council should look to plan above the minimum number of homes needed. Overall, given the reasons above the Council should reconsider its proposed housing requirement. This would be in the context of the Government objective to significantly boost the supply of homes (as set out in paragraph 60 of the Framework) and noting the aim to deliver 300,000 dpa nationally which requires more homes to be delivered than the standard method outputs nationally. Revisiting the requirement would ensure that at least a greater proportion of development needs – particularly for affordable housing – can be met while considering whether any adverse impacts of doing so would significantly and demonstrably outweigh the benefits

	<p>(paragraph 11b of the Framework) as tested through the SA process. It would also account and support for scenarios where job growth is above that currently forecast (i.e. more in line with previous forecasts).</p> <p>In considering the above, we consider draft Policy fails to meet the tests of soundness for the following reasons:</p> <p>1 It is not positively prepared – The strategy used to identify housing need does not correctly account for affordable housing need or forecasted job growth. It also does not properly consider cross boundary strategic planning in the context of persistent under delivery coupled with an increase in housing need as result of the emerging standard method in Stoke on Trent.</p> <p>2 It is not effective – the housing requirement will fail to deliver the required amount of affordable housing and the amount of housing required to sustain job growth.</p> <p>3 It is not consistent with national policy – it fails to afford with the Framework (paragraphs 15, 20, 60 – 62 inclusive).</p>
Q7 Modification	As such it is recommended that the minimum housing need figure set out in the draft policy is increased to take account of the evidence presented above.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	On behalf of our client, MHDL, we formally request to participate in hearing sessions associated with Draft Policy PSD 1, Draft Policy PSD 2, Draft Policy PSD 3, SA Section 5: Reasonable Alternatives, Draft Policy PSD 5 & Draft Policy MD29. We consider that our representation at the hearing sessions is necessary to ensure our representations above are taken into account for the draft Local Plan to be found sound.

Q4 Part of document	Paragraph
Q4 Paragraph number	3)Rural Centres p21
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>The paragraph sets out 6 rural centres, excluding the parish of Silverdale based on the methodology adopted in the Rural Areas Topic Paper (ED005). There is a decision to be made whether Silverdale Parish Council is a rural centre yet there is no evidence of whether and how Silverdale was excluded from the 6 centres.</p> <p>Furthermore, there is a case to be made for Silverdale Parish Council to be a rural centre on the grounds of historic culture as a key and original mining village for the region during early industrialisation. A detailed history of the origins of the settlement is available (Nixon 2018; see reference in the attachment) giving credibility to the nature of Silverdale as an original urban village from the industrialisation begun in the late 18th century.</p> <p>Silverdale Parish Council have explored this question and inserted comments about the special circumstances in its favour during the previous 2023 consultation but there is no record of the matter being taken up.</p> <p>Please note the current issue that a parish which had about half the land use within the green belt will potentially lose 25% of the total Green Belt acreage under the current Local Plan land allocation scenario.</p>
Q7 Modification	Classify Silverdale Parish Council as Rural and Local Centre within the Settlement Hierarchy.

Q6 Details	<p>These representations are made in response to the Regulation 19 consultation on the final draft of the Newcastle-under-Lyme Local Plan 2020 – 2040. The representations are made by Pegasus Group on behalf of Araripe Limited and relate to their land interest at St Martins Road, Talke(hereafter referred to as the “Site”). The Site is greenfield land situated to the south of Talke. With regards to the Site, these representations should be read alongside the attachment.</p> <p>Policy PSD 2 sets out the overarching settlement hierarchy for the Borough, with Newcastleunder- Lyme as the main Strategic Centre. Urban Centres, Rural Centres, and Other Settlements and Rural Areas are also identified. Within the Urban Centres category, it is made clear that Kidsgrove incorporates Talke and Butt Lane, and that this is a key location for growth within the Borough. The Sustainability Appraisal (July 2024) confirms that Kidsgrove is a sustainable location for further growth, where development can have positive impacts on climate change, transport and accessibility, physical and mental health and wellbeing, and equality. Araripe Limited strongly support this policy, which is considered to be justified.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	Sufficient land for housing should be planned for to meet the identified need for this within the Borough. Araripe Limited strongly support the allocation of Site TK17 for residential development, but several amendments are required to make Policy TK17 sound, as set out in paragraph 3.19 of the accompanying written representations. We would welcome the opportunity to participate in the hearing sessions to set these out, as well as to draw attention to the other matters which need to be addressed to ensure soundness elsewhere in the final draft plan, whilst emphasising site TK17's suitability, availability, and deliverability, being an optimum and sustainable location for high-quality residential development.

Title	Policy PSD2: Settlement Hierarchy
Consultee Company / Organisation	Jones Homes & Renew Land Baldwins Gate Ltd)
Consultee Family Name	Jones Homes & Renew Land Ltd
Agent Company / Organisation	Stantec
Agent Position	Planner
Agent Family Name	Connell
Agent Given Name	Lydia
Q4 Part of document	Policy
Q4 Policy	PSD2
Q6 Details	<p>These representations are submitted by Stantec on behalf of Jones Homes (North West) Ltd (Jones Homes) and Renew Land Baldwins Gate Ltd (Renew Land), together known as "the Promoters", in response to the Final Publication Draft of the Newcastle-under-Lyme 2020- 2040 ('Local Plan') at Regulation 19 published by Newcastle-under-Lyme Borough Council (NuLBC) ('the Council') in August 2024. Please also see attached representations.</p> <p>Settlement Hierarchy and Distribution</p> <p>The adoption of a clear adoption of a clear settlement hierarchy within the NuLLP is supported, as is the recognition of the role that Rural Centres can play in meeting the development needs of the Borough as a whole. We agree that maintaining the role of the rural centre by securing their ongoing vitality and viability is fundamental to their continuing role as well as the health of their communities and surrounding hinterlands.</p> <p>Jones Homes and Renew Land support draft Policy PSD2: Settlement Hierarchy which seeks to maintain the role and function of Baldwins Gate as a Rural Centre.</p> <p>Policy PSD 2 states, in relation to Rural Centres: "Rural Centres provide a role in service provision to the local population and contain several essential services and facilities in order to meet the day to day needs of residents. The Rural Centres will meet some of the development needs of the Borough, commensurate with their role as villages and with the type, density and design of development seeking to protect and enhance their rural and historic character. It is recognised that there are differences between these villages in terms of their sizes and available facilities and therefore the scale of development in each area should be relative to its role, function and infrastructure capacity. The Rural Centres are Audley and Bignall End (joint), Baldwins Gate, Betley and Wrinehill (joint), Keele Village (with University Hub), Loggerheads, Madeley and Madeley Heath (joint). The University Hub is expected to receive a balanced level of growth commensurate with its role as a strategic hub whilst recognising its rural role and function."</p> <p>We support the above policy that recognises that there are differences between villages in terms of their sizes and available facilities and therefore the scale of development in each area should be relative to its role, function and infrastructure capacity.</p> <p>Draft policy PSD3 seeks therefore to distribute development throughout the settlement hierarchy. The supporting test to PSD3 sets out, however, that the figures presented in this policy are intended as a guide and are neither a ceiling nor a specific target. We consider that whilst figures set out within PSD3 should certainly not be a ceiling, delivery of those number of dwellings is essential to the borough meeting its housing needs as a whole. We consider, therefore that PSD3 should require that the level of development it seeks to distribute should be met as a 'minimum'.</p> <p>The resulting Distribution of Development the Rural Centres is set out as follows:</p> <ul style="list-style-type: none"> • Audley and Bignall End (joint) in the order of 250 new homes • Betley and Wrinehill (joint) and Madeley and Madeley Heath (joint) in the order of 250 new homes • Loggerheads in the order of 450 new homes • Baldwins Gate in the order of 250 new homes • Keele and Keele University (joint) in the order of 800 new homes

The Local Plan notes that commitments and completions since the start of the Plan period will contribute towards the indicative targets outlined above and to maintain an available supply of housing land. The broad level of development proposed for those settlements will be delivered through a combination of Local Plan site allocations and through existing housing land supply.

We have fundamental objections to the Local Plan's approach to the distribution of development to the Rural Centres. We will demonstrate below that the Local Plan does not have a robust, consistent or transparent methodology for determining the level of growth distributed to each settlement. We conclude that the eventual distribution of growth which has been landed on has been based loosely on a perceived availability of housing land supply at those centres which, again, has not been assessed in a robust, consistent or transparent way. We conclude that the Local Plan, in this regard does not pass any of the tests of soundness set out within the NPPF.

The supporting text to PSD3 at 5.15 of the Local Plan states that the proposed distribution of development for the Borough has been established from: "assessing reasonable alternative options for the distribution of development informed by previous Local Plan consultation stages, the evidence base and Sustainability Appraisal (SA). The process undertaken to establish a development distribution and the consideration of site options is set out in the Plan Strategy Topic Papers, Site Selection Paper and SA Report."

In the first instance, disappointingly, there is no one source of truth for how the above distribution model has been arrived at or how a methodology has been applied. The closest document to providing an explanation is the Housing Spatial Strategy Topic Paper [ED031] which seeks to show the evolution of the distribution model from the Regulation 18 draft of the Local Plan. Paragraph 5.18 of that document sets out that, at Regulation 18, "Housing site options for these settlements were considered in relation to broad distribution factors, settlement hierarchy and the merits of individual sites through the site selection process."

For the rural service centres, paragraph 5.86 – 5.88 explains:

In accordance with strategic factors it is appropriate to primarily direct growth to the strategic and urban centres. As part of a balanced distribution of development a proportionate level of growth is also appropriate in the rural service centres commensurate with their role and function including the range of key facilities and infrastructure. The Regulation 18 preferred spatial strategy identified a proportionate quantum of development for the rural service centres that combined with the strategy for the strategic and urban centre provided for LHN.

A site selection process was also undertaken for the rural service centres consistent with the broad distribution factors and settlement hierarchy to direct an appropriate scale of growth to these settlements. Bottom-up considerations and the merits of the sites have then been considered informed by site specific SA, key evidence studies and ongoing stakeholder engagement to identify a shortlist of preferred sites. It is considered that there are no further reasonable alternative growth scenarios for the rural service centres. Scenarios identifying higher levels of growth in these settlements would be inappropriate in relation to broad distribution factors, settlement hierarchy and the availability of key facilities / infrastructure. The most sustainable sites for these settlements have been identified through the site selection process. It is considered that there are no further reasonable alternative growth scenarios to appraise for these settlements.

In essence then, ED031 sets out that the Reg 18 Local Plan sought to distribute development between the Rural Centres (having decided what the overall level of growth would be) in accordance with the suitability of the rural centre for growth (based on services and facilities).

The Rural Area Topic Paper (RATP) (2024) sets out the methodology for establishing the position of the rural settlements. Table 3 of the RATP sets out the sustainability of settlements and shows that Baldwins Gate and Loggerheads are the only Rural Centres that meet all sustainability criteria for meeting the day to day needs of their populations on their own, without the reliance of being considered alongside a nearby settlement.

Notwithstanding the above, and without any reasonable explanation the Reg 18 Local Plan failed to allocate any development towards Baldwins Gate. Our Representations to the Reg 18 Local Plan consultation (at Appendix 2) set out the reasons that approach was unsound and stressed the importance of providing a proportionate level of growth to the Rural Centres to maintain their vitality and viability. The Reg 18 Local Plan did set out that a Planning Appeal at Baldwins Gate Farm was due to be determined at Inquiry following the consultation on the Local Plan and that the LPA would revisit its position on allocating development to Baldwins Gate subject to that appeal. That appeal was subsequently allowed and that site has subsequently been allocated for development.

The failure of the previous local plan to allocate any development towards Baldwins Gate despite it being demonstrated as equally the most sustainable Rural Centre within the borough demonstrates that the conclusions reached by the Local Plan (not to allocate growth) were not reflective of the approach reported to be being taken within the Plan Strategy Topic Paper. Indeed, the approach to Site Selection is completely absent insofar as the only Site which was to be allocated was one which was successful at appeal.

Contrary to paragraph 5.15 of the draft Local Plan, the Sustainability Appraisal (SA), Site Selection Methodology or other parts of the evidence base do not provide any further information as to how the decision has been made to proportion development among the rural centres. The resulting distribution of development does not bear out a logical approach to distribution on any one of, or combination of the factors set out to have been considered within ED031; or if it has, it has not been presented transparently to the reader of the plan or its evidence base.

This lack of evidence based approach is borne out in the disparities between the different Rural Centres and how growth has been distributed amongst them.

Notwithstanding having identical settlement status, and sharing an equivalent number of services and facilities, draft Policy PSD3 seeks to apportion some 450 dwellings to Loggerheads over the plan period in comparison to 250 dwellings at Baldwins Gate. We consider that failing a more robust methodology than the Council has provided, the Local Plan should be bound to at least a fair and even distribution of development across its sustainable settlements in line with their access to services and facilities; i.e. Baldwins Gate should at least be apportioned 450 homes in line with Loggerheads.

Notwithstanding the lack of methodology for the distribution of growth having been provided within the evidence base for the Local Plan, it can be fairly readily deduced that the eventual quantum of development for each Rural Centre has been arrived at as a result of the number of sites (and their capacity) that the Council considered was available and appropriate to bring forwards. In the case of Baldwins Gate, that is certainly true where the disaggregation of development towards it has only happened as a result of planning permission having been granted at appeal; as made clear by the Reg 18 Local Plan and the Plan Strategy Topic Paper [ED031].

We do not consider it inherently unsound to distribute development across a range of settlements based on, in part, the availability of suitable sites for development. However, if that is the approach that a Local Plan is to take, it must be soundly done and, as such, must be positively prepared, justified, effective and compliant with national policy. Notwithstanding those tests, it must also be done fairly and with transparency such that the reader (including a Local Plan Inspector Examining the Plan) can see and understand the process which has been undertaken.

Such an approach has not been executed in the case of the NuLLP. Putting to one side that the methodology purported within the evidence base (distribution commensurate with the role of the settlement) doesn't reflect the one that has been taken (distribution based on site availability), the approach to Site selection is not considered to be robust or transparent.

The Site Selection Methodology (SSM) Report within the Council's evidence base at paragraph 2.1 sets out the stages to site selection as: The site selection process comprises several stages. There may be instances where sites have had to move between stages on an iterative basis. The stages are: -

Stage 1: establish a pool of sites to consider through the Strategic Housing and Economic Land Availability Assessment (SHELAA)

Stage 2: First site sift using the list of SHELAA to generate a list of sites for further consideration through the process

Stage 3: Decision point, to determine if there is there a need to continue with site selection process based on alignment with the distribution of development and relationship to the settlement hierarchy of centres".

Stage 4: Site Assessment using SA (Sustainability Appraisal), HRA (Habitats Regulations Assessment) and appropriate relevant evidence.

Stage 5: Evaluation and initial recommendations - have enough non-Green Belt sites been identified in the centre to meet the distribution of development. If development needs have not been met through: -

- Allocation of non-greenbelt sites
- Discussions with neighbouring authorities to meet the Borough's need
- There are exceptional circumstances Then consider Green Belt sites for allocation

Stage 6: Public consultation and input from statutory consultees

Stage 7: Final site sift and site selection (our emphasis)

We have no material objection to Stage 1 and Stage 2 of the SSM as a mechanism; we consider that it is appropriate for the SHELAA (informed by the call for sites process) to inform the pool for sites to be considered. Taking Baldwins Gate as an example, some 9 sites were identified in that process in Baldwins Gate and a further 4 within the surrounding area. All were sifted in to Stage 3.

The fundamental objection we have with the SSM is in Stage 3 which, as above, is stated

as: "Stage 3: Decision point, to determine if there is there a need to continue with site selection process based on alignment with the distribution of development and relationship to the settlement hierarchy of centres"

In essence, the SSM states that once it has found enough sites to meet the required number of dwellings within a centre, it can take the decision to discontinue the search for sites.

In the case of Baldwins Gate specifically, this is a completely circular argument and self fulfilling. Table 35 of the SSM sets out the summary position for Baldwins Gate that there is a 'target of 250 dwellings' and 49 committed dwellings within the settlement.

At Stage 3 (paragraph 10.1-10.3), it sets out: "10.1. Table 35 (above) highlights that commitments and completions are insufficient to meet the indicative development requirements for Baldwins Gate Therefore, it is necessary to continue with the site selection process.

However, site LW74 (Baldwins Gate Farm, Newcastle Road) has planning permission granted post 31 March 2023 at appeal for 200 dwellings within a community parkland. The appeal decision, alongside planning permissions and completions in Baldwins Gate are considered to be in the order of 250 dwellings."

The SSM suggest that, co-incidentally, the distribution model has a 201 dwelling deficit which has been filled by development of 200 dwellings won at appeal and therefore, the SSM can end its search for further sites for development. However, as set out above, we know from the previous Reg 18 Local Plan, and the lack of other methodology provided, that the figure of 250 dwellings has been arrived at precisely because there was an appeal decision which allowed 200 dwellings (in addition to 49 dwellings which are existing commitments).

As above, this methodology is entirely circular, is not based on a robust methodology and is not planned.

Indeed, as set out below, even if the above circular methodology was applied and development was to be allocated to the Rural Centres based only on the Council's preferred Sites, that selection methodology (for the comparison and selection of sites) must, in itself, be robust. Again, we consider that no such fair and transparent process has been undertaken, particularly with regard to Baldwins Gate.

Indeed, as set out within both the SHELAA, the SSM and the Sustainability Appraisal, the land at Baldwins Gate Farm (which has been allocated) does not perform materially differently to other Sites which have been sifted into the SHELAA by the Council's assessment. Indeed, the Council itself refused development for Baldwins Gate Farm. We provide a commentary on that process below.

Jones Homes' site has been considered within the Site Selection Report (informed by the SHELAA) under reference LW38. However, this was discounted from consideration for allocation based on "concerns over access arrangements into the site and the loss of agricultural land."

In terms of the loss of agricultural land, the Baldwins Gate Farm appeal was allowed despite the site being located on Grade 2 and 3 agricultural land. Jones Homes' site is on exclusively Grade 3 land.

Moreover, that Grade 3 land is predominantly 3b land which is not Best and Most Versatile land and prevents the Site as a whole from being farmed as BMV (as demonstrated within the Agricultural Land

	<p>Classification Report submitted with Jones Homes pending planning applications). Loss of agricultural land should not be seen as a barrier to development.</p> <p>In terms of access concerns expressed, no detail is given as to what these relate to specifically. However, transport assessment work undertaken by Jones Homes in support of the pending planning application has shown that the Site can be accessed safely.</p> <p>Responses from the LHA in relation to the planning application demonstrates the same.</p> <p>Furthermore, the recent appeal decision at Baldwins Gate Farm showed that there is the potential for safe access to be delivered in this part of the settlement based on existing highway capacity. The development of the Jones Homes' site offers the opportunity to provide a more recognisable gateway into the settlement from the west and as such increase highway safety further.</p> <p>As such, not only is the Jones Homes site is an entirely suitable site for allocation within the NuLLP (and would assist in meeting the established spatial strategy of the Plan) we consider it performs equal or better than the Site at Baldwins Gate Farm which was allowed at appeal and other comparison sites assessed within the SHELAA.</p> <p>As such, the site selection methodology needs revisiting in order to accurately assess Jones Homes' site and conclude that it is appropriate for allocation.</p>

Title	Policy PSD2: Settlement Hierarchy
Consultee Company / Organisation	Keele University
Consultee Family Name	Cain
Consultee Given Name	Jonathan
Agent Family Name	Plant
Agent Given Name	Clare
Q4 Part of document	Policy
Q4 Policy	PSD2
Q5 Legally compliant	No
Q5 Sound	No
Q6 Details	<p>Policy PSD2: Settlement Hierarchy</p> <p>Policy PSD2 indicates that the Rural Centres in the Borough comprise; Audley and Bignall End (joint), Baldwins Gate, Betley and Wrinehill (joint), Keele Village (with University Hub), Loggerheads, Madeley and Madeley Heath (joint).</p> <p>It is firstly noted that this designation does not mirror the terminology used in the updated Policies Map published at this stage, which identifies a 'Proposed Development Boundary' around the majority of the University campus. The use of terminology relating to Rural Centre and Proposed Development Boundaries should be consistent across all documents to avoid confusion in understanding the plan as a whole.</p> <p>Notwithstanding this, of the six locations within the Emerging Plan identified as Rural Centre Areas, five comprise established service villages performing a traditional residential-led function for the community. The Keele University campus area is identified jointly within the policy with the Keele village area, despite the two areas being defined by two separate boundaries on the Policies Map. The campus area comprises education and research-related employment functions, a purpose-built range of residential accommodation for a largely transient student population, and other services and facilities to meet the specific needs of the University. It does not therefore share the same characteristics of the other Rural Centres, however this is not recognised within the wording of Policy PSD2.</p> <p>It is not considered that given the unique characteristics of the University campus when compared with other Rural Centres, that Policy PSD2 adequately addresses the unique requirements of the University over the Plan Period. The policy should therefore be revised to ensure the role and status of the University is adequately recognised and the policy is appropriately worded to enable the growth of the university as required by the Strategic Objectives of the emerging Local Plan.</p>
Q7 Modification	<p>Recommendation</p> <p>Within the above context, we strongly recommend that inconsistencies between the designation of the Keele University campus as a Rural Centre within the draft policies, and the Proposed Development Boundary designations within the Policies Map documents are rectified to ensure that the documents are effective.</p> <p>We further recommend that the Rural Centre Area designation is removed and the entire campus is subject to a separate and distinct policy designation, which recognises the current ranges of facilities within the site and the opportunities provided for future housing and employment growth and investment in the campus. This is in order to ensure that the plan is positively prepared and effective.</p>

Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	We request the right to make representations on behalf of Keele University, in order to examine the Council's evidence in support of the proposed approach to Green Belt and Open Space matters in order to ensure that the plan is effective and justified within the context of the University's future investment proposals, and with reference to the importance of this investment for the wider economy of Newcastle Under Lyme.

Q6 Details	<p>Please see attached representations. Policy PSD 2 confirms that Rural Centres will meet some of the development need within the Borough and that this will include 'Audley and Bignall End'.</p> <p>This broad approach is supported as our client's proposal would help contribute towards providing housing in these locations.</p> <p>However given the additional housing commitments that the draft National Planning Policy Framework indicates that the Borough will now face, it is recommended that Audley be recognised as a Rural Centre that can deliver greater growth than currently proposed. Importantly, paragraph 144 of the draft National Planning Policy Framework states that:</p> <p>"When drawing up or reviewing Green Belt boundaries, the need to promote sustainable patterns of development should be taken into account. Strategic policymaking authorities should consider the consequences for sustainable development of channelling development towards urban areas inside the Green Belt boundary, towards towns and villages inset within the Green Belt or towards locations beyond the outer Green Belt boundary. Where it has been concluded that it is necessary to release Green Belt land for development, plans should give first consideration to previously-developed land in sustainable locations, then consider grey belt land in sustainable locations which is not already previously-developed, and only then consider other sustainable Green Belt locations. They should also set out ways in which the impact of removing land from the Green Belt can be offset through compensatory improvements to the environmental quality and accessibility of remaining Green Belt land." [Knights' emphasis]</p> <p>The site is considered to fall within the definition of 'Grey Belt' (as set out in Annex A) which states that: "Grey belt: For the purposes of plan-making and decision-making, 'grey belt' is defined as land in the green belt comprising Previously Developed Land and any other parcels and/or areas of Green Belt land that make a limited contribution to the five Green Belt purposes (as defined in para 140 of this Framework), but excluding those areas or assets of particular importance listed in footnote 7 of this Framework (other than land designated as Green Belt)." [Knights' emphasis]</p> <p>Aside from its Green Belt designation, the site is not located within any of the excluding areas listed in footnote 7. Furthermore, the previous appeal for the 7no. dwellings adjacent to the site (LPA ref. 18/00122/FUL) confirmed that the site was indeed a sustainable location for new residential development.</p> <p>3.10 Paragraph 155 goes on to state that: "Where major development takes place on land which has been released from the Green Belt through plan preparation or review, or on sites in the Green Belt permitted through development management, the following contributions should be made:</p> <ul style="list-style-type: none"> a. In the case of schemes involving the provision of housing, at least 50% affordable housing [with an appropriate proportion being Social Rent], subject to viability; b. Necessary improvements to local or national infrastructure; and c. The provision of new, or improvements to existing, green spaces that are accessible to the public. <p>Where residential development is involved, the objective should be for new residents to be able to access good quality green spaces within a short walk of their home, whether through onsite provision or through access to offsite spaces."</p> <p>The current planning application includes a viability report that demonstrates that it would be unviable to deliver affordable housing on this site (given that the minimum amount of development has been proposed to enable the redevelopment of Madeley Manor Farm). Nevertheless, our client owns further</p>

	land around this site which could be considered to also comprise Grey Land and may well be able to provide affordable housing provision as part of a Phase 2 scheme. Having consideration to the above, the redevelopment of this site has the potential to deliver much needed housing to the village to support its sustainable growth in a way that could enable the next generation of the village to affordably continue to live within the village that they grew up in. The client owns substantial land around the proposed development site (including land immediately to the east of the cricket ground) which would enable improved sports facilities as well as opportunities for more accessible open space to serve the village.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	Knights wish to participate at the hearing sessions for Policies PSD3, PSD4 and PSD5 so that we can demonstrate why the New Farm, Audley site should be included as a residential allocation in the Policies Map.

	<p>3.8 Persimmon strongly support the identification of Keele and Keele University as a combined settlement location – identified as “Keele Village (with University Hub)” - however, this should be recognised commensurate to its role in the Borough, rather than sitting alongside the Borough’s “Rural Centres” in the settlement hierarchy.</p> <p>3.9 The Council’s Strategic Employment Site Assessment Report (SESAR) (2023) states, “[Keele’s] impact on the local and regional economy and the leading-edge research in key growth sectors, means that it has to be acknowledged as a regional strategic site”.</p> <p>Persimmon consider that the composition, uses and economic weight of the University, alongside Keele village, create a settlement that is geographically, economically and functionally different from other Rural Centres in the settlement hierarchy. Its identification as a Rural Centre does not reflect the need for this settlement area to provide the land and supporting uses to meet its long-term growth trajectory as part of the expanding University and its Science Park corridor.</p> <p>3.10 Persimmon consider that Keele and Keele University should be recognised as a location that supports the significant aspirations for growth and recognises the potential to fully link employment and housing growth in a sustainable way. Persimmon suggest that ‘Keele Village (and University Hub)’ is afforded a standalone position in the hierarchy of centres - as the “Keele and Keele University Growth Hub” – sitting above the Rural Centres and reflecting its role within University’s growth corridor and its once-in-a generation opportunity to form a new community where housing and economic growth is fully aligned.</p>

Q4 Part of document	Policy
Q4 Policy	SP23
Q6 Details	<p>Keele Parish Council recognise that developing national policy with regard to the NPPF means that, in order for the plan to be considered under the existing regulations, the amount of housing delivered per annum must come within 200 of the proposed nationally set target. The proposed new algorithm is 593 per annum. Whilst we do not accept the proposed target of 400 houses per annum is robustly supported by the evidence provided, we recognise that, were the plan to fail at inspection, that this already inflated</p>

	<p>target would, in all likelihood, be subject to a mandatory increase. Thus we have no choice other than to support this target in the hope that the plan will pass.</p> <p>The plan notes:</p> <p>5.14 The Council has sought to direct the greatest level of development to the higher tiers of the settlement hierarchy. These have the highest levels of service provision and infrastructure, as well as the best sustainable transport opportunities in the Borough. Rural centres will take a smaller share of the overall levels of growth, to support the viability of services and facilities and the vitality of these centres. However, Keele and Silverdale are taking a very high level of housing with 1100 homes being planned on the major sites (above). If TB19 is included, the number rises to 1650 homes. As previously noted, the settlement hierarchy notes Keele as a rural centre and omits Silverdale altogether. Thus housing allocations contradict PSD2 and appear opportunistic rather than planned. This undermines the effectiveness of the plan, a point we will hope to make at Inspection.</p>

Q4 Part of document	Policy
Q4 Policy	PSD2
Q6 Details	<p>Please see attached representations. Policy PSD 2 confirms that Rural Centres will meet some of the development need within the Borough. It identifies these centres as “the Rural Centres are Audley and Bignall End (joint), Baldwins Gate, Betley and Wrinehill (joint), Keele Village (with University Hub), Loggerheads, Madeley and Madeley Heath (joint)”. Our client is broadly in support of this policy. However given the additional housing commitments that the draft National Planning Policy Framework indicates that the</p> <p>Borough will now face, it is recommended that Betley be recognised as a Rural Centre that can deliver greater growth than currently proposed. Importantly, paragraph 144 of the draft National Planning Policy Framework states that: “When drawing up or reviewing Green Belt boundaries, the need to promote sustainable patterns of development should be taken into account. Strategic policymaking authorities should consider the consequences for sustainable development of channelling development towards urban areas inside the Green Belt boundary, towards towns and villages inset within the Green Belt or towards locations beyond the outer Green Belt boundary. Where it has been concluded that it is necessary to release Green Belt land for development, plans should give first consideration to previously-developed land in sustainable locations, then consider grey belt land in sustainable locations which is not already previously developed, and only then consider other sustainable Green Belt locations. They should also set out ways in which the impact of removing land from the Green Belt can be offset through compensatory improvements to the environmental quality and accessibility of remaining Green Belt land.” [Knights’ emphasis]</p> <p>The site would not be defined as ‘Grey Belt’ (as set out in Annex A) given its location within a conservation area. Nevertheless, the release of this land would nevertheless meet the aspirations of the government who are seeking to deliver housing in ‘other sustainable Green Belt locations’. It is considered that this site could be one such site which would deliver an appropriate plan-led release of land in a way that would result in a logical extension to the village of Betley.</p> <p>Paragraph 155 goes on to state that:</p> <p>“Where major development takes place on land which has been released from the Green Belt through plan preparation or review, or on sites in the Green Belt permitted through development management, the following contributions should be made:</p> <ol style="list-style-type: none"> In the case of schemes involving the provision of housing, at least 50% affordable housing [with an appropriate proportion being Social Rent], subject to viability; Necessary improvements to local or national infrastructure; and The provision of new, or improvements to existing, green spaces that are accessible to the public. <p>Where residential development is involved, the objective should be for new residents to be able to access good quality green spaces within a short walk of their home, whether through onsite provision or through access to offsite spaces.”</p> <p>Having consideration to the above, the redevelopment of this site has the potential to deliver much needed market and affordable housing to the village to support its sustainable growth in a way that could enable the next generation of the village to continue to live within the village. The client owns substantial land around the proposed development site (including land immediately to the east of the cricket ground) which would enable improved sports facilities as well as opportunities for more accessible open space to serve the village.</p>
Q7 Modification	Please see attached representations
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)

Q9 Hearing reasons	Knights wish to participate at the hearing sessions for Policies PSD3, PSD4 and PSD5 so that we can demonstrate why the Betley Court Farm, land east of Main Road, Betley site should be included as a residential allocation in the Policies Map. (I reattach the representations document again for ease of reference).

Title	Policy PSD2: Settlement Hierarchy
Consultee Company / Organisation	Home Builders Federation
Consultee Position	Planning Manager - Local Plans (Midland and South West)
Consultee Family Name	Danemann
Consultee Given Name	Rachel
Q4 Part of document	Policy
Q4 Policy	PSD2
Q5 Sound	No
Q6 Details	<p>Please see attached representations.</p> <p>The Policy is not considered to be sound as it is not justified or effective or in line with national policy.</p> <p>Although HBF do not comment on individual site allocations, we would expect that the spatial distribution of sites follows a logical hierarchy, provides an appropriate development pattern and supports sustainable development within all market areas. HBF considers that the Council's proposed approach to the distribution of housing should ensure the availability of a sufficient supply of deliverable and developable land to deliver the housing requirement.</p> <p>However, the spatial strategy of the Plan should also recognise that there may be clusters of villages that provide a range of services for that area within reasonable travelling distance of each other, so villages may need to be grouped together. These areas might be able to sustainably support a substantial level of development but may not have all the services within one particular village.</p> <p>The Plan should recognise that settlements that currently do not have services could expand to include those services if new development is allocated in those areas. The current range of village services should not be used as a basis for only locating development close to existing services, it could in fact also identify where services could be improved through new development. Allocating housing sites in rural areas can also provide opportunities for small sites which are particularly helpful for SME builders.</p> <p>The NPPF also requires Local Plans to identify land to accommodate at least 10% of the housing requirement on sites no larger than one hectare, unless there are strong reasons why this cannot be achieved. HBF has undertaken extensive consultation with its small developer members. One of the chief obstacles for small developers is that funding is extremely difficult to secure without a full, detailed, and implementable planning permission. Securing an implementable planning permission is extremely difficult if small sites are not allocated. Without implementable consents lenders are uneasy about making finance available or the repayment fees and interest rates they set will be very high. Small developers, consequently, need to invest a lot of money and time up-front in the risky business of trying to secure an allocation and a planning permission, and this is money that many small developers do not have.</p> <p>In order to be effective and justified the Plan's policies and evidence base should set out how the plan will deliver 10% of homes on sites of less than one hectare, as required by the NPPF. Indeed, HBF would advocate that a higher percentage of small sites are allocated if possible. Such sites are important for encouraging the growth in SME housebuilders who will tend to develop these sites but rarely see the benefits that arise from the allocation of sites in a local plan. Up until the 1980s, small developers once accounted for the construction of half of all homes built in this country resulting in greater variety of product, more competition, and faster build-out rates. Since then, the number of small companies has fallen by 80%.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	HBF requests to participate in the Hearing Sessions for the Local Plan Examination, the HBF considers that their involvement is necessary to ensure that the home building industry is able to respond to any housing related issues raised during the hearing sessions.

Q4 Part of document	Policy
Q4 Policy	PSD2
Q5 Sound	No
Q6 Details	<p>ED 005- Rural Area Topic paper</p> <p>This document is used to support policy PSD2 and PSD3 and is fundamentally flawed in a number of respects.</p> <p>Firstly, in relation to Public Transport, which requires that a "commutable bus service" is available solely to enable residents to access Newcastle Town Centre during what is described as "standard working hours" of 9 am to 5 pm. This fails to recognise the changing nature of work, in that far fewer jobs have "standard hours" of 9-5, for example, retail work or shift work and this is therefore an inappropriate criterion for a bus service to be "commutable".</p> <p>This criterion also ignores Saturday and Sunday working patterns which are, in the 21st century, much more prevalent, and frequently bus services are not available on those days, or significantly less frequent. It also makes the assumption that people in rural communities will only travel to Newcastle for work - it fails to recognise that people living in certain rural communities will almost certainly be working outside the Borough, or will need to travel onwards from the town centre to their place of work (for example in Stoke) and using the definition in the topic paper gives a false impression of sustainability in terms of public transport. It's a lazy definition, with no rational basis for its adoption.</p> <p>Secondly, by limiting the public transport criterion solely to work, the paper completely ignores the need for children and young people to attend colleges at appropriate times, fails to recognise needs for travel for social or leisure activities and even shopping, and completely ignores the need for travel to hospitals or other healthcare settings beyond GP practices.</p> <p>By failing to recognise these needs, the policy fails to support sustainable rural community access to essential facilities that enable them to live in rural communities.</p> <p>In addition to that, the paper fails to differentiate between healthcare facilities - making the erroneous assumption that a pharmacy and a GP surgery are in some way equivalent. Residents who need access to primary care services are unlikely to be able to receive them from a pharmacy and patients who need a pharmacy are unlikely to be able to access those facilities in a GP surgery.</p> <p>The paper fails to recognise that patients need to be able to physically access healthcare facilities and that (for example) the GP surgery in Ashley is not walkable safely from Loggerheads, and the public transport available seriously limits the times at which patients could attend.</p> <p>The topic paper fails to recognise the additional costs of living in rural communities which lack suitable essential infrastructure and these additional costs directly impact on (among other things) the takeup of affordable housing - in particular social rented housing.</p> <p>The fact that this flawed paper is referenced in support of policies PSD2 and PSD3 renders those policies less sound than they would otherwise be</p>
Q7 Modification	The rural topic paper needs amending to recognise (inter alia) the need for public transport to support work outside 9-5, to support social and leisure activity and to realistically identify barriers to sustainability in rural areas, including issues around healthcare facilities and the additional costs of living in a rural area with inadequate infrastructure to support increased development.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	As the corporate body responsible for Loggerheads Neighbourhood Plan, and as a statutory consultee on Planning matters, the Parish Council would wish to ensure its views are considered and responded to

Q5 Sound	Yes
Q6 Details	<p>Policy PSD 2: Settlement Hierarchy</p> <p>Policy PSD 2 notes that Madeley and Madeley Heath (joint together) form a Rural Centre. In respect of Rural Centres, the policy notes that:</p> <p>“The Rural Centres will meet some of the development needs of the Borough, commensurate to their role as villages and with the type, density and design of development seeking to protect and enhance their rural and historic character. It is recognised that there are differences between these villages in terms of their size and available facilities and therefore the scale of development in each area should be relative to its role, function and infrastructure capacity.”</p> <p>The Council's own evidence base states that the centre of the village of Madeley is within 15 minutes' walk to the centre of Madeley Heath. Together this joint settlement has excellent access to essential services facilities including shops, post office, schools, restaurants GP and dental surgeries, pharmacy no.85 and 1A buses to Newcastle under Lyme and primary and secondary schools (pages 20-21 of the Rural Topic Paper. As such we support the approach set out in respect of the Rural Centres which identifies these as making an important contribution to meet development needs in the borough. We consider this to be sound as it represents an appropriate strategy justified by evidence regarding sustainability of the joint settlement.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	On behalf of our client, MHD, we formally request to participate in hearing sessions associated with Draft Policy PSD 1, Draft Policy PSD 2, Draft Policy PSD 3, SA Section 5: Reasonable Alternatives, Draft Policy PSD 5 & Draft Policy MD29. We consider that our representation at the hearing sessions is necessary to ensure our representations above are taken into account for the draft Local Plan to be found sound.

Q4 Part of document	Paragraph
Q6 Details	<p>I consider that the draft plan is not sound, in particular, with reference to page 129 namely "Policy LW53 Land at Corner of Muckleston Wood Lane, Loggerheads". This is because the allocation of site LW53 for future housing development is contrary to and inconsistent with current national policy namely, the National Planning Policy Framework 2023 ("the NPPF 2023").</p> <p>I also challenge the soundness of the draft local plan with regard to "Policy PSD3: Distribution of Development" (page 16 of the draft plan) in that the numbers within this Policy have not been justified.</p> <p>Summary of Reasons</p> <ol style="list-style-type: none"> 1 LW53 is not a "sustainable location" for future housing development and is therefore contrary to national policy. This view was endorsed by the Council's Planning Committee on the 27th February 2024, who refused outline planning permission for the development of housing on this same site for the following reason regarding sustainability: <ul style="list-style-type: none"> - The site is not considered to be a sustainable location by virtue of the lack of supporting infrastructure available locally to support the development, limited public transport facilities and the need to travel by car to access higher level services. <p>The Council has already determined that this site is not within a sustainable location; consequently, and for the above reasons, the inclusion of this site for housing development contravenes the NPPF 2023.</p> <p>In addition, the Council's own evidence document namely, the "Rural Area Topic Paper" (June 2021 topic paper-paragraph 124) notes that Loggerheads the following:</p> <p>"Loggerheads - G.P access is dependent on travel to Ashley and does not have a direct bus service to the hospital. Loggerheads is the least accessible to jobs by public transport (to Newcastle-under-Lyme) Loggerheads has very mixed accessibility in terms of travel times to services and facilities".</p> <p>The above text and the recent refusal of this site for housing development supports the view that it is not a sustainable location and development will only encourage reliance on private motor vehicle due to the lack of poor public transport and access to higher leisure/retail services.</p> <p>In conclusion, LW53 is not considered to be a site within a sustainable location and is contrary to the NPPF 2023.</p> <ol style="list-style-type: none"> 1 (i) LW53 is currently in use as agricultural farmland and consists of best and most versatile agricultural land. The UI proposed development would therefore result in the loss of best and most versatile agricultural land contrary to Paragraph 180 of the NPPF (2023). This point was recognised by the Council's Planning Committee and was one of the reasons for the refusal of housing on this site. 2.(ii) The selection of this green field site for housing is also contrary to the underlying national policy principle of prioritising brownfield and other under-utilised urban sites. <ol style="list-style-type: none"> 1 LW53 is adjacent to the Grade II listed building of White House Farm. The recent planning application for this site recognised that the proposed development of the site for housing would result in harm to the setting of this Grade II listed building. As the listed building will remain, any future development would inevitably result in harm to this heritage asset and would be contrary to the aims and objectives of the NPPF (2023). Again, this harm was recognised by the Council's Planning Committee as part of the reasoning for the refusal of housing on this site. 2 The inclusion of LW53 for residential development will have an adverse impact on the character and appearance of the open countryside and the rural setting and character of this part of Muckleston Wood Lane. This would be in contradiction of the aims and objectives of the National Planning Policy Framework (2023). Again, this was recognised by the Council's Planning Committee as part of the reasoning for the refusal of housing on this site. <ol style="list-style-type: none"> 1 Policy PSD3: Distribution of Development (page 16) <ol style="list-style-type: none"> (i) No figures/evidence has been provided to justify why it is considered necessary for Loggerheads to expand by 450 dwellings. The proposed expansion figure should be compared to other rural centres where dwellings in the region of 250 is suggested. Given the Council's own evidence regarding the accessibility of Loggerheads being mixed, no justification has been provided for such a large increase. (ii) The draft local plan also suggests that this number of dwellings are required to meet the development proposals of Loggerheads. Again, no justification is given for this statement (page 127 of the draft plan). Although, current on-going developments are part of the proposed increase, no account has been taken of the current variety of housing (including affordable, single housing and bungalows) already being provided. Planning Policy Officers merely say that "the Borough has a need for x amount of housing and Loggerheads has to have its share". Yet no justification has been provided for the proposed 450 dwelling increase for Loggerheads when comparing with the proposed smaller increases for the other rural centres. 1 Conclusion

	<p>6(i) In order for the draft local plan to pass the test of “soundness”, the allocation of LW53 should be removed as a preferred site for future housing. This site, as acknowledged by the Council’s Planning Committee, is not a sustainable location and for the other reasons (above) is contrary to the NPPF 2023.</p> <p>6(ii) The reference to the increase of 450 dwellings should be removed from the draft plan.</p>
Q7 Modification	<p>6(i) In order for the draft local plan to pass the test of “soundness”, the allocation of LW53 should be removed as a preferred site for future housing. Title	Policy PSD3: Distribution of Development
Consultee Family Name	Wilson
Consultee Given Name	Angela H
Q4 Part of document	Policy
Q4 Policy	LW53
Q5 Sound	No
Q6 Details	<p>I wish to comment on the Regulation 19 Draft Local Olan for the Borough of Newcastle under Lyme. With reference to page 129 "Policy LW53 Land at Corner of Mucklestone Wood Lane". I consider that the inclusion of this land for future housing development is both unacceptable and extremely puzzling and also not compatible with the current National Planning Framework 2023 (the NPPF2023). I also challenge the plan on the grounds that numbers within this Policy have not been justified – "Distribution of Development PSD3 -page 16 of the draft plan. Development here (LW53) would be unsustainable. This was endorsed unanimously by the council's Planning Committee on 27th February 2024 when outline planning permission for housing development was refused on this site. Reasons given at this meeting include the following:</p> <p>1 Lack of supporting infrastructure in general: very limited public transport which would mean increased use of cars to access a range of services such as doctors (the nearest is in Ashley), secondary schools, no direct bus to a hospital, supermarkets and other shops are also not readily accessible by public transport. This means that the inclusion of this site contravenes the NPPF 2023. Loggerheads also has extremely limited access to jobs by public transport and few employment opportunities in the village itself. The bus service is infrequent and only runs between Hanley, Newcastle and Market Drayton. There are no direct links between other main towns e.g. Stafford, Crewe and Telford. Evidence considered by the Planning Committee in February 2024 ruled decisively that this location was unsustainable and contrary to NPPF 2023.</p> <p>2 LW53 is currently under cultivation and has had continuous use as agricultural land for many years. The development of this site would result in the loss of best and versatile agricultural land which contravenes paragraph 180 of the NPPOF2023. The Planning Committee, in February 2024, gave this as a reason for refusing to allow housing on this site. The selection of this greenfield site for housing is also against the stated national policy of this Labour government to prioritise brownfield and "grey field sites". I listened to a Labour spokesperson on Radio 4 immediately after this year's general election pledging that anyone who looked out on greenfields would not see them built on. Obviously this spokesperson has not read the Newcastle Borough Local Plan nor seen the number of agricultural fields surrounding the Loggerheads village which have already been covered in houses over the past few years.</p> <p>3 The council also acknowledged in their decision to refuse planning permission, the existence of a Grade II listed building adjacent to the site as housing development nearby, they considered would harm this heritage asset in contradiction to the aims and objectives of the National Planning Policy Framework 2023. Additionally, they ruled that the development of a housing estate on LW53 would adversely affect the rural nature of the area again in contravention of the National Planning Policy Framework 2023.</p> <p>4 The Council has not provided any figures to justify why Loggerheads needs to expand by 450 dwellings. 3 other rural centres have a target of 250 dwellings on the Local Plan. The draft plan suggests that Loggerheads NEEDS these dwellings but no reasons are given for this statement (Page 127 of the Draft Plan). There is no reason why Loggerheads should bear more than its share of new housing when already current and ongoing developments offer a range of housing including affordable and bungalows to meet the needs of a range of population. To meet the condition of, "soundness", the Local I Plan should remove the LW53 site as a site for future housing and also remove the increase of 450 houses for which no justification has been given and which is excessive compared to other rural centres.</p>

Q7 Modification	To meet the condition of, "soundness", the Local Plan should remove the LW53 site as a site for future housing and also remove the increase of 450 houses for which no justification has been given and which is excessive compared to other rural centres.

Q6 Details	<p>To Whom It May Concern,</p> <p>I am writing to put forward my comments regarding the Newcastle-under-Lyme Local Plan 2020-2040 Draft Local Plan (Regulation 19 stage) as follows:-</p> <p>Here in Loggerheads we have absolutely no infrastructure to support further building sites. We have in recent months had various different building companies creating new homes, some of which are struggling to sell. We have one site built as rental properties which appear to still be mostly empty.</p> <p>We have no decent public transport, mostly it consists of a less than decent bus service, going either way from Hanley to Shrewsbury and various stops in between. Only running every two hours. Therefore families would be dependant on their own mode of transport causing even more pressure on the already busy A53, which is the main link to and from the M6 motorway.</p> <p>LW53 would most certainly create problems for Muckleston Wood Lane and the exit out on to the A53 is an accident waiting to happen now, let alone with 900 extra vehicles trying to access it. (Given that most of the 450 dwelling would likely have two or more vehicles per property). It is a greenfield site and has a grade II listed building on it.</p> <p>Loggerheads has one small co-op, a post office situated within the chemist and limited other facilities. The nearest gp surgery is in Ashley, which is not easily accessible to those without their own transport. There is no dentist.</p> <p>There is only one infant school at Muckleston and one infant/junior school actually in Loggerheads. There are no leisure amenities whatsoever.</p> <p>I consider that the draft plan is not sound, in particular, with reference to page 129 namely "Policy LW53 Land at Corner of Muckleston Wood Lane, Loggerheads". This is because the allocation of site LW53 for future housing development is contrary to and inconsistent with current national policy namely, the National Planning Policy Framework 2023 ("the NPPF2023").</p> <p>I also challenge the soundness of the draft local plan with regard to "Policy PSD3: Distribution of Development" (page 16 of the draft plan) in that the numbers within this Policy have not been justified.</p> <p>Summary of Reasons</p> <ol style="list-style-type: none"> 1. LW53 is not a "sustainable location" for future housing development and is therefore contrary to national policy. 2. (i) LW53 is currently in use as agricultural farmland and consists of best and most versatile agricultural land. The UI proposed development would therefore result in the loss of best and most versatile agricultural land contrary to Paragraph 180 of the NPPF (2023). This point was recognised by the Council's Planning Committee and was one of the reasons for the refusal of housing on this site. 2(ii) The selection of this green field site for housing is also contrary to the underlying national policy principle of prioritising brownfield and other under utilised urban sites. 3. LW53 is adjacent to the Grade II listed building of White House Farm. The recent planning application for recognised that the proposed development of the site for housing would result in harm to the setting of the Grade II listed building. As the listed building will remain, any future development would inevitably result in harm to this heritage asset and would be contrary to the aims and objectives of the NPPF (2023). 4. The inclusion of LW53 for residential development will have an adverse impact on the character and appearance of the open countryside and the rural setting and character of this part of Muckleston Wood Lane. This would be in contradiction of the aims and objectives of the National Planning Policy Framework (2023). 5. Policy PSD3: Distribution of Development (page 16) No figures or evidence have been provided to justify why it is necessary for Loggerheads to expand by 450 dwellings. 6. Conclusion 6(i) In order for the draft local plan to pass the test of "soundness", the allocation of LW53 should be removed as a preferred site for future housing. This site, as acknowledged by the Council's Planning Committee, is not a sustainable location and for other reasons (above) is contrary to the NPPF 2023. 6(ii) The reference to the increase of 450 dwellings should be removed from the draft plan.
Q7 Modification	<p>6. Conclusion</p> <p>6(i) In order for the draft local plan to pass the test of "soundness", the allocation of LW53 should be removed as a preferred site for future housing. Title	Policy PSD3: Distribution of Development
Consultee Family Name	Allen
Consultee Given Name	Sally
Q4 Part of document	Policy
Q4 Policy	lw53
Q5 Sound	No
Q6 Details	<p>I consider that the draft plan is not sound, in particular, with reference to page 129 namely "Policy LW53 Land at Corner of Mucklestone Wood Lane, Loggerheads". This is because the allocation of site LW53 for future housing development is contrary to and inconsistent with current national policy namely, the National Planning Policy Framework 2023 ("the NPPF 2023").</p> <p>I also challenge the soundness of the draft local plan with regard to "Policy PSD3: Distribution of Development" (page 16 of the draft plan) in that the numbers within this Policy have not been justified. Summary of Reasons 1. LW53 is not a "sustainable location" for future housing development and is therefore contrary to national policy. This view was endorsed by the Council's Planning Committee on the 27th February 2024, who refused outline planning permission for the development of housing on this same site for the following reason regarding sustainability: 2 / 3 - The site is not considered to be a sustainable location by virtue of the lack of supporting infrastructure, available locally to support the development, limited public transport facilities and the need to travel by car to access higher level services. The Council has already determined that this site is not within a sustainable location; consequently, and for the above reasons, the inclusion of this site for housing development contravenes the NPPF 2023. In addition, the Council's own evidence document namely, the "Rural Area Topic Paper" (June 2021 topic paper-paragraph 124) notes that Loggerheads the following: "Loggerheads - G.P access is dependent on travel to Ashley and does not have a direct bus service to the hospital. Loggerheads is the least accessible to jobs by public transport (to Newcastle-under-Lyme) Loggerheads has very mixed accessibility in terms of travel times to services and facilities". The above text and the recent refusal of this site for housing development supports the view that it is not a sustainable location and development will only encourage reliance on private motor vehicle due to the lack of poor public transport and access to higher leisure/retail services. In conclusion, LW53 is not considered to be a site within a sustainable location and is contrary to the NPPF 2023. 2. (i) LW53 is currently in use as agricultural farmland and consists of best and most versatile agricultural land. The UI proposed development would therefore result in the loss of best and most versatile agricultural land contrary to Paragraph 180 of the NPPF (2023). This point was recognised by the Council's Planning Committee and was one of the reasons for the refusal of housing on this site. 2.(ii) The selection of this green field site for housing is also contrary to the underlying national policy principle of prioritising brownfield and other under-utilised urban sites. 3. LW53 is adjacent to the Grade II listed building of White House Farm. The recent planning application for this site recognised that the proposed development of the site for housing would result in harm to the setting of this Grade II listed building. As the listed building will remain, any future development would inevitably result in harm to this heritage asset and would be contrary to the aims and objectives of the NPPF (2023). Again, this harm was recognised by the Council's Planning Committee as part of the reasoning for the refusal of housing on this site. 4. The inclusion of LW53 for residential development will have an adverse impact on the character and appearance of the open countryside and the rural setting and character of this part of Mucklestone Wood Lane. This would be in contradiction of the aims and objectives of the National Planning Policy Framework (2023). Again, this was recognised by the Council's Planning Committee as part of the reasoning for the refusal of housing on this site. 6. Policy PSD3: Distribution of Development (page 16) (i) No figures/evidence has been provided to justify why it is considered necessary for Loggerheads to expand by 450 dwellings. The proposed expansion figure should be compared to other rural 3 / 3 centres where dwellings in the region of 250 is suggested. Given the Council's own evidence regarding the accessibility of Loggerheads being mixed, no justification has been provided for such a large increase. (ii) The draft local plan also suggests that this number of dwellings are required to meet the development proposals of Loggerheads. Again, no justification is given for this statement (page 127 of the draft plan). Although, current on-going developments are part of the proposed increase, no account has been taken of the current variety of housing (including affordable, single housing and bungalows) already being provided. Planning Policy Officers merely say that "the Borough has a need for x amount of housing and Loggerheads has to have its share". Yet no justification has been provided for the proposed 450 dwelling increase for Loggerheads when comparing with the proposed smaller increases for the other rural centres. 7. Conclusion 7(i) In order for the draft local plan to pass the test of "soundness", the allocation of LW53 should be removed as a preferred site for future housing. This site, as acknowledged by the Council's Planning Committee, is not a sustainable location and for the other reasons (above) is contrary to the NPPF 2023. 7(ii) The reference to the increase of 450 dwellings should be removed from the draft plan.</p>
Q7 Modification	7. Conclusion 7(i) In order for the draft local plan to pass the test of "soundness", the allocation of LW53 should be removed as a preferred site for future housing. This site, as acknowledged by the Council's Planning Committee, is not a sustainable location and for the other reasons (above) is contrary to the NPPF 2023. 7(ii) The reference to the increase of 450 dwellings should be removed from the draft plan.

Q4 Part of document	Paragraph
Q6 Details	<p>Comments on the Regulation 19 Draft Local Plan</p> <p>I consider that the draft plan is not sound, in particular, with reference to page 129 namely "Policy LW53 Land at Corner of Mucklestone Wood Lane, Loggerheads". This is because the allocation of site LW53 for future housing development is contrary to and inconsistent with current national policy namely, the National Planning Policy Framework 2023 ("the NPPF 2023").</p>

I also challenge the soundness of the draft local plan with regard to "Policy PSD3: Distribution of Development" (page 16 of the draft plan) in that the numbers within this Policy have not been justified.

Summary of Reasons

1 LW53 is not a "sustainable location" for future housing development and is therefore contrary to national policy. This view was endorsed by the Council's Planning Committee on the 27th February 2024, who refused outline planning permission for the development of housing on this same site for the following reason regarding sustainability:

- The site is not considered to be a sustainable location by virtue of the lack of supporting infrastructure available locally to support the development, limited public transport facilities and the need to travel by car to access higher level services.

The Council has already determined that this site is not within a sustainable location; consequently, and for the above reasons, the inclusion of this site for housing development contravenes the NPPF 2023.

In addition, the Council's own evidence document namely, the "Rural Area Topic Paper" (June 2021 topic paper-paragraph 124) notes that Loggerheads the following:

"Loggerheads - G.P access is dependent on travel to Ashley and does not have a direct bus service to the hospital. Loggerheads is the least accessible to jobs by public transport (to Newcastle-under-Lyme) Loggerheads has very mixed accessibility in terms of travel times to services and facilities".

The above text and the recent refusal of this site for housing development supports the view that it is not a sustainable location and development will only encourage reliance on private motor vehicle due to the lack of poor public transport and access to higher leisure/retail services.

In conclusion, LW53 is not considered to be a site within a sustainable location and is contrary to the NPPF 2023.

1 (i) LW53 is currently in use as agricultural farmland and consists of best and most versatile agricultural land. The UI proposed development would therefore result in the loss of best and most versatile agricultural land contrary to Paragraph 180 of the NPPF (2023). This point was recognised by the Council's Planning Committee and was one of the reasons for the refusal of housing on this site.

2.(ii) The selection of this green field site for housing is also contrary to the underlying national policy principle of prioritising brownfield and other under-utilised urban sites.

1 LW53 is adjacent to the Grade II listed building of White House Farm. The recent planning application for this site recognised that the proposed development of the site for housing would result in harm to the setting of this Grade II listed building. As the listed building will remain, any future development would inevitably result in harm to this heritage asset and would be contrary to the aims and objectives of the NPPF (2023). Again, this harm was recognised by the Council's Planning Committee as part of the reasoning for the refusal of housing on this site.

1 The inclusion of LW53 for residential development will have an adverse impact on the character and appearance of the open countryside and the rural setting and character of this part of Muckleston Wood Lane. This would be in contradiction of the aims and objectives of the National Planning Policy Framework (2023). Again, this was recognised by the Council's Planning Committee as part of the reasoning for the refusal of housing on this site.

1 Policy PSD3: Distribution of Development (page 16)

(i) No figures/evidence has been provided to justify why it is considered necessary for Loggerheads to expand by 450 dwellings. The proposed expansion figure should be compared to other rural centres where dwellings in the region of 250 is suggested. Given the Council's own evidence regarding the accessibility of Loggerheads being mixed, no justification has been provided for such a large increase.

(ii) The draft local plan also suggests that this number of dwellings are required to meet the development proposals of Loggerheads. Again, no justification is given for this statement (page 127 of the draft plan). Although, current on-going developments are part of the proposed increase, no account has been taken of the current variety of housing (including affordable, single housing and bungalows) already being provided. Planning Policy Officers merely say that "the Borough has a need for x amount of housing and Loggerheads has to have its share". Yet no justification has been provided for the proposed 450 dwelling increase for Loggerheads when comparing with the proposed smaller increases for the other rural centres.

	<p>1 Conclusion</p> <p>6(i) In order for the draft local plan to pass the test of “soundness”, the allocation of LW53 should be removed as a preferred site for future housing. This site, as acknowledged by the Council's Planning Committee, is not a sustainable location and for the other reasons (above) is contrary to the NPPF 2023.</p> <p>6(ii) The reference to the increase of 450 dwellings should be removed from the draft plan.</p>

Again, no justification is given for this statement (page 127 of the draft plan). Although, current on-going developments are part of the proposed increase, no account has been taken of the current variety of housing (including affordable, single housing and bungalows) already being provided. Planning Policy Officers merely say that “the Borough has a need for x amount of housing and Loggerheads has to have its share”. Yet no justification has been provided for the proposed 450 dwelling increase for Loggerheads when comparing with the proposed smaller increases for the other rural centres. 7. Conclusion 7(i) In order for the draft local plan to pass the test of “soundness”, the allocation of LW53 should be removed as a preferred site for future housing. This site, as acknowledged by the Council's Planning Committee, is not a sustainable location and for the other reasons (above) is contrary to the NPPF 2023. 7(ii) The reference to the increase of 450 dwellings should be removed from the draft plan.</p> <p>I am one of the regular pedestrians on this road that snakes through from Newcastle Rd to the T junction with Muckleston Rd. I say " on" this road because that is where you have to walk, due to MWL having a pavement footpath for only 25% on just one side of the road.</p> <p>Street lighting is restricted in similar fashion to part only of Muckleston Wood lane.</p>

	<p>If planning is approved this would mean circa 150 extra vehicles per day spilling out directly on to MWL and all returning on the same MWL, This does not take into account the dozens of delivery vehicles (Amazon DHL etc to name just 2)</p> <p>The impact on vehicle and pedestrian use is a massive cause for concern particularly for the safety of pedestrians.</p> <p>All social housing occupants will need vehicles to access all facilities including taking children to school if the existing schools can actually accommodate them?</p> <p>All the objections stated against the previous housing application for this site are applicable here. It is not sustainable has no merit need or benefit whatsoever, and makes it axiomatic that this location should not be included in the plan NPPF2023.</p>

Q4 Part of document	Policy
Q4 Policy	LW53
Q6 Details	<p>I refer to the refusal of planning permission Application number: 23/00002/OUT Land off Mucklestone Wood Lane and Rock Lane Loggerheads.</p> <p>1. The site is not a sustainable location for further residential development by virtue of the lack of supporting infrastructure available locally to support the development, limited public transport opportunities and the need to travel by car to access higher level services. The development would therefore be contrary to Policy SP3 of the Newcastle-under-Lyme and Stoke on Trent Core Spatial Strategy (2006-2026), Policy LNPS1 of the Loggerheads Neighbourhood Plan and the aims and objectives of the National Planning Policy Framework (2023).</p> <p>2. The proposed development would result in the loss of best and most versatile agricultural land contrary to Paragraph 180 of the National Planning Policy Framework (2023).</p> <p>3. The proposed development, by virtue of its position and relationship with White House Farm, would result in less than substantial harm to the setting of this Grade II listed building and this harm is considered to outweigh any public benefits of the proposal. The development is therefore contrary to Policy CSP2 of the Newcastle-under-Lyme and Stoke on Trent Core Spatial Strategy (2006-2026), Policy B5 of the Newcastle-under-Lyme Local Plan (2011), Policy LNPP2 of the Loggerheads Neighbourhood Plan and the aims and objectives of the National Planning Policy Framework (2023).</p> <p>4. The proposed development would have an adverse impact on the character and appearance of the open countryside and the rural setting and character of this part of Mucklestone Wood Lane. The development is therefore contrary to Policies CSP1 and CSP4 of the Newcastle-under-Lyme and Stoke on Trent Core Spatial Strategy (2006-2026), Policies N17 and N19 of the Newcastle under-Lyme Local Plan (2011), Policy LNPP1 of the Loggerheads Neighbourhood Plan and the aims and objectives of the National Planning Policy Framework (2023).</p> <p>Statement as to how the Local Planning Authority has worked in a positive and proactive manner in dealing with the planning application</p> <p>There are fundamental objections to the development which cannot be resolved and therefore the appropriate course of action is to refuse planning permission.</p> <p>Despite receiving over 440 objections to this proposal, your planning department refusing planning permission for this development and the final statement on the refusal stating that there are fundamental objections to the development which cannot be resolved I am surprised and annoyed that this site has been included in the Newcastle under Lyme Local Plan.</p> <p>My objections to this development were sent to you previously and remain and I now comment further as follows:-</p> <p>I consider that the draft plan is not sound, in particular, with reference to page 129 namely "Policy LW53 Land at Corner of Mucklestone Wood Lane, Loggerheads". This is because the allocation of site LW53 for future housing development is contrary to and inconsistent with current national policy namely, the National Planning Policy Framework 2023 ("the NPPF 2023").</p> <p>I also challenge the soundness of the draft local plan with regard to "Policy PSD3: Distribution of Development" (page 16 of the draft plan) in that the numbers within this Policy have not been justified.</p> <p>Summary of Reasons</p> <p>1. LW53 is not a "sustainable location" for future housing development and is therefore contrary to national policy. This view was endorsed by the Council's Planning Committee on the 27th February 2024, who refused outline planning permission for the development of housing on this same site for the following reason regarding sustainability:</p> <p>a) The site is not considered to be a sustainable location by virtue of the lack of supporting infrastructure available locally to support the development, limited public transport facilities and the need to travel by car to access higher level services.</p> <p>b) The Council has already determined that this site is not within a sustainable location</p> <p>c) The inclusion of this site for housing development contravenes the NPPF 2023.</p>

	<p>d) The Council's own evidence document namely, the "Rural Area Topic Paper "(June 2021 topic paper-paragraph 124) notes the following: "Loggerheads - G.P access is dependent on travel to Ashley and does not have a direct bus service to the hospital. Loggerheads is the least accessible to jobs by public transport (to Newcastle-under-Lyme) Loggerheads has very mixed accessibility in terms of travel times to services and facilities".</p> <p>e) The above text and the recent refusal of this site for housing development supports the view that it is not a sustainable location and development will only encourage reliance on private motor vehicles due to the lack of poor public transport and access to higher leisure/retail services.</p> <p>f) In conclusion, LW53 is not considered to be a site within a sustainable location and is contrary to the NPPF 2023.</p> <p>2. LW53 is currently in use as agricultural farmland and consists of best and most versatile agricultural land. The UI proposed development would therefore result in the loss of best and most versatile agricultural land contrary to Paragraph 180 of the NPPF (2023).</p> <p>This point was recognised by the Council's Planning Committee and was one of the reasons for the refusal of housing on this site.</p> <p>The selection of this green field site for housing is also contrary to the underlying national policy principle of prioritising brownfield and other under-utilised urban sites.</p> <p>3. LW53 is adjacent to the Grade II listed building of White House Farm. The recent planning application for this site recognised that the proposed development of the site for housing would result in harm to the setting of this Grade II listed building. As the listed building will remain, any future development would inevitably result in harm to this heritage asset and would be contrary to the aims and objectives of the NPPF (2023).</p> <p>This harm was recognised by the Council's Planning Committee as part of the reasoning for the refusal of housing on this site.</p> <p>4. The inclusion of LW53 for residential development will have an adverse impact on the character and appearance of the open countryside and the rural setting and character of this part of Muckleston Wood Lane. This would be in contradiction of the aims and objectives of the National Planning Policy Framework (2023).</p> <p>This was recognised by the Council's Planning Committee as part of the reasoning for the refusal of housing on this site.</p> <p>5. Policy PSD3: Distribution of Development (page 16)</p> <p>a) No figures/evidence has been provided to justify why it is considered necessary for Loggerheads to expand by 450 dwellings. The proposed expansion figure should be compared to other rural centres where dwellings in the region of 250 is suggested. Given the Council's own evidence regarding the accessibility of Loggerheads being mixed, no justification has been provided for such a large increase.</p> <p>b) The draft local plan also suggests that this number of dwellings are required to meet the development proposals of Loggerheads. Again, no justification is given for this statement (page 127 of the draft plan). Although, current on-going developments are part of the proposed increase, no account has been taken of the current variety of housing (including affordable, single housing and bungalows) already being provided.</p> <p>c) Planning Policy Officers merely say that "the Borough has a need for x amount of housing and Loggerheads has to have its share". Yet no justification has been provided for the proposed 450 dwelling increase for Loggerheads when comparing with the proposed smaller increases for the other rural centres.</p> <p>In Conclusion, for the draft local plan to pass the test of "soundness", the allocation of LW53 should be removed as a preferred site for future housing. This site, as acknowledged by the Council's Planning Committee, is not a sustainable location and for the other reasons (above) is contrary to the NPPF 2023.</p> <p>7(ii) The reference to the increase of 450 dwellings should be removed from the draft plan.</p>
Q7 Modification	<p>In Conclusion, for the draft local plan to pass the test of "soundness", the allocation of LW53 should be removed as a preferred site for future housing. This site, as acknowledged by the Council's Planning Committee, is not a sustainable location and for the other reasons (above) is contrary to the NPPF 2023.</p> <p>7(ii) The reference to the increase of 450 dwellings should be removed from the draft plan.</p>

Q6 Details	<p>Dear Sir/Madam</p> <p>Comments on the Newcastle-under-Lyme Local Plan 2020-2040</p> <p>1. I object to the inclusion of LW53, land at the corner of Muckleston Wood Lane, Loggerheads as this is not a sustainable location. Outline planning permission was refused by the planning committee on February 27th 2024 on the lack of sustainability. This is due to the absence of infrastructure in the area to support the development, limited public transport and the need to travel by car for employment, larger supermarkets, leisure facilities and even the doctors'. As the council have already stated that the site is not in a sustainable location, its inclusion in the plan contravenes the National Planning Framework 2023 (NPPF 2023)</p>

	<p>LW53 is currently farmed and consists of the best and most versatile agricultural land, which would be lost should development go ahead on this site. This is contrary to paragraph 180 of the NPPF 2023 and was another reason for the refusal by the Planning Committee. Brownfield sites should be prioritised, not greenfield sites.</p> <p>2. I also question the reason for Loggerheads to expand by 450 dwellings when other rural communities where around 250 dwellings are suggested. There is already a variety of housing in Loggerheads, including affordable housing and bungalows, and there is no indication as to how the figures were reached.</p> <p>In conclusion, I feel that LW53 should be removed from the Local Plan and the reference to an extra 450 dwellings for Loggerheads should also be removed.</p>
Q7 Modification	In conclusion, I feel that LW53 should be removed from the Local Plan and the reference to an extra 450 dwellings for Loggerheads should also be removed.

Title	Policy PSD3: Distribution of Development
Consultee Family Name	Wilson
Consultee Given Name	Keith
Q4 Part of document	Policy
Q4 Policy	LW53
Q6 Details	<p>The Borough Council has not provided any justification for why Loggerheads needs to expand by 450 houses – three other rural centres have a target of 250 houses/dwellings on the Local Plan. Loggerheads, it seems, is a location with the least suitable infrastructure being targeted with the biggest number of houses. The draft plan suggests that Loggerheads needs these dwellings, but no reasons for this are given. Loggerheads has already more than fulfilled its share of new housing, without any upgrades in infrastructure. The sluggish sales of the new builds should also be taken into consideration.</p> <p>In order to meet the criterion of "soundness", the Local Plan should withdraw site LW53 as a location for further housing development, as well as removing the arbitrary target of 450 houses. No justification has been given for this figure; it smacks of Soviet-style planning where arbitrary targets are handed down, leading to arbitrary and mistaken decisions, to the detriment of all concerned – except the developers.</p> <p>Yours truly, Keith Wilson</p>

Q6 Details	<p>This representation is drafted in a form that would assist the Local Plan Inspector in framing the Examination Matters and Issues, notwithstanding that in its current form the Draft Local Plan is unsound. All matters raised are in summary only, and would be taken forward in detail as Examination hearing statements as required in due course.</p> <p>The Draft Plan is unclear in a number of critical matters, which are raised in this representation. It should be re-drafted to take up these aspects.</p> <p>The shortcomings of Policy PSD1 also of course impacts on Policy PSD3 and resulting Site Allocations.</p> <p>PSD5</p> <p>Concerns have been raised in previous disregarded representations in relation to the 2017 Arup Green Belt Assessment Report. These have been in relation to the Brownfield cross-boundary (Newcastle Borough / Stoke City) site assessed as Review site RC14 and SHEELA site 422. Further details in this respect are included later, solely to back up significant flaws which need to be addressed.</p> <p>The Draft Plan proposes to release 14no sites from the Green Belt in a highly sporadic and often unjustified manner as a sort of 'pick-n-mix' exercise rather than any synergy with a justified spatial economic strategy. Equally, and fundamentally it significantly overrides its own Green Belt Review recommendations for a variety of spurious unevidenced reasoning. This significantly undermines its credibility as the most effective and sound strategy.</p> <p>The new mandatory housing targets and the now age of the 2017 Arup Green Belt Review, plus the proposed NPPF fundamental requirement to define and examine green belt opportunities for appropriate development including 'grey belt' of previously developed and lower quality Green Belt really calls for the need for a fundamentally refreshed Green Belt Review process. The current Draft Plan's Green Belt approach is unsound in particular its irrationality and its inconsistency with current and proposed national policy.</p> <p>Draft Plan Policy PSD5 will also need to be modified in the context of major modifications to Policies PSD1 and PSD3 and the changes to Green Belt approaches as set out in evolving national policy.</p>
Q7 Modification	<p>Due to the scale and nature of the flaws identified in this representation so far in respect of Policies PSD1 and PSD3, the Council's new mandatory housing target, the NPPF planned changes in particular its advice in relation to Green Belt has major impact on Policy PSD5, there is need to fully re-evaluate the proposals in this regard. One straightforward matter is to re-prioritise the north of the Borough for development in order to re-balance the spatial economic strategy.</p> <p>The Green Belt Review 2017 needs fundamental review, including taking into account relevant NPPF changes like 'grey belt' and other more relaxed criteria-based approaches to appropriate development in the Green Belt. The current Review is rendered out of date by now not being consistent with current and proposed national policy.</p> <p>A distinct example of how a brownfield opportunity of appropriate development in the Green Belt (with others in locality) within a priority area for regeneration is demonstrated at the end of this representation.</p> <p>Plan changes</p> <p>Local Plan experience would say that it is highly questionable whether this version of the Draft Plan can proceed to Examination due to the significant matters raised above. In the event that the Draft Plan can take a positive forward direction the following actions are recommended:</p> <ul style="list-style-type: none"> • PSD5 – a total review of the Green Belt Review 2017 taking in to account the above matters and importantly the NPPF changes and how its criteria based evaluations become sound enough to properly justify Green Belt release in a manner that the current Draft Plan's 14 Green Belt sites are not. <p>As a prime example of how the current Draft Plan has 'missed the boat' the following example demonstrates a totally discarded site which is surely amongst others which need a more justified approach and recognition rather than a simplistic dismissal.</p> <p>This particular site has been the subject of SHELAA submissions dating back to 2008 (ref 422) and has received analysis under the Green Belt Assessment (Part 2) Study as Site RC14.</p> <p>The aforementioned Assessment was very detailed in nature and in recognition of the site being assessed as making a weak contribution to Green Belt purposes and was recommended for further consideration. It's potential for sustainable small-scale growth adjacent to Kidsgrove and its local facilities was recognised.</p> <p>The site is clearly Brownfield / previously developed land with a substantial former farm complex of substantial buildings now in commercial use plus associated substantial hard standings. The site should form part of the Brownfield Land Register for Newcastle Borough.</p> <p>The Newcastle Borough Regulation 18 First Draft Local Plan (June 2023) Exceptional Circumstances for Green Belt release sets an important context. At 5.10 it states 'suitable previously developed land was prioritised for development during the site selection process'. It then refers to constraints typically</p>

	<p>associated with development of brownfield sites, such as lack of economic viability and land contamination. In relation to Site RC 14 – which does not form part of the Plan; 7.1 of the report confirms urban and brownfield sites have received site allocation focus, and that 'wherever a brownfield site was assessed to be suitable, this land has been allocated'. This is clearly not the case with Site RC 14. Perversely the Draft Plan at states that 'the lack of brownfield land ... within the urban boundary has resulted in the need to consider sites beyond the urban boundary'. This site being cross-boundary demonstrates an ever-greater justification for allocation in relation to Stoke's substantial housing requirements. Further, smaller sites such are critical to meeting early 5 year housing land supply requirements, with large strategic sites proven to have long lead-in times to delivery. This site could be fully developed within 3 years; at most 5 years. This is an example of how the Site selection process is flawed.</p> <p>The Draft Local Plan is scant in relation to its Spatial Growth reasoning, but clearly emanates from the more fulsome Issues & Options which showed strong reasoning behind Green Belt release around Kidsgrove, the Borough's second largest settlement with strong connectivity. The Green Belt Assessment Study in this context recommended that four sites (NC4, NC5, NC13 and RC14) be taken forward for further consideration. None of these sites are proposed allocations – only site KG6 is promoted in the Plan as offering estimated 6 dwellings. The Draft Plan Policy PSD 3: Settlement Hierarchy promoting substantial growth of Kidsgrove Urban Centre is totally imbalanced in this respect.</p> <p>The NPPF has a whole range of relevance to the allocation of Site RC 14. National policy calls for 'a variety and mix of land' (Para 60), a priority for sites that are deliverable in 5 years (69a) and that at least 10% of housing requirements should be made up of small sites (70) in recognition of main supply and delivery of housing requirements (74-77). Paras 24-27 highlight the need for joint co-operation in Plan making and the tests of soundness at Para 35. Para 1 refers to making effective use of land and emphasis to the role of small sites.</p> <p>The Levelling up & Regeneration Bill 2023 fingerposts 'local planning authorities to deliver as many houses as possible on land which has been previously developed'. Further, the Government announced on 13 February 2024 an even greater emphasis on prioritising such land and respect this in policy setting. They stated that 'the brownfield presumption will be strictly enforced' and announced 'a rocket boost to bringing forward as much previously used land as possible to deliver much needed housing'. This is stated to be followed up by an even stronger 'brownfield first presumption on development' through a planned revised NPPF and National Development Management Policies in 2024.</p> <p>The Draft Plan overlooks brownfield development opportunities in favour of in many instances open green belt sites with no logical circumstance in favour of allocation.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	<p>As a professionally qualified Planner I have been commissioned to represent a landowner in the Local Plan process for both Newcastle Borough and Stoke-on-Trent City Councils. I have significant experience in the Local Plan process including Plan Examinations.</p> <p>I wish to be offered the opportunity of further developing this representation through suitable topic hearing statements on key matters and issues, and appearance at Plan Examination sessions to ensure in particular participation on Plan soundness.</p> <p>As a professionally qualified Planner I have been commissioned to represent a landowner in the Local Plan process for both Newcastle Borough and Stoke-on-Trent City Councils. Q6 Details	<p>This representation is drafted in a form that would assist the Local Plan Inspector in framing the Examination Matters and Issues, notwithstanding that in its current form the Draft Local Plan is unsound. All matters raised are in summary only, and would be taken forward in detail as Examination hearing statements as required in due course.</p> <p>The Draft Plan is unclear in a number of critical matters, which are raised in this representation. It should be re-drafted to take up these aspects.</p> <p>The shortcomings of Policy PSD1 also of course impacts on Policy PSD3 and resulting Site Allocations.</p> <p>PSD3:</p> <p>This exercise and its outcomes are fundamentally brought in to question through a change in the Draft Plan's mandatory housing target from 400 to 593 dwellings delivered per annum – a requirement of any final Plan to make this close to 50% shortfall. The current policy is out-of-date, ineffective and therefore unsound. Regrettably, without a further version of a Draft Plan to deal with this anomaly, and other significant flaws, the current version fails all four tests of soundness.</p> <p>As discussed earlier, the spatial distribution of development is flawed – with the main economic drivers at Junction 16 M6 and Chatterley Valley as part of the Ceramic Valley EZ in the distinct north of the Borough, which justifies and supports the regeneration of Kidsgrove Town Centre (Policy RET5). However the only proposed housing growth attributed to Kidsgrove against a Plan target of 800 (see PSD 3 'the urban centre of Kidsgrove is expected to accommodate 800 new homes') does in fact promote in the plan just an allocation of 6no through Policy KG6 William Road, Kidsgrove, a former public house site in the Kidsgrove and Ravenscliffe area.</p> <p>Site RC8 is not referenced in the Plan document but does appear on Map 7: Kidsgrove Ward Map as an allocation. This referenced 6no dwellings in the Regulation 18 Draft. This is a Plan anomaly.</p> <p>Whilst there is planned allocated new housing to the north of the Borough it is in complete imbalance with significant outlier developments in the south for example at Loggerheads (LW53) and the aforementioned Lyme Park at Keele (SP11) and Land South Of Newcastle Golf Club (TB19) both in the Green Belt. Reasonable examination demonstrates that the Draft Plan Spatial Strategy is totally unbalanced and does not correlate with current and future economic activity or public transport connections.</p> <p>Whilst Keele Science Park (KL15) may in the longer term become deliverable, any growth aspirations of the University need to be carefully examined in the context of delivery in relation to its significant rationalisation announced in May 2024. This questionable need in relation to the planned Green Belt released scale of development on Council-owned land at Lyme Park (Keele) SP11 of 900 dwellings clearly needs significant further examination of justified exceptional circumstances. Site allocation TB19 has no validity whatsoever.</p> <p>Policy PSD3 requires fundamental change to demonstrate it is positively prepared in the light of the above, in order to demonstrate whether it is justified. This is highly questionable against the requirement of increased housing delivery and other material factors raised in this representation.</p>
Q7 Modification	<p>Due to the scale and nature of the flaws identified in this representation so far in respect of Policies PSD1 and PSD3, the Council's new mandatory housing target, the NPPF planned changes in particular its advice in relation to Green Belt has major impact on Policy PSD5, there is need to fully re-evaluate the proposals in this regard. One straightforward matter is to re-prioritise the north of the Borough for development in order to re-balance the spatial economic strategy.</p> <p>The Green Belt Review 2017 needs fundamental review, including taking into account relevant NPPF changes like 'grey belt' and other more relaxed criteria-based approaches to appropriate development</p>

	<p>in the Green Belt. The current Review is rendered out of date by now not being consistent with current and proposed national policy.</p> <p>A distinct example of how a brownfield opportunity of appropriate development in the Green Belt (with others in locality) within a priority area for regeneration is demonstrated at the end of this representation. Plan changes</p> <p>Local Plan experience would say that it is highly questionable whether this version of the Draft Plan can proceed to Examination due to the significant matters raised above. In the event that the Draft Plan can take a positive forward direction the following actions are recommended:</p> <ul style="list-style-type: none"> • PSD3 – to totally re-assess this based on the outcome of the first bullet point action above. Again, this exercise was undertaken with the Cheshire East Plan where similarly there was an initial north-south misfit and lack of understanding of economic drivers, which had to be the subject of serious 'homework' for that Council. • Prioritise transport links and public transport provision, which has no presence in the current Draft Plan. <p>As a prime example of how the current Draft Plan has 'missed the boat' the following example demonstrates a totally discarded site which is surely amongst others which need a more justified approach and recognition rather than a simplistic dismissal.</p> <p>This particular site has been the subject of SHELAA submissions dating back to 2008 (ref 422) and has received analysis under the Green Belt Assessment (Part 2) Study as Site RC14.</p> <p>The aforementioned Assessment was very detailed in nature and in recognition of the site being assessed as making a weak contribution to Green Belt purposes and was recommended for further consideration. It's potential for sustainable small-scale growth adjacent to Kidsgrove and its local facilities was recognised.</p> <p>The site is clearly Brownfield / previously developed land with a substantial former farm complex of substantial buildings now in commercial use plus associated substantial hard standings. The site should form part of the Brownfield Land Register for Newcastle Borough.</p> <p>The Newcastle Borough Regulation 18 First Draft Local Plan (June 2023) Exceptional Circumstances for Green Belt release sets an important context. At 5.10 it states 'suitable previously developed land was prioritised for development during the site selection process'. It then refers to constraints typically associated with development of brownfield sites, such as lack of economic viability and land contamination. In relation to Site RC 14 – which does not form part of the Plan; 7.1 of the report confirms urban and brownfield sites have received site allocation focus, and that 'wherever a brownfield site was assessed to be suitable, this land has been allocated'. This is clearly not the case with Site RC 14. Perversely the Draft Plan at states that 'the lack of brownfield land ... within the urban boundary has resulted in the need to consider sites beyond the urban boundary'. This site being cross-boundary demonstrates an ever-greater justification for allocation in relation to Stoke's substantial housing requirements. Further, smaller sites such are critical to meeting early 5 year housing land supply requirements, with large strategic sites proven to have long lead-in times to delivery. This site could be fully developed within 3 years; at most 5 years. This is an example of how the Site selection process is flawed.</p> <p>The Draft Local Plan is scant in relation to its Spatial Growth reasoning, but clearly emanates from the more fulsome Issues & Options which showed strong reasoning behind Green Belt release around Kidsgrove, the Borough's second largest settlement with strong connectivity. The Green Belt Assessment Study in this context recommended that four sites (NC4, NC5, NC13 and RC14) be taken forward for further consideration. None of these sites are proposed allocations – only site KG6 is promoted in the Plan as offering estimated 6 dwellings. The Draft Plan Policy PSD 3: Settlement Hierarchy promoting substantial growth of Kidsgrove Urban Centre is totally imbalanced in this respect.</p> <p>The NPPF has a whole range of relevance to the allocation of Site RC 14. National policy calls for 'a variety and mix of land' (Para 60), a priority for sites that are deliverable in 5 years (69a) and that at least 10% of housing requirements should be made up of small sites (70) in recognition of main supply and delivery of housing requirements (74-77). Paras 24-27 highlight the need for joint co-operation in Plan making and the tests of soundness at Para 35. Para 1 refers to making effective use of land and emphasis to the role of small sites.</p> <p>The Levelling up & Regeneration Bill 2023 fingerposts 'local planning authorities to deliver as many houses as possible on land which has been previously developed'. Further, the Government announced on 13 February 2024 an even greater emphasis on prioritising such land and respect this in policy setting. They stated that 'the brownfield presumption will be strictly enforced' and announced 'a rocket boost to bringing forward as much previously used land as possible to deliver much needed housing'. This is stated to be followed up by an even stronger 'brownfield first presumption on development' through a planned revised NPPF and National Development Management Policies in 2024.</p> <p>The Draft Plan overlooks brownfield development opportunities in favour of in many instances open green belt sites with no logical circumstance in favour of allocation.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	<p>As a professionally qualified Planner I have been commissioned to represent a landowner in the Local Plan process for both Newcastle Borough and Stoke-on-Trent City Councils. I have significant experience in the Local Plan process including Plan Examinations.</p> <p>I wish to be offered the opportunity of further developing this representation through suitable topic hearing statements on key matters and issues, and appearance at Plan Examination sessions to ensure in particular participation on Plan soundness.</p>

Title	Policy PSD3: Distribution of Development
Consultee Company / Organisation	Gladman Developments Ltd
Consultee Position	Planning Manager
Consultee Family Name	Wilding
Consultee Given Name	Robert
Q4 Part of document	Policy
Q4 Policy	PSD3
Q6 Details	<p>Gladman Developments Ltd (Gladman) welcome the opportunity to comment on the Newcastle-under-Lyme Final Draft Local Plan 2020-2040 (Regulation 19) consultation and request to be updated on the progress of the emerging Local Plan. Please refer to attached representations. Gladman has fully engaged fully in the preparation of the emerging Newcastle-under-Lyme Local Plan 2040 to date. Feedback from the First Draft Local Plan (Regulation 18) consultation has been addressed and incorporated into the Final Draft Local Plan consultation document.</p> <p>In the sections below, Gladman have made specific comments where we consider the Final Draft Local Plan requires modifications or further clarification to ensure that it is capable of being found sound. Comments are focussed mainly on the consultation document, with references to the Duty to Cooperate and Sustainability Appraisal documents. Our representations also include details of Gladman's land interest at land south of Eccleshall Road, Loggerheads, which we are promoting as suitable for identification as a housing allocation in the emerging Local Plan. Please refer to attachment for more information.</p> <p>Gladman are supportive of the proposed hierarchy of centres set out within the settlement hierarchy. It follows that in formulating the spatial strategy and making site allocations that this same principle should apply. Loggerheads for example has demonstrated over the last decade that it can support and deliver new housing growth opportunities in the short / medium term which has helped assist the local planning authority in meeting its housing need. This is demonstrated by the three sites which are currently under construction in the village, including 128 homes at Tadgedale Quarry, 73 dwellings at land south of Muckleston Road and 55 dwellings at land off Eccleshall Road.</p> <p>In promoting sustainable development patterns, Gladman agree that development proposals should be directed to the most sustainable settlements in the first instance. The correct settlement hierarchy is essential in developing a sustainable spatial strategy.</p> <p>The main urban areas of Newcastle-under-Lyme and Kidsgrove are constrained by the North Staffordshire Green Belt. Green Belt also constrains the settlements of Keele, Madeley and Audley Parish. Gladman support the allocation of 450 new homes to Loggerheads over the plan period, however we suggest it could accommodate a higher proportion of overall housing growth due to it being the only settlement in the borough not constrained by Green Belt. In addition, Loggerheads has all the everyday local facilities and services available in the village for new and existing residents and additional growth will ensure their vitality.</p> <p>Gladman suggest amending the terminology of 'in the order' to 'a minimum' to allow for more certainty that this level of housing will be delivered over the plan period. Furthermore, it would allow for sustainable housing proposals adjacent to settlement boundaries which are not allocated by the Council to come forward in scenarios where the Council is unable to demonstrate a robust five-year housing land supply position. It also aligns with the boost to the supply of housing outlined in the NPPF.</p>

Title	Policy PSD3: Distribution of Development
Consultee Company / Organisation	Cross Heath, Wolstanton and May Bank Branch Labour Party
Consultee Position	Branch Secretary
Consultee Family Name	Gorton
Consultee Given Name	Richard
Q4 Part of document	Policy
Q4 Policy	PSD3
Q6 Details	Policy PSD3- Distribution of Development - While the Branch recognizes that some new build on Green Belt land will be necessary to meet the Borough's future housing needs, we believe before the Local Plan is adopted, the Borough Council should look again at the impact that new homes would have on the rural centres listed in the document. This exercise would establish whether the rural centres had the infrastructure to cope with an influx of new residents and identify the consequences development would have for the local countryside and wildlife.
Q7 Modification	Modification of Policy PSD3 – the Council should review the impact new dwellings would have on the rural centres identified for further development with a view to establishing whether these centres had the infrastructure to cope with an influx of new residents and examine the consequences new development would have on the local countryside and wildlife.
Q9 Hearing reasons	Conclusion Cross Heath, Wolstanton and May Bank Branch Labour Party welcomes the opportunity to give its views in response to the Regulation 19 stage of the draft Local Plan. If it is felt to be appropriate, a member of the Branch would be prepared to take part in the public scrutiny of the draft Local Plan.

Q4 Part of document	Policy
Q4 Policy	PSD3
Q5 Legally compliant	Yes
Q5 Sound	Yes
Q5 DTC compliant	Yes
Q6 Details	<p>This representation is submitted on behalf of Richborough in response to the Newcastle-under-Lyme Draft Local Plan ("DLP") consultation. Please also refer to attached representations.</p> <p>This policy seeks to direct most development towards the urban areas of Newcastle-under-Lyme and Kidsgrove with some more limited development to the rural centres.</p> <p>In general terms, there is no objection to the policy presumption to directing the most development towards the larger urban centres, Keele University and the larger Rural Centres, including Baldwins Gate. This chapter will give further consideration to the proposed growth around Newcastle-under-Lyme, Keele University and Baldwins Gate below.</p> <p>Newcastle-under-Lyme and Keele University</p> <p>Keele University and Science Park has been a key part of the Council's growth strategy identified in previous drafts of the Local Plan, and previous consultations on the draft Joint Local Plan with Stoke-on-Trent. It is well placed to deliver quality well paid employment and is also well related to the Newcastle-under-Lyme urban area with both locations providing mutual benefits and synergies with each other.</p> <p>Richborough supports the retained focus on Keele University as an area of growth in the current version of the DLP and the sustainable expansion of Newcastle-under-Lyme.</p>

	<p>The allocation of SP23 is well placed to deliver mutual benefits of growth to both Keele University and Newcastle-under-Lyme. The site is located towards the edge of the Newcastle-under-Lyme urban area and provides a strategic link between the urban area and the University and Science Park. Richborough has been engaging and working collaboratively with Keele University to facilitate a joined up approach to the growth of Newcastle-under-Lyme and Keele and this site forms part of wider discussions held to date.</p> <p>It site can also deliver high quality housing to support the employment growth at the University and Science Park by providing homes in close proximity to employment as well as providing housing in close proximity to other services and facilities within the urban area.</p> <p>Therefore, the growth of Newcastle-under-Lyme and Keele are complimentary to each other and this growth is supported as part of the overall distribution of development. SP23 forms an important component of this distribution of development and the allocation of this site is considered to be sound. Further commentary regarding site specific policies for these two draft allocations will be provided later in this submission.</p> <p>In summary, it is the position of Richborough that the proposed settlement hierarchy is justified.</p>
Q7 Modification	Please see supporting representation by Knights on behalf of Richborough for allocation reference SP23.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)

Consultee Company / Organisation	Araripe Limited
Agent Company / Organisation	Pegasus Group
Agent Position	Executive Director
Agent Family Name	Onions
Agent Given Name	David
Q4 Part of document	Policy
Q4 Policy	PSD3
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>These representations are made in response to the Regulation 19 consultation on the final draft of the Newcastle-under-Lyme Local Plan 2020 – 2040. The representations are made by Pegasus Group on behalf of Araripe Limited and relate to their land interest at St Martins Road, Talke(hereafter referred to as the “Site”). The Site is greenfield land situated to the south of Talke. With regards to the Site, these representations should be read alongside the attachment.</p> <p>Araripe Limited support the Council's approach to the distribution of development outlined in this Policy, which is positively prepared as it details how and where the objectively assessed need in the HENAFU will be delivered. Particular support is given to the 800 homes identified for Kidsgrove, although this should be treated as a minimum figure, as acknowledged in paragraph 5.12 of the supporting text. The Site being promoted for residential development by Araripe Limited (TK17) is well positioned to support this growth in the short to medium term following the adoption of the Plan. The policy is justified, with it being informed by the findings of both the Sustainability Appraisal and Housing Spatial Strategy Topic Paper.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	Sufficient land for housing should be planned for to meet the identified need for this within the Borough. Araripe Limited strongly support the allocation of Site TK17 for residential development, but several amendments are required to make Policy TK17 sound, as set out in paragraph 3.19 of the accompanying written representations. We would welcome the opportunity to participate in the hearing sessions to set these out, as well as to draw attention to the other matters which need to be addressed to ensure soundness elsewhere in the final draft plan, whilst emphasising site TK17's suitability, availability, and deliverability, being an optimum and sustainable location for high-quality residential development.

Q5 DTC compliant	No
Q6 Details	<p>As drafted, the plan provides for 8,000 homes over the plan period (400 dwellings per annum), based on the following spatial distribution:</p> <ul style="list-style-type: none"> • Strategic Centre of Newcastle-under-Lyme – 5,200 dwellings; • Urban Centre of Kidsgrove – 800 dwellings; • Audley and Bignall End – 250 dwellings; • Betley and Wrinehill/Madeley and Madeley Heath – 250 dwellings; • Loggerheads – 450 dwellings; • Baldwins Gate – 250 dwellings; and • Keele and Keele University – 800 dwellings. <p>As detailed above, we consider that is lower than it should be as it does not respond to the Council's new mandatory housing target, and the proposed supply contains significant levels of student accommodation.</p> <p>Setting aside issues associated with the plan's overall housing number, the distribution of development from a spatial perspective is flawed. Two of the plan's key economic drivers – Land at Junction 16 of the M6, and Chatterley Valley, Lowlands Road – are located within the north of the borough along the A500 corridor, while the plan also provides the policy context for the regeneration of Kidsgrove town centre. However, while it is acknowledged that the northern area of the Strategic Centre of Newcastle-under-Lyme will provide a certain level of the housing requirement in support of these allocations, the closest areas from a spatial perspective are Audley and Bignall End, and the Urban Centre of Kidsgrove, the two combined provide just 1,050 homes, or 13.1% of the overall proposed housing land supply. This is clearly an unbalanced approach, particularly taking into consideration public transport connections.</p> <p>It is also noted that the housing number associated with the Strategic Centre of Newcastle-under-Lyme incorporates an 'urban extension' which is detailed in Policy SP11 (Lyme Park, Silverdale) and is associated with the proposed development of the Keele Municipal Golf Course to provide 900 homes within a country park setting. The justification of the release of the golf course from the Green Belt was based around the extension of the Keele Science Park, and the growth aspirations of Keele University. However, while the extension of Keele Science Park still appears to be deliverable, the growth aspirations of the university would appear to be facing some serious challenges linked to the funding crisis facing the higher education sector, and the post-Brexit challenges facing international students. Indeed, in May 2024, Keele University invited 2,300 members</p>

	of staff to consider voluntary redundancy. Therefore, the major Green Belt release that underpins the proposed urban extension is unjustified in the current context. Therefore it is considered that Policy PSD3 requires amendment to properly respond to the plan's proposed economic strategy and any increase in the Council's housing target. Suggested amendments are detailed below.
Q7 Modification	Policy PSD3 will be the most complex to address and it will require the Council to carry out some 'homework' and detailed analysis in terms of the unbalanced nature of the distribution of development in the context of the key economic drivers in the north of the borough, and the new mandatory housing target. While the new mandatory housing target may well mean increased housing numbers across all areas of the borough, particular attention will need to be paid to the Urban Centre of Kidsgrove.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	We consider that it is necessary for us to participate in the examination hearing session(s) as we are promoting a site that was allocated in the Regulation 18 draft, yet removed from the Regulation 19 draft despite nothing changing. In addition, we have further evidence to present within our hearing statement to reinforce the deliverability of the site, and the weaknesses of the plan as drafted.

Title	Policy PSD3: Distribution of Development
Consultee Company / Organisation	Thistleberry Residents Association
Consultee Position	Chair
Consultee Family Name	Drakakis-Smith
Consultee Given Name	Angela
Q4 Part of document	Policy
Q4 Policy	PSD3
Q6 Details	<p>2. RE Housing provision contained in Policies PSD1 – PSD 7 and with regard to housing allocations per borough/ward areas:</p> <p>a. The total allocations for the Borough has been increased from 5,000 units to 8,000. Under the changes to the NPPF rules, does this mean that national government has intervened to change the level of development that the NBC adopted based on the last consultation which took place for the last draft of the Plan?</p> <p>b. If the supporting documents are read and understood, these estimates are based on guestimates and over- estimates for some localities, which might include Newcastle Borough. The reliance for the estimates appears to be on the 2011 and 2021 (even the 2001 census is mentioned) census material. Some data had been updated to 2023 but seemed questionable. The post- Covid total population needs to be verified to be made part of any assessment in the interests of accuracy and unnecessary development.</p> <p>c. The issue of empty homes has not been mentioned, even though the number in this and other LAs would appear to be high. Pre- Covid, when enquiries were made of the NBC by the TRA, 1100 was a figure mentioned. Councils have all the necessary powers to bring such homes back into commission and resources should be allocated at both national and local levels to do this. This level of empty homes should not be regarded as acceptable or sustainable if there are shortages.</p> <p>d. Whilst the Plan makes some attempt to deal with the issue of affordable homes and social housing, whilst the term home (as a need) and house (as a commodity) are confused and left to the mercy of market forces to decide affordability, the issue will not be resolved, and need will not be satisfactorily met.</p> <p>e. Neither does the Plan factor in that the purchase of a house/home might be the easier part. The more difficult part is maintaining property so that it remains habitable and affordable.</p> <p>f. Does the LA know how many homes have been repossessed? Or how many residents have abandoned private ownership in favour of public or private rental as a more affordable option?</p> <p>g. In Newcastle-under-Lyme student flats and bedsits have been favoured over other types of housing. This Plan suggests it might perpetuate those kinds of development when other types are needed. Some student developments have already 'extended' their criteria to other users, since take up has not been as high as expected.</p> <p>h. Providing affordable homes, therefore, is not a stand-alone issue although it would appear that cross-cutting issues have been ignored, or not considered. Additional updated data and analysis are needed to ensure sound decision-making and effective solutions that transcend any political influences, allowing for more objective and sustainable outcomes necessary.</p> <p>8. The Future of the Plan System</p> <p>Although this is not contained within the remit of the Plan it might be the time to introduce such concepts in order to deal with the issues that prevent plans from a) being drawn up in a timely manner and b) from being implemented with good will, and in a timely manner.</p> <p>a. After reading the Plan it seems to be not necessarily a ground-up Plan in forward planning, but an attempt to fulfil all the legal, national, government requirements which have been imposed, using the tick-box vocabulary.</p>

	<p>b. It would appear that within LAs that there are short-term enthusiasms for projects which wears off as new projects are streamed. Enthusiasm seems to equate with levels of resources invested. This also means that some projects are not actually needed or required and add little value.</p> <p>c. The new NPPF rules reveal the tensions between national government and local authorities, particularly in the areas of control of development and resources.</p> <p>d. Local Authorities seem to have evolved their own ways of doing things which means that either practices and procedures need to be standardised, or that one size does not fit all and that each local council needs to formulate its own plan with reference to its unique needs without the interference of national government – with national government being the final scrutineer/arbitrator. However, this might need a new and different kind of Councillor and MP.</p> <p>e. It would seem that, currently, national and local government might not be on the same wavelength. It seems that in some cases, national government is a driving force for implementation of its own wish lists, and that Local Government is a line of resistance with ideas of its own. A more collaborative and meaningful dialogue might produce a more meaningful dialogue and mutual compromises in order to bring about a better working relationship.</p> <p>f. Given how dynamic and fast-moving situations can be at the local level it is questionable whether or not setting a plan to cover 20 years is possible or even feasible so that it is fit for purpose.</p> <p>g. Some of the proposals in the Plan have already happened so the Plan appears to be retrospective – rather than forward looking. The same could be said of the housing allocations and provision – some have already been built so there is a confusion between what has been, what is, what is needed and what might/should be. Whilst the five year 'banks' for land and quantities of units might go some way to prevent evasion, it is important that the methodology is also fully understood and implemented into a workable rolling system.</p> <p>h. The system of local governance was outdated even in 1972 when it was introduced. However, the system still clings to 19th Century principles and rules. Some parish councils are particularly out of date even with those rules. Many parish councils do not have the policies to ensure they are acting legally or even democratically – a term which is losing its meaning. Increasingly it seems that governance has become so eroded, in some contexts it might no longer exist.</p> <p>i. Rules and overarching policies are often vague (if they exist) and are differentially interpreted within and between councils. Councillors appear to lack the necessary support to place things back on track. Chairs and Clerks can be equally and increasingly ill-equipped to deal with the kind of governance required in a 21 Century which appears to be controlled by the internet, social media and hearsay. Truth is rapidly losing its appeal.</p> <p>j. To inform the latest Plan perhaps there is a need to quantify the real successes (and failures) of its predecessor in order to avoid making the same mistakes in the next 20 year Plan period.</p>

Q5 Sound	No
Q6 Details	<p>Policy PSD3: Distribution of Development</p> <p>Policy PSD3 provides the distribution of development across the Borough based on the Settlement Hierarchy and the requirement set out in Policy PSD1.</p> <p>The policy states that the strategic centre of Newcastle-under-Lyme is expected to accommodate in the order of 5,200 new homes; the urban centre of Kidsgrove is expected to accommodate in the order of 800 new homes; and the rural centres are expected to accommodate development of the scale shown below:</p> <ul style="list-style-type: none"> •Audley and Bignall End (joint) in the order of 250 new homes •Betley and Wrinehill (joint) and Madeley and Madeley Heath (joint) in the order of 250 new homes •Loggerheads in the order of 450 new homes •Baldwins Gate in the order of 250 new homes •Keele and Keele University (joint) in the order of 800 new homes <p>The University is supportive of the overall approach to providing new homes. However, it is important to meet the requirements of the University population, as well as the broader Borough requirements. It is therefore recommended that the housing target set out in Policy PSD3 is clearly identified as a minimum figure. This will ensure the growth aspirations of the plan as a whole are met.</p>

Q7 Modification	Recommendation We strongly recommend that the wording of the Policy is revised at various points to remove the wording 'in the order of' and replaced with 'a minimum of'. This will support the objectives of the NPPF and local policy objectives including PSD1 to support appropriate provision of accommodation within the Borough.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	We request the right to make representations on behalf of Keele University, in order to examine the Council's evidence in support of the proposed approach to Green Belt and Open Space matters in order to ensure that the plan is effective and justified within the context of the University's future investment proposals, and with reference to the importance of this investment for the wider economy of Newcastle Under Lyme.

Title	Policy PSD3: Distribution of Development
Consultee Company / Organisation	Persimmon Homes (North West) Limited
Agent Company / Organisation	Asteer Planning LLP
Agent Family Name	Power
Agent Given Name	Jon
Q4 Part of document	Policy
Q4 Policy	PSD3
Q6 Details	Please see attached representations Policy PSD3 (Distribution of Development) 3.11 The Regulation 19 Plan identifies a distribution of development which directs 800 new homes towards the Keele and Keele University settlement. In line with the above comments regarding the Settlement Hierarchy, whilst Persimmon welcome a greater apportionment to Keele and Keele University Hub (increased from 600 homes to 800 homes from Regulation 18 to Regulation 19), we consider that it is capable of accommodating a greater level of housing growth which will catalyse regional economic growth. 3.12 Ambitions in both the 'NULBC's Strategic Economic Development Strategy' and the 'New Deal for Newcastle-under-Lyme 2019-2023' seek to double the SIP and provide over 7,000

FTE jobs by 2040 while “significantly raising the number of new houses built each year”, demonstrating the capability of Keele and Keele University to accommodate significant growth. The identification of 800 new homes in Keele is therefore not sufficiently ambitious, and could miss a significant opportunity to realise the University growth corridor and its potential for delivering housing, employment, and economic growth. Notwithstanding this, as explained below, the supply identified to meet this need predominantly comprised of student accommodation; which will not provide the market or affordable housing to support this economic growth or the development of the University Growth Corridor.

Housing Supply in Keele

3.13 The Site Selection and Assessments Report (2024) identifies 587 commitments and completions within the Keele and Keele University settlement, which are included as part of the emerging Local Plan’s claimed supply, leaving a ‘residual’ need for 213 units to meet the identified need of 800 units during the Plan Period. A large majority of the 587 commitments and completions are primarily claimed from the following two sites:

- KL16: Pepper Street, Keele – this site was originally granted reserved matters permission for 100 dwellings in August 2018, and has subsequently received reserved matters consent. An update from the SHELAA (2024) states that “the site is under construction as of June 2024”.

- KL28: Horwood Hall, Keele University – this campus site was granted approval for the demolition of 732 student bedspaces, and erection of 1,706 student bedspaces at 12

Horwood Hall within the Keele University campus. The Council’s housing trajectory in the SHELAA (2024) is claiming this as 406 dwellings (from the 973 net additional bed spaces) in the housing supply / commitments.

3.14 The Regulation 19 Plan proposes to allocate two sites in the Keele and Keele University settlement. These both support the ambitions of the University and the University Growth Corridor, which Persimmon fully supports; however, neither offer any contribution to meeting the market or affordable housing needs that would support this growth. These include:

- KL13: Keele Science Park Phase 3 – the site has an extant planning permission for mixed-use development. The SHELAA (2024) states that “The site has planning approval for mixed use development for employment and academic purposes with some student residence (Ref. 17/00934/OUT & 20/00162/REM). Site promotion includes provision of approximately 220 units of student residential accommodation in addition to employment use”. The extant permission (Ref. 17/00934/OUT) confirms that the consent is for student and university staff accommodation and does not provide consent for market or affordable housing – condition 6 of that permission states “6. The occupation of the residential accommodation hereby permitted shall be limited to persons who are either students or delegates at the University or members of University staff”.

- KL15: Land South of A525 – Policy KL15 states “Land south of the A525 Keele is allocated for residential and employment development including 260 dwellings for student accommodation and 13 hectares of employment land”. The site will therefore also deliver no market or affordable housing.

3.15 Based on the above, Persimmon has significant concerns with the Council’s approach in claiming its housing supply from large numbers of student residences especially while there is no clear evidence of how this is applied as part of the overall housing requirement or supply.

In relation to demand and supply in Keele, Persimmon makes the following comments: Housing & Student Requirement

3.16 As set out in Lichfields Housing Requirement Paper at Appendix 2, the Council’s 2023 HENA and 2024 HENA Update make it explicitly clear that the proposed growth of the University has not been taken into account in the calculation of the Borough’s Housing requirement. Paragraph 8.34 of the 2023 HENA confirms this, stating that [Asteer

13

emphasis added]: “As with the earlier modelling presented in the HNA, the demographic projections introduced in this report continue to principally allow for indigenous growth amongst residents of traditional student age, meaning that a significant growth in the student population could generate an additional need for housing that is not explicitly taken into account. The HNA recommended that the Council maintains a dialogue with Keele University to ensure that its plans for investment, and specifically the anticipated allowance for additional student numbers in the plan period, are fully understood and the update above reaffirms why this will be necessary”. As set out by Lichfields, there is no evidence that engagement with the University has been undertaken or that student need has been addressed. They anticipate that student demand will generate a need for the equivalent of an additional 25d dpa in NUL, and specifically in the Keele corridor, which has not been addressed.

Housing Land Supply

3.17 Persimmon has significant concerns with the housing supply land position in Keele. Of a total of a total of 587 units claimed in the supply of ‘committed’ sites in Keele, a large majority of these are at Horwood Hall - with 406 residential units claimed in housing commitments from an on-campus student development for 1,706 replacement student bedspaces.

3.18 In terms of future supply in Keele, 220 units are allocated at site KL13 and 260 units are allocated at site KL15 – both of which are student accommodation only development, as explicitly stated in the Regulation 19 Plan. This means that:

- The largest source of supply in the committed sites in Keele and the University Hub

	<p>comprises student bedspaces at Horwood Hall.</p> <ul style="list-style-type: none"> • The proposed allocated supply in the Keele and Keele University settlement is entirely student accommodation, at sites KL13 and KL15 – and therefore no market or affordable housing is proposed to be allocated during the Plan Period in Keele and the University Hub. • As set out by Lichfields, the HENA and Local Plan does not factor in student growth or accommodation needs. It is therefore likely that the student accommodation proposed will merely support some of the growth needs of the University – leaving a residual and severe lack of market and affordable housing in Keele to meet the proposed housing requirement. <p>14</p> <ul style="list-style-type: none"> • Only site KL16 (Pepper Street - 100 units) and other windfall / commitments (though it is unclear in the evidence base where or what these are) have the potential to deliver any non-student residential accommodation in Keele and the University Hub. <p>3.19 Based on the above, there will be very limited high quality market or affordable housing brought forward in the Keele and Keele University settlement during the Plan Period (including no allocations), which will significantly impact on the growth of the University corridor and the ability of employment generators, such as the SIP, to attract and retain staff in the University Growth Corridor.</p> <p>3.20 Persimmon considers that the Regulation 19 Plan does not adequately meet its housing needs, particularly in the settlement of Keele and Keele University, which relies heavily on a claimed supply of student accommodation (compared to a housing requirement that does not consider University or employment growth). As a minimum, the Council should revisit its housing evidence base in the context of emerging national policy, the growth of Keele University and the need to provide a deliverable supply of market and affordable housing to support the University Growth Corridor.</p>

Q6 Details	<p>2. Chapter 5: Planning for Sustainable Development</p> <p>Policy PSD3: Distribution of Development</p> <p>2.14 Under Policy PSD3, 5,200 homes are distributed to the strategic centre of Newcastle-under-Lyme, an uplift of 400 dwellings from the previous iteration of the plan (which also appears to correspond with the uplift of 400 dwellings to the housing requirement). In contrast, only 800 new homes are distributed to the urban centre of Kidsgrove, which appears to be too low based on the evidence. This is less development than was proposed in Kidsgrove in the previous Regulation 18 consultation (Draft Plan).</p> <p>2.15 Policy PSD2 also recognises that Kidsgrove benefits from a high number of services and facilities, retail and leisure, economic and residential areas, sustainable transport connections and accessible public open space. Furthermore, Kidsgrove railway station is the only mainline train station in the borough, which also provides direct links to a range of local and national destinations including Manchester and London. The station has been the subject of significant investment for accessibility improvements (£5.5m via Access for All funding), and there are long-term ambitions for the car park to house a bus station to create an integrated public transport hub. The Council's website states4:</p> <p>"Kidsgrove Station represents a key growth opportunity for the town. Crewe is a 15- minute rail journey from Kidsgrove with 34 trains travelling from Crewe to Kidsgrove on an average weekday. The Crewe hub will see 18 trains per hour running to and from London by 2033, and an additional 12 trains per hour to and from Birmingham. This will transform Kidsgrove's rail connectivity and attractiveness as a place to live and invest. The redevelopment of Kidsgrove station has been a long-term priority with widespread local support."</p> <p>2.16 The rail station at Kidsgrove is therefore very important for the borough and represents a key opportunity when considering the distribution of development. In our view, Kidsgrove is highly sustainable and should be accommodating an even greater proportion of the proposed housing requirement.</p>
Q7 Modification	Please see attached representations.

Title	Policy PSD3: Distribution of Development
Consultee Company / Organisation	Bignall End
Consultee Family Name	Willard
Consultee Given Name	Gerald
Q4 Part of document	Policy
Q4 Policy	PSD3
Q5 Sound	No
Q6 Details	<p>Policy SD3 says:</p> <p>1. The strategic centre of Newcastle-under-Lyme is expected to accommodate in the order of 5,200 new homes. SP11 provides for an expected 900 housing units within a county park . There is no clear reasoning for this number of units or indeed a 2nd country park within this area. There is scope within SP11 to increase the housing numbers to meet an increased housing target. The policy also says:</p> <p>3. The rural centres are expected to accommodate development of the scale shown below:Audley and Bignall End (joint) in the order of 250 new homes.</p>
Q7 Modification	<p>Clearly in light of the shortfall within the plan a significant increase in housing allocation for Newcastle under Lyme District and also for Audley change is required. The allocation of site SP11 provides for 900 units. This should be increased in line with revised national targets.</p> <p>It is suggested that for Audley site AB75 should be included within the plan. This addition could deliver an additional 136 units. This site adjoins AB12 and can provide a safe and secure access to both AB75</p>

	itself and AB12 which does not have any suitable and safe access. In addition the economies of scale associated with this conjoined development can provide sufficient viability to support linked community gains.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	In seeking the following modifications to the plan, I do consider it necessary to participate in examination hearing session(s) in order advise the inspector of my clients concerns and to respond to any questions that the inspector may have.

Title	Policy PSD3: Distribution of Development
Consultee Company / Organisation	Jones Homes & Renew Land Baldwins Gate Ltd)
Consultee Family Name	Jones Homes & Renew Land Ltd
Agent Company / Organisation	Stantec
Agent Position	Planner
Agent Family Name	Connell
Agent Given Name	Lydia
Q4 Part of document	Policy
Q4 Policy	PSD3
Q6 Details	<p>These representations are submitted by Stantec on behalf of Jones Homes (North West) Ltd (Jones Homes) and Renew Land Baldwins Gate Ltd (Renew Land), together known as "the Promoters", in response to the Final Publication Draft of the Newcastle-under-Lyme 2020- 2040 ('Local Plan') at Regulation 19 published by Newcastle-under-Lyme Borough Council (NuLBC) ('the Council) in August 2024. Please also see attached representations.</p> <p>Settlement Hierarchy and Distribution</p> <p>The adoption of a clear adoption of a clear settlement hierarchy within the NuLLP is supported, as is the recognition of the role that Rural Centres can play in meeting the development needs of the Borough as a whole. We agree that maintaining the role of the rural centre by securing their ongoing vitality and viability is fundamental to their continuing role as well as the health of their communities and surrounding hinterlands.</p> <p>Jones Homes and Renew Land support draft Policy PSD2: Settlement Hierarchy which seeks to maintain the role and function of Baldwins Gate as a Rural Centre.</p> <p>Policy PSD 2 states, in relation to Rural Centres: "Rural Centres provide a role in service provision to the local population and contain several essential services and facilities in order to meet the day to day needs of residents. The Rural Centres will meet some of the development needs of the Borough, commensurate with their role as villages and with the type, density and design of development seeking to protect and enhance their rural and historic character. It is recognised that there are differences between these villages in terms of their sizes and available facilities and therefore the scale of development in each area should be relative to its role, function and infrastructure capacity. The Rural Centres are Audley and Bignall End (joint), Baldwins Gate, Betley and Wrinehill (joint), Keele Village (with University Hub), Loggerheads, Madeley and Madeley Heath (joint). The University Hub is expected to receive a balanced level of growth commensurate with its role as a strategic hub whilst recognising its rural role and function."</p> <p>We support the above policy that recognises that there are differences between villages in terms of their sizes and available facilities and therefore the scale of development in each area should be relative to its role, function and infrastructure capacity.</p> <p>Draft policy PSD3 seeks therefore to distribute development throughout the settlement hierarchy. The supporting test to PSD3 sets out, however, that the figures presented in this policy are intended as a guide and are neither a ceiling nor a specific target. We consider that whilst figures set out within PSD3 should certainly not be a ceiling, delivery of those number of dwellings is essential to the borough meeting its housing needs as a whole. We consider, therefore that PSD3 should require that the level of development it seeks to distribute should be met as a 'minimum'.</p> <p>The resulting Distribution of Development the Rural Centres is set out as follows:</p> <ul style="list-style-type: none"> • Audley and Bignall End (joint) in the order of 250 new homes • Betley and Wrinehill (joint) and Madeley and Madeley Heath (joint) in the order of 250 new homes • Loggerheads in the order of 450 new homes • Baldwins Gate in the order of 250 new homes • Keele and Keele University (joint) in the order of 800 new homes <p>The Local Plan notes that commitments and completions since the start of the Plan period will contribute towards the indicative targets outlined above and to maintain an available supply of housing land. The broad level of development proposed for those settlements will be delivered through a combination of Local Plan site allocations and through existing housing land supply.</p> <p>We have fundamental objections to the Local Plan's approach to the distribution of development to the Rural Centres. We will demonstrate below that the Local Plan does not have a robust, consistent or transparent methodology for determining the level of growth distributed to each settlement. We conclude that the eventual distribution of growth which has been landed on has been based loosely on a perceived availability of housing land supply at those centres which, again, has</p>

not been assessed in a robust, consistent or transparent way. We conclude that the Local Plan, in this regard does not pass any of the tests of soundness set out within the NPPF.

The supporting text to PSD3 at 5.15 of the Local Plan states that the proposed distribution of development for the Borough has been established from: "assessing reasonable alternative options for the distribution of development informed by previous Local Plan consultation stages, the evidence base and Sustainability Appraisal (SA). The process undertaken to establish a development distribution and the consideration of site options is set out in the Plan Strategy Topic Papers, Site Selection Paper and SA Report."

In the first instance, disappointingly, there is no one source of truth for how the above distribution model has been arrived at or how a methodology has been applied. The closest document to providing an explanation is the Housing Spatial Strategy Topic Paper [ED031] which seeks to show the evolution of the distribution model from the Regulation 18 draft of the Local Plan. Paragraph 5.18 of that document sets out that, at Regulation 18, "Housing site options for these settlements were considered in relation to broad distribution factors, settlement hierarchy and the merits of individual sites through the site selection process."

For the rural service centres, paragraph 5.86 – 5.88 explains:

In accordance with strategic factors it is appropriate to primarily direct growth to the strategic and urban centres. As part of a balanced distribution of development a proportionate level of growth is also appropriate in the rural service centres commensurate with their role and function including the range of key facilities and infrastructure. The Regulation 18 preferred spatial strategy identified a proportionate quantum of development for the rural service centres that combined with the strategy for the strategic and urban centre provided for LHN.

A site selection process was also undertaken for the rural service centres consistent with the broad distribution factors and settlement hierarchy to direct an appropriate scale of growth to these settlements. Bottom-up considerations and the merits of the sites have then been considered informed by site specific SA, key evidence studies and ongoing stakeholder engagement to identify a shortlist of preferred sites. It is considered that there are no further reasonable alternative growth scenarios for the rural service centres. Scenarios identifying higher levels of growth in these settlements would be inappropriate in relation to broad distribution factors, settlement hierarchy and the availability of key facilities / infrastructure. The most sustainable sites for these settlements have been identified through the site selection process. It is considered that there are no further reasonable alternative growth scenarios to appraise for these settlements.

In essence then, ED031 sets out that the Reg 18 Local Plan sought to distribute development between the Rural Centres (having decided what the overall level of growth would be) in accordance with the suitability of the rural centre for growth (based on services and facilities).

The Rural Area Topic Paper (RATP) (2024) sets out the methodology for establishing the position of the rural settlements. Table 3 of the RATP sets out the sustainability of settlements and shows that Baldwins Gate and Loggerheads are the only Rural Centres that meet all sustainability criteria for meeting the day to day needs of their populations on their own, without the reliance of being considered alongside a nearby settlement.

Notwithstanding the above, and without any reasonable explanation the Reg 18 Local Plan failed to allocate any development towards Baldwins Gate. Our Representations to the Reg 18 Local Plan consultation (at Appendix 2) set out the reasons that approach was unsound and stressed the importance of providing a proportionate level of growth to the Rural Centres to maintain their vitality and viability. The Reg 18 Local Plan did set out that a Planning Appeal at Baldwins Gate Farm was due to be determined at Inquiry following the consultation on the Local Plan and that the LPA would revisit its position on allocating development to Baldwins Gate subject to that appeal. That appeal was subsequently allowed and that site has subsequently been allocated for development.

The failure of the previous local plan to allocate any development towards Baldwins Gate despite it being demonstrated as equally the most sustainable Rural Centre within the borough demonstrates that the conclusions reached by the Local Plan (not to allocate growth) were not reflective of the approach reported to be being taken within the Plan Strategy Topic Paper. Indeed, the approach to Site Selection is completely absent insofar as the only Site which was to be allocated was one which was successful at appeal.

Contrary to paragraph 5.15 of the draft Local Plan, the Sustainability Appraisal (SA), Site Selection Methodology or other parts of the evidence base do not provide any further information as to how the decision has been made to proportion development among the rural centres. The resulting distribution of development does not bear out a logical approach to distribution on any one of, or combination of the factors set out to have been considered within ED031; or if it has, it has not been presented transparently to the reader of the plan or its evidence base.

This lack of evidence based approach is borne out in the disparities between the different Rural Centres and how growth has been distributed amongst them.

Notwithstanding having identical settlement status, and sharing an equivalent number of services and facilities, draft Policy PSD3 seeks to apportion some 450 dwellings to Loggerheads over the plan period in comparison to 250 dwellings at Baldwins Gate. We consider that failing a more robust methodology than the Council has provided, the Local Plan should be bound to at least a fair and even distribution of development across its sustainable settlements in line with their access to services and facilities; i.e. Baldwins Gate should at least be apportioned 450 homes in line with Loggerheads.

Notwithstanding the lack of methodology for the distribution of growth having been provided within the evidence base for the Local Plan, it can be fairly readily deduced that the eventual quantum of development for each Rural Centre has been arrived at as a result of the number of sites (and their capacity) that the Council considered was available and appropriate to bring forwards. In the case of Baldwins Gate, that is certainly true where the disaggregation of development towards it has only happened as a result of planning permission having been granted at appeal; as made clear by the Reg 18 Local Plan and the Plan Strategy Topic Paper [ED031].

We do not consider it inherently unsound to distribute development across a range of settlements based on, in part, the availability of suitable sites for development. However, if that is the approach that a Local Plan is to take, it must be soundly done and, as such, must be positively prepared, justified, effective

and compliant with national policy. Notwithstanding those tests, it must also be done fairly and with transparency such that the reader (including a Local Plan Inspector Examining the Plan) can see and understand the process which has been undertaken.

Such an approach has not been executed in the case of the NuLLP. Putting to one side that the methodology purported within the evidence base (distribution commensurate with the role of the settlement) doesn't reflect the one that has been taken (distribution based on site availability), the approach to Site selection is not considered to be robust or transparent.

The Site Selection Methodology (SSM) Report within the Council's evidence base at paragraph 2.1 sets out the stages to site selection as: The site selection process comprises several stages. There may be instances where sites have had to move between stages on an iterative basis. The stages are: -

Stage 1: establish a pool of sites to consider through the Strategic Housing and Economic Land Availability Assessment (SHELAA)

Stage 2: First site sift using the list of SHELAA to generate a list of sites for further consideration through the process

Stage 3: Decision point, to determine if there is there a need to continue with site selection process based on alignment with the distribution of development and relationship to the settlement hierarchy of centres".

Stage 4: Site Assessment using SA (Sustainability Appraisal), HRA (Habitats Regulations Assessment) and appropriate relevant evidence.

Stage 5: Evaluation and initial recommendations - have enough non-Green Belt sites been identified in the centre to meet the distribution of development. If development needs have not been met through: -

- Allocation of non-greenbelt sites
- Discussions with neighbouring authorities to meet the Borough's need
- There are exceptional circumstances Then consider Green Belt sites for allocation

Stage 6: Public consultation and input from statutory consultees

Stage 7: Final site sift and site selection (our emphasis)

We have no material objection to Stage 1 and Stage 2 of the SSM as a mechanism; we consider that it is appropriate for the SHELAA (informed by the call for sites process) to inform the pool for sites to be considered. Taking Baldwins Gate as an example, some 9 sites were identified in that process in Baldwins Gate and a further 4 within the surrounding area. All were sifted in to Stage 3.

The fundamental objection we have with the SSM is in Stage 3 which, as above, is stated as: "Stage 3: Decision point, to determine if there is there a need to continue with site selection process based on alignment with the distribution of development and relationship to the settlement hierarchy of centres"

In essence, the SSM states that once it has found enough sites to meet the required number of dwellings within a centre, it can take the decision to discontinue the search for sites.

In the case of Baldwins Gate specifically, this is a completely circular argument and self fulfilling. Table 35 of the SSM sets out the summary position for Baldwins Gate that there is a 'target of 250 dwellings' and 49 committed dwellings within the settlement.

At Stage 3 (paragraph 10.1-10.3), it sets out: "10.1. Table 35 (above) highlights that commitments and completions are insufficient to meet the indicative development requirements for Baldwins Gate Therefore, it is necessary to continue with the site selection process.

However, site LW74 (Baldwins Gate Farm, Newcastle Road) has planning permission granted post 31 March 2023 at appeal for 200 dwellings within a community parkland. The appeal decision, alongside planning permissions and completions in Baldwins Gate are considered to be in the order of 250 dwellings."

The SSM suggest that, co-incidentally, the distribution model has a 201 dwelling deficit which has been filled by development of 200 dwellings won at appeal and therefore, the SSM can end its search for further sites for development. However, as set out above, we know from the previous Reg 18 Local Plan, and the lack of other methodology provided, that the figure of 250 dwellings has been arrived at precisely because there was an appeal decision which allowed 200 dwellings (in addition to 49 dwellings which are existing commitments).

As above, this methodology is entirely circular, is not based on a robust methodology and is not plan led.

Indeed, as set out below, even if the above circular methodology was applied and development was to be allocated to the Rural Centres based only on the Council's preferred Sites, that selection methodology (for the comparison and selection of sites) must, in itself, be robust. Again, we consider that no such fair and transparent process has been undertaken, particularly with regard to Baldwins Gate.

Indeed, as set out within both the SHELAA, the SSM and the Sustainability Appraisal, the land at Baldwins Gate Farm (which has been allocated) does not perform materially differently to other Sites which have been sifted into the SHELAA by the Council's assessment. Indeed, the Council itself refused development for Baldwins Gate Farm. We provide a commentary on that process below.

Jones Homes' site has been considered within the Site Selection Report (informed by the SHELAA) under reference LW38. However, this was discounted from consideration for allocation based on "concerns over access arrangements into the site and the loss of agricultural land."

In terms of the loss of agricultural land, the Baldwins Gate Farm appeal was allowed despite the site being located on Grade 2 and 3 agricultural land. Jones Homes' site is on exclusively Grade 3 land. Moreover, that Grade 3 land is predominantly 3b land which is not Best and Most Versatile land and prevents the Site as a whole from being farmed as BMV (as demonstrated within the Agricultural Land Classification Report submitted with Jones Homes pending planning applications). Loss of agricultural land should not be seen as a barrier to development.

In terms of access concerns expressed, no detail is given as to what these relate to specifically. However, transport assessment work undertaken by Jones Homes in support of the pending planning application has shown that the Site can be accessed safely.

Responses from the LHA in relation to the planning application demonstrates the same.

Furthermore, the recent appeal decision at Baldwins Gate Farm showed that there is the potential for safe access to be delivered in this part of the settlement based on existing highway capacity. The development of the Jones Homes' site offers the opportunity to provide a more recognisable gateway into the settlement from the west and as such

	<p>increase highway safety further.</p> <p>As such, not only is the Jones Homes site is an entirely suitable site for allocation within the NuLLP (and would assist in meeting the established spatial strategy of the Plan) we consider it performs equal or better than the Site at Baldwins Gate Farm which was allowed at appeal and other comparison sites assessed within the SHELAA.</p> <p>As such, the site selection methodology needs revisiting in order to accurately assess Jones Homes' site and conclude that it is appropriate for allocation.</p>

Q4 Part of document	Policy
Q4 Policy	PSD3
Q6 Details	<p>PCD3 and 9 RET1, 4 Retail and service Issues:</p> <p>a. There are new large-scale developments proposed in this Plan (some suggested before 2019). It is difficult to know if these have now been secured or if they are still part of a wish list. Currently there are retail units which have never been wholly occupied (or have seen constant short-term turnover) in and around the town centre (York Place (1964), Lymelight Arcade (2014), the Roebuck Centre (1986) and the arcade linking Merrial Street with the Ironmarket (in 2000s?). Have the reasons for this phenomenon been factored into future developments, or the estimated suggested allocations, so that unnecessary demolition and destruction do not become part of the Plan? Formalising such practices as sustainable and acceptable processes are not necessarily the best use of resources, scarce or otherwise.</p> <p>b. Have the reasons for the demise of the town been sufficiently analysed and taken into account in order to avoid making the same mistakes?</p> <p>c. The former retail units mentioned above are now destined for demolition/partial demolition, with replacements advocated in the Plan. This should not be regarded as an acceptable or sustainable strategy and for the sake of complying with national government's overestimated allocations, and certainly not without factoring in up-to-date information. This is important in LAs where developable land is scarce, and where alternative uses might be preferable.</p> <p>d. The issue of car parking in and around Newcastle-under-Lyme town centre, which has not been satisfactorily resolved, has had an impact on retailing in an already declining and reduced retail offer. Developing the smaller car parks around the town might not be a good idea in the long term. The issue of carparking might have been reassessed to inform the plan in order to come to a better solution to encourage a larger footfall to the town centre.</p> <p>e. Online shopping and the changed behaviour of customers, evident before Covid, and more pronounced afterwards, has reduced the patronage of high street shops. The cross-cutting issues compounding the decline of the high Street need to be satisfactorily explored and resolved if the Plan is to be effective over the next 20 years.</p>

Q5 Sound	No

Q6 Details

We consider that the Local Plan is not sound on the basis that it is (1) not positively prepared, (2) not justified, (3) not effective, and (4) not consistent with national policy. The Local Plan as drafted fails to provide sufficient housing and employment land, and the proposed length of the Local Plan is not long enough in line with national policy requirements. Our rationale is set out in the supporting covering letter.

This representation is submitted on behalf of Harworth Group PLC (herein "Harworth") and Graham Ward Farms Limited to the Newcastle-under-Lyme Borough Council Final Draft Local Plan. This letter provides our comments as referenced in the completed Representation Form, in support of our response to questions 6 and 7 regarding the soundness of the Local Plan. Our comments go to the heart of the Local Plan and, whilst our Representation Form notes this relates to Policy PSD1: Overall Development Strategy, our amendments sought would require updates across the Local Plan document and Proposals Map.

The specific matter which we dispute is the council's proposed approach to allocate two strategic employment sites (ref: AB2 - 'Land adjoining corner of A500 and M6 Southbound' and ref: KL15 - 'Land South of A525 between Keele University and Newcastle') and not 'Land off Talke Roundabout / A500', which was previously assessed in the Local Plan preparation under ref: TK30. We also consider the Local Plan does not cover a sufficient period of time. The Local Plan as drafted fails to provide sufficient housing and employment land. As such, we consider that the proposed approach to the Local Plan is (1) not positively prepared, (2) not justified, (3) not effective, and (4) not consistent with national policy. We consider that the extension of the Local Plan duration to 2042 as a minimum or ideally 2045, and the allocation of 'Land off Talke Roundabout / A500' (herein 'Talke Park') would resolve this soundness matter. We request that the council consider the contents of this letter and update the Local Plan prior to the submission for Examination. Otherwise, we would request that these comments are passed to the Planning Inspector(s).

In addition to this letter and our completed representation form, this submission is supported by the following documentation:

- Updated Vision Document (October 2024);
- Updated Indicative Proposed Masterplan;
- Housing and Economic Growth Evidence (October 2024);
- Letter from Wendy Lancaster at Tyler Grange, with enclosed Accurate Visual Representations, dated 30th September 2024;
- Geo-environmental Desk Study (August 2023);
- Highways Access Appraisal (August 2023);
- Heritage Briefing Note (August 2023);
- Note on Socio-economic Benefits; and
- Ecology and Landscaping Combined Technical Note (August 2023).

Appended to this letter is a plan of land to the north of Peacock Hay Road, which is also within Harworth's ownership, demonstrating that they have available land in the authority to compensate for the removal of this site from the Green Belt and contribute towards biodiversity net gain.

HARWORTH GROUP PLC

Harworth is one of the leading land and property regeneration companies in the UK, owning and managing c.16,000 acres on c.100 sites in the North of England and the Midlands. The company originated as the property division of UK Coal and is therefore an expert at dealing with complex sites with abnormal ground conditions and topography.

Harworth is one of the key developers presently working in Newcastle under Lyme, currently delivering 'Chatterley Park' (previously referred to as 'Chatterley Valley' prior to the commencement of development), which is the authority's Regional Investment Site, and less than 1km from 'Talke Park'. Harworth fully acquired the land forming Chatterley Park in August 2017, and has subsequently secured planning permissions to allow earthworks to progress, with 1.2m sqft of industrial and logistics floorspace set to come forward, creating around 1,700 jobs.

At Chatterley Park, Harworth has received significant interest from large national and international businesses attracted by the central location, access to the motorway network and ability to service major conurbations in all of the North West, East and West Midlands. There has been a range of occupiers with an interest for a variety of unit sizes. Harworth have also identified interest for "mid-box" (50,000 – 150,000 sqft) units and smaller units (20,000 – 50,000 sqft) and a pent-up demand for an underserved and important segment of the market.

Whilst the larger and "mid box" units do attract distribution warehouses, there is range of occupiers with an interest in the range of unit sizes:

- national/international logistics companies;
- a pharmaceutical distributor;
- manufacturing businesses;
- a bespoke requirement for glass manufacturing;
- a vehicle preparation centre for an automotive occupier; and
- a local business in the medical field, looking to amalgamate operations across the North West centrally to the Stoke/Newcastle area.

The interest across all unit sizes includes occupiers looking to replace older premises, secure larger premises to align with growth of their business and/or amalgamate operations. This includes local businesses and national/ international businesses including one looking for a hub to service the north of England.

Talke Park is the logical extension/ next step to Chatterley Park in terms of its proximity to both that site and the strategic road network. The sites have a similar industrial history and topography, neither of which are deemed to be constraints by Harworth and Graham Ward Farms Limited to their proposed redevelopment of either site.

Harworth's proven track record in the area and strong relationship with stakeholders (including the Councils and potential occupiers) demonstrates that, in partnership with Graham Ward Farms Limited, it can deliver Talke Park and its associated benefits within the plan period. Harworth has an extensive track record of delivering large-scale employment, residential and mixed-use developments. Further information is provided in the submitted Vision document.

TESTS OF SOUNDNESS

In order to be deemed sound, paragraph 35 of the NPPF (2023) states that a Local Plan must be:

- a) Positively prepared – this strategy must, as a minimum, meet the area's objectively assessed needs. Paragraph 16 adds that a Local Plan should be “aspirational but deliverable”. The government has recently closed its consultation on updates to the NPPF. Whilst the transitional arrangements may mean that the Local Plan is examined under the currently adopted NPPF, the Government has made it clear through their consultation that “sustained economic growth is the only route to improving the prosperity of our country and the living standards of working people”¹.
- b) Justified – an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence;
- c) Effective – deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and
- d) Consistent with national policy – enabling the delivery of sustainable development in accordance with the policies in the NPPF and other statements of national planning policy, where relevant.

SUMMARY ASSESSMENT AGAINST THE TESTS OF SOUNDNESS

We contest that the ‘Final Local Plan’ is:

- a) Not positively prepared – The allocation of two strategic sites is a low growth option and does not present an aspirational strategy. At a time when housing delivery is critical (evidenced by the government's proposed reforms to the planning system to make the standard method for assessing housing needs mandatory) and economic growth is deemed essential to improving prosperity and living standards, the LPA should be pursuing an ambitious strategy. In order to be positively prepared and “aspirational”, the Council should target high growth scenarios, so far as any site allocations and policies are deliverable. The draft Local Plan fails to provide sufficient homes and does not plan for all types of employment growth. The Final Draft Local Plan proposes to allocate two strategic employment sites, which are aimed at different uses (AB2 seeks to support a sub-regional logistics focused employment development and KL15 seeks

to support the expansion of the existing science park and create an innovation zone, linked to research and innovation of Keele University). The overall delivery for industrial and logistics sites is therefore very low and limited. In terms of housing, the Local Plan should allocate additional sites to meet the housing need and this would also allow for delays to sites coming forward.

- b) Not justified – In the context of the above, we do not consider that the proposal represents an appropriate strategy, when a reasonable alternative would be to allocate ‘Talke Park’ (ref: TK30) as a strategic location, increasing housing numbers and employment land. The council's evidence base is flawed, and the conclusions reached are incorrect in deeming that the allocation of the site in this plan would be premature. Indeed, the Strategic Employment Sites Assessment – 2024 Update (June 2024), prepared by Aspinall Verdi notes that it “has the potential be a high-quality site for local employment in a future local plan”, thereby indicating that the perceived “considerable issues” associated with the site's delivery (considered below) can be overcome, but that the lead-in time until development proceeds would not render the site suitable for allocation. This is not accurate, as outlined below. It is not justified to pursue low growth for housing and employment land.

- c) Not effective – The Local Plan will not deliver the housing need of the authority. As detailed in the Housing and Economic Growth Evidence and summarised below, the Council will fail to meet its five year housing land supply upon adoption of the Local Plan. With the requirement for Green Belt release established to even meet the low growth option, this suggests that it will not be possible to meet the shortage on windfall sites; as such, additional site/s need to be allocated; and

- d) Not consistent with national policy – The social objective of the NPPF concerns “ensuring that a sufficient number and range of homes can be provided to meet the needs of present and future generations”. We consider that the Final Local Plan would not deliver a sufficient number of homes and therefore does not meet this fundamental requirement of sustainable development. The NPPF seeks for the planning system to help build a “strong, responsive and competitive economy, by ensuring that sufficient land of the right types is available in the right places and at the right time to support growth, innovation and improved productivity; and by identifying and coordinating the provision of infrastructure” (paragraph 8). The failure to allocate Talke Park represents a low growth scenario, which is not akin to a strong, responsive or competitive economy. Without this site, there would not be the right type of land in the right place to support businesses (considered below). The Council have acknowledged that Talke Park is in a sustainable location and it therefore follows to allocate further housing and employment land in this location. Furthermore, the proposed length of the Local Plan is not long enough in line with national policy requirements. The NPPF states, at paragraph 22, that strategic policies should look ahead over a minimum 15-year period from adoption. The Local Plan the Plan seeks to cover the plan period 2020 – 2040. This approach would therefore only meet the minimum timeframe as required by the NPPF if adopted before the end of 2025. This is a short timeframe allowing for the review and potential update of the Local Plan prior to submission and matters arising during examination. We consider the Local Plan should therefore cover up to 2042 as a minimum and ideally to 2045. Further detail is set out below.
- THE COUNCIL'S APPROACH TO TALKE PARK (REF: TK30)

The Land off Talke Roundabout / A500 (Talke Park) was identified as one of three potential strategic locations in the First Draft Local Plan (ref: TK30), potentially capable of delivering new homes and employment land. One of the evidence base documents supporting that consultation, the Strategic Employment Site Assessment Report (April 2023), which was prepared by Aspinall Verdi, concluded that there is a clear regional rationale for the allocation of at least two Strategic Sites in Newcastle-under-Lyme (paragraph 11.5).

The Final Draft Local Plan proposes two of the three sites are allocated. Talke Park is not proposed for allocation, and is proposed to remain in the Green Belt. The evidence base for the Final Draft Local Plan includes the Strategic Employment Sites Assessment – 2024 Update (June 2024), prepared by Aspinall Verdi. This provides their professional opinion that there is a need for two Strategic Sites in the new local plan, which should be AB2 (‘Land at J16 of the M6’) and KL15 (‘Land at Barkers Wood, (Keele University) Keele’). We consider that some of the assumptions made in reaching this conclusion are incorrect, and subsequently the summary of our case is that:

1)
There is a need for three strategic sites in order to meet the housing and employment needs of the area;
and

2)
Talke Park is a deliverable, sustainable site, and its allocation would represent growth aligning with the NPPF and aspirations of the government.

HOUSING AND EMPLOYMENT NEED ASSESSMENT

Harworth and Graham Ward Farms Limited have commissioned WSP to undertake a series of analyses into the housing and economic growth options for Newcastle under Lyme, and the approach taken to informing the Local Plan. The findings are presented in the Housing and Economic Growth Evidence which highlights Talke Park's role in generating local employment opportunities and providing housing for existing and new residents of Newcastle under Lyme.

The report identifies flaws in the Council's approach which relies upon an overly optimistic housing supply pipeline to meet long-term needs, which may lead to potential housing shortfall in the long-term. The government's consultation on changes to the NPPF includes a standard methodology to housing need. Whilst the transitional arrangements may mean that the Local Plan is not assessed against this higher housing target, this approach would need to be applied once the Local Plan has been adopted in order to assess their five-year housing land supply, and could therefore render policies out of date.

The report also highlights the Council's under-appreciation of emerging employment land needs, which may limit the Borough's growth potential. The strategic need and economic life of properties for warehousing and logistic sectors is overlooked, and the fast-growing and emerging sectors that are not captured by traditional UK SIC sectors are under-appreciated. Talke Park can provide a strategic employment site and a different offer to the proposed strategic sites AB2 and KL15 which can bring a variety of opportunities to existing and future employers in the area.

DELIVERABILITY OF TALKE PARK (REF: TK30)

The Strategic Employment Sites Assessment – 2024 Update (June 2024) (herein 'SESA 2024'), prepared by Aspinall Verdi, concludes that there are "considerable issues to overcome" associated with the delivery of Talke Park, and "there will be a long lead in period before any development takes place", suggesting this renders an allocation premature. We consider the perceived "issues" would not prevent development or cause a significant delay. Whilst the site is not an immediate short-term opportunity in the Local Plan, it can be delivered in the plan period. Our response to the comments made are set out in Table 1, which should be read alongside the Vision Document and the supporting technical reports (Geo-environmental Desk Study; Highways Access Appraisal; Heritage Briefing Note; Note on Socio-economic Benefits; and Ecology and Landscaping Combined Technical Note). These were prepared in support of the submission to the previous First Draft Local Plan consultation and, whilst some changes have been made to the Indicative Proposed Masterplan since that submission, the assessments are still applicable and accurate. Note that the masterplan has been underpinned by significant technical work such as an earthworks cut and fill model to demonstrate that the site is deliverable and this indicative layout could be achieved. This establishes that the site can provide up to 390 new homes, and 95,500sqm (1m sqft) of employment floorspace (see attachment, table 1, Response to commentary in the Strategic Employment Sites Assessment – 2024 Update)

GREEN BELT

The main current constraint to the development of Talke Park is its location within the Green Belt. The preparation of a new Local Plan for Newcastle-under-Lyme presents an opportunity for this to be reviewed and the LPA has demonstrated exceptional circumstances to justify the release of land from the Green Belt in order to meet its development needs over the plan period.

Our previous representations submitted to the Draft Local Plan were supported by an Ecology and Landscaping Combined Technical Note, which set out the high-level baseline and opportunities and constraints to development within the Site.

The council has now published a Green Belt Assessment Part 4 (July 2024) which specifically assesses Talke Park (TK30), finding that it's development would not constitute unrestricted sprawl, would not result in neighbouring towns merging; and would not impact upon the setting or character of the historic town. Whilst it finds that it would represent an incursion into undeveloped countryside, this would be the case for any greenfield site. The Assessment concludes that Talke Park (TK30) did not make a greater contribution to the purposes of the Green Belt than AB2 which is proposed for allocation; indeed TK30 is recommended to be taken forward for consideration, whilst AB2 is not. Its current Green Belt status cannot therefore be a reason for the non-allocation of Talke Park.

The letter from Tyler Grange dated 26 September 2024 provides a number of indicative visuals which demonstrate that development within the site will not obstruct views to and from the Wedgwood Monument, and that the Monument would continue to be seen as a distinct element on high ground separate from and raised above the development. The illustrative mitigation strategy in Appendix 1 demonstrates where opportunities existing to create visual and physical enclosure through the use of green infrastructure. This, together with careful use of cladding tones and designs will further reduce the visual impact of the proposed buildings in views to and from the monument.

In addition to the land at Chatterley Valley and Talke Park, Harworth is in control of additional land in the authority, namely land to the north of Peacock Hay Road (north of Chatterley Valley). A plan is provided at Appendix A (taken from a previous SHLAA assessment). This land, extending to 6.65ha and would be available to offer Biodiversity Offset and any Green Belt compensation land required in association with the allocation of land at Talke Park.

SITE DELIVERY TIMEFRAMES

The Strategic Employment Sites Assessment – 2024 Update (June 2024), prepared by Aspinall Verdi considers that Talke Park "has the potential be a high-quality site for local employment in a future local plan", thereby indicating that if the potential issues associated with the site's delivery can be overcome (as the above table demonstrates is the case), it is the lead-in time until development proceeds which would render the site unsuitable for allocation. However, Harworth and Graham Ward Farms Limited are confident that the site can be delivered in the Local Plan period, whether this be up to 2040, or indeed longer (as considered below). The anticipated programme for delivery and rationale is set out below:

The key constraint to the development of the site, at this time, is its Green Belt designation. An application would not be progressed until the site were to be released from the Green Belt. Should this be proposed prior to the submission of the Local Plan for Examination, the following timeframe may be brought forward as pre-application discussions and surveys could be progressed with greater comfort that the allocation is likely to be brought forward;

Whilst the Local Development Scheme targets the adoption of the Local Plan in 2025 Q5, we anticipate that a more realistic target would be 2026 Q4. If this is the case, then an application could be progressed with the necessary surveys/ assessments and consultation, to lead to the submission of an outline or hybrid planning application by the end of 2027. Note the hybrid application approach was taken at Chatterley Valley to ensure full planning permission was secured for the earthworks, allowing them to get underway sooner. The application could be determined in 2028 Q2/ Q3;

Earthworks could then proceed with the submission of reserved matters application/s for the first phase/s in 2028 Q3/4. The application could be determined in 2029 Q2/ Q3;

The first units could then be constructed and available before the end of 2029. We would expect this to include the first homes;

Harworth and Graham Ward Farms Limited expect a delivery programme of circa 5-6 years for the employment units, which may run from 2029 to 2035. This would form a logical continuation of the anticipated construction and occupation programme at Chatterley Park, whereby it is envisaged this will be constructed and fully occupied by 2030;

Harworth and Graham Ward Farms Limited expect a delivery programme of circa 8 years for the homes, on the basis of 50 being delivered per year, which may run from 2029 to 2037;

Harworth and Graham Ward Farms Limited are confident that the site can be delivered within the Local Plan period, whether this be up to 2040, or indeed longer (as considered below).

In summary, Harworth and Graham Ward Farms Limited do not consider that the design, planning, earthworks and construction programme for the site will not prevent it from being delivered in the Local Plan period. Indeed, we do not anticipate that this would be significantly different to the delivery of proposed strategic site AB2 given its location, so the availability of employment space will be limited, warranting the allocation of Talke Park.

BENEFITS

The allocation of Talke Park would:

Provide up to 390 new homes, housing needs/ growth;

Provide 95,500sqm (1m sqft)/ circa 21ha of employment floorspace, emp needs/ growth, providing up to 1,000 jobs in the construction phase and circa 3,600 permanent jobs once operational, of which around 1,000 would be taken by residents of Newcastle-Under-Lyme;

Meet local need for school places;

The Gross Value Added to the economy is estimated to be circa £15.3 million per year during the construction phase and £140 million per year during operation. It is also anticipated around £1.9 million per year in revenue would be generated through Council Tax and Business Rates receipts;

The location of Talke Park directly adjacent to the existing settlement limits offers clear benefits in terms of easy access to jobs, new homes, sustainable travel and green spaces. This local area would directly benefit from local expenditure of around £85,000 per year from the construction workforce over the construction phase, and around £5.3 million per year from the new residents;

Talke Park will promote sustainable communities, supporting improvements, connections and relationship with the wider area such as Wedgwood Monument;

Harworth and Graham Ward Farms Limited envisage the development to of high quality design and sustainability standards providing market leading approaches to ESG and Carbon Reduction, incorporating Net Zero design criteria and contributing to the delivery of Harworth's Net Zero Carbon Pathway2. This means that all commercial buildings Talke Park will be:

—Net Zero Carbon in operation (subject to occupier process requirements);

—Net Zero Carbon in construction and operation for any units build after 2030; and

—BREEAM Excellent.

DURATION OF THE LOCAL PLAN PERIOD

The NPPF states, at paragraph 22, that strategic policies should look ahead over a minimum 15 year period from adoption, in order to anticipate and respond to long-term requirements and opportunities, such as those arising from major improvements in infrastructure. It adds that, where larger scale developments such as new settlements or significant extensions to existing villages and towns form part of the strategy for the area (as is the case here where two strategic sites are currently proposed for allocation), policies should be set within a vision that looks further ahead (at least 30 years), to take into account the likely timescale for delivery.

The Local Plan the Plan seeks to cover the plan period 2020 – 2040. This approach would therefore only meet the minimum timeframe as required by the NPPF if adopted before the end of 2025. This is a short timeframe allowing for the review and potential update of the Local Plan prior to submission and matters arising during examination. The Local Plan is therefore at significant risk of not being consistent with national policy.

The Local Plan should therefore cover up to 2042 as a minimum and ideally to 2045. This will require additional land to be allocated for employment and residential use. The allocation of Talke Park would assist in addressing this subsequent shortfall.

CHANGES SOUGHT TO THE LOCAL PLAN

Harworth and Graham Ward Farms Limited seeks the allocation of TK30 as a Strategic Site, including the following:

Policy PSD1 – the inclusion of the site under point 3 as a strategic site “Land off Talke Roundabout / A500 to offer a sustainable urban extension providing a strategic employment location, new homes, and public space”.

Policy PSD5 – the site should be listed for removal from the Green Belt.

Update to Policy PSD3 – the figures in terms of housing and employment provision should be updated to account for the allocation of TK30.

	<p>Addition of a new Policy TK30 relating to the site's development. A suggested policy is provided below, which we would be happy to discuss further.</p> <p>Policy TK30 'Land off Talke Roundabout / A500'</p> <p>Land off Talke Roundabout / A500 is allocated as a sustainable urban extension providing employment land, new homes and public space. The site extends to circa 66 hectares and is allocated for uses including circa 390 new homes and 21 hectares (circa 95,500 sqm of floorspace) of employment land. Where ancillary non-employment uses are proposed, these will primarily support the onsite businesses and industrial processes. Development will be permitted subject to:</p> <ol style="list-style-type: none"> 1.Satisfactorily addressing the site allocation requirements set out in Policy SA1 (General Requirements), 2.Safe and convenient access into the development via a new access on Talke Road for the employment development and provision of two access points on Deans Lane for the residential development, 3.In line with Policy SA1 (General Requirements), a masterplan and design code should be prepared and agreed for the site which will: <ol style="list-style-type: none"> a.Consider sustainable travel links including cycle and pedestrian connectivity including to public transport links. Development should also consider walking and active travel for health and wellbeing purposes within the site, b.provide for appropriate boundary treatments to the existing Green Belt, c.Facilitate improvements to local footpaths and linkages to Wedgwood Monument d.Achieve high quality design reflecting the landscape location of the site and creating a vibrant destination and attractive public realm. This should recognise the transitional location between the higher density urban and rural area, e.Ensure the layout and development of the site is landscape led and buildings or structures are designed to ensure they are not intrusive in significant views from the surrounding area including the Wedgwood Monument. 4.Submission of a coal mining risk assessment, land contamination assessment and mitigation strategy, 5.Submission of a drainage strategy, 6.Appropriate measures to control impact of increased traffic movement or uses within the site on local amenity including noise and air quality on the surrounding area. This should include submission of a noise and air quality assessment and mitigation strategy, 7.Submission of a Heritage Impact Assessment to demonstrate how the layout and design of the development will respond sensitively to the setting of Wedgwood Monument, 8.Financial contributions to improvements in the capacity of local schools and health facilities. 9.Provision of a new and / or enhanced bus service from Newcastle-under-Lyme to the site. 10.Employment units to achieve at least BREEAM excellent standard with an aim for the most recent BREEAM outstanding standard, 11.Retention and enhancement of mature trees and existing hedgerows on the site and its boundaries, with minimal breaks in hedgerows to facilitate vehicular traffic. Strengthened boundaries to the site, comprising landscape buffers, and the creation of new strong, defensible boundaries to the Green Belt, 12.The development being subject to an agreed Employment and Skills Plan secured through a S.106 agreement. <p>We also consider that the period which the Local Plan covers should be extended beyond 2040, and cover up to 2042 as a minimum and ideally to 2045. This will require additional land to be allocated for employment and residential use. The allocation of Talke Park would assist in addressing this subsequent shortfall.</p> <p>CONCLUSION</p> <p>We consider that, in its current form, the Final Draft Local Plan is not sound, on the basis that it is (1) not positively prepared, (2) not justified, and (3) not consistent with national policy. We consider that the allocation of 'Land off Talke Roundabout / A500' (herein 'Talke Park') would resolve this soundness matter. Harworth and Graham Ward Farms Limited are in control of the site and would therefore lead its design and delivery, as per Chatterley Park. Exceptional circumstances have been demonstrated to justify the release of land from the Green Belt. Allocating Talke Park would meet the Council's growth aspirations in terms of delivering sustainable new homes and jobs, meeting local needs and providing more economic opportunities for residents of Newcastle-under-Lyme. Harworth is an experienced land and property regeneration company which is currently investing in Newcastle under Lyme at the nearby Chatterley Valley site. The above commentary demonstrates why the site is suitable and available for allocation, notably:</p> <p>The Council's own evidence base supports the allocation of the site. The Strategic Employment Sites Assessment – 2024 Update (June 2024), prepared by Aspinall Verdi notes that it "has the potential be a high-quality site for local employment [albeit] in a future local plan". There is therefore recognition that the perceived issues associated with the site's delivery can be overcome, but the Council are uncertain on programme.</p> <p>The SWECO report which forms part of the evidence base notes that the Talke Site has the best walking accessibility score of the three potential strategic sites. That SWECO report, and Mosodi's independent assessment of the site, confirm that there are no highways or accessibility constraints to prevent the site being allocated.</p> <p>The council's Green Belt Assessment Part 4 (July 2024) concludes that the development of Talke Park would not constitute unrestricted sprawl, would not result in neighbouring towns merging; and would not impact upon the setting or character of the historic town.</p> <p>Harworth and Graham Ward Farms Limited are confident that the site can be delivered in the Local Plan period, whether this be up to 2040, or indeed longer.</p>
Q7 Modification	<p>We consider that the period which the Local Plan covers should be extended beyond 2040, and cover up to 2042 as a minimum and ideally to 2045. We consider that the allocation of site ref: TK30 (the Land off Talke Roundabout / A500), as a strategic location, for housing and employment would resolve the soundness matters outlined at 6 above. Further detail is provided in the supporting covering letter.</p>
Q8 Hearing attendance	<p>Yes, I wish to participate in hearing session(s)</p>

Q9 Hearing reasons	In order to accurately outline our client's position and aid the Inspector in providing any further information relating to site TK30, on the basis we consider the allocation of the site would resolve our concerns about the Local Plan being unsound.

Consultee Company / Organisation	Home Builders Federation
Consultee Position	Planning Manager - Local Plans (Midland and South West)
Consultee Family Name	Danemann
Consultee Given Name	Rachel
Q4 Part of document	Policy
Q4 Policy	PSD3
Q5 Sound	No
Q6 Details	<p>Please see attached representations.</p> <p>The Policy is not considered to be sound as it is not justified or effective or in line with national policy.</p> <p>As mentioned previously HBF do not comment on individual site allocations, we would expect that the spatial distribution of sites follows a logical hierarchy, provides an appropriate development pattern and supports sustainable development within all market areas. HBF notes that the location of windfall sites, is by definition, currently unknown as such question if there is a potential tension between relying on windfall sites as part of the Housing Land Supply and restricting development in rural areas. Similarly, brownfield sites within the Green Belt (and potentially new grey belt sites) are another example of sites that may be brought forward that the Council may wish to support being redeveloped.</p> <p>It is therefore essential that the statement in the supporting text of the Plan as para 5.12 that the spatial distribution figures are not a ceiling is applied in practice. However, that sentence continues to explain that the spatial distribution is not a target either. We are therefore unclear how this would be monitored and what actions would be taken if development was not coming forward in line with the spatial distribution expected.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	HBF requests to participate in the Hearing Sessions for the Local Plan Examination, the HBF considers that their involvement is necessary to ensure that the home building industry is able to respond to any housing related issues raised during the hearing sessions.

Q4 Policy	PSD3

Q6 Details	<p>Policy PSD3 – Distribution of Development</p> <p>2.9. The proposed distribution of development is noted within Policy PSD3. Lone Star would just question why Madeley and Madeley Heath, along with Betley and Wrinehill been considered together?</p> <p>2.10. Betley and Wrinehill are located to the north and are separated somewhat from Madeley. In addition, Betley and Wrinehill are also constrained by Green Belt.</p> <p>2.11. It is only the western edge of Madeley which is free from Green Belt constraints, and this is where the single allocation (which we address further below) is proposed for residential development to address the identified needs in this location.</p> <p>2.12. It is reasonable for Madeley and Madeley Heath to be considered together given the proximity of those settlements. As such, all development should be directed to Madeley and Madeley Heath. Accordingly, Lone Star would have no particular concerns with directing 250 dwellings across the plan period being directed to Madeley.</p> <p>2.13. In addition, and in order to be positively prepared and in accordance with Para 35 of the NPPF, all housing figures to be distributed to the various settlements should be presented as a minimum figure. In this respect, it is noted in Table 2 (pg 14) that the figures presented in the Plan are minimum housing requirements.</p>

Q5 DTC compliant	Yes
Q6 Details	<p>Please see supporting representation by Knights on behalf of Aspire. This policy seeks to direct most development towards the urban areas of Newcastle-under-Lyme and Kidsgrove with some more limited development to the rural centres.</p> <p>In general terms, there is no objection to the policy presumption to directing the most development towards the larger urban centres, however given the uplift that is required to deliver sufficient levels affordable housing to meet substantial need for this type of housing, it suggested that along with any uplift in the overall housing requirement as suggested in Chapter 4 above, whether or not some higher levels of growth should be directed towards the rural centres to enable the delivery of more allocations, and consequently, more affordable housing as part of the housing mix on such allocations. Housing is less affordable in the rural areas generally as well as around the rural centres, and directing some additional housing towards the rural settlements may facilitate the delivery of more affordable housing to meet local needs in these locations and would do so in a more plan-led way over and above ad-hoc applications for rural exceptions sites.</p> <p>It is also suggested that given that Audley and Bignall End has a wide range of local services and facilities, that perhaps a further uplift to the overall housing requirement for the Borough could be accommodated in this location (whilst the overall level of development elsewhere is maintained), as well as other sustainable urban fringe and rural locations around the Borough. In summary, it is the position of Aspire Housing that there should be more allocations than those currently proposed in order to provide an enhanced prospect of the 400 dwellings per annum figure being achieved.</p> <p>Summary of recommendations:</p> <p>(a) Consider directing some additional housing towards the larger rural centres</p> <p>(b) Consider some additional allocations to the larger rural centres</p>

Title	Policy PSD3: Distribution of Development
Consultee Family Name	Fuller
Consultee Given Name	Ross
Agent Company / Organisation	Knights PLC
Agent Family Name	Askew
Agent Given Name	Michael
Q4 Part of document	Policy
Q4 Policy	PSD3
Q6 Details	<p>Please see attached representations. Policy PSD 2 confirms that Rural Centres will meet some of the development need within the Borough and that this will include 'Keele Village (with University Hub)'. Policy PSD 3 identifies that Keele and Keele University will provide in the order of 600 new homes. This broad approach is supported as our client's proposal, which would help to contribute towards providing housing in these locations.</p> <p>However, given the additional housing commitments that the draft National Planning Policy Framework indicates that the Borough will now face, it is recommended that Keele can deliver greater growth than currently proposed. Importantly, paragraph 144 of the draft National Planning Policy Framework states that:</p> <p>"When drawing up or reviewing Green Belt boundaries, the need to promote sustainable patterns of development should be taken into account. Strategic policymaking authorities should consider the consequences for sustainable development of channelling development towards urban areas inside the Green Belt boundary, towards towns and villages inset within the Green Belt or towards locations beyond the outer Green Belt boundary. Where it has been concluded that it is necessary to release Green Belt land for development, plans should give first consideration to previously-developed land in sustainable locations, then consider grey belt land in sustainable locations which is not already previously-developed, and only</p>

	<p>then consider other sustainable Green Belt locations. They should also set out ways in which the impact of removing land from the Green Belt can be offset through compensatory improvements to the environmental quality and accessibility of remaining Green Belt land." [Knights' emphasis]</p> <p>The site could be defined as 'Grey Belt' (as set out in Annex A) given its location outside of the Keele Conservation Area, its limited contribution to the five purposes of the Green Belt and its sustainable location. It is considered that this site could be one such site which would deliver an appropriate plan-led release of land in a way that would result in a logical inclusion within the village of Keele.</p>
Q7 Modification	Please see attached representations.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	Knights wish to participate at the hearing sessions for Policies PSD3, PSD4 and PSD5 so that we can demonstrate why the Land at 3 Highway Lane, Keel site should be included within the settlement boundary for Keele in the Policies Map.

Consultee Given Name	Jeff
Q4 Part of document	Policy
Q4 Policy	PSD3
Q5 Sound	No
Q6 Details	<p>ED 005- Rural Area Topic paper</p> <p>This document is used to support policy PSD2 and PSD3 and is fundamentally flawed in a number of respects.</p> <p>Firstly, in relation to Public Transport, which requires that a "commutable bus service" is available solely to enable residents to access Newcastle Town Centre during what is described as "standard working hours" of 9 am to 5 pm. This fails to recognise the changing nature of work, in that far fewer jobs have "standard hours" of 9-5, for example, retail work or shift work and this is therefore an inappropriate criterion for a bus service to be "commutable".</p> <p>This criterion also ignores Saturday and Sunday working patterns which are, in the 21st century, much more prevalent, and frequently bus services are not available on those days, or significantly less frequent. It also makes the assumption that people in rural communities will only travel to Newcastle for work - it fails to recognise that people living in certain rural communities will almost certainly be working outside the Borough, or will need to travel onwards from the town centre to their place of work (for example in Stoke) and using the definition in the topic paper gives a false impression of sustainability in terms of public transport. It's a lazy definition, with no rational basis for its adoption.</p> <p>Secondly, by limiting the public transport criterion solely to work, the paper completely ignores the need for children and young people to attend colleges at appropriate times, fails to recognise needs for travel for social or leisure activities and even shopping, and completely ignores the need for travel to hospitals or other healthcare settings beyond GP practices.</p> <p>By failing to recognise these needs, the policy fails to support sustainable rural community access to essential facilities that enable them to live in rural communities.</p> <p>In addition to that, the paper fails to differentiate between healthcare facilities - making the erroneous assumption that a pharmacy and a GP surgery are in some way equivalent. Residents who need access to primary care services are unlikely to be able to receive them from a pharmacy and patients who need a pharmacy are unlikely to be able to access those facilities in a GP surgery.</p> <p>The paper fails to recognise that patients need to be able to physically access healthcare facilities and that (for example) the GP surgery in Ashley is not walkable safely from Loggerheads, and the public transport available seriously limits the times at which patients could attend.</p> <p>The topic paper fails to recognise the additional costs of living in rural communities which lack suitable essential infrastructure and these additional costs directly impact on (among other things) the takeup of affordable housing - in particular social rented housing.</p> <p>The fact that this flawed paper is referenced in support of policies PSD2 and PSD3 renders those policies less sound than they would otherwise be</p>
Q7 Modification	The rural topic paper needs amending to recognise (inter alia) the need for public transport to support work outside 9-5, to support social and leisure activity and to realistically identify barriers to sustainability in rural areas, including issues around healthcare facilities and the additional costs of living in a rural area with inadequate infrastructure to support increased development.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)

Q4 Part of document	Policy
Q4 Policy	PSD3
Q6 Details	<p>Please see attached representations. Betley and Wrinehill (joint) and Madeley and Madeley Heath (joint) are identified as providing in the order of 250 new homes during the Plan period. However, the draft Policy Map identifies that no allocations are identified within Betley or Wrinehill (with housing sites only located around the non-Green Belt elements of Madeley).</p> <p>However the expected increased housing requirements for the Borough that are anticipated to come through the changes to the National Planning Policy provide an opportunity to distribute growth across these two villages more evenly. The draft National Planning Policy Framework now acknowledged that there should be a focus on delivering sustainably located Green Belt sites (including greenfield sites) that do not contribute to the purposes of including land within the Green Belt. This will be explored in greater detail when commenting upon Draft Policy PSD5.</p> <p>As it stands, it is considered that this policy should be amended to allow some growth through an allocation in Betley.</p>
Q7 Modification	Please see attached representations
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	Knights wish to participate at the hearing sessions for Policies PSD3, PSD4 and PSD5 so that we can demonstrate why the Betley Court Farm, land east of Main Road, Betley site should be included as a residential allocation in the Policies Map. Title	Policy PSD3: Distribution of Development
Consultee Company / Organisation	Loggerheads Parish Council
Consultee Position	Planning and Environment Committee
Consultee Family Name	Love
Consultee Given Name	Jeff
Q4 Part of document	Policy
Q4 Policy	PSD3
Q5 Sound	No
Q6 Details	<p>PSD3 at page 16 suggests an allocation for Loggerheads Ward of "the order of 450 homes". It is not clear from the document the basis on which this number was calculated, and it does not reflect the Housing Needs Assessment carried out as part of the development of the Neighbourhood Plan which identified the housing need for the parish/ward. The level of development in Loggerheads has already exceeded the number set out in the Neighbourhood Plan, and even taking into account the difference in the periods covered by the two plans the volume of development proposed for Loggerheads is inconsistent with the robust Housing Needs Assessment carried out in the Neighbourhood Plan.</p> <p>No justification is given for this proposed number and it is not clear how this reflects the housing needs of the Parish or how it reflects the Parish's share of the overall housing needs identified for the Borough - it appears to be an arbitrary allocation.</p> <p>In addition to this, it is apparent that (in order to meet the annual targets set in the plan) that housing must be "built" and not just "planned".</p> <p>On two recent developments in Loggerheads building was "paused" because sales were poor - in particular there are difficulties in managing the take-up of affordable housing. It is questionable whether the market will exist for the volume of housing proposed in the Loggerheads ward/parish, given the lack of supporting infrastructure, and there is concern that the number of homes "planned" will not equate to the number actually "built" because of problems with sales, which will impact on the delivery of the targets set out in the plan.</p>

Q7 Modification	Given the existing level of development, there should not be further development of the scale proposed in Loggerheads - any development should be of housing suitable to meet the needs of the local population and should only be considered as sustainable development if adequate infrastructure provision is included, that this is not completely dependent on S106 developer contributions, and that enforcement of s106 obligations an planning conditions are rigorously enforced

Q4 Part of document	Policy
Q4 Policy	PSD3
Q6 Details	Please see attached representations. Audley and Bignall End are identified as Rural Centres that are expected to accommodate in the order of 250no. dwellings during the plan period. The draft Policy Map identifies that these can be provided across three sites in the northwest of Audley (sites AB15, AB32 and AB33) and Bignall End (site AB12). However, the provision of our client's site could enable the amount of land proposed across these sites to be reduced, thus reducing the overall impact on the Green Belt. The anticipated increased housing requirements for the Borough that are expected to come through the changes to the National Planning Policy provide an opportunity to accommodate more growth within and around this Rural Centre. The draft National Planning Policy Framework now acknowledged that there should be a focus on delivering sustainably located Green Belt sites (including greenfield sites) that do not contribute to the purposes of including land within the Green Belt. This will be explored in greater detail when commenting upon Draft Policy PSD5. Furthermore, the Regulation 19 Plan also seeks to allocate 80 hectares of new employment allocation at Junction 16 (Policy AB2 'Land at Junction 16 of the M6'). This allocation would be located around 1 mile from this site and would provide aspirational housing to attract future employees working at this strategic employment site.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	Knights wish to participate at the hearing sessions for Policies PSD3, PSD4 and PSD5 so that we can demonstrate why the New Farm, Audley site should be included as a residential allocation in the Policies Map.

Title	Policy PSD3: Distribution of Development
Consultee Given Name	Keepmoat Homes
Agent Company / Organisation	Pegasus Group
Agent Position	Associate Planner
Agent Family Name	Walker
Agent Given Name	Kerry
Q4 Part of document	Policy
Q4 Policy	PSD3
Q5 Legally compliant	No
Q5 Sound	No
Q6 Details	Please see attached representation. The proposed distribution of development is noted within Policy PSD3. The distribution of development is clear, but there is a concern around the level of flexibility within the distribution. As presented the distribution totals the 8,000 homes as identified in PSD1. Para 5.12 of the Draft Plan is clear in so far as it confirms that: The figures presented in this policy are intended as a

	<p>guide and are neither a ceiling nor a specific target. Commitments and completions since the start of the Plan period will contribute towards the indicative targets outlined above and to maintain an available supply of housing land. The broad level of development proposed for our settlements will be delivered through a combination of Local Plan site allocations and through existing housing land supply. (Pegasus emphasis)</p> <p>There needs to be a reasonable level of flexibility in this distribution in order for the Plan to be positively prepared and to take into consideration elements such as lapse rates for sites with planning approvals at the point of adoption.</p> <p>In addition to this, proposed allocated sites also need to be masterplanned in accordance with Policy SA1. This expects the delivery of various different policy requirements, as well as delivering biodiversity net gain as required by the Environment Act and also Policy SE7. Until this process is undertaken, it is not clear how the development quantum at some sites have been arrived at, especially as some densities expected in HOU2 vary considerably.</p> <p>Following on from this overarching point on the distribution of development, Keepmoat would just question why Madeley and Madeley Heath, along with Betley and Wrinehill have been considered together? Betley and Wrinehill are located to the north and are separated somewhat from Madeley. In addition, Betley and Wrinehill are also constrained by Green Belt, so development options are severely limited, largely to sites within the settlement boundary.</p> <p>Across these settlements, it is only the western edge of Madeley, mostly beyond the railway line, which is free from Green Belt constraints. The only site to the east of the railway line, but outside of the proposed settlement boundary and not constrained by Green Belt is Keepmoat's. Nearby is where the single allocation for Madeley is located, so it must be considered an appropriate location for housing, certainly as none of the supporting report submitted with the application identify any evidence to the contrary. It is reasonable for Madeley and Madeley Heath to be considered together given the proximity of these settlements. As such, all development should be directed to Madeley and Madeley Heath. Accordingly, Keepmoat would have no particular concerns with Plan in identifying sufficient sites to be able to deliver the minimum 250 dwellings across the plan period in Madeley.</p> <p>In addition, and in order to be positively prepared and in accordance with Para 35 of the NPPF, it needs to be remembered that all housing figures to be distributed to the various settlements should be presented as a minimum figure. In this respect, it is noted in Table 2 (pg 14) that the figures presented in the Plan are minimum housing requirements</p>

Title	Policy PSD3: Distribution of Development
Consultee Company / Organisation	Madeley Heath Developmental Ltd
Consultee Family Name	Munnery
Consultee Given Name	James
Agent Company / Organisation	Lichfields
Agent Family Name	Zulver
Agent Given Name	Imogen
Q4 Part of document	Policy
Q4 Policy	PSD3
Q5 Legally compliant	No
Q5 Sound	No
Q6 Details	<p>Draft Policy PSD 3: Distribution of Development</p> <p>Draft Policy PSD 3 sets out that the Rural Centres of Betley & Wrinehill (joint) and Madeley & Madeley Heath (joint) are expected to accommodate in the order of 250 new homes. This is with reference to the settlement hierarchy (draft Policy PSD 2) which notes Rural Centres will meet "some development needs of the Borough commensurate with their role" with the scale of development being "relative to its role, function, and infrastructure capacity". Whilst we are supportive of the approach set out in respect of the Rural Centres in draft Policy PSD 2., it does not appear that the approach advocated by Policy PSD 2 has been followed through in Policy PSD 3 in respect of distributing development to Rural Centres in an evidence-based way.</p> <p>Considering the policy, we have a number of concerns:</p> <ul style="list-style-type: none"> It is unclear how the 250 home 'guide' requirement was determined as being the appropriate amount of development for Madeley & Madeley Heath (in addition to Betley & Wrinehill). There is no assessment of local needs across the different rural centres, nor an assessment of what quantum of housing might be appropriate in each taking account of constraints and both existing infrastructure provision and future needs. Nor is there any comparison between the Rural Centres and the housing proposed, noting each centre has a different role (as per Policy PSD 2).

	<ul style="list-style-type: none"> Without this evidence, the proposed distribution of housing is in conflict with Policy PSD 2 which advocates such an approach. This evidence would need to consider the Rural Centres in turn and why the guide amount of housing for Madeley & Madeley Heath is appropriate. The distribution of homes is noted as being a 'guide'; however, that 'guide' figure is treated akin to a requirement in the 'Site Selection Interim Report' (2023) that considers the proposed preferred sites based on it meeting a residual requirement (taking account of existing commitments). If the figure is a 'guide' rather than a 'requirement', the Council should consider whether additional sites in the Madeley & Madeley Heath could and should support the overall objectives of the plan. <p>In considering the above, we consider draft Policy fails to meet the tests of soundness for the following reasons:</p> <p>1 It is not positively prepared – it does not properly consider the additional sites in Madeley and Madeley Heath.</p> <p>2 It is not justified –no justification has been provided for the distribution of housing and reasonable alternatives for meeting housing need in Rural Centres have not been properly considered;</p>
Q7 Modification	As such it is recommended that the Council consider additional sites in Madeley and Madeley Heath to support overall objectives of the plan including our client's land interests in 'Land at Madeley Heath' (site ref. MD12A, also known as 'Land Area 2 at Marley Eternit Tiles, Madeley Heath').
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	On behalf of our client, MHDL, we formally request to participate in hearing sessions associated with Draft Policy PSD 1, Draft Policy PSD 2, Draft Policy PSD 3, SA Section 5: Reasonable Alternatives, Draft Policy PSD 5 & Draft Policy MD29. We consider that our representation at the hearing sessions is necessary to ensure our representations above are taken into account for the draft Local Plan to be found sound.

Title	Policy PSD3: Distribution of Development
Consultee Given Name	Lone Star Land Ltd
Agent Company / Organisation	Pegasus Group
Agent Family Name	Robinson
Agent Given Name	Phil
Q4 Part of document	Policy
Q4 Policy	PSD3
Q6 Details	<p>Policy PSD3 – Distribution of Development</p> <p>The proposed distribution of development is noted within Policy PSD3. Lone Star would just question why Madeley and Madeley Heath, along with Betley and Wrinehill been considered together? Betley and Wrinehill are located to the north and are separated somewhat from Madeley. In addition, Betley and Wrinehill are also constrained by Green Belt.</p> <p>It is only the western edge of Madeley which is free from Green Belt constraints, and this is where the single allocation (which we address further below) is proposed for residential development to address the identified needs in this location.</p> <p>It is reasonable for Madeley and Madeley Heath to be considered together given the proximity of those settlements. As such, all development should be directed to Madeley and Madeley Heath. Accordingly, Lone Star would have no particular concerns with directing 250 dwellings across the plan period being directed to Madeley.</p> <p>In addition, and in order to be positively prepared and in accordance with Para 35 of the NPPF, all housing figures to be distributed to the various settlements should be presented as a minimum figure. In this respect, it is noted in Table 2 (pg 14) that the figures presented in the Plan are minimum housing requirements.</p>

Title	Policy PSD4: Development Boundaries and the Open Countryside
Consultee Company / Organisation	Gladman Developments Ltd
Consultee Position	Planning Manager
Consultee Family Name	Wilding
Consultee Given Name	Robert
Q4 Part of document	Policy
Q4 Policy	PSD4
Q6 Details	<p>Gladman Developments Ltd (Gladman) welcome the opportunity to comment on the Newcastle-under-Lyme Final Draft Local Plan 2020-2040 (Regulation 19) consultation and request to be updated on the progress of the emerging Local Plan. Please refer to attached representations. Gladman has fully engaged fully in the preparation of the emerging Newcastle-under-Lyme Local Plan 2040 to date. Feedback from the First Draft Local Plan (Regulation 18) consultation has been addressed and incorporated into the Final Draft Local Plan consultation document.</p> <p>In the sections below, Gladman have made specific comments where we consider the Final Draft Local Plan requires modifications or further clarification to ensure that it is capable of being found sound. Comments are focussed mainly on the consultation document, with references to the Duty to Cooperate and Sustainability Appraisal documents. Our representations also include details of Gladman's land interest at land south of Eccleshall Road, Loggerheads, which we are promoting as suitable for identification as a housing allocation in the emerging Local Plan. Please refer to attachment for more information.</p> <p>Policy PSD4 outlines the limited and specific forms of development that will be permitted beyond settlement limits and in the open countryside. Whilst recognising that the policy identifies instances where development will be supported, these are limited and render the policy overly restrictive. In the absence of an up to date development plan, NuLBC has been reliant upon the granting planning permission for major and minor housing development on a number of sites outside of existing settlement</p>

	<p>boundaries, including three sites in Loggerheads. The Framework is clear that development which is sustainable should go ahead without delay in accordance with the presumption in favour of sustainable development. The use of settlement limits to arbitrarily restrict suitable development from coming forward on the edge of settlements would therefore not accord with the positive approach to growth required by the Framework.</p> <p>The policy wording as currently drafted only allows for development in a narrow set of circumstances (i.e. replacing existing dwellings, previously developed land, re-use of existing rural buildings etc.) and does not allow for sufficient flexibility to respond to changes of circumstance such as a shortfall in the Council's five-year housing supply position. Although the Council currently claim to be able to demonstrate a five-year housing land supply (Housing Land Supply Statement with a 1st April 2023 base date – 5.26 years), it has struggled to demonstrate a robust five-year housing land supply over the past decade due to the lack of available land within development boundaries and in areas which are not designated as Green Belt.</p> <p>Gladman believe that draft Policy PSD4 should be modified to a criteria-based policy which provides a more appropriate mechanism for assessing the merits of individual development proposals, based on their specific circumstances and ability to deliver sustainable development rather than being discounted simply due to a site's location beyond an artificial boundary.</p> <p>Gladman support a more flexible to development within villages and the countryside that recognises the important role these locations play in the provision of much needed homes. Settlement limit policies should be suitably worded to ensure that they can adapt to changing supply provisions and accommodate a broader portfolio of sites to be delivered in area which have experienced little to no growth in recent history to boost means of supply.</p> <p>This approach has been taken in the Ashford Local Plan (2019) which sets a positive and realistic approach for residential development adjoining the existing confines of a settlement, and in the Durham Local Plan, where Policy 6 provides flexibility for the delivery of unallocated sites. Gladman recommend the Council review these policies and consider amendments to Policy PSD4 accordingly.</p>
Q7 Modification	Please see attached representations

Title	Policy PSD4: Development Boundaries and the Open Countryside
Consultee Company / Organisation	Cross Heath, Wolstanton and May Bank Branch Labour Party
Consultee Position	Branch Secretary
Consultee Family Name	Gorton
Consultee Given Name	Richard
Q4 Part of document	Policy
Q4 Policy	PSD4
Q6 Details	Policy PSD4 - Development Boundaries and the Open Countryside - we strongly support the re-use of previously developed land and buildings and feel that the reclamation of both land and buildings should feature strongly in the Local Plan. We must, however, repeat the concern which was expressed during the Regulation 18 stage of the Local Plan that the commitment to review village envelope boundaries could result in changes which made it easier to build within village envelopes.
Q9 Hearing reasons	<p>Conclusion</p> <p>Cross Heath, Wolstanton and May Bank Branch Labour Party welcomes the opportunity to give its views in response to the Regulation 19 stage of the draft Local Plan. If it is felt to be appropriate, a member of the Branch would be prepared to take part in the public scrutiny of the draft Local Plan.</p>

Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>These representations are made in response to the Regulation 19 consultation on the final draft of the Newcastle-under-Lyme Local Plan 2020 – 2040. The representations are made by Pegasus Group on behalf of Araripe Limited and relate to their land interest at St Martins Road, Talke(hereafter referred to as the “Site”). The Site is greenfield land situated to the south of Talke. With regards to the Site, these representations should be read alongside the attachment.</p> <p>Araripe Limited support the proposed revisions to the settlement boundaries in Newcastleunder-Lyme, which would remove site TK17 from the Green Belt. This amendment is recommended in the Settlement Boundary Review (July 2024).</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	Sufficient land for housing should be planned for to meet the identified need for this within the Borough. Araripe Limited strongly support the allocation of Site TK17 for residential development, but several amendments are required to make Policy TK17 sound, as set out in paragraph 3.19 of the accompanying written representations. We would welcome the opportunity to participate in the hearing sessions to set these out, as well as to draw attention to the other matters which need to be addressed to ensure soundness elsewhere in the final draft plan, whilst emphasising site TK17’s suitability, availability, and deliverability, being an optimum and sustainable location for high-quality residential development.

Q6 Details	<p>5. The Issues of the Green Belt and the Countryside development - Sustainable Environment Policies and the issue of the 5 year supply of land for housing and employment and town centre uplift:</p> <p>a. In order to comply with NPPF rules and guidance, there are some LAs which might over-develop in order to avoid national government interference. This could lead not only to saturation but also to unnecessary encroachment into the green belt and/or countryside. The issue of the land (especially farmland) alienated by the HS2 project has not been dealt with or clarified given that so much land has been appropriated and taken out of commission from farms (the countryside (and the green belt?)) and may not be used again as farming land. If this is the case this will have been a back door enclosure of the countryside, cutting a swathe down the centre of England, and providing developers with land they have always wanted.</p> <p>b. The (Stones) Market is regularly 'improved' (revamped/reduced) but solutions have not led to its development or improvement, success and well being, only its decline. Given that the identity of Newcastle-under-Lyme is that of 'Market Town' this is becoming harder to justify. Developers would be aware of the difference between the statements and claims about Newcastle-under-Lyme (appearance) and its reality.</p>

	c. It is only recently that the NBC has viewed itself as a University Town – which it has been for the past 75 years – an opportunity missed or possibly not even recognised?

Q4 Policy	PSD4
Q5 Legally compliant	No
Q5 Sound	No
Q6 Details	<p>Policy PSD4: Distribution of Development</p> <p>Policy PSD4 (Development Boundaries and the Open Countryside) sets out how development proposals will be considered in Rural Centres, stating in part 2 of the policy that:</p> <p>"Within Settlement Boundaries, development proposals will be supported where they are in keeping with the scale, role, and function of that settlement and do not conflict with any other relevant policy in the Local Plan."</p> <p>Notwithstanding the representations made above about the clarity and appropriateness of the Rural Centres designation, the grouping of the University site with Keele village in the written text to the draft Plan fails to recognise the distinct character of the campus and the range of uses and typologies of development that may be required within it.</p> <p>Thought Part 3 of PSD4 does support some forms of development in the open countryside outside of the development boundary, in the case of the wider Keele University campus, this area is covered by Green Belt policies, restricting development in these areas. These areas include existing and anticipated University sport, health and wellbeing facilities which the University has identified need to be replaced to allow the University to adequately attract future students, to provide sufficient capacity serve increased numbers of the local community and support the development of these anticipated sport, health and wellbeing facilities whilst continuing to operate existing facilities. The continued inclusion of such areas within the Green Belt will restrict the enhancement of and future investment in these key facilities.</p>
Q7 Modification	<p>Recommendation</p> <p>For the reasons set out in the Green Belt section of this representation, the Keele University development boundary should be extended to incorporate wider areas of the existing University campus, as identified in Appendix A. This approach will support the long term investment plans and growth strategy and ensure that the policy is positively prepared.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	We request the right to make representations on behalf of Keele University, in order to examine the Council's evidence in support of the proposed approach to Green Belt and Open Space matters in order to ensure that the plan is effective and justified within the context of the University's future investment proposals, and with reference to the importance of this investment for the wider economy of Newcastle Under Lyme.

Q4 Part of document	Policy
Q4 Policy	PSD4
Q6 Details	<p>Please see attached representations. Criterion 1 of this policy seeks to define Development Boundaries, Rural Centres and Other Settlement Boundaries within the draft Policy Map.</p> <p>Criterion 2 goes on to state that: "Within Development or Other Settlement Village Boundaries, development proposals will be supported where they are in keeping with the scale, role, and function of that settlement and do not conflict with any other relevant policy in the Local Plan."</p> <p>Criterion 4h goes on to state that new development will be supported in the open countryside: "Where the development meets a demonstrable local housing need such as affordable housing and / or self-build plots".</p> <p>The footnote to this policy goes on to state that self-build plots "must be directly adjacent to the development boundary and other residential development".</p> <p>Our client is broadly in support of this proposal in that this policy as it acknowledges the need to promote self-build dwelling adjacent to development boundaries, including Baldwin's Gate. It is the intention that this site would include some selfbuildplots and in doing so would provide an alternative offer to the type of houses that are building proposed on the Baldwins Gate Farm site or the Jones Homes site.</p> <p>However, the draft Policy Map excludes our client's site from the proposed Baldwin's Gate settlement boundary, and in doing so this would result in a missed opportunity to build upon the sustainable credentials of this village, particularly in the light of the Baldwins Gate Farm decision.</p> <p>It is therefore recommended that the Policy Map be amended along the lines illustrated in Figure 2 (see attachment). This would include the Jones Homes site to the east of Sandy Lane and our clients' site; resulting in the logical rounding off of this part of the village.</p> <p>SUMMARY</p> <p>It has been demonstrated that there is a clear and robust argument in favour of including Land at Stone House Farm within the proposed settlement boundary for Baldwins Gate set out in Figure 2 of this report. This site would be a logical addition to the Rural Centre of Baldwin's Gate, an area which has been established as part of the Baldwins Gate Farm appeal to be an inherently sustainable location.</p> <p>The site would bring forward substantial benefits to Baldwin's Gate and the Borough as a whole and would align with the Government's aspirations to deliver 1.5 million homes during the next parliament</p>

	(with the Borough identified as needing to accommodate 193 new homes per year). The proposal would provide much needed family market and potentially self-build homes.
Q7 Modification	Please see attached representations.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	Knights wish to participate at the hearing sessions for Policies PSD3 and PSD4 so that we can demonstrate why the Stone House Farm, Baldwin's Gate site should be included as a residential allocation in the Policies Map.

Q6 Details	<p>Please see attached representations. Criterion 1 of this policy seeks to define Development Boundaries, Rural Centres and Other Settlement Boundaries within the draft Policy Map.</p> <p>Criterion 2 goes on to state that: "Within Development or Other Settlement Village Boundaries, development proposals will be supported where they are in keeping with the scale, role, and function of that settlement and do not conflict with any other relevant policy in the Local Plan."</p> <p>Whilst the New Farm, Audley site is located outside of the open countryside (and instead within the Green Belt) our client is broadly in support of this policy.</p> <p>Criterion 4c goes on to state that new development will be supported in the open countryside: "Development associated with the conversion and enhancement or redevelopment of a heritage asset". Our client is broadly in support of this proposal in that this policy as it acknowledges that proposals can be acceptable where they can ensure the ongoing viability of an existing heritage asset. However it is requested that the text in this policy explicitly refer to 'enabling developments' and provide confirmation that such enabling developments can be supported in accordance with paragraph 208 of the Framework (which states that "local planning authorities should assess whether the benefits of a proposal for enabling development, which would otherwise conflict with planning policies but which would secure the future conservation of a heritage asset, outweigh the disbenefits of departing from these policies") and that the LPA will consider offsite enabling developments (including where appropriate outside of the immediate locality of the site) where proposals have been fully justified.</p> <p>It is therefore recommended that the Policy Map be amended along the lines illustrated in Figure 2 (See attachment). This would include all the proposed landscaped areas as well as the 7no. dwellings approved under 18/00122/FUL (located to the west) and the New Farm dwelling itself (located to the south).</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)

Whilst the Land East</p>

	of Main Road, Betley site is located outside of the open countryside (and instead within the Green Belt) our client is broadly in support of this policy. However, given the Government's aspirations to release appropriate sites within the Green Belt to deliver new housing it is considered that it is not appropriate for all of the rural housing sites to be located outside of Green Belt land as this would not provide a balanced distribution of housing across the Borough (putting settlements such as Betley at a disadvantage).
Q7 Modification	Please see attached representations
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	Knights wish to participate at the hearing sessions for Policies PSD3, PSD4 and PSD5 so that we can demonstrate why the Betley Court Farm, land east of Main Road, Betley site should be included as a residential allocation in the Policies Map. (I reattach the representations document again for ease of reference).

Title	Policy PSD4: Development Boundaries and the Open Countryside
Consultee Given Name	Keepmoat Homes
Agent Company / Organisation	Pegasus Group
Agent Position	Associate Planner
Agent Family Name	Walker
Agent Given Name	Kerry
Q4 Part of document	Policy
Q4 Policy	PSD4
Q5 Legally compliant	No
Q5 Sound	No
Q6 Details	<p>Please see attached representation. Keepmoat object to the settlement boundary of Madeley as proposed, as is does not identify sufficient sites to be able to accommodate the 250 dwellings identified. As it stands, the settlement is proposed to be altered only to accommodate the single allocation – that being site MD29, capable of accommodating around 150 dwellings. There are no other alterations proposed.</p> <p>Looking at the housing trajectory in Appendix 6, this does not really provide much additional assistance to clarify the supply of sites. It is also noted that the latest Housing Development Monitoring Report is dated 20101, so this does not assist and the latest Annual Monitoring Report2 is for the 21/22 period and this also does not include any additional relevant data. As such it is difficult to understand what has possibly been delivered in Madeley between 2020 and the submission of the Plan to assist in understanding what the residual requirement is.</p> <p>In terms of current live planning applications, the latest 5 year housing land supply assessment3 covers the period 2023-2028. This provides some assistance in identifying the existing supply of sites in this area. After reviewing Appendix 1 of the assessment, this identifies the following sites exceeding 5 dwellings(see attachment)</p> <p>In addition to the above, the planning permission at land south of Honeywall Lane (Ref: 21/00593/RM and 17/00514/OUT) was not implemented at the time the Council's 2023 5 Yr HLS was issued, there is no evidence of the relevant pre-commencement conditions being submitted and approved, other than the WSI and the planning permission expired on 11/01/2024.</p> <p>Pegasus have only identified those sites exceeding 5 dwelling, to ensure that there is some flexibility in the supply of sites, given it is inevitable that there will be some lapse rates in consented sites being delivered and para 5.12 confirms the figures are a guide and not a ceiling.</p> <p>Therefore, and as part of the Examination process, it is requested that the Council provide a full list of housing sites and allocations to corroborate the chart in Appendix 6. Pegasus would also note that the chart only seems to identify the delivery of sites over a 17-year period, despite the full plan period being 2020-2040, so this also needs clarifying. Until this evidence is prepared, Pegasus reserve the right to make further comments on the supply of homes in this area.</p> <p>After taking into consideration the known consented and under construction sites and the single allocation the residual requirement of additional homes in Madeley (and Betley)</p> <p>to seek to achieve the 250 dwellings, is somewhere in the region of 50 dwellings.</p> <p>In order for the Plan to be positively prepared, additional site(s) should be identified in Madeley. This would allow for some flexibility in the supply of sites and also to achieve the minimum housing requirements set out in Policy PSD1.</p>

Agent Family Name	Askew
Agent Given Name	Michael
Q4 Part of document	Policy
Q4 Policy	PSD4
Q6 Details	<p>Please see attached representations. Criterion 1 of this policy seeks to define Development Boundaries, Rural Centres and Other Settlement Boundaries within the draft Policy Map.</p> <p>Criterion 2 goes on to state that: "Within Development or Other Settlement Village Boundaries, development proposals will be supported where they are in keeping with the scale, role, and function of that settlement and do not conflict with any other relevant policy in the Local Plan."</p> <p>Criterion 4h goes on to state that new development will be supported in the open countryside: "Where the development meets a demonstrable local housing need such as affordable housing and / or self-build plots".</p> <p>The footnote to this policy goes on to state that self-build plots "must be directly adjacent to the development boundary and other residential development". Our client is broadly in support of this, as it acknowledges the need to promote selfbuild dwellings adjacent to development boundaries, and a village inset boundary is proposed for Keele. However, despite the inclusion of the policy in favour of self-build plots, the draft Policy Map excludes our client's site, the site would remain in the Green Belt and in doing so, there would be uncertainty as to whether a self-build dwelling would be supported (if the site remained within the Green Belt).</p>
Q7 Modification	Please see attached representations.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)

Q9 Hearing reasons	Knights wish to participate at the hearing sessions for Policies PSD3, PSD4 and PSD5 so that we can demonstrate why the Land at 3 Highway Lane, Keel site should be included within the settlement boundary for Keele in the Policies Map.

Q5 Sound	No
Q6 Details	Representations in relation to draft Policy AB2 are set out in the Statement submitted alongside this form. That Statement lists and is accompanied by a series of 10 Appendices. Draft Policy PSD4 is concerned with Development Boundaries and the Open Countryside. Read as a whole it establishes the different approach that will be taken within settlement boundaries compared with open countryside. However, as currently phrased it creates the potential for confusion and conflict in circumstances where some allocated sites are (by draft Policy PSD4 definition) within open countryside, but not subject to the associated limitations embodied within this part of the Plan. This serves to undermine the effectiveness of the Plan.
Q7 Modification	A further type of allowable development should be added to Part 3 of Policy PSD4 to read, "Development in accordance with the allocations made in this Plan."
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	The representations made, particularly in relation to draft Policy AB2, are detailed, extensive, and address a range of technical matters. It will assist the hearing process to have participants in attendance able to assist with any explanation that may be required in relation to this or related matters.

Q6 Details	<p>Please see supporting representation by Knights on behalf of Aspire. As is acknowledged elsewhere in this submission, there is a substantial need for a step-change in affordable housing delivery across the Borough, including in the rural areas.</p> <p>Criteria 3i of Policy PSD 4 is a welcome inclusion that allows proposals for rural and First Homes Exception sites in accordance with policies HOU8 and HOU9. Further comments relating to these policies are provided later on in this response.</p> <p>It is noted that the Local Plan includes a policies map that includes proposed settlement boundary lines. It is noted that to some settlements that there are some sites that are enclosed on three sides by a combination of proposed allocations and proposed settlement boundaries. In such scenarios, it is suggested that the settlement boundaries are re-drawn to include such enclosed sites within the settlement boundary as such sites are likely to meet the definition of "Grey Belt" set out in the proposed changes to national policy. This is considered to be a sensible way forward should an early review of the Local Plan be required to address changes to national policy. For example, there is land to the north of AB33 in Audley which would meet the definition of Grey Belt that is surrounded on three sides which could easily be included within the settlement boundary. In addition, the site edged green below (Cheviot Close, ST5, 6HU) is located adjacent to the settlement boundary and could be included within the defined settlement boundary as it comprises land that is previously developed.</p> <p>Land at Cheviot Drive – Grey Belt site that should be located within the settlement boundary</p> <p>In addition, it is noted that settlements within Audley Parish – Wood Lane, Miles Green and Halmer End – are proposed to be "inset" from the Green Belt, but the draft policies map suggests that these settlements will be identified within the inset boundaries as Open Countryside. It is considered that such settlements should be defined with a development boundary within which development would be acceptable in principle, rather than development within these settlements being restricted and judged against countryside policies. This would enable more infill development opportunities that are greater than 1 or 2 dwellings to be realised and this would also be consistent with the provision of a development boundary to settlements such as Madeley Heath.</p> <p>Criteria 3h is permissive of the infill of a small gap with one or two dwellings in an otherwise built-up frontage. It is considered that this aspect of the policy is too restrictive, as often there can be instances where small scale development can be delivered on gap sites that may be able to accommodate more than 2 dwellings but are less than 5 or 10 dwellings whilst reflecting the broad character of adjoining residential development. These small sites would provide greater scope for RPs to quickly deliver smaller sites without the need to undertake lengthy localised housing need surveys where the principle of development could otherwise be acceptable, and in addition would also support the SME sector more generally. It is therefore suggested that the reference to "one or two dwellings" is removed and the policy worded as follows: "the infill of a gap or the rounding off of a settlement with non-major housing development (up to ten dwellings) in an otherwise built-up frontage with development that is compatible with the character and appearance of adjoining residential development"</p> <p>Summary of recommendations:</p> <p>(a) Consider undertaking a further review of settlement boundaries to "round off" settlements and/or include sites within settlement boundaries that are currently identified as Green Belt or countryside that are already enclosed on three sides by development;</p> <p>(b) Provide a more flexible policy approach to infill development by broadening the definition of infill housing to allow up to ten dwellings in a built up frontage and also allow rounding off of settlements with housing development that is compatible with adjoining residential development.</p>

Q4 Part of document	Policy
Q4 Policy	PSD5
Q5 Legally compliant	No
Q5 Sound	No
Q6 Details	<p>Green belt is finite and irreplaceable and 'safeguards the countryside from encroachment'. The National Planning Policy Framework states that 'the government attaches great importance to Green Belt'. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence and The NPPF states that there must be 'exceptional circumstance' for altering the Green Belt boundaries. I do not believe that NULBC can justify the 'exceptional circumstances' required to release Green Belt land.</p> <p>The <i>NPPF paragraph 146</i> asserts that the strategic policy-making authority should first fully examine all other reasonable options for</p>

meeting development need before using Green Belt land including making 'as much use as possible of suitable brownfield sites and underutilised land;'. The *Campaign to Protect Rural England State of Brownfield Report 2022* states: 'the availability of previously developed land continues to grow across England' and found that 'over 1.2 million homes could be built on 23,000 sites covering more than 27,000 hectares of brownfield'. Building on Green Belt land cannot be justified with so many brownfield sites available nationally.

We should also be focused on making sure that developments that have already been granted permission are completed promptly rather than starting more and eating into Green Belt land. It is estimated that there are currently 1 million houses with planning permission but remain unbuilt. *National Empty Homes Week 2023 sees call for action on One Million homes nobody lives in*

How can there be 'exceptional circumstances' for developing on Green Belt land when there are so many other sites available nationally? This is not justified and therefore not sound.

NPPF Paragraph 146 further states that before developing Green Belt land that the strategic policy-making authority should also examine 'whether policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport;'. We should be concentrating on developing and regenerating our town and city centres. With high street shops shutting down regularly and leaving many empty premises these areas are in need of attention now. Repurposing some of these buildings/land for employment or housing needs could help to increase footfall for the remaining businesses whilst also alleviating some of the pressure to find new sites to develop. One of the original purposes of Green Belt protection was to aid urban regeneration by focusing development on urban land. Renovate derelict homes and build the homes that already have planning permission first.

Green belt is not distributed evenly across the country therefore, if it is being reviewed, then it should be reviewed nationally as a whole and not chipped away at in multiple locations to meet local targets. If NULBC has a higher percentage of Green Belt land than another borough then this should be taken into consideration and protected for the benefit of everyone nationally. Some areas that are designated as Green Belt are 'poor environmental and visual quality' (*Landscape Briefing April 2018 Green Belt Policy*) so it would be beneficial to take a view nationally to protect sites that make a stronger contribution regarding land quality; to protect areas with a higher percentage of quality Green Belt.

Loss of natural capital does not just have a local effect. Destruction of good quality agricultural land, climate change and the loss of wildlife habitats and biodiversity impacts everyone. The *NPPF Paragraph 20* states that Strategic policies should make sufficient provision for: 'conservation and enhancement of the natural, built and historic environment, including landscapes and green infrastructure, and planning measures to address climate change mitigation and adaptation'. We need to restore nature and combat climate change by restoring natural capital and not chipping away at it further.

Previously undeveloped land such as the proposed huge 80 hectares AB2 site is crucial in its role as a natural carbon storage area. The *Sustainability Appraisal published prior to consultation in 2023* noted that some of the negative effects that we could experience if the development goes ahead: *Paragraph 5.2.21* discussed how rural based options 'may have a negative impact on climate change as they would encourage the use of private vehicles for travel and so potentially increase GHG emissions, contributing towards the causes of climate change to a greater extent'.

The *Sustainability Appraisal* also acknowledged the impact that development would have on the air quality in Audley where reliance on private car usage potentially increasing air pollution levels and having a negative effect on local air quality (*paragraph 5.2.3*).

As a nation we also should be conscious of working towards food security and recognise the food production value of farmland. 'Best and Most Versatile' land is defined as grades 1-3a in the Agricultural Land Classification. If Strategic site AB2 goes ahead it would mean a massive loss of 80ha of Green Belt of which much is grade 3a agricultural land. This land would be better utilised for food production.

As well as the loss of agricultural land, the proposed Green Belt development will have a devastating effect on local wildlife by destruction of their habitat and hunting grounds. The area is disconnected so it would mean a loss of open countryside and would also impact the surrounding land with light, noise and air pollution.

The Environment Act 2021 states that the government is required by law to halt the decline of wildlife by 2030. How can this be achieved if good quality, undeveloped land is eaten up by warehousing and housing?

The land owner at AB2 has been receiving public funding to encourage wildlife friendly farming. The 3b land on the site provides habitat for wildlife and if developed then this public investment will be lost. There are also many historic protected hedgerows (visible on victorian maps). These hedgerows need to exist within the protection of greenbelt and not line car parks or housing estates as they will no longer provide safe habitats for wildlife. Wildlife noted on this site along with the other proposed Green Belt site AB12 includes: Barn Owls, Tawny Owls, Buzzards, Kestrels, Hares, Badgers, Foxes, Hedgehogs, Bats and Shrews. Full wildlife surveys should be undertaken before any development is permitted.

All other possibilities should be explored before encroaching on Green Belt land in order to be able to meet requirements for exceptional circumstances to release Green Belt. However if there is a shortage of brownfield sites then the Green Belt assessment should be used to identify the sites with weaker Green Belt contribution and use them first. The *Green belt assessment part 2* graded the contender sites and identified weak and moderate sites. It should only have been these sites that were taken through to the next stage; however proposed local housing sites AB12, AB33 and TK10 were all assessed as having a strong contribution to the Green Belt but are now included in the local plan. Whereas there are examples of 'moderate contribution' sites that were not taken further e.g. AB22 Wall Farm.

Wall Farm was also previously advertised for development under the RENEW scheme and has good road access. AB78/79 was rejected from the contender sites but land included in that site has now been submitted as a planning application for 39 houses (NEW FARM, Cross Lane) yet this land is not listed as a preferred site. It is also worth noting that, if these planning permissions were to be granted, then they would extend up to the AB12 site and therefore would join up to form a much larger encroachment on the countryside. There does not seem to be a consistent approach to site allocation and this is unsound.

The previous *Sustainability Appraisal Table 7.4* outlined reasons for selection/rejection of sites - such reasons for rejection include poor access, strong contribution to Green Belt or being valuable as agricultural land. AB12 also has these same restrictions but was still determined as a preferred site. This land is owned by Staffordshire County Council - did the ownership of the land have a bearing on the decision? If so then this would be a bias within the selection process.

The Sustainability report has been updated and now the information is practically inaccessible as no one, with a job and responsibilities, has time within the 6 week consultation to read all 675 to find the relevant points!

Q7 Modification	Develop brownfield sites first nationally Build houses which already have planning permission first. Adhere to greenbelt assessments of sites and use weaker areas first.
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)

Q6 Details	<p>Policy PSD 5: Green Belt and Safeguarded Land</p> <p>See comments also below on housing site allocations and green belt release. We object to the release of site AB2 or AB2A from the green belt, as it would harm green belt purposes relating to safeguarding the countryside from encroachment and assisting in urban regeneration, contradicting Policy PSD 5.</p> <p>Sites AB2 and AB2A</p> <p>ARNP strongly objects to the proposed allocation of Site AB2/AB2A (A500/M6).</p> <p>The Green Belt Site Review Consolidated Report 16th July 2024 recommends exclusion of the site(s) from the process (Table 17, page 28). This issue was also considered in the Urban Vision Enterprise CIC Audley Parish Green Belt Review, V2.4, August 2022, commissioned by Staffordshire County Council, which found a strong contribution to green belt purposes, including safeguarding the countryside from encroachment and regeneration of urban land.</p> <p>These recent reports appear to have been ignored.</p> <p>Removal of the site(s) from the green belt would undermine the purposes for green belts set out in the NPPF, in particular by allowing major incursion and encroachment into the countryside and undermining of regeneration of the urban conurbation, by developing greenfield land in the countryside.</p> <p>The economic impact on the conurbation would be negative, due to:</p> <ul style="list-style-type: none"> the remoteness of the site(s); the impact on the viability of alternative urban sites in the conurbation. Harm to the rural economy, due to loss of the best and most versatile agricultural land and associated harm to local food growing capacity and agricultural employment. <p>The traffic impacts would be negative, including:</p>

- Generation of road-based traffic and lack of sustainable transport alternatives;
- Traffic impacts on the rural character of the area;
- Impacts on the amenity and safety of rural roads and lanes.

The development of this site would be unsustainable and environmentally harmful, due to:

- biodiversity impacts on rural lanes, where they need to be widened, including
- destruction of adjoining landscapes;
- development of greenfield land in an unsustainable location, remote from the
- existing urban conurbation;
- a range of significant adverse impacts (visual, noise, light, disturbance, air quality).

The development would introduce a major urban employment site within a rural parish, near to small rural villages and remote from local services.

The Strategic Employment Site Assessment - 2024 Update (Aspinall Verdi) has failed to deal with the previously highlighted contradiction with the ARUP and UVE green belt assessment reports.

The updated Sustainability Appraisal July 2024 highlights adverse impacts of developing the site AB2. Paragraph D.5.2.11 states "The introduction of new large-scale developments has potential to be discordant with the landscape features of the associated character areas as identified in the LSCA34, especially given the location of Sites AB2 and KL15 within areas of 'high' sensitivity to development ...".

The Table on page N37 identifies that site AB2 would have major negative impacts on:

'Natural Resources and Waste', 'Flooding' and also 'Landscape'. Minor negative impacts include: Air, Biodiversity, Flora and Fauna, Water, Health and Wellbeing and Transport and Accessibility. There is only one other site that scores so negatively, and this is not being taken forward.

We note that positive impacts are identified for 'Climate Change' and 'Economy'. We believe that this finding is perverse. It is difficult to see how the development of a remote site, well outside of the urban conurbation, involving the loss of agricultural land and relying on road based travel could contribute positively against climate change. In addition, the harm to the rural economy and to economic and physical regeneration in the urban conurbation has clearly not been taken into account.

Site variation AB2A is not mentioned so presumably has not been assessed.

Tables N10 and N11 set out growth strategy options. We note that option 6D does not include site AB2 and delivers better scores/outcomes.

The Newcastle-under-Lyme Landscape & Visual Appraisal March 2023 identifies the site as having a major adverse impact. Mitigation measures would not be effective given the scale of development.

The Audley Rural Civil Parish Natural Capital Assessment report (Staffordshire Wildlife Trust, June 2024) identifies ecological and wildlife features within the site, including a high distinctiveness wildlife corridor and Strategic Significance Areas within the Nature Recovery Network. A copy of this report is included.

The Strategic Housing & Employment Land Availability Assessment (SHELAA), Report September 2022 Appendix 4 (Sites not in Deliverable & Developable Supply) included Site AB2. The AB2 site assessment proforma recognised that the site was in the green belt and was isolated, disconnected from Audley and Bignall End, partly affected by flood zones, with access limitations and with poor access to a range of services and facilities. The site appears to be missing from the 2024 update report. There is still a big inconsistency between NUL Borough Council's position in September 2022 and the present. A site identified as not deliverable or developable is now suggested for allocation.

Allocation of this site is not justified by the Economic Needs Assessment Newcastle-under-Lyme & Stoke-on-Trent June 2020 which stated, 'overall need implied under any of the aforementioned scenarios could be met through the current supply of circa 293ha of employment land'. This further highlights how allocation of site AB2 would undermine regeneration elsewhere.

Development of AB2 would be harmful to the local economy, community and environment.

The site assessment is not supported by evidence and assessments (though we note the site has been deleted from updates of some of those assessments). Allocation of the site conflicts with several of the proposed policies of the Local Plan.

Housing Site Allocations AB12, AB15 and AB33

Sites AB12, AB15 and AB33 are all within Audley Parish. ARNP accepts that some housing growth is needed to meet local housing need, including small (one bedroom) and family (4 bedroom) accommodation and homes suitable for older people and those with limited mobility. The sites are close to existing settlements and do not create coalescence between settlements. ARNP would emphasise that green belt release should only occur in exceptional circumstances, but accepts that there are no alternative sites that would not involve green belt release.

The new housing would help to ensure that existing shops and other facilities in Audley and Bignall End remain viable. The increase in population would place more pressure on health, education and other facilities and this one of the main concerns for many residents. The provision of a safe and adequate access would be essential for all sites.

Title	Policy PSD5: Green Belt
Consultee Company / Organisation	Cross Heath, Wolstanton and May Bank Branch Labour Party

Consultee Position	Branch Secretary
Consultee Family Name	Gorton
Consultee Given Name	Richard
Q4 Part of document	Policy
Q4 Policy	PSD5
Q6 Details	Policy PSD5 – Green Belt- to deliver the housing targets, set out in the draft Local Plan, we recognize that, it will be necessary to develop some land in the Green Belt. The Branch accepts that there is insufficient 'brown field' land in the Newcastle-under-Lyme to meet the Borough's future development needs. We are not convinced, however, that Section 106 agreements as currently concluded with developers will achieve the 'compensatory improvements' referred to in paragraph 5.37 and believe that the draft Local Plan should make it clear that the Authority will insist on developers compensating the local community for the loss of Green Belt land.
Q7 Modification	Modification of Policy PSD5 – the inclusion of a stronger statement to reflect the Borough Council's expectation that developers must compensate the local community for the loss of land in the Green Belt.
Q9 Hearing reasons	Conclusion Cross Heath, Wolstanton and May Bank Branch Labour Party welcomes the opportunity to give its views in response to the Regulation 19 stage of the draft Local Plan. If it is felt to be appropriate, a member of the Branch would be prepared to take part in the public scrutiny of the draft Local Plan.

Q6 Details	<p>Why has no document considered the cumulative impact of the loss of all the following sites from the Green Belt. The amount of Green Belt amendment in this Local plan is far more than just a bit of rounding off or tweaking of the edges of villages etc or using the weakest performing sites first ... the overall impact on the northern part of the Borough needs to be fully assessed as the cumulative impact will weaken the remaining green belt which most likely will be easy pickings for the next round of Local plan development. Surely this should be standard practice and a logical step to take a step back and look at the overall impact on the Borough's Green Belt plus also the neighbouring authorities Green Belt as well as part of the consideration - as if both Cheshire East and Newcastle nibble away at it - it will be meeting in the middle! The views of Cheshire East and Stoke on Trent City Council in the Duty to Co operate should have been fully obtained and considered on the proposed Final Draft Local Plan before it went through to Reg 19 consultation.</p> <p>AB2 Land at Junction 16 of the M6; AB12 Land east of Diglake Street; AB15 Land north of Vernon Avenue; AB33 Land off Nantwich Road / Park Lane; CT1 Land off Red Street and High Carr Farm; KL15 Land south of A525 Keele; NC13 Land west of Bullockhouse Road; SP11 Lyme Park, Silverdale; SP23 Land at Cemetery Road / Park Road; BL18 Land at Clough Hall; TK10 Land at Crown Bank, Talke; TK17 Land off St Martins Road; TK27 Land off Coppice Road; TB19 Land South of Newcastle Golf Club.</p>

Q6 Details	<p>This representation is submitted on behalf of Richborough in response to the Newcastle-under-Lyme Draft Local Plan ("DLP") consultation. Please also refer to attached representations. Policy PSD 5 proposes to alter Green Belt boundaries in order to allocate a number of development sites. It is considered that this policy is justified on the basis that there is limited urban capacity in Newcastle-under-Lyme, and there is a limited amount of previously developed land available to meet development needs. In particular, there is a high level of need for affordable housing and this cannot all be met within the urban boundary. Exceptional circumstances to justify the release of land from the Green Belt is set out further below.</p> <p>The policy concept of what constitutes exceptional circumstances for releasing land from the Green Belt through plan making has been considered in the High Court.</p> <p>In Compton Parish Council vs Guildford Borough Council [2019] EWHC 3242 (Admin) ("The Guildford judgement") where the main general issue of the challenge was whether the Inspector, in recommending that the Local Plan be adopted, had erred in law in his approach to what constituted the "exceptional circumstances" required for the redrawing of Green Belt boundaries in a local plan review.</p> <p>In the Guildford judgment, Sir Duncan Ousley, sitting as a High Court Judge confirmed that:</p> <p>(a) There is no definition of the policy concept of "exceptional circumstances". This itself is a deliberate policy decision, demonstrating that there is a planning judgment to be made in all the circumstances of any particular case. It is deliberately broad, and not susceptible to dictionary definition.</p> <p>(b) Whether a particular factor was capable of being an "exceptional circumstance" in any particular case was a matter of law; but whether in any particular case it was treated as such, was a matter of planning judgment.</p> <p>(c) A judicial decision that a factor relied on by a planning decision-maker as an "exceptional circumstance" was not in law capable of being one is likely to require some caution and judicial restraint. All that is</p>

required is that the circumstances relied on, taken together, rationally fit within the scope of "exceptional circumstances" in this context. The breadth of the phrase and the array of circumstances which may come within it place the judicial emphasis very much more on the rationality of the judgment than on providing a definition or criteria or characteristics for that which the policy-maker has left in deliberately broad terms.

(d) "Exceptional circumstances" is a less demanding test than the development control test for permitting inappropriate development in the Green Belt, which requires "very special circumstances."

(e) The phrase does not require at least more than one individual "exceptional circumstance". The "exceptional circumstances" can be found in the accumulation or combination of circumstances, of varying natures, which entitle the decision-maker, in the rational exercise of a planning judgment, to say that the circumstances are sufficiently exceptional to warrant altering the Green Belt boundary.

(f) General planning needs, such as ordinary housing, are not precluded from its scope; indeed, meeting such needs is often part of the judgment that "exceptional circumstances" exist; the phrase is not limited to some unusual form of housing, nor to a particular intensity of need.

The above judgement confirms that there is a very broad exercise of planning judgment for the decision-maker which the courts will not readily disturb. This can include meeting the need for market housing.

The NPPF at paragraph 141 the NPPF provides more guidance on what will add up to exceptional circumstances:

Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development. This will be assessed through the examination of its strategic policies, which will take into account the preceding paragraph, and whether the strategy:

a) makes as much use as possible of suitable brownfield sites and underutilised land;

b) optimises the density of development in line with the policies in chapter 11 of this Framework, including whether policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport; and

c) has been informed by discussions with neighbouring authorities about whether they could accommodate some of the identified need for development, as demonstrated through the statement of common ground. In the case of Newcastle-under-Lyme, each of the above will be taken in turn.

Making as much use as possible of suitable brownfield sites and underutilised land

The council recently undertook a call for brownfield sites exercise and a Newcastle-under-Lyme and Kidsgrove Urban Capacity and Town Centre Regeneration Study (June 2023) forms part of the evidence base. This study considered a range of vacant and infill sites, and considered the scope for the conversion of upper storey floorspace of existing commercial buildings. This study was also informed by sites identified in the SHELAA.

Paragraph 8.11 of the Issues and Options consultation document previously consulted upon stated that evidence gathered as part of the now abandoned Joint Local Plan exercise with Stoke-on-Trent City Council suggested that approximately 2,500 dwellings could be found on land within existing development boundaries, which would be at least 4,660 dwellings short of the minimum housing requirement figure established using the nationally set starting requirement of 7,160 established using the Standard Method or 5,500 short of the Regulation 19 Local Plan requirement of 8,000 dwellings.

The latest SHELAA and Urban Capacity Study have not identified any significant amounts of further brownfield sites that were not considered previously. The latest SHELAA (dated 2024)

identifies a deliverable and developable supply of brownfield sites that amount to the delivery of 1938 homes. When other deliverable and developable greenfield site that are not located in the Green Belt are considered, there is a capacity to deliver a further 1012 dwellings. Mixed brownfield/greenfield sites can deliver a further 147 dwellings. This amounts to a total of 3097 dwellings that are deliverable/already have planning permission or developable. This amounts to a shortfall of at least 4,093 dwellings.

The above figures strongly suggest that land beyond existing settlement boundaries is required to deliver the Council's minimum housing requirement of 8,000 dwellings over the plan period.

Whilst national policy seeks to exhaust previously developed sites for housing delivery before releasing Green Belt sites, meeting housing needs also have to be balanced with meeting economic development needs, with many economic development needs (including, but not limited to, office, retail, leisure, manufacturing and distribution) also requiring the use of previously developed land or buildings. This is particularly true if they are located on existing employment parks or within town centres, or otherwise located where businesses require to be located based on their business needs and/or customer demands.

In light of these conclusions, it is considered that the Council has made good progress in granting planning permission for residential development on sites within the development boundary, including on brownfield land, however it is very clear that minimum housing needs cannot be met on these types of sites alone.

Optimising the Density of Development

With regard to optimising the density of development, if limited development sites are available within existing development boundaries, then opportunities for delivering higher density development will be limited. Whilst some higher density development has occurred within Newcastle-under-Lyme town centre, other opportunities are likely to be limited due to the following factors:

(a) Conservation areas / special character area designations

(b) Listed buildings and the need to appropriately take into account their settings

(c) Prevailing densities/character of existing residential areas, particular those of sub-urban character where high density or high rise development is likely to be inappropriate in design and amenity terms

(d) Other locational specific constraints.

6.16 Whilst there may be possibilities to increase the density of new development within existing urban areas or other non-Green Belt sites, it is unlikely that this could be done on a sufficient number of such sites to remove any need to release land from the Green Belt at all.

Meeting any Unmet Housing Needs in Neighbouring Authorities

At the time of preparing this Local Plan, a number of neighbouring authorities have recently adopted development plans. Staffordshire Moorlands adopted a local plan in 2020 and Cheshire East Council adopted its part 1 Local Plan Strategy in 2017. The Cheshire East Site Allocations and Policies DPD

has also been recently adopted. Stafford Borough Council are currently reviewing their local plan, but have yet to reach examination stage. Stoke-on-Trent City Council are also in the early stages of preparing a new Local Plan.

In light of the above, the following authorities are unlikely to be in a position to accommodate any unmet needs in Newcastle-under-Lyme:

- (a) Cheshire East
- (b) Shropshire
- (c) Staffordshire Moorlands

With regard to Stafford Borough and Stoke-on-Trent, it is, at this stage, unclear what additional needs these authorities may be able to accommodate, however it should be noted that Stoke-on-Trent's minimum housing needs are currently subject to the 35% uplift for urban areas, so it is unclear if any further need from Newcastle-under-Lyme could be met within Stoke-on-Trent over the plan period. Furthermore, the Governments review of the Standard Method suggests that local housing need figures for all surrounding local authority areas could significantly increase over and above the existing Standard Method requirement if the new Standard Method is confirmed.

With regard to Stoke-on-Trent, when Newcastle-under-Lyme were pursuing a Joint Local Plan with Stoke-on-Trent City Council, Stoke-on-Trent indicated that they could accommodate around 800 dwellings of Newcastle-under-Lyme's unmet needs. This figure still remains substantially short of the housing need required in Newcastle-under-Lyme that cannot be accommodated within existing development boundaries. Stoke-on-Trent have yet to make significant progress on a new Local Plan since a consultation on Issues and Options took place between May and June 2021.

With regard to economic development needs, this will also be a material factor, particularly where economic growth factors are linked to existing employment sites that need to expand and are inextricably linked, such as Keele University and Science Park. Their expansion needs are unlikely to be able to be accommodated in other local authority areas and will need to be anchored to their existing site. As such, in addition to housing factors, there are economic development needs that won't be able to be accommodated in other local authority areas.

Other Considerations Amounting to Exceptional Circumstances to Justify the Release of Land from the Green Belt

As set out above, meeting housing needs can amount to exceptional circumstances to justify the release of land from the Green Belt. By extension, this is also considered to apply in terms of meeting economic development needs and facilitating sustainable patterns of development in the Borough.

Having a suitable range of employment sites in suitable locations to meet future economic development needs and providing more scope to adapt to future changes in the economy

therefore justify the need to review Green Belt boundaries. For example, Newcastle-under-Lyme is well located in relation to the strategic road network, in particular the A500 and the M6. Large warehouses and distribution centres will require large sites with good access to the strategic road network, and such sites are best placed to be located outside of urban areas where access for large vehicles is likely to be more problematic. As such, it is considered that a review of the Green Belt in Newcastle-under-Lyme is necessary to meet both economic needs and housing needs.

Promoting sustainable patterns of development is also a relevant factor to consider, as set out at paragraph 142 of the Framework, which states:

When drawing up or reviewing Green Belt boundaries, the need to promote sustainable patterns of development should be taken into account.

The above was a material factor explored at length during the examination of the Cheshire East Local Plan, with northern parts of the Borough heavily constrained by Green Belt designations.

Green Belt release around the northern towns in the Cheshire East Borough was justified as follows¹:

Without alterations to the detailed Green Belt boundaries, the amount of new development that could be planned for in the north of the borough would be very low. It is considered that such a low level of development would have severe consequences including:

- Demand for new housing outstripping supply, further increasing house prices and a lack of new affordable housing provision leading to young people and key workers being unable to stay in the area.
- An increasingly ageing population as young people leave and an absolute reduction in the number of people of working age.
- Difficulty in attracting inward investment and economic growth. In areas of relatively unaffordable housing, employers have difficulty in recruiting to lower paid positions.
- Increases in traffic and congestion as people unable to live close to their place of work are forced to travel longer distances for employment and the smaller working-age population living locally would also mean more people commuting in to the area.
- A decline in the vibrancy and vitality of town centres and some local services and facilities becoming unviable.

Some parallels can be drawn between Cheshire East and Newcastle-under-Lyme. For example, as Newcastle-under-Lyme town is currently ring-fenced by Green Belt, any substantial levels of development on non-Green Belt land outside of the development boundary would need to leapfrog the Green Belt towards the periphery of the Borough in locations such as Loggerheads, although it is acknowledged that the settlements of Baldwins Gate and Loggerheads, which are not heavily constrained by Green Belt, are considered to be sustainable locations.

More broadly, the release of sites from the Green Belt on the periphery of the urban area in particular, sites around/adjacent to the Keele University Campus, for example, through the allocation of SP23, would deliver a sustainable pattern of development that is aligned to the Council's economic growth aspirations.

In addition, there is a substantial need to deliver an uplift in affordable housing in Newcastle-under-Lyme in light of the high level of affordable housing need, with a need to deliver a net increase of at least 278 affordable homes per annum.

The above considerations add further weight to the case that exceptional circumstances exist to justify Green Belt release in Newcastle-under-Lyme.

	In light of the above, it is considered that Policy PSD 5 is justified, as are the proposed allocations that follow from it. Richborough therefore support Policy PSD 5 and the release of SP23 for the delivery of 200 dwellings.

This will be assessed through the</p>

examination of its strategic policies, which will take into account the preceding paragraph, and whether the strategy:

- a) makes as much use as possible of suitable brownfield sites and underutilised land;
- b) optimises the density of development in line with the policies in chapter 11 of this Framework, including whether policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport; and
- c) has been informed by discussions with neighbouring authorities about whether they could accommodate some of the identified need for development, as demonstrated through the statement of common ground. In the case of Newcastle-under-Lyme, each of the above will be taken in turn.

Making as much use as possible of suitable brownfield sites and underutilised land

The council recently undertook a call for brownfield sites exercise and a Newcastle-under-Lyme and Kids Grove Urban Capacity and Town Centre Regeneration Study (June 2023) forms part of the evidence base. This study considered a range of vacant and infill sites, and considered the scope for the conversion of upper storey floorspace of existing commercial buildings. This study was also informed by sites identified in the SHELAA.

Paragraph 8.11 of the Issues and Options consultation document previously consulted upon stated that evidence gathered as part of the now abandoned Joint Local Plan exercise with Stoke-on-Trent City Council suggested that approximately 2,500 dwellings could be found on land within existing development boundaries, which would be at least 4,660 dwellings short of the minimum housing requirement figure established using the nationally set starting requirement of 7,160 established using the Standard Method or 5,500 short of the Regulation 19 Local Plan requirement of 8,000 dwellings.

The latest SHELAA and Urban Capacity Study have not identified any significant amounts of further brownfield sites that were not considered previously. The latest SHELAA (dated 2024) identifies a deliverable and developable supply of brownfield sites that amount to the delivery of 1938 homes. When other deliverable and developable greenfield sites that are not located in the Green Belt are considered, there is a capacity to deliver a further 1012 dwellings. Mixed brownfield/greenfield sites can deliver a further 147 dwellings. This amounts to a total of 3097 dwellings that are deliverable/already have planning permission or developable. This amounts to a shortfall of at least 4,093 dwellings.

The above figures strongly suggest that land beyond existing settlement boundaries is required to deliver the Council's minimum housing requirement of 8,000 dwellings over the plan period.

Whilst national policy seeks to exhaust previously developed sites for housing delivery before releasing Green Belt sites, meeting housing needs also have to be balanced with meeting economic development needs, with many economic development needs (including, but not limited to, office, retail, leisure, manufacturing and distribution) also requiring the use of previously developed land or buildings. This is particularly true if they are located on existing employment parks or within town centres, or otherwise located where businesses require to be located based on their business needs and/or customer demands. In light of these conclusions, it is considered that the Council has made good progress in granting planning permission for residential development on sites within the development boundary, including on brownfield land, however it is very clear that minimum housing needs cannot be met on these types of sites alone.

Optimising the Density of Development

With regard to optimising the density of development, if limited development sites are available within existing development boundaries, then opportunities for delivering higher density development will be limited. Whilst some higher density development has occurred within Newcastle-under-Lyme town centre, other opportunities are likely to be limited due to the following factors:

- (a) Conservation areas / special character area designations
- (b) Listed buildings and the need to appropriately take into account their settings
- (c) Prevailing densities/character of existing residential areas, particular those of sub-urban character where high density or high rise development is likely to be inappropriate in design and amenity terms
- (d) Other locational specific constraints.

Whilst there may be possibilities to increase the density of new development within existing urban areas or other non-Green Belt sites, it is unlikely that this could be done on a sufficient number of such sites to remove any need to release land from the Green Belt at all.

Meeting any Unmet Housing Needs in Neighbouring Authorities

At the time of preparing this Local Plan, a number of neighbouring authorities have recently adopted development plans. Staffordshire Moorlands adopted a local plan in 2020 and Cheshire East Council adopted its part 1 Local Plan Strategy in 2017. The Cheshire East Site Allocations and Policies DPD has also been recently adopted. Stafford Borough Council are currently reviewing their local plan, but have yet to reach examination stage. Stoke-on-Trent City Council are also in the early stages of preparing a new Local Plan.

In light of the above, the following authorities are unlikely to be in a position to accommodate any unmet needs in Newcastle-under-Lyme:

- (a) Cheshire East
- (b) Shropshire
- (c) Staffordshire Moorlands

With regard to Stafford Borough and Stoke-on-Trent, it is, at this stage, unclear what additional needs these authorities may be able to accommodate, however it should be noted that Stoke-on-Trent's minimum housing needs are currently subject to the 35% uplift for urban areas, so it is unclear if any further need from Newcastle-under-Lyme could be met within Stoke-on-Trent over the plan period. Furthermore, the Government's review of the Standard Method suggests that local housing need figures for all surrounding local authority areas could significantly increase over and above the existing Standard Method requirement if the new Standard Method is confirmed.

With regard to Stoke-on-Trent, when Newcastle-under-Lyme were pursuing a Joint Local Plan with Stoke-on-Trent City Council, Stoke-on-Trent indicated that they could accommodate around 800 dwellings of Newcastle-under-Lyme's unmet needs. This figure still remains substantially short of the housing need required in Newcastle-under-Lyme that cannot be accommodated within existing development boundaries. Stoke-on-Trent have yet to make significant progress on a new Local Plan since a consultation on Issues and Options took place between May and June 2021.

	<p>With regard to economic development needs, this will also be a material factor, particularly where economic growth factors are linked to existing employment sites that need to expand and are inextricably linked, such as Keele University and Science Park. Their expansion needs are unlikely be able to be accommodated in other local authority areas and will need to be anchored to their existing site. As such, in addition to housing factors, there are economic development needs that won't be able to be accommodated in other local authority areas.</p> <p>Other Considerations Amounting to Exceptional Circumstances to Justify the Release of Land from the Green Belt</p> <p>As set out above, meeting housing needs can amount to exceptional circumstances to justify the release of land from the Green Belt. By extension, this is also considered to apply in terms of meeting economic development needs and facilitating sustainable patterns of development in the Borough.</p> <p>Having a suitable range of employment sites in suitable locations to meet future economic development needs and providing more scope to adapt to future changes in the economy therefore justify the need to review Green Belt boundaries. For example, Newcastle-under-Lyme is well located in relation to the strategic road network, in particular the A500 and the M6. Large warehouses and distribution centres will require large sites with good access to the strategic road network, and such sites are best placed to be located outside of urban areas where access for large vehicles is likely to be more problematic. As such, it is considered that a review of the Green Belt in Newcastle-under-Lyme is necessary to meet both economic needs and housing needs.</p> <p>Promoting sustainable patterns of development is also a relevant factor to consider, as set out at paragraph 142 of the Framework, which states:</p> <p>When drawing up or reviewing Green Belt boundaries, the need to promote sustainable patterns of development should be taken into account.</p> <p>The above was a material factor explored at length during the examination of the Cheshire East Local Plan, with northern parts of the Borough heavily constrained by Green Belt designations.</p> <p>Green Belt release around the northern towns in the Cheshire East Borough was justified as follows¹: Without alterations to the detailed Green Belt boundaries, the amount of new development that could be planned for in the north of the borough would be very low. It is considered that such a low level of development would have severe consequences including:</p> <ul style="list-style-type: none"> • Demand for new housing outstripping supply, further increasing house prices and a lack of new affordable housing provision leading to young people and key workers being unable to stay in the area. • An increasingly ageing population as young people leave and an absolute reduction in the number of people of working age. • Difficulty in attracting inward investment and economic growth. In areas of relatively unaffordable housing, employers have difficulty in recruiting to lower paid positions. • Increases in traffic and congestion as people unable to live close to their place of work are forced to travel longer distances for employment and the smaller working-age population living locally would also mean more people commuting in to the area. • A decline in the vibrancy and vitality of town centres and some local services and facilities becoming unviable. <p>Some parallels can be drawn between Cheshire East and Newcastle-under-Lyme. For example, as Newcastle-under-Lyme town is currently ring-fenced by Green Belt, any substantial levels of development on non-Green Belt land outside of the development boundary would need to leapfrog the Green Belt towards the periphery of the Borough in locations such as Loggerheads, although it is acknowledged that the settlements of Baldwins Gate and Loggerheads, which are not heavily constrained by Green Belt, are considered to be sustainable locations.</p> <p>More broadly, the release of sites from the Green Belt on the periphery of the urban area in particular, sites around/adjacent to the Keele University Campus, for example, through the allocation of TB19, would deliver a sustainable pattern of development that is aligned to the Council's economic growth aspirations.</p> <p>In addition, there is a substantial need to deliver an uplift in affordable housing in Newcastle-under-Lyme in light of the high level of affordable housing need, with a need to deliver a net increase of at least 278 affordable homes per annum.</p> <p>The above considerations add further weight to the case that exceptional circumstances exist to justify Green Belt release in Newcastle-under-Lyme.</p> <p>In light of the above, it is considered that Policy PSD 5 is justified, as are the proposed allocations that follow from it. Richborough therefore support Policy PSD 5 and the release of TB19 for the delivery of 550 dwellings.</p>
Q7 Modification	Please see supporting representation by Knights on behalf of Richborough for allocation reference TB19
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	Please see supporting representation by Knights on behalf of Richborough for allocation reference TB19

Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>These representations are made in response to the Regulation 19 consultation on the final draft of the Newcastle-under-Lyme Local Plan 2020 – 2040. The representations are made by Pegasus Group on behalf of Araripe Limited and relate to their land interest at St Martins Road, Talke(hereafter referred to as the “Site”). The Site is greenfield land situated to the south of Talke. With regards to the Site, these representations should be read alongside the attachment.</p> <p>Policy PSD 5 is consistent with national policy, namely Paragraphs 152 to 156 of the NPPF, and is therefore considered sound on this basis. Araripe Limited support the alteration of the Green Belt boundary at St Martins Road to incorporate site TK17 as an allocation for residential development. Comments on the consideration of the Site in terms of Green Belt and other factors are set out in comments made regarding Section 13.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	Sufficient land for housing should be planned for to meet the identified need for this within the Borough. Araripe Limited strongly support the allocation of Site TK17 for residential development, but several amendments are required to make Policy TK17 sound, as set out in paragraph 3.19 of the accompanying written representations. We would welcome the opportunity to participate in the hearing sessions to set these out, as well as to draw attention to the other matters which need to be addressed to ensure soundness elsewhere in the final draft plan, whilst emphasising site TK17's suitability, availability, and deliverability, being an optimum and sustainable location for high-quality residential development.

Title	Policy PSD5: Green Belt
Consultee Given Name	Evolution 500
Agent Company / Organisation	Knights
Agent Family Name	Weatherley
Agent Given Name	Ben
Q4 Part of document	Policy
Q4 Policy	PSD5
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>This representation is submitted on behalf of Evolution 500 Limited by Knights in response to the Newcastle-under-Lyme Borough Council Local Plan Regulation 19 consultation. Please also see attached representations.</p> <p>Our representations concern in particular the land to the west of Newcastle Road, Talke shown in the image at Figure 1 below ("the site", see attachment). We identify and promote this site as suitable for electric vehicle charging station, which could accommodate public electric vehicle charging facilities and associated development/uses for visiting members of the public.</p> <p>These representations follow a response to the previous Regulation 18 version of the Local Plan in August 2023, along with our Call for Sites submission at the same time, plus our subsequent (May 2024) provision of additional supporting material relating to the site's development potential for the uses mentioned at paragraph 1.3 above. A copy of the indicative site layout plan (see Appendix 1) and Transport Technical Note (Appendix 2) that accompanied our submissions in August 2023 and May 2024 are provided with this representation. The Transport Technical Note sets out the findings of SCP Transport's review of the highway and transport aspects of the proposed allocation of the land for an electric vehicle charging station.</p> <p>As detailed in the attached representations there is an urgent need for a significant expansion of public EV charging facilities and the Government's objective is that the UK should have one of the best EV infrastructure networks in the world. This requires a large increase in accessible charging points along the major road network. We consider this requirement amounts to the 'exceptional circumstances' case required by NPPF paragraph 145 to amend the Green Belt and remove to the Land west of Newcastle Road, Talke site. The location of the Land to the west of Newcastle Road, Talke site is shown relative to the A500/A34 junction on the image at Figure 2 below (see attachment):</p> <p>The A500/A34 junction to the north of Newcastle-under-Lyme is a nodal point on the strategic highway network. It sits around 5km east of the M6 at the northern margin of the North Staffordshire conurbation and forms a key gateway for journeys into and out of the Potteries area. The junction is 2.5km south of Kidsgrove, 2.75 km west of Tunstall and 6km north of Newcastle-under-Lyme, It also lies around 12km east of the significant employment hub of Crewe</p> <p>As a result of its strategic position adjoining the A500/A34 junction the Site is therefore close to various employment parks and housing areas and significant traffic passes the site. It would be well-located close to homes and places of work and an appropriate location for breaking journeys into or out of the Borough on the strategic road network. In that regard, a site adjacent to this junction is clearly a very suitable location for an EV charging station designed to meet a range of EV charging needs.</p> <p>Policy PSD5 refers to the Green Belt boundary as defined on the draft Policies Map. The land to the west of Newcastle Road, Talke site lies within the Green Belt. Given its suitability to support delivery of public EV charging infrastructure. We consider it should be removed from the Green Belt and allocated for such development. We therefore object to the Green Belt boundary as defined further to Policy PSD5. Whilst NPPF paragraph 146 sets out a requirement to demonstrate that all other reasonable options for meeting the identified need for development have been considered prior to release of Green belt sites, given the intersection of the A500 and A34 here, the proximity to the urban edge and the tightly drawn Green Belt encircling the urban area, we do not consider that there are alternative sites that provide a similarly suitable location for EV charging facilities.</p> <p>In the Council's Green Belt Assessment Part 1, the Site sits within Green Belt parcel number 34. This parcel comprises the area of land bound by Oak Tree Lane to the north, the A34 to the east, the A500 to the south and Talke Road to the west. Parcel 34 contains the Site itself, but also a Travelodge and a building housing a Subway/Greggs. There are also two dwellings off Talke Road to the south.</p> <p>The NPPF sets out the purposes of the Green Belt in the form of a list at paragraph 143. This text is reproduced below along with observations in respect of the contribution of The Site to these aims:</p> <p>'To check the unrestricted sprawl of large built-up areas' – The Council's Green Belt Assessment Part 1 considered that the Green Belt parcel makes 'no contribution' to this Green Belt purpose as it is not connected to the Newcastle-under-Lyme and Stoke-on-Trent urban areas. We agree with this conclusion in respect of The Site as it lies between the A500 and Talke and not at the boundary of the main urban area with the wider countryside.</p> <p>'To prevent neighbouring towns merging into one another' - The Council's Green Belt Assessment Part 1 considered the Green Belt parcel makes a 'weak contribution' to this Green Belt purpose, concluding that development would slightly reduce the actual gap between neighbouring towns but not the perceived gap. We would point to the roads that already encircle the land and separate it from the wider countryside and we consider that the site makes 'no contribution' of any meaningful form to the second purpose of the Green Belt.</p> <p>'To assist in safeguarding the countryside from encroachment' - The Council's Green Belt Assessment Part 1 considered the parcel would have a 'weak contribution' to this third Green Belt purpose. The assessment noted its boundaries all consist of roads, which are durable and would be able to prevent</p>

	<p>further encroachment if the parcel was developed and also noted there is development on part of the land. We agree, noting there is a Travelodge, Subway/Greggs building and two dwellings off Talke Road on the land. Given this development and that in particular, it is a very contained area of land with roads that fully encircle it and separate it from the wider countryside. We would go further and argue that the land makes the site makes 'no contribution' of any meaningful form to the third Green Belt purpose.</p> <p>'To preserve the setting and special character of historic towns' – The Council's Green Belt Assessment Part 1 considered the parcel as a whole would have 'no contribution'. We agree as there are no 'historic towns' in the vicinity that would be affected by development here and so the land makes 'no contribution' to the fourth purpose of the Green Belt.</p> <p>'And to assist in urban regeneration, by encouraging the recycling of derelict and other urban land' - The Council's Green Belt Assessment Part 1 considered the parcel as a whole would make a 'moderate contribution'. This same conclusion was reached in respect of all Green Belt land that it can assist in urban regeneration, by encouraging the recycling of derelict and other urban land. We consider this argument to be flawed as where a site comes forward for development it would depend whether the uses proposed might alternatively have come forward on urban land within the North Staffordshire conurbation. In this case the land has a particular strategic location adjacent to the A500/A34 junction. The use being proposed in this representation is specifically related to the position of the land adjacent to this important junction. We consider that the release of the land in order that it be allocated to facilitate the development of specific roadside-type uses will not impact on whether derelict urban land is also brought forward elsewhere. It is therefore asserted that in the case of the land being brought forward for such proposals, there would be no impact on the final purpose of the Green Belt and the assessment should conclude 'nocontribution' to this purpose.</p> <p>The Council's report provides an overall final assessment of the parcel as making a 'weak' overall contribution to the Green Belt. Given the points set out above we would argue that the Site makes 'no contribution' of any material nature to Green Belt purposes.</p> <p>Paragraph 143 of the NPPF states that when defining Green Belt boundaries local planning authorities should define boundaries "using physical features that are readily recognisable and likely to be permanent". We note that the Site, when considered with the Travelodge and Subway/Greggs building to the south, is self-contained within the landscape, it is surrounded by roads that would form clear and durable boundaries. These would provide the Green Belt with defensible boundaries over the plan period and beyond.</p> <p>We also note that the government announced planning reforms would be an important part of its plan for growth and has introduced a Planning and Infrastructure Bill that aims to "speed up and streamline the planning process". A revised NPPF is being consulted upon at the time of writing that includes a proposed new definition of "Grey Belt". It is proposed such land should be a focus when reviewing Green Belt boundaries and the consultation NPPF states "Where it has been concluded that it is necessary to release Green Belt land for development, plans should give first consideration to previously-developed land in sustainable locations, then consider grey belt land in sustainable locations which is not already previously-developed, and only then consider other sustainable Green Belt locations".</p> <p>For the purposes of plan-making and decision-making grey belt land is defined as land in the green belt that is previously developed land and any other parcels and/or areas of Green Belt land that make a limited contribution to the five Green Belt purposes (our emphasis).</p> <p>For the reasons set out above we submit that the west of Newcastle Road, Talke would fit this proposed definition as 'grey belt' and is a site that should be prioritized in any Green Belt review.</p> <p>A Written Ministerial Statement (WMS) by Angela Rayner, Deputy Prime Minister and Secretary of State for Housing, Communities and Local Government on 30 July 2024 set out this proposed sequential approach. Indeed the WMS is a material planning consideration and makes clear the government's proposed approach going forward is to remove sites such as this "that are making a limited contribution to the Green Belt's purposes".</p> <p>With reference to policy PSD5 we therefore request the removal of the land from the Green Belt boundary as defined on the draft Policies Map.</p> <p>With regard to NPPF para 35 the Local Plans must be prepared in accordance with the 'Tests of Soundness'. We consider this element of the Local Plan does not accord with the tests of soundness set out at NPPF paragraph 35 as it is:</p> <p>a) Not "Positively prepared", as it fails to ensure the area's future infrastructure needs are fully met;</p> <p>b) Not "Effective", as it would not help ensure the infrastructure needed is delivered over the plan period.</p> <p>Further detail in respect of the case for the allocation of the site is set out below.</p>
Q7 Modification	See attached representations
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	To explain the respondent's case and provide details in respect of the proposals for the development of the site.

Title	Policy PSD5: Green Belt
Consultee Company / Organisation	Bloor Homes
Consultee Family Name	Bloor Homes
Agent Company / Organisation	Knights

Agent Family Name	Corinaldi-Knott
Agent Given Name	Alan
Q4 Part of document	Policy
Q4 Policy	PSD1
Q5 Legally compliant	Yes
Q5 Sound	Yes
Q5 DTC compliant	Yes
Q6 Details	<p>Please see supporting representation by Knights on behalf of Bloor Homes for allocation reference NC13.</p> <p>Policy PSD5 proposes to alter Green Belt boundaries in order to allocate a number of development sites. It is considered that this policy is justified on the basis that there is limited urban capacity in Newcastle-under-Lyme, and there is a limited amount of previously developed land available to meet development needs. In particular, there is a high level of need for affordable housing and this cannot all be met within the urban boundary.</p> <p>Exceptional circumstances to justify the release of land from the Green Belt is set out further below. The policy concept of what constitutes exceptional circumstances for releasing land from the Green Belt through plan making has been considered in the High Court.</p> <p>In <i>Compton Parish Council vs Guildford Borough Council</i> [2019] EWHC 3242 (Admin) ("The Guildford judgement") where the main general issue of the challenge was whether the Inspector, in recommending that the Local Plan be adopted, had erred in law in his approach to what constituted the "exceptional circumstances" required for the redrawing of Green Belt boundaries in a Local Plan review.</p> <p>In the Guildford judgment, Sir Duncan Ousley, sitting as a High Court Judge confirmed that:</p> <p>(a) There is no definition of the policy concept of "exceptional circumstances". This itself is a deliberate policy decision, demonstrating that there is a planning judgment to be made in all the circumstances of any particular case. It is deliberately broad, and not susceptible to dictionary definition.</p> <p>(b) Whether a particular factor was capable of being an "exceptional circumstance" in any particular case was a matter of law; but whether in any particular case it was treated as such, was a matter of planning judgment.</p> <p>(c) A judicial decision that a factor relied on by a planning decision-maker as an "exceptional circumstance" was not in law capable of being one is likely to require some caution and judicial restraint. All that is required is that the circumstances relied on, taken together, rationally fit within the scope of "exceptional circumstances" in this context. The breadth of the phrase and the array of circumstances which may come within it place the judicial emphasis very much more on the rationality of the judgment than on providing a definition or criteria or characteristics for that which the policy-maker has left in deliberately broad terms.</p> <p>(d) "Exceptional circumstances" is a less demanding test than the development control test for permitting inappropriate development in the Green Belt, which requires "very special circumstances."</p> <p>(e) The phrase does not require at least more than one individual "exceptional circumstance". The "exceptional circumstances" can be found in the accumulation or combination of circumstances, of varying natures, which entitle the decision-maker, in the rational exercise of a planning judgment, to say that the circumstances are sufficiently exceptional to warrant altering the Green Belt boundary.</p> <p>(f) General planning needs, such as ordinary housing, are not precluded from its scope; indeed, meeting such needs is often part of the judgment that "exceptional circumstances" exist; the phrase is not limited to some unusual form of housing, nor to a particular intensity of need.</p> <p>The above judgement confirms that there is a very broad exercise of planning judgment for the decision-maker which the courts will not readily disturb. This can include meeting the need for market housing.</p> <p>The NPPF provides more guidance (at paragraph 141) on what will add up to exceptional circumstances: Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development. This will be assessed through the examination of its strategic policies, which will take into account the preceding paragraph, and whether the strategy:</p> <p>a) makes as much use as possible of suitable brownfield sites and underutilised land;</p> <p>b) optimises the density of development in line with the policies in chapter 11 of this Framework, including whether policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport; and</p> <p>c) has been informed by discussions with neighbouring authorities about whether they could accommodate some of the identified need for development, as demonstrated through the statement of common ground.</p> <p>In the case of Newcastle-under-Lyme, each of the above will be considered in turn below.</p> <p>Making as much use as possible of Suitable Brownfield Sites and Underutilised Land</p> <p>The Council recently undertook a call for brownfield sites exercise and a Newcastle-under-Lyme and Kidsgrove Urban Capacity and Town Centre Regeneration Study (June 2023) forms part of the evidence base. This study considered a range of vacant and infill sites, and considered the scope for the conversion of upper storey floorspace of existing commercial buildings. This study was also informed by sites identified in the SHELAA.</p> <p>Paragraph 8.11 of the Issues and Options consultation document previously consulted upon, stated that evidence gathered as part of the now abandoned Joint Local Plan exercise with Stoke-on-Trent City Council suggested that approximately 2,500 dwellings could be found on land within existing development boundaries. That figure would be at least 4,660 dwellings short of the minimum housing requirement using the nationally set starting requirement of 7,160 established using the Standard Method, or 5,500 short of the Regulation 19 Local Plan requirement of 8,000 dwellings.</p> <p>The latest SHELAA and Urban Capacity Study have not identified any significant amounts of further brownfield sites that were not considered previously. The latest SHELAA (dated 2024) identifies a</p>

deliverable and developable supply of brownfield sites that amount to the delivery of 1,938 homes. When other deliverable and developable greenfield sites that are not located in the Green Belt are considered, there is a capacity to deliver a further 1,012 dwellings. Mixed brownfield/greenfield sites can deliver a further 147 dwellings. This amounts to a total of 3,097 dwellings that are deliverable/already have planning permission or developable, a shortfall of at least 4,093 dwellings.

The above figures strongly suggest that land beyond existing settlement boundaries is required to deliver the Council's minimum housing requirement of 8,000 dwellings over the plan period.

Whilst national policy seeks to exhaust previously developed sites for housing delivery before releasing Green Belt sites, meeting housing needs also have to be balanced with meeting economic development needs, with many economic development needs (including, but not limited to, office, retail, leisure, manufacturing and distribution) also requiring the use of previously developed land or buildings. This is particularly true if they are located on existing employment parks or within town centres, or otherwise located where businesses require to be located based on their business needs and/or customer demands. In light of these conclusions, it is considered that the Council has made good progress in granting planning permission for residential development on sites within the development boundary, including on brownfield land, however it is very clear that minimum housing needs cannot be met on these types of sites alone. Optimising the Density of Development

With regard to optimising the density of development, if limited development sites are available within existing development boundaries, then opportunities for delivering higher density development will be limited. Whilst some higher density development has occurred within Newcastle-under-Lyme town centre, other opportunities are likely to be limited due to the following factors:

- (a) Conservation areas / special character area designations.
- (b) Listed buildings and the need to appropriately take into account their settings.
- (c) Prevailing densities/character of existing residential areas, particular those of sub-urban character where high density or high rise development is likely to be inappropriate in design and amenity terms.
- (d) Other locational specific constraints.

Whilst there may be possibilities to increase the density of new development within existing urban areas or other non-Green Belt sites, it is unlikely that this could be done on a sufficient number of such sites to remove any need to release land from the Green Belt at all.

Meeting any Unmet Housing Needs in Neighbouring Authorities

At the time of preparing this Local Plan, a number of neighbouring authorities have recently adopted development plans. Staffordshire Moorlands adopted a Local Plan in 2020 and Cheshire East Council adopted its part 1 Local Plan Strategy in 2017. The Cheshire East Site Allocations and Policies DPD has also been recently adopted. Stafford Borough Council are currently reviewing their Local Plan, but have yet to reach examination stage. Stoke-on-Trent City Council are also in the early stages of preparing a new Local Plan.

In light of the above, the following authorities are unlikely to be in a position to accommodate any unmet needs in Newcastle-under-Lyme:

- (a) Cheshire East
- (b) Shropshire
- (c) Staffordshire Moorlands

With regard to Stafford Borough and Stoke-on-Trent, it is, at this stage, unclear what additional needs these authorities may be able to accommodate, however it should be noted that Stoke-on-Trent's minimum housing needs are currently subject to the 35% uplift for urban areas, so it is unclear if any further need from Newcastle-under-Lyme could be met within Stoke-on-Trent over the plan period. Furthermore, the Government's review of the Standard Method suggests that local housing need figures for all surrounding local authority areas could significantly increase over and above the existing Standard Method requirement if the new Standard Method is confirmed.

With regard to Stoke-on-Trent, when Newcastle-under-Lyme were pursuing a Joint Local Plan with Stoke-on-Trent City Council, Stoke-on-Trent indicated that they could accommodate around 800 dwellings of Newcastle-under-Lyme's unmet needs. This figure still remains substantially short of the housing need required in Newcastle-under-Lyme that cannot be accommodated within existing development boundaries. Stoke-on-Trent have yet to make significant progress on a new Local Plan since a consultation on Issues and Options took place between May and June 2021.

With regard to economic development needs, this will also be a material factor, particularly where economic growth factors are linked to existing employment sites that need to expand and are inextricably linked, such as Keele University and Science Park. Their expansion needs are unlikely to be able to be accommodated in other local authority areas and will need to be anchored to their existing site. As such, in addition to housing factors, there are economic development needs that won't be able to be accommodated in other local authority areas.

As set out above, meeting housing needs can amount to exceptional circumstances to justify the release of land from the Green Belt. By extension, this is also considered to apply in terms of meeting economic development needs and facilitating sustainable patterns of development in the Borough.

Having a suitable range of employment sites in suitable locations to meet future economic development needs and providing more scope to adapt to future changes in the economy therefore justify the need to review Green Belt boundaries. For example, Newcastle-under-Lyme is well located in relation to the strategic road network, in particular the A500 and the M6. Large warehouses and distribution centres will require large sites with good access to the strategic road network, and such sites are best placed to be located outside of urban areas where access for large vehicles is likely to be more problematic. As such, it is considered that a review of the Green Belt in Newcastle-under-Lyme is necessary to meet both economic needs and housing needs.

Promoting sustainable patterns of development is also a relevant factor to consider, as set out at paragraph 142 of the Framework, which states:

When drawing up or reviewing Green Belt boundaries, the need to promote sustainable patterns of development should be taken into account.

The above was a material factor explored at length during the examination of the Cheshire East Local Plan, with northern parts of Cheshire East heavily constrained by Green Belt designations.

Green Belt release around the northern towns in Cheshire East was justified as follows4:

	<p>Without alterations to the detailed Green Belt boundaries, the amount of new development that could be planned for in the north of the borough would be very low. It is considered that such a low level of development would have severe consequences including:</p> <ul style="list-style-type: none"> • Demand for new housing outstripping supply, further increasing house prices and a lack of new affordable housing provision leading to young people and key workers being unable to stay in the area. • An increasingly ageing population as young people leave and an absolute reduction in the number of people of working age. • Difficulty in attracting inward investment and economic growth. In areas of relatively unaffordable housing, employers have difficulty in recruiting to lower paid positions. • Increases in traffic and congestion as people unable to live close to their place of work are forced to travel longer distances for employment and the smaller working-age population living locally would also mean more people commuting in to the area. • A decline in the vibrancy and vitality of town centres and some local services and facilities becoming unviable. <p>Some parallels can be drawn between Cheshire East and Newcastle-under-Lyme. For example, as Newcastle-under-Lyme town is currently ring-fenced by Green Belt, any substantial levels of development on non-Green Belt land outside of the development boundary would need to leapfrog the Green Belt towards the periphery of the Borough in locations such as Loggerheads, although it is acknowledged that the settlements of Baldwins Gate and Loggerheads, which are not heavily constrained by Green Belt, are considered to be sustainable locations.</p> <p>More broadly, the release of sites from the Green Belt on the periphery of the urban area in particular, such as NC13, would deliver a sustainable pattern of development that is aligned to the Council's economic growth aspirations.</p> <p>In addition, there is a substantial need to deliver an uplift in affordable housing in Newcastle-under-Lyme in light of the high level of affordable housing need, with a need to deliver a net increase of at least 278 affordable homes per annum.</p> <p>The above considerations add further weight to the case that exceptional circumstances exist to justify Green Belt release in Newcastle-under-Lyme.</p> <p>In light of the above, it is considered that Policy PSD5 is justified, as are the proposed allocations that follow from it. Bloor Homes therefore support Policy PSD5 and the release of NC13 for the delivery of around 100 dwellings.</p>

Q6 Details	<p>This report has been prepared on behalf of Seddon Homes Limited by Knights, in respect of the Newcastle-under-Lyme Local Plan regulation 19 consultation. Please see attached representations. These representations refer in particular to land south of High Street, Newchapel, shown on the plan at Appendix 1 ("The Site"). The statement is accompanied by a Part A form and 3no. separate Part B response forms and responds to the draft plan as follows:</p> <ol style="list-style-type: none"> 1. To support the release of land from the Green Belt for housing development via Policy PSD5. 2. To object to the omission of land to the south of High Street, Newchapel as a site allocation in Chapter 13, paragraphs 13.157 – 13.163. 3. To object to the omission on the Proposals Map of the land south of High Street, Newchapel as an amendment to the Green Belt and housing site allocation. <p>The representations are also accompanied by a Landscape and Visual Appraisal by landscape consultants PGLA.</p> <p>The principle of release of Green Belt land as set out in policy PSD5 is supported</p> <p>Policy PSD5 'Green Belt' states that "The Plan will alter the Green Belt boundary" and the policy indicates that sites are to be removed from the Green Belt and allocated for housing and employment.</p> <p>We support the principle of Green Belt release in PSD5 for the reasons set out below.</p> <p>Housing delivery is a key aim of national and local policy. NPPF paragraph 60 makes clear that the Government's objective is "significantly boosting the supply of homes". Nationally housing is not being delivered at the level required to meet needs. The previous government had a housebuilding a target of 300,000 homes a year and similarly the current government's target is for "1.5 million new homes over the next parliament". The total number of new homes registered in 2022 was however just 189,009 and fell further to 105,449 in 2023 (figures from NHBC1).</p> <p>The emphasis given to supporting housing delivery has increased further under the new government. With planning reforms being stated as central to the government's plan for growth and a Planning and Infrastructure Bill aims to "speed up and streamline the planning process to build more homes of all tenures". A revised national planning policy framework is being consulted upon at the time of writing with changes focussed on increasing housing delivery and it is evident that the government is seeking a significant housing boost to supply.</p> <p>Like many districts however, Newcastle under Lyme's ability to deliver housing land is significantly constrained by a tightly drawn Green Belt. Protecting the Green Belt should not be at the expense of meeting housing need and in accordance with NPPF paragraph 20 the Local Plan must make sufficient provision for housing, for infrastructure, for schools and other community infrastructure and for, employment land, including where ne.</p> <p>Without Green Belt release, the alternatives will present a less effective spatial strategy, with more sites beyond the Green Belt to be allocated, leading to less sustainable travel patterns and a need for new services and infrastructure in smaller settlements. And unless the new Local Plan brings forward sufficient land in a timely fashion planning by appeal may be seen, where sites come forward in locations that may not have been anticipated in the Plan.</p> <p>A Green Belt review is therefore urgently required in order to identify areas of lower value where development can come forward without compromising the purposes of Green Belt designation.</p> <p>The Housing Spatial Strategy Topic Paper prepared as part of the evidence base alongside the plan refers to the Housing and Economic Needs Assessment (2023) concludes as follows:</p> <ul style="list-style-type: none"> • There is a justified need to deliver a minimum of 8,000 homes (400 dwellings per annum) over the plan period to 2040 and the local plan spatial strategy needs to identify sufficient housing supply accordingly. • There is an objectively assessed requirement for the provision of a minimum of 63ha of employment land over the plan period to 2040. • The requirements for Exceptional Circumstances in NPPF para 145 has been met and there is a fully justified case to amend the Green Belt to provide for local housing and employment needs It states that the Council has comprehensively reviewed all reasonable alternative options to Green Belt release in accordance with national policy. <p>The above conclusions provide a justified basis for Policy PSD5: Green Belt to amend the Green Belt boundary in order to bring forward a specific number of site allocations within the Green Belt. We therefore endorse the conclusion that exceptional circumstances exist and we support the approach of Green Belt release.</p> <p>Further to Policy PSD5 we consider this element of the Local Plan to be in accordance with the test of soundness set out at NPPF paragraph 35:</p> <ol style="list-style-type: none"> a) "Positively prepared", in seeking to meet the area's objectively assessed needs; b) "Justified", in that it is an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence; c) "Effective", as it would be deliverable over the plan period, d) "Consistent with national policy" as it reflects the specific requirements of NPPF paragraph 20 and paragraph 145 in particular.
Q7 Modification	Please see attached representations
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	To explain the respondent's case and provide details in respect of the progress of the proposals for the development of the site for housing.

Q4 Part of document	Policy
Q4 Policy	PSD5
Q5 Legally compliant	No
Q5 Sound	No
Q6 Details	<p>Policy PSD5: Green Belt</p> <p>Policy PSD5 confirms that the Green Belt boundary is defined on the Policies Map, and that within the Green Belt, proposals will be assessed in accordance with the NPPF and the need to demonstrate very special circumstances for inappropriate development.</p> <p>The Green Belt boundary has been subject to incremental changes historically to support the growth of the campus site. The emerging Local Plan does propose removal of land from the Green Belt including the identification of Keele village as an inset village outside of the Green Belt and also the allocation of site KL15 to the east. We object to Development Boundary as proposed and recommend that it is amended in line with the plan at Appendix A of this representation to reflect the operational extent of the University campus site.</p> <p>It is acknowledged that Very Special Circumstances can be pursued through the Development Management process to support proposals in such areas. However, it is considered that Exceptional Circumstances can be demonstrated at this stage to make minor amendments to the boundaries to support future proposals.</p> <p>In this regard, the Strategic Objective of the emerging Local Plan is re-iterated: “Enable the growth of Keele University to support its vision for increasing student numbers and expanding its capacity for research and development, supporting its role as a centre for innovation and as an economic asset for North Staffordshire, whilst preserving and enhancing the character of the surrounding area.”</p> <p>It is a key objective of the emerging Local Plan to “enable the growth of Keele University”. However, due to the tightly drawn nature of the Green Belt around the existing infrastructure, car parks, roads, buildings and built form, there is little flexibility provided to support any new development of supporting facilities on campus including supporting infrastructure (e.g. parking, improved all weather pitches or other sport, health and wellbeing facilities). This would be contrary to the Strategic Objective as it would not ‘enable the growth’ of the University. Indeed, the Green Belt boundary would have the opposite effect and be restrictive to future development.</p> <p>The campus facilities currently located within the Green Belt include sports facilities in the northern part of the campus site including all weather pitches, tennis courts, parking as well as sports and estates facilities buildings. The evidence base for the Local Plan indicates that further investment is needed in these facilities to support current and future demand in the Borough. This evidence includes:</p> <ul style="list-style-type: none"> • Infrastructure delivery plan (2024), which identifies need for new playing pitches at Keele University. • Playing Pitch Strategy and Action Plan (2020), which identifies future shortfalls in adult pitch (for football and rugby going forward. The ancillary facilities at both Chesterton Community Sports College and Keele University Sports Centre are considered to be relatively dated and tired with both sites accommodating both community, curricular and extracurricular demand. Future investment and commitment to improvement and maintenance of facilities for hockey at the University campus are also recommended. <p>Feasibility studies of potential proposals as part of the CIP have shown the importance of the adjacency of any new sport, health and wellbeing facility to the existing playing pitches. Any new facility would need to be supported by a suitable all weather pitch, improving the capacity, quality and accessibility of both indoor and outdoor resources. The current Development Boundary and Green Belt prevent the most appropriate siting which would allow new fit for purpose facilities to be developed without any loss of service as well as making the new improved facilities more accessible to University staff, students as well as Borough residents.</p> <p>The existing boundary also limits viable options associated with the reuse of heritage assets (Keele Hall, the Clock House, the Walled Garden) within the southern part of the site. There is sufficient protection of the campus’ assets from other local and national planning policies relating to historic park and gardens, listed buildings and playing pitches, to avoid the need for the additional Green Belt restrictions.</p> <p>The Green Belt Site Review (July 2024) considers land surrounding, though not land forming part of and adjoining the campus site. Land proposed for release under references KL12,14,15 is all assessed as making a weak contribution to Green Belt, as is KL21 to the west of the campus. The latter site is only discounted from further consideration for release based on its detached position from a defined settlements boundary.</p> <p>By contract, the land immediately to the north and south of campus is directly associated with the function of the University and should be included within the Development Boundary on that basis.</p> <p>3.38</p> <p>The Council’s Green Belt Part 2 assessment study (paragraph 4.4) identified that: “...the principal factors that the Borough Council consider capable of amounting to ‘exceptional circumstances’ and would therefore justify amendment to the Green Belt boundary are:</p> <ul style="list-style-type: none"> •Newcastle-under-Lyme’s Housing Need. •Newcastle-under-Lyme’s House Prices & Affordability Issues. •Newcastle-under-Lyme’s Affordable Housing Need. •Establishing a demographic balance to support identified employment growth.

	<p>•Providing higher value jobs within the Plan area and taking advantage of the socio-economic benefits of the success of Keele, whilst seeking to retain and attract graduates and encouraging greater embryonic business creation."</p> <p>In order to secure the above referenced benefits, investment in existing and supporting infrastructure should be facilitated without an overly restrictive policy context.</p> <p>The Council's Green Belt Exceptional Circumstances Review (2019) confirms that in relation to the exceptional circumstances for Keele, paragraphs 3.13-3.26 of the Preferred Options consultation documents and paragraph 6.5-6.10 of the Green Belt Technical Paper set out the business need and benefits to sustainable development of employment and housing growth in this location. Given the very specific set of circumstances which apply to Keele, the Council has considered reasonable alternatives but concluded that it would not be possible to reproduce this form of development elsewhere.</p> <p>The facilities provided within the campus site, including the leisure and community facilities to the north and heritage assets to the south are currently included within the Green Belt in the draft plan. However, they form an important part of campus infrastructure and the future CIP as well as making an important contribution to the local community. As acknowledged in the Rural Topic Paper (appendix 6), there are strong sustainability links between the campus and the village of Keele, with policies to strengthen investment in these facilities having a subsequently beneficial impact on Keele Village.</p> <p>As acknowledged by the Site Selection report, a masterplanning exercise has informed proposals for the Keele University Growth Corridor, and policies need to support the comprehensive delivery of this vision. The University is a major asset for the Borough and the strategic objectives in the draft Local Plan should enable the growth of the University.</p>
Q7 Modification	<p>Recommendations</p> <p>The wider areas of the campus site, which form an important part of the campus masterplan, and directly adjoin the Development Boundary of the campus should be removed from the Green Belt and included within the Development Boundary.</p> <p>It is recommended that the Development Boundary is amended as indicated in Appendix A.</p> <p>The justification for this is set out above and the amendments will ensure the growth of the University is enabled, in accordance with the Strategic Objective including:</p> <ul style="list-style-type: none"> •SO-9 Support physical activity including sport & recreation •SO-10 Enable the growth of Keele University •PSD3 Distribution of Development - Provide a range of essential services & facilities to support an appropriate level of growth •PSD6 Health & Wellbeing - Provide access to accessible sports facilities •CRE1 Climate Change - Opportunities to extend Keele district heating network <p>Exceptional Circumstances can be identified within the emerging Local Plan with reference to the future expansion requirements of the University and the economic importance of the institution to the area, as well as the importance of the facilities in this part of the campus to the local community, as set out further below.</p> <p>The proposed amendments to the Green Belt boundary is considered to be relatively minor in nature, albeit important to the economic vision, and will not undermine the purposes of including land within the Green Belt.</p> <p>This approach is justified in accordance with the Strategic Objective and with reference to future educational requirements. The above recommendations will ensure that the emerging plan is positively prepared, justified, effective and consistent with national policy, and therefore sound in accordance with Paragraph 35 of the National Planning Policy Framework</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	We request the right to make representations on behalf of Keele University, in order to examine the Council's evidence in support of the proposed approach to Green Belt and Open Space matters in order to ensure that the plan is effective and justified within the context of the University's future investment proposals, and with reference to the importance of this investment for the wider economy of Newcastle Under Lyme.

Title	Policy PSD5: Green Belt
Consultee Company / Organisation	Harworth Group PLC
Consultee Given Name	Harworth Group
Agent Company / Organisation	WSP
Agent Position	Associate Director
Agent Family Name	Stocks
Agent Given Name	Matthew
Q4 Part of document	Policy
Q4 Policy	PSD5
Q5 Sound	No

<p>Q6 Details</p>	<p>We consider that the Local Plan is not sound on the basis that it is (1) not positively prepared, (2) not justified, (3) not effective, and (4) not consistent with national policy. The Local Plan as drafted fails to provide sufficient housing and employment land, and the proposed length of the Local Plan is not long enough in line with national policy requirements. Our rationale is set out in the supporting covering letter.</p> <p>This representation is submitted on behalf of Harworth Group PLC (herein "Harworth") and Graham Ward Farms Limited to the Newcastle-under-Lyme Borough Council Final Draft Local Plan. This letter provides our comments as referenced in the completed Representation Form, in support of our response to questions 6 and 7 regarding the soundness of the Local Plan. Our comments go to the heart of the Local Plan and, whilst our Representation Form notes this relates to Policy PSD1: Overall Development Strategy, our amendments sought would require updates across the Local Plan document and Proposals Map.</p> <p>The specific matter which we dispute is the council's proposed approach to allocate two strategic employment sites (ref: AB2 - 'Land adjoining corner of A500 and M6 Southbound' and ref: KL15 - 'Land South of A525 between Keele University and Newcastle') and not 'Land off Talke Roundabout / A500', which was previously assessed in the Local Plan preparation under ref: TK30. We also consider the Local Plan does not cover a sufficient period of time. The Local Plan as drafted fails to provide sufficient housing and employment land. As such, we consider that the proposed approach to the Local Plan is (1) not positively prepared, (2) not justified, (3) not effective, and (4) not consistent with national policy. We consider that the extension of the Local Plan duration to 2042 as a minimum or ideally 2045, and the allocation of 'Land off Talke Roundabout / A500' (herein 'Talke Park') would resolve this soundness matter. We request that the council consider the contents of this letter and update the Local Plan prior to the submission for Examination. Otherwise, we would request that these comments are passed to the Planning Inspector(s).</p> <p>In addition to this letter and our completed representation form, this submission is supported by the following documentation:</p> <ul style="list-style-type: none"> Updated Vision Document (October 2024); Updated Indicative Proposed Masterplan; Housing and Economic Growth Evidence (October 2024); Letter from Wendy Lancaster at Tyler Grange, with enclosed Accurate Visual Representations, dated 30th September 2024; Geo-environmental Desk Study (August 2023); Highways Access Appraisal (August 2023); Heritage Briefing Note (August 2023); Note on Socio-economic Benefits; and Ecology and Landscaping Combined Technical Note (August 2023). <p>Appended to this letter is a plan of land to the north of Peacock Hay Road, which is also within Harworth's ownership, demonstrating that they have available land in the authority to compensate for the removal of this site from the Green Belt and contribute towards biodiversity net gain.</p> <p>HARWORTH GROUP PLC</p> <p>Harworth is one of the leading land and property regeneration companies in the UK, owning and managing c.16,000 acres on c.100 sites in the North of England and the Midlands. The company originated as the property division of UK Coal and is therefore an expert at dealing with complex sites with abnormal ground conditions and topography.</p> <p>Harworth is one of the key developers presently working in Newcastle under Lyme, currently delivering 'Chatterley Park' (previously referred to as 'Chatterley Valley' prior to the commencement of development), which is the authority's Regional Investment Site, and less than 1km from 'Talke Park'. Harworth fully acquired the land forming Chatterley Park in August 2017, and has subsequently secured planning permissions to allow earthworks to progress, with 1.2m sqft of industrial and logistics floorspace set to come forward, creating around 1,700 jobs.</p> <p>At Chatterley Park, Harworth has received significant interest from large national and international businesses attracted by the central location, access to the motorway network and ability to service major conurbations in all of the North West, East and West Midlands. There has been a range of occupiers with an interest for a variety of unit sizes. Harworth have also identified interest for "mid-box" (50,000 – 150,000 sqft) units and smaller units (20,000 – 50,000 sqft) and a pent-up demand for an underserved and important segment of the market.</p> <p>Whilst the larger and "mid box" units do attract distribution warehouses, there is range of occupiers with an interest in the range of unit sizes:</p> <ul style="list-style-type: none"> national/international logistics companies; a pharmaceutical distributor; manufacturing businesses; a bespoke requirement for glass manufacturing; a vehicle preparation centre for an automotive occupier; and a local business in the medical field, looking to amalgamate operations across the North West centrally to the Stoke/Newcastle area. <p>The interest across all unit sizes includes occupiers looking to replace older premises, secure larger premises to align with growth of their business and/or amalgamate operations. This includes local businesses and national/ international businesses including one looking for a hub to service the north of England.</p> <p>Talke Park is the logical extension/ next step to Chatterley Park in terms of its proximity to both that site and the strategic road network. The sites have a similar industrial history and topography, neither of which are deemed to be constraints by Harworth and Graham Ward Farms Limited to their proposed redevelopment of either site.</p> <p>Harworth's proven track record in the area and strong relationship with stakeholders (including the Councils and potential occupiers) demonstrates that, in partnership with Graham Ward Farms Limited, it can deliver Talke Park and its associated benefits within the plan period. Harworth has an extensive track record of delivering large-scale employment, residential and mixed-use developments. Further information is provided in the submitted Vision document.</p>
--------------------------	--

TESTS OF SOUNDNESS

In order to be deemed sound, paragraph 35 of the NPPF (2023) states that a Local Plan must be:

- a) Positively prepared – this strategy must, as a minimum, meet the area's objectively assessed needs. Paragraph 16 adds that a Local Plan should be “aspirational but deliverable”. The government has recently closed its consultation on updates to the NPPF. Whilst the transitional arrangements may mean that the Local Plan is examined under the currently adopted NPPF, the Government has made it clear through their consultation that “sustained economic growth is the only route to improving the prosperity of our country and the living standards of working people”¹.
- b) Justified – an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence;
- c) Effective – deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and
- d) Consistent with national policy – enabling the delivery of sustainable development in accordance with the policies in the NPPF and other statements of national planning policy, where relevant.

SUMMARY ASSESSMENT AGAINST THE TESTS OF SOUNDNESS

We contest that the ‘Final Local Plan’ is:

- a) Not positively prepared – The allocation of two strategic sites is a low growth option and does not present an aspirational strategy. At a time when housing delivery is critical (evidenced by the government's proposed reforms to the planning system to make the standard method for assessing housing needs mandatory) and economic growth is deemed essential to improving prosperity and living standards, the LPA should be pursuing an ambitious strategy. In order to be positively prepared and “aspirational”, the Council should target high growth scenarios, so far as any site allocations and policies are deliverable. The draft Local Plan fails to provide sufficient homes and does not plan for all types of employment growth. The Final Draft Local Plan proposes to allocate two strategic employment sites, which are aimed at different uses (AB2 seeks to support a sub-regional logistics focused employment development and KL15 seeks

to support the expansion of the existing science park and create an innovation zone, linked to research and innovation of Keele University). The overall delivery for industrial and logistics sites is therefore very low and limited. In terms of housing, the Local Plan should allocate additional sites to meet the housing need and this would also allow for delays to sites coming forward.

- b) Not justified – In the context of the above, we do not consider that the proposal represents an appropriate strategy, when a reasonable alternative would be to allocate ‘Talke Park’ (ref: TK30) as a strategic location, increasing housing numbers and employment land. The council's evidence base is flawed, and the conclusions reached are incorrect in deeming that the allocation of the site in this plan would be premature. Indeed, the Strategic Employment Sites Assessment – 2024 Update (June 2024), prepared by Aspinall Verdi notes that it “has the potential be a high-quality site for local employment in a future local plan”, thereby indicating that the perceived “considerable issues” associated with the site's delivery (considered below) can be overcome, but that the lead-in time until development proceeds would not render the site suitable for allocation. This is not accurate, as outlined below. It is not justified to pursue low growth for housing and employment land.

- c) Not effective – The Local Plan will not deliver the housing need of the authority. As detailed in the Housing and Economic Growth Evidence and summarised below, the Council will fail to meet its five year housing land supply upon adoption of the Local Plan. With the requirement for Green Belt release established to even meet the low growth option, this suggests that it will not be possible to meet the shortage on windfall sites; as such, additional site/s need to be allocated; and

- d) Not consistent with national policy – The social objective of the NPPF concerns “ensuring that a sufficient number and range of homes can be provided to meet the needs of present and future generations”. We consider that the Final Local Plan would not deliver a sufficient number of homes and therefore does not meet this fundamental requirement of sustainable development. The NPPF seeks for the planning system to help build a “strong, responsive and competitive economy, by ensuring that sufficient land of the right types is available in the right places and at the right time to support growth, innovation and improved productivity; and by identifying and coordinating the provision of infrastructure” (paragraph 8). The failure to allocate Talke Park represents a low growth scenario, which is not akin to a strong, responsive or competitive economy. Without this site, there would not be the right type of land in the right place to support businesses (considered below). The Council have acknowledged that Talke Parke is in a sustainable location and it therefore follows to allocate further housing and employment land in this location. Furthermore, the proposed length of the Local Plan is not long enough in line with national policy requirements. The NPPF states, at paragraph 22, that strategic policies should look ahead over a minimum 15-year period from adoption. The Local Plan the Plan seeks to cover the plan period 2020 – 2040. This approach would therefore only meet the minimum timeframe as required by the NPPF if adopted before the end of 2025. This is a short timeframe allowing for the review and potential update of the Local Plan prior to submission and matters arising during examination. We consider the Local Plan should therefore cover up to 2042 as a minimum and ideally to 2045. Further detail is set out below.

THE COUNCIL'S APPROACH TO TALKE PARK (REF: TK30)

The Land off Talke Roundabout / A500 (Talke Park) was identified as one of three potential strategic locations in the First Draft Local Plan (ref: TK30), potentially capable of delivering new homes and employment land. One of the evidence base documents supporting that consultation, the Strategic Employment Site Assessment Report (April 2023), which was prepared by Aspinall Verdi, concluded that there is a clear regional rationale for the allocation of at least two Strategic Sites in Newcastle-under-Lyme (paragraph 11.5).

The Final Draft Local Plan proposes two of the three sites are allocated. Talke Park is not proposed for allocation, and is proposed to remain in the Green Belt. The evidence base for the Final Draft Local Plan includes the Strategic Employment Sites Assessment – 2024 Update (June 2024), prepared by Aspinall Verdi. This provides their professional opinion that there is a need for two Strategic Sites in the new local plan, which should be AB2 (‘Land at J16 of the M6’) and KL15 (‘Land at Barkers Wood, (Keele University) Keele’). We consider that some of the assumptions made in reaching this conclusion are incorrect, and subsequently the summary of our case is that:

1)
There is a need for three strategic sites in order to meet the housing and employment needs of the area;
and

2)
Talke Park is a deliverable, sustainable site, and its allocation would represent growth aligning with the NPPF and aspirations of the government.

HOUSING AND EMPLOYMENT NEED ASSESSMENT
Harworth and Graham Ward Farms Limited have commissioned WSP to undertake a series of analyses into the housing and economic growth options for Newcastle under Lyme, and the approach taken to informing the Local Plan. The findings are presented in the Housing and Economic Growth Evidence which highlights Talke Park's role in generating local employment opportunities and providing housing for existing and new residents of Newcastle under Lyme.

The report identifies flaws in the Council's approach which relies upon an overly optimistic housing supply pipeline to meet long-term needs, which may lead to potential housing shortfall in the long-term. The government's consultation on changes to the NPPF includes a standard methodology to housing need. Whilst the transitional arrangements may mean that the Local Plan is not assessed against this higher housing target, this approach would need to be applied once the Local Plan has been adopted in order to assess their five-year housing land supply, and could therefore render policies out of date.

The report also highlights the Council's under-appreciation of emerging employment land needs, which may limit the Borough's growth potential. The strategic need and economic life of properties for warehousing and logistic sectors is overlooked, and the fast-growing and emerging sectors that are not captured by traditional UK SIC sectors are under-appreciated. Talke Park can provide a strategic employment site and a different offer to the proposed strategic sites AB2 and KL15 which can bring a variety of opportunities to existing and future employers in the area.

DELIVERABILITY OF TALKE PARK (REF: TK30)
The Strategic Employment Sites Assessment – 2024 Update (June 2024) (herein 'SESA 2024'), prepared by Aspinall Verdi, concludes that there are "considerable issues to overcome" associated with the delivery of Talke Park, and "there will be a long lead in period before any development takes place", suggesting this renders an allocation premature. We consider the perceived "issues" would not prevent development or cause a significant delay. Whilst the site is not an immediate short-term opportunity in the Local Plan, it can be delivered in the plan period. Our response to the comments made are set out in Table 1, which should be read alongside the Vision Document and the supporting technical reports (Geo-environmental Desk Study; Highways Access Appraisal; Heritage Briefing Note; Note on Socio-economic Benefits; and Ecology and Landscaping Combined Technical Note). These were prepared in support of the submission to the previous First Draft Local Plan consultation and, whilst some changes have been made to the Indicative Proposed Masterplan since that submission, the assessments are still applicable and accurate. Note that the masterplan has been underpinned by significant technical work such as an earthworks cut and fill model to demonstrate that the site is deliverable and this indicative layout could be achieved. This establishes that the site can provide up to 390 new homes, and 95,500sqm (1m sqft) of employment floorspace (see attachment, table 1, Response to commentary in the Strategic Employment Sites Assessment – 2024 Update)

GREEN BELT
The main current constraint to the development of Talke Park is its location within the Green Belt. The preparation of a new Local Plan for Newcastle-under-Lyme presents an opportunity for this to be reviewed and the LPA has demonstrated exceptional circumstances to justify the release of land from the Green Belt in order to meet its development needs over the plan period.

Our previous representations submitted to the Draft Local Plan were supported by an Ecology and Landscaping Combined Technical Note, which set out the high-level baseline and opportunities and constraints to development within the Site.

The council has now published a Green Belt Assessment Part 4 (July 2024) which specifically assesses Talke Park (TK30), finding that it's development would not constitute unrestricted sprawl, would not result in neighbouring towns merging; and would not impact upon the setting or character of the historic town. Whilst it finds that it would represent an incursion into undeveloped countryside, this would be the case for any greenfield site. The Assessment concludes that Talke Park (TK30) did not make a greater contribution to the purposes of the Green Belt than AB2 which is proposed for allocation; indeed TK30 is recommended to be taken forward for consideration, whilst AB2 is not. Its current Green Belt status cannot therefore be a reason for the non-allocation of Talke Park.

The letter from Tyler Grange dated 26 September 2024 provides a number of indicative visuals which demonstrate that development within the site will not obstruct views to and from the Wedgwood Monument, and that the Monument would continue to be seen as a distinct element on high ground separate from and raised above the development. The illustrative mitigation strategy in Appendix 1 demonstrates where opportunities existing to create visual and physical enclosure through the use of green infrastructure. This, together with careful use of cladding tones and designs will further reduce the visual impact of the proposed buildings in views to and from the monument.

In addition to the land at Chatterley Valley and Talke Park, Harworth is in control of additional land in the authority, namely land to the north of Peacock Hay Road (north of Chatterley Valley). A plan is provided at Appendix A (taken from a previous SHLAA assessment). This land, extending to 6.65ha and would be available to offer Biodiversity Offset and any Green Belt compensation land required in association with the allocation of land at Talke Park.

SITE DELIVERY TIMEFRAMES
The Strategic Employment Sites Assessment – 2024 Update (June 2024), prepared by Aspinall Verdi considers that Talke Park "has the potential be a high-quality site for local employment in a future local plan", thereby indicating that if the potential issues associated with the site's delivery can be overcome (as the above table demonstrates is the case), it is the lead-in time until development proceeds which would render the site unsuitable for allocation. However, Harworth and Graham Ward Farms Limited are confident that the site can be delivered in the Local Plan period, whether this be up to 2040, or indeed longer (as considered below). The anticipated programme for delivery and rationale is set out below:

The key constraint to the development of the site, at this time, is its Green Belt designation. An application would not be progressed until the site were to be released from the Green Belt. Should this be proposed prior to the submission of the Local Plan for Examination, the following timeframe may be brought forward as pre-application discussions and surveys could be progressed with greater comfort that the allocation is likely to be brought forward;

Whilst the Local Development Scheme targets the adoption of the Local Plan in 2025 Q5, we anticipate that a more realistic target would be 2026 Q4. If this is the case, then an application could be progressed with the necessary surveys/ assessments and consultation, to lead to the submission of an outline or hybrid planning application by the end of 2027. Note the hybrid application approach was taken at Chatterley Valley to ensure full planning permission was secured for the earthworks, allowing them to get underway sooner. The application could be determined in 2028 Q2/ Q3;

Earthworks could then proceed with the submission of reserved matters application/s for the first phase/s in 2028 Q3/4. The application could be determined in 2029 Q2/ Q3;

The first units could then be constructed and available before the end of 2029. We would expect this to include the first homes;

Harworth and Graham Ward Farms Limited expect a delivery programme of circa 5-6 years for the employment units, which may run from 2029 to 2035. This would form a logical continuation of the anticipated construction and occupation programme at Chatterley Park, whereby it is envisaged this will be constructed and fully occupied by 2030;

Harworth and Graham Ward Farms Limited expect a delivery programme of circa 8 years for the homes, on the basis of 50 being delivered per year, which may run from 2029 to 2037;

Harworth and Graham Ward Farms Limited are confident that the site can be delivered within the Local Plan period, whether this be up to 2040, or indeed longer (as considered below).

In summary, Harworth and Graham Ward Farms Limited do not consider that the design, planning, earthworks and construction programme for the site will not prevent it from being delivered in the Local Plan period. Indeed, we do not anticipate that this would be significantly different to the delivery of proposed strategic site AB2 given its location, so the availability of employment space will be limited, warranting the allocation of Talke Park.

BENEFITS

The allocation of Talke Park would:

Provide up to 390 new homes, housing needs/ growth;

Provide 95,500sqm (1m sqft)/ circa 21ha of employment floorspace, emp needs/ growth, providing up to 1,000 jobs in the construction phase and circa 3,600 permanent jobs once operational, of which around 1,000 would be taken by residents of Newcastle-Under-Lyme;

Meet local need for school places;

The Gross Value Added to the economy is estimated to be circa £15.3 million per year during the construction phase and £140 million per year during operation. It is also anticipated around £1.9 million per year in revenue would be generated through Council Tax and Business Rates receipts;

The location of Talke Park directly adjacent to the existing settlement limits offers clear benefits in terms of easy access to jobs, new homes, sustainable travel and green spaces. This local area would directly benefit from local expenditure of around £85,000 per year from the construction workforce over the construction phase, and around £5.3 million per year from the new residents;

Talke Park will promote sustainable communities, supporting improvements, connections and relationship with the wider area such as Wedgwood Monument;

Harworth and Graham Ward Farms Limited envisage the development to of high quality design and sustainability standards providing market leading approaches to ESG and Carbon Reduction, incorporating Net Zero design criteria and contributing to the delivery of Harworth's Net Zero Carbon Pathway2. This means that all commercial buildings Talke Park will be:

—Net Zero Carbon in operation (subject to occupier process requirements);

—Net Zero Carbon in construction and operation for any units build after 2030; and

—BREEAM Excellent.

DURATION OF THE LOCAL PLAN PERIOD

The NPPF states, at paragraph 22, that strategic policies should look ahead over a minimum 15 year period from adoption, in order to anticipate and respond to long-term requirements and opportunities, such as those arising from major improvements in infrastructure. It adds that, where larger scale developments such as new settlements or significant extensions to existing villages and towns form part of the strategy for the area (as is the case here where two strategic sites are currently proposed for allocation), policies should be set within a vision that looks further ahead (at least 30 years), to take into account the likely timescale for delivery.

The Local Plan the Plan seeks to cover the plan period 2020 – 2040. This approach would therefore only meet the minimum timeframe as required by the NPPF if adopted before the end of 2025. This is a short timeframe allowing for the review and potential update of the Local Plan prior to submission and matters arising during examination. The Local Plan is therefore at significant risk of not being consistent with national policy.

The Local Plan should therefore cover up to 2042 as a minimum and ideally to 2045. This will require additional land to be allocated for employment and residential use. The allocation of Talke Park would assist in addressing this subsequent shortfall.

CHANGES SOUGHT TO THE LOCAL PLAN

Harworth and Graham Ward Farms Limited seeks the allocation of TK30 as a Strategic Site, including the following:

Policy PSD1 – the inclusion of the site under point 3 as a strategic site “Land off Talke Roundabout / A500 to offer a sustainable urban extension providing a strategic employment location, new homes, and public space”.

Policy PSD5 – the site should be listed for removal from the Green Belt.

Update to Policy PSD3 – the figures in terms of housing and employment provision should be updated to account for the allocation of TK30.

	<p>Addition of a new Policy TK30 relating to the site's development. A suggested policy is provided below, which we would be happy to discuss further.</p> <p>Policy TK30 'Land off Talke Roundabout / A500'</p> <p>Land off Talke Roundabout / A500 is allocated as a sustainable urban extension providing employment land, new homes and public space. The site extends to circa 66 hectares and is allocated for uses including circa 390 new homes and 21 hectares (circa 95,500 sqm of floorspace) of employment land. Where ancillary non-employment uses are proposed, these will primarily support the onsite businesses and industrial processes. Development will be permitted subject to:</p> <ol style="list-style-type: none"> 1.Satisfactorily addressing the site allocation requirements set out in Policy SA1 (General Requirements), 2.Safe and convenient access into the development via a new access on Talke Road for the employment development and provision of two access points on Deans Lane for the residential development, 3.In line with Policy SA1 (General Requirements), a masterplan and design code should be prepared and agreed for the site which will: <ol style="list-style-type: none"> a.Consider sustainable travel links including cycle and pedestrian connectivity including to public transport links. Development should also consider walking and active travel for health and wellbeing purposes within the site, b.provide for appropriate boundary treatments to the existing Green Belt, c.Facilitate improvements to local footpaths and linkages to Wedgwood Monument d.Achieve high quality design reflecting the landscape location of the site and creating a vibrant destination and attractive public realm. This should recognise the transitional location between the higher density urban and rural area, e.Ensure the layout and development of the site is landscape led and buildings or structures are designed to ensure they are not intrusive in significant views from the surrounding area including the Wedgwood Monument. 4.Submission of a coal mining risk assessment, land contamination assessment and mitigation strategy, 5.Submission of a drainage strategy, 6.Appropriate measures to control impact of increased traffic movement or uses within the site on local amenity including noise and air quality on the surrounding area. This should include submission of a noise and air quality assessment and mitigation strategy, 7.Submission of a Heritage Impact Assessment to demonstrate how the layout and design of the development will respond sensitively to the setting of Wedgwood Monument, 8.Financial contributions to improvements in the capacity of local schools and health facilities. 9.Provision of a new and / or enhanced bus service from Newcastle-under-Lyme to the site. 10.Employment units to achieve at least BREEAM excellent standard with an aim for the most recent BREEAM outstanding standard, 11.Retention and enhancement of mature trees and existing hedgerows on the site and its boundaries, with minimal breaks in hedgerows to facilitate vehicular traffic. Strengthened boundaries to the site, comprising landscape buffers, and the creation of new strong, defensible boundaries to the Green Belt, 12.The development being subject to an agreed Employment and Skills Plan secured through a S.106 agreement. <p>We also consider that the period which the Local Plan covers should be extended beyond 2040, and cover up to 2042 as a minimum and ideally to 2045. This will require additional land to be allocated for employment and residential use. The allocation of Talke Park would assist in addressing this subsequent shortfall.</p> <p>CONCLUSION</p> <p>We consider that, in its current form, the Final Draft Local Plan is not sound, on the basis that it is (1) not positively prepared, (2) not justified, and (3) not consistent with national policy. We consider that the allocation of 'Land off Talke Roundabout / A500' (herein 'Talke Park') would resolve this soundness matter. Harworth and Graham Ward Farms Limited are in control of the site and would therefore lead its design and delivery, as per Chatterley Park. Exceptional circumstances have been demonstrated to justify the release of land from the Green Belt. Allocating Talke Park would meet the Council's growth aspirations in terms of delivering sustainable new homes and jobs, meeting local needs and providing more economic opportunities for residents of Newcastle-under-Lyme. Harworth is an experienced land and property regeneration company which is currently investing in Newcastle under Lyme at the nearby Chatterley Valley site. The above commentary demonstrates why the site is suitable and available for allocation, notably:</p> <p>The Council's own evidence base supports the allocation of the site. The Strategic Employment Sites Assessment – 2024 Update (June 2024), prepared by Aspinall Verdi notes that it "has the potential be a high-quality site for local employment [albeit] in a future local plan". There is therefore recognition that the perceived issues associated with the site's delivery can be overcome, but the Council are uncertain on programme.</p> <p>The SWECO report which forms part of the evidence base notes that the Talke Site has the best walking accessibility score of the three potential strategic sites. That SWECO report, and Mosodi's independent assessment of the site, confirm that there are no highways or accessibility constraints to prevent the site being allocated.</p> <p>The council's Green Belt Assessment Part 4 (July 2024) concludes that the development of Talke Park would not constitute unrestricted sprawl, would not result in neighbouring towns merging; and would not impact upon the setting or character of the historic town.</p> <p>Harworth and Graham Ward Farms Limited are confident that the site can be delivered in the Local Plan period, whether this be up to 2040, or indeed longer.</p>
Q7 Modification	<p>We consider that the period which the Local Plan covers should be extended beyond 2040, and cover up to 2042 as a minimum and ideally to 2045. We consider that the allocation of site ref: TK30 (the Land off Talke Roundabout / A500), as a strategic location, for housing and employment would resolve the soundness matters outlined at 6 above. Further detail is provided in the supporting covering letter.</p>
Q8 Hearing attendance	<p>Yes, I wish to participate in hearing session(s)</p>

Q9 Hearing reasons	In order to accurately outline our client's position and aid the Inspector in providing any further information relating to site TK30, on the basis we consider the allocation of the site would resolve our concerns about the Local Plan being unsound.

Q6 Details	<p><u>RE the Draft Local Plan Consultation</u></p> <p>Please find enclosed a hard copy of the TRA submission to the Local Plan Consultation. Apologies that it is not on the proforma, but the proforma did not provide the space for issues that the TRA wanted to address and which it was of the view needed to be addressed if this Plan was to be considered sound.</p> <p>It is hopeful that the comments made and issues raised will be helpful and assist this plan in reaching a sound footing to cover the next 20 years.</p> <p>Many thanks Yours faithfully Dr A Drakakis-Smith Chair Thistleberry Residents Association</p> <p>THISTLEBERRY RESIDENTS ASSOCIATION LOCAL PLAN SUBMISSION</p> <p>The Thistleberry Residents Association wishes to submit the following comments and thoughts on what will hopefully be the final draft of the Local Plan and in the following way:</p> <p>5. The Issues of the Green Belt and the Countryside development - Sustainable Environment Policies and the issue of the 5 year supply of land for housing and employment and town centre uplift:</p> <p>a. In order to comply with NPPF rules and guidance, there are some LAs which might over-develop in order to avoid national government interference. This could lead not only to saturation but also to unnecessary encroachment into the green belt and/or countryside. The issue of the Land (especially farmland) alienated by the HS2 project has not been dealt with or clarified given that so much land has been appropriated and taken out of commission from farms (the countryside (and the green belt)?) and may not be used again as farming land. If this is the case this will have been a back door enclosure of the countryside, cutting a swathe down the centre of England, and providing developers with land they have always wanted.</p> <p>b. The (Stones) Market is regularly 'improved' (revamped/reduced) but solutions have not led to its development or improvement, success and well being, only its decline. Given that the identity of Newcastle-under-Lyme is that of 'Market Town' this is becoming harder to justify. Developers would be aware of the difference between the statements and claims about Newcastle-under-Lyme (appearance) and its reality.</p> <p>c. It is only recently that the NBC has viewed itself as a University Town- which it has been for the past 75 years - an opportunity missed or possibly not even recognised?</p>

Q4 Part of document	Policy
Q4 Policy	PSD5

Q6 Details	<p>Please see attached representations</p> <p>Policy PSD5 (Green Belt)</p> <p>3.21 Persimmon fully supports the proactive approach of the Regulation 19 Plan in recognising the need for Green Belt release. Permission also supports the position of the Regulation 19 Local Plan in establishing an inset boundary at Keele Village. The Seddon Homes Hawthorns development has demonstrably changed the character of the village to one whereby the presence of a washed over green belt would only serve to unnecessarily restrict and hinder future development. Establishing an Inset boundary allows for more agile planning decisions to be made, to the benefit of the Village as part of the wider settlement hub that is combined with Keele University.</p> <p>Safeguarded Land</p> <p>3.22 As part of the evidence base, ARUP has prepared a Green Belt Safeguarded Land Advice (Assessing the Need for Safeguarded Land) Report (July 2024). This assessment identifies a need for safeguarded land to retain flexibility in the Borough's supply without needing to further alter the Green Belt and to look beyond the Plan Period. The report considers the requirement and potential quantum of safeguarded land the NUL should consider in its emerging Local Plan, concluding that it is "recommended that safeguarded land sufficient to accommodate between 1,562 and 2,342 dwellings is identified".</p> <p>15</p> <p>3.23 The Regulation 19 Local Plan remains silent on addressing this advice or in identifying any safeguarded sites. Persimmon would urge the Council to respond to this advice prior to the Local Plan progressing to submission stage, and as an absolute minimum, identify safeguarded land that retains flexibility to:</p> <ul style="list-style-type: none"> • Meet housing needs throughout the entirety of Plan Period, particularly in the context of planning reform and proposals to significantly increase the Borough's housing requirement. • Address any under delivery in the Borough's strategic allocations, particularly its large scale or brownfield land allocations. • Respond to macro-economic change, employment growth and other patterns that may affect demographic change or a change in need. <p>3.24 Persimmon fully supports the need to safeguarded land to future-proof the emerging Local Plan and meet longer-term development needs. Safeguarding land will mean the Council has increased agility when responding to future demand, particularly in light of the NPPF changes and policy landscape being proposed by the new Government. This is especially critical in the University Growth Corridor where there is significant evidence that development of the area could lead to exponential growth.</p>

Q6 Details	<p>Concerns regarding the Newcastle-under-Lyme Borough Council and Stoke-on-Trent City Council Green Belt Assessment produced by Arup in 2017 have been raised in previous representations, and those concerns still remain.</p> <p>But more fundamentally, Green Belt policy is changing from a national perspective, and while a brownfield first policy remains, there will now be a requirement for local planning authorities to identify 'grey belt' – essentially previously developed land located in the Green Belt – and lower quality Green Belt land that could be released should the need be there.</p> <p>However, although the Council has already acknowledged the need to release land from the Green Belt to meet the plan's development requirements, while the new mandatory targets will inevitably mean the need to release further land for development. In the first instance this should at least mean the reinstatement of sites that were allocated in the Regulation 18 draft.</p> <p>In this context, it is considered that the 2017 Green Belt Assessment is out-of-date and will need to be revisited in order to focus on the identification grey belt and lower quality Green Belt land. Policy PSD5 sets out how and where the Green Belt boundary will be amended in the Local Plan. However, the policy will need to be modified in the context of required modifications to Policies PSD1 and PSD3, and changes to the approach to Green Belt release at a national level through the revised NPPF, as detailed above. It should also be noted that the Council has already demonstrated exceptional circumstances to justify Green Belt release, as evidenced by proposed site allocations.</p>
Q7 Modification	<p>As with Policy PSD3, Policy PSD5 will be complex to address as it will need to respond to other policy modifications – specifically Policies PSD1 and PSD3 – and the new mandatory housing target. This will inevitably mean further amendments to the Green Belt boundary, and while it is not appropriate to discuss specific sites at this point, the starting point should be:</p> <ul style="list-style-type: none"> • Reinstatement of sites that were allocated in the Regulation 18 draft but removed ahead of the publication of the Regulation 19 draft; and • A review of the 2017 Green Belt Assessment in order to identify grey belt sites, and lower quality Green Belt sites, with a particular focus on the north of the borough given the unbalanced distribution of housing land supply. The above will then inform the required modifications to Policy PSD5, which will also inform any new site allocations.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	<p>We consider that it is necessary for us to participate in the examination hearing session(s) as we are promoting a site that was allocated in the Regulation 18 draft, yet removed from the Regulation 19 draft despite nothing changing. In addition, we have further evidence to present within our hearing statement to reinforce the deliverability of the site, and the weaknesses of the plan as drafted.</p>

Q6 Details	<p>Please see supporting representation by Knights on behalf of Dr D Hodgkinson for allocation reference TK10.</p> <p>Policy PSD5 proposes to alter Green Belt boundaries in order to allocate a number of development sites. It is considered that this policy is justified on the basis that there is limited urban capacity in Newcastle-under-Lyme, and there is a limited amount of previously developed land available to meet development needs. In particular, there is a high level of need for affordable housing and this cannot all be met within the urban boundary.</p> <p>Exceptional circumstances to justify the release of land from the Green Belt is set out further below. The policy concept of what constitutes exceptional circumstances for releasing land from the Green Belt through plan making has been considered in the High Court.</p> <p>In Compton Parish Council vs Guildford Borough Council [2019] EWHC 3242 (Admin) ("The Guildford judgement") where the main general issue of the challenge was whether the Inspector, in recommending that the Local Plan be adopted, had erred in law in his approach to what constituted the "exceptional circumstances" required for the redrawing of Green Belt boundaries in a local plan review.</p> <p>In the Guildford judgment, Sir Duncan Ousley, sitting as a High Court Judge confirmed that:</p> <p>(a) There is no definition of the policy concept of "exceptional circumstances". This itself is a deliberate policy decision, demonstrating that there is a planning judgment to be made in all the circumstances of any particular case. It is deliberately broad, and not susceptible to dictionary definition.</p> <p>(b) Whether a particular factor was capable of being an "exceptional circumstance" in any particular case was a matter of law; but whether in any particular case it was treated as such, was a matter of planning judgment.</p>

(c) A judicial decision that a factor relied on by a planning decision-maker as an "exceptional circumstance" was not in law capable of being one is likely to require some caution and judicial restraint. All that is required is that the circumstances relied on, taken together, rationally fit within the scope of "exceptional circumstances" in this context. The breadth of the phrase and the array of circumstances which may come within it place the judicial emphasis very much more on the rationality of the judgment than on providing a definition or criteria or characteristics for that which the policy-maker has left in deliberately broad terms.

(d) "Exceptional circumstances" is a less demanding test than the development control test for permitting inappropriate development in the Green Belt, which requires "very special circumstances."

(e) The phrase does not require at least more than one individual "exceptional circumstance". The "exceptional circumstances" can be found in the accumulation or combination of circumstances, of varying natures, which entitle the decision-maker, in the rational exercise of a planning judgment, to say that the circumstances are sufficiently exceptional to warrant altering the Green Belt boundary.

(f) General planning needs, such as ordinary housing, are not precluded from its scope; indeed, meeting such needs is often part of the judgment that "exceptional circumstances" exist; the phrase is not limited to some unusual form of housing, nor to a particular intensity of need.

The above judgement confirms that there is a very broad exercise of planning judgment for the decision-maker which the courts will not readily disturb. This can include meeting the need for market housing.

The NPPF (paragraph 141) provides more guidance on what will add up to exceptional circumstances: Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development. This will be assessed through the examination of its strategic policies, which will take into account the preceding paragraph, and whether the strategy:

a) makes as much use as possible of suitable brownfield sites and underutilised land;

b) optimises the density of development in line with the policies in chapter 11 of this Framework, including whether policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport; and

c) has been informed by discussions with neighbouring authorities about whether they could accommodate some of the identified need for development, as demonstrated through the statement of common ground. In the case of Newcastle-under-Lyme, each of the above will be taken in turn.

Making as much use as possible of Suitable Brownfield Sites and Underutilised Land

The Council recently undertook a call for brownfield sites exercise and a Newcastle-under-Lyme and Kidsgrove Urban Capacity and Town Centre Regeneration Study (June 2023) forms part of the evidence base. This study considered a range of vacant and infill sites, and considered the scope for the conversion of upper storey floorspace of existing commercial buildings. This study was also informed by sites identified in the SHELAA.

Paragraph 8.11 of the Issues and Options consultation document previously consulted upon stated that evidence gathered as part of the now abandoned Joint Local Plan exercise with Stoke-on-Trent City Council suggested that approximately 2,500 dwellings could be found on land within existing development boundaries, which would be at least 4,660 dwellings short of the minimum housing requirement figure established using the nationally set starting requirement of 7,160 established using the Standard Method or 5,500 short of the Regulation 19 Local Plan requirement of 8,000 dwellings.

The latest SHELAA and Urban Capacity Study have not identified any significant amounts of further brownfield sites that were not considered previously. The latest SHELAA (dated 2024) identifies a deliverable and developable supply of brownfield sites that amount to the delivery of 1,938 homes. When other deliverable and developable greenfield site that are not located in the Green Belt are considered, there is a capacity to deliver a further 1,012 dwellings. Mixed brownfield/greenfield sites can deliver a further 147 dwellings. This amounts to a total of 3,097 dwellings that are deliverable/already have planning permission or developable. This amounts to a shortfall of at least 4,093 dwellings.

The above figures strongly suggest that land beyond existing settlement boundaries is required to deliver the Council's minimum housing requirement of 8,000 dwellings over the plan period.

Whilst national policy seeks to exhaust previously developed sites for housing delivery before releasing Green Belt sites, meeting housing needs also have to be balanced with meeting economic development needs, with many economic development needs (including, but not limited to, office, retail, leisure, manufacturing and distribution) also requiring the use of previously developed land or buildings. This is particularly true if they are located on existing employment parks or within town centres, or otherwise located where businesses require to be located based on their business needs and/or customer demands. In light of these conclusions, it is considered that the Council has made good progress in granting planning permission for residential development on sites within the development boundary, including on brownfield land, however it is very clear that minimum housing needs cannot be met on these types of sites alone.

Optimising the Density of Development

With regard to optimising the density of development, if limited development sites are available within existing development boundaries, then opportunities for delivering higher density development will be limited. Whilst some higher density development has occurred within Newcastle-under-Lyme town centre, other opportunities are likely to be limited due to the following factors:

(a) Conservation areas / special character area designations

(b) Listed buildings and the need to appropriately take into account their settings

(c) Prevailing densities/character of existing residential areas, particular those of sub-urban character where high density or high rise development is likely to be inappropriate in design and amenity terms

(d) Other locational specific constraints.

Whilst there may be possibilities to increase the density of new development within existing urban areas or other non-Green Belt sites, it is unlikely that this could be done on a sufficient number of such sites to remove any need to release land from the Green Belt at all.

Meeting any Unmet Housing Needs in Neighbouring Authorities

At the time of preparing this Local Plan, a number of neighbouring authorities have recently adopted development plans. Staffordshire Moorlands adopted a local plan in 2020 and Cheshire East Council

adopted its part 1 Local Plan Strategy in 2017. The Cheshire East Site Allocations and Policies DPD has also been recently adopted. Stafford Borough Council are currently reviewing their local plan, but have yet to reach examination stage. Stoke-on-Trent City Council are also in the early stages of preparing a new Local Plan.

In light of the above, the following authorities are unlikely to be in a position to accommodate any unmet needs in Newcastle-under-Lyme:

- (a) Cheshire East
- (b) Shropshire
- (c) Staffordshire Moorlands

With regard to Stafford Borough and Stoke-on-Trent, it is, at this stage, unclear what additional needs these authorities may be able to accommodate, however it should be noted that Stoke-on-Trent's minimum housing needs are currently subject to the 35% uplift for urban areas, so it is unclear if any further need from Newcastle-under-Lyme could be met within Stoke-on-Trent over the plan period. Furthermore, the Government's review of the Standard Method suggests that local housing need figures for all surrounding local authority areas could significantly increase over and above the existing Standard Method requirement if the new Standard Method is confirmed.

With regard to Stoke-on-Trent, when Newcastle-under-Lyme were pursuing a Joint Local Plan with Stoke-on-Trent City Council, Stoke-on-Trent indicated that they could accommodate around 800 dwellings of Newcastle-under-Lyme's unmet needs. This figure still remains substantially short of the housing need required in Newcastle-under-Lyme that cannot be accommodated within existing development boundaries. Stoke-on-Trent have yet to make significant progress on a new Local Plan since a consultation on Issues and Options took place between May and June 2021.

With regard to economic development needs, this will also be a material factor, particularly where economic growth factors are linked to existing employment sites that need to expand and are inextricably linked, such as Keele University and Science Park. Their expansion needs are unlikely to be able to be accommodated in other local authority areas and will need to be anchored to their existing site. As such, in addition to housing factors, there are economic development needs that won't be able to be accommodated in other local authority areas.

Other Considerations Amounting to Exceptional Circumstances to Justify the Release of Land from the Green Belt

As set out above, meeting housing needs can amount to exceptional circumstances to justify the release of land from the Green Belt. By extension, this is also considered to apply in terms of meeting economic development needs and facilitating sustainable patterns of development in the Borough.

Having a suitable range of employment sites in suitable locations to meet future economic development needs and providing more scope to adapt to future changes in the economy therefore justify the need to review Green Belt boundaries. For example, Newcastle-under-Lyme is well located in relation to the strategic road network, in particular the A500 and the M6. Large warehouses and distribution centres will require large sites with good access to the strategic road network, and such sites are best placed to be located outside of urban areas where access for large vehicles is likely to be more problematic. As such, it is considered that a review of the Green Belt in Newcastle-under-Lyme is necessary to meet both economic needs and housing needs.

Promoting sustainable patterns of development is also a relevant factor to consider, as set out at paragraph 142 of the Framework, which states:

When drawing up or reviewing Green Belt boundaries, the need to promote sustainable patterns of development should be taken into account.

The above was a material factor explored at length during the examination of the Cheshire East Local Plan, with northern parts of the Borough heavily constrained by Green Belt designations.

Green Belt release around the northern towns in the Cheshire East Borough was justified as follows¹: Without alterations to the detailed Green Belt boundaries, the amount of new development that could be planned for in the north of the borough would be very low. It is considered that such a low level of development would have severe consequences including:

- Demand for new housing outstripping supply, further increasing house prices and a lack of new affordable housing provision leading to young people and key workers being unable to stay in the area.
 - An increasingly ageing population as young people leave and an absolute reduction in the number of people of working age.
 - Difficulty in attracting inward investment and economic growth. In areas of relatively unaffordable housing, employers have difficulty in recruiting to lower paid positions.
 - Increases in traffic and congestion as people unable to live close to their place of work are forced to travel longer distances for employment and the smaller working-age population living locally would also mean more people commuting in to the area
- decline in the vibrancy and vitality of town centres and some local services and facilities becoming unviable.

Some parallels can be drawn between Cheshire East and Newcastle-under-Lyme. For example, as Newcastle-under-Lyme town is currently ring-fenced by Green Belt, any substantial levels of development on non-Green Belt land outside of the development boundary would need to leapfrog the Green Belt towards the periphery of the Borough in locations such as Loggerheads, although it is acknowledged that the settlements of Baldwins Gate and Loggerheads, which are not heavily constrained by Green Belt, are considered to be sustainable locations.

More broadly, the release of sites from the Green Belt on the periphery of the urban area in particular, sites around/adjacent to higher order settlements such as Kidsgrove/Talke, for example, through the allocation of TK10, would deliver a sustainable pattern of development that is aligned to the Council's economic growth aspirations.

In addition, there is a substantial need to deliver an uplift in affordable housing in Newcastle-under-Lyme in light of the high level of affordable housing need, with a need to deliver a net increase of at least 278 affordable homes per annum.

The above considerations add further weight to the case that exceptional circumstances exist to justify Green Belt release in Newcastle-under-Lyme Borough.

	In light of the above, it is considered that Policy PSD5 is justified, as are the proposed allocations that follow from it. Dr Hodgkinson therefore supports Policy PSD5 and the release of TK10 for the delivery of around 170 dwellings.

Title	Policy PSD5: Green Belt
Consultee Family Name	Fuller
Consultee Given Name	Ross
Agent Company / Organisation	Knights PLC
Agent Family Name	Askew
Agent Given Name	Michael
Q4 Part of document	Policy
Q4 Policy	PSD5
Q6 Details	<p>Please see attached representations. Criterion 1 of this policy states that: "The Green Belt boundary is defined on the draft Policies Map."</p> <p>Criterion 2 of this policy states that: "The Green Belt boundary will be altered through this Plan to:</p> <p>b. Establish an inset boundary at Keele."</p> <p>Paragraph 6.29 of the supporting text to this Policy states the following: "The Green Belt Village Study (2019) sets out the evidence for establishing a new inset boundary at Keele. A detailed assessment of a potential inset boundary is included in the study and comments are being sought on the approach outlined during the consultation on the Local Plan." [Knights' emphasis]</p> <p>It is the 2019 Arup Green Belt Village Study which recommended that the development plan status of Keele change from a village which is washed over to a village inset. Chapter 4 'Village Assessments' of that Study sets out the area to be assessed and uses the 2011 infill boundary (Figure 1 above) as a starting point. The boundaries have however been extended to include built curtilage including all the residential properties along Highway Lane. Top Farm to the north of the village has been excluded from the boundary given it is set back from the roads.</p> <p>The justification for defining the section of village boundary around Highway Lane was: "The boundary includes the main cluster of development and the ribbon development along Highway Lane. It retains much of the existing infill boundaries from the Newcastle-under-Lyme Local Plan 2011 however has been extended to include the full extent of the built curtilage of the village including all of the residential properties along Highway Lane."</p> <p>This representation requests that the Council extend the village inset boundary to allow for our client's site, which is located on the junction of Highway Lane and Station Road. Including this small site would simply square off (as illustrated in Fig.2 below) the inset boundary and to do so makes sense on the ground, as would be observed with a site visit. It would also make sense to extend the village boundary around the driveway adjacent property of The Orchard (to the northwest of the site). The property of the Orchard itself is proposed to be included within the new settlement boundary but not the access.</p> <p>The site does not form part of Top Farm and is distinguished from it via boundary features and being of a different, non-agricultural appearance. It largely comprises overgrown scrub and contains some built form by way of utility apparatus. It has two road frontages. The site also includes the access track to the adjacent property of The Orchards.</p> <p>It is evident that our client's site is clearly framed by built development to the east, south and west, which overall obstructs views of the Green Belt beyond. The immediate context of the site has materially changed recently with the construction of the large Seddon Homes residential estate, located immediately across the road to the east.</p> <p>It is therefore advanced that that this site does not make an important contribution to the openness of the Green Belt.</p> <p>There are no technical issues associated with developing the site. There is an existing field gate to the site, which would be replaced with a domestic access to serve one dwelling (as do all dwellings on to Highway Lane), and an ecology survey is attached as Appendix B, which sets out that there are no ecology issues.</p> <p>The 2019 Study sets out some defining features of this part of the village (within the Assessment Proforma for Keele). These are listed below with a response:</p> <p>a) There is a linear development extending along Highway Lane. Response: this linear character would continue.</p> <p>b) The western section of the village along Highway Lane consists of detached dwellings with large gardens. Response: this would continue: one dwelling with a large garden is proposed.</p>

	<p>c) Properties within the village are 2 storeys high. Response: this would continue; the dwelling would be 2 storeys high.</p> <p>d) The western sections of the village are particularly clearly defined due to the building and garden lines. Response: this would continue: one dwelling to front Highway Lane with a rear and front garden.</p> <p>e) On the whole views into and out of the village are mostly restricted by built form, with the exception of the linear development along Highway Lane. Response: linear development would continue.</p> <p>As stated previously in this report, the draft National Planning Policy Framework supports sustainably located sites within the Green Belt to be used to deliver the identified housing growth, including sites that fall within the definition of Grey Belt.</p> <p>Whilst the site does not comprise a previously developed site, it can nevertheless be defined as a Grey Belt by virtue of it comprising 'any other parcels of land and/or areas of Green Belt land that make a limited contribution to the five Green Belt purposes'. It is considered that the site itself does not contribute towards the five purposes of the Green Belt as set out in paragraph 143 of the current National Planning Policy Framework as demonstrated below:</p> <p>"to check the unrestricted sprawl of large built-up areas" – The rounding off of this infill element along Highway Lane would not result in the increase in size of the Staffordshire conurbation as it would involve the enlargement of the village of Keele.</p> <p>"to prevent neighbouring towns merging into one another" – The proposed allocation of this site would retain a substantial gap between the villages around Keele. Indeed, this infill development along the current ribbon development along Highway Lane would be barely discernible from beyond Keele itself.</p> <p>"to assist in safeguarding the countryside from encroachment" – The site would be reinforced by established, defensible boundaries along Highway Lane. The proposal would also reinforce these existing boundaries through new landscaped areas (including BNG enhancements).</p> <p>"to preserve the setting and special character of historic towns" – Keele is a village in conservation area (rather than a history 'town') and in any event the infilling of this gap along Highway Lane would assimilate within the established ribbon development along Highway Lane.</p> <p>"to assist in urban regeneration, by encouraging the recycling of derelict and other urban land" – The provision of an additional dwelling on this site would not conflict with the wider development strategy proposed under draft Policy PSD 1.</p> <p>As a result, it is recommended that this site be also excluded from the Green Belt and instead allocated as a residential development.</p> <p>In conclusion, our clients support Policy PSD5 and the principle of the village inset boundary, but request the change to the boundary so that site is excluded from the Green Belt and instead incorporated within the proposed village inset boundary. It is requested that the inset boundary be amended as illustrated in Figure 2:</p> <p>SUMMARY</p> <p>It has been demonstrated that there is a clear and robust argument in favour of including land adjacent to 3 Highway Lane, Keele within the proposed village inset boundary as set out in Figure 2 of this report. This site would be a logical addition to the village inset, which would not adversely affect the openness of the Green Belt and would not conflict with the purposes of including land within the Green Belt. Indeed, it is considered that this site would constitute a 'Grey Belt' site as defined in the draft National Planning Policy Framework.</p> <p>By including some developable sites within the village (such as our client's site), this would enable some modest and proportional growth of this village which would enable the village to continue to evolve over the plan period and provide an opportunity for a young person (with strong ties to the village) to raise a family in this village. This development would also potentially contribute to the Council's requirement to support self-build dwellings.</p>
Q7 Modification	Please see attached representations.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	Knights wish to participate at the hearing sessions for Policies PSD3, PSD4 and PSD5 so that we can demonstrate why the Land at 3 Highway Lane, Keel site should be included within the settlement boundary for Keele in the Policies Map.

Q6 Details	<p>Please see supporting representation by Knights on behalf of Aspire. The main urban area of Newcastle-under-Lyme is currently tightly constrained by Green Belt, as are the larger rural settlements of Madeley and Audley. The proposal to remove suitable and deliverable sites from the Green Belt is supported given the existing tightly drawn Green Belt Boundary.</p> <p>The above is considered to be justified on the basis that there is a limited and finite supply of previously developed land both within existing settlement boundaries and elsewhere and the significant need for affordable housing (and other development needs, such as employment) across the Borough. The Council's position that exceptional circumstances exist to justify the release of Green Belt land to meet current and future housing and employment land needs and the evidence that underpins this position is fully endorsed by Aspire.</p> <p>Criteria 4 and 5 of this policy defers the decision maker to national policy in terms of assessing proposals for certain forms of appropriate development. Such exceptions set out in national policy redevelopment of previously developed sites, the re-use of buildings and limited affordable housing, including rural exceptions sites.</p> <p>Policy HOU 8 of the DLP provides a Rural Exception Site policy and representations on this proposed policy will be provided later in this representation.</p> <p>At Regulation 18 stage, the policy included a Criteria 7 which suggested that the Council would consider whether or not it is necessary to identify areas of safeguarded land to meet longer term needs beyond the Plan Period. This criteria is not included in the Regulation 19 DLP, and given the proposed changes to national policy, it is considered that the Council should explore the possibility of identifying safeguarded land to enable sites to be quickly identified and allocated when the new Local Plan is subject to review, or should additional land be required during the next plan period should delivery not come forward as quickly as envisaged</p> <p>Given the tightly constrained nature of the urban area, the limited availability of previously developed land within the urban area, and that a further Green Belt review may be required as part of any future Local Plan review, it is considered that it would be a sensible and sound approach to identify safeguarded land to meet future needs. This would also create long term certainty for the longer term delivery of housing (and other development needs) across the Borough. Aspire Housing would therefore support the identification of safeguarded land should the Council or the Inspector deem this to be necessary.</p> <p>Summary of recommendations:</p> <p>(a) Maintain all of the sites currently proposed for release from the Green Belt.</p> <p>(b) Consider identifying safeguarded land within the Local Plan in order to secure further development options beyond the plan period or land that can come forward in advance of any Local Plan review should delivery fall short of the housing requirement in order to deliver long term certainty.</p>

Title	Policy PSD5: Green Belt
Consultee Company / Organisation	Bignall End
Consultee Family Name	Willard
Consultee Given Name	Gerald
Q4 Part of document	Policy
Q4 Policy	PSD5
Q5 Sound	No
Q6 Details	<p>Policy PSD5: Green Belt says:</p> <p>The Plan will alter the Green Belt boundary only to:</p> <p>a. Support the allocation of the following Green Belt sites in the Local Plan</p> <p>b. AB12 Land east of Diglake Street;</p> <p>Site AB12 has no suitable or safe access and Audley fails to provide for sufficient housing to meet the new national housing targets. Allocations in Audley ought to be increased by between 48% and 80 % dependent upon changed housing targets. This can be met in large part by the allocation of site AB75 which adjoins AB12 and which has a demonstrably safe access for itself and site AB12.</p>
Q7 Modification	<p>This policy ought to be extended to include site AB75 which adjoins AB12 and could be developed at the same time and provide a safe a secure access to both sites. In respect of site SP11 Lyme Park, Silverdale; Taking all of SP11 out of the Green Belt is supported. It will provide now a new a clearly defined boundary beyond the new housing and country park.</p> <p>Note This revised Green Belt boundary in this area according to the proposals map includes all of SP11 and the associated new Lyme Park as being taken out for the Green Belt. This is supported.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)

Q9 Hearing reasons	In seeking the following modifications to the plan, I do consider it necessary to participate in examination hearing session(s) in order advise the inspector of my clients concerns and to respond to any questions that the inspector may have.

Title	Policy PSD5: Green Belt
Consultee Company / Organisation	Natural England
Consultee Position	Senior Officer
Consultee Family Name	McLaughlin
Consultee Given Name	Sally
Q4 Part of document	Policy
Q4 Policy	PSD5
Q6 Details	<p>Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.</p> <p>Natural England welcomes the opportunity to comment at this stage of the Local Plan and particularly supports the inclusion of policies on green and blue infrastructure, biodiversity, health and wellbeing, trees hedgerows and woodlands. We have reviewed the consultation documents and provide comments</p>

that relate to the soundness of the Local Plan and that are most relevant to our interest in the Natural Environment.

Natural England has adopted a robust precautionary approach within this plan response. Whilst we welcome the content of the Local Plan, Natural England advises that the plan is currently at risk of being unsound and/or not legally compliant due to the potential impacts on air quality in relation to internationally designated nature conservation sites and the justification for the potential loss of 263ha best and most versatile (BMV) agricultural land. Further detail is provided below.

Natural England have also provided other advice within this submission relating to further improvements that could strengthen plan policies and specific strategic site options and related mitigation.

Do you consider that the Newcastle Under Lyme Plan is Sound and Legally Compliant?

Natural England notes that the plan is at the pre-submission stage and as such your authority is seeking confirmation on the soundness of the plan. Having reviewed the plan and supporting documents, Natural England considers the pre-submission plan in its current form is not sound or legally compliant, this is due to a lack of evidence with regards to air quality and the cumulative loss of BMV agricultural land both in a local and national context.

Air quality

Natural England notes that the Sustainability Appraisal states that "Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)

As Natural England understands it the current evidence base used to conduct the HRA cannot rule out adverse impacts on designated sites. The HRA states at page 22 3.4.16 "At the time of writing, the traffic modelling run for the final suite of Regulation 19 allocations had not been undertaken." Appendix A lists the local plans for neighbouring LPA's concluding that 'in combination' with plans and projects (approved and those yet to be implemented) they may trigger in-combination effects on European sites as a result of air quality, particularly as we understand it in the key commuting areas.

Natural England notes that Annual Average Daily Traffic (AADT) data and traffic modelling in the Strategic Transport Assessment (STA) concludes a potential reduction in travel and related air pollution at allocated sites as a result of a predicted preference in the use of public transport. We are surprised by this projected decrease in both traffic and related air pollution, particularly as one employment allocation site includes a 200-bay lorry park and increased congestion is predicted at junction 16 of the M6 where it joins the A500 in a rural location with no existing rural transport provision. The Sustainability Appraisal also notes that: "There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work". (p 206)

Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot therefore currently be ruled out at the following internationally designated sites:

- Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI
- Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI

The HRA outlines that the main source of ammonia emissions is agricultural practice, and that material increases in NH3 emissions are unlikely to be associated with the proposed local plan. At Black Firs and Cranberry Bog and Oakhanger Moss, any increase in nitrogen deposition has the potential to exacerbate pollution levels and thereby undermine the reasons for notification of these sites as a Ramsar.

Ammonia can be emitted from vehicle exhaust emissions as a by-product of the catalytic conversion process designed to reduce emissions of nitrogen oxide. As traffic composition transitions toward more petrol and electric cars (i.e., fewer diesel cars on the road), catalytic converters may aid in reducing NOx emissions but result in increased ammonia emissions. Ammonia emissions from road traffic therefore could make a significant difference to nitrogen deposition close to roads.

Natural England therefore advise that ammonia sourced from traffic emissions should be included for assessment within the local plan HRA, as the impact from this source on designated sites is currently unclear. For further information please see this report from Air Quality Consultants (AQC) that looks at ammonia emissions from roads for assessing impacts on nitrogen-sensitive habitats. Whilst we are aware that the current CREAM model created by AQC used to assess ammonia emissions from road traffic has not been peer reviewed, at this time it has been recognised as a Best Available Tool and we deem it appropriate to be used where any caveats associated with this model are also considered within the assessment. An assessment based on the best available approach is necessary. The next stage of assessment can then consider uncertainties in the model and site specifics to decide if mitigation needs to be considered.

Further work is therefore required to inform the Habitat Regulations Assessment. Natural England will engage with the Local Planning Authority in order to produce a Statement of Common Ground (SoCG) on this matter.

'Best and most versatile' (BMV) agricultural land

Natural England notes that "the proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land, A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of 'best and most versatile' (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services". (page 74 Sustainability Appraisal).

Under the Town and Country Planning (Development Management Procedure) (England) Order 2015 (DMPO) Natural England is a statutory consultee on development that would lead to the loss of over 20ha of 'best and most versatile' (BMV) agricultural land (land graded as 1, 2 and 3a in the Agricultural Land Classification (ALC) system, where this is not in accordance with an approved plan.

Natural England would like to understand how the local planning authority have produced the evidence base and options assessment which informs the strategic site allocations.

Natural England will engage with the local planning authority to consider the cumulative impacts of the loss of BMV both in the local and national context and the challenges related to environmental impact, infrastructure, and the requirement to deliver a balance between the need for development and the potential urbanisation of the countryside including the potential mitigation measures that need to be considered.

NPPF paragraph 174e states:

Planning policies and decisions should contribute to and enhance the natural and local environment by: ... preventing new and existing development from contributing to, being put at unacceptable risk from, or being adversely affected by, unacceptable levels of soil, air, water or noise pollution or land instability. Development should, wherever possible, help to improve local environmental conditions such as air and water quality, taking into account relevant information such as river basin management plans.

Natural England provides guidance to inform further assessment of air quality and the loss of BMV agricultural land in our response to the content of the plans Strategic Policies as set out below.

Do you consider that the Newcastle-under-Lyme Borough Council Regulation 19 pre-submission draft Plan is compliant with Duty to Co-operate?

In terms of working with neighbouring authorities, Natural England notes that initially the plan was intended to be produced jointly with the City of Stoke-on-Trent, the plan does not however currently present an evidence base that demonstrates that a collaborative approach has been adopted and that the Duty to Co-operate has been fully complied with.

The Sustainability Appraisal states that: "Overall, there is potential for a cumulative adverse effect on biodiversity, owing to the fragmentation of the ecological network... Where a large amount of development is located on previously undeveloped land surrounding rural settlements, this is likely to produce a long-term irreversible negative cumulative effect regarding the urbanisation of the countryside" (p 71)

Natural England would therefore like to further understand how the areas identified to meet the City of Stoke-on-Trent's unmet employment needs are justified and appropriate and whether meeting some of the employment needs of the City of Stoke-on-Trent has led to the need to release or safeguard more land from the Green Belt in Newcastle under Lyme. If this is the case, what are the exceptional circumstances for doing this and how does this align with the allocated sites options assessment?

Recreational Pressure

In terms of the South Pennine Moors SAC and recreational impacts, the Local Plan does comply with the Duty to Co-operate. Natural England recommends that reference is made to the 'Recreation use of the South Pennine Moors and implications for strategic housing growth' report by Footprint Ecology Ref 778 date 27th March 2024. This report should both inform the evidence base and ensure that policies relating to open space/green infrastructure are as rigorous and robust as possible.

The report concludes that more data/evidence is required to determine if recreational use is causing an impact across to the South Pennine Moors and to get a better understanding of the scale and location of any impact. Natural England notes that the report records 7,000 additional dwellings in

Newcastle-under-Lyme over the plan period rather than the 8,000 included in this regulation 19 submission. Newcastle-under-Lyme Borough Council should therefore continue to work with local authority and other partners to ensure coordinated and continued cross boundary action.

Other matters

Natural England has specific concerns related to allocations in the Green Belt. Notwithstanding that, Natural England considers most of the policies within the plan to be sound and deliverable. The plan is consistent with national policy with regard to those policies that are within Natural England's remit. Further information on strengthening policies including but not limited to Soils and best and most versatile (BMV) agricultural land, preventing loss and fragmentation of habitats and supporting green infrastructure are provided below.

Vision and Strategy

Natural England notes that the Plan's vision and emerging development strategy set out a framework for the future development of Newcastle-under-Lyme and addresses the needs in relation to housing, the economy, community facilities and infrastructure, including specific reference to a proposed employment site allocation.

This vision and the related objectives should also set out the environmental ambition for the plan area and form the basis for nature recovery and enhancement, supported by the policies and proposals in the plan.

Natural England advises that the vision should also incorporate more on the local ecology and landscape features which underpin local distinctiveness such as the "strong rural character with long open views across the surrounding rural landscape, towards more distant hills often framed by trees" (p 69) Part 3 Site Specific Landscape & Visual Appraisal. "Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms" (p 187) Sustainability Appraisal.

Strategic Objectives

Natural England welcome strategic objective SO-4 relating to carbon reduction and climate change, however we do not feel that this group of thirteen strategic objectives value or reflect the Boroughs whole ecology and landscape including but not limited to the protection of soil and best and most versatile (BMV) agricultural land. We would suggest that additional objectives are added relating to: air quality, water quality and quantity, soils and landscape.

Natural England would also like to see stronger reference to the Nature Recovery Network which is one of the specific aims of the Environment Act 2021 and will underpin the approach to the enhancement of nature.

Air quality is a major threat to habitats and species. Many ecological sites are exceeding their critical loads and levels for ammonia, nitrogen deposition and acid deposition. The strengthening of the policies and the rationale behind site allocations within this plan will ensure that new development does not contribute to the further deterioration of habitats and species due to air pollution. Further advice on strengthening the plans evidence base with regards to air quality is provided in the links below:

Natural England's approach to advising competent authorities on the assessment of road traffic emissions under the Habitats Regulations (NEA001)

 Strategic Policies
 5 Planning for Sustainable Development
 Policy PSD5: Green Belt
 Natural England notes that this policy “aims to protect the Borough's essential open spaces, prioritise the use of brownfield land, and guide potential future development in accordance with the National Planning Policy Framework (NPPF)”.
 Natural England however notes that amendments to the Green Belt boundary are proposed in the form of 14 site allocations to accommodate both the growth requirements of the borough and the employment requirements of wider Stoke-on-Trent conurbation. Natural England's has some site-specific concerns about the potential impacts of some of the green belt sites selected on the natural environment with regards to habitat loss, fragmentation and justification for the loss of BMV agricultural land.
 We note the LPA's intention to release and compensate for the loss of green belt and prioritise the use of suitable brownfield land. However, the site allocations in the green belt would result in the potential loss of 263ha of Best and Most Versatile (BMV) agricultural land. The council should satisfy itself that it is making a balanced decision for sustainable development, the Sustainability Appraisal concludes that: “The Green Belt Study assessed land parcels against the contribution they make to the five purposes of the Green Belt on a four-point scale...Three allocated sites (AB12, AB33 and TK10) are located in areas which make a ‘strong’ overall contribution to the purposes of the Green Belt where “the site contributes to the purpose in a strong and undeniable way, whereby removal of the site from the Green Belt will detrimentally undermine this purpose” (p101)
 “Site allocations on previously undeveloped land or that would result in a net loss of GI / vegetation could result in a reduced capability of the environment to provide ecosystem services including carbon storage, the storage and filtration of water including natural flood protection, as well as reduced availability and connectivity of habitats within the green network enabling movement of species. (p 165)
 Strategic Site Allocations
 Natural England suggests that the HRA should include a “requirement for project-level/site specific HRA's and targeted ecological surveys”.
 The Sustainability Appraisal concludes that:
 “Some 12 allocated sites partially coincide with priority habitats, where 3.43% of the total site allocation areas coinciding with priority habitats which include deciduous woodland, good quality semi-improved grassland and Site BL18 coincides with lowland fens which is a very high distinctiveness habitat in the BNG handbook (2024). These habitats can support a range of species of principal importance. Allocated Site KL15 is adjacent to ‘The Butts and Hands Wood’ ancient woodland, with a further 20 allocated sites located in close proximity to ancient woodlands. P158
 “Six allocated sites (Sites CT20, HD10, KL13, RC8, SP11(2) and SP23) are located within areas of ‘high’ or ‘very high’ habitat distinctiveness that provide high biodiversity value. Whilst in many cases these habitats can be conserved alongside development, it is likely that in some cases fragmentation or loss of habitats and connections between habitats will occur”
 “The majority of allocated sites are located on previously undeveloped land, which would result in the loss of soil resources and the ecosystem services they provide. (p 159) The development of new buildings on previously undeveloped land would be expected to result in a direct loss of soil resource, with little or no scope for mitigation” (p 216)
 “The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution. (p 68)
 For all sites, Natural England advises that the hydrological catchment within which the site sits is taken into consideration, with regards to the potential impact of the developments proposed on the adjoining watercourses and wider catchments, including but not limited to surface water runoff (including during construction), existing and required capacity of Waste Water Treatment Works (WwTW) and water supply and flooding issues. Each site will require site specific investigation, and the council should understand the impact of all the sites put forward individually and in combination.
 Natural England has specific concerns and or requires further information about the following ‘Strategic Site Allocations’ which could potentially impact on designated sites as a result of air and water quality and/or lead to the loss and / or fragmentation of priority habitats and BMV agricultural land:
 BL18 – Clough Hall Playing Fields, Talke
 Natural England would like to further understand this larger residential development proposal with regards to the potential impacts on the lowland fen habitat.
 KL13 & KL15 – Land South of A525 between Keele University and Newcastle
 Natural England notes this proposal for Employment development is immediately adjacent to ancient woodland priority habitat.
 HM28 – Land off East Lawns, Betley
 Existing and projected water quality issues at Betley Mere will need to be considered with regards to this allocation.
 LW53 – Loggerheads
 Natural England notes this residential housing development proposal is located within the IRZ of protected sites (Burnt Wood SSSI) which states that development proposals of 50 or more homes outside existing settlements/urban areas in these zones should be consulted upon with Natural England.
 SP11 – Former Keele Municipal Golf Course

This Larger residential development is categorised in the Landscape Assessment as having a Major adverse impact on the local Landscape.

AB2 – Land Adjoining Corner of A500 and M6 Southbound

Natural England notes this proposed employment allocation released entirely from the green belt, which comprises 70ha of grade 2 BMV agricultural land. The Landscape study concludes that the: “Proposed development scenario is likely to have a major adverse effect on the SA objective with no satisfactory mitigation possible” (p 15). With regards to potential Air Quality impacts on protected sites Natural England notes from the options analysis that “The loss or potential moving of a layby to enable access to the site could be problematic indicating potential issues with site access and traffic flow. An increase in HGV and personal vehicle traffic is anticipated, which could lead to potential congestion and air pollution in the area”. Natural England would therefore also like to understand the evidence base further including the rationale for an alternative site TK30 @ Talke A34 / A500 roundabout being ruled out.

Policy PSD6: Health and Wellbeing

Natural England welcome this policy direction in terms of safeguarding health and amenity and supporting healthy communities, through the protection and provision of high-quality open spaces, including allotments and the promotion of active travel transport choices Further information on joining up Nature Recovery and Green Infrastructure (GI) with health priorities is set out below. If more cities and towns can be creatively designed and managed, with nature and communities at their heart, we will see nature and people thrive. This is something we set out to inspire at Natural England when developing the Green Infrastructure Framework and Design Guide. Natural England's People and Nature survey tells us that, for 82% of people 'being in nature makes me happy'. With the cost-of-living crisis, 'free' places like local parks and greenspace, have become even more important. The value of these spaces for the economy is estimated at £28.7 billion per year.

Green infrastructure in towns and cities provides places to relax, exercise, and spend time outdoors; cools urban areas; reduces flooding by allowing water to permeate the ground rather than overwhelm our drains; increases biodiversity and helps to reduce inequalities in access to nature. Options assessments for development sites and related green and blue Infrastructure within and between developments, green spaces and designated sites should; include soft transition and consider potential direct and indirect implications on sustainable use for example visitor pressure and transport / access options.

The natural environment affords the best 'natural' play opportunities for children while offering multifunctional nature-based solutions to climate change etc. These can be blended into wildlife rich green infrastructure and green open spaces that can act as destination play sites for local children (See best practice at Play England and Play Wales) that have proven health and wellbeing value.

Evidence for nature play and health:

Play, naturally: a review of children's natural play

Nature for health and wellbeing | The Wildlife Trusts

Good practice in social prescribing for mental health: the role of nature-based interventions - NECR228 (naturalengland.org.uk)

6 Climate and Renewable Energy

Whilst Natural England welcomes this group of policies we recommend including Policy CRE1: Climate Change and Policy CRE2: Renewable Energy within the Sustainable Environment (SE) group of policies to achieve a collective strategic focus on sustainable development and working toward achieving net zero alongside the SE policies relating to Pollution and Air Quality (SE1) and requirements for sustainable water management measures to reduce water use, natural flood protection features alongside the specific policies on Sustainable Drainage Systems (Policy SE4:)

Natural England continues to work with the LPAs across the region on understanding air pollution across area boundaries (see comments and links in objectives section.)

10 Infrastructure and Transport Policy.

Policy IN4 Cycleways, Bridleways and Public Rights of Way

Natural England welcomes the inclusion of this group of policies which seek to maintain and enhance the network of public rights of way that cross the borough. We note that the sustainability appraisal states that “the borough has relatively poor accessibility to the cycle network and is the lowest performing in the county for walking zones” (p 206) and that, “eight allocated sites (AB2, AB12, AB33, HD10, KL15, MD29, SP11(3) and TK10) do not currently have safe pedestrian or cycle access adjacent to the site, where site end users may reliant upon less sustainable modes of transport including private car use”. (p 180)

11 Sustainable Environment

Natural England welcomes this group of policies and has the following policy specific comments:

Policy SE1: Pollution and Air Pollution.

Natural England welcomes this policy that notes that development proposals which are likely to result in detrimental impacts on air quality, will not be permitted unless it can be demonstrated that mitigation measures effectively address these impacts. (Comments on Air Quality are also provided on page 2 and 4 of this letter). The promotion of sustainable and active travel options, low-emission technologies and enhancement of green infrastructure to absorb air pollution is also noted. (see comment above re integrating the group: 6 Policies Climate and Renewable Energy).

Policy SE7: Biodiversity Net Gain

Natural England supports the inclusion of a policy on BNG. We suggest the following minor amendments to further improve the plan policy.

The BNG policy should make it clear that biodiversity net gain is not applied to irreplaceable habitats, and that any mitigation and/or compensation requirements for Habitats sites should be dealt with separately from biodiversity net gain provision. The policy should also set out how biodiversity net gain will be delivered and managed through the lifetime of the scheme and including monitoring requirements. This should include indicators to demonstrate the amount and type of gain provided through development. The indicators should be as specific as possible to help build an evidence base to take forward for future reviews of the plan, for example the total number and type of biodiversity units created, the number of developments achieving biodiversity net gains and a record of on-site and off-site contributions.

Natural England notes that the Sustainability Appraisal states “Despite the BNG provisions at the site level, there remains potential for a cumulative adverse impact on biodiversity at the landscape scale, owing to incremental habitat losses. As a result of development within the Local Plan undeveloped land will be lost which will include the loss of soil resources, habitats recognised as being of ‘high’ and ‘very high’ distinctiveness, and potentially ecological links between biodiversity assets, whereby the policies will not be expected to fully mitigate the fragmentation of the ecological network. Fragmentation of the ecological network across Newcastle-under-Lyme is expected to be a long-term and permanent significant effect.” (p 162)

Policy SE8: Biodiversity and Geodiversity

Natural England supports the inclusion of this policy to protect the Boroughs internationally, nationally and locally designated sites important for their biodiversity value and to enhance the natural environment and work with partners toward Nature Recovery.

We particularly welcome the plans recognition of the value of “wider ecological networks” stating that “Other sites, both individually and collectively, that are not designated can also contribute towards protecting and enhancing diversity of species locally”.

Policy SE10: Landscape

Natural England welcomes this policy aimed at ensuring that “development proposals should protect and enhance the character, quality, beauty, and tranquillity of the Borough”. We note from the sustainability appraisal that “The entirety of the south of the borough is identified as being high in relation to landscape sensitivity, which starts in Audley in the north and covers the southern area of the borough, including Loggerheads and Almington.” We agree that “Alteration of the landscape character is a long-term and permanent significant effect...There is potential for a cumulative adverse effect on landscape character resulting from the development proposed in the Plan”. (p193) SA.

Natural England has divided England into 159 distinct natural areas called National Character Areas (NCAs) Newcastle-under-Lyme falls within two NCAs: Shropshire, Cheshire and Staffordshire Plain: gently rolling plains dominated by intensive dairy farming, beef and arable production; The Potteries and Churnet Valley: strong contrast between the industrialised landscape of the Potteries and the pastoral, strongly dissected hills and small plateaux that flank the Churnet and Dove valleys.

Natural agrees with the following statement in the sustainability appraisal: “Although various policies aim to ensure that development conserves and enhances landscape character and distinctiveness, when combined with Local Plan policies that support infrastructural improvements such as for transportation, water, and waste, this is likely to lead to a long-term and irreversible cumulative adverse effect on landscape character and tranquillity and associated indicators such as dark skies.” (p72)

Policy SE11: Trees, hedgerows, and woodland

Natural England welcomes this plans recognition that “Trees, hedgerows, and woodlands are integral to the distinctive character and ecological health of the Borough of Newcastle-under-Lyme, defining landscapes across both urban and rural settlements.” And that “This policy prioritises the protection of existing natural assets, seeking to not only preserve, but actively enhance, these valuable features wherever possible”.

Policy SE13: Soil and Agricultural Land

Natural England has concerns about the justification for the loss of BMV agricultural land within this plan. “The proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land, A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of ‘best and most versatile’ (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services.” (page74) (SA)

Natural England notes that policy SE13 states: “Outside of sites allocated for development in the Local Plan, development proposals should avoid the loss of best and most versatile agricultural land (BMV) unless it can be demonstrated that the benefits of development clearly outweigh the loss of the land and every effort has been made to mitigate for the overall impact of the development on best and most versatile agricultural land.”

With regards to Soil and Agricultural Land Quality, Natural England advises that The Local Plan should give appropriate weight to the roles performed by the area’s soils. These should be valued as a finite multi-functional resource which underpin our wellbeing and prosperity. Decisions about development should take full account of the impact on soils, their intrinsic character and the sustainability of the many ecosystem services they deliver.

The 25 Year Environment Plan (25YEP) sets out government action to help the natural world regain and retain good health, including highlighting the need to:

- protect the best agricultural land
- put a value on natural capital, including healthy soil
- ensure all soils are managed sustainably by 2030
- restore and protect peatland

Soil is a finite resource which plays an essential role within sustainable ecosystems, performing an array of functions supporting a range of ecosystem services, including storage of carbon and water, the infiltration and transport of water, nutrient cycling, a buffer against pollution and provision of food. In order to safeguard soil resources as part of the overall sustainability of the development, it is important that the soil resource is able to retain as many of its important functions as possible. This can be achieved through careful soil management and appropriate, beneficial soil re-use, with consideration on how any adverse impacts on soils can be avoided or minimised.

The conservation and sustainable management of soils is reflected in the National Planning Policy Framework (NPPF), particularly in paragraph 180(a), 180(b) and 181 (footnote 62). When planning authorities are considering land use change, the permanency of the impact on soils is an important consideration. Particular care over planned changes to the most potentially productive soil is needed, for the ecosystem services it supports including its role in agriculture and food production.

Plan policies should therefore take account of the impact on land and soil resources and the wide range of vital functions (ecosystem services) they provide in line with paragraph 180(b) of the NPPF.

Soil Plan Policies

We strongly advise that at a minimum, the plan includes core policies for:

- the protection of best and most versatile (BMV) agricultural land (Grades 1, 2 and 3a in the Agricultural Land Classification (ALC)); and
- for the protection of and sustainable management of soils as a resource for the future.
- Areas of poorer quality land (ALC grades 3b, 4, 5) should be preferred to areas of higher quality land (grades 1, 2 and 3a).
- Recognise that development has an irreversible adverse impact on the finite national and local stock of BMV land.
- Conforms to NPPF and Planning Practice Guidance (Natural Environment and Minerals).
- Requires detailed ALC surveys to support plan allocations and for subsequent planning applications (for all sites larger than 5 ha). ALC surveys to support plan allocations and for subsequent planning applications for smaller sites (1 – 5 ha) would be welcomed.
- Recognise that development (soil sealing) has a major and usually irreversible adverse impact on soils.
- Soils of high environmental value (e.g., wetland and carbon stores such as peatland, low nutrient soils; or soils of high environmental value in the local context) should also be considered as part of ecological connectivity (Nature Recovery Network / Green Infrastructure).
- Requires soil handling and sustainable soil management strategies based on a detailed assessment of the soil resource based on best practice guidance (for all sites larger than 5 ha), ideally as part of the planning application process for major sites to help inform master-planning, and to safeguard the continued delivery of ecosystem services through careful soil management and appropriate, beneficial soil re-use. Soil handling and sustainable soil management strategies for smaller sites (1 – 5 ha) would be welcomed.
- Reference should be made to Defra's Construction Code of Practice for the Sustainable Use of Soils on Construction Sites
- In addition, for minerals and other temporary forms of development, plans for reinstatement, restoration and aftercare will be required (or for solar, a commitment to do so if the operational life is in decades); normally this will be return to the former land quality (ALC grade)
- Refers to soils issues within relevant policy areas such as renewable energy, climate change, green infrastructure and biodiversity net gain, flood schemes, managed realignment, development design and landscaping.

Policy SE14: Green and Blue Infrastructure

Natural England supports this policy. Well-designed cross boundary multi-functional green infrastructure contributes greatly to a number of benefits both for people and nature. Your green and blue (for example cross boundary canals) infrastructure should dovetail with your biodiversity net gain strategies to maximise benefits.

We would advise that the Local Authority also considers Natural England's Green Infrastructure Framework of Principles and Standards for England. As stated in our document, "Green infrastructure (GI) is part of the solution to many of the challenges we face; health inequalities, biodiversity crisis, climate change, nature recovery and levelling up. The GI framework supports local authorities, developers, parks and greenspace managers and local communities to enhance and create new good quality green infrastructure."

We would also suggest reference is made to the emerging Local Nature Recovery Strategy. Preparing Local Nature Recovery Strategies (LNRS) is a statutory requirement under the Environment Act 2021. LNRS are designed to work closely alongside other measures in the Act including supporting the delivery of mandatory biodiversity net gain and providing a focus for a strengthened duty on all public authorities to conserve and enhance biodiversity. They will also underpin the Nature Recovery Network, alongside work to develop partnerships and to integrate nature into our incentives and land management activities. Each LNRS will be specific and tailored to its area. The responsible authorities and people involved in preparing a strategy can choose how they want it to look, but every strategy must contain:

1. A local habitat map.
2. A written statement of biodiversity priorities. Statutory guidance for responsible authorities explains in detail what these 2 things should contain. Together they set out what the strategy is aiming to achieve and what practical actions will help do this. They will also propose where actions could be carried out for best effect and to connect and expand existing areas that are important for nature. We expect local nature recovery strategies to propose actions such as the:
 - creation of wetlands
 - restoration of peatlands
 - planting of trees and hedgerows
 - more sustainable management of existing woodlands and other habitats like grasslands
 These actions are intended to help nature itself and to also help improve the wider natural environment.

Whilst the Staffordshire Local Nature Recovery Strategy (LNRS) is currently a work in progress, Newcastle-under-Lyme Borough Council Regulation 19 pre-submission should still be consistent with NPPF Paragraph 185 in terms of setting out local habitat priorities and identifying potential measures by which they can be achieved, alongside mapping areas that could become of particular importance in the future.

Natural England encourages Newcastle Under Lyme Borough Council via their Local Nature Recovery Strategy to actively develop cross border cooperation between other Local Planning Authorities (LPA) (for example Staffordshire Moorlands Borough Council) in coordinating land development projects that impact on local biodiversity sites to ensure that local biodiversity corridors are maintained and link up other local important sites for nature conservation.

This is a good way of achieving nature recovery and preparing to deliver the LNRS alongside enabling the local authority and its partners to identify, map and safeguard site areas, including green and blue infrastructure opportunities and interlinkages.

Habitats Regulations Assessment

Natural England notes that this Local Plan is not directly connected with or necessary to the management of any European site. A screening assessment has been undertaken which identified a number of Likely Significant Effects (LSE) associated with the Local Plan. Taking no account of mitigation measures, the HRA concludes that Local Plan has the potential to affect the following European sites:

- Cannock Chase SAC
- Humber Estuary SAC, SPA and Ramsar

- Mersey Estuary SPA and Ramsar
- Midland Meres and Mosses Phase 1 Ramsar
- Midland Meres and Mosses Phase 2 Ramsar
- Pasturefields Salt Marsh SAC
- Peak District Dales SAC
- Peak District Moors (South Pennine Moors Phase 1) SPA
- Severn Estuary SAC, SPA and Ramsar
- South Pennine Moors SAC
- West Midland Mosses SAC

We welcome that your HRA includes the Humber Estuary SAC, SPA and Ramsar site which is hydrologically connected to the river Trent. If the Local Plan resulted in significant water pollution, this European site could be affected and has therefore been screened in, in relation to water quality only, on a precautionary basis. Natural England however notes that the Sustainability Appraisal identifies "A long-term cumulative adverse effect ...in terms of water quality" (p 148) as a result of the plan, this is not fully reflected in the current HRA.

Natural England note that the Sustainability Appraisal states: that "the entirety of the borough falls within IRZs of one or more SSSIs. All five SSSIs within the borough are in 'unfavourable' condition: Burnt Wood SSSI, Maer Pool SSSI, Black Firs and Cranberry Bog SSSI (Midlands Meres and Mosses Phase 2 Ramsar), Betley Mere SSSI (Midlands Meres and Mosses Phase 1 Ramsar) and Metallic Tileries, Parkhouse SSSI."

Natural England are also aware of the extensive network of ancient woodland spread across the borough, totalling 707.60 hectares, as well as a large quantity of priority habitats, totalling 1,791 hectares.

Natural England agree that the following designated sites and related priority habitats in adjoining LPA areas may also be affected by development through several pathways, including fragmentation, recreational pressure and/or pollution (including Air and Water Quality). Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI, Wybunbury Moss SAC SSSI, Tyrlay Canal Cutting SSSI, King's and Hargreaves Wood SSSI, Gannister Quarry SSSI, Roe Park Woods SSSI, Wetley Moore SSSI, Churnet Valley SSSI, Hatherton Flush SSSI, Sounds Heath SSSI, Ford Green Redebed SSSI, and Cop Mere SSSI.

It is noted that the Appropriate Assessment stage of the HRA assessed potential impacts by topic;

- Impacts on designated features affected by a possible deterioration in air quality
- Impacts on water quality and quantity associated with increased levels of built development.
- Impacts associated with increased recreational pressure at European sites; and
- Consideration of impacts at associated functionally linked land.

Natural England notes that the HRA also factored the following into the assessment process "the protective framework provided by the Local Plan and existing protection measures set out in high level strategic policy and existing planning policy frameworks that serve to help overcome the identified potential adverse effects" and that "taking into consideration these factors, it is concluded that the Local Plan would have no adverse impact on site integrity at any European site, either alone or in-combination.

Natural England disagree agree with this conclusion that for those Habitats sites in the area of search with features sensitive to air pollution, adverse effects on their integrity, alone or in-combination, can be ruled out for the reasons set out at the beginning of this letter on page 2 and repeated in part below:

Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot currently be ruled out at the following internationally designated sites:

- Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI
- Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI

Natural England are currently in discussion with a number of the Staffordshire and West Midlands LPA's with regards to the cumulative impacts of air quality. We advise that further work is required to inform the HRA. The HRA should demonstrate that there are no adverse effects on integrity of Habitat sites as a result of this Local Plan, alone and in combination with other plans and projects. With regards to allocated sites, it is unclear whether the individual sites put forward in the Local Plan have been assessed through the Habitat Regulations Assessment process and how mitigation will be applied here.

Sustainability Appraisal

Natural England has reviewed the Sustainability Appraisal (SA) and included comments taken from the document throughout our response.

The SA is a comprehensive document which should be reviewed in strengthening the HRA, particularly with regards to residual adverse effects that would be expected to remain in terms of wastewater following the implementation of the Local Plan policies. (p 141) Natural England notes that "Increased pressure on wastewater treatment has the potential to be a long term and potentially permanent significant effect" (p 142)

The SA recognises the local distinctiveness of the plan area;

"The Borough itself is largely rural in nature and supports some high-quality agricultural land, but is more heavily built up towards the north east surrounding Stoke-on-Trent. (p 8)

Newcastle-under-Lyme has a strong rural character with a high-quality landscape and countryside, with some areas identified as being sensitive to change as a result of new development. (p 19)

Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms make up the key features of some of these Landscape Character Types." (p 20)

Sets out the area specific barriers to achieving sustainable growth;

"Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)

Loss of tranquillity The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution.(p 68)

"The pre-mitigation SA assessments identified negative impacts in relation to air quality due to the proximity of sites to major roads, landscape character due to the location of sites within areas of high landscape sensitivity, close proximity to the PRoW network and potential for coalescence and urban

	<p>sprawl, habitat sites, priority habitats, habitat distinctiveness, loss of undeveloped land, 'best and most versatile' (BMV) agricultural land, coinciding with mineral safeguarding areas (MSAs) and areas of surface water flood risk (SWFR); and access to healthcare facilities, schools, the local cycle network and railway network. (p 40)</p> <p>There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work. (p 21)</p> <p>Trends in transport choice are unlikely to change significantly, and private car use would continue to increase as the selected method of transport to work, with potential adverse impacts on air quality in the borough."(p 23)</p> <p>Considers the local and cumulative significance of soil loss alongside the ecological implications: "Loss of soil resources, BMV land and ecosystem services The proposed allocations would cumulatively result in the loss of up to approximately 342ha of previously undeveloped land, including up to 263ha of BMV agricultural land. The proposed development would be expected to reduce the ability of the local soil biome to effectively provide ecosystem services, to some extent. Additionally, the loss of permeable soils could potentially increase the risk of flooding and result in a loss of biodiversity across the Plan area. Loss of soil can also result in an increase in soil erosion and have subsequent impacts on agricultural yield.(p 68) The majority of the borough is ALC Grade 3 soil, with areas of ALC Grade 2 scattered across the borough. Grade 2 and potentially Grade 3 represents some of the borough's BMV agricultural land and should be conserved wherever possible (p 21)</p> <p>A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of BMV land to be lost as a result of the development proposed in the Local Plan." (p 59)</p> <p>Other Advice</p> <p>Further general advice is provided within Natural England Advice Note – Local Plans February 2024, attached at (Appendix A) - see attachment</p>

Title	Policy PSD5: Green Belt
Consultee Family Name	Manor View Care Home Ltd
Agent Company / Organisation	Knights PLC
Agent Family Name	Askew
Agent Given Name	Michael
Q4 Part of document	Policy
Q4 Policy	PSD5
Q6 Details	<p>Please see attached representations. Criterion 1 of this policy states that:</p> <p>"The Green Belt boundary is defined on the draft Policies Map."</p> <p>The Newcastle-under-Lyme Borough Council and Stoke-on-Trent City Council Green Belt Assessment (November 2017) that was produced by Arup assesses the contribution that the individual parcels of Green Belt land have in respect to the five purposes of including them within the Green Belt, however the area of Green Belt covering is area of Audley was not assessed as part of that report The Green Belt Assessment Part 2 considers our client's site which formed part of a wider site (identified as AB6) which runs up to the boundary with the A500 and contains land on both sides of the Alsager Road. When assessing this wider parcel of land, the Part 2= assessment considers that this site has a strong contribution when to one of the purposes (safeguarding against encroachment) but either moderate, weak or no contributions in respect of the other purposes. The assessment considers that this wider site has a strong degree of openness and has a less durable boundary between the site and the countryside. Clearly this assessment is based upon the wider site in general, and our client's site sits within a small element of this; is bounded by Cross Lane and other field boundaries as well as the approved 7no. dwelling scheme. The LVIA that supports the current planning application in fact demonstrates that views of the site are extremely limited to views from adjacent roads and the footpaths along the perimeter of the site.</p> <p>The subsequent Green Belt Assessment (Part 3) produced in 2023 does include an assessment of our client's wider site (as submitted through the Call for Sites process) which is given the reference 'AB79 - Land South of Cross Lane, Audley' (the westernmost element comprises the land that is subject to planning application 23/00522/FUL). Whilst the assessment of this wider site considers that it has an overall strong contribution to the purposes of including land within the Green Belt, it does acknowledge that the north and northwest boundaries with Cross Lane (where this development is located) "is durable and would prevent encroachment if it were developed".</p> <p>This, combined with the enabling development justification (which is advanced as part of the 23/00522/FUL planning application by heritage consultants HCUK), demonstrates that this site would be an appropriate location for housing to cross-fund the redevelopment of Madeley Manor. The provision of additional landscaped areas on the northeast and southeast of the site would amplify these defensible boundaries as well as assist to soften its impact upon the wider surrounding area as it matures.</p> <p>As stated previously in this report, the draft National Planning Policy Framework supports sustainably located sites (including Grey Belt sites) within the Green Belt to be used to deliver the identified housing growth. This site is considered to comprise a Grey Belt site given that it falls within the definition of "any</p>

	<p>other parcels and/or areas of Green Belt land that make a limited contribution to the five Green Belt purposes".</p> <p>It is considered that the site itself does not contribute towards the five purposes of the Green Belt as set out in paragraph 143 of the current National Planning Policy Framework as demonstrated below:</p> <p>a) "to check the unrestricted sprawl of large built-up areas" – The provision of this site as a housing allocation would not extend closer towards the Newcastle urban area and would therefore would not result in the increase in size of the Staffordshire conurbation.</p> <p>b) "to prevent neighbouring towns merging into one another" – The proposed allocation of this site would not reduce the gap between the other Audley Parish villages to the south of Audley.</p> <p>c) "to assist in safeguarding the countryside from encroachment" – The site would be reinforced by established, defensible boundaries and the proposed landscaping scheme shown in Appendix A illustrates how this would be further enhanced.</p> <p>d) "to preserve the setting and special character of historic towns" – Audley does not comprise a historic town.</p> <p>e) "to assist in urban regeneration, by encouraging the recycling of derelict and other urban land" – Audley and Bignall End contain very little derelict land that could realistically come forward to provide a housing scheme of a scale that would deliver economic, social and environmental benefits to the extent that this site would. The overall quantum of housing provided, whilst of a scale beneficial to Audley, would not conflict with the wider development strategy proposed under draft Policy PSD 1.</p> <p>In light of the above, it is considered that the allocation of this site would not contradict the five purposes of including land within the Green Belt.</p> <p>As a result, it is recommended that this site be also excluded from the Green Belt and instead allocated as a residential development.</p> <p>It has been demonstrated that there is a clear and robust argument in favour of removing New Farm, Cross Lane, Audley from the Green Belt and allocating it for residential purposes. The site would bring forward substantial benefits to Audley and the Borough as a whole (as demonstrated by the Economic Benefits Statement that was produced by Pegasus Group in support of planning application 23/00522/FUL) and would also facilitate the redevelopment of Madeley Manor to enable it to be conserved and put to a viable use consistent with its conservation for the foreseeable future. The proposal would provide much needed family housing which is currently underprovided within Audley, which would attract new upwardly mobile families to the area, particularly those who may be associated with the new employment allocation at Junction 16 of the M6.</p> <p>The site (as well as land beyond which is also within the ownership of our client as set out in Appendix B) would bring forward substantial benefits to Audley, Bignall End and the Borough as a whole and would align with the Government's aspirations to deliver 1.5 million homes during the next parliament.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	Knights wish to participate at the hearing sessions for Policies PSD3, PSD4 and PSD5 so that we can demonstrate why the New Farm, Audley site should be included as a residential allocation in the Policies Map.

Q4 Part of document	Policy
Q4 Policy	PSD5
Q6 Details	<p>Please see attached representations. Criterion 1 of this policy states that:</p> <p>"The Green Belt boundary is defined on the draft Policies Map."</p> <p>The Newcastle-under-Lyme Borough Council and Stoke-on-Trent City Council Green Belt Assessment (November 2017) that was produced by Arup assesses the contribution that the individual parcels of Green Belt land have in respect to the five purposes of including them within the Green Belt. This site was identified as Parcel</p> <p>which was focused around the southern portion of the village. When assessing this site, the report identified that the overall parcel had a 'moderate contribution' overall with only a 'strong contribution' in one area (to preserve the setting and special character of historic town) with the balance either assessed to have either a 'modest contribution', a 'weak contribution' or 'no contribution'. It is however important that our client's site that is proposed for allocation consists of only a small portion of this wider parcel of land and consequently a carefully considered redevelopment is likely to have far less impact on purposes of including land within the Green Belt when viewed in isolation. The subsequent Parts 2 and 3 of the Green Belt Assessment make no reference to this site, furthermore the Green Belt Village Study (produced in July 2024) makes no reference to proposed changes to Betley's settlement boundary.</p> <p>As stated previously in this report, the draft National Planning Policy Framework supports sustainably located sites within the Green Belt to be used to deliver the identified housing growth. Such sites are not just restricted to 'Grey Belt' sites, which very few sites on the fringe of Betley (including this site) fall</p>

	<p>within the definition of, due to the allocation of the Betley Conservation Area which extends beyond the settlement boundary. Indeed, those sites that are on the fringe of Betley and outside of the conservation area have poor infrastructure links and would not provide a logical extension to Betley (i.e. are located behind linear rows of housing which would result in contrived site access locations). By comparison the allocation of our client's site would result in the logical rounding off of the southeastern portion of the village and would be seen as an area still very much at the heart of the village (due to its close proximity to St Margaret's Church, the cricket ground and the facilities and public transport links along Main Road). It is considered that the site itself does not contribute towards the five purposes of the Green Belt as set out in paragraph 143 of the current National Planning Policy Framework as demonstrated below:</p> <p>a) "to check the unrestricted sprawl of large built-up areas" – The rounding off of the southeastern portion of Betley would not result in the increase in size of the Staffordshire conurbation as it would involve the enlargement of a village.</p> <p>b) "to prevent neighbouring towns merging into one another" – The proposed allocation of this site would retain a substantial gap between the nearest village of Wrinehill to the south of the site. Indeed, there currently exists a strong ribbon development along both sides of Main Road further south of the site which function and have the visual appearance as part of the existing village of Betley.</p> <p>c) "to assist in safeguarding the countryside from encroachment" – The site would be reinforced by established, defensible boundaries including the cricket ground to the northeast, Main Road to the west and field boundaries to the south. The proposal would also reinforce these existing boundaries through new landscaped areas (including BNG enhancements).</p> <p>d) "to preserve the setting and special character of historic towns" – The Arup Green Belt Assessment Part 1 identified the Betley as being a historic town and therefore concluded this it had a strong contribution to this purposes of the Green Belt. Notwithstanding this, this does not mean that a wellconsidered housing scheme would automatically be harmful to the village's historic setting or adversely affect the Betley Conservation Area. In any event, the proposed development would be supported by a Heritage Impact Assessment that would demonstrate that the significance of the conservation area would be preserved through a well-considered design. By focusing on a consolidated area of redevelopment to round off this part of the village in a master-planned layout, this would be a more pragmatic approach than through other piecemeal development throughout the village which would likely erode the village's special historic character to a greater extent.</p> <p>e) "to assist in urban regeneration, by encouraging the recycling of derelict and other urban land" – Betley contains very little derelict land that could realistically come forward to provide a housing scheme of a scale that would deliver economic, social and environmental benefits to the extent that this site would. The overall quantum of housing provided, whilst of a scale beneficial to Betley, would not conflict with the wider development strategy proposed under draft Policy PSD 1.</p> <p>As a result, it is recommended that this site be also excluded from the Green Belt and instead allocated as a residential development.</p> <p>It is considered that the Draft Policy Map should be amended as set out in Figure 4. The suggested allocation also incorporates a number of rear gardens serving residential properties along Butts Lane to the north of the site which are considered to comprise a logical rounding off of the village (see attachment for Plan, figure 4) It has been demonstrated that there is a clear and robust argument in favour of removing Land East of Main Road, Betley from the Green Belt and allocating it as a residential development. The site would bring forward substantial benefits to Betley and the Borough as a whole and would align with the Government's aspirations to deliver 1.5 million homes during the next parliament (with the Borough identified as needing to accommodate 193 new homes per year). The proposal would provide much needed family market and affordable housing which is currently underprovided within Betley.</p>
Q7 Modification	Please see attached representations
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	Knights wish to participate at the hearing sessions for Policies PSD3, PSD4 and PSD5 so that we can demonstrate why the Betley Court Farm, land east of Main Road, Betley site should be included as a residential allocation in the Policies Map. (I reattach the representations document again for ease of reference).

Q6 Details	<p>Draft Policy PSD5: Green Belt</p> <p>Draft Policy</p> <p>PSD5: Green Belt defines the Green Belt boundary on the Policies Map. The plan thus acknowledges that exceptional circumstances exist to release Green Belt land which is supported by MHDL. However as set out in our representations above, we consider that the plan is unsound as it does not plan for enough homes to meet its own needs nor in the context of cross boundary strategic planning with Stoke on Trent. As such as we consider that there is still a shortfall in housing land within the authority which can only be met through further release of Green Belt land to meet future development needs. MHDL therefore considers that the draft</p> <p>Policy PSD4: Green Belt and the Policies Map fails to meet the tests of soundness for the following reasons:</p> <ol style="list-style-type: none"> 1 It is not positively prepared – it fails to identify sufficient sources of developable residential land that are underpinned by sound evidence; 2 It is not justified – the Council has not provided robust evidence to underpin its housing requirement and has not considered reasonable alternatives to meet housing needs on additional sites; 3 It is not effective – the proposed Green Belt boundary will not allow the delivery of housing required as evidenced in our response to draft Policy PSD1; and, 4 It is not consistent with national policy – it therefore fails to afford with the Framework (paragraphs 15, 20, 60 – 62 inclusive).
Q7 Modification	<p>It is recommended that consideration should be given to our client's land interests in 'Land at Madeley Heath' (site ref. MD12A, also known as 'Land Area 2 at Marley Eternit Tiles, Madeley Heath'). Previous site specific representations prepared by Frost Planning in response to the Regulation 18 consultation sets out why this Site is considered to have excellent potential to deliver a substantial number of new homes and new school for Madeley Heath. In summary, the Site is contained within the existing built-up area both physically and visually (including planning permission Planning permission (17/00514/OUT) granted in 2018 for 35 dwellings on adjacent land to the east) and M6 corridor. It is not considered to make any significant contribution towards the five purposes of the Green Belt. Lichfields has expanded on Frost's original assessment of the Site's performance against the Green Belt purposes below:</p> <p>1</p> <p>The existing containment due to surrounding housing, industry, and the M6 motorway would prevent urban sprawl in any directions. In addition, the Council's own assessment of the Site confirms that this would not represent unrestricted sprawl of the large built-up area as it is not connected to the large built-up area of Newcastle Under Lyme.</p> <p>2</p> <p>Madeley and Madeley Heath already form a single settlement as a joint Rural Centre so the merging of neighbouring towns could not occur. The Council's assessment comments that the development of this Site would significantly reduce the gap between Madeley Heath and Madeley (although it acknowledges that the M6 retains an element of separation). We do not endorse this assessment regarding a reduction in the gap. This is because there are already residential dwellings outwith the settlement boundary to the west of the Site (washed over by Green Belt). The development of this Site will bring the built-up area no closer to Madeley than residential development which already exists.</p> <p>3</p>

	<p>The Site is not considered to have any physical or visual affinity to the wider open countryside due to the containment by surrounding housing, industry and the M6 motorway thus is not considered to encroach into the countryside. The Council's own assessment comments on the size of the settlement relative to the size of Madeley Heath. However, this is not considered relevant to the encroachment into the countryside and this analysis is best placed when considering the sustainability of the Site and the ability of the Site to be supported by the existing services and amenities. Indeed, the Council's own evidence base states that the centre of the village of Madeley is within 15 minutes' walk to the centre of Madeley Heath. It is therefore critical to review the sustainability of this Site in the context of the joint settlement which is explored further below (in considering sustainability). Nevertheless, we do not endorse the Council's assessment on encroachment into the Countryside as the Site is entirely contained. Madeley or Madeley Heath are not considered to be historic towns and therefore the development would not affect, or other neighbouring towns, due to the factors above. Therefore, development would not harm the historic setting of nearby settlements.</p> <p>5</p> <p>The development would indirectly assist in urban regeneration in the district, including encouraging the recycling of derelict and other urban land, by providing more housing and bolstering the Borough's economic climate (i.e. increased spend and future investment in the urban areas). Nevertheless, the Council have already acknowledged that exceptional circumstances exist to release Green Belt land and thus this Site performs no different to any other Green Belt site being considered for allocation for residential development.</p> <p>Overall, we consider that the Council's own assessment of the Site's performance against the Green Belt purposes is fundamentally flawed and do not endorse the conclusion that the Site would make a moderate contribution to Green Belt purposes / harm the overall function and integrity of the Green Belt. In addition to the assessment above, it is considered that if it is found that there is no need for a school on this Site, the layout can be easily reconfigured to bring residential development forward on the parcel of land closest to the existing village of Madeley Heath. We therefore urge that the Council reconsider the Site for allocation to meet additional needs evidenced in our response to draft Policy PSD 1.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	On behalf of our client, MHD, we formally request to participate in hearing sessions associated with Draft Policy PSD 1, Draft Policy PSD 2, Draft Policy PSD 3, SA Section 5: Reasonable Alternatives, Draft Policy PSD 5 & Draft Policy MD29. We consider that our representation at the hearing sessions is necessary to ensure our representations above are taken into account for the draft Local Plan to be found sound.

Q5 DTC compliant	Yes
Q6 Details	<p>The current level of protection for 40 hectares of woodland, pasture and grassland should not be removed from the greenbelt by sleight of hand.</p> <p>1 The proposed country park at Lyme Park within SP11-the former Keele Golf Course- is currently a mixture of woodland and grassland.</p> <p>2 The former site SP14, known as the cowfield. SP14 continues in agricultural use as pasture and contains a rectangle of environmentally sensitive land on the north west flank.</p> <p>3 The dense woodland at Job's Wood (identifiable on the 1900 OS map) contains regionally significant geology, a former sandstone quarry.</p> <p>4 There are sections of unidentified woodland across this area with connectivity to nature reserves and other wildlife habitats.</p> <p>5 The field pattern of 'Silverdale Farm', the precursor of the golf course is imprinted across sites SP11 and SP23 with the patchwork of hedgerows still in existence, also discernable from the 1900 OS map of Silverdale.</p> <p>The country park within SP11 and the site known as SP14 the Cowfield, bounded by SP23,Cemetery Road and the A525 should remain incorporated the greenbelt.</p> <p>The net effect of the modifications would protect up to 45 hectares of open space currently within the greenbelt and thereby reduce the harm of the development proposals for the future on the greenbelt, the vista along the A525 and to the natural environment of Silverdale and Keele parishes.</p>
Q7 Modification	<p>Modification1: The proposed country park within SP11 and the SP14 the Cowfield should remain incorporated the greenbelt.</p> <p>The net effect of the modifications would protect up to 45 hectares of open space currently within the greenbelt and thereby reduce the harm of the development proposals on the greenbelt.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	<p>The last major development in Silverdale completed in 2014 included 300 houses, a country park and Athletic club as part of a massive regeneration project on the huge Silverdale Colliery which ceased production in 1998.</p> <p>This 2024 Local Plan multiplies Heritage Park by a factor of 4.</p> <p>The impact of the proposed housing allocation at SP11 and SP23 on the community in Silverdale will be extraordinary and complex.</p> <p>Consider the photograph the landscape west across Silverdale from a drone hovering above the middle of SP23.</p> <p>The ground in 2040 below will consist of 2 new estates. SP23 200 houses and SP11 (4) 100 houses. The parkland beyond, about 75 hectares will consist of a further 800 houses. That total transformation requires much more in the way of preparation than provided in this document. It is so much more more than shifting a boundary line on a map by 1.8km.</p> <p>The two other maps indicate very thinly what the impact might be on the ground.</p> <p>Understanding this complexity is not easy. From many conversations with residents and officers of the council I would be able to explain the many concerns of residents both as an individual and as chair of the parish council.</p>

Title	Policy PSD6: Health and Wellbeing
Consultee Company / Organisation	The British Horse Society
Consultee Family Name	Bannerman
Consultee Given Name	Wendy
Q4 Part of document	Policy
Q4 Policy	PSD6
Q6 Details	<p>Dear Local Plan Team</p> <p>Reg 19 Local Plan Newcastle-under-Lyme</p> <p>The response below is from the British Horse Society however our volunteers in the county may also respond at a local level.</p> <p>Overall</p> <p>The British Horse Society is the UK's largest equestrian Charity, representing the UK's 3 million horse riders. Nationally equestrians have just 22% of the rights of way network – only 16.4% in Staffordshire - and are increasingly forced to use busy roads to access them.</p> <p>Between 01.01.2023 – 31.12.2023 nationally:</p> <ul style="list-style-type: none"> • 3,345 road incidents involving horses have been reported to The British Horse Society • Of these, 50 horses have died and 77 have been injured • 3 people have died, and 94 people have been injured because of road incidents • 23% of riders were victims to road rage or abuse • 82% of incidents occurred because a vehicle passed by too closely to the horse • 79% of incidents occurred because a vehicle passed by too quickly <p>'Planning policies and decisions should protect and enhance public rights of way and access, including taking opportunities to provide better facilities for users' (NPPF, s104).</p> <p>DEFRA has recorded a population of 755 horses in the ST5 postcode area (2021). The contribution per horse to the economy, according to BETA (2023), is £6,887, therefore is this case a contribution of £5,199,685 per annum. Equestrian activities in semi-rural areas (bring your horse on holiday, pleasure rides, competitions) are increasingly popular in addition to established activities such as schooling and hacking. The equine industry provides diverse employment (vets, farriers, feed outlets, saddlers, instructors, venues, liveries, etc). Promoting, nurturing and enabling equestrian access would support the equestrian industry.</p> <p>PSD6 Health and Wellbeing</p> <p>5.43 Modes of travel, which are not only for utility and in reality mostly for leisure, should not be limited to walking, cycling and wheeling. Plans should include equestrians to make these multi-user routes;</p>

	<p>otherwise the scenario is horses become sandwiched between MPV traffic on one side and cyclists on the other. Active travel does include equestrians. Jesse Norman in House of Commons debate on Road Safety, 5 November 2018: "We should be clear that the cycling and walking strategy may have that name but is absolutely targeted at vulnerable road users, including horse-riders".</p> <p>In terms of health and wellbeing, according to BETA (2023) 58% of equestrians are women and Church et al (2010) found 37% of women who are horse riders are over 45 years of age and over a third would pursue no other physical activity. 22% of equestrians are under 16 years old and 15% are over 45 – it is an activity that can span lifetimes. Only 15% of BHS members identify as 'competition riders' with the vast majority enjoying their equines for recreational enjoyment, hacking off-road and on roads. Information is available from https://www.bhs.org.uk/go-riding/leaflets-and-downloads/</p>

Consultee Company / Organisation	Cross Heath, Wolstanton and May Bank Branch Labour Party
Consultee Position	Branch Secretary
Consultee Family Name	Gorton
Consultee Given Name	Richard
Q4 Part of document	Policy
Q4 Policy	PSD6
Q6 Details	<p>Policy PSD6 – Health and Wellbeing - – The Branch strongly supports this section and welcomes the emphasis the draft Plan places on health and wellbeing through access to sport, exercise and a healthy diet. We endorse the commitment given in the Plan to reducing obesity and endorse action to prevent the concentration of hot food takeaways (Policy RET3). We feel that greater use should be made of Health Impact Assessments in the scrutiny of development applications. The number of shops selling vapes in and around Newcastle Town centre cannot be overlooked and should be curbed. Single -use vapes cannot be recycled and represent a threat to health. We take the view that the draft Local Plan should recognize the adverse environmental and health effects of single-use vapes.</p>
Q7 Modification	<p>Modification of Policy PSD6 – highlight the greater use of Health Impact Assessments in the scrutiny of development applications. Refer in the draft Plan to the need to curb the number of shops in Newcastle Town centre selling vapes.</p>
Q9 Hearing reasons	<p>Conclusion</p> <p>Cross Heath, Wolstanton and May Bank Branch Labour Party welcomes the opportunity to give its views in response to the Regulation 19 stage of the draft Local Plan. If it is felt to be appropriate, a member of the Branch would be prepared to take part in the public scrutiny of the draft Local Plan.</p>

Consultee Company / Organisation	Jones Homes & Renew Land Baldwins Gate Ltd)
Consultee Family Name	Jones Homes & Renew Land Ltd
Agent Company / Organisation	Stantec
Agent Position	Planner
Agent Family Name	Connell
Agent Given Name	Lydia
Q4 Part of document	Policy
Q4 Policy	PSD6
Q6 Details	<p>These representations are submitted by Stantec on behalf of Jones Homes (North West) Ltd (Jones Homes) and Renew Land Baldwins Gate Ltd (Renew Land), together known as "the Promoters", in response to the Final Publication Draft of the Newcastle-under-Lyme 2020- 2040 ('Local Plan') at Regulation 19 published by Newcastle-under-Lyme Borough Council (NuLBC) ('the Council) in August 2024. Please also see attached representations.</p> <p>Jones Homes is in broad agreement with Policy PSD6 as drafted and is committed to promoting and enabling healthy communities. However, at provision 1.a. the Council require development to follow Sport England's Active Design Principles (as updated). This provision is a concern as it will mean NuLBC signing up to and requiring all future development to adhere to currently unknown active design principles. NuLBC will in essence be relinquishing control of this design area to a quasi-non-governmental organisation. A more positive and justified approach would be for Policy PSD6 to require developments to account of Sport England Active Design Principles where possible as a material consideration in decision making.</p> <p>In addition, at provision 1.f, the Council state that development should 'provide access to accessible sports facilities and green spaces and opportunity for recreation and leisure that is available and affordable for all ages and abilities'. To be justified, this provision needs to be more specific. For example, in what</p>

	specific development scenarios will this provision be applied? And what does the Council consider to be 'accessible'? Depending on the scale and location of development, it may not be justified for development to provide access to accessible sports facilities.
Q7 Modification	Please see attached representations.

Title	Policy PSD6: Health and Wellbeing
Consultee Company / Organisation	Staffordshire County Council
Consultee Family Name	Chadwick
Consultee Given Name	James
Q4 Part of document	Policy
Q4 Policy	PSD6
Q5 Legally compliant	Yes
Q5 Sound	Yes
Q5 DTC compliant	Yes
Q6 Details	<p>The Staffordshire Public Health and Prevention Team are particularly supportive of Policy PSD6: Health and Wellbeing. The requirements outlined for new developments which aim to foster safe, healthy, and active lifestyles, are in line with our priorities within our Healthy Environments and Healthy Behaviours programmes. They also provide practical application of the guidance contained in the NPPF that local authorities should 'enable and support healthy lifestyles, especially where this would address green infrastructure, sports facilities, local shops, access to healthier food, allotments and design layouts that encourage walking and cycling'.</p> <p>The commitment to achieving healthy weight for the population of Newcastle-Under-Lyme is evident through the support of active design principles and restrictions on hot food takeaway businesses. This is positive, given the specific challenges around weight management and obesity in the borough and the subsequent cost to health services.</p> <p>It is clear that Borough Council have acknowledged the health and wellbeing challenges in the Borough, and that they recognise the potential of planning in positive changes to promote good health and wellbeing. The inclusion of health impact assessments as a way for developers to review proposals against a set of health and wellbeing concerns, is particularly welcomed. It is expected that this will have a long term impact through carefully considered developments which ensure that the potential for healthier lifestyles is designed into the landscape, housing, and infrastructure, within the Borough.</p>

	<p>Policy HOU5 refers particularly to the need of specialist needs housing which is addressing an identified need. However, we particularly welcome references made to building for healthy life made within Policy PSD7. In particular, the requirement for housing developments to build accessible and inclusive homes is an important addition to ensure that homes are built for all who may need them, and to reduce the need for expensive adaptations made for people with physical challenges due to age or disability. It is positive to see this reinforced further in Policy HOU3 which acknowledges that physical accessibility is not just relevant to older people but also to younger people with additional needs.</p> <p>Health and wellbeing within the wider environment where homes are built is also well considered in PSD7 through the requirement to produce a design review at an early stage and the inclusion of active travel and aesthetic considerations and innovative solutions to design that will meet the needs of those that reside in those communities.</p> <p>Public Health and Prevention are also satisfied with the inclusion of blue and green infrastructure, trees and other planting, and the growing and sourcing of local food supplies in Policy CRE1. This is an important addition for climate change but can also have a positive impact on physical and mental health. It is also more thoroughly thought through in Open Space, Sports and Leisure Provision (Policy SE6) with particular reference to restricting the loss of open spaces. This supports our priority to increase physical activity and supports the understanding that open spaces have a positive impact on mental health. The inclusion of Policy SE14, Green and Blue Infrastructure, is very well considered for this purpose.</p> <p>Policy RET3 expands on earlier references made to hot food takeaways. Public Health and Prevention particularly endorse the requirement to restrict hot food takeaways close to schools, and for a health impact assessment to be undertaken by the applicant for any proposals to open a hot food takeaway. This is due to the higher-than-average levels of overweight and obese children and adults in the NUL area, and the subsequent health consequences as outlined in the policy.</p> <p>References made to promotion of active travel in the town centre (Policy RET4), within Transport and Accessibility (Policy IN2) and Cycleways, Bridleways and Public Rights of Way (Policy IN4) support our Public Health priority to increase physical activity.</p>

Consultee Family Name	Willard
Consultee Given Name	Gerald
Q4 Part of document	Policy
Q4 Policy	PSD6
Q5 Sound	No
Q6 Details	This draft policy seems to omit the delivery of a new country park (Lyme Park). It is explained that Lyme Park is needed to boost health and well being. If this is the case then policy PS6 ought to include a requirement for the delivery of this park.
Q7 Modification	No dwelling within allocation SP11 shall be occupied until the boundaries of the associated Country Park have been set out and its main features provided or protected in accord with a delivery, management and maintenance plan for the park. The intent being to ensure certain delivery of this new country park which the Council say is needed for health and well being.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	In seeking the following modifications to the plan, I do consider it necessary to participate in examination hearing session(s) in order advise the inspector of my clients concerns and to respond to any questions that the inspector may have.

Q4 Part of document	Policy
Q4 Policy	PSD6
Q5 Legally compliant	Yes
Q5 Sound	Yes
Q5 DTC compliant	Yes
Q6 Details	<p>Please see supporting representation by Knights on behalf of Aspire. Criteria c of this policy requires a screening health impact assessment to be undertaken for major development schemes. Major development is currently defined as developments of 10 dwellings or more.</p> <p>This is considered to be an onerous requirement on small and medium sized developers and is likely to add further time and cost burdens on such developers.</p> <p>There is no evidence to suggest that building new housing results in unacceptable health impacts, and major developments are often subject to other requirements and assessments, such as providing travel plans to encourage the use of non-car modes of transport, design policies that promote walking and cycling, design policies that require the provision of greenspace and usable area of public open space, policies that require sites to be located in close proximity to services and facilities and other policies that promote active travel. These are all matters which are often covered within submitted transport assessments and design and access statements and are also issues considered at the design review stage.</p> <p>In addition, other validation requirements will also assess proposals with regard to air quality, noise and other environmental matters.</p> <p>New housing developments are unlikely to result in adverse impacts on health and wellbeing of themselves and it is considered that the need to provide a health impact assessment for residential development proposals is unnecessary. It is therefore proposed that this aspect of Policy PSD6 is removed as it would be an unnecessary duplication of process and other technical assessments that usually form part of a planning application submission.</p> <p>Summary of recommendations:</p> <p>(a) Remove criteria c of the policy which requires a health impact assessment. Such matters are adequately covered by other validation requirements and other policies</p>
Q7 Modification	Please see supporting representation by Knights on behalf of Aspire
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)

Consultee Company / Organisation	NHS Property Services
Consultee Family Name	Fleet
Consultee Given Name	Daniel
Q4 Part of document	Policy
Q4 Policy	PSD6
Q6 Details	<p>Draft Policy PSD6 Health and Wellbeing</p> <p>Draft Policy PSD6 sets out the Council's commitment to making sure that development promotes healthier lifestyles and improves overall health and wellbeing. NHSPS welcomes and supports the inclusion of policies that support healthy lifestyles, and the requirement for Health Impact Assessments on major developments. There is a well-established connection between planning and health, and the planning system has an important role in creating healthy communities. The planning system is critical not only to the provision of improved health services and infrastructure by enabling health providers to meet changing healthcare needs, but also to addressing the wider determinants of health.</p>

Title	Policy PSD6: Health and Wellbeing
Consultee Company / Organisation	Natural England
Consultee Position	Senior Officer
Consultee Family Name	McLaughlin
Consultee Given Name	Sally
Q4 Part of document	Policy
Q4 Policy	PSD6
Q6 Details	<p>Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.</p> <p>Natural England welcomes the opportunity to comment at this stage of the Local Plan and particularly supports the inclusion of policies on green and blue infrastructure, biodiversity, health and wellbeing, trees hedgerows and woodlands. We have reviewed the consultation documents and provide comments that relate to the soundness of the Local Plan and that are most relevant to our interest in the Natural Environment.</p> <p>Natural England has adopted a robust precautionary approach within this plan response. Whilst we welcome the content of the Local Plan, Natural England advises that the plan is currently at risk of being unsound and/or not legally compliant due to the potential impacts on air quality in relation to internationally designated nature conservation sites and the justification for the potential loss of 263ha best and most versatile (BMV) agricultural land. Further detail is provided below.</p> <p>Natural England have also provided other advice within this submission relating to further improvements that could strengthen plan policies and specific strategic site options and related mitigation.</p> <p>Do you consider that the Newcastle Under Lyme Plan is Sound and Legally Compliant?</p> <p>Natural England notes that the plan is at the pre-submission stage and as such your authority is seeking confirmation on the soundness of the plan. Having reviewed the plan and supporting documents, Natural England considers the pre-submission plan in its current form is not sound or legally compliant, this is due to a lack of evidence with regards to air quality and the cumulative loss of BMV agricultural land both in a local and national context.</p> <p>Air quality</p> <p>Natural England notes that the Sustainability Appraisal states that "Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)</p> <p>As Natural England understands it the current evidence base used to conduct the HRA cannot rule out adverse impacts on designated sites. The HRA states at page 22 3.4.16 "At the time of writing, the traffic modelling run for the final suite of Regulation 19 allocations had not been undertaken." Appendix A lists the local plans for neighbouring LPA's concluding that 'in combination' with plans and projects (approved and those yet to be implemented) they may trigger in-combination effects on European sites as a result of air quality, particularly as we understand it in the key commuting areas.</p> <p>Natural England notes that Annual Average Daily Traffic (AADT) data and traffic modelling in the Strategic Transport Assessment (STA) concludes a potential reduction in travel and related air pollution at allocated sites as a result of a predicted preference in the use of public transport. We are surprised by this projected decrease in both traffic and related air pollution, particularly as one employment allocation site includes a 200-bay lorry park and increased congestion is predicted at junction 16 of the M6 where it joins the A500 in a rural location with no existing rural transport provision. The Sustainability Appraisal also notes</p>

that: "There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work". (p 206)

Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot therefore currently be ruled out at the following internationally designated sites:

- Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI
- Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI

The HRA outlines that the main source of ammonia emissions is agricultural practice, and that material increases in NH₃ emissions are unlikely to be associated with the proposed local plan. At Black Firs and Cranberry Bog and Oakhanger Moss, any increase in nitrogen deposition has the potential to exacerbate pollution levels and thereby undermine the reasons for notification of these sites as a Ramsar.

Ammonia can be emitted from vehicle exhaust emissions as a by-product of the catalytic conversion process designed to reduce emissions of nitrogen oxide. As traffic composition transitions toward more petrol and electric cars (i.e., fewer diesel cars on the road), catalytic converters may aid in reducing NO_x emissions but result in increased ammonia emissions. Ammonia emissions from road traffic therefore could make a significant difference to nitrogen deposition close to roads.

Natural England therefore advise that ammonia sourced from traffic emissions should be included for assessment within the local plan HRA, as the impact from this source on designated sites is currently unclear. For further information please see this report from Air Quality Consultants (AQC) that looks at ammonia emissions from roads for assessing impacts on nitrogen-sensitive habitats. Whilst we are aware that the current CREAM model created by AQC used to assess ammonia emissions from road traffic has not been peer reviewed, at this time it has been recognised as a Best Available Tool and we deem it appropriate to be used where any caveats associated with this model are also considered within the assessment. An assessment based on the best available approach is necessary. The next stage of assessment can then consider uncertainties in the model and site specifics to decide if mitigation needs to be considered.

Further work is therefore required to inform the Habitat Regulations Assessment. Natural England will engage with the Local Planning Authority in order to produce a Statement of Common Ground (SoCG) on this matter.

'Best and most versatile' (BMV) agricultural land

Natural England notes that "the proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land, A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of 'best and most versatile' (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services". (page 74 Sustainability Appraisal).

Under the Town and Country Planning (Development Management Procedure) (England) Order 2015 (DMPO) Natural England is a statutory consultee on development that would lead to the loss of over 20ha of 'best and most versatile' (BMV) agricultural land (land graded as 1, 2 and 3a in the Agricultural Land Classification (ALC) system, where this is not in accordance with an approved plan.

Natural England would like to understand how the local planning authority have produced the evidence base and options assessment which informs the strategic site allocations.

Natural England will engage with the local planning authority to consider the cumulative impacts of the loss of BMV both in the local and national context and the challenges related to environmental impact, infrastructure, and the requirement to deliver a balance between the need for development and the potential urbanisation of the countryside including the potential mitigation measures that need to be considered.

NPPF paragraph 174e states:

Planning policies and decisions should contribute to and enhance the natural and local environment by:

- ... preventing new and existing development from contributing to, being put at unacceptable risk from, or being adversely affected by, unacceptable levels of soil, air, water or noise pollution or land instability.

Development should, wherever possible, help to improve local environmental conditions such as air and water quality, taking into account relevant information such as river basin management plans.

Natural England provides guidance to inform further assessment of air quality and the loss of BMV agricultural land in our response to the content of the plans Strategic Policies as set out below.

Do you consider that the Newcastle-under-Lyme Borough Council Regulation 19 pre-submission draft Plan is compliant with Duty to Co-operate?

In terms of working with neighbouring authorities, Natural England notes that initially the plan was intended to be produced jointly with the City of Stoke-on-Trent, the plan does not however currently present an evidence base that demonstrates that a collaborative approach has been adopted and that the Duty to Co-operate has been fully complied with.

The Sustainability Appraisal states that: "Overall, there is potential for a cumulative adverse effect on biodiversity, owing to the fragmentation of the ecological network... Where a large amount of development is located on previously undeveloped land surrounding rural settlements, this is likely to produce a long-term irreversible negative cumulative effect regarding the urbanisation of the countryside" (p 71)

Natural England would therefore like to further understand how the areas identified to meet the City of Stoke-on-Trent's unmet employment needs are justified and appropriate and whether meeting some of the employment needs of the City of Stoke-on-Trent has led to the need to release or safeguard more land from the Green Belt in Newcastle under Lyme. If this is the case, what are the exceptional circumstances for doing this and how does this align with the allocated sites options assessment?

Recreational Pressure

In terms of the South Pennine Moors SAC and recreational impacts, the Local Plan does comply with the Duty to Co-operate. Natural England recommends that reference is made to the 'Recreation use of the South Pennine Moors and implications for strategic housing growth' report by Footprint Ecology Ref 778 date 27th March 2024. This report should both inform the evidence base and ensure that policies relating to open space/green infrastructure are as rigorous and robust as possible.

The report concludes that more data/evidence is required to determine if recreational use is causing an impact across to the South Pennine Moors and to get a better understanding of the scale and location of any impact. Natural England notes that the report records 7,000 additional dwellings in Newcastle-under-Lyme over the plan period rather than the 8,000 included in this regulation 19 submission.

Newcastle-under-Lyme Borough Council should therefore continue to work with local authority and other partners to ensure coordinated and continued cross boundary action.

Other matters

Natural England has specific concerns related to allocations in the Green Belt. Notwithstanding that, Natural England considers most of the policies within the plan to be sound and deliverable. The plan is consistent with national policy with regard to those policies that are within Natural England's remit. Further information on strengthening policies including but not limited to Soils and best and most versatile (BMV) agricultural land, preventing loss and fragmentation of habitats and supporting green infrastructure are provided below.

Vision and Strategy

Natural England notes that the Plan's vision and emerging development strategy set out a framework for the future development of Newcastle-under-Lyme and addresses the needs in relation to housing, the economy, community facilities and infrastructure, including specific reference to a proposed employment site allocation.

This vision and the related objectives should also set out the environmental ambition for the plan area and form the basis for nature recovery and enhancement, supported by the policies and proposals in the plan.

Natural England advises that the vision should also incorporate more on the local ecology and landscape features which underpin local distinctiveness such as the "strong rural character with long open views across the surrounding rural landscape, towards more distant hills often framed by trees" (p 69) Part 3 Site Specific Landscape & Visual Appraisal. "Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms" (p 187) Sustainability Appraisal.

Strategic Objectives

Natural England welcome strategic objective SO-4 relating to carbon reduction and climate change, however we do not feel that this group of thirteen strategic objectives value or reflect the Boroughs whole ecology and landscape including but not limited to the protection of soil and best and most versatile (BMV) agricultural land. We would suggest that additional objectives are added relating to: air quality, water quality and quantity, soils and landscape.

Natural England would also like to see stronger reference to the Nature Recovery Network which is one of the specific aims of the Environment Act 2021 and will underpin the approach to the enhancement of nature.

Air quality is a major threat to habitats and species. Many ecological sites are exceeding their critical loads and levels for ammonia, nitrogen deposition and acid deposition. The strengthening of the policies and the rationale behind site allocations within this plan will ensure that new development does not contribute to the further deterioration of habitats and species due to air pollution. Further advice on strengthening the plans evidence base with regards to air quality is provided in the links below:

Strategic Policies

5 Planning for Sustainable Development

Policy PSD5: Green Belt

Natural England notes that this policy "aims to protect the Borough's essential open spaces, prioritise the use of brownfield land, and guide potential future development in accordance with the National Planning Policy Framework (NPPF)".

Natural England however notes that amendments to the Green Belt boundary are proposed in the form of 14 site allocations to accommodate both the growth requirements of the borough and the employment requirements of wider Stoke-on-Trent conurbation. Natural England's has some site-specific concerns about the potential impacts of some of the green belt sites selected on the natural environment with regards to habitat loss, fragmentation and justification for the loss of BMV agricultural land.

We note the LPA's intention to release and compensate for the loss of green belt and prioritise the use of suitable brownfield land. However, the site allocations in the green belt would result in the potential loss of 263ha of Best and Most Versatile (BMV) agricultural land. The council should satisfy itself that it is making a balanced decision for sustainable development, the Sustainability Appraisal concludes that: "The Green Belt Study assessed land parcels against the contribution they make to the five purposes of the Green Belt on a four-point scale...Three allocated sites (AB12, AB33 and TK10) are located in areas which make a 'strong' overall contribution to the purposes of the Green Belt where "the site contributes to the purpose in a strong and undeniable way, whereby removal of the site from the Green Belt will detrimentally undermine this purpose" (p101)

"Site allocations on previously undeveloped land or that would result in a net loss of GI / vegetation could result in a reduced capability of the environment to provide ecosystem services including carbon storage,

the storage and filtration of water including natural flood protection, as well as reduced availability and connectivity of habitats within the green network enabling movement of species. (p 165)

Strategic Site Allocations

Natural England suggests that the HRA should include a “requirement for project-level/site specific HRA's and targeted ecological surveys”.

The Sustainability Appraisal concludes that:

“Some 12 allocated sites partially coincide with priority habitats, where 3.43% of the total site allocation areas coinciding with priority habitats which include deciduous woodland, good quality semi-improved grassland and Site BL18 coincides with lowland fens which is a very high distinctiveness habitat in the BNG handbook (2024). These habitats can support a range of species of principal importance. Allocated Site KL15 is adjacent to ‘The Butts and Hands Wood’ ancient woodland, with a further 20 allocated sites located in close proximity to ancient woodlands. P158

“Six allocated sites (Sites CT20, HD10, KL13, RC8, SP11(2) and SP23) are located within areas of ‘high’ or ‘very high’ habitat distinctiveness that provide high biodiversity value. Whilst in many cases these habitats can be conserved alongside development, it is likely that in some cases fragmentation or loss of habitats and connections between habitats will occur”

“The majority of allocated sites are located on previously undeveloped land, which would result in the loss of soil resources and the ecosystem services they provide. (p 159) The development of new buildings on previously undeveloped land would be expected to result in a direct loss of soil resource, with little or no scope for mitigation” (p 216)

“The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution. (p 68)

For all sites, Natural England advises that the hydrological catchment within which the site sits is taken into consideration, with regards to the potential impact of the developments proposed on the adjoining watercourses and wider catchments, including but not limited to surface water runoff (including during construction), existing and required capacity of Waste Water Treatment Works (WwTW) and water supply and flooding issues. Each site will require site specific investigation, and the council should understand the impact of all the sites put forward individually and in combination.

Natural England has specific concerns and or requires further information about the following ‘Strategic Site Allocations’ which could potentially impact on designated sites as a result of air and water quality and/or lead to the loss and / or fragmentation of priority habitats and BMV agricultural land:

BL18 – Clough Hall Playing Fields, Talke

Natural England would like to further understand this larger residential development proposal with regards to the potential impacts on the lowland fen habitat.

KL13 & KL15 – Land South of A525 between Keele University and Newcastle

Natural England notes this proposal for Employment development is immediately adjacent to ancient woodland priority habitat.

HM28 – Land off East Lawns, Betley

Existing and projected water quality issues at Betley Mere will need to be considered with regards to this allocation.

LW53 – Loggerheads

Natural England notes this residential housing development proposal is located within the IRZ of protected sites (Burnt Wood SSSI) which states that development proposals of 50 or more homes outside existing settlements/urban areas in these zones should be consulted upon with Natural England.

SP11 – Former Keele Municipal Golf Course

This Larger residential development is categorised in the Landscape Assessment as having a Major adverse impact on the local Landscape.

AB2 – Land Adjoining Corner of A500 and M6 Southbound

Natural England notes this proposed employment allocation released entirely from the green belt, which comprises 70ha of grade 2 BMV agricultural land. The Landscape study concludes that the: “Proposed development scenario is likely to have a major adverse effect on the SA objective with no satisfactory mitigation possible” (p 15). With regards to potential Air Quality impacts on protected sites Natural England notes from the options analysis that “The loss or potential moving of a layby to enable access to the site could be problematic indicating potential issues with site access and traffic flow. An increase in HGV and personal vehicle traffic is anticipated, which could lead to potential congestion and air pollution in the area”. Natural England would therefore also like to understand the evidence base further including the rationale for an alternative site TK30 @ Talke A34 / A500 roundabout being ruled out.

Policy PSD6: Health and Wellbeing

Natural England welcome this policy direction in terms of safeguarding health and amenity and supporting healthy communities, through the protection and provision of high-quality open spaces, including allotments and the promotion of active travel transport choices Further information on joining up Nature Recovery and Green Infrastructure (GI) with health priorities is set out below. If more cities and towns can be creatively designed and managed, with nature and communities at their heart, we will see nature and people thrive. This is something we set out to inspire at Natural England when developing the Green Infrastructure Framework and Design Guide. Natural England's People and Nature survey tells us that, for 82% of people ‘being in nature makes me happy’. With the cost-of-living crisis, ‘free’ places like local parks and greenspace, have become even more important. The value of these spaces for the economy is estimated at £28.7 billion per year.

Green infrastructure in towns and cities provides places to relax, exercise, and spend time outdoors; cools urban areas; reduces flooding by allowing water to permeate the ground rather than overwhelm our drains; increases biodiversity and helps to reduce inequalities in access to nature. Options assessments for development sites and related green and blue Infrastructure within and between developments, green spaces and designated sites should; include soft transition and consider potential direct and indirect implications on sustainable use for example visitor pressure and transport / access options.

The natural environment affords the best ‘natural’ play opportunities for children while offering multifunctional nature-based solutions to climate change etc. These can be blended into wildlife rich

green infrastructure and green open spaces that can act as destination play sites for local children (See best practice at Play England and Play Wales) that have proven health and wellbeing value.

Evidence for nature play and health:
 Play, naturally: a review of children's natural play
 Nature for health and wellbeing | The Wildlife Trusts
 Good practice in social prescribing for mental health: the role of nature-based interventions - NECR228 (naturalengland.org.uk)

6 Climate and Renewable Energy
 Whilst Natural England welcomes this group of policies we recommend including Policy CRE1: Climate Change and Policy CRE2: Renewable Energy within the Sustainable Environment (SE) group of policies to achieve a collective strategic focus on sustainable development and working toward achieving net zero alongside the SE policies relating to Pollution and Air Quality (SE1) and requirements for sustainable water management measures to reduce water use, natural flood protection features alongside the specific policies on Sustainable Drainage Systems (Policy SE4:)
 Natural England continues to work with the LPAs across the region on understanding air pollution across area boundaries (see comments and links in objectives section.)

10 Infrastructure and Transport Policy.
 Policy IN4 Cycleways, Bridleways and Public Rights of Way
 Natural England welcomes the inclusion of this group of policies which seek to maintain and enhance the network of public rights of way that cross the borough. We note that the sustainability appraisal states that "the borough has relatively poor accessibility to the cycle network and is the lowest performing in the county for walking zones" (p 206) and that, "eight allocated sites (AB2, AB12, AB33, HD10, KL15, MD29, SP11(3) and TK10) do not currently have safe pedestrian or cycle access adjacent to the site, where site end users may be reliant upon less sustainable modes of transport including private car use". (p 180)

11 Sustainable Environment
 Natural England welcomes this group of policies and has the following policy specific comments:
 Policy SE1: Pollution and Air Quality.
 Natural England welcomes this policy that notes that development proposals which are likely to result in detrimental impacts on air quality, will not be permitted unless it can be demonstrated that mitigation measures effectively address these impacts. (Comments on Air Quality are also provided on page 2 and 4 of this letter). The promotion of sustainable and active travel options, low-emission technologies and enhancement of green infrastructure to absorb air pollution is also noted. (see comment above re integrating the group: 6 Policies Climate and Renewable Energy).
 Policy SE7: Biodiversity Net Gain
 Natural England supports the inclusion of a policy on BNG. We suggest the following minor amendments to further improve the plan policy.
 The BNG policy should make it clear that biodiversity net gain is not applied to irreplaceable habitats, and that any mitigation and/or compensation requirements for Habitats sites should be dealt with separately from biodiversity net gain provision. The policy should also set out how biodiversity net gain will be delivered and managed through the lifetime of the scheme and including monitoring requirements. This should include indicators to demonstrate the amount and type of gain provided through development. The indicators should be as specific as possible to help build an evidence base to take forward for future reviews of the plan, for example the total number and type of biodiversity units created, the number of developments achieving biodiversity net gains and a record of on-site and off-site contributions.
 Natural England notes that the Sustainability Appraisal states "Despite the BNG provisions at the site level, there remains potential for a cumulative adverse impact on biodiversity at the landscape scale, owing to incremental habitat losses. As a result of development within the Local Plan undeveloped land will be lost which will include the loss of soil resources, habitats recognised as being of 'high' and 'very high' distinctiveness, and potentially ecological links between biodiversity assets, whereby the policies will not be expected to fully mitigate the fragmentation of the ecological network. Fragmentation of the ecological network across Newcastle-under-Lyme is expected to be a long-term and permanent significant effect." (p 162)
 Policy SE8: Biodiversity and Geodiversity
 Natural England supports the inclusion of this policy to protect the Boroughs internationally, nationally and locally designated sites important for their biodiversity value and to enhance the natural environment and work with partners toward Nature Recovery.
 We particularly welcome the plans recognition of the value of "wider ecological networks" stating that "Other sites, both individually and collectively, that are not designated can also contribute towards protecting and enhancing diversity of species locally".
 Policy SE10: Landscape
 Natural England welcomes this policy aimed at ensuring that "development proposals should protect and enhance the character, quality, beauty, and tranquillity of the Borough". We note from the sustainability appraisal that "The entirety of the south of the borough is identified as being high in relation to landscape sensitivity, which starts in Audley in the north and covers the southern area of the borough, including Loggerheads and Alington." We agree that "Alteration of the landscape character is a long-term and permanent significant effect... There is potential for a cumulative adverse effect on landscape character resulting from the development proposed in the Plan". (p193) SA.
 Natural England has divided England into 159 distinct natural areas called National Character Areas (NCAs) Newcastle-under-Lyme falls within two NCAs: Shropshire, Cheshire and Staffordshire Plain: gently rolling plains dominated by intensive dairy farming, beef and arable production; The Potteries and Churnet Valley: strong contrast between the industrialised landscape of the Potteries and the pastoral, strongly dissected hills and small plateaux that flank the Churnet and Dove valleys.
 Natural agrees with the following statement in the sustainability appraisal: "Although various policies aim to ensure that development conserves and enhances landscape character and distinctiveness, when combined with Local Plan policies that support infrastructural improvements such as for transportation, water, and waste, this is likely to lead to a long-term and irreversible cumulative adverse effect on landscape character and tranquillity and associated indicators such as dark skies." (p72)

Policy SE11: Trees, hedgerows, and woodland

Natural England welcomes this plans recognition that “Trees, hedgerows, and woodlands are integral to the distinctive character and ecological health of the Borough of Newcastle-under-Lyme, defining landscapes across both urban and rural settlements.” And that “This policy prioritises the protection of existing natural assets, seeking to not only preserve, but actively enhance, these valuable features wherever possible”.

Policy SE13: Soil and Agricultural Land

Natural England has concerns about the justification for the loss of BMV agricultural land within this plan. “The proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land. A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of ‘best and most versatile’ (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services.” (page74) (SA)

Natural England notes that policy SE13 states: “Outside of sites allocated for development in the Local Plan, development proposals should avoid the loss of best and most versatile agricultural land (BMV) unless it can be demonstrated that the benefits of development clearly outweigh the loss of the land and every effort has been made to mitigate for the overall impact of the development on best and most versatile agricultural land.”

With regards to Soil and Agricultural Land Quality, Natural England advises that The Local Plan should give appropriate weight to the roles performed by the area’s soils. These should be valued as a finite multi-functional resource which underpin our wellbeing and prosperity. Decisions about development should take full account of the impact on soils, their intrinsic character and the sustainability of the many ecosystem services they deliver.

The 25 Year Environment Plan (25YEP) sets out government action to help the natural world regain and retain good health, including highlighting the need to:

- protect the best agricultural land
- put a value on natural capital, including healthy soil
- ensure all soils are managed sustainably by 2030
- restore and protect peatland

Soil is a finite resource which plays an essential role within sustainable ecosystems, performing an array of functions supporting a range of ecosystem services, including storage of carbon and water, the infiltration and transport of water, nutrient cycling, a buffer against pollution and provision of food. In order to safeguard soil resources as part of the overall sustainability of the development, it is important that the soil resource is able to retain as many of its important functions as possible. This can be achieved through careful soil management and appropriate, beneficial soil re-use, with consideration on how any adverse impacts on soils can be avoided or minimised.

The conservation and sustainable management of soils is reflected in the National Planning Policy Framework (NPPF), particularly in paragraph 180(a), 180(b) and 181 (footnote 62). When planning authorities are considering land use change, the permanency of the impact on soils is an important consideration. Particular care over planned changes to the most potentially productive soil is needed, for the ecosystem services it supports including its role in agriculture and food production.

Plan policies should therefore take account of the impact on land and soil resources and the wide range of vital functions (ecosystem services) they provide in line with paragraph 180(b) of the NPPF.

Soil Plan Policies

We strongly advise that at a minimum, the plan includes core policies for:

- the protection of best and most versatile (BMV) agricultural land (Grades 1, 2 and 3a in the Agricultural Land Classification (ALC)); and
- for the protection of and sustainable management of soils as a resource for the future.
- Areas of poorer quality land (ALC grades 3b, 4, 5) should be preferred to areas of higher quality land (grades 1, 2 and 3a).
- Recognise that development has an irreversible adverse impact on the finite national and local stock of BMV land.
- Conforms to NPPF and Planning Practice Guidance (Natural Environment and Minerals).
- Requires detailed ALC surveys to support plan allocations and for subsequent planning applications (for all sites larger than 5 ha). ALC surveys to support plan allocations and for subsequent planning applications for smaller sites (1 – 5 ha) would be welcomed.
- Recognise that development (soil sealing) has a major and usually irreversible adverse impact on soils.
- Soils of high environmental value (e.g., wetland and carbon stores such as peatland, low nutrient soils; or soils of high environmental value in the local context) should also be considered as part of ecological connectivity (Nature Recovery Network / Green Infrastructure).
- Requires soil handling and sustainable soil management strategies based on a detailed assessment of the soil resource based on best practice guidance (for all sites larger than 5 ha), ideally as part of the planning application process for major sites to help inform master-planning, and to safeguard the continued delivery of ecosystem services through careful soil management and appropriate, beneficial soil re-use. Soil handling and sustainable soil management strategies for smaller sites (1 – 5 ha) would be welcomed.
- Reference should be made to Defra’s Construction Code of Practice for the Sustainable Use of Soils on Construction Sites
- In addition, for minerals and other temporary forms of development, plans for reinstatement, restoration and aftercare will be required (or for solar, a commitment to do so if the operational life is in decades); normally this will be return to the former land quality (ALC grade)
- Refers to soils issues within relevant policy areas such as renewable energy, climate change, green infrastructure and biodiversity net gain, flood schemes, managed realignment, development design and landscaping.

Policy SE14: Green and Blue Infrastructure

Natural England supports this policy. Well-designed cross boundary multi-functional green infrastructure contributes greatly to a number of benefits both for people and nature. Your green and blue (for example cross boundary canals) infrastructure should dovetail with your biodiversity net gain strategies to maximise benefits.

We would advise that the Local Authority also considers Natural England's Green Infrastructure Framework of Principles and Standards for England. As stated in our document, "Green infrastructure (GI) is part of the solution to many of the challenges we face; health inequalities, biodiversity crisis, climate change, nature recovery and levelling up. The GI framework supports local authorities, developers, parks and greenspace managers and local communities to enhance and create new good quality green infrastructure."

We would also suggest reference is made to the emerging Local Nature Recovery Strategy. Preparing Local Nature Recovery Strategies (LNRS) is a statutory requirement under the Environment Act 2021. LNRS are designed to work closely alongside other measures in the Act including supporting the delivery of mandatory biodiversity net gain and providing a focus for a strengthened duty on all public authorities to conserve and enhance biodiversity. They will also underpin the Nature Recovery Network, alongside work to develop partnerships and to integrate nature into our incentives and land management activities. Each LNRS will be specific and tailored to its area. The responsible authorities and people involved in preparing a strategy can choose how they want it to look, but every strategy must contain:

1. A local habitat map.

2. A written statement of biodiversity priorities. Statutory guidance for responsible authorities explains in detail what these 2 things should contain. Together they set out what the strategy is aiming to achieve and what practical actions will help do this. They will also propose where actions could be carried out for best effect and to connect and expand existing areas that are important for nature. We expect local nature recovery strategies to propose actions such as the:

- creation of wetlands
 - restoration of peatlands
 - planting of trees and hedgerows
 - more sustainable management of existing woodlands and other habitats like grasslands
- These actions are intended to help nature itself and to also help improve the wider natural environment.

Whilst the Staffordshire Local Nature Recovery Strategy (LNRS) is currently a work in progress, Newcastle-under-Lyme Borough Council Regulation 19 pre-submission should still be consistent with NPPF Paragraph 185 in terms of setting out local habitat priorities and identifying potential measures by which they can be achieved, alongside mapping areas that could become of particular importance in the future.

Natural England encourages Newcastle Under Lyme Borough Council via their Local Nature Recovery Strategy to actively develop cross border cooperation between other Local Planning Authorities (LPA) (for example Staffordshire Moorlands Borough Council) in coordinating land development projects that impact on local biodiversity sites to ensure that local biodiversity corridors are maintained and link up other local important sites for nature conservation.

This is a good way of achieving nature recovery and preparing to deliver the LNRS alongside enabling the local authority and its partners to identify, map and safeguard site areas, including green and blue infrastructure opportunities and interlinkages.

Habitats Regulations Assessment

Natural England notes that this Local Plan is not directly connected with or necessary to the management of any European site. A screening assessment has been undertaken which identified a number of Likely Significant Effects (LSE) associated with the Local Plan. Taking no account of mitigation measures, the HRA concludes that Local Plan has the potential to affect the following European sites:

- Cannock Chase SAC
- Humber Estuary SAC, SPA and Ramsar
- Mersey Estuary SPA and Ramsar
- Midland Meres and Mosses Phase 1 Ramsar
- Midland Meres and Mosses Phase 2 Ramsar
- Pasturefields Salt Marsh SAC
- Peak District Dales SAC
- Peak District Moors (South Pennine Moors Phase 1) SPA
- Severn Estuary SAC, SPA and Ramsar
- South Pennine Moors SAC
- West Midland Mosses SAC

We welcome that your HRA includes the Humber Estuary SAC, SPA and Ramsar site which is hydrologically connected to the river Trent. If the Local Plan resulted in significant water pollution, this European site could be affected and has therefore been screened in, in relation to water quality only, on a precautionary basis. Natural England however notes that the Sustainability Appraisal identifies "A long-term cumulative adverse effect ...in terms of water quality" (p 148) as a result of the plan, this is not fully reflected in the current HRA.

Natural England note that the Sustainability Appraisal states: that "the entirety of the borough falls within IRZs of one or more SSSIs. All five SSSIs within the borough are in 'unfavourable' condition: Burnt Wood SSSI, Maer Pool SSSI, Black Firs and Cranberry Bog SSSI (Midlands Meres and Mosses Phase 2 Ramsar), Betley Mere SSSI (Midlands Meres and Mosses Phase 1 Ramsar) and Metallic Tileries, Parkhouse SSSI."

Natural England are also aware of the extensive network of ancient woodland spread across the borough, totalling 707.60 hectares, as well as a large quantity of priority habitats, totalling 1,791 hectares.

Natural England agree that the following designated sites and related priority habitats in adjoining LPA areas may also be affected by development through several pathways, including fragmentation, recreational pressure and/or pollution (including Air and Water Quality). Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI, Wyburnbury Moss SAC SSSI, Tyrley Canal Cutting SSSI, King's and Hargreaves Wood SSSI, Gannister Quarry SSSI, Roe Park Woods SSSI, Wetley Moore SSSI, Churnet Valley SSSI, Hatherton Flush SSSI, Sounds Heath SSSI, Ford Green Redebed SSSI, and Cop Mere SSSI.

It is noted that the Appropriate Assessment stage of the HRA assessed potential impacts by topic;

- Impacts on designated features affected by a possible deterioration in air quality
- Impacts on water quality and quantity associated with increased levels of built development.
- Impacts associated with increased recreational pressure at European sites; and

	<p>-Consideration of impacts at associated functionally linked land.</p> <p>Natural England notes that the HRA also factored the following into the assessment process “the protective framework provided by the Local Plan and existing protection measures set out in high level strategic policy and existing planning policy frameworks that serve to help overcome the identified potential adverse effects” and that “taking into consideration these factors, it is concluded that the Local Plan would have no adverse impact on site integrity at any European site, either alone or in-combination.</p> <p>Natural England disagree agree with this conclusion that for those Habitats sites in the area of search with features sensitive to air pollution, adverse effects on their integrity, alone or in-combination, can be ruled out for the reasons set out at the beginning of this letter on page 2 and repeated in part below:</p> <p>Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot currently be ruled out at the following internationally designated sites:</p> <ul style="list-style-type: none"> •Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI •Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI <p>Natural England are currently in discussion with a number of the Staffordshire and West Midlands LPA's with regards to the cumulative impacts of air quality. We advise that further work is required to inform the HRA. The HRA should demonstrate that there are no adverse effects on integrity of Habitat sites as a result of this Local Plan, alone and in combination with other plans and projects. With regards to allocated sites, it is unclear whether the individual sites put forward in the Local Plan have been assessed through the Habitat Regulations Assessment process and how mitigation will be applied here.</p> <p>Sustainability Appraisal</p> <p>Natural England has reviewed the Sustainability Appraisal (SA) and included comments taken from the document throughout our response.</p> <p>The SA is a comprehensive document which should be reviewed in strengthening the HRA, particularly with regards to residual adverse effects that would be expected to remain in terms of wastewater following the implementation of the Local Plan policies. (p 141) Natural England notes that “Increased pressure on wastewater treatment has the potential to be a long term and potentially permanent significant effect” (p 142)</p> <p>The SA recognises the local distinctiveness of the plan area;</p> <p>“The Borough itself is largely rural in nature and supports some high-quality agricultural land, but is more heavily built up towards the north east surrounding Stoke-on-Trent. (p 8)</p> <p>Newcastle-under-Lyme has a strong rural character with a high-quality landscape and countryside, with some areas identified as being sensitive to change as a result of new development. (p 19)</p> <p>Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms make up the key features of some of these Landscape Character Types.” (p 20)</p> <p>Sets out the area specific barriers to achieving sustainable growth;</p> <p>“Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)</p> <p>Loss of tranquillity The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution.(p 68)</p> <p>“The pre-mitigation SA assessments identified negative impacts in relation to air quality due to the proximity of sites to major roads, landscape character due to the location of sites within areas of high landscape sensitivity, close proximity to the PRoW network and potential for coalescence and urban sprawl, habitat sites, priority habitats, habitat distinctiveness, loss of undeveloped land, ‘best and most versatile’ (BMV) agricultural land, coinciding with mineral safeguarding areas (MSAs) and areas of surface water flood risk (SWFR); and access to healthcare facilities, schools, the local cycle network and railway network. (p 40)</p> <p>There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work. (p 21)</p> <p>Trends in transport choice are unlikely to change significantly, and private car use would continue to increase as the selected method of transport to work, with potential adverse impacts on air quality in the borough.”(p 23)</p> <p>Considers the local and cumulative significance of soil loss alongside the ecological implications:</p> <p>“Loss of soil resources, BMV land and ecosystem services The proposed allocations would cumulatively result in the loss of up to approximately 342ha of previously undeveloped land, including up to 263ha of BMV agricultural land. The proposed development would be expected to reduce the ability of the local soil biome to effectively provide ecosystem services, to some extent. Additionally, the loss of permeable soils could potentially increase the risk of flooding and result in a loss of biodiversity across the Plan area. Loss of soil can also result in an increase in soil erosion and have subsequent impacts on agricultural yield.(p 68) The majority of the borough is ALC Grade 3 soil, with areas of ALC Grade 2 scattered across the borough. Grade 2 and potentially Grade 3 represents some of the borough's BMV agricultural land and should be conserved wherever possible (p 21)</p> <p>A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of BMV land to be lost as a result of the development proposed in the Local Plan.” (p 59)</p> <p>Other Advice</p> <p>Further general advice is provided within Natural England Advice Note – Local Plans February 2024, attached at (Appendix A) - see attachment</p>

Title	Policy PSD6: Health and Wellbeing
Consultee Given Name	McCarthy Stone
Agent Company / Organisation	THE PLANNING BUREAU
Agent Position	Planning Associate
Agent Family Name	Vlach
Agent Given Name	Jane
Q4 Part of document	Policy
Q4 Policy	PSD6
Q6 Details	<p>Please see attached representations. Policy PSD6 requires the submission of a Health Impact Assessment for all planning applications for major development. The Council should note that there is a common misconception that older person's housing places an additional burden on healthcare infrastructure and therefore rather than requiring applicants of older person's schemes to show that there is capacity in healthcare systems and to show that the scheme will not have a health impact, the policy should instead recognise the health benefits that delivering older people's housing can bring to individuals. Older Persons' Housing produces a large number of significant benefits which can help to reduce the demands exerted on Health and Social Services and other care facilities – not only in terms of the fact that many of the residents remain in better health, both physically and mentally, but also doctors, physiotherapists, community nurses, hairdressers and other essential practitioners can all attend to visit several occupiers at once. This leads to a far more efficient and effective use of public resources. A report “‘Healthier and Happier’ An analysis of the fiscal and wellbeing benefits of building more homes for later living” by WPI Strategy for Homes for Later Living explored the significant savings that Government and individuals could expect to make if more older people in the UK could access this type of housing. The analysis showed that:</p> <ul style="list-style-type: none"> • ‘Each person living in a home for later living enjoys a reduced risk of health challenges, contributing to fiscal savings to the NHS and social care services of approximately £3,500 per year. • Building 30,000 more retirement housing dwellings every year for the next 10 years would generate fiscal savings across the NHS and social services of £2.1bn per year. • On a selection of national well-being criteria such as happiness and life satisfaction, an average person aged 80 feels as good as someone 10 years younger after moving from mainstream housing to housing specially designed for later living.’ <p>In addition, specifically designed housing for older people offers significant opportunities to enable residents to be as independent as possible in a safe and warm environment. Older homes are typically in a poorer state of repair, are often colder, damper, have more risk of fire and fall hazards. They lack in adaptations such as handrails, wider internal doors, stair lifts and walk in showers. Without these simple features everyday tasks can become harder and harder. Based on the above, it is not necessary to provide health Impact Assessments for retirement housing schemes.</p> <p>Recommendation: For the plan to be in line with national policy and effective the following wording should be added to the policy to recognise the health benefits of older persons housing. Policy PSD6: Health and Wellbeing The Council will support development that fosters safe, healthy, and active lifestyles. Any new development should: -</p> <p>c. For major development schemes, including non-residential but excluding proposals delivering specialist housing for older people that already provide health benefits, be supported by a core (i.e. screening) health impact assessment. Following the screening assessment, a full (comprehensive) health impact assessment may be required. Development that would have an unacceptable adverse impact, following the Health Impact Assessment, on health or wellbeing will not be The ‘Supporting Information’ should then include the following text: Specialist Housing for older people has a number of health benefits and proposals for such schemes will not be required to submit a Health Impact Assessment permitted;</p>
Q7 Modification	<p>Please see attached representations. Q4 Part of document	Policy
Q4 Policy	PSD7
Q6 Details	<p>Gladman Developments Ltd (Gladman) welcome the opportunity to comment on the Newcastle-under-Lyme Final Draft Local Plan 2020-2040 (Regulation 19) consultation and request to be updated on the progress of the emerging Local Plan. Please refer to attached representations. Gladman has fully engaged fully in the preparation of the emerging Newcastle-under-Lyme Local Plan 2040 to date. Feedback from the First Draft Local Plan (Regulation 18) consultation has been addressed and incorporated into the Final Draft Local Plan consultation document.</p> <p>In the sections below, Gladman have made specific comments where we consider the Final Draft Local Plan requires modifications or further clarification to ensure that it is capable of being found sound. Comments are focussed mainly on the consultation document, with references to the Duty to Cooperate and Sustainability Appraisal documents. Our representations also include details of Gladman's land interest at land south of Eccleshall Road, Loggerheads, which we are promoting as suitable for identification as a housing allocation in the emerging Local Plan. Please refer to attachment for more information.</p> <p>The new National Design Guide: Planning practice guidance for beautiful, enduring & successful places (January 2021), the NPPF 2023 and National Model Design Code (updated October 2021) set the framework for the characteristics for creating beautiful, high quality sustainable places. Gladman support the principles of draft Policy PSD7 and the requirement to accord with the National Design Code, National Design Guide or any local design guide or code.</p>

	<p>We endorse the Council's approach to ensure that housing developments achieve Building for a Healthy Life standard, create high-quality, beautiful and sustainable buildings and places and should be accessible and inclusive to all. A range of different disciplines across sectors and should be involved at an early stage to produce a range of ideas, interventions and solutions to help shape future development. Criteria 4 of the policy requires major development schemes should demonstrate that design proposals have responded positively to the Council's Design Review process. Gladman recognise the importance of good design but note from experience of design review panels that they often, whilst well intentioned, frustrate the planning process at the outline planning application stage.</p> <p>Gladman note that draft Policy PSD7 repeats the requirements for housing developments to achieve Building for a Healthy Life standard. This should be addressed either in Policy PSD6 or Policy PSD7, not both.</p>

Title	Policy PSD7: Design
Consultee Company / Organisation	Araripe Limited
Agent Company / Organisation	Pegasus Group
Agent Position	Executive Director
Agent Family Name	Onions
Agent Given Name	David
Q4 Part of document	Policy
Q4 Policy	PSD7
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>These representations are made in response to the Regulation 19 consultation on the final draft of the Newcastle-under-Lyme Local Plan 2020 – 2040. The representations are made by Pegasus Group on behalf of Araripe Limited and relate to their land interest at St Martins Road, Talke(hereafter referred to as the "Site"). The Site is greenfield land situated to the south of Talke. With regards to the Site, these representations should be read alongside the attachment.</p> <p>Policy PSD 7 makes reference to major developments having to demonstrate that they have responded positively to the Design Review process. However, as previously raised by Araripe Limited in response to the First Draft Local Plan, the requirement for all major developments to be subject to a Design Review process is likely to be untenable in view of the number of schemes which would fall into the major category, i.e. 10 more units. Moreover, this element of the policy is inconsistent with the supporting text which states, at paragraph 5.47, that a Design Review is only required for "large and complex sites", rather than all forms of major development. This is considered a more appropriate and manageable approach. As such, this aspect of the policy should be amended accordingly, to align with the supporting text, ensuring that the policy will be effective.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	Sufficient land for housing should be planned for to meet the identified need for this within the Borough. Araripe Limited strongly support the allocation of Site TK17 for residential development, but several amendments are required to make Policy TK17 sound, as set out in paragraph 3.19 of the accompanying written representations. We would welcome the opportunity to participate in the hearing sessions to set these out, as well as to draw attention to the other matters which need to be addressed to ensure soundness elsewhere in the final draft plan, whilst emphasising site TK17's suitability, availability, and deliverability, being an optimum and sustainable location for high-quality residential development.

Consultee Company / Organisation	Cross Heath, Wolstanton and May Bank Branch Labour Party
Consultee Position	Branch Secretary
Consultee Family Name	Gorton
Consultee Given Name	Richard
Q4 Part of document	Policy
Q4 Policy	PSD7
Q6 Details	Policy PSD7-Design – We strongly agree with the statement that any new development should contribute positively to an area's character and identity. We also welcome the stress the draft Plan places on using design to reduce the risk of crime. The Branch believes, however, that the statement in paragraph 5.45 would be strengthened if 'should' was replaced by 'must' and therefore read as follows: <i>Developers should engage with the Council, the local community and relevant statutory consultees at the earliest opportunity to make sure the development appropriately responds to the unique character and sense of place in the Borough.</i>
Q7 Modification	Modification of Policy PSD7 – amended to paragraph 5.45 as proposed above.
Q9 Hearing reasons	Conclusion Cross Heath, Wolstanton and May Bank Branch Labour Party welcomes the opportunity to give its views in response to the Regulation 19 stage of the draft Local Plan. If it is felt to be appropriate, a member of the Branch would be prepared to take part in the public scrutiny of the draft Local Plan.

Consultee Company / Organisation	Jones Homes & Renew Land Baldwins Gate Ltd)
Consultee Family Name	Jones Homes & Renew Land Ltd
Agent Company / Organisation	Stantec
Agent Position	Planner
Agent Family Name	Connell
Agent Given Name	Lydia
Q4 Part of document	Policy
Q4 Policy	PSD7
Q6 Details	These representations are submitted by Stantec on behalf of Jones Homes (North West) Ltd (Jones Homes) and Renew Land Baldwins Gate Ltd (Renew Land), together known as "the Promoters", in response to the Final Publication Draft of the Newcastle-under-Lyme 2020- 2040 ('Local Plan') at Regulation 19 published by Newcastle-under-Lyme Borough Council (NuLBC) ('the Council') in August 2024. Please also see attached representations. Policy PSD7 as drafted is considered to be sufficiently aspirational such that it will deliver high-quality design. That said, there remains the need to apply a degree of subjective assessment on a site-by-site basis taking account of local context, character, and surroundings such that each development is capable of being assessed on its own merits. This will also ensure variety in the design of new development across the Borough. Should the Council intend to introduce any more prescriptive design guidance (beyond that in Policy PSD7), this should take the form of a Supplementary Planning Document
Q7 Modification	Please see attached representations.
Q9 Hearing reasons	Please see attached representations.

Q4 Part of document	Policy
Q4 Policy	PSD7
Q6 Details	<p>Please see attached representations. Criteria 4 of draft policy PSD7 states that "Development proposals for major development schemes should demonstrate that design proposals have positively responded to the Design Review process".</p> <p>While the WMHAPC acknowledges the value of engaging with stakeholders on design, the requirement for all proposals of 10 or more dwellings to engage in a design review process appears overly stringent. There is concern that the policy, as currently worded, could delay the progression of smaller major sites and will add to viability considerations if there is to be a cost for the applicant to engage in the design review process.</p> <p>The WMHAPC suggests that design reviews should be reserved for larger major schemes, specifically developments proposing 50 or more residential units or strategic sites which present more complex issues. This approach would ensure a well-coordinated design while streamlining the process for smaller major developments. We therefore recommend including an exemption for smaller developments in the policy to enable such schemes to progress without delay.</p>
Q7 Modification	Please see attached representations

Consultee Family Name	Danemann
Consultee Given Name	Rachel
Q4 Part of document	Policy
Q4 Policy	PSD7
Q5 Sound	No
Q6 Details	<p>Please see attached representations.</p> <p>The Policy is not considered to be sound as it is not justified, effective or in line with national policy.</p> <p>The policy seems to require every single new house to meet the Building for a Healthy Life standard It would seem unjustified and ineffective, unreasonable and disproportionate for a planning application for individual dwelling to have to undertake a full Building for a Healthy Life assessment and indeed it is not designed for such use.</p> <p>Although HBF is supportive of use of Building for a Healthy Life toolkit but note that it is not really a 'standard' to be achieved, but rather a toolkit for considering design and thinking about the qualities of successful places. The Local Plan needs to be clear about what 'meeting the standard' would entail, and what information would be needed to show that a development would achieve it. The policy is currently ineffective as it is unclear how a developer would show compliance with the policy as it is not really possible to 'achieve Building for a Healthy Life standard'.</p> <p>In order to be effective it is important for the difference between a Health Impact Assessment screening and a full Health Impact Assessment is explained in the Plan.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	HBF requests to participate in the Hearing Sessions for the Local Plan Examination, the HBF considers that their involvement is necessary to ensure that the home building industry is able to respond to any housing related issues raised during the hearing sessions.

Order	37
Title	Policy CRE1: Climate Change
Consultee Company / Organisation	National Grid Electricity
Consultee Family Name	Buxton
Consultee Given Name	Nick
Agent Family Name	White
Agent Given Name	Lucy
Q4 Part of document	Policy
Q4 Policy	CRE1
Q6 Details	<p>Dear Sirs,</p> <p>NEWCASTLE-UNDER-LYME REGULATION 19 LOCAL PLAN - REPRESENTATIONS ON BEHALF OF NATIONAL GRID ELECTRICITY DISTRIBUTION (SOUTH WEST) PLC</p> <p>These representations are prepared on behalf of National Grid Electricity Distribution (South West) Plc (NGED) (formerly Western Power Distribution (South West) Plc, in response to the Regulation 19 version of the Local Plan, which is subject to public consultation until 7th October.</p> <p>Introduction</p> <p>NGED owns and is responsible for electrical distribution apparatus within the area subject to this Local Plan and is the licensed network operator with statutory duties and powers including compulsory purchase powers.</p> <p>In preparing development plans, local planning authorities (LPA) have a duty to safeguard the operation of National Grid's infrastructure to enable NGED to supply electricity in the most efficient and cost effective manner. In the majority of cases this will involve retention of the existing infrastructure in situ, including overhead power lines and pylons.</p> <p>Towards Net Zero</p> <p>The Government is committed to achieve net zero by 2050. The shift towards electricity to heat our homes and power our cars is critical to achieving this goal and the National Grid is playing a crucial role in meeting this commitment by increasing capacity to meet the growing demand for electricity.</p> <p>Our network investment planning process is the strategic approach we are taking to investing in our network, ensuring that it can meet future demand in the right place, at the right time while ensuring good value for money for customers.</p> <p>To ensure that we can provide the network you need from us, your projects need to be included in our Distribution Future Energy Scenarios. We use this information to predict the future requirements on our network and decide when and where to invest in the network. This ensures that our strategic network planning provides sufficient network capacity as the country transitions to net zero.</p> <p>We ask Local Authorities about their future plans, including information in your Local Plan annually (normally in May/June). This will inform our future forecasts down to Electricity Supply Area level ensuring we can connect new developments in 5 years and beyond.</p> <p>NGED strongly recommends that local planning authorities ensure that they feed into the Distribution Futures Energy Scenario process by emailing nged.energyplanning@nationalgrid.co.uk and that you contact them at the earliest possible opportunity for confirmation of National Grid's capacity to accommodate planned growth in their area. If capacity is limited, LPAs should explore alternative locations for growth which may be less constrained or allocate land, in consultation with NGED, to accommodate a new sub-station. NGED should also be involved in the masterplanning of any development allocation which includes a large sub-station.</p> <p>Please ensure this process has been completed prior to submission of the Local Plan for examination.</p> <p>132kV Overhead Lines</p> <p>Where diversion and/or undergrounding of overhead lines is deemed necessary to enable the development of a proposed allocation, lower voltage lines (up to 33kV) supported by wooden poles can normally be undergrounded or diverted without significant concern. However, where land allocations affect lines supported by steel lattice towers, particularly 132kV, the LPA are advised to engage with NGED at the earliest opportunity in the plan-making process to confirm:</p> <ul style="list-style-type: none"> a) whether the lines can be accommodated within the development site; or b) the viability and feasibility of diverting and/or undergrounding overhead lines. <p>This includes, where relevant, ensuring the agreement of third party landowners to the provision of new infrastructure on their land and subsequent agreement between the LPA and NGED to appropriate wording within the allocation policy.</p> <p>In allocating land affected by high voltage power lines, the LPA should take into account the additional costs involved in their diversion and/or undergrounding, the need for additional new infrastructure and its visual impact, including larger terminal towers at either end of an undergrounded line, and the potential impact on timescales for delivery of the development.</p> <p>LPAs should also be aware that where high voltage electricity lines are undergrounded National Grid is unable to support any development which could affect the operation of or obstruct the line, including buildings, tree planting, public highway or attenuation features. A 10m wide corridor of open ground is required above the undergrounded cables. Accordingly, the retention of overhead lines in situ provides greater opportunities to deliver an efficient and effective masterplan, with the potential to deliver a range of uses beneath the lines including green infrastructure, public highway, drainage features and some biodiversity net gain measures.</p>

	<p>NGED cannot be held accountable for the absence of a planned solution for a proposed diversion route or undergrounding of an overhead power line or any subsequent reduction in the allocation site's development capacity, where the LPA and/or developer/landowner has not agreed proposals with NGED prior to the adoption of the Local Plan.</p> <p>National Grid Capacity</p> <p>In light of the above, NGED requires LPAs to make early enquiries to ensure the National Grid has sufficient capacity to accommodate planned growth. If electricity capacity is limited, the LPA should engage with NGED to ascertain whether a new sub-station can be introduced to increase capacity and if so, where this should be located. Land should be safeguarded for the sub-station through the Local Plan. The timescales for delivery of a new sub-station and the implications for occupation of new homes should be taken into account in preparing the LPA's housing trajectory.</p> <p>Summary</p> <p>NGED does not object to the allocation of land upon which its infrastructure is present, however, in the context of the Government's commitment to reach Net Zero by 2050 and the role which National Grid has to play in delivering significant new infrastructure to meet existing and future energy demands, all reasonable efforts should be made by LPAs and developers to safeguard to retain the existing grid infrastructure and the associated embodied carbon.</p> <p>In preparing Local Plans, LPAs should take the following steps:</p> <ol style="list-style-type: none"> 1. Ensure your Local Authority is responding annually to our Distribution Future Energy Scenario questionnaire that is sent out via Regen. 2. Contact NGED as early as possible in the Plan making process to establish whether capacity exists in the grid to accommodate planned development. 3. Where land is allocated, priority should be given to retention of high voltage overhead lines wherever possible, with design principles included within the allocation policy to safeguard the retained lines and incorporate sensitively into the development, whilst achieving high standards of design and an efficient use of land. 4. Where necessary, early engagement with NGED to establish whether its infrastructure can be accommodated within the development or whether diversion/undergrounding is feasible; 5. Where diversion/undergrounding is required, ongoing dialogue with NGED to agree a potential route prior to adoption of the Local Plan, as outlined above. 6. For strategic allocations and sites significantly affected by overhead lines (e.g. with 5 or more pylons on site), NGED recommends early masterplanning and the preparation of Supplementary Planning Documents to demonstrate site capacity and establish principles for the retention/diversion or undergrounding of overhead lines and safeguarding of land to accommodate new sub-stations, where necessary, with the agreement of NGED.

Title	Policy CRE1: Climate Change
Consultee Company / Organisation	Gladman Developments Ltd
Consultee Position	Planning Manager
Consultee Family Name	Wilding
Consultee Given Name	Robert
Q4 Part of document	Policy
Q4 Policy	CRE1

Q6 Details	<p>Gladman Developments Ltd (Gladman) welcome the opportunity to comment on the Newcastle-under-Lyme Final Draft Local Plan 2020-2040 (Regulation 19) consultation and request to be updated on the progress of the emerging Local Plan. Please refer to attached representations. Gladman has fully engaged fully in the preparation of the emerging Newcastle-under-Lyme Local Plan 2040 to date. Feedback from the First Draft Local Plan (Regulation 18) consultation has been addressed and incorporated into the Final Draft Local Plan consultation document.</p> <p>In the sections below, Gladman have made specific comments where we consider the Final Draft Local Plan requires modifications or further clarification to ensure that it is capable of being found sound. Comments are focussed mainly on the consultation document, with references to the Duty to Cooperate and Sustainability Appraisal documents. Our representations also include details of Gladman's land interest at land south of Eccleshall Road, Loggerheads, which we are promoting as suitable for identification as a housing allocation in the emerging Local Plan. Please refer to attachment for more information.</p> <p>Gladman recognise that the planning system has an important role to play in tackling the effects of climate change, as outlined in paragraph 8 of the NPPF which highlights how the planning system should help to mitigate and adapt to climate change and support the transition to a low carbon economy. This objective filters through to other elements of the Framework, including section 14, which deals specifically with climate change. In this regard, paragraph 152 of the Framework identifies how the planning system should:</p> <p>"support the transition to a low carbon future in a changing climate, taking full account of flood risk and coastal change. It should help to: shape places in ways that contribute to radical reductions in greenhouse gas emissions, minimise vulnerability and improve resilience; encourage the reuse of existing resources, including the conversion of existing buildings; and support renewable and low carbon energy and associated infrastructure"</p> <p>Gladman recognise the importance of tackling climate change and encourage sustainable housing developments to mitigate its impact. The Council should continue to take account of climate change in its plan-making, including any updates to guidance to the Framework and PPG. It is important to recognise that mitigating and adapting to climate change must also be compatible with other important objectives for the planning system, including the requirement to boost housing delivery and build a strong, competitive economy.</p> <p>The Council declared a climate emergency in April 2019 and have the aim of becoming a carbon-neutral borough by 2030 and reaching net carbon zero by 2050. Since 2019, the Council have already reduced carbon emissions by 43%. Gladman is committed to contributing to this through our land interest at land south of Eccleshall Road, Loggerheads which can provide environmental commitments to assist the Council in meeting its climate related strategies. At the detailed design stage, renewable energy technologies can be considered, and these proposals will be in line with energy performance and efficiency targets. In addition, a Construction Environmental Management Plan will be submitted at the reserved matters stage to secure best practice measures such as Modern Methods of Construction and keeping landfill waste to a minimum.</p> <p>Criteria 2 of draft Policy CRE1 seeks to require all new development will be expected to meet the carbon emission targets set by UK Building Regulations (Part L of the Building Regulations or as amended / updated). It is the Government's intention to set standards for energy efficiency through the Building Regulations. The key to success is standardisation and avoidance of individual councils specifying their own policy approach to energy efficiency, which undermines economies of scale for product manufacturers, suppliers and developers. The Council does not need to set local energy efficiency standards in a Local Plan policy because of the higher levels of energy efficiency standards for new homes set out in the 2021 Part L Interim Uplift and proposals for the 2025 Future Homes Standard.</p> <p>Criteria 3 of the policy states that all residential development proposals must also show compliance with a water efficiency standard maximum of 110 litres per person per day. The Building Regulations require all new dwellings to achieve a mandatory level of water efficiency of 125 litres per day per person, which is a higher standard than that achieved by much of the existing housing stock. This mandatory standard represents an effective demand management measure. The Optional Technical Housing Standard is 110 litres per day per person.</p> <p>As set out in the NPPF (paragraph 31), all policies should be underpinned by relevant and up to date evidence, which should be adequate, proportionate and focussed tightly on supporting and justifying the policies concerned. Therefore, a policy requirement for the optional water efficiency standard must be justified by credible and robust evidence. If the Council wishes to adopt the optional standard for water efficiency of 110 litres per person per day, should justify doing so by applying the criteria set out in the PPG (ID: 56-014-20150327). PPG states that "Where there is a clear local need, local planning authorities can set out local plan policies requiring new dwellings to meet the new tighter Building Regulations optional requirement of 110 litres per person per day". PPG (ID: 56-015-20150327) states the 'it will be for a LPA to establish a clear need based on existing sources of evidence, consultations with the local water and sewerage company, the Environment Agency and catchment partnerships and consideration of the impact on viability and housing supply of such a requirement'. The Government's Housing Standards Review was explicit that reduced water consumption was solely applicable to water stressed areas.</p>

Title	Policy CRE1: Climate Change
Consultee Company / Organisation	Cross Heath, Wolstanton and May Bank Branch Labour Party
Consultee Position	Branch Secretary
Consultee Family Name	Gorton
Consultee Given Name	Richard
Q4 Part of document	Policy
Q4 Policy	CRE1
Q6 Details	<p>Policy CRE1 – Climate Change -The Branch strongly supports this section of the draft Plan and agrees that all new and existing developments should contribute to the reduction in greenhouse gas emissions. We recognise that action is needed to promote the efficient use of energy and feel that an energy/sustainability statement should be included in a development application. We welcome paragraph 6 which makes it clear that:</p> <p><i>Developments should use appropriate design, construction, insulation, layout and orientation to create developments that are resilient to climate change, minimise energy use, use natural resources prudently, and promote the use, recovery and recycling of materials to reduce embodied carbon.</i></p> <p>We look forward to an extended district heat network at Keele and believe that the Local Plan should oblige developers to consider this option before other heat sources were considered. We think it entirely reasonable to expect development proposals to include green spaces and tree planting and believe the cost of maintaining green spaces and trees should be carried by the developer. While we accepted that water should be conserved and agree that residential development proposals should try to reduce the</p>

	use of mains water, we suggest that the authorities need to do more to reassure the public that readings provided by smart meters are accurate.
Q7 Modification	Modification of Policy CRE1 – modify as follows: a) oblige developers to consider the district heat network based at Keele before other heat sources were considered; b) cost of maintaining green spaces should be carried by developers.
Q9 Hearing reasons	Conclusion Cross Heath, Wolstanton and May Bank Branch Labour Party welcomes the opportunity to give its views in response to the Regulation 19 stage of the draft Local Plan. If it is felt to be appropriate, a member of the Branch would be prepared to take part in the public scrutiny of the draft Local Plan.

Consultee Company / Organisation	Historic England
Consultee Position	Historic Environment Planning Adviser
Consultee Family Name	Taylorson
Consultee Given Name	Kezia
Q4 Part of document	Policy
Q4 Policy	CRE 1
Q6 Details	There is currently no reference to the historic environment, heritage assets and their setting and how climate change/ renewable energy generation should respond to the historic character of areas and heritage assets. Whilst we recognise that this policy is focussing on responding to climate change, it is necessary to set out that how that response is delivered may need to occur in a different way for heritage assets and this should be clear in the policy. A strategy to also protect existing building from demolition and re-purpose heritage assets for appropriate uses would also be beneficial to ensure the re-use of existing embedded carbon rather than focus on the need for new development.

Title	Policy CRE1: Climate Change
Consultee Given Name	Evolution 500
Agent Company / Organisation	Knights
Agent Family Name	Weatherley
Agent Given Name	Ben
Q4 Part of document	Policy
Q4 Policy	CRE1
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>This representation is submitted on behalf of Evolution 500 Limited by Knights in response to the Newcastle-under-Lyme Borough Council Local Plan Regulation 19 consultation. Please also see attached representations.</p> <p>Our representations concern in particular the land to the west of Newcastle Road, Talke shown in the image at Figure 1 below ("the site", see attachment). We identify and promote this site as suitable for electric vehicle charging station, which could accommodate public electric vehicle charging facilities and associated development/uses for visiting members of the public.</p> <p>These representations follow a response to the previous Regulation 18 version of the Local Plan in August 2023, along with our Call for Sites submission at the same time, plus our subsequent (May 2024) provision of additional supporting material relating to the site's development potential for the uses mentioned at paragraph 1.3 above. A copy of the indicative site layout plan (see Appendix 1) and Transport Technical Note (Appendix 2) that accompanied our submissions in August 2023 and May 2024 are provided with this representation. The Transport Technical Note sets out the findings of SCP Transport's review of the highway and transport aspects of the proposed allocation of the land for an electric vehicle charging station.</p> <p>The Government firmly expects that electric vehicles will be at the forefront of the UK's transition to zero emission transport over the next two decades. The government has therefore set a national deadline of 2030 for the end of sales of new petrol and diesel cars and vans in the UK. A 2035 deadline for the sale of hybrid electric / plug-in hybrid electric vehicles (PHEVs) has also been set¹ (where they are capable of covering a "significant distance" in zero-emission mode). After 2035, the only new cars and vans that can be sold will be purely electric vehicles (EVs). The timetable for the transition to EVs was originally set out in November 2020 by Boris Johnson as Prime Minister, with the subsequent prime minister (Rishi Sunak) also reaffirming his government's continuing commitment to this. This transition is already well underway, with buyers increasingly turning to alternatively fuelled vehicles. 17 per cent of new UK car registrations were battery only EVs in 2022, with an additional 1% being hybrids². Whilst this take-up has accelerated rapidly in the last 2 – 3 years it still lags behind a number of other European countries³.</p> <p>There will be wide-ranging implications of this transition to EVs. In particular, it requires a charging infrastructure network that is convenient, affordable, efficient and reliable. This includes an urgent need for a significant national expansion of public EV charging facilities. These provide for 'on route' charging and are therefore a critical part of the EV charging infrastructure that the nation will need. The Government's objective is that the UK should have "one of the best EV infrastructure networks in the world"⁴. Public charging facilities provide onroute charging and 90% of all current EV drivers rely on such facilities from time to time, especially when making longer journeys⁵. Public charging facilities also provide particular support for fleet drivers and van drivers who will more often need to utilise top-up charging during the day and also for those who do not have access to charging points at home or at work.</p> <p>The Climate Change Committee commissioned research to assess future demand for Britain's electric vehicle public charging network. The report's key findings were that the number of rapid chargers located near the major roads network needs to expand from 460 in 2016 to 1,170 by 2030 and that the number of public chargers needed for 'top-up charging' needs to rise from 2,700 in 2016 to over 27,000 by 2030⁶. This issue is critical in order to address 'range anxiety' for drivers considering the purchase and use of an EV: "People making the switch to an EV must have the confidence that the public charging network they need is available"⁷. The Government's ambition is that the UK should have one of the best and most comprehensive EV charging networks in the world. Key performance indicators in the government's delivery plan⁸ therefore include the total number of public chargepoints across the UK, and number of rapid chargepoints. The government's position is that "around 300,000 public chargepoints will be needed as a minimum to support our commitment to phase out sales of new diesel and petrol cars and vans by 2030"⁹.</p> <p>With reference to the Government's electric vehicle infrastructure strategy¹⁰, there can be little doubt that looking forward there will be a significant need for public EV charging facilities in the plan area. In view of the Local Plan period to 2040, this is clearly a matter that the Local Plan should address. In particular, we would emphasise the national requirement for more accessible charging points along the major road network. Furthermore, at the local level Staffordshire County Council has recognised the need to deliver</p>

	<p>far more EV charging infrastructure in the county, plus taken steps to try to identify sites to deliver such additional infrastructure. For instance, in August 2024 the County Council undertook a survey that asked people for their views on EV charging infrastructure, with the feedback intended to be used to inform the placement of charging points across the county. Evolution 500 Limited responded to that survey to make the County Council aware of the availability and suitability of their land at Talke to deliver an EV charging station in close proximity to the local A-road network and M6 beyond (note that the locational suitability of the site for this proposed use and low provision of comparable facilities elsewhere in the local area is contained in SCP Transport's Technical Note at Appendix 2). We therefore request that policy CRE1 be amended to make explicit support delivery of public EV charging infrastructure. We note bullet point 10 of policy CRE1 reads "8. Schemes that help to deliver the Council's Carbon Capture Areas and Urban Tree Planting Strategy to facilitate carbon capture will be supported". We would suggest adding similar wording to state in addition that "schemes that deliver public EV charging infrastructure will be supported". We also note this policy approach would align with Strategic Objective IV including to "Reduce the Borough's carbon footprint and mitigate the impact of climate change in the Borough ensuring local policies promote sustainability. . ." and with Strategic Objective VII including to "Support active and sustainable travel" (paras 4.7 and 4.10). With regard to NPPF para 35 the Local Plans must be prepared in accordance with the 'Tests of Soundness'. We consider this element of the Local Plan does not accord with the tests of soundness set out at NPPF paragraph 35 as it is:</p> <p>a) Not "Positively prepared", as it fails to ensure the area's future infrastructure needs are fully met;</p> <p>b) Not "Effective", as it would not help ensure the infrastructure needed is delivered over the plan period.</p>
Q7 Modification	See attached representations.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)

Agent Position	Executive Director
Agent Family Name	Onions
Agent Given Name	David
Q4 Part of document	Policy
Q4 Policy	CRE1
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>These representations are made in response to the Regulation 19 consultation on the final draft of the Newcastle-under-Lyme Local Plan 2020 – 2040. The representations are made by Pegasus Group on behalf of Araripe Limited and relate to their land interest at St Martins Road, Talke(hereafter referred to as the "Site"). The Site is greenfield land situated to the south of Talke. With regards to the Site, these representations should be read alongside the attachment.</p> <p>This Policy refers to many aspects of national regulations, including the Building Regulations. It is established practice that other regulatory regimes must operate separately to the planning regime. Reference to the Building Regulations should therefore be deleted. The Council can set its own targets within the policy, without reference to the Building Regulations. However, these must not exceed the current requirements of the Building Regulations, as a Ministerial Statement dated 13th December 2023 made clear that planning policies including greater standards should generally be rejected at examination. It is considered that these amendments are required for this policy to be found sound.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	Sufficient land for housing should be planned for to meet the identified need for this within the Borough. Araripe Limited strongly support the allocation of Site TK17 for residential development, but several amendments are required to make Policy TK17 sound, as set out in paragraph 3.19 of the accompanying written representations. We would welcome the opportunity to participate in the hearing sessions to set these out, as well as to draw attention to the other matters which need to be addressed to ensure soundness elsewhere in the final draft plan, whilst emphasising site TK17's suitability, availability, and deliverability, being an optimum and sustainable location for high-quality residential development.

Q6 Details	<p>These representations are submitted by Stantec on behalf of Jones Homes (North West) Ltd (Jones Homes) and Renew Land Baldwins Gate Ltd (Renew Land), together known as "the Promoters", in response to the Final Publication Draft of the Newcastle-under-Lyme 2020- 2040 ('Local Plan') at Regulation 19 published by Newcastle-under-Lyme Borough Council (NuLBC) ('the Council') in August 2024. Please also see attached representations.</p> <p>At provision 3 of Policy CRE1, the Council state that 'Residential developments should be designed to achieve a maximum of 110 litres per person per day, in line with the optional standard of Building Regulations, Part G'. This provision is not justified for Applicant's should not be required in planning policy to meet an optional building regulation standard. A more justified approach would be for Applicant's to have regard to Building Regulations Part G and provide justification of any deviation from it. At provision 6, the Council provide a list of sustainability features which developments'should' include. This wording is too prescriptive and not justified. A more appropriate approach would be set out how development 'could' incorporate some of the sustainable features put forward in the policy. This would ensure that developments can come forward appropriately, informed by the unique constraints and opportunities of each development site.</p>

Title	Policy CRE1: Climate Change
Consultee Company / Organisation	NHS Property Services
Consultee Family Name	Fleet
Consultee Given Name	Daniel
Q4 Part of document	Policy
Q4 Policy	CRE1
Q6 Details	Draft Policy CRE1 Climate Change Draft Policy CRE1 seeks to promote both climate mitigation and adaptation strategies to new development. The NHS requires all new development projects to be net zero carbon, and NHSPS fully support policies that promote carbon neutral development. In considering the implementation of policies related to net zero, we would highlight that if ever introduced, NHS property could benefit from carbon offset funds

	collected where on-site carbon mitigation requirements cannot be met. This would support the NHS to reach the goal of becoming the world's first net zero healthcare provider.

Title	Policy CRE1: Climate Change
Consultee Company / Organisation	National Highways
Consultee Position	Assistant Spatial Planner
Consultee Family Name	Pyner
Consultee Given Name	David
Q4 Part of document	Policy
Q4 Policy	CRE1
Q6 Details	<p>Newcastle-Under-Lyme Local Plan Review - Regulation 19 Consultation (Final Draft)</p> <p>National Highways welcomes the opportunity to provide comments on the Final Draft Local Plan consultation (Regulation 19) prepared for Newcastle-Under-Lyme Borough Council, which is expected to cover the plan period up to 2040.</p> <p>National Highways has been appointed by the Secretary of State for Transport as a strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the Strategic Road Network (SRN). It is our role to maintain the safe and efficient operation of the SRN whilst acting as a delivery partner to national economic growth.</p> <p>In relation to this consultation, National Highways' principal interest is ensuring the safe and efficient operation of the SRN in the area, notably the M6, A50 and A500 network which routes through the Local Plan boundary.</p> <p>In responding to Local Plan consultations, we have regard to the Department of Transport's (DfT) revised Circular 01/2022 - Strategic Road Network and the delivery of sustainable development ('the Circular') which sets out how interactions with the SRN should be considered in the making of local plans. Paragraph 28 of the Circular sets out that:</p> <p>"The policies and allocations that result from plan-making must not compromise the SRN's prime function to enable the long-distance movement of people and goods. When the company assists local authorities in the development of their plans and strategies, the local authority should ensure that the SRN is not being relied upon for the transport accessibility of site allocations except where this relates to roadside facilities or SRN-dependent sectors (such as logistics and manufacturing). The company will also work with local authorities to explore opportunities to promote walking, wheeling, cycling, public transport and shared travel in plan-making, in line with the expectations set out in the NPPF and the Transport Decarbonisation Plan."</p> <p>In addition to the DfT Circular 01/2022, the response set out below is also in accordance with the National Planning Policy Framework (NPPF) and other relevant policies.</p> <p>Previous Consultations</p> <p>National Highways was consulted during the Regulation 18 consultation in August 2023. The Regulation 18 identified a minimum requirement of 7,160 dwellings (358 per year) and 69 hectares of employment land to be delivered during the plan period between 2020 and 2040. It also included potential sites for allocation, and we provided an indication of the potential sites that were expected to have traffic and boundary impacts on the SRN.</p> <p>In May 2024, National Highways was consulted to provide recommendations for the Infrastructure Delivery Plan preparation, where we provided comments on the infrastructure requirement.</p> <p>Final Draft Local Plan Regulation 19 Consultation</p> <p>The Final Draft Local Plan Regulation 19 includes locally specific policies and strategic / non-strategic site allocations to meet housing and employment needs across the Newcastle-Under-Lyme area for the plan period of up to 2040. Once adopted, this Local Plan will replace the policies in the Newcastle-Under-Lyme and Stoke-on-Trent Core Spatial Strategy (adopted 2009) and the saved policies of the Newcastle-Under-Lyme Local Plan (adopted 2003). Appendix 2 of the Local Plan consultation document outlines the list of previously adopted policies that will be retained or replaced.</p> <p>In principle, National Highways supports the vision and objectives set out in the Regulation 19 Draft Local Plan which aim to deliver the growth in a sustainable manner.</p> <p>Housing and employment requirements</p> <p>Based on our review of the Regulation 19 consultation, we note that the Final Draft Local Plan outlines a minimum requirement to deliver 63 hectares of employment land and 8,000 dwellings (400 dwellings per annum) over the plan period of up to 2040 as stated in the 'Policy PSD1: Overall Development Strategy'. We welcome that the housing and employment requirement have primarily been determined using a Housing and Economic Development Needs Assessment (HEDNA) in 2024, which in this case is expected to provide a higher housing demand when compared against the Government's standard method.</p> <p>We acknowledge that a Sustainability Appraisal (SA) process has been undertaken to evaluate the different growth options considered, assess the impacts and identify the residual effects based on the social, economic and environmental parameters.</p> <p>As outlined in Table 2 of the Final Draft a total of 8,663 dwellings are planned to be delivered over the plan period of up to 2040 to meet housing demands. This also includes a supply buffer of around 8.3%</p>

to address any potential delivery challenges. We acknowledge that the supply also factors in the windfall allowance estimated based on the Council's Strategic Housing Land Availability Assessment (SHLAA), historical trends, and future projections.

Policy SA1: Site Allocations indicates that a significant portion of the housing supply will be delivered through strategic allocations. When comparing the allocation sites included in the Regulation 19 consultation against those set out in the Regulation 18 consultation, we note some minor changes in the scale of growth at individual sites, with a few sites being removed and others added. However, the total housing growth from all strategic allocations remains at 4,512 dwellings. The table below outlines these changes (tables included in the attachment)

In the case of employment supply, we note that AB2 (Land at M6 Junction 16) and KL15 (Land at Barkers Wood, Keele) are key strategic sites contributing significantly to meet the employment needs.

Sustainable transport

We acknowledge that the Final Draft Local Plan has focussed on decarbonisation policies such as 'Policy CRE 1: Climate change' and 'Policy CRE 2: Renewable energy' to address climate change impacts by reducing carbon emissions. This also includes developing energy-efficient buildings, designing to BREEAM Excellent standards, optimising water use, adopting water conservation measures, and utilising renewable or low-carbon energy sources.

'Policy IN2: Transport and Accessibility' emphasises that new developments must provide access through sustainable transport modes to protect the integrity of the highway network. The Council will work with developers to ensure that the proposals contribute to a transport network that is accessible, efficient, and safe. We support this policy and acknowledge that developments likely to generate significant traffic will be required to produce Transport Assessments and Travel Plans, in accordance with the requirements set out. We appreciate that focus is also given to developments that facilitate sustainable movement of freight traffic.

'Policy IN4: Cycleways, Bridleways, and Public Rights of Way' highlights the importance of enhancing walking, cycling, and public transport facilities within the Borough.

We welcome these policies and note that these align with the expectations set out in the National Planning Policy Framework and National Highways' Net Zero Strategy.

Transport Evidence Base

Considering the scale and location of the allocations included in the Draft Final Local Plan, we expect impacts on the SRN in the area either independently or cumulatively.

Strategic Transport Assessment (document reference ED011)

We acknowledge that a Strategic Transport Assessment (STA) dated July 2024 has been prepared using the North Staffordshire Multi-Modal (NSMM) transport model to assess the likely traffic impacts of the site allocations proposed in the Regulation 19 consultation. We note that the model has been run for the following five scenarios in the forecast year of 2040.

Based on our review of the STA, we have the following comments to make:

Section 4.5 of the STA states that while the model emphasises the use of pre/post-COVID data, we note that accident data for the years 2018-2022 includes COVID data with relatively lower traffic flows and possibly fewer accidents. How has the impact of COVID been taken into account?

Section 5.3 of the STA states that the 2015 NSMM model is overestimating the flows by 26-28% when compared against 2022/23 observed WebTRIS data. It also notes that only 15-35% of counts pass in this validation exercise. Despite this shortcoming, model forecasts for 2040 were proposed to be used to inform future testing, which National Highways agreed to as it presents the worst-case scenario with overestimation of the traffic.

Section 7 provides details of the reference case model development, but note that finer details of the method applied are missing. We therefore have the following queries relating to this section:

- Does this scenario include constraining other local authorities to NTEM/TEMPro?
- Does this scenario include any committed and under-construction developments within the local plan area?
- What is the background growth percentage between the base year and the forecast year 2040?

Regarding Figure 7-1, we are unable to find the basis for changing the junction delay definitions for slight, moderate, and severe delays from what was mentioned in the minutes of the meeting dated 15th May 2024. At present, delays of up to 3 minutes at junctions are reported as slight which is arguable.

Based on the model outcomes, improvement measures to enhance public transport connectivity and infrastructure schemes on the local highway network are proposed in the STA. We also note that a detailed junction assessment will be undertaken for M6 J16 using a VISSIM model to accurately assess the traffic impacts of the AB2 allocation.

Regarding Section 8.3.2, bullet 1, we interpret that the new junction is the access to site AB2. Thus, we are surprised that the design of this new junction would still lead to 120-180 seconds of delays in the PM. A new access arrangement should work without that much stress.

We request that a summary table with delays (absolute numbers in seconds) at each of the approaches be prepared and shared with National Highways for M6 J16 and the new junction on A500 for site AM2. This is so we can understand the changes in delays between the base, reference case, and proposed scenarios.

We request that the basis for the 10% reduction in car users for the area around site AB2 set out within Section 8.6.6.1 be supported by further evidence.

We also request further details on how much total demand (in PCUs or vehicles) has been removed from the original matrix. Has a preliminary assessment been undertaken on the frequency of bus service that would be required to cater to that demand during peak hours to verify that this is a feasible option?

Regarding Section 8.6.3, while we do not have an issue with the bespoke approach to testing M6 J16 within VISSIM, considering that the NSMM is overestimating the traffic, the use of incremental addition of the difference from the NSMM may lead to an underestimation of traffic at this junction due to large delays in the NSMM reference case scenario. There is a possibility that any additional traffic from the AB2 site may divert to local or unrealistic routes within NSMM.

We therefore request that traffic flow distribution Select Link Analysis plots from site AB2 be shared with National Highways to verify that the routes assigned in the model are reasonable before being used for incremental addition for microsimulation assessment.

We also request that observed base and modelled reference case data be presented in a similar format as Table 8-6 for National Highways to understand the absolute traffic growth at each of the approaches. National Highways Previous comments

While we are happy with the suggested incremental change in flow and delays analysis for 2040 forecast year models, we must establish a robust do – minimum reference case scenario developed using the base year model.

We note that our previous query dated May 2024 remains unanswered: “The further turning count comparison tables for the M6 J16 model are appreciated and provides comfort that many movements (particularly the A500 East approach) match the 2015 model. However the turning proportions provided for the M6 South to A500 East movement are of concern as these look significantly different to those that were modelled. National Highways would like to understand if there are any explanations of why these differences have occur and particularly why the model identifies such low percentage of car movements?”

STA Comments Summary

In summary, the modelling work to date is based on the NSMM model, which was previously approved by the DfT for other schemes. However, present-day validation using 2022/23 data shows that the model is overestimating traffic and not validating well. Hence, a bespoke approach is applied to assessing M6 J16, while the rest of the strategic assessment uses the forecast 2040 NSMM model which is still believed to be the best tool available. Analysis provided shows that parts of the A500 and junctions along it will be stressed by 2040 and that the level of stress will increase with the local plan. Strategic allocation sites tested will lead to some congestion but this would not lock out the network. The STA and IDP mention the possibility of developers' contributions for various infrastructure schemes including a new bus service along site AB2 among others that could potentially bring congestion levels down to a more comparable level with the reference case scenario, which should be acceptable.

We request responses to our queries above but are hopeful that the Local Plan can work with some support from the developers to mitigate any impact on the SRN.

Infrastructure Delivery Plan (IDP)

A total of 28 transport development schemes are listed in Table A.1 of Appendix A of the IDP to enhance the transport network and promote sustainable transport. The schemes that are of interest to National Highways are:

1. T9 (improvements between M6 J13 and J15) - part of the RIS 2 scheme
2. T14 to T20 schemes

We note that the finalisation of these schemes is subject to undertaking detailed junction capacity assessments. We appreciate that the list of potential allocations that are likely to impact the SRN has been included.

T14 specifically mentions a “Potential mitigation scheme involving widening and an additional lane at the gyratory on M6 J16. VISSIM modelling work is currently ongoing, and the need for any potential mitigation measures can be confirmed after the completion of a detailed capacity assessment as part of the planning application stage.” It should be noted that there is no confirmed scheme from National Highways perspective at the moment, and we seek confirmation as to whether such a scheme is included in the Local Plan assessment within Scenario 5.

We note that the funding mechanism to implement these mitigation schemes including T14 will likely be through developer funded Section 278 agreements. Considering that there could be cumulative impacts from different allocations in the area, a Section 278 agreement is likely to result in a piecemeal approach to the delivery of the improvement works. We would welcome some clarity on why a Section 278 agreement is preferred over a Section 106 agreement for the funding mechanism in this case.

Duty to Cooperate

We note that a Duty to Cooperate Interim Statement of Compliance has been submitted as part of the evidence base alongside the Final Draft Local Plan. We commend the Council's approach to collaborating with neighbouring local authorities, stakeholders, and other bodies to address issues related to local authority boundaries. This collaborative effort will help ensure that all parties' interests are considered and that a comprehensive solution is developed.

National Highways is committed to working with Newcastle-Under-Lyme Council to develop and draft a Statement of Common Ground (SoCG) to address any strategic cross-boundary issues and reach an agreement on how the traffic impacts from the allocations identified in the Local Plan are to be dealt with. We understand that a final version of the Duty to Cooperate will be prepared to support the submission version by December 2024.

Once again, National Highways appreciates the opportunity to comment on the Final Draft Local Plan Regulation 19 consultation and looks forward to working collaboratively with the Council to support the development and adoption of the Local Plan for Newcastle-Under-Lyme.

Title	Policy CRE1: Climate Change
Consultee Company / Organisation	Home Builders Federation
Consultee Position	Planning Manager - Local Plans (Midland and South West)
Consultee Family Name	Danemann
Consultee Given Name	Rachel
Q4 Part of document	Policy
Q4 Policy	CRE1

Q5 Sound	No
Q6 Details	<p>Please see attached representations.</p> <p>The Policy is not considered to be sound as it is not justified or effective or in line with national policy.</p> <p>The first policy criteria sets a requirement to follow the energy hierarchy, but this is not defined in the policy, supporting text, or the Glossary of the Plan .</p> <p>Criteria 3 of this policy seeks to require development to ensure an estimated water consumption of no more than 110 litres/person/day. HBF do not believe such a policy is needed in the Local Plan because current Part G Building Regulations require 125 litres per day, and house builders are frequently delivering 115-110 litres per day which means the house building industry is already improving upon the regulations. There is no need for Local Plan policies to repeat Building Regulations and it is in fact unhelpful to do so as Building Regulations may change during the course of the plan period.</p> <p>HBF would caution against policies that seek to go further and faster than national legislation and policy changes, which would lead to the creation of a patchwork of differing local policies which could inadvertently undermine the delivery of the wider environmental objectives the Council is seeking and create unnecessary delays to much needed new housing.</p> <p>HBF would caution against Criteria 8 and whether it will deliver the climate change benefits the Council are seeking. Heat networks are one aspect of the path towards decarbonising heat, however currently the predominant technology for district-sized communal heating networks is gas combined heat and power (CHP) plants. Over 90% of district networks are gas fired. As 2050 approaches, meeting the Government's climate target of reducing greenhouse gas emissions to net zero will require a transition from gas-fired networks to renewable or low carbon alternatives such as large heat pumps, hydrogen or waste-heat recovery but at the moment one of the major reasons why heat network projects do not install such technologies is because of the up-front capital cost. The Council should be aware that for the foreseeable future it will remain uneconomic for most heat networks to install low-carbon technologies.</p> <p>Furthermore, some heat network consumers do not have comparable levels of satisfaction as consumers on gas and electricity networks, and they pay a higher price. Currently, there are no sector specific protections for heat network consumers, unlike for people on other utilities such as gas, electricity or water. A consumer living in a building serviced by a heat network does not have the same opportunities to switch supplier as they would for most gas and electricity supplies. All heat network domestic consumers should have ready access to information about their heat network, a good quality of service, fair and transparently priced heating and a redress option should things go wrong. Research by the Competition and Markets Authority (CMA) found that a significant proportion of suppliers and managing agents do not provide pre-transaction documents, or what is provided contains limited information, particularly on the on-going costs of heat networks and poor transparency regarding heating bills, including their calculation, limits consumers' ability to challenge their heat suppliers reinforcing a perception that prices are unjustified. The monopolistic nature of heat networks means that future price regulation is required to protect domestic consumers.</p> <p>The CMA have concluded that "a statutory framework should be set up that underpins the regulation of all heat networks." They recommended that "the regulatory framework should be designed to ensure that all heat network customers are adequately protected. At a minimum, they should be given a comparable level of protection to gas and electricity in the regulated energy sector." The Government's latest consultation on heating networks proposes a regulatory framework that would give Ofgem oversight and enforcement powers across quality of service, provision of information and pricing arrangements for all domestic heat network consumers.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	HBF requests to participate in the Hearing Sessions for the Local Plan Examination, the HBF considers that their involvement is necessary to ensure that the home building industry is able to respond to any housing related issues raised during the hearing sessions.

Title	Policy CRE1: Climate Change
Consultee Company / Organisation	Natural England
Consultee Position	Senior Officer
Consultee Family Name	McLaughlin
Consultee Given Name	Sally
Q4 Part of document	Policy
Q4 Policy	CRE1
Q6 Details	<p>Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.</p> <p>Natural England welcomes the opportunity to comment at this stage of the Local Plan and particularly supports the inclusion of policies on green and blue infrastructure, biodiversity, health and wellbeing, trees hedgerows and woodlands. We have reviewed the consultation documents and provide comments that relate to the soundness of the Local Plan and that are most relevant to our interest in the Natural Environment.</p> <p>Natural England has adopted a robust precautionary approach within this plan response. Whilst we welcome the content of the Local Plan, Natural England advises that the plan is currently at risk of being unsound and/or not legally compliant due to the potential impacts on air quality in relation to internationally designated nature conservation sites and the justification for the potential loss of 263ha best and most versatile (BMV) agricultural land. Further detail is provided below.</p> <p>Natural England have also provided other advice within this submission relating to further improvements that could strengthen plan policies and specific strategic site options and related mitigation.</p> <p>Do you consider that the Newcastle Under Lyme Plan is Sound and Legally Compliant?</p> <p>Natural England notes that the plan is at the pre-submission stage and as such your authority is seeking confirmation on the soundness of the plan. Having reviewed the plan and supporting documents, Natural England considers the pre-submission plan in its current form is not sound or legally compliant, this is due to a lack of evidence with regards to air quality and the cumulative loss of BMV agricultural land both in a local and national context.</p> <p>Air quality</p> <p>Natural England notes that the Sustainability Appraisal states that “Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)</p> <p>As Natural England understands it the current evidence base used to conduct the HRA cannot rule out adverse impacts on designated sites. The HRA states at page 22 3.4.16 “At the time of writing, the traffic modelling run for the final suite of Regulation 19 allocations had not been undertaken.” Appendix A lists the local plans for neighbouring LPA’s concluding that ‘in combination’ with plans and projects (approved and those yet to be implemented) they may trigger in-combination effects on European sites as a result of air quality, particularly as we understand it in the key commuting areas.</p> <p>Natural England notes that Annual Average Daily Traffic (AADT) data and traffic modelling in the Strategic Transport Assessment (STA) concludes a potential reduction in travel and related air pollution at allocated sites as a result of a predicted preference in the use of public transport. We are surprised by this projected decrease in both traffic and related air pollution, particularly as one employment allocation site includes a 200-bay lorry park and increased congestion is predicted at junction 16 of the M6 where it joins the A500 in a rural location with no existing rural transport provision. The Sustainability Appraisal also notes that: “There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work”. (p 206)</p>

Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot therefore currently be ruled out at the following internationally designated sites:

- Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI
- Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI

The HRA outlines that the main source of ammonia emissions is agricultural practice, and that material increases in NH₃ emissions are unlikely to be associated with the proposed local plan. At Black Firs and Cranberry Bog and Oakhanger Moss, any increase in nitrogen deposition has the potential to exacerbate pollution levels and thereby undermine the reasons for notification of these sites as a Ramsar.

Ammonia can be emitted from vehicle exhaust emissions as a by-product of the catalytic conversion process designed to reduce emissions of nitrogen oxide. As traffic composition transitions toward more petrol and electric cars (i.e., fewer diesel cars on the road), catalytic converters may aid in reducing NO_x emissions but result in increased ammonia emissions. Ammonia emissions from road traffic therefore could make a significant difference to nitrogen deposition close to roads.

Natural England therefore advise that ammonia sourced from traffic emissions should be included for assessment within the local plan HRA, as the impact from this source on designated sites is currently unclear. For further information please see this report from Air Quality Consultants (AQC) that looks at ammonia emissions from roads for assessing impacts on nitrogen-sensitive habitats. Whilst we are aware that the current CREAM model created by AQC used to assess ammonia emissions from road traffic has not been peer reviewed, at this time it has been recognised as a Best Available Tool and we deem it appropriate to be used where any caveats associated with this model are also considered within the assessment. An assessment based on the best available approach is necessary. The next stage of assessment can then consider uncertainties in the model and site specifics to decide if mitigation needs to be considered.

Further work is therefore required to inform the Habitat Regulations Assessment. Natural England will engage with the Local Planning Authority in order to produce a Statement of Common Ground (SoCG) on this matter.

'Best and most versatile' (BMV) agricultural land

Natural England notes that "the proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land. A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of 'best and most versatile' (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services". (page 74 Sustainability Appraisal).

Under the Town and Country Planning (Development Management Procedure) (England) Order 2015 (DMPO) Natural England is a statutory consultee on development that would lead to the loss of over 20ha of 'best and most versatile' (BMV) agricultural land (land graded as 1, 2 and 3a in the Agricultural Land Classification (ALC) system, where this is not in accordance with an approved plan.

Natural England would like to understand how the local planning authority have produced the evidence base and options assessment which informs the strategic site allocations.

Natural England will engage with the local planning authority to consider the cumulative impacts of the loss of BMV both in the local and national context and the challenges related to environmental impact, infrastructure, and the requirement to deliver a balance between the need for development and the potential urbanisation of the countryside including the potential mitigation measures that need to be considered.

NPPF paragraph 174e states:

Planning policies and decisions should contribute to and enhance the natural and local environment by: ... preventing new and existing development from contributing to, being put at unacceptable risk from, or being adversely affected by, unacceptable levels of soil, air, water or noise pollution or land instability. Development should, wherever possible, help to improve local environmental conditions such as air and water quality, taking into account relevant information such as river basin management plans.

Natural England provides guidance to inform further assessment of air quality and the loss of BMV agricultural land in our response to the content of the plans Strategic Policies as set out below.

Do you consider that the Newcastle-under-Lyme Borough Council Regulation 19 pre-submission draft Plan is compliant with Duty to Co-operate?

In terms of working with neighbouring authorities, Natural England notes that initially the plan was intended to be produced jointly with the City of Stoke-on-Trent, the plan does not however currently present an evidence base that demonstrates that a collaborative approach has been adopted and that the Duty to Co-operate has been fully complied with.

The Sustainability Appraisal states that: "Overall, there is potential for a cumulative adverse effect on biodiversity, owing to the fragmentation of the ecological network... Where a large amount of development is located on previously undeveloped land surrounding rural settlements, this is likely to produce a long-term irreversible negative cumulative effect regarding the urbanisation of the countryside" (p 71)

Natural England would therefore like to further understand how the areas identified to meet the City of Stoke-on-Trent's unmet employment needs are justified and appropriate and whether meeting some of the employment needs of the City of Stoke-on-Trent has led to the need to release or safeguard more land from the Green Belt in Newcastle under Lyme. If this is the case, what are the exceptional circumstances for doing this and how does this align with the allocated sites options assessment?

Recreational Pressure

In terms of the South Pennine Moors SAC and recreational impacts, the Local Plan does comply with the Duty to Co-operate. Natural England recommends that reference is made to the 'Recreation use of the South Pennine Moors and implications for strategic housing growth' report by Footprint Ecology Ref 778 date 27th March 2024. This report should both inform the evidence base and ensure that policies relating to open space/green infrastructure are as rigorous and robust as possible.

The report concludes that more data/evidence is required to determine if recreational use is causing an impact across to the South Pennine Moors and to get a better understanding of the scale and location of any impact. Natural England notes that the report records 7,000 additional dwellings in Newcastle-under-Lyme over the plan period rather than the 8,000 included in this regulation 19 submission. Newcastle-under-Lyme Borough Council should therefore continue to work with local authority and other partners to ensure coordinated and continued cross boundary action.

Other matters

Natural England has specific concerns related to allocations in the Green Belt. Notwithstanding that, Natural England considers most of the policies within the plan to be sound and deliverable. The plan is consistent with national policy with regard to those policies that are within Natural England's remit. Further information on strengthening policies including but not limited to Soils and best and most versatile (BMV) agricultural land, preventing loss and fragmentation of habitats and supporting green infrastructure are provided below.

Vision and Strategy

Natural England notes that the Plan's vision and emerging development strategy set out a framework for the future development of Newcastle-under-Lyme and addresses the needs in relation to housing, the economy, community facilities and infrastructure, including specific reference to a proposed employment site allocation.

This vision and the related objectives should also set out the environmental ambition for the plan area and form the basis for nature recovery and enhancement, supported by the policies and proposals in the plan.

Natural England advises that the vision should also incorporate more on the local ecology and landscape features which underpin local distinctiveness such as the "strong rural character with long open views across the surrounding rural landscape, towards more distant hills often framed by trees" (p 69) Part 3 Site Specific Landscape & Visual Appraisal. "Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms" (p 187) Sustainability Appraisal.

Strategic Objectives

Natural England welcome strategic objective SO-4 relating to carbon reduction and climate change, however we do not feel that this group of thirteen strategic objectives value or reflect the Boroughs whole ecology and landscape including but not limited to the protection of soil and best and most versatile (BMV) agricultural land. We would suggest that additional objectives are added relating to: air quality, water quality and quantity, soils and landscape.

Natural England would also like to see stronger reference to the Nature Recovery Network which is one of the specific aims of the Environment Act 2021 and will underpin the approach to the enhancement of nature.

Air quality is a major threat to habitats and species. Many ecological sites are exceeding their critical loads and levels for ammonia, nitrogen deposition and acid deposition. The strengthening of the policies and the rationale behind site allocations within this plan will ensure that new development does not contribute to the further deterioration of habitats and species due to air pollution. Further advice on strengthening the plans evidence base with regards to air quality is provided in the links below:

Strategic Policies

5 Planning for Sustainable Development

Policy PSD5: Green Belt

Natural England notes that this policy "aims to protect the Borough's essential open spaces, prioritise the use of brownfield land, and guide potential future development in accordance with the National Planning Policy Framework (NPPF)".

Natural England however notes that amendments to the Green Belt boundary are proposed in the form of 14 site allocations to accommodate both the growth requirements of the borough and the employment requirements of wider Stoke-on-Trent conurbation. Natural England's has some site-specific concerns about the potential impacts of some of the green belt sites selected on the natural environment with regards to habitat loss, fragmentation and justification for the loss of BMV agricultural land.

We note the LPA's intention to release and compensate for the loss of green belt and prioritise the use of suitable brownfield land. However, the site allocations in the green belt would result in the potential loss of 263ha of Best and Most Versatile (BMV) agricultural land. The council should satisfy itself that it is making a balanced decision for sustainable development, the Sustainability Appraisal concludes that: "The Green Belt Study assessed land parcels against the contribution they make to the five purposes of the Green Belt on a four-point scale...Three allocated sites (AB12, AB33 and TK10) are located in areas which make a 'strong' overall contribution to the purposes of the Green Belt where "the site contributes to the purpose in a strong and undeniable way, whereby removal of the site from the Green Belt will detrimentally undermine this purpose" (p101)

"Site allocations on previously undeveloped land or that would result in a net loss of GI / vegetation could result in a reduced capability of the environment to provide ecosystem services including carbon storage, the storage and filtration of water including natural flood protection, as well as reduced availability and connectivity of habitats within the green network enabling movement of species. (p 165)

Strategic Site Allocations

Natural England suggests that the HRA should include a “requirement for project-level/site specific HRA’s and targeted ecological surveys”.

The Sustainability Appraisal concludes that:

“Some 12 allocated sites partially coincide with priority habitats, where 3.43% of the total site allocation areas coinciding with priority habitats which include deciduous woodland, good quality semi-improved grassland and Site BL18 coincides with lowland fens which is a very high distinctiveness habitat in the BNG handbook (2024). These habitats can support a range of species of principal importance. Allocated Site KL15 is adjacent to ‘The Butts and Hands Wood’ ancient woodland, with a further 20 allocated sites located in close proximity to ancient woodlands. P158

“Six allocated sites (Sites CT20, HD10, KL13, RC8, SP11(2) and SP23) are located within areas of ‘high’ or ‘very high’ habitat distinctiveness that provide high biodiversity value. Whilst in many cases these habitats can be conserved alongside development, it is likely that in some cases fragmentation or loss of habitats and connections between habitats will occur”

“The majority of allocated sites are located on previously undeveloped land, which would result in the loss of soil resources and the ecosystem services they provide. (p 159) The development of new buildings on previously undeveloped land would be expected to result in a direct loss of soil resource, with little or no scope for mitigation” (p 216)

“The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution. (p 68)

For all sites, Natural England advises that the hydrological catchment within which the site sits is taken into consideration, with regards to the potential impact of the developments proposed on the adjoining watercourses and wider catchments, including but not limited to surface water runoff (including during construction), existing and required capacity of Waste Water Treatment Works (WwTW) and water supply and flooding issues. Each site will require site specific investigation, and the council should understand the impact of all the sites put forward individually and in combination.

Natural England has specific concerns and or requires further information about the following ‘Strategic Site Allocations’ which could potentially impact on designated sites as a result of air and water quality and/or lead to the loss and / or fragmentation of priority habitats and BMV agricultural land:

BL18 – Clough Hall Playing Fields, Talke

Natural England would like to further understand this larger residential development proposal with regards to the potential impacts on the lowland fen habitat.

KL13 & KL15 – Land South of A525 between Keele University and Newcastle

Natural England notes this proposal for Employment development is immediately adjacent to ancient woodland priority habitat.

HM28 – Land off East Lawns, Betley

Existing and projected water quality issues at Betley Mere will need to be considered with regards to this allocation.

LW53 – Loggerheads

Natural England notes this residential housing development proposal is located within the IRZ of protected sites (Burnt Wood SSSI) which states that development proposals of 50 or more homes outside existing settlements/urban areas in these zones should be consulted upon with Natural England.

SP11 – Former Keele Municipal Golf Course

This Larger residential development is categorised in the Landscape Assessment as having a Major adverse impact on the local Landscape.

AB2 – Land Adjoining Corner of A500 and M6 Southbound

Natural England notes this proposed employment allocation released entirely from the green belt, which comprises 70ha of grade 2 BMV agricultural land. The Landscape study concludes that the: “Proposed development scenario is likely to have a major adverse effect on the SA objective with no satisfactory mitigation possible” (p 15). With regards to potential Air Quality impacts on protected sites Natural England notes from the options analysis that “The loss or potential moving of a layby to enable access to the site could be problematic indicating potential issues with site access and traffic flow. An increase in HGV and personal vehicle traffic is anticipated, which could lead to potential congestion and air pollution in the area”. Natural England would therefore also like to understand the evidence base further including the rationale for an alternative site TK30 @ Talke A34 / A500 roundabout being ruled out.

Policy PSD6: Health and Wellbeing

Natural England welcome this policy direction in terms of safeguarding health and amenity and supporting healthy communities, through the protection and provision of high-quality open spaces, including allotments and the promotion of active travel transport choices Further information on joining up Nature Recovery and Green Infrastructure (GI) with health priorities is set out below. If more cities and towns can be creatively designed and managed, with nature and communities at their heart, we will see nature and people thrive. This is something we set out to inspire at Natural England when developing the Green Infrastructure Framework and Design Guide. Natural England’s People and Nature survey tells us that, for 82% of people ‘being in nature makes me happy’. With the cost-of-living crisis, ‘free’ places like local parks and greenspace, have become even more important. The value of these spaces for the economy is estimated at £28.7 billion per year.

Green infrastructure in towns and cities provides places to relax, exercise, and spend time outdoors; cools urban areas; reduces flooding by allowing water to permeate the ground rather than overwhelm our drains; increases biodiversity and helps to reduce inequalities in access to nature. Options assessments for development sites and related green and blue Infrastructure within and between developments, green spaces and designated sites should; include soft transition and consider potential direct and indirect implications on sustainable use for example visitor pressure and transport / access options.

The natural environment affords the best ‘natural’ play opportunities for children while offering multifunctional nature-based solutions to climate change etc. These can be blended into wildlife rich green infrastructure and green open spaces that can act as destination play sites for local children (See best practice at Play England and Play Wales) that have proven health and wellbeing value.

Evidence for nature play and health:

Play, naturally: a review of children's natural play

Nature for health and wellbeing | The Wildlife Trusts

Good practice in social prescribing for mental health: the role of nature-based interventions - NECR228 (naturalengland.org.uk)

6 Climate and Renewable Energy

Whilst Natural England welcomes this group of policies we recommend including Policy CRE1: Climate Change and Policy CRE2: Renewable Energy within the Sustainable Environment (SE) group of policies to achieve a collective strategic focus on sustainable development and working toward achieving net zero alongside the SE policies relating to Pollution and Air Quality (SE1) and requirements for sustainable water management measures to reduce water use, natural flood protection features alongside the specific policies on Sustainable Drainage Systems (Policy SE4:)

Natural England continues to work with the LPAs across the region on understanding air pollution across area boundaries (see comments and links in objectives section.)

10 Infrastructure and Transport Policy.

Policy IN4 Cycleways, Bridleways and Public Rights of Way

Natural England welcomes the inclusion of this group of policies which seek to maintain and enhance the network of public rights of way that cross the borough. We note that the sustainability appraisal states that "the borough has relatively poor accessibility to the cycle network and is the lowest performing in the county for walking zones" (p 206) and that, "eight allocated sites (AB2, AB12, AB33, HD10, KL15, MD29, SP11(3) and TK10) do not currently have safe pedestrian or cycle access adjacent to the site, where site end users may be reliant upon less sustainable modes of transport including private car use". (p 180)

11 Sustainable Environment

Natural England welcomes this group of policies and has the following policy specific comments:

Policy SE1: Pollution and Air Pollution.

Natural England welcomes this policy that notes that development proposals which are likely to result in detrimental impacts on air quality, will not be permitted unless it can be demonstrated that mitigation measures effectively address these impacts. (Comments on Air Quality are also provided on page 2 and 4 of this letter). The promotion of sustainable and active travel options, low-emission technologies and enhancement of green infrastructure to absorb air pollution is also noted. (see comment above re integrating the group: 6 Policies Climate and Renewable Energy).

Policy SE7: Biodiversity Net Gain

Natural England supports the inclusion of a policy on BNG. We suggest the following minor amendments to further improve the plan policy.

The BNG policy should make it clear that biodiversity net gain is not applied to irreplaceable habitats, and that any mitigation and/or compensation requirements for Habitats sites should be dealt with separately from biodiversity net gain provision. The policy should also set out how biodiversity net gain will be delivered and managed through the lifetime of the scheme and including monitoring requirements. This should include indicators to demonstrate the amount and type of gain provided through development.

The indicators should be as specific as possible to help build an evidence base to take forward for future reviews of the plan, for example the total number and type of biodiversity units created, the number of developments achieving biodiversity net gains and a record of on-site and off-site contributions.

Natural England notes that the Sustainability Appraisal states "Despite the BNG provisions at the site level, there remains potential for a cumulative adverse impact on biodiversity at the landscape scale, owing to incremental habitat losses. As a result of development within the Local Plan undeveloped land will be lost which will include the loss of soil resources, habitats recognised as being of 'high' and 'very high' distinctiveness, and potentially ecological links between biodiversity assets, whereby the policies will not be expected to fully mitigate the fragmentation of the ecological network. Fragmentation of the ecological network across Newcastle-under-Lyme is expected to be a long-term and permanent significant effect." (p 162)

Policy SE8: Biodiversity and Geodiversity

Natural England supports the inclusion of this policy to protect the Boroughs internationally, nationally and locally designated sites important for their biodiversity value and to enhance the natural environment and work with partners toward Nature Recovery.

We particularly welcome the plans recognition of the value of "wider ecological networks" stating that "Other sites, both individually and collectively, that are not designated can also contribute towards protecting and enhancing diversity of species locally".

Policy SE10: Landscape

Natural England welcomes this policy aimed at ensuring that "development proposals should protect and enhance the character, quality, beauty, and tranquillity of the Borough". We note from the sustainability appraisal that "The entirety of the south of the borough is identified as being high in relation to landscape sensitivity, which starts in Audley in the north and covers the southern area of the borough, including Loggerheads and Alington." We agree that "Alteration of the landscape character is a long-term and permanent significant effect... There is potential for a cumulative adverse effect on landscape character resulting from the development proposed in the Plan". (p193) SA.

Natural England has divided England into 159 distinct natural areas called National Character Areas (NCAs) Newcastle-under-Lyme falls within two NCAs: Shropshire, Cheshire and Staffordshire Plain: gently rolling plains dominated by intensive dairy farming, beef and arable production; The Potteries and Churnet Valley: strong contrast between the industrialised landscape of the Potteries and the pastoral, strongly dissected hills and small plateaux that flank the Churnet and Dove valleys.

Natural agrees with the following statement in the sustainability appraisal: "Although various policies aim to ensure that development conserves and enhances landscape character and distinctiveness, when combined with Local Plan policies that support infrastructural improvements such as for transportation, water, and waste, this is likely to lead to a long-term and irreversible cumulative adverse effect on landscape character and tranquillity and associated indicators such as dark skies." (p72)

Policy SE11: Trees, hedgerows, and woodland

Natural England welcomes this plans recognition that “Trees, hedgerows, and woodlands are integral to the distinctive character and ecological health of the Borough of Newcastle-under-Lyme, defining landscapes across both urban and rural settlements.” And that “This policy prioritises the protection of existing natural assets, seeking to not only preserve, but actively enhance, these valuable features wherever possible”.

Policy SE13: Soil and Agricultural Land

Natural England has concerns about the justification for the loss of BMV agricultural land within this plan. “The proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land, A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of ‘best and most versatile’ (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services.” (page74) (SA)

Natural England notes that policy SE13 states: “Outside of sites allocated for development in the Local Plan, development proposals should avoid the loss of best and most versatile agricultural land (BMV) unless it can be demonstrated that the benefits of development clearly outweigh the loss of the land and every effort has been made to mitigate for the overall impact of the development on best and most versatile agricultural land.”

With regards to Soil and Agricultural Land Quality, Natural England advises that The Local Plan should give appropriate weight to the roles performed by the area’s soils. These should be valued as a finite multi-functional resource which underpin our wellbeing and prosperity. Decisions about development should take full account of the impact on soils, their intrinsic character and the sustainability of the many ecosystem services they deliver.

The 25 Year Environment Plan (25YEP) sets out government action to help the natural world regain and retain good health, including highlighting the need to:

- protect the best agricultural land
- put a value on natural capital, including healthy soil
- ensure all soils are managed sustainably by 2030
- restore and protect peatland

Soil is a finite resource which plays an essential role within sustainable ecosystems, performing an array of functions supporting a range of ecosystem services, including storage of carbon and water, the infiltration and transport of water, nutrient cycling, a buffer against pollution and provision of food. In order to safeguard soil resources as part of the overall sustainability of the development, it is important that the soil resource is able to retain as many of its important functions as possible. This can be achieved through careful soil management and appropriate, beneficial soil re-use, with consideration on how any adverse impacts on soils can be avoided or minimised.

The conservation and sustainable management of soils is reflected in the National Planning Policy Framework (NPPF), particularly in paragraph 180(a), 180(b) and 181 (footnote 62). When planning authorities are considering land use change, the permanency of the impact on soils is an important consideration. Particular care over planned changes to the most potentially productive soil is needed, for the ecosystem services it supports including its role in agriculture and food production.

Plan policies should therefore take account of the impact on land and soil resources and the wide range of vital functions (ecosystem services) they provide in line with paragraph 180(b) of the NPPF.

Soil Plan Policies

We strongly advise that at a minimum, the plan includes core policies for:

- the protection of best and most versatile (BMV) agricultural land (Grades 1, 2 and 3a in the Agricultural Land Classification (ALC)); and
- for the protection of and sustainable management of soils as a resource for the future.
- Areas of poorer quality land (ALC grades 3b, 4, 5) should be preferred to areas of higher quality land (grades 1, 2 and 3a).
- Recognise that development has an irreversible adverse impact on the finite national and local stock of BMV land.
- Conforms to NPPF and Planning Practice Guidance (Natural Environment and Minerals).
- Requires detailed ALC surveys to support plan allocations and for subsequent planning applications (for all sites larger than 5 ha). ALC surveys to support plan allocations and for subsequent planning applications for smaller sites (1 – 5 ha) would be welcomed.
- Recognise that development (soil sealing) has a major and usually irreversible adverse impact on soils.
- Soils of high environmental value (e.g., wetland and carbon stores such as peatland, low nutrient soils; or soils of high environmental value in the local context) should also be considered as part of ecological connectivity (Nature Recovery Network / Green Infrastructure).
- Requires soil handling and sustainable soil management strategies based on a detailed assessment of the soil resource based on best practice guidance (for all sites larger than 5 ha), ideally as part of the planning application process for major sites to help inform master-planning, and to safeguard the continued delivery of ecosystem services through careful soil management and appropriate, beneficial soil re-use. Soil handling and sustainable soil management strategies for smaller sites (1 – 5 ha) would be welcomed.
- Reference should be made to Defra’s Construction Code of Practice for the Sustainable Use of Soils on Construction Sites
- In addition, for minerals and other temporary forms of development, plans for reinstatement, restoration and aftercare will be required (or for solar, a commitment to do so if the operational life is in decades); normally this will be return to the former land quality (ALC grade)
- Refers to soils issues within relevant policy areas such as renewable energy, climate change, green infrastructure and biodiversity net gain, flood schemes, managed realignment, development design and landscaping.

Policy SE14: Green and Blue Infrastructure

Natural England supports this policy. Well-designed cross boundary multi-functional green infrastructure contributes greatly to a number of benefits both for people and nature. Your green and blue (for example cross boundary canals) infrastructure should dovetail with your biodiversity net gain strategies to maximise benefits.

We would advise that the Local Authority also considers Natural England's Green Infrastructure Framework of Principles and Standards for England. As stated in our document, "Green infrastructure (GI) is part of the solution to many of the challenges we face; health inequalities, biodiversity crisis, climate change, nature recovery and levelling up. The GI framework supports local authorities, developers, parks and greenspace managers and local communities to enhance and create new good quality green infrastructure."

We would also suggest reference is made to the emerging Local Nature Recovery Strategy. Preparing Local Nature Recovery Strategies (LNRS) is a statutory requirement under the Environment Act 2021. LNRS are designed to work closely alongside other measures in the Act including supporting the delivery of mandatory biodiversity net gain and providing a focus for a strengthened duty on all public authorities to conserve and enhance biodiversity. They will also underpin the Nature Recovery Network, alongside work to develop partnerships and to integrate nature into our incentives and land management activities. Each LNRS will be specific and tailored to its area. The responsible authorities and people involved in preparing a strategy can choose how they want it to look, but every strategy must contain:

1. A local habitat map.

2. A written statement of biodiversity priorities. Statutory guidance for responsible authorities explains in detail what these 2 things should contain. Together they set out what the strategy is aiming to achieve and what practical actions will help do this. They will also propose where actions could be carried out for best effect and to connect and expand existing areas that are important for nature. We expect local nature recovery strategies to propose actions such as the:

- creation of wetlands
 - restoration of peatlands
 - planting of trees and hedgerows
 - more sustainable management of existing woodlands and other habitats like grasslands
- These actions are intended to help nature itself and to also help improve the wider natural environment.

Whilst the Staffordshire Local Nature Recovery Strategy (LNRS) is currently a work in progress, Newcastle-under-Lyme Borough Council Regulation 19 pre-submission should still be consistent with NPPF Paragraph 185 in terms of setting out local habitat priorities and identifying potential measures by which they can be achieved, alongside mapping areas that could become of particular importance in the future.

Natural England encourages Newcastle Under Lyme Borough Council via their Local Nature Recovery Strategy to actively develop cross border cooperation between other Local Planning Authorities (LPA) (for example Staffordshire Moorlands Borough Council) in coordinating land development projects that impact on local biodiversity sites to ensure that local biodiversity corridors are maintained and link up other local important sites for nature conservation.

This is a good way of achieving nature recovery and preparing to deliver the LNRS alongside enabling the local authority and its partners to identify, map and safeguard site areas, including green and blue infrastructure opportunities and interlinkages.

Habitats Regulations Assessment

Natural England notes that this Local Plan is not directly connected with or necessary to the management of any European site. A screening assessment has been undertaken which identified a number of Likely Significant Effects (LSE) associated with the Local Plan. Taking no account of mitigation measures, the HRA concludes that Local Plan has the potential to affect the following European sites:

- Cannock Chase SAC
- Humber Estuary SAC, SPA and Ramsar
- Mersey Estuary SPA and Ramsar
- Midland Meres and Mosses Phase 1 Ramsar
- Midland Meres and Mosses Phase 2 Ramsar
- Pasturefields Salt Marsh SAC
- Peak District Dales SAC
- Peak District Moors (South Pennine Moors Phase 1) SPA
- Severn Estuary SAC, SPA and Ramsar
- South Pennine Moors SAC
- West Midland Mosses SAC

We welcome that your HRA includes the Humber Estuary SAC, SPA and Ramsar site which is hydrologically connected to the river Trent. If the Local Plan resulted in significant water pollution, this European site could be affected and has therefore been screened in, in relation to water quality only, on a precautionary basis. Natural England however notes that the Sustainability Appraisal identifies "A long-term cumulative adverse effect ...in terms of water quality" (p 148) as a result of the plan, this is not fully reflected in the current HRA.

Natural England note that the Sustainability Appraisal states: that "the entirety of the borough falls within IRZs of one or more SSSIs. All five SSSIs within the borough are in 'unfavourable' condition: Burnt Wood SSSI, Maer Pool SSSI, Black Firs and Cranberry Bog SSSI (Midlands Meres and Mosses Phase 2 Ramsar), Betley Mere SSSI (Midlands Meres and Mosses Phase 1 Ramsar) and Metallic Tileries, Parkhouse SSSI."

Natural England are also aware of the extensive network of ancient woodland spread across the borough, totalling 707.60 hectares, as well as a large quantity of priority habitats, totalling 1,791 hectares.

Natural England agree that the following designated sites and related priority habitats in adjoining LPA areas may also be affected by development through several pathways, including fragmentation, recreational pressure and/or pollution (including Air and Water Quality). Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI, Wyburnbury Moss SAC SSSI, Tyrley Canal Cutting SSSI, King's and Hargreaves Wood SSSI, Gannister Quarry SSSI, Roe Park Woods SSSI, Wetley Moore SSSI, Churnet Valley SSSI, Hatherton Flush SSSI, Sounds Heath SSSI, Ford Green Redebed SSSI, and Cop Mere SSSI.

It is noted that the Appropriate Assessment stage of the HRA assessed potential impacts by topic;

- Impacts on designated features affected by a possible deterioration in air quality
- Impacts on water quality and quantity associated with increased levels of built development.
- Impacts associated with increased recreational pressure at European sites; and

	<p>-Consideration of impacts at associated functionally linked land.</p> <p>Natural England notes that the HRA also factored the following into the assessment process “the protective framework provided by the Local Plan and existing protection measures set out in high level strategic policy and existing planning policy frameworks that serve to help overcome the identified potential adverse effects” and that “taking into consideration these factors, it is concluded that the Local Plan would have no adverse impact on site integrity at any European site, either alone or in-combination.</p> <p>Natural England disagree agree with this conclusion that for those Habitats sites in the area of search with features sensitive to air pollution, adverse effects on their integrity, alone or in-combination, can be ruled out for the reasons set out at the beginning of this letter on page 2 and repeated in part below:</p> <p>Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot currently be ruled out at the following internationally designated sites:</p> <ul style="list-style-type: none"> •Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI •Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI <p>Natural England are currently in discussion with a number of the Staffordshire and West Midlands LPA's with regards to the cumulative impacts of air quality. We advise that further work is required to inform the HRA. The HRA should demonstrate that there are no adverse effects on integrity of Habitat sites as a result of this Local Plan, alone and in combination with other plans and projects. With regards to allocated sites, it is unclear whether the individual sites put forward in the Local Plan have been assessed through the Habitat Regulations Assessment process and how mitigation will be applied here.</p> <p>Sustainability Appraisal</p> <p>Natural England has reviewed the Sustainability Appraisal (SA) and included comments taken from the document throughout our response.</p> <p>The SA is a comprehensive document which should be reviewed in strengthening the HRA, particularly with regards to residual adverse effects that would be expected to remain in terms of wastewater following the implementation of the Local Plan policies. (p 141) Natural England notes that “Increased pressure on wastewater treatment has the potential to be a long term and potentially permanent significant effect” (p 142)</p> <p>The SA recognises the local distinctiveness of the plan area;</p> <p>“The Borough itself is largely rural in nature and supports some high-quality agricultural land, but is more heavily built up towards the north east surrounding Stoke-on-Trent. (p 8)</p> <p>Newcastle-under-Lyme has a strong rural character with a high-quality landscape and countryside, with some areas identified as being sensitive to change as a result of new development. (p 19)</p> <p>Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms make up the key features of some of these Landscape Character Types.” (p 20)</p> <p>Sets out the area specific barriers to achieving sustainable growth;</p> <p>“Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)</p> <p>Loss of tranquillity The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution.(p 68)</p> <p>“The pre-mitigation SA assessments identified negative impacts in relation to air quality due to the proximity of sites to major roads, landscape character due to the location of sites within areas of high landscape sensitivity, close proximity to the PRoW network and potential for coalescence and urban sprawl, habitat sites, priority habitats, habitat distinctiveness, loss of undeveloped land, ‘best and most versatile’ (BMV) agricultural land, coinciding with mineral safeguarding areas (MSAs) and areas of surface water flood risk (SWFR); and access to healthcare facilities, schools, the local cycle network and railway network. (p 40)</p> <p>There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work. (p 21)</p> <p>Trends in transport choice are unlikely to change significantly, and private car use would continue to increase as the selected method of transport to work, with potential adverse impacts on air quality in the borough.”(p 23)</p> <p>Considers the local and cumulative significance of soil loss alongside the ecological implications:</p> <p>“Loss of soil resources, BMV land and ecosystem services The proposed allocations would cumulatively result in the loss of up to approximately 342ha of previously undeveloped land, including up to 263ha of BMV agricultural land. The proposed development would be expected to reduce the ability of the local soil biome to effectively provide ecosystem services, to some extent. Additionally, the loss of permeable soils could potentially increase the risk of flooding and result in a loss of biodiversity across the Plan area. Loss of soil can also result in an increase in soil erosion and have subsequent impacts on agricultural yield.(p 68) The majority of the borough is ALC Grade 3 soil, with areas of ALC Grade 2 scattered across the borough. Grade 2 and potentially Grade 3 represents some of the borough's BMV agricultural land and should be conserved wherever possible (p 21)</p> <p>A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of BMV land to be lost as a result of the development proposed in the Local Plan.” (p 59)</p> <p>Other Advice</p> <p>Further general advice is provided within Natural England Advice Note – Local Plans February 2024, attached at (Appendix A) - see attachment</p>

Q4 Part of document	Policy
Q4 Policy	CRE1
Q6 Details	<p>Please see attached representations. Criteria 3 of Draft Policy CRE1 references water efficiency measures of 110 litres per person per day in line with Part G of the Building Regulations for new developments. The WMHAPC suggests revising this requirement to focus on complying with the most up to date building regulations instead of specifying exact measures. This is because water efficiency standards are already addressed and enforced through Building Regulations, and planning policies should avoid replicating these standards to prevent becoming outdated due to potential changes in building regulations. Criteria 4 of Draft Policy CRE1 indicates that proposals which exceed fabric and energy efficient performance will be afforded positive weight. This is supported by the WMHAPC.</p>

Title	Policy CRE2: Renewable Energy
Consultee Company / Organisation	Cross Heath, Wolstanton and May Bank Branch Labour Party
Consultee Position	Branch Secretary
Consultee Family Name	Gorton
Consultee Given Name	Richard
Q4 Part of document	Policy
Q4 Policy	CRE2
Q6 Details	<p>Policy CRE2– Renewable Energy – The Branch welcomes the inclusion of this policy in the draft Local Plan and supports investment in Low and Zero Carbon technologies. We believe that it is possible to support the greater use of renewable energy and protect the heritage and character of a local area. Investment in solar and wind energy should also be encouraged. In view of the need to promote the use of renewable energy, the Branch feels that the obligation placed on major developments to provide at least 10% of their energy needs from renewable or low carbon sources may be too modest.</p>
Q7 Modification	<p>Modification of Policy CRE2 Renewable Energy - we would suggest that a higher percentage figure should be adopted. The obligation placed on developers of wind energy proposals to demonstrate that communities affected by schemes of this nature to support an application seems to be rather onerous and difficult to satisfy. It is unlikely that objectors to a particular scheme will concede that they have been persuaded by the case put forward by a developer.</p>
Q9 Hearing reasons	Conclusion

	Cross Heath, Wolstanton and May Bank Branch Labour Party welcomes the opportunity to give its views in response to the Regulation 19 stage of the draft Local Plan. If it is felt to be appropriate, a member of the Branch would be prepared to take part in the public scrutiny of the draft Local Plan.

Q4 Part of document	Policy
Q4 Policy	CRE2
Q5 Sound	No
Q6 Details	<p>Please see attached representations.</p> <p>The Policy is not considered to be sound as it is not justified or effective or in line with national policy.</p> <p>Again, HBF would caution against policies that seek to go further and faster than national legislation and policy changes, which would lead to the creation of a patchwork of differing local policies which could inadvertently undermine the delivery of the wider environmental objectives the Council is seeking and create unnecessary delays to much needed new housing.</p> <p>HBF note that it is the Government's intention to set standards for energy efficiency through the Building Regulations. The key to success is standardisation and avoidance of individual Council's specifying their own policy approach to energy efficiency, which undermines economies of scale for product manufacturers, suppliers and developers. The policy requirements to provide an energy statement which demonstrates the maximum feasible and viable use of onsite renewable energy generation for at least 10% of their energy needs from renewable or low carbon energy generation, is unified and may be ineffective.</p> <p>The development industry is working to address this matter at a national level through Building Regulations and the Future Home Standard. A Local Plan policy on this issue may therefore be unintentionally counterproductive, and undermine climate change adaptations and mitigations.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	HBF requests to participate in the Hearing Sessions for the Local Plan Examination, the HBF considers that their involvement is necessary to ensure that the home building industry is able to respond to any housing related issues raised during the hearing sessions.

Agent Given Name	Clare
Q4 Part of document	Policy
Q4 Policy	CRE2
Q5 Legally compliant	No
Q5 Sound	No
Q6 Details	<p>Policy CRE2: Renewable Energy</p> <p>As illustrated within the University's Vision document provided at Appendix B, the University has aspirations to provide renewable energy infrastructure within the campus, or at locations where such infrastructure will contribute to meeting the University's energy needs.</p> <p>The University welcomes that Policy CRE2 would support the development of renewable or sustainable energy technologies over the Plan Period. There are however concerns that certain parts of the policy are overly restrictive. For example, part 7 of the Policy requires large scale solar energy proposals to demonstrate that available brownfield sites have been examined and discounted before greenfield development is considered. We however believe that Policy CRE2 should recognise that renewable energy proposals can also have a specific locational requirement, particularly when they are directly associated to an existing community or use. This would be the case with the University and the need to place such infrastructure within or adjacent to the existing Campus.</p> <p>We also highlight that Paragraph 163 of the NPPF states that when determining planning applications for renewable and low carbon development, local planning authorities should approve the application if its impacts are (or can be made) acceptable. There is no requirement in the NPPF for solar energy proposals to be provided on brownfield sites, therefore, this element of the policy is not consistent with the NPPF.</p>
Q7 Modification	In light of the above, we recommend that Policy CRE2 is amended to remove the requirement for brownfield sites to be examined and discounted before greenfield sites are considered. We also recommend that the policy recognises that there are locational requirements for such infrastructure, particularly where it is required in support of an existing use
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	We request the right to make representations on behalf of Keele University, in order to examine the Council's evidence in support of the proposed approach to Green Belt and Open Space matters in order to ensure that the plan is effective and justified within the context of the University's future investment proposals, and with reference to the importance of this investment for the wider economy of Newcastle Under Lyme.

Title	Policy CRE2: Renewable Energy
Consultee Company / Organisation	Natural England
Consultee Position	Senior Officer
Consultee Family Name	McLaughlin
Consultee Given Name	Sally
Q4 Part of document	Policy
Q4 Policy	CRE2
Q6 Details	<p>Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.</p> <p>Natural England welcomes the opportunity to comment at this stage of the Local Plan and particularly supports the inclusion of policies on green and blue infrastructure, biodiversity, health and wellbeing, trees hedgerows and woodlands. We have reviewed the consultation documents and provide comments that relate to the soundness of the Local Plan and that are most relevant to our interest in the Natural Environment.</p> <p>Natural England has adopted a robust precautionary approach within this plan response. Whilst we welcome the content of the Local Plan, Natural England advises that the plan is currently at risk of being unsound and/or not legally compliant due to the potential impacts on air quality in relation to internationally designated nature conservation sites and the justification for the potential loss of 263ha best and most versatile (BMV) agricultural land. Further detail is provided below.</p> <p>Natural England have also provided other advice within this submission relating to further improvements that could strengthen plan policies and specific strategic site options and related mitigation.</p> <p>Do you consider that the Newcastle Under Lyme Plan is Sound and Legally Compliant?</p> <p>Natural England notes that the plan is at the pre-submission stage and as such your authority is seeking confirmation on the soundness of the plan. Having reviewed the plan and supporting documents, Natural England considers the pre-submission plan in its current form is not sound or legally compliant, this is due to a lack of evidence with regards to air quality and the cumulative loss of BMV agricultural land both in a local and national context.</p> <p>Air quality</p> <p>Natural England notes that the Sustainability Appraisal states that "Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)</p> <p>As Natural England understands it the current evidence base used to conduct the HRA cannot rule out adverse impacts on designated sites. The HRA states at page 22 3.4.16 "At the time of writing, the traffic modelling run for the final suite of Regulation 19 allocations had not been undertaken." Appendix A lists the local plans for neighbouring LPA's concluding that 'in combination' with plans and projects (approved and those yet to be implemented) they may trigger in-combination effects on European sites as a result of air quality, particularly as we understand it in the key commuting areas.</p> <p>Natural England notes that Annual Average Daily Traffic (AADT) data and traffic modelling in the Strategic Transport Assessment (STA) concludes a potential reduction in travel and related air pollution at allocated sites as a result of a predicted preference in the use of public transport. We are surprised by this projected decrease in both traffic and related air pollution, particularly as one employment allocation site includes a 200-bay lorry park and increased congestion is predicted at junction 16 of the M6 where it joins the A500 in a rural location with no existing rural transport provision. The Sustainability Appraisal also notes</p>

that: "There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work". (p 206)

Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot therefore currently be ruled out at the following internationally designated sites:

- Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI
- Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI

The HRA outlines that the main source of ammonia emissions is agricultural practice, and that material increases in NH3 emissions are unlikely to be associated with the proposed local plan. At Black Firs and Cranberry Bog and Oakhanger Moss, any increase in nitrogen deposition has the potential to exacerbate pollution levels and thereby undermine the reasons for notification of these sites as a Ramsar. Ammonia can be emitted from vehicle exhaust emissions as a by-product of the catalytic conversion process designed to reduce emissions of nitrogen oxide. As traffic composition transitions toward more petrol and electric cars (i.e., fewer diesel cars on the road), catalytic converters may aid in reducing NOx emissions but result in increased ammonia emissions. Ammonia emissions from road traffic therefore could make a significant difference to nitrogen deposition close to roads.

Natural England therefore advise that ammonia sourced from traffic emissions should be included for assessment within the local plan HRA, as the impact from this source on designated sites is currently unclear. For further information please see this report from Air Quality Consultants (AQC) that looks at ammonia emissions from roads for assessing impacts on nitrogen-sensitive habitats. Whilst we are aware that the current CREAM model created by AQC used to assess ammonia emissions from road traffic has not been peer reviewed, at this time it has been recognised as a Best Available Tool and we deem it appropriate to be used where any caveats associated with this model are also considered within the assessment. An assessment based on the best available approach is necessary. The next stage of assessment can then consider uncertainties in the model and site specifics to decide if mitigation needs to be considered.

Further work is therefore required to inform the Habitat Regulations Assessment. Natural England will engage with the Local Planning Authority in order to produce a Statement of Common Ground (SoCG) on this matter.

'Best and most versatile' (BMV) agricultural land

Natural England notes that "the proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land, A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of 'best and most versatile' (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services". (page 74 Sustainability Appraisal).

Under the Town and Country Planning (Development Management Procedure) (England) Order 2015 (DMPO) Natural England is a statutory consultee on development that would lead to the loss of over 20ha of 'best and most versatile' (BMV) agricultural land (land graded as 1, 2 and 3a in the Agricultural Land Classification (ALC) system, where this is not in accordance with an approved plan.

Natural England would like to understand how the local planning authority have produced the evidence base and options assessment which informs the strategic site allocations.

Natural England will engage with the local planning authority to consider the cumulative impacts of the loss of BMV both in the local and national context and the challenges related to environmental impact, infrastructure, and the requirement to deliver a balance between the need for development and the potential urbanisation of the countryside including the potential mitigation measures that need to be considered.

NPPF paragraph 174e states:

Planning policies and decisions should contribute to and enhance the natural and local environment by:

- ... preventing new and existing development from contributing to, being put at unacceptable risk from, or being adversely affected by, unacceptable levels of soil, air, water or noise pollution or land instability.

Development should, wherever possible, help to improve local environmental conditions such as air and water quality, taking into account relevant information such as river basin management plans.

Natural England provides guidance to inform further assessment of air quality and the loss of BMV agricultural land in our response to the content of the plans Strategic Policies as set out below.

Do you consider that the Newcastle-under-Lyme Borough Council Regulation 19 pre-submission draft Plan is compliant with Duty to Co-operate?

In terms of working with neighbouring authorities, Natural England notes that initially the plan was intended to be produced jointly with the City of Stoke-on-Trent, the plan does not however currently present an evidence base that demonstrates that a collaborative approach has been adopted and that the Duty to Co-operate has been fully complied with.

The Sustainability Appraisal states that: "Overall, there is potential for a cumulative adverse effect on biodiversity, owing to the fragmentation of the ecological network... Where a large amount of development is located on previously undeveloped land surrounding rural settlements, this is likely to produce a long-term irreversible negative cumulative effect regarding the urbanisation of the countryside" (p 71)

Natural England would therefore like to further understand how the areas identified to meet the City of Stoke-on-Trent's unmet employment needs are justified and appropriate and whether meeting some of the employment needs of the City of Stoke-on-Trent has led to the need to release or safeguard more land from the Green Belt in Newcastle under Lyme. If this is the case, what are the exceptional circumstances for doing this and how does this align with the allocated sites options assessment?

Recreational Pressure

In terms of the South Pennine Moors SAC and recreational impacts, the Local Plan does comply with the Duty to Co-operate. Natural England recommends that reference is made to the 'Recreation use of the South Pennine Moors and implications for strategic housing growth' report by Footprint Ecology Ref 778 date 27th March 2024. This report should both inform the evidence base and ensure that policies relating to open space/green infrastructure are as rigorous and robust as possible.

The report concludes that more data/evidence is required to determine if recreational use is causing an impact across to the South Pennine Moors and to get a better understanding of the scale and location of any impact. Natural England notes that the report records 7,000 additional dwellings in Newcastle-under-Lyme over the plan period rather than the 8,000 included in this regulation 19 submission.

Newcastle-under-Lyme Borough Council should therefore continue to work with local authority and other partners to ensure coordinated and continued cross boundary action.

Other matters

Natural England has specific concerns related to allocations in the Green Belt. Notwithstanding that, Natural England considers most of the policies within the plan to be sound and deliverable. The plan is consistent with national policy with regard to those policies that are within Natural England's remit. Further information on strengthening policies including but not limited to Soils and best and most versatile (BMV) agricultural land, preventing loss and fragmentation of habitats and supporting green infrastructure are provided below.

Vision and Strategy

Natural England notes that the Plan's vision and emerging development strategy set out a framework for the future development of Newcastle-under-Lyme and addresses the needs in relation to housing, the economy, community facilities and infrastructure, including specific reference to a proposed employment site allocation.

This vision and the related objectives should also set out the environmental ambition for the plan area and form the basis for nature recovery and enhancement, supported by the policies and proposals in the plan.

Natural England advises that the vision should also incorporate more on the local ecology and landscape features which underpin local distinctiveness such as the "strong rural character with long open views across the surrounding rural landscape, towards more distant hills often framed by trees" (p 69) Part 3 Site Specific Landscape & Visual Appraisal. "Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms" (p 187) Sustainability Appraisal.

Strategic Objectives

Natural England welcome strategic objective SO-4 relating to carbon reduction and climate change, however we do not feel that this group of thirteen strategic objectives value or reflect the Boroughs whole ecology and landscape including but not limited to the protection of soil and best and most versatile (BMV) agricultural land. We would suggest that additional objectives are added relating to: air quality, water quality and quantity, soils and landscape.

Natural England would also like to see stronger reference to the Nature Recovery Network which is one of the specific aims of the Environment Act 2021 and will underpin the approach to the enhancement of nature.

Air quality is a major threat to habitats and species. Many ecological sites are exceeding their critical loads and levels for ammonia, nitrogen deposition and acid deposition. The strengthening of the policies and the rationale behind site allocations within this plan will ensure that new development does not contribute to the further deterioration of habitats and species due to air pollution. Further advice on strengthening the plans evidence base with regards to air quality is provided in the links below:

Natural England's approach to advising competent authorities on the assessment of road traffic emissions under the Habitats Regulations (NEA001)

Strategic Policies

5 Planning for Sustainable Development

Policy PSD5: Green Belt

Natural England notes that this policy "aims to protect the Borough's essential open spaces, prioritise the use of brownfield land, and guide potential future development in accordance with the National Planning Policy Framework (NPPF)".

Natural England however notes that amendments to the Green Belt boundary are proposed in the form of 14 site allocations to accommodate both the growth requirements of the borough and the employment requirements of wider Stoke-on-Trent conurbation. Natural England's has some site-specific concerns about the potential impacts of some of the green belt sites selected on the natural environment with regards to habitat loss, fragmentation and justification for the loss of BMV agricultural land.

We note the LPA's intention to release and compensate for the loss of green belt and prioritise the use of suitable brownfield land. However, the site allocations in the green belt would result in the potential loss of 263ha of Best and Most Versatile (BMV) agricultural land. The council should satisfy itself that it is making a balanced decision for sustainable development, the Sustainability Appraisal concludes that: "The Green Belt Study assessed land parcels against the contribution they make to the five purposes of the Green Belt on a four-point scale...Three allocated sites (AB12, AB33 and TK10) are located in areas which make a 'strong' overall contribution to the purposes of the Green Belt where "the site contributes to the purpose in a strong and undeniable way, whereby removal of the site from the Green Belt will detrimentally undermine this purpose" (p101)

"Site allocations on previously undeveloped land or that would result in a net loss of GI / vegetation could result in a reduced capability of the environment to provide ecosystem services including carbon storage,

the storage and filtration of water including natural flood protection, as well as reduced availability and connectivity of habitats within the green network enabling movement of species. (p 165)

Strategic Site Allocations

Natural England suggests that the HRA should include a “requirement for project-level/site specific HRA's and targeted ecological surveys”.

The Sustainability Appraisal concludes that:

“Some 12 allocated sites partially coincide with priority habitats, where 3.43% of the total site allocation areas coinciding with priority habitats which include deciduous woodland, good quality semi-improved grassland and Site BL18 coincides with lowland fens which is a very high distinctiveness habitat in the BNG handbook (2024). These habitats can support a range of species of principal importance. Allocated Site KL15 is adjacent to ‘The Butts and Hands Wood’ ancient woodland, with a further 20 allocated sites located in close proximity to ancient woodlands. P158

“Six allocated sites (Sites CT20, HD10, KL13, RC8, SP11(2) and SP23) are located within areas of ‘high’ or ‘very high’ habitat distinctiveness that provide high biodiversity value. Whilst in many cases these habitats can be conserved alongside development, it is likely that in some cases fragmentation or loss of habitats and connections between habitats will occur”

“The majority of allocated sites are located on previously undeveloped land, which would result in the loss of soil resources and the ecosystem services they provide. (p 159) The development of new buildings on previously undeveloped land would be expected to result in a direct loss of soil resource, with little or no scope for mitigation” (p 216)

“The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution. (p 68)

For all sites, Natural England advises that the hydrological catchment within which the site sits is taken into consideration, with regards to the potential impact of the developments proposed on the adjoining watercourses and wider catchments, including but not limited to surface water runoff (including during construction), existing and required capacity of Waste Water Treatment Works (WwTW) and water supply and flooding issues. Each site will require site specific investigation, and the council should understand the impact of all the sites put forward individually and in combination.

Natural England has specific concerns and or requires further information about the following ‘Strategic Site Allocations’ which could potentially impact on designated sites as a result of air and water quality and/or lead to the loss and / or fragmentation of priority habitats and BMV agricultural land:

BL18 – Clough Hall Playing Fields, Talke

Natural England would like to further understand this larger residential development proposal with regards to the potential impacts on the lowland fen habitat.

KL13 & KL15 – Land South of A525 between Keele University and Newcastle

Natural England notes this proposal for Employment development is immediately adjacent to ancient woodland priority habitat.

HM28 – Land off East Lawns, Betley

Existing and projected water quality issues at Betley Mere will need to be considered with regards to this allocation.

LW53 – Loggerheads

Natural England notes this residential housing development proposal is located within the IRZ of protected sites (Burnt Wood SSSI) which states that development proposals of 50 or more homes outside existing settlements/urban areas in these zones should be consulted upon with Natural England.

SP11 – Former Keele Municipal Golf Course

This Larger residential development is categorised in the Landscape Assessment as having a Major adverse impact on the local Landscape.

AB2 – Land Adjoining Corner of A500 and M6 Southbound

Natural England notes this proposed employment allocation released entirely from the green belt, which comprises 70ha of grade 2 BMV agricultural land. The Landscape study concludes that the: “Proposed development scenario is likely to have a major adverse effect on the SA objective with no satisfactory mitigation possible” (p 15). With regards to potential Air Quality impacts on protected sites Natural England notes from the options analysis that “The loss or potential moving of a layby to enable access to the site could be problematic indicating potential issues with site access and traffic flow. An increase in HGV and personal vehicle traffic is anticipated, which could lead to potential congestion and air pollution in the area”. Natural England would therefore also like to understand the evidence base further including the rationale for an alternative site TK30 @ Talke A34 / A500 roundabout being ruled out.

Policy PSD6: Health and Wellbeing

Natural England welcome this policy direction in terms of safeguarding health and amenity and supporting healthy communities, through the protection and provision of high-quality open spaces, including allotments and the promotion of active travel transport choices Further information on joining up Nature Recovery and Green Infrastructure (GI) with health priorities is set out below. If more cities and towns can be creatively designed and managed, with nature and communities at their heart, we will see nature and people thrive. This is something we set out to inspire at Natural England when developing the Green Infrastructure Framework and Design Guide. Natural England's People and Nature survey tells us that, for 82% of people ‘being in nature makes me happy’. With the cost-of-living crisis, ‘free’ places like local parks and greenspace, have become even more important. The value of these spaces for the economy is estimated at £28.7 billion per year.

Green infrastructure in towns and cities provides places to relax, exercise, and spend time outdoors; cools urban areas; reduces flooding by allowing water to permeate the ground rather than overwhelm our drains; increases biodiversity and helps to reduce inequalities in access to nature. Options assessments for development sites and related green and blue Infrastructure within and between developments, green spaces and designated sites should; include soft transition and consider potential direct and indirect implications on sustainable use for example visitor pressure and transport / access options.

The natural environment affords the best ‘natural’ play opportunities for children while offering multifunctional nature-based solutions to climate change etc. These can be blended into wildlife rich

green infrastructure and green open spaces that can act as destination play sites for local children (See best practice at Play England and Play Wales) that have proven health and wellbeing value.

Evidence for nature play and health:
 Play, naturally: a review of children's natural play
 Nature for health and wellbeing | The Wildlife Trusts
 Good practice in social prescribing for mental health: the role of nature-based interventions - NECR228 (naturalengland.org.uk)

6 Climate and Renewable Energy
 Whilst Natural England welcomes this group of policies we recommend including Policy CRE1: Climate Change and Policy CRE2: Renewable Energy within the Sustainable Environment (SE) group of policies to achieve a collective strategic focus on sustainable development and working toward achieving net zero alongside the SE policies relating to Pollution and Air Quality (SE1) and requirements for sustainable water management measures to reduce water use, natural flood protection features alongside the specific policies on Sustainable Drainage Systems (Policy SE4:)
 Natural England continues to work with the LPAs across the region on understanding air pollution across area boundaries (see comments and links in objectives section.)

10 Infrastructure and Transport Policy.
 Policy IN4 Cycleways, Bridleways and Public Rights of Way
 Natural England welcomes the inclusion of this group of policies which seek to maintain and enhance the network of public rights of way that cross the borough. We note that the sustainability appraisal states that "the borough has relatively poor accessibility to the cycle network and is the lowest performing in the county for walking zones" (p 206) and that, "eight allocated sites (AB2, AB12, AB33, HD10, KL15, MD29, SP11(3) and TK10) do not currently have safe pedestrian or cycle access adjacent to the site, where site end users may be reliant upon less sustainable modes of transport including private car use". (p 180)

11 Sustainable Environment
 Natural England welcomes this group of policies and has the following policy specific comments:
 Policy SE1: Pollution and Air Quality.
 Natural England welcomes this policy that notes that development proposals which are likely to result in detrimental impacts on air quality, will not be permitted unless it can be demonstrated that mitigation measures effectively address these impacts. (Comments on Air Quality are also provided on page 2 and 4 of this letter). The promotion of sustainable and active travel options, low-emission technologies and enhancement of green infrastructure to absorb air pollution is also noted. (see comment above re integrating the group: 6 Policies Climate and Renewable Energy).
 Policy SE7: Biodiversity Net Gain
 Natural England supports the inclusion of a policy on BNG. We suggest the following minor amendments to further improve the plan policy.
 The BNG policy should make it clear that biodiversity net gain is not applied to irreplaceable habitats, and that any mitigation and/or compensation requirements for Habitats sites should be dealt with separately from biodiversity net gain provision. The policy should also set out how biodiversity net gain will be delivered and managed through the lifetime of the scheme and including monitoring requirements. This should include indicators to demonstrate the amount and type of gain provided through development. The indicators should be as specific as possible to help build an evidence base to take forward for future reviews of the plan, for example the total number and type of biodiversity units created, the number of developments achieving biodiversity net gains and a record of on-site and off-site contributions.
 Natural England notes that the Sustainability Appraisal states "Despite the BNG provisions at the site level, there remains potential for a cumulative adverse impact on biodiversity at the landscape scale, owing to incremental habitat losses. As a result of development within the Local Plan undeveloped land will be lost which will include the loss of soil resources, habitats recognised as being of 'high' and 'very high' distinctiveness, and potentially ecological links between biodiversity assets, whereby the policies will not be expected to fully mitigate the fragmentation of the ecological network. Fragmentation of the ecological network across Newcastle-under-Lyme is expected to be a long-term and permanent significant effect." (p 162)
 Policy SE8: Biodiversity and Geodiversity
 Natural England supports the inclusion of this policy to protect the Boroughs internationally, nationally and locally designated sites important for their biodiversity value and to enhance the natural environment and work with partners toward Nature Recovery.
 We particularly welcome the plans recognition of the value of "wider ecological networks" stating that "Other sites, both individually and collectively, that are not designated can also contribute towards protecting and enhancing diversity of species locally".
 Policy SE10: Landscape
 Natural England welcomes this policy aimed at ensuring that "development proposals should protect and enhance the character, quality, beauty, and tranquillity of the Borough". We note from the sustainability appraisal that "The entirety of the south of the borough is identified as being high in relation to landscape sensitivity, which starts in Audley in the north and covers the southern area of the borough, including Loggerheads and Alington." We agree that "Alteration of the landscape character is a long-term and permanent significant effect... There is potential for a cumulative adverse effect on landscape character resulting from the development proposed in the Plan". (p193) SA.
 Natural England has divided England into 159 distinct natural areas called National Character Areas (NCAs) Newcastle-under-Lyme falls within two NCAs: Shropshire, Cheshire and Staffordshire Plain: gently rolling plains dominated by intensive dairy farming, beef and arable production; The Potteries and Churnet Valley: strong contrast between the industrialised landscape of the Potteries and the pastoral, strongly dissected hills and small plateaux that flank the Churnet and Dove valleys.
 Natural agrees with the following statement in the sustainability appraisal: "Although various policies aim to ensure that development conserves and enhances landscape character and distinctiveness, when combined with Local Plan policies that support infrastructural improvements such as for transportation, water, and waste, this is likely to lead to a long-term and irreversible cumulative adverse effect on landscape character and tranquillity and associated indicators such as dark skies." (p72)

Policy SE11: Trees, hedgerows, and woodland

Natural England welcomes this plans recognition that “Trees, hedgerows, and woodlands are integral to the distinctive character and ecological health of the Borough of Newcastle-under-Lyme, defining landscapes across both urban and rural settlements.” And that “This policy prioritises the protection of existing natural assets, seeking to not only preserve, but actively enhance, these valuable features wherever possible”.

Policy SE13: Soil and Agricultural Land

Natural England has concerns about the justification for the loss of BMV agricultural land within this plan. “The proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land. A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of ‘best and most versatile’ (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services.” (page74) (SA)

Natural England notes that policy SE13 states: “Outside of sites allocated for development in the Local Plan, development proposals should avoid the loss of best and most versatile agricultural land (BMV) unless it can be demonstrated that the benefits of development clearly outweigh the loss of the land and every effort has been made to mitigate for the overall impact of the development on best and most versatile agricultural land.”

With regards to Soil and Agricultural Land Quality, Natural England advises that The Local Plan should give appropriate weight to the roles performed by the area’s soils. These should be valued as a finite multi-functional resource which underpin our wellbeing and prosperity. Decisions about development should take full account of the impact on soils, their intrinsic character and the sustainability of the many ecosystem services they deliver.

The 25 Year Environment Plan (25YEP) sets out government action to help the natural world regain and retain good health, including highlighting the need to:

- protect the best agricultural land
- put a value on natural capital, including healthy soil
- ensure all soils are managed sustainably by 2030
- restore and protect peatland

Soil is a finite resource which plays an essential role within sustainable ecosystems, performing an array of functions supporting a range of ecosystem services, including storage of carbon and water, the infiltration and transport of water, nutrient cycling, a buffer against pollution and provision of food. In order to safeguard soil resources as part of the overall sustainability of the development, it is important that the soil resource is able to retain as many of its important functions as possible. This can be achieved through careful soil management and appropriate, beneficial soil re-use, with consideration on how any adverse impacts on soils can be avoided or minimised.

The conservation and sustainable management of soils is reflected in the National Planning Policy Framework (NPPF), particularly in paragraph 180(a), 180(b) and 181 (footnote 62). When planning authorities are considering land use change, the permanency of the impact on soils is an important consideration. Particular care over planned changes to the most potentially productive soil is needed, for the ecosystem services it supports including its role in agriculture and food production.

Plan policies should therefore take account of the impact on land and soil resources and the wide range of vital functions (ecosystem services) they provide in line with paragraph 180(b) of the NPPF.

Soil Plan Policies

We strongly advise that at a minimum, the plan includes core policies for:

- the protection of best and most versatile (BMV) agricultural land (Grades 1, 2 and 3a in the Agricultural Land Classification (ALC)); and
- for the protection of and sustainable management of soils as a resource for the future.
- Areas of poorer quality land (ALC grades 3b, 4, 5) should be preferred to areas of higher quality land (grades 1, 2 and 3a).
- Recognise that development has an irreversible adverse impact on the finite national and local stock of BMV land.
- Conforms to NPPF and Planning Practice Guidance (Natural Environment and Minerals).
- Requires detailed ALC surveys to support plan allocations and for subsequent planning applications (for all sites larger than 5 ha). ALC surveys to support plan allocations and for subsequent planning applications for smaller sites (1 – 5 ha) would be welcomed.
- Recognise that development (soil sealing) has a major and usually irreversible adverse impact on soils.
- Soils of high environmental value (e.g., wetland and carbon stores such as peatland, low nutrient soils; or soils of high environmental value in the local context) should also be considered as part of ecological connectivity (Nature Recovery Network / Green Infrastructure).
- Requires soil handling and sustainable soil management strategies based on a detailed assessment of the soil resource based on best practice guidance (for all sites larger than 5 ha), ideally as part of the planning application process for major sites to help inform master-planning, and to safeguard the continued delivery of ecosystem services through careful soil management and appropriate, beneficial soil re-use. Soil handling and sustainable soil management strategies for smaller sites (1 – 5 ha) would be welcomed.
- Reference should be made to Defra’s Construction Code of Practice for the Sustainable Use of Soils on Construction Sites
- In addition, for minerals and other temporary forms of development, plans for reinstatement, restoration and aftercare will be required (or for solar, a commitment to do so if the operational life is in decades); normally this will be return to the former land quality (ALC grade)
- Refers to soils issues within relevant policy areas such as renewable energy, climate change, green infrastructure and biodiversity net gain, flood schemes, managed realignment, development design and landscaping.

Policy SE14: Green and Blue Infrastructure

Natural England supports this policy. Well-designed cross boundary multi-functional green infrastructure contributes greatly to a number of benefits both for people and nature. Your green and blue (for example cross boundary canals) infrastructure should dovetail with your biodiversity net gain strategies to maximise benefits.

We would advise that the Local Authority also considers Natural England's Green Infrastructure Framework of Principles and Standards for England. As stated in our document, "Green infrastructure (GI) is part of the solution to many of the challenges we face; health inequalities, biodiversity crisis, climate change, nature recovery and levelling up. The GI framework supports local authorities, developers, parks and greenspace managers and local communities to enhance and create new good quality green infrastructure."

We would also suggest reference is made to the emerging Local Nature Recovery Strategy. Preparing Local Nature Recovery Strategies (LNRS) is a statutory requirement under the Environment Act 2021. LNRS are designed to work closely alongside other measures in the Act including supporting the delivery of mandatory biodiversity net gain and providing a focus for a strengthened duty on all public authorities to conserve and enhance biodiversity. They will also underpin the Nature Recovery Network, alongside work to develop partnerships and to integrate nature into our incentives and land management activities. Each LNRS will be specific and tailored to its area. The responsible authorities and people involved in preparing a strategy can choose how they want it to look, but every strategy must contain:

1. A local habitat map.

2. A written statement of biodiversity priorities. Statutory guidance for responsible authorities explains in detail what these 2 things should contain. Together they set out what the strategy is aiming to achieve and what practical actions will help do this. They will also propose where actions could be carried out for best effect and to connect and expand existing areas that are important for nature. We expect local nature recovery strategies to propose actions such as the:

- creation of wetlands
 - restoration of peatlands
 - planting of trees and hedgerows
 - more sustainable management of existing woodlands and other habitats like grasslands
- These actions are intended to help nature itself and to also help improve the wider natural environment.

Whilst the Staffordshire Local Nature Recovery Strategy (LNRS) is currently a work in progress, Newcastle-under-Lyme Borough Council Regulation 19 pre-submission should still be consistent with NPPF Paragraph 185 in terms of setting out local habitat priorities and identifying potential measures by which they can be achieved, alongside mapping areas that could become of particular importance in the future.

Natural England encourages Newcastle Under Lyme Borough Council via their Local Nature Recovery Strategy to actively develop cross border cooperation between other Local Planning Authorities (LPA) (for example Staffordshire Moorlands Borough Council) in coordinating land development projects that impact on local biodiversity sites to ensure that local biodiversity corridors are maintained and link up other local important sites for nature conservation.

This is a good way of achieving nature recovery and preparing to deliver the LNRS alongside enabling the local authority and its partners to identify, map and safeguard site areas, including green and blue infrastructure opportunities and interlinkages.

Habitats Regulations Assessment

Natural England notes that this Local Plan is not directly connected with or necessary to the management of any European site. A screening assessment has been undertaken which identified a number of Likely Significant Effects (LSE) associated with the Local Plan. Taking no account of mitigation measures, the HRA concludes that Local Plan has the potential to affect the following European sites:

- Cannock Chase SAC
- Humber Estuary SAC, SPA and Ramsar
- Mersey Estuary SPA and Ramsar
- Midland Meres and Mosses Phase 1 Ramsar
- Midland Meres and Mosses Phase 2 Ramsar
- Pasturefields Salt Marsh SAC
- Peak District Dales SAC
- Peak District Moors (South Pennine Moors Phase 1) SPA
- Severn Estuary SAC, SPA and Ramsar
- South Pennine Moors SAC
- West Midland Mosses SAC

We welcome that your HRA includes the Humber Estuary SAC, SPA and Ramsar site which is hydrologically connected to the river Trent. If the Local Plan resulted in significant water pollution, this European site could be affected and has therefore been screened in, in relation to water quality only, on a precautionary basis. Natural England however notes that the Sustainability Appraisal identifies "A long-term cumulative adverse effect ...in terms of water quality" (p 148) as a result of the plan, this is not fully reflected in the current HRA.

Natural England note that the Sustainability Appraisal states: that "the entirety of the borough falls within IRZs of one or more SSSIs. All five SSSIs within the borough are in 'unfavourable' condition: Burnt Wood SSSI, Maer Pool SSSI, Black Firs and Cranberry Bog SSSI (Midlands Meres and Mosses Phase 2 Ramsar), Betley Mere SSSI (Midlands Meres and Mosses Phase 1 Ramsar) and Metallic Tileries, Parkhouse SSSI."

Natural England are also aware of the extensive network of ancient woodland spread across the borough, totalling 707.60 hectares, as well as a large quantity of priority habitats, totalling 1,791 hectares.

Natural England agree that the following designated sites and related priority habitats in adjoining LPA areas may also be affected by development through several pathways, including fragmentation, recreational pressure and/or pollution (including Air and Water Quality). Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI, Wyburnbury Moss SAC SSSI, Tyrley Canal Cutting SSSI, King's and Hargreaves Wood SSSI, Gannister Quarry SSSI, Roe Park Woods SSSI, Wetley Moore SSSI, Churnet Valley SSSI, Hatherton Flush SSSI, Sounds Heath SSSI, Ford Green Redebed SSSI, and Cop Mere SSSI.

It is noted that the Appropriate Assessment stage of the HRA assessed potential impacts by topic;

- Impacts on designated features affected by a possible deterioration in air quality
- Impacts on water quality and quantity associated with increased levels of built development.
- Impacts associated with increased recreational pressure at European sites; and

	<p>-Consideration of impacts at associated functionally linked land.</p> <p>Natural England notes that the HRA also factored the following into the assessment process “the protective framework provided by the Local Plan and existing protection measures set out in high level strategic policy and existing planning policy frameworks that serve to help overcome the identified potential adverse effects” and that “taking into consideration these factors, it is concluded that the Local Plan would have no adverse impact on site integrity at any European site, either alone or in-combination.</p> <p>Natural England disagree agree with this conclusion that for those Habitats sites in the area of search with features sensitive to air pollution, adverse effects on their integrity, alone or in-combination, can be ruled out for the reasons set out at the beginning of this letter on page 2 and repeated in part below:</p> <p>Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot currently be ruled out at the following internationally designated sites:</p> <ul style="list-style-type: none"> •Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI •Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI <p>Natural England are currently in discussion with a number of the Staffordshire and West Midlands LPA's with regards to the cumulative impacts of air quality. We advise that further work is required to inform the HRA. The HRA should demonstrate that there are no adverse effects on integrity of Habitat sites as a result of this Local Plan, alone and in combination with other plans and projects. With regards to allocated sites, it is unclear whether the individual sites put forward in the Local Plan have been assessed through the Habitat Regulations Assessment process and how mitigation will be applied here.</p> <p>Sustainability Appraisal</p> <p>Natural England has reviewed the Sustainability Appraisal (SA) and included comments taken from the document throughout our response.</p> <p>The SA is a comprehensive document which should be reviewed in strengthening the HRA, particularly with regards to residual adverse effects that would be expected to remain in terms of wastewater following the implementation of the Local Plan policies. (p 141) Natural England notes that “Increased pressure on wastewater treatment has the potential to be a long term and potentially permanent significant effect” (p 142)</p> <p>The SA recognises the local distinctiveness of the plan area;</p> <p>“The Borough itself is largely rural in nature and supports some high-quality agricultural land, but is more heavily built up towards the north east surrounding Stoke-on-Trent. (p 8)</p> <p>Newcastle-under-Lyme has a strong rural character with a high-quality landscape and countryside, with some areas identified as being sensitive to change as a result of new development. (p 19)</p> <p>Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms make up the key features of some of these Landscape Character Types.” (p 20)</p> <p>Sets out the area specific barriers to achieving sustainable growth;</p> <p>“Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)</p> <p>Loss of tranquillity The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution.(p 68)</p> <p>“The pre-mitigation SA assessments identified negative impacts in relation to air quality due to the proximity of sites to major roads, landscape character due to the location of sites within areas of high landscape sensitivity, close proximity to the PRoW network and potential for coalescence and urban sprawl, habitat sites, priority habitats, habitat distinctiveness, loss of undeveloped land, ‘best and most versatile’ (BMV) agricultural land, coinciding with mineral safeguarding areas (MSAs) and areas of surface water flood risk (SWFR); and access to healthcare facilities, schools, the local cycle network and railway network. (p 40)</p> <p>There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work. (p 21)</p> <p>Trends in transport choice are unlikely to change significantly, and private car use would continue to increase as the selected method of transport to work, with potential adverse impacts on air quality in the borough.”(p 23)</p> <p>Considers the local and cumulative significance of soil loss alongside the ecological implications:</p> <p>“Loss of soil resources, BMV land and ecosystem services The proposed allocations would cumulatively result in the loss of up to approximately 342ha of previously undeveloped land, including up to 263ha of BMV agricultural land. The proposed development would be expected to reduce the ability of the local soil biome to effectively provide ecosystem services, to some extent. Additionally, the loss of permeable soils could potentially increase the risk of flooding and result in a loss of biodiversity across the Plan area. Loss of soil can also result in an increase in soil erosion and have subsequent impacts on agricultural yield.(p 68) The majority of the borough is ALC Grade 3 soil, with areas of ALC Grade 2 scattered across the borough. Grade 2 and potentially Grade 3 represents some of the borough's BMV agricultural land and should be conserved wherever possible (p 21)</p> <p>A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of BMV land to be lost as a result of the development proposed in the Local Plan.” (p 59)</p> <p>Other Advice</p> <p>Further general advice is provided within Natural England Advice Note – Local Plans February 2024, attached at (Appendix A) - see attachment</p>

Q4 Part of document	Policy
Q4 Policy	CRE2
Q6 Details	<p>Newcastle-Under-Lyme Local Plan Review - Regulation 19 Consultation (Final Draft)</p> <p>National Highways welcomes the opportunity to provide comments on the Final Draft Local Plan consultation (Regulation 19) prepared for Newcastle-Under-Lyme Borough Council, which is expected to cover the plan period up to 2040.</p> <p>National Highways has been appointed by the Secretary of State for Transport as a strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the Strategic Road Network (SRN). It is our role to maintain the safe and efficient operation of the SRN whilst acting as a delivery partner to national economic growth.</p> <p>In relation to this consultation, National Highways' principal interest is ensuring the safe and efficient operation of the SRN in the area, notably the M6, A50 and A500 network which routes through the Local Plan boundary.</p> <p>In responding to Local Plan consultations, we have regard to the Department of Transport's (DfT) revised Circular 01/2022 - Strategic Road Network and the delivery of sustainable development ('the Circular') which sets out how interactions with the SRN should be considered in the making of local plans. Paragraph 28 of the Circular sets out that:</p> <p>"The policies and allocations that result from plan-making must not compromise the SRN's prime function to enable the long-distance movement of people and goods. When the company assists local authorities in the development of their plans and strategies, the local authority should ensure that the SRN is not being relied upon for the transport accessibility of site allocations except where this relates to roadside facilities or SRN-dependent sectors (such as logistics and manufacturing). The company will also work with local authorities to explore opportunities to promote walking, wheeling, cycling, public transport and shared travel in plan-making, in line with the expectations set out in the NPPF and the Transport Decarbonisation Plan."</p> <p>In addition to the DfT Circular 01/2022, the response set out below is also in accordance with the National Planning Policy Framework (NPPF) and other relevant policies.</p> <p>Previous Consultations</p> <p>National Highways was consulted during the Regulation 18 consultation in August 2023. The Regulation 18 identified a minimum requirement of 7,160 dwellings (358 per year) and 69 hectares of employment land to be delivered during the plan period between 2020 and 2040. It also included potential sites for allocation, and we provided an indication of the potential sites that were expected to have traffic and boundary impacts on the SRN.</p> <p>In May 2024, National Highways was consulted to provide recommendations for the Infrastructure Delivery Plan preparation, where we provided comments on the infrastructure requirement.</p> <p>Final Draft Local Plan Regulation 19 Consultation</p>

The Final Draft Local Plan Regulation 19 includes locally specific policies and strategic / non-strategic site allocations to meet housing and employment needs across the Newcastle-Under-Lyme area for the plan period of up to 2040. Once adopted, this Local Plan will replace the policies in the Newcastle-Under-Lyme and Stoke-on-Trent Core Spatial Strategy (adopted 2009) and the saved policies of the Newcastle-Under-Lyme Local Plan (adopted 2003). Appendix 2 of the Local Plan consultation document outlines the list of previously adopted policies that will be retained or replaced. In principle, National Highways supports the vision and objectives set out in the Regulation 19 Draft Local Plan which aim to deliver the growth in a sustainable manner.

Housing and employment requirements

Based on our review of the Regulation 19 consultation, we note that the Final Draft Local Plan outlines a minimum requirement to deliver 63 hectares of employment land and 8,000 dwellings (400 dwellings per annum) over the plan period of up to 2040 as stated in the 'Policy PSD1: Overall Development Strategy'. We welcome that the housing and employment requirement have primarily been determined using a Housing and Economic Development Needs Assessment (HEDNA) in 2024, which in this case is expected to provide a higher housing demand when compared against the Government's standard method.

We acknowledge that a Sustainability Appraisal (SA) process has been undertaken to evaluate the different growth options considered, assess the impacts and identify the residual effects based on the social, economic and environmental parameters.

As outlined in Table 2 of the Final Draft a total of 8,663 dwellings are planned to be delivered over the plan period of up to 2040 to meet housing demands. This also includes a supply buffer of around 8.3% to address any potential delivery challenges. We acknowledge that the supply also factors in the windfall allowance estimated based on the Council's Strategic Housing Land Availability Assessment (SHLAA), historical trends, and future projections.

Policy SA1: Site Allocations indicates that a significant portion of the housing supply will be delivered through strategic allocations. When comparing the allocation sites included in the Regulation 19 consultation against those set out in the Regulation 18 consultation, we note some minor changes in the scale of growth at individual sites, with a few sites being removed and others added. However, the total housing growth from all strategic allocations remains at 4,512 dwellings. The table below outlines these changes (tables included in the attachment)

In the case of employment supply, we note that AB2 (Land at M6 Junction 16) and KL15 (Land at Barkers Wood, Keele) are key strategic sites contributing significantly to meet the employment needs.

Sustainable transport

We acknowledge that the Final Draft Local Plan has focussed on decarbonisation policies such as 'Policy CRE 1: Climate change' and 'Policy CRE 2: Renewable energy' to address climate change impacts by reducing carbon emissions. This also includes developing energy-efficient buildings, designing to BREEAM Excellent standards, optimising water use, adopting water conservation measures, and utilising renewable or low-carbon energy sources.

'Policy IN2: Transport and Accessibility' emphasises that new developments must provide access through sustainable transport modes to protect the integrity of the highway network. The Council will work with developers to ensure that the proposals contribute to a transport network that is accessible, efficient, and safe. We support this policy and acknowledge that developments likely to generate significant traffic will be required to produce Transport Assessments and Travel Plans, in accordance with the requirements set out. We appreciate that focus is also given to developments that facilitate sustainable movement of freight traffic.

'Policy IN4: Cycleways, Bridleways, and Public Rights of Way' highlights the importance of enhancing walking, cycling, and public transport facilities within the Borough.

We welcome these policies and note that these align with the expectations set out in the National Planning Policy Framework and National Highways' Net Zero Strategy.

Transport Evidence Base

Considering the scale and location of the allocations included in the Draft Final Local Plan, we expect impacts on the SRN in the area either independently or cumulatively.

Strategic Transport Assessment (document reference ED011)

We acknowledge that a Strategic Transport Assessment (STA) dated July 2024 has been prepared using the North Staffordshire Multi-Modal (NSMM) transport model to assess the likely traffic impacts of the site allocations proposed in the Regulation 19 consultation. We note that the model has been run for the following five scenarios in the forecast year of 2040.

Based on our review of the STA, we have the following comments to make:

Section 4.5 of the STA states that while the model emphasises the use of pre/post-COVID data, we note that accident data for the years 2018-2022 includes COVID data with relatively lower traffic flows and possibly fewer accidents. How has the impact of COVID been taken into account?

Section 5.3 of the STA states that the 2015 NSMM model is overestimating the flows by 26-28% when compared against 2022/23 observed WebTRIS data. It also notes that only 15-35% of counts pass in this validation exercise. Despite this shortcoming, model forecasts for 2040 were proposed to be used to inform future testing, which National Highways agreed to as it presents the worst-case scenario with overestimation of the traffic.

Section 7 provides details of the reference case model development, but note that finer details of the method applied are missing. We therefore have the following queries relating to this section:

- Does this scenario include constraining other local authorities to NTEM/TEMPPro?
- Does this scenario include any committed and under-construction developments within the local plan area?
- What is the background growth percentage between the base year and the forecast year 2040?

Regarding Figure 7-1, we are unable to find the basis for changing the junction delay definitions for slight, moderate, and severe delays from what was mentioned in the minutes of the meeting dated 15th May 2024. At present, delays of up to 3 minutes at junctions are reported as slight which is arguable.

Based on the model outcomes, improvement measures to enhance public transport connectivity and infrastructure schemes on the local highway network are proposed in the STA. We also note that a

detailed junction assessment will be undertaken for M6 J16 using a VISSIM model to accurately assess the traffic impacts of the AB2 allocation.

Regarding Section 8.3.2, bullet 1, we interpret that the new junction is the access to site AB2. Thus, we are surprised that the design of this new junction would still lead to 120-180 seconds of delays in the PM. A new access arrangement should work without that much stress.

We request that a summary table with delays (absolute numbers in seconds) at each of the approaches be prepared and shared with National Highways for M6 J16 and the new junction on A500 for site AM2. This is so we can understand the changes in delays between the base, reference case, and proposed scenarios.

We request that the basis for the 10% reduction in car users for the area around site AB2 set out within Section 8.6.6.1 be supported by further evidence.

We also request further details on how much total demand (in PCUs or vehicles) has been removed from the original matrix. Has a preliminary assessment been undertaken on the frequency of bus service that would be required to cater to that demand during peak hours to verify that this is a feasible option?

Regarding Section 8.6.3, while we do not have an issue with the bespoke approach to testing M6 J16 within VISSIM, considering that the NSMM is overestimating the traffic, the use of incremental addition of the difference from the NSMM may lead to an underestimation of traffic at this junction due to large delays in the NSMM reference case scenario. There is a possibility that any additional traffic from the AB2 site may divert to local or unrealistic routes within NSMM.

We therefore request that traffic flow distribution Select Link Analysis plots from site AB2 be shared with National Highways to verify that the routes assigned in the model are reasonable before being used for incremental addition for microsimulation assessment.

We also request that observed base and modelled reference case data be presented in a similar format as Table 8-6 for National Highways to understand the absolute traffic growth at each of the approaches.

National Highways Previous comments

While we are happy with the suggested incremental change in flow and delays analysis for 2040 forecast year models, we must establish a robust do – minimum reference case scenario developed using the base year model.

We note that our previous query dated May 2024 remains unanswered: “The further turning count comparison tables for the M6 J16 model are appreciated and provides comfort that many movements (particularly the A500 East approach) match the 2015 model. However the turning proportions provided for the M6 South to A500 East movement are of concern as these look significantly different to those that were modelled. National Highways would like to understand if there are any explanations of why these differences have occur and particularly why the model identifies such low percentage of car movements?”

STA Comments Summary

In summary, the modelling work to date is based on the NSMM model, which was previously approved by the DfT for other schemes. However, present-day validation using 2022/23 data shows that the model is overestimating traffic and not validating well. Hence, a bespoke approach is applied to assessing M6 J16, while the rest of the strategic assessment uses the forecast 2040 NSMM model which is still believed to be the best tool available. Analysis provided shows that parts of the A500 and junctions along it will be stressed by 2040 and that the level of stress will increase with the local plan. Strategic allocation sites tested will lead to some congestion but this would not lock out the network. The STA and IDP mention the possibility of developers' contributions for various infrastructure schemes including a new bus service along site AB2 among others that could potentially bring congestion levels down to a more comparable level with the reference case scenario, which should be acceptable.

We request responses to our queries above but are hopeful that the Local Plan can work with some support from the developers to mitigate any impact on the SRN.

Infrastructure Delivery Plan (IDP)

A total of 28 transport development schemes are listed in Table A.1 of Appendix A of the IDP to enhance the transport network and promote sustainable transport. The schemes that are of interest to National Highways are:

1. T9 (improvements between M6 J13 and J15) - part of the RIS 2 scheme
2. T14 to T20 schemes

We note that the finalisation of these schemes is subject to undertaking detailed junction capacity assessments. We appreciate that the list of potential allocations that are likely to impact the SRN has been included.

T14 specifically mentions a “Potential mitigation scheme involving widening and an additional lane at the gyratory on M6 J16. VISSIM modelling work is currently ongoing, and the need for any potential mitigation measures can be confirmed after the completion of a detailed capacity assessment as part of the planning application stage.” It should be noted that there is no confirmed scheme from National Highways perspective at the moment, and we seek confirmation as to whether such a scheme is included in the Local Plan assessment within Scenario 5.

We note that the funding mechanism to implement these mitigation schemes including T14 will likely be through developer funded Section 278 agreements. Considering that there could be cumulative impacts from different allocations in the area, a Section 278 agreement is likely to result in a piecemeal approach to the delivery of the improvement works. We would welcome some clarity on why a Section 278 agreement is preferred over a Section 106 agreement for the funding mechanism in this case.

Duty to Cooperate

We note that a Duty to Cooperate Interim Statement of Compliance has been submitted as part of the evidence base alongside the Final Draft Local Plan. We commend the Council's approach to collaborating with neighbouring local authorities, stakeholders, and other bodies to address issues related to local authority boundaries. This collaborative effort will help ensure that all parties' interests are considered and that a comprehensive solution is developed.

National Highways is committed to working with Newcastle-Under-Lyme Council to develop and draft a Statement of Common Ground (SoCG) to address any strategic cross-boundary issues and reach an agreement on how the traffic impacts from the allocations identified in the Local Plan are to be dealt with.

	<p>We understand that a final version of the Duty to Cooperate will be prepared to support the submission version by December 2024.</p> <p>Once again, National Highways appreciates the opportunity to comment on the Final Draft Local Plan Regulation 19 consultation and looks forward to working collaboratively with the Council to support the development and adoption of the Local Plan for Newcastle-Under-Lyme.</p>

Q4 Part of document	Paragraph
Q6 Details	I have concerns that only affordable housing is mentioned in this section of the local plan and that even 4 bedroom houses are included n the break down of intended housing . Social housing is not mentioned which is astounding as we as a borough council hold the housing waiting list so I find it very concerning that we are not including any proposed social housing.

Q4 Part of document	Policy
Q4 Policy	HOU1
Q6 Details	<p>The Draft Local Plan</p> <ul style="list-style-type: none"> • I endorse the general policy comments already circulated by Keele Parish Council and strongly support the view that Keele and Silverdale Parish Councils will need to work together since the planned housing developments will affect both communities. • I am concerned that the promise of a local centre, health centre and primary school is delivered because promises of a shop on the Hawthorns development was not delivered. Will the developers also have to make a contribution Madeley High and/or the Newcastle Academy? • I also note that planned inclusion of social housing is often not delivered by developers "for economic reasons" at a later date. It is a common "get-out" ploy. • There is little in the Local Plan about provision of social housing. I think the Local Authority as the planning authority should establish the existing need for accommodation for homeless families, for old people's bungalows (as at Knights Cross in Keele), for old peoples housing complexes as at the Madeley Centre and for residents with disabilities and then build them to meet real needs. • The local developments will be the biggest since the creation of Park Site. Think creatively. You will not just be building houses you will be creating and transforming communities for years to come. Have you asked experts such as sociologists what more you could and should do?

Title	Policy HOU1: Affordable Housing
Consultee Company / Organisation	Gladman Developments Ltd
Consultee Position	Planning Manager
Consultee Family Name	Wilding
Consultee Given Name	Robert
Q4 Part of document	Policy
Q4 Policy	HOU1
Q6 Details	<p>Gladman Developments Ltd (Gladman) welcome the opportunity to comment on the Newcastle-under-Lyme Final Draft Local Plan 2020-2040 (Regulation 19) consultation and request to be updated on the progress of the emerging Local Plan. Please refer to attached representations. Gladman has fully engaged fully in the preparation of the emerging Newcastle-under-Lyme Local Plan 2040 to date. Feedback from the First Draft Local Plan (Regulation 18) consultation has been addressed and incorporated into the Final Draft Local Plan consultation document.</p> <p>In the sections below, Gladman have made specific comments where we consider the Final Draft Local Plan requires modifications or further clarification to ensure that it is capable of being found sound. Comments are focussed mainly on the consultation document, with references to the Duty to Cooperate and Sustainability Appraisal documents. Our representations also include details of Gladman's land</p>

	<p>interest at land south of Eccleshall Road, Loggerheads, which we are promoting as suitable for identification as a housing allocation in the emerging Local Plan. Please refer to attachment for more information.</p> <p>Gladman consider the best way to significantly increase the supply of affordable housing in the borough is to allocate over and above the housing requirement so that affordable housing can be delivered on these sites. This is especially pertinent considering that as of 16th May 2024, the number of households in the borough on the Council's affordable housing waiting list totals 2,531 households, which represents a substantial number of households in need of an affordable home within the borough. Furthermore, there has been no plan-led delivery of affordable housing through allocations in the borough for at least 20 years.</p> <p>This is the approach taken in East Riding of Yorkshire, where the Council has opted to increase their housing requirement to ensure that affordable housing needs are met. Whilst this approach is yet to be examined, this is an approach the Council could consider if it was found to be suitable.</p> <p>Gladman are supportive of the variation in requirement for affordable on greenfield and brownfield sites, recognising and responding to the high and low value zones across the borough. This approach will protect the viability of development, aiding housing delivery and ensuring that affordable housing can be provided across the borough. However, Gladman maintain that Criteria 1 should include the flexibility to enable a lower amount of affordable housing to be provided for viability reasons, especially on brownfield sites where demolition and potentially remediation costs need to be considered.</p> <p>Criteria 2 of the policy seems to require the affordable housing to be whatever the Council's Housing Team decide to request when asked. The policy should allow for flexibility and negotiation that reflects the site location and characteristics and not just the most up to date evidence of local housing need.</p> <p>Criteria 4 of the policy suggests that on-site affordable housing should be provided. In relation to providing off-site provision, Gladman are unclear how off-site affordable housing could be secured through a planning application and Section 106 Agreement relating to a different site, and therefore it is unclear what a developer would need to do to show compliance with the policy. Payment in lieu of affordable housing is the more typical approach to securing funds for affordable housing delivery elsewhere.</p> <p>Gladman are pleased to see the removal of footnotes from this draft policy following the Regulation 18 consultation. The use of footnotes with an ambiguous status had the potential to result in challenges about the weight to be applied to the footnotes and whether they are policy, supporting text or something else. Any opportunity for confusion or misunderstanding in policy working should be avoided.</p>

Q4 Part of document	Policy
Q4 Policy	HOU1
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>These representations are made in response to the Regulation 19 consultation on the final draft of the Newcastle-under-Lyme Local Plan 2020 – 2040. The representations are made by Pegasus Group on behalf of Araripe Limited and relate to their land interest at St Martins Road, Talke(hereafter referred to as the “Site”). The Site is greenfield land situated to the south of Talke. With regards to the Site, these representations should be read alongside the attachment.</p> <p>Policy HOU 1 states that Council will seek the provision of 30% affordable housing on all greenfield sites. The Housing and Economic Needs Assessment Update (HENU) (March 2023) identifies an annual need of 278 affordable homes per year in Newcastle-under-Lyme, and Araripe Limited support the principle of providing affordable homes to meet this need, subject to a viability assessment where required (it is noted that reference to viability has now been added to the policy, having been omitted in the First Draft Local Plan). Overall, this policy is considered to be positively prepared, justified, and consistent with national policy, with no amendments needed.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	Sufficient land for housing should be planned for to meet the identified need for this within the Borough. Araripe Limited strongly support the allocation of Site TK17 for residential development, but several amendments are required to make Policy TK17 sound, as set out in paragraph 3.19 of the accompanying written representations. We would welcome the opportunity to participate in the hearing sessions to set these out, as well as to draw attention to the other matters which need to be addressed to ensure soundness elsewhere in the final draft plan, whilst emphasising site TK17's suitability, availability, and deliverability, being an optimum and sustainable location for high-quality residential development.

Title	Policy HOU1: Affordable Housing
Consultee Company / Organisation	Cross Heath, Wolstanton and May Bank Branch Labour Party
Consultee Position	Branch Secretary
Consultee Family Name	Gorton
Consultee Given Name	Richard
Q4 Part of document	Policy
Q4 Policy	HOU1
Q6 Details	<p>Policy Hou1 – Affordable Housing - our support for the construction of affordable housing was set out in our response to Policy PSD1. We believe that Policy Hou1 highlights the demand for affordable housing across Newcastle-under-Lyme and provides convincing reasons why affordable housing must be encouraged by a new Local Plan. We recognise that to satisfy the demand for affordable housing, new homes must be built. One flaw of the Regulation 19 draft Plan is that it does not include specific targets for the construction of affordable or social housing. The absence of targets leads the Branch to doubt whether the intention of the Plan to deliver additional affordable and social housing will be achieved.</p> <p>In areas such as Newcastle-under-Lyme wage levels have failed to keep pace with market rents. While the Regulation 19 draft Plan stipulates that between 15% - 30% of new dwellings must be affordable, the Branch is sceptical that this target will be achieved. It is our experience that developers have often argued that increasing construction costs should release them from any affordable or social housing contributions previously negotiated under Section 106 agreements.</p>
Q7 Modification	<p>Policy Hou1 -We note that the Policy Hou1 allows some flexibility concerning the obligation on developers to provide off-site affordable provision. The document refers to 'exceptional circumstance'. We feel that this section should provide examples of exceptional circumstances which the Borough Council consider valid. In general, the Branch believes that Policy Hou1 should express more vigorously the Borough Council's expectation that Section 106 agreed between the Authority and developers should be observed.</p>
Q9 Hearing reasons	<p>Conclusion</p> <p>Cross Heath, Wolstanton and May Bank Branch Labour Party welcomes the opportunity to give its views in response to the Regulation 19 stage of the draft Local Plan. If it is felt to be appropriate, a member of the Branch would be prepared to take part in the public scrutiny of the draft Local Plan.</p>

Q5 Sound	No
Q6 Details	<p>Policy HOU1 Affordable Housing</p> <p>We consider that the proposed policy fails to meet the requirements of either the current NPPF or the Consultation NPPF, particularly with regard to:</p> <ol style="list-style-type: none"> 1 Delivering a sufficient supply of homes <p>For example:</p> <ol style="list-style-type: none"> 1 Where a need for affordable housing is identified, planning policies should specify the type of affordable housing required (<i>including the minimum proportion of Social Rent homes required</i>), and expect it to be met on-site unless: 2 a) off-site provision or an appropriate financial contribution in lieu can be robustly justified; and 3 b) the agreed approach contributes to the objective of creating mixed and balanced communities. <p><i>(Italicisation shows the proposed addition in the Consultation Draft).</i></p> <p>The policy does not specify the type of affordable housing required, other than referring to First Homes and their minimum discount. We recognise that this is referred to in paragraph 7.4 of the Regulation 19 document:</p> <p>7.4 The Housing Needs Assessment (HNA, 2024) identifies an annual need for 278 affordable homes throughout the Borough of Newcastle-under-Lyme over the plan period to 2040. Given the acute need for social rented accommodation, the HNA Update (2024) recommends the tenure split of affordable homes to be 65% social rented, 10% other affordable housing product and 25% affordable home ownership through First Homes. Opportunities should also be taken to include a proportion of affordable older persons accommodation as part of the affordable housing provision, particularly involving care provision. Planning permission may be granted for an alternative tenure split provided that robust evidence demonstrates that a different split is more suitable. This will be informed by market conditions and local housing need at the time.</p> <p>However, this is simply not reflected, or given effect to, in Policy HOU1.</p> <p>It is also considered that the percentage for affordable housing in 1a of the Policy is too low.</p> <p><i>Note:</i></p> <p><i>We have concerns in relation to 1a. as we consider that the percentage proposed falls below what should be required.</i></p> <p><i>Newcastle-under-Lyme Housing and Economic Needs Assessment. Further Update. April 2024</i></p> <p><i>Need for affordable housing</i></p> <p><i>5.13 The HENAU drew upon the latest information available in early 2023 to recalculate the need for affordable housing in Newcastle-under-Lyme, updating the assessment presented in the original HNA. It concluded that circa 278 affordable homes would be needed annually throughout the borough, between 2022 and 2040.</i></p>

Q7 Modification	The Policy is fundamentally unsound at present. We request that, in the Main Modifications following the Examination, the Inspector amends the proposed policy to reflect Government policy, to specify the type of affordable housing, to increase the percentage requirement for affordable housing, and to take account of Paragraph 7.4 referred to above.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	To engage in the discussion if this issue is to be the subject of a hearing session.

Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>3. Chapter 7: Housing</p> <p>Policy HOU1: Affordable Housing</p> <p>3.1 The policy proposes that for major residential developments of greenfield sites, 30% of all units are to be affordable. The Local Plan Viability Assessment (ED004) indicates that this level of provision is not viable across the majority of sites in Value Area 1. We therefore propose that the policy is amended to reduce the affordable housing rate for greenfield sites in Value Area 1 to 20%. The policy would then reflect the evidence base, in particular Table 8.1 of ED004 which demonstrates that greenfield sites of 60-150 dwellings are at least marginal or viable based on 20% affordable housing.</p>
Q7 Modification	Given that ED004 identifies that the cumulative policy requirements (including affordable housing) are not viable in Value Area 1, we consider that the requirement to provide M4(3) housing should be removed in Value Area 1. However, if the affordable housing requirement in Value Area 1 is reduced as per our suggested amendment to Policy HOU1, then this amendment may not be necessary.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	We wish to attend the hearings and make oral submissions, respond to the Inspector's questions and to the Council's case. The issues are complex and there is a need for detailed examination of the evidence.

Title	Policy HOU1: Affordable Housing
Consultee Company / Organisation	Keele Parish Council
Consultee Position	Parish Clerk
Consultee Family Name	Powell
Consultee Given Name	Debra
Q4 Part of document	Policy
Q4 Policy	SP23

Q6 Details	<p>Keele Parish Council recognise that developing national policy with regard to the NPPF means that, in order for the plan to be considered under the existing regulations, the amount of housing delivered per annum must come within 200 of the proposed nationally set target. The proposed new algorithm is 593 per annum. Whilst we do not accept the proposed target of 400 houses per annum is robustly supported by the evidence provided, we recognise that, were the plan to fail at inspection, that this already inflated target would, in all likelihood, be subject to a mandatory increase. Thus we have no choice other than to support this target in the hope that the plan will pass.</p> <p>The Affordable Housing strategy needs further work. It is far from clear how the allocations in HOU1</p> <ul style="list-style-type: none"> • 30% on Greenfield Sites • 15% on Brownfield Sites in the 'Low Value Zone'. • 25% on Brownfield Sites in the 'High Value Zone'. <p>could yield the 278 affordable homes needed per annum, as identified in the HNA 2024 when 400 houses per annum are being built. This portion of the plan is thus not effective nor credible.</p>

Title	Policy HOU1: Affordable Housing
Consultee Company / Organisation	Home Builders Federation
Consultee Position	Planning Manager - Local Plans (Midland and South West)
Consultee Family Name	Danemann
Consultee Given Name	Rachel
Q4 Part of document	Policy
Q4 Policy	HOU1
Q5 Sound	No
Q6 Details	<p>Please see attached representations.</p> <p>The Policy is not considered to be sound as it is not justified or effective or in line with national policy.</p> <p>The policy seeks 30% affordable housing on greenfield sites, 15% on low value brownfield and 25% on high value brownfield. HBF would question if this policy is deliverable and viable.</p> <p>A Whole Plan Viability Assessment has been undertaken by Porter Pe. The report dated July 2024 is document reference ED004 of the supporting evidence of the Plan.</p> <p>HBF question whether the viability assessment has fully considered all the relevant costs that will impact on development viability. For example, HBF information suggests that complying with the current new part L is costing £3500 per plot. The Future Homes Standard Part L in 2025 is anticipated to cost up to £7500+ per plot. There will also be the addition of the Building Safety Levy that is coming in pay for cladding. This will be a per plot basis around the UK, and initial values are around £1500- £2500 per plot.</p> <p>Other factors that need to be taken into account include increasing costs of materials and labour due to inflation and the fact that the cost of living crisis has also impacted the housing market making borrowing more expensive for potential future purchasers. HBF suggest these changes may not be limited to only the short term but are likely to also mid to longer term impacts.</p> <p>Another key cost relates to BNG. The costs of mandatory BNG are still emerging as the off-site market is yet to be established. Although the initial price of statutory credits is now known this national fallback option has been deliberately highly priced to discourage their use. Whilst this intention is understandable, at present the lack of functioning local markets for off-site credits causes viability problems because HBF members experience to date suggests that any scheme that needed to rely on statutory credits would become unviable.</p> <p>Whole Plan viability testing is an important part of the plan-making process. However, as noted in PPG (ID: 10-003-20180724) assessing the viability of plans does not require individual testing of every site or assurance that individual sites are viable, and therefore flexibility in the amount of affordable housing sought may be needed to deal with site specific issues.</p> <p>At a very basic level viability can be improved by reducing costs or increasing values. Sometimes, therefore changing the type of affordable housing provided can help to improve viability of a specific site, and the plan should recognise this. Greater flexibility within the Affordable Housing policy is needed.</p> <p>HBF would again question if any reference to Frist Homes is appropriate, justified or effective as this is no longer a kind of affordable housing supported by the Government.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	HBF requests to participate in the Hearing Sessions for the Local Plan Examination, the HBF considers that their involvement is necessary to ensure that the home building industry is able to respond to any housing related issues raised during the hearing sessions.

Agent Company / Organisation	Knights
Agent Family Name	Corinaldi-Knott
Agent Given Name	Alan
Q4 Part of document	Policy
Q4 Policy	HOU1
Q5 Legally compliant	Yes
Q5 Sound	Yes
Q5 DTC compliant	Yes
Q6 Details	<p>Please see supporting representation by Knights on behalf of Aspire. The Council's Housing and Economic Needs Assessment Update (2023) identifies an annual net need to deliver 278 affordable homes per annum over the plan period. At a recent public inquiry relating to application reference 21/01041/OUT4, affordable housing evidence was presented which made the following conclusions which were not contested by the Council:</p> <p>(a) The number of households on the Council's affordable housing waiting list amounted to 1550 households, which represents a substantial number of households in need of an affordable home now.</p> <p>(b) There has been no plan-led delivery of affordable housing through allocations in the Borough for at least 20 years, which needs to be urgently addressed through new local plan allocations and up to date policies.</p> <p>(c) Despite the delivery of 1081 new affordable homes since the adoption of the Core Spatial Strategy or 1347 new affordable homes since the time of the Council housing stock transfer, the affordable housing stock in the Borough has only grown by 22 affordable homes (net) over a period of 23 years.</p> <p>(d) More recent figures over a 5 year period show a net decline in affordable housing stock of 151 or 224 affordable homes per annum, depending upon which dataset is used.</p> <p>(e) The proportion of social housing stock as part of the overall housing stock in the Borough shrank from 18.7% in 2011 to 17.1% in 2021 (2011 and 2021 Census figures).</p> <p>(f) The number of new affordable housing units being delivered is insufficient to replace those being lost to Right to Buy sales meaning that the existing needs and future needs of households in need of affordable housing is not being met.</p> <p>(g) Figures provided by Aspire Housing demonstrated that over a 6-month period, on average, there are 37 bids per affordable home which becomes available for those households on the affordable housing waiting list.</p> <p>(h) The emerging supply of affordable housing from sites with planning permission is insufficient to meet the needs of those on the Council's affordable housing waiting list and the completion of those affordable housing units that form part of the council's 5 year housing land supply would still leave 1400 households on the council's affordable housing waiting list.</p> <p>(i) The delivery of student accommodation and any accommodation that may be released back onto the housing market as a result of the delivery of student housing will not address affordable housing needs.</p> <p>(j) The private rental sector is unsuitable and unaffordable for those in affordable housing need.</p> <p>(k) Lower quartile and median quartile house prices are significantly higher in the rural areas than in the urban areas with affordable housing tenures representing a smaller proportion of the overall number of homes in the rural area compared to the urban area and the Borough as a whole</p> <p>2.3 With regard to paragraph 2.2(g) above, Aspire have provided an up to date table of shortlists let, number of bids, and the average number of bids per property, and this information is provided at Appendix 1. This shows that between October 2022 and September 2024, the average number of bids per affordable home that becomes available each month has been increasing, with the average number of bids per property increasing to in excess of 100.</p> <p>POLICY HOU 1: AFFORDABLE HOUSING</p> <p>Aspire Housing is the largest affordable housing provider in the Borough and have a number of comments to make on Policy HOU 1.</p> <p>As a general point, Aspire welcome the proposed uplift of the affordable housing requirement on greenfield sites across the Borough to 30% from the current 25%.</p> <p>Having estimated the likely affordable housing contributions from proposed allocations for 10 dwellings and above, there is potential to deliver 1365 affordable housing units from site allocations. This represents an uplift of around 182 affordable dwellings compared to what could be achieved through the current policy of 25%.</p> <p>At Regulation 18 stage, Aspire made the point that it was not clear to Aspire the rationale for reducing the affordable housing requirement on previously developed sites in the low value zone and the amount of affordable housing that is likely to arise were this policy to be implemented in comparison to the current blanket 25% requirement.</p> <p>Were there to be a blanket requirement for 30% affordable housing contributions on all sites, then it would be theoretically possible to deliver 1419 affordable homes, which would be an uplift of 237 affordable homes compared to what could be achieved with the current 25% policy. Were the threshold to be increased to a third (33%), then 1561 affordable homes could be achieved, which would be an uplift of 378 affordable homes.</p>

Evidence should be provided to demonstrate how many previous applications on previously developed sites in these zones have been subject to viability assessments to justify a reduction in affordable housing contributions in order to provide further justification for this policy.

In any event, the analysis provided above suggests that the proposed policy could potentially deliver 1365 affordable housing units on proposed allocations. Over a 20 year period, this would amount to an average of 68 affordable homes per annum, which is substantially below the 278 affordable homes per annum that the Council's evidence base suggests is needed. Therefore, any potential to increase the amount of affordable housing delivered through allocations should be taken up.

Given the substantial need for affordable housing across the Borough, it is considered that this policy requirement requires greater justification.

With regard to affordable housing requirements on previously developed sites in the high value zone, the DLP proposes to maintain the current requirement for major developments of 25% affordable housing. However again, it is not clear how much affordable housing would actually be delivered on such sites, given that the high value zones primarily cover the rural parishes of Loggerheads, Maer and Whitmore and Keele. Existing CSS Policy ASP6 already places an emphasis on the development of previously developed sites within existing settlement boundaries in these locations, however the council's own housing land availability assessments demonstrate that there are very few previously developed sites in these locations. Further, there are already routes where affordable housing contributions can be reduced on previously developed sites, such as by making use of the vacant building credit if there are vacant structures present on such sites.

Further, the only previously developed site that has been identified as an allocation in the high value zone is LW87 in Loggerheads and the policy as it stands would not yield any additional affordable housing units.

Aspire would also like to point out that there are some areas of the Borough, that are generally seen as higher value areas, but they are shown as lower value areas as part of the current DLP consultation. It is considered that these areas should be identified as higher value areas in the next draft of the plan.

ONS data5 is available that provides ward level lower quartile and median house price data for all homes, new build homes and median and lower quartile prices for different property types.

Extracts for the above data are provided as Appendix 1.

The Audley Ward is a more rural area of the Borough and that is identified as a low value zone. The lower quartile prices for this ward are comparable with the lower quartile prices identified for Madeley which is identified as a high value zone. Given that the Audley ward is a more rural zone where affordability and housing availability is likely to be an issue, it is considered that this zone be identified as a high value zone for the purposes of this policy.

Whilst it is acknowledged that the plan wide viability study is quite high level, it is considered that based on actual house prices that can be achieved in the wards identified that these wards should also be identified as higher value zones for affordable housing policy purposes should the Council continue with the current policy as drafted, rather than the policy suggested by Aspire of a blanket 30% affordable housing policy for all sites across the Borough, unless a site specific viability appraisal suggests otherwise. It is considered that the starting point for this policy should therefore be a blanket 30% affordable housing contribution from all sites, with an exception that this can only be reduced where viability evidence is provided in accordance with criteria 5. It is therefore proposed to amend the policy wording for criteria 1 as follows:

On major residential development sites, 30% of the total number of dwellings will be provided as affordable housing units, unless viability evidence demonstrates that the amount of affordable housing required to be provided would not be viable in accordance with criteria 5 of this policy.

Criteria 3 of Policy HOU 1 seeks to identify a percentage threshold for the affordable housing mix to be provided as part of housing development schemes by specifically requiring 25% of the affordable housing to be provided as First Homes.

Aspire Housing are concerned that there is a lack of emphasis on shared ownership products in this policy as this form of affordable housing has a clear place in the affordable housing market. The policy worded in its current form has the potential to heavily restrict the delivery of notable affordable housing products, including affordable rent and shared ownership.

Aspire Housing consider that the affordable housing mix should be determined on a case by case basis in recognition of the affordable housing funding model that Registered Providers operate under. For example, Aspire are able to deliver social rent on the former Knutton Community Centre site due to values, mix, build cost and grant rates, whilst on the Cross Street Phase 2 site, Aspire can only deliver based on affordable rent in that case, otherwise there would be no delivery. Therefore it is considered that a more discretionary approach should be permitted by the policy in order to ensure that policies allow adaptability to changing market conditions and funding constraints.

In addition to the above, on sites where relatively small numbers affordable housing comes forward as part of on site provision through a section 106 agreement (e.g. affordable housing provision of 10 dwellings or less, a requirement for First Homes provision in addition to other forms of affordable housing makes the delivery of a wider affordable housing tenure mix complex for both developers and housing providers. Aspire Housing currently have 489 shared ownership properties (153 in Newcastle under Lyme) and are due to take on a further 55 shared ownership properties, including 45 in Newcastle under Lyme. We currently have no unsold / unreserved shared ownership properties.

As demonstrated above, shared ownership homes have a strong role in the market. Insufficient earnings to access a mortgage is a major barrier to home ownership, alongside insufficient savings for a deposit. Shared ownership is a more accessible form of homeownership which can start with a 25% share and in most cases permits staircasing up to 100% of the property value. As such it is a flexible affordable home ownership product that allows households to enter home ownership with a small deposit and to staircase to full ownership over time. Under the current policy proposals, it is likely that the delivery of shared ownership affordable homes within the Borough would reduce under the proposed policy.

In light of the above considerations, it is proposed that criteria 2 of HOU 1 is amended to read as follows: The size, type and tenure of affordable housing to be provided shall comprise a mix of homes available for social and affordable rent, as intermediate (such as Rent to Buy and shared-ownership) housing, First Homes or other forms of affordable housing in line with national policy. The mix of affordable housing

	<p>that is provided should be informed by local housing needs, the needs of households on the Council's affordable housing waiting list (and in particular, those in priority need), and agreed with the Council's Housing Team at pre-application stage and prior to the determination of any planning application. The above wording would ensure that affordable housing mix delivered by new developments can be more responsive to the needs that persist at the time a development proposal is considered and would provide more flexibility to deal with changing circumstances, which a fixed policy may not be able to respond to. In addition, some forms of affordable housing may be more viable to deliver than others, and amending the wording on the affordable housing mix may assist with delivering a greater number of affordable homes than otherwise might be the case on sites where viability is marginal. Aspire is happy to discuss the above further with the Council and assist further with formulating emerging affordable housing policies and sharing best practice, and would welcome the opportunity to discuss this further with the Council.</p> <p>Summary of recommendations;</p> <p>(a) Amend criteria 1 so that the overall affordable housing requirement for all major housing sites is 30%.</p> <p>(b) If criteria 1 is to be retained, re-designate the Audley Ward as a high value zone.</p> <p>(c) Remove the requirement for 25% of the affordable housing tenure split to be First Homes from criteria 3.</p> <p>(d) Amend criteria 3 to allow a flexible approach to the affordable tenure mix on a case by case basis.</p>
Q7 Modification	Please see supporting representation by Knights on behalf of Aspire

Q4 Part of document	Policy
Q4 Policy	HOU1
Q5 Sound	No
Q6 Details	<p>Policy HOU1 Development in the Green Belt and Affordable Housing</p> <p>In its recent consultation on the NPPF, the Government included the following:</p> <p>Golden rules to ensure public benefit</p> <ol style="list-style-type: none"> 1 The Government has committed to introducing 'golden rules' to ensure that major development on land released from the Green Belt benefits both communities and nature. This will build on our wider commitment for exemplary design, so that the following are required where land is released through plans or individual planning decisions: 2 in the case of schemes involving the provision of housing, at least 50% affordable housing, with an appropriate proportion being Social Rent, subject to viability; 3 necessary improvements to local or national infrastructure, including delivery of new schools, GP surgeries, transport links, care homes and nursery places, to deliver well-designed, connected places, recognising that local leaders are best placed to identify the infrastructure that their communities need; and 4 the provision of new, or improvements to existing, local green spaces that are accessible to the public – where residential development is involved, new residents should be able to access good quality green spaces within a short walk of their homes, whether through onsite provision or through access to offsite facilities. <p>24. The Government is proposing a target of 50% affordable housing on land released from the Green Belt for residential development. The Government is committed to delivering more genuinely affordable housing tenures, such as Social Rent. However, we also recognise that for the purposes of place-making, a balance of tenures is required. For that reason, we propose that the tenure split across affordable housing delivered under the golden rules should be for local authorities to decide.</p> <p>Whilst NuLBC could not have had sufficient time to re-consider the Regulation 19 documents before publication, it seems likely that by the time that the documents are sent to the Inspectorate, new policies will be in place, the plan will not conform with them and, if the document was not changed, it would be unsound.</p>

	<p>The Council may be prudent to consider whether it wishes to proceed to Examination and, if so, to ask the Inspector to recommend modifications to the Regulation 19 document to ensure that it meets Government policy and can be considered sound.</p> <p>Our representation seeks modification of the council's policy to reflect new Government policy.</p>
Q7 Modification	As a Main Modification, to amend existing policies or, preferably, to introduce an additional policy to specifically and solely refer to sites currently in the Green Belt to ensure that the Local Plan policy is clearly in accordance with national Government policy.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	If this is a subject for a hearing session, to take part in the discussion on how best to amend the plan to reflect published central Government policies.

Title	Policy HOU1: Affordable Housing
Consultee Company / Organisation	NHS Property Services
Consultee Family Name	Fleet
Consultee Given Name	Daniel
Q4 Part of document	Policy
Q4 Policy	CRE1
Q6 Details	<p>Draft Policy HOU1 Affordable Housing</p> <p>As part of preparing additional guidance to inform detailed delivery of this policy, we suggest the Council consider the need for affordable housing for NHS staff and those employed by other health and care providers in the local authority area. The sustainability of the NHS is largely dependent on the recruitment and retention of its workforce. Most NHS staff need to be anchored at a specific workplace or within a specific geography to carry out their role. When staff cannot afford to rent or purchase suitable accommodation within reasonable proximity to their workplace, this has an impact on the ability of the NHS to recruit and retain staff.</p> <p>Housing affordability and availability can play a significant role in determining people's choices about where they work, and even the career paths they choose to follow. As the population grows in areas of new housing development, additional health services are required, meaning the NHS must grow its workforce to adequately serve population growth. Ensuring that NHS staff have access to suitable housing at an affordable price within reasonable commuting distance of the communities they serve is an important factor in supporting the delivery of high-quality local healthcare services. We recommend that the Council:</p> <ul style="list-style-type: none"> •Engage with local NHS partners such as the local Integrated Care Board (ICB), NHS Trusts and other relevant Integrated Care System (ICS) partners. •Ensure that the local need for affordable housing for NHS staff is factored into housing needs assessments, and any other relevant evidence base studies that inform the local plan (for example employment or other economic policies). •Consider site selection and site allocation policies in relation to any identified need for affordable housing for NHS staff, particularly where sites are near large healthcare employers.

Title	Policy HOU1: Affordable Housing
Consultee Company / Organisation	Loggerheads Parish Council
Consultee Position	Planning and Environment Committee
Consultee Family Name	Love
Consultee Given Name	Jeff
Q4 Part of document	Policy
Q4 Policy	HOU1
Q6 Details	The policy on Affordable Housing is broadly sound, in terms of the obligation on developers to make affordable housing available, but it fails to reference policy HOU2 (in particular para 8.19) concerning the makeup of such housing, and as such leaves the nature of affordable housing more open than it should be.

	<p>In addition, it fails to recognise the issue of affordable housing in relation to infrastructure, especially in areas away from the urban core - the policy set in the local plan does not recognise that although the housing itself may be classified as affordable, and even available for social rent, that the takeup of such housing is frequently affected by the costs of living in more remote areas, where the lack of reliable public transport and other essential infrastructure make living in these areas unaffordable.</p> <p>In the absence of this infrastructure, on-site provision of affordable housing will have low take up.</p>
Q7 Modification	The plan needs to identify how infrastructure will support the delivery of affordable housing specifically in rural areas.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	As the corporate body responsible for Loggerheads Neighbourhood Plan, and as a statutory consultee on Planning matters, the Parish Council would wish to ensure its views are considered and responded to

Consultee Given Name	McCarthy Stone
Agent Company / Organisation	THE PLANNING BUREAU
Agent Position	Planning Associate
Agent Family Name	Vlach
Agent Given Name	Jane
Q4 Part of document	Policy
Q4 Policy	HOU1
Q6 Details	<p>Please refer to attached representations.</p> <p>Policy HOU 1 affordable Housing</p> <p>Item 1 of the policy states:</p> <p>On-site affordable housing provision will be required on sites of 10 dwellings or more, or sites of 0.5ha or more at the following percentages:</p> <ol style="list-style-type: none"> 30% of all units on greenfield sites. 15% of all units on brownfield sites within the 'low value zone' as shown on the policies map. 25% of units on brownfield sites within the 'high value zone' as shown on the policies map. <p>The Supporting Information to the policy at Paragraph 7.9 confirms that 'proposals for extra care accommodation, assisted living or other forms of retirement housing to be let and sold on the open market will be subject to the requirements of this policy to provide affordable housing'</p> <p>Applying this policy to retirement housing is not justified or consistent with national policy considering that the 'Newcastle-under-Lyme Local Plan viability Study' by Porter Planning Economics July 2024 which underpins the Local Plan concludes that 'The viability results for the tested older persons accommodation by accommodation type, value area and land type all show a negative residual land value, as set out in Tables 8.3 and 8.4 on page 75 of the viability study'.</p> <p>Paragraph 8.11 of the Viability Study continues...It is clear from these results that the older person accommodation would be unlikely to come forward under the emerging Local Plan and current residential market. The testing shows that even by varying the affordable rate, the current residential market is unable to afford to deliver any affordable housing based on standard market conditions in the older persons accommodation sector'.</p> <p>The PPG on viability, Paragraph: 001 Reference ID: 10-001-20190509 confirms that 'policy requirements should be informed by evidence of infrastructure and affordable housing need, and a proportionate assessment of viability that takes into account all relevant policies, and local and national standards,</p>

including the cost implications of the Community Infrastructure Levy (CIL) and section 106. Policy requirements should be clear so that they can be accurately accounted for in the price paid for land. To provide this certainty, affordable housing requirements should be expressed as a single figure rather than a range. Different requirements may be set for different types or location of site or types of development.'

If Policy Hou1 is applied to specialist housing for older people, the Council's own commissioned evidence states that it would serve to inhibit such housing coming forward. Yet despite this conclusion the Viability Study recommends that 'the 10% of dwellings to be for affordable home ownership should also be applied to older person homes'. (para 9.8).

The current policy, as worded, would require any proposal for specialist housing for older people to delivery policy compliant affordable housing or to provide a viability assessment if policy compliant on-site affordable housing was not achievable. This is in conflict with the PPG on viability at Paragraph: 002 Reference ID: 10-002-20190509 which confirms that 'The role for viability assessment is primarily at the plan making stage. Viability assessment should not compromise sustainable development but should be used to ensure that policies are realistic, and that the total cumulative cost of all relevant policies will not undermine deliverability of the plan' and that 'Policy requirements, particularly for affordable housing, should be set at a level that takes account of affordable housing and infrastructure needs and allows for the planned types of sites and development to be deliverable, without the need for further viability assessment at the decision making stage'.

In view of the conclusions of the viability study, the requirement for older persons housing to provide affordable housing should be removed from the policy as it is not justified or consistent with national policy. We would draw the Council's attention to relevant Local Plan policies within Swale and Fareham Borough Councils. Based on detailed viability evidence, both have adopted Local Plans that exempt older people's housing schemes from affordable housing. Furthermore, Fareham exempts older people's housing from their Community Infrastructure Levy charge. Similarly, Maidstone BC has recently adopted a plan that has a lower affordable housing requirement for class C3 retirement housing and exempts housing that falls into the C2 use class from delivering affordable housing. Charnwood, Leicestershire, are towards the latter stages of their Local Plan examination and have recently consulted on main modifications that exempt specialist housing for older people from affordable housing, as well as removing the requirement for M4(3).

The inclusion of a requirement for older persons' housing to deliver affordable housing in line with policy Hou 1 will create an unrealistic over aspirational policy requirement that would no doubt result in protracted discussion at the decision-making stage. This would potentially be adversarial, requiring protracted negotiations with Council officers and their commissioned consultants, and result in difficulties with decision makers expecting policy compliancy. As a minimum, the policy should therefore be amended to make it clear that older person's housing is exempt from all types of affordable housing in line with the conclusions of the Viability Study, to ensure that the plan is deliverable, justified and consistent with national policy.

Comments on Viability Study

Whilst we welcome that the Council have tested retirement and extra care housing on brownfield land, we have some concerns with regard to some of the assumptions and conclusions that have been used and if acted upon would be likely to make sheltered and extra care housing not viable. As such the Viability Assessment should be re-run for retirement and extra-care housing using the assumptions recommended below.

We also note that the viability study does not include appraisals on the different typologies for older persons' housing. This is contrary to paragraph 58 of the NPPF.

Initially, if Policy Hou1 is applied to specialist housing for older people, the Council's own commissioned evidence states that it would serve to inhibit such housing from coming forward. Yet despite this conclusion the Viability Study recommends that 'the 10% of dwellings to be for affordable home ownership should also be applied to older person homes'. (para 9.8).

It appears from paragraphs 8.22 & 9.7 of the Viability Study that this recommendation is based on an understanding of the NPPF that the minimum requirement for major housing development is for 10% of the total number of dwellings to be available for affordable home ownership. However, this is an incorrect interpretation of the NPPF in this instance as Paragraph 66 of the NPPF specifically allows for exemptions to this requirement, including for purpose-built accommodation for the elderly.

With respect to viability assumptions themselves, we would direct the Council towards the Retirement Housing Consortium paper entitled 'A briefing note on viability' prepared for Retirement Housing Group by Three Dragons, May 2013 (updated February 2016 ('RHG Briefing Note') available from <https://retirementhousinggroup.com/rhg/wp-content/uploads/2017/01/CIL-viability-appraisal-issues-RHG-February-2016.pdf>.

The RHG Briefing Note establishes how sheltered housing and extra care development differs from mainstream housing and looks at the key variables and assumptions that can affect the viability of specialist housing for older people. These key variables include unit size, unit numbers and GIA, non-saleable communal space, empty property costs, external build cost, sales values, build costs, marketing costs and sales periods and significantly variable benchmark land values. We are also aware that the RHG Briefing Note is being updated and indeed we are informing that process. We therefore have the following comments on the assumptions that should be used within the Viability Assessment with respect to extra care and retirement housing as defined by the PPG on housing for older and disabled people Paragraph: 010 Reference ID: 63-010-20190626.

Unit numbers / GIA / Density

We note that the Viability Assessment has modelled a unit density of 110 dwellings per hectare resulting in a 55 unit scheme being modelled on a 0.5 hectare site for both the Sheltered and Extra-Care schemes, and modelled a 45 unit scheme on a 0.5 hectare site with a density of 90 dwellings per hectare. However, a typical sheltered housing / retirement living scheme would consist of 45 dwellings on a gross site area of 0.45 hectares creating a density of 100 units per hectare. Extra care housing tends to have a lower density and a typical scheme would consist of 60 units on a 0.75 hectare site at a lower density of 80 units per hectare. Therefore, a scheme of 50 units should be modelled for sheltered housing and a scheme of 40 units should be modelled for extra care, both on a site of 0.5 hectares.

Unit Size

	<p>The Viability Study should amend the 1 bedroom apartment sizes as follows. These have evolved in recent years with the National Space Standards and M4 (2) requirements and allow for additional storage and circulation space to facilitate downsizing:</p> <ul style="list-style-type: none"> •1 bed sheltered 55 sq m •1 bed extra care 60 sq m <p>Unit mix</p> <p>A typical scheme provides 1 and 2 bedrooomed apartments using a mix of 60% 1 bed and 40 % 2 bed units on a development. This is the case for both sheltered (retirement) and extra care (retirement living plus) schemes.</p> <p>Professional fees</p> <p>Given that a large number of specialist housing for older people is delivered on brownfield sites, in our experience these often involve more professional advisors associated with contamination, legal fees, drainage, air quality, overheating, sunlight, noise amongst other areas. We would therefore recommend that a 10% of build cost figure is used for brownfield sites for professional fees rather than 8%.</p> <p>Sales periods</p> <p>As discussed in the RHG Briefing Note, sales periods of older persons' housing schemes are typically longer for retirement and extra care housing than general needs housing. There is a typical 18 month build period before sales can commence. Sheltered and Extra care schemes cannot be phased but must be fully operational and completed from month 1 of sales / occupation. As detailed within the RHG Briefing Note, once sales commence a rough guide is that 40% of units will be sold at the end of the first year of sales, 30% during the second year of sales and 30% during the third period. This should be considered within the viability modelling. These longer sales periods should therefore be incorporated into the Viability Study. It is not clear currently what sales period has been used.</p> <p>Empty property costs</p> <p>It is recommended that a standard allowance of £5,000 per unit is assumed as a typical average empty property cost – to cover Council Tax liability on unsold units and service charges (which will be applicable to the whole building from day first resident moves in). This increases to £10,000 for extra care accommodation to reflect higher costs particularly in maintaining care, communal and catering facilities, staff and services and reflecting a slower sales rate than Retirement Living.</p> <p>Developer Return</p> <p>PPG sets out that 'For the purpose of plan making an assumption of 15-20% of gross development value (GDV) may be considered a suitable return to developers. However, for specialist housing for older people there is a clear precedent for a return of not less than 20% of gross development value primarily because of the risks associated with such developments. This is consistent with the Inspector's conclusions for appeals such as McCarthy Stone proposal at Redditch (Appeal Ref: 3166677), Churchill Retirement Living proposal at Cheam (Appeal Ref: 3159137) and the Churchill Retirement Living scheme at West Bridgford (Appeal Ref: 3229412) in 2019. 20% profit should therefore be assumed for specialist housing for older people rather than the 17.5% used within the study.</p> <p>Policy costs –BNG</p> <p>Since the price of statutory BNG units have been published it has enabled it to be determined how much BNG may cost and this needs to be incorporated into the viability assessment at a realistic level. In addition, brownfield site BNG costs are often more substantial than Greenfield, but this very much depends on the site characteristics. For example, if an older persons' housing scheme consisting of 50 units on a 0.5 hectare site needed to purchase one off-site statutory credit, if this was for the cheapest low quality habitat type this would cost £84,000 or £1,680 per unit given that 2 credits are needed per unit. Older Persons housing schemes are ideally located on small windfall sites close to local facilities and it will most likely be that BNG requirements will need to be met largely or entirely off site by contribution.</p> <p>Policy cost – M4 (3)</p> <p>Despite the draft plan requiring 10% of older persons housing to be built for M4(3) it appears that a £0 additional cost has been incorporated into the Viability study. However, the council should note that any M4(3) requirement needs to be considered on top of M4(2) and would include additional costs for fixtures and fittings, services and controls and additionally room dimensions and layout which include up to 30% more floorspace and corresponding reduction in density, sales values and affordability of such housing'. While some value may be secured for larger units this is unlikely to mitigate the overall loss of units across the proposal as a result of the requirement.</p> <p>Recommendation</p> <p>In conclusion, draft Policy HOU1 is therefore considered to be unsound on the grounds that the affordable housing targets are not justified in respect of housing for older people</p> <p>In order for the plan to be justified, effective and consistent with national policy, the affordable housing requirement for older peoples' housing should be removed The following wording should be added to the policy:</p> <p>Older person's housing schemes are exempt from providing affordable housing.</p>
Q7 Modification	<p>Please see attached representations. In order for the plan to be justified, effective and consistent with national policy, the affordable housing requirement for older peoples' housing should be removed The following wording should be added to the policy:</p> <p>Older person's housing schemes are exempt from providing affordable housing.</p>

Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>Policy HOU 1 affordable Housing</p> <p>Draft Policy HOU1 on affordable housing matters seeks to apply a generic affordable housing requirement as follows (on sites proposing 10 dwellings or more):</p> <ul style="list-style-type: none"> a. 30% of all units on greenfield sites. b. 15% of all units on brownfield sites within the 'low value zone' as shown on the policies map. c. 25% of units on brownfield sites within the 'high value zone' as shown on the policies map. <p>The Supporting Information to the policy at Paragraph 7.9 confirms that 'proposals for extra care accommodation, assisted living or other forms of retirement housing to be let and sold on the open market will be subject to the requirements of this policy to provide affordable housing'</p> <p>However, the council do not have a justified policy basis to apply the affordable housing requirements to housing for older people. The Local Plan evidence base (by Porter Planning Economics) included testing of the viability of housing for older people where it is concluded that:</p> <p>...It is clear from these results that the older person accommodation would be unlikely to come forward under the emerging Local Plan and current residential market. The testing shows that even by varying the affordable rate, the current residential market is unable to afford to deliver any affordable housing based on standard market conditions in the older persons accommodation sector'.</p> <p>The PPG states</p> <p>'policy requirements should be informed by evidence of infrastructure and affordable housing need, and a proportionate assessment of viability that takes into account all relevant policies, and local and national standards, including the cost implications of the Community Infrastructure Levy (CIL) and section 106. Policy requirements should be clear so that they can be accurately accounted for in the price paid for land. To provide this certainty, affordable housing requirements should be expressed as a single figure rather than a range. Different requirements may be set for different types or location of site or types of development.'</p> <p>It is clear from the council's viability testing that there is no viable range given that none of the testing demonstrates a viable position.</p> <p>The PPG also states that the role for viability assessment is primarily at the plan making stage . By gnoring the plan wide viability assessment, the opposite is achieved in that housing for older people developments would be forced down the uncertainty of site-specific viability negotiation. The PPG is also clear that in respect of site-specific viability, reference should be taken from the plan wide viability study. An unnecessary circular position therefore arises.</p> <p>The requirement for older persons housing to provide affordable housing should be removed from the policy as it is not justified or consistent with national policy. Such an approach with be consistent with recent local plan adoptions (Fareham and Maidstone) and consultation proposals at BCP, Birmingham and Charnwood whereby full exemptions are either adopted or proposed in view of the plan wide viability study conclusions.</p>
Q7 Modification	Recommendation - Policy HOU1 is not justified and it should be stated within the policy that the affordable housing targets will not be applied to specialist housing for older people.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	It is important that the policy is discussed with those parties who will be involved in delivering the housing impacted by the proposed policies to understand the issues which are likley to arise.

Q4 Policy	HOU1
Q6 Details	<p>Please see attached representations. Given the significant need for new affordable homes in Newcastle-Under-Lyme, the WMHAPC suggests that a blanket affordable housing requirement of 30% on sites across the Borough would be more appropriate than the proposed stepped policy (currently based on a land value approach) that requires:</p> <ul style="list-style-type: none"> • 30% affordable housing on greenfield sites; • 15% on brownfield sites in low value zones (the north of the Borough); and • 25% on brownfield sites in high value zones (the south of the Borough). <p>The WMHAPC asks the Council to consider a blanket 30% requirement for affordable housing to optimise the delivery of affordable housing across the Borough regardless of the land value. We previously queried the evidence based used for to justify the reduced affordable housing requirement on low value brownfield sites in which the policy proposes 15%. Furthermore, and in light of the Borough's substantial need for affordable housing as highlighted in the HEDNA (2024) of delivering 278 dpa of affordable housing, the Council should avoid progressing an emerging policy that would potentially secure less affordable housing than current adopted Policy CSP6 which requires 25% affordable housing on qualifying sites.</p> <p>The WMHAPC is pleased that the Council has incorporated our previous advice on when it is appropriate to secure affordable housing in perpetuity. Draft Policy HOU1 no longer requires all affordable homes to be secured in perpetuity, with the emerging Local Plan reserving the requirement for rural exception sites only under draft Policy HOU8.</p> <p>It is welcoming to see that the housing tenure mix policy has amended in this Regulation 19 version of the Plan to require 25% as First Homes with the tenure split for affordable housing 'provided in line with the latest evidence', which is suitably flexible to account for changing housing needs over the plan period and site specific issues. This being said, there is ongoing concern regarding the Council's proposal to require 25% of affordable housing on-site to be First Homes. This approach heavily restricts the delivery of other effective affordable housing products such as affordable rent and shared ownership. Members of the WMHAPC who operate within Newcastle-under-Lyme, emphasise the importance of shared ownership homes, which offer a flexible path to homeownership. Insufficient earnings to access a mortgage is a major barrier alongside insufficient savings for a deposit. Shared ownership allows buyers to begin with a 25% share and potentially staircase to full ownership, providing an accessible option for those with limited savings or income. However, under the current policy, the delivery of shared ownership homes may become more unlikely.</p> <p>Although it is acknowledged that the revised NPPF is not yet adopted, it is pertinent to note that the requirement for 25% of affordable tenures being First Homes has been proposed to be removed entirely by the new Government. As has been observed across the industry in recent years, housebuilders are generally not set up in way to provide First Homes. The WMHAPC members have specified that they would typically offer circa 70% of market value for shared ownership/intermediate housing which housebuilders typically favour. On sites that are delivering relatively small numbers of S106 homes, the First Homes requirement often makes it unnecessarily complex for developers and housing providers. It is suggested that Newcastle-Under-Lyme could develop its affordable housing allocations policy to prioritise those people that would have been eligible for First Homes. The WMHAPC members have specified that they would not act as First Homes agents.</p> <p>Criterion 7 of draft Policy HOU1 requires pepper-potting of affordable housing on new residential schemes. Whilst we advocate for a well-integrated and varied distribution of affordable housing within housing schemes, we highlight to the Council that this approach makes management more difficult as the properties are more spread out. It is noted that the council has caveated the proposed policy requirement by stating that: "unless specific circumstance suggests clustering and/or a distinctive design is appropriate. The exception is blocks of flats, where a mixed tenure block can potentially cause management and leasehold issues." The WMHAPC recommends that the Council take a more general flexible approach to pepper potting or clustering to allow for ease of asset maintenance and management for the affordable housing providers.</p> <p>We would like the Local Plan to acknowledge the role of Housing Associations in providing affordable housing in Birmingham. It would be beneficial to see the Council recognise the role of Housing Associations and encourage developers to have early active engagement with Housing Associations in the preparation of planning proposals. Early engagement enables Housing Associations to have an active role in the planning and design of developments to ensure that the development addresses local housing needs and meets the management requirements of WMHAPC members.</p>

Q4 Policy	HOU1

Q6 Details

Introduction

The Labour group on Newcastle-under-Lyme Borough council represents the authority's principal opposition group. The group comprises of 18 of the 44 total council members on the authority. Throughout the local plan process, the Labour group has scrutinised the plan, when afforded opportunity to do so, during scrutiny committee, planning committee and full council. Though several recommendations have been proposed, these have not been taken into account by the administration, and therefore the final version of the plan (at Regulation 19 stage) has not taken account of opposition suggestions. This response outlines several concerns that we feel critical to the success of the plan, and pertinent to the planning inspector during official examination of the plan.

Overview

The Labour group acknowledges the significant amount of work put into preparation of the regulation 19 pre-submission draft local plan. The Labour group acknowledges the need for a functional and sustainable local plan to ensure development within the borough is guided towards areas of unmet need, or suitability. We wish to be clear that there are many areas of the proposed plan that we agree with and support. However, there are areas of the plan where we have concerns. Whilst these concerns make up most of our comments, they are presented with due respect to several areas of the plan where we agree. We are committed to getting good value for money on behalf of our residents and delivering economic growth, but also protecting green spaces. Therefore, we are unable to support the plan in its current form, where the plans aspirations are unlikely to be matched by realised commitments. Our specific concerns, and proposals to help alleviate these are as follows:

Housing Targets

During Regulation 18 examination of the local plan the Labour group raised concerns over the adoption of a housing target of a minimum of 8,000 dwellings from 2020-40 equating to 400 dwellings per annum. Our objections to this housing target were based on a national minimum housing target calculation of 330 p.a. We further note that the housing and economic needs assessment commissioned by the council models a housing need of 347 p.a.1. In providing evidence for the adopted housing target of 400 dwellings p.a. the council relies on modelling provided by the housing and economic needs assessment update that suggests a forecast job creation of at mid-point between modelling forecasts 207 p.a.1, with a blended approach suggesting 237 p.a.

The Labour group notes the concern raised over available modelling data in the Turley Report:

"These are though becoming dated, with each provider having released new forecasts in the last year which envisage the creation of between 194 and 364 new jobs per annum between 2023 and 2040. Either would represent an improvement on the past trend, with Newcastle-under-Lyme having created only 20 jobs per annum on average since 2009, but the higher forecast – from Cambridge Econometrics – appears particularly optimistic given that it adds 100 jobs per year to its previous forecast, presented in the HENAU. This appears due to an unexplained upgrading of the growth prospects of three sectors that have not actually created any jobs in Newcastle-under-Lyme over the past five years, suggesting a need for caution before assuming that these sectors will indeed create far more jobs than forecast only a year ago."

Turley (March 2024) Housing and Economic Needs Assessment Update: Newcastle-under-Lyme

Based on these job growth forecasts, the report recommends a housing need of 400 dwellings p.a. The Labour group notes that the Regulation 19 Draft Plan identifies a housing need of 400 dwellings p.a. Consistent with this assumed significant growth forecast in jobs p.a., whilst noting that such housing numbers would be dependant on a 1085% increase in job creation p.a. The Labour group has significant concerns that the level of house building will not match job growth, and thus raises objection to the sustainability of these developments.

Delivering Affordable and Social Housing

The Regulation 19 Draft Plan does not set specific targets for delivery of affordable or social housing. With no clear target on delivery, the Labour group has significant concerns that over the lifetime of the plan limited development of these much-needed dwellings will occur.

The Turley report identifies a calculated need of 278 affordable homes p.a. Whilst challenged on this number, the report does highlight the growing demand on the housing register but assumes that this growth will be met through rising earnings and private sector offerings. The Labour group challenges this assertion, given that wage growth has vastly tracked behind house price, and average rental costs, growth; and that mortgage affordability has been impacted by a significant rise in the Bank of England base rates. The Labour group has concerns that such assumptions will lead to an under-delivery of affordable homes.

The Regulation 19 Draft Plan recommends a number of policies for delivery of affordable and social housing. These are formed under Policy HOU1 Affordable Housing and include:

"On-site affordable housing provision will be required on sites of 10 dwellings or more, or sites of 0.5ha or more at the following percentages:

- a. 30% of all units on greenfield sites.*
- b. 15% of all units on brownfield sites within the 'low value zone' as shown on the policies map.*
- c. 25% of units on brownfield sites within the 'high value zone' as shown on the policies map."*

"Given the acute need for social rented accommodation, the HNA Update (2024) recommends the tenure split of affordable homes to be 65% social rented, 10% other affordable housing product and 25% affordable home ownership through First Homes. Opportunities should also be taken to include a proportion of affordable older persons accommodation as part of the affordable housing provision, particularly involving care provision. Planning permission may be granted for an alternative tenure split provided that robust evidence demonstrates that a different split is more suitable. This will be informed by market conditions and local housing need at the time"

Unfortunately, at the time of writing we have not been able to locate within the Policies Map document any reference to distribution of sites across 'low vale' and 'high value' zones. However, on the assumption that delivery across non-greenfield sites will amount to 20% of dwellings in developments of 10 dwellings

or more, or 0.5ha in size. On this assumption of the 400 dwellings-built p.a, only 80 p.a will be affordable or social housing. This is dramatically below the number of affordable of social rent dwellings needed. Whilst the plan mentions delivering affordable housing, the Labour Group finds no tangible commitments that provide reassurance of its delivery. Current housing policy has largely failed to produce affordable housing due to systemic issues affecting supply, demand, and financing. The introduction of 'Right to Buy' has seen local authorities struggle to replace housing stock, while lengthy approval processes, excessive regulations, and permitting delays have hindered new builds. Rising construction costs, driven by increased material prices, labour shortages, and supply chain issues, have pushed developers towards high-end housing. Limited government support, insufficient subsidies, and poorly targeted incentives have compounded the problem, with the previous government (2010-2024) failing to allocate adequate funding or attract developers. Housing is increasingly treated as an investment asset, with speculative bubbles inflating prices and reducing affordability. Ineffective policies, such as underfunded public housing and rent controls, exacerbate these challenges. In areas like Newcastle-under-Lyme and wider North Staffordshire, wages lag behind housing costs, leading to an affordability gap. Existing rental assistance schemes are often inadequate, failing to cover the full rent cost, and there is a failure to address the needs of the homeless and vulnerable populations, leaving affordable housing out of reach for those who need it most.

The Labour group believes the policies within the Regulation 19 Local Plan will not lead to the delivery of 278 affordable homes p.a. That whilst the commitment to secure between 15-30% of dwellings as affordable homes is a good first step. To meet the demand required, the policy would need to see 70% of new developments as affordable or socially rented. Whilst the Labour group accepts that this percentage would potentially deter developers, we have significant concern that the current 15-30% range will not be met. Rising construction costs has seen a significant number of developments across the borough seek to vary their social housing contributions under 106 agreements. This has led to significant under delivery of these much-needed homes across the borough. The Labour group proposes a recommendation to improve the deliverability of affordable and social housing.

Labour group proposal

That for developments on public owned land, the minimum percentage of dwellings allocated for affordable and social rented homes is increased to 50%. Given that several large housing developments will occur on either Borough or County Council owned land, and increased allocation in these areas, where land purchase is not necessary will address significant shortfall between anticipated built and need. Further, whilst outside of the material considerations for the local plan, the Labour group proposes that the Council explore alternative options for delivery of affordable and social housing, including the reintroduction of council stock should delivery continue to be deficient.

The Council generally works with housing developers and other stakeholders to facilitate affordable housing projects – but these have not and will not meet the demand or provide the foundations required for the next twenty years. The argument for our council returning to build council houses revolves around several key points, emphasising the need for more affordable housing, the limitations of private market solutions, and the role of public investment in addressing the housing crisis.

If council builds and retains its housing stock, we create long-term assets that generate rental income and remain under public control. This is a sustainable approach to housing provision, as opposed to relying solely on private developers who may prioritise short-term profit over community needs.

Our proposal to return to council housebuilding is seen by our group as a crucial solution to the affordable housing crisis. By taking control of housing supply, council can directly address the needs of vulnerable residents, provide stability, and counter the failures of market-driven housing policies. Investing in council housing is also a long-term, sustainable approach that can contribute to the overall health and well-being of communities within the Borough.

Transport

It is important for local planning authorities to undertake an assessment of the transport implications in developing or reviewing their Local Plan so that a robust transport evidence base may be developed to support the preparation and/or review of that Plan.

Bus services connect the main towns in Staffordshire & Stoke-on-Trent and provide cross boundary links with neighbouring authorities and towns. Whilst bus services have declined in recent years, they continue to provide vital connections between people, services and places of work and enable people to make more sustainable travel choices.

Staffordshire & Stoke-on-Trent's bus network is operated by several private operators including Arriva Midlands, First Potteries (operating 70% of services in Stoke-on-Trent), D & G, and National Express West Midlands who are significantly increasing their presence in the county. Diamond Bus, Stagecoach and Select Buses also operate services on selected routes.

Key public transport issues include congestion and unreliable journey times, limited frequency of services and falling bus patronage levels affecting commercial viability. To reduce per capita road transport emissions, Staffordshire County Council wish to improve walking, cycling and bus facilities, and are promoting their use to encourage a modal shift away from car use.

Rail connectivity in Staffordshire is currently delivered through a comprehensive rail network and several different franchises. The West Coast Main Line is 700 miles in length from London Euston to Glasgow via Birmingham providing fast services from several Staffordshire stations to London. It is one of the busiest freight routes in Europe and part of the Trans-European Transport Network (TEN-T) route, carrying 40% of all UK rail freight traffic. There are at least 14 train operator companies using this line. Cross Country operate services from the South Coast, Reading, and Birmingham to Manchester calling at Stafford and Stoke-on-Trent. The Crewe to Derby Line which runs via Stoke-on-Trent and Uttoxeter currently suffers from overcrowding.

The local plan makes no proposals to address these issues other than a reference to:

High Speed Two (HS2) services will pass through Staffordshire when Phase 1 is operational. HS2 services will stop at Stafford Station and will improve journey times and connectivity to London and Birmingham. Phase 2b will provide further improvements in journey times and capacity from Stafford to London, Birmingham and the North West, while 27 releasing capacity on West Coast Main Line services for other Staffordshire & Stoke-on Trent stations."

Since the publication of the draft plan the HS2 project has been scrapped by the previous Conservative government.

"The need for a link between the M54 and the M6 was identified in the 2014 Road Investment Strategy (RIS) to relieve congestion on the A460, A449 and A5. The preferred option was announced in 2018 (and a planning application submitted in 2020) which includes a dual carriageway link between M54 J1 and M6 J11 and associated improvements. 6.9. The Midlands Connect studies for the A50 / A500 and A5 have already begun to consider how congestion issues can be addressed and growth supported along these key corridors. The case for investment and opportunities to deliver transport interventions to accelerate growth in the region are being explored. This will lead to preferred investment priorities along these routes which will likely need to be delivered to fully realise the growth potential of Staffordshire & Stoke-on-Trent."

No further announcements on this road infrastructure have been announced.

Critically however, there is no mention of improved transport links to the Town centre or the Royal Stoke Hospital or the new planned Integrated Care Hub at Bradwell or a plan to improve connection to the rural areas of the borough.

As part of the evidence base for the local plan the Council commissioned a Strategic Transport Assessment by Sweco UK Limited. The SWECO report outlines the existing pressures on the highways network throughout the borough, including the following locations:

- *"Slow moving traffic observed in and around Newcastle-under-Lyme centre,*
- *Some limited speed reductions in southern areas of Newcastle-under-Lyme Borough, Madeley and Audley,*
- *Slow moving traffic on the A34 Newcastle Road from the A500 to north of Clough Hall Drive though largely no queuing. Some traffic congestion on signalised roundabout"*

SWECO (July 2024) Strategic Transport Assessment

The draft local plan makes no reference to these existing pressures, nor does it provide any solutions to these pressures.

The SWECO report also notes the existing pressures on links to the strategic road network, notably the M6 and A500.

"• M16 J16 - Observed data shows traffic congestion along the A500 eastbound approach with decreased speeds (0-10mph AM, 10-0mph PM)

- *M6 J15 - The speed data indicates that queued traffic (speed 1-10mph) is observed along the A500 approach to the A500 Queensway\ Newcastle Road roundabout in the PM peak,*
- *A500\Alsager Road – Can be inferred from data to be operating without any capacity related congestion,*
- *Talke Interchange - Some relatively slow-moving traffic, along the section between the Newcastle Road\Talke Road roundabout. However, the data indicates that this is slow moving traffic, but in general the data does not show any large reductions in speed due to queuing,*
- *A500/A527 - Data indicates that traffic is operating without the presence of queues long term queues during the peak hour,*
- *A500/A34 -In the AM peak observed speeds of around 20-30mph are in line with the speed limits in place on the A34. This is with the exception of the A34 northbound approach to the gyratory which shows lower observed speeds of around 10-20mph. In the PM peak lower speeds of 10-20mph are also observed on the southbound approach to the gyratory."*

SWECO (July 2024) Strategic Transport Assessment

Again, there are no proposals within the local plan to address these existing pressures on connectivity to the wider strategic road network.

The SWECO report modelled the impact of housing and strategic site developments on traffic flow and made the following conclusions.

Keele:

"It can be seen that there is a further worsening from the core-only scenario with now severe congestion forecast in both directions of Keele Road between the University and Gallowstree Lane roundabout. Evidence of re-routing is seen with increases in V/C forecast for Mill Street in Silverdale. Moderate junction delay issues begin to become apparent at the signalised junction of Cemetery Road/Church Lane/B5044. These patterns are also visible in the difference plots (Figure 8-15 and Figure 8-16) where volume has increased around the B5044 (Silverdale), A525 (Keele Road) and A53. It should be noted that the NSMM model is developed within the CUBE modelling software application. A limitation of the CUBE software is that it does not model blocking back (traffic queuing back to previous road links with potential to impact other links and junctions). Therefore, there is the possibility of additional related impacts to queuing traffic on Keele Road, for example to the Keele University roundabout."

SWECO (July 2024) Strategic Transport Assessment

The report recommends mitigations at Keele:

"A new link road running between University Avenue/Barkers Wood Road to Whitmore Road. The link road will be a 30mph 7.3m wide road connecting the A525 with the A53 to provide an additional route to distribute trips and relieve pressure on the A525.

A new circular bus service serving Newcastle-under-Lyme bus station, Keele University, KL15, KL13, TB19, and SP11 sites via Keele Road, the new link road and Whitmore Road."

The report notes the impact of these mitigation measures:

For Keele, the mitigation measure of a new link road added between the University and Whitmore Road is seen to have a positive impact on the reduction of traffic on Keele Road between the University Roundabout and Gallowstree Lane.

It can be seen that during the AM period, westbound traffic is most improved whilst in the PM period, eastbound traffic is most improved. This is likely to be of significant improvement for University traffic and related bus services.

It can also be seen that the mitigation brings volume back or nearly back to capacity for each direction and period. There is potential for additional improvements to be made with high impact travel plans and other local bus service improvements."

SWECO (July 2024) Strategic Transport Assessment

The Labour group notes that this report only mitigates the impact of the proposed developments, and in doing so “brings volume back or nearly back to capacity for each direction and period”. The Labour group has significant concerns that the mitigation measures proposed in the report are not sufficient to provide long-term sustainable traffic flow in the area.

The report recommends the following mitigations at Audley:

“Bus provision connecting employees within Stoke-on-Trent, Newcastle-under-Lyme and Crewe with AB2 employment. It is assumed the service is timed to meet the needs of any shift patterns and enable some connection with other existing public transport services. This is expected to be a replacement for 10% of car trips originating in nearby zones that could use this and other existing public transport services to access AB2 within 1 hour.”

SWECO (July 2024) Strategic Transport Assessment

The report recommends the following mitigation measures in Talke:

“Extension of the NW-bound Newcastle Road two-lane approach to the signalised junction at Newcastle Road/Coalpit Hill. This will give additional space for right-turning traffic that is leading to junction delay issues in scenario 2 – core local plan sites.

Cedar Avenue – Community improvements to Cedar Avenue to increase attractiveness of walking, wheeling, and cycling (not able to model in the strategic NSMM transport model).”

SWECO (July 2024) Strategic Transport Assessment

The Labour group notes the Local plan has identified mitigation measures at Keele and Talke:

“13. Transport infrastructure identified through the Strategic Transport Assessment will be supported. This is to include: - a. a link road between A525 Keele Road and Whitmore Road. b. Improvements to Talke Signals (A34 Newcastle Road / Congleton Road / Coalpit Hill)”

SWECO (July 2024) Strategic Transport Assessment

Labour group notes that funding for these mitigation measures will be identified via 106 funding levied on developments in the area. The Labour group has significant concerns that mitigating the impact of these developments will require 106 funding, and that given the impact of rising cost of living, several developments have proceeded following waiver of the 106 funding requirements. We note within the councils own Infrastructure Baseline Report the following:

“At the same time, it is critical that any infrastructure expectations do not disincentivise development to such an extent that it becomes unviable, thus inhibiting Newcastle-under-Lyme’s growth opportunities. This challenge is particularly acute in those parts of Newcastle-under-Lyme where land and property values are low and profit margins on development are small or even non-existent. In some parts of the Borough, the private sector will not be able to meet all of the infrastructure/policy requirements which are ultimately set out in the Local Plan. In such cases, an appropriate balance will need to be struck between competing interests and demands.”

NBC (July 2024) Infrastructure Baseline Report

The Labour group also notes the Strategic Transport Assessment provided by the SWECO report does not include assessment of the impact of public transport, outside of assumed reductions in car usage. The borough of Newcastle-under-Lyme, like many other post-industrial non-metropolitan districts, can be considered as a deprived public transport area. Within the borough, public transport is provided via the bus network, and thus subject to the impact of increased traffic and lack of mitigation. At present, travel from Newcastle to connecting rail network stations at Stoke is a 40-minute bus journey outside of periods of high traffic congestion, with a 1 hour journey to Crewe. The Labour group has concerns that the local plan, whilst referring to increased walking and cycling, has no reference to improving the outdated, inefficient, and poor provision of existing public transport across the borough.

Labour group proposal

The Labour group wants to see the local plan have firm detailed and costed plans for a fully integrated transport plan that serves the current and proposed needs of our communities. That such integrated transport plan involves the combining of different modes of transport to maximise ease and efficiency for the user in terms of time, cost, comfort, safety, accessibility and convenience. We are aware that the cuts to bus routes and times across the borough are leading to difficulties in accessing employment, education and health services. We also know that lack of connectivity leads to social isolation.

The Labour group expects to see how the borough plans to address the needs of residents within the borough, demonstrate how it supports the proposed growth in development and population in the plan by working with bus operators, planners and other local authorities such as Staffordshire County Council and Stoke on Trent City Council to get Newcastle moving and growing.

Education

The Borough of Newcastle is divided into two distinct areas for the purpose of school place planning: 1) Newcastle and 2) Kidsgrove. These areas are further broken down into smaller planning areas, which are used to determine the number of school places required. These smaller planning areas have been grouped based on the geographical location of schools and by analysing pupil movement between schools and catchment areas.

A two-tier education system, consisting of Primary (ages 4-11) and Secondary (ages 11-16/18) schools, operates across the Borough. Sixth form provision is available on-site at two secondary schools within the district and is mainly accessible at Newcastle College, with The King’s Church of England School, Kidsgrove, also providing this provision. As of September 2020, Newcastle has 30 primary schools, 1 infant school, 1 junior school, and 7 secondary schools, while Kidsgrove has 9 primary schools and 2 secondary schools.

The Infrastructure Baseline Report provided by the Council within the local plan evidence base identifies most areas of the borough have existing capacity within local primary schools to satisfy the proposed developments within the local plan. It is noted however that Newcastle region 5 covering the villages of Silverdale and Knutton would have insufficient school places for the proposed developments on the former municipal golf course.

In the infrastructure delivery plan, the local plan proposes the development of a new primary school on the former municipal golf course:

"The relatively large amount of development set out in the plan for the Keele University corridor (with the inclusion of development site SP11) means there is an identified need for a new 1 Form of Entry (FE) primary school."

Infrastructure delivery plan

The Labour group notes that the infrastructure baseline report does not include St John's primary school in Keele in meeting the numbers required by this development. Evidence from the school demonstrates the high number of pupils registered at the school from the villages of Silverdale and Knutton. Further, concerns have been raised by members of the governing bodies of the four existing catchment primary schools; St Johns Keele, St Luke's Silverdale, The Racecourse Silverdale and St Mary's Knutton regarding the impact of a new primary school on pupil numbers. More alarmingly, neither Staffordshire County Council, nor the Borough council have communicated with the existing primary schools, including discussions over expansion. The Labour group notes that the Borough council has held conversations with St Chads Kidsgrove, Sir John Offley Madeley and Baldwins Gate primary schools over expansions to their existing estate to sustain development, and therefore raises concerns over the unequitable approach to the schools in the Keele, Knutton and Silverdale area.

Labour group proposal

The Labour group proposes that the prior to adoption of the local plan, that the Council undertakes a consultation with existing primary schools in the Keele, Knutton and Silverdale area to determine if existing capacity can be increased through expansion of the existing estate.

Health & Social Care

Health services in England are overseen by NHS England, which operates five regional teams to commission healthcare services. NHS Midlands and East support the commissioning of services in the West Midlands in partnership with Clinical Commissioning Groups (CCGs) and Acute Trusts.

Clinical Commissioning Groups, established by the Health and Social Care Act 2012, changed how primary care services are planned. They commission most NHS hospital and community services, including hospital care, rehabilitative care, urgent care, community health services, and mental health and learning disability services.

The six Clinical Commissioning Groups serving Staffordshire and Stoke-on-Trent are:

- Cannock Chase CCG
- East Staffordshire CCG
- North Staffordshire CCG
- South East Staffordshire and Seisdon Peninsula CCG
- Stafford and Surrounds CCG
- Stoke-on-Trent CCG

The focus for health and social care is on prevention and providing care outside hospitals where possible.

'Together We're Better' is the Sustainability and Transformation Partnership (STP) for Staffordshire and Stoke-on-Trent. The Staffordshire and Stoke Sustainability Transformation Plan (2016) identifies key challenges, including:

- High rates of obesity, diabetes, and smoking in certain areas.
- An ageing and growing population driving up demand.
- Frequent A&E attendance and a risk-averse staff culture.
- A notable proportion of patients with common mental health conditions.
- Higher than average urgent care activity at acute trusts due to poor primary and community infrastructure and citizen behaviours.

In January 2019, NHS England published The NHS Long Term Plan (LTP) and the Five-Year Framework for GP contract reform, setting out ambitions for the next ten years to improve patient care, health outcomes, and to deliver more coordinated primary and community care. The Five-Year Framework introduced Primary Care Networks (PCNs) as the foundation of Integrated Care Systems (ICSs).

Now established, PCNs are groups of one or more GP practices serving populations of 30,000 to 50,000 patients, providing a strategic view of primary care delivery and identifying estate requirements. ICSs, set to replace STPs in April 2021, will offer strategic oversight at the regional level, identifying opportunities for integrated working across health and social care partners. By April 2022, ICSs will become statutory bodies.

The infrastructure delivery plan notes the following:

"There are three Primary Care Networks (PCNs) in Newcastle-under-Lyme (Newcastle North, Newcastle Central and Newcastle South PCNs) that serve the residents of Newcastle-under-Lyme. These comprise 17 general practices. Of the practices in Newcastle-under-Lyme, only Silverdale Medical Centre is reported to have surplus capacity to accommodate patients with all other practices reporting insufficient capacity. In summation, there are capacity issues at many locations in Newcastle-under-Lyme with some of this attributed to the level of growth experienced by the borough in recent years and a historic lack of funding for the estate via mechanisms such as the planning system"

Infrastructure delivery plan

The Labour group notes all GP practices, outside of the practice in Silverdale, which must be noted is twinned with the Town Centre practice at Ryecroft, are currently at patient capacity. The Labour group further notes that the only proposal within the Local plan is for a new GP practice on the former Golf course, though we also note that this is a relocation of an existing local practice.

Social care

The Department of Health and Social Care oversees adult social care policy in England, with the Care Quality Commission acting as the independent regulator to ensure care services are safe, effective, compassionate, and high-quality.

In England, adult social care can be publicly or privately funded or provided voluntarily. Local authorities are responsible for publicly funded care and have a legal duty to provide care for those who meet nationally set needs and means tests, either by commissioning or directly delivering services.

Pressures on adult social care budgets have risen in recent years due to increasing demand (from a growing, ageing population with more long-term and multiple health conditions), reduced local government funding, and higher care costs.

Consequently, the adult social care sector is facing growing challenges, including a fragile provider market, increasing unmet needs, more strain on informal carers, reduced investment in prevention, pressure on an already overstretched care workforce, and a diminished capacity to help ease demand on the NHS.

In the infrastructure baseline report the following is noted:

"It should be noted that local demand for care services will vary based on the overall size of the population and specific population care needs, the affordability, quality and location of existing services. This is covered in more detail within Staffordshire County Council's market position statements and associated intelligence documents. Newcastle-under-Lyme currently has significant provision for extra care facilities, residential care homes & nursing homes, but it is anticipated that during the Local Plan period additional units within each of these sectors will be required."

Infrastructure baseline report

The Labour group notes that requirement of additional adult social care facilities during the local plan period. The Labour group further notes the lack of identified development within the local plan to meet the rising demands for adult social care.

Labour group proposals

The Labour group proposes that before adoption of the local plan:

I. The Council work with Staffordshire County Council to identify suitable portions of developments sites within the local plan to meet the rising demand for adult social care provision.

II. The council work with Primary care networks to increase GP capacity across the whole of the borough.

Strategic Employment Sites – the case against AB2 and the case for Chatterley Valley

The Labour group is opposed to the proposals for the AB2 employment site in Audley. Taking 80 hectares of land in the rural village of Audley out of the green belt and designating it as high-quality strategic employment site without the evidence base to do so and considering the significant recorded public opposition to the proposal appears to be flawed. The removal of green belt, the increase in traffic, noise and pollution combined with the lack of adequate local infrastructure across the locality is inappropriate, especially so when we already have Chatterley Valley strategic employment site that barely features in the Local Plan at all.

This is quite incredible considering Chatterley Valley has seen £3.5 Million investment from Staffordshire County Council into the site, alongside the £3.7 Million the borough council secured as part of the Kidsgrove Town Deal, and has seen infrastructure, utilities and access upgraded.

The Labour group further notes that under the duty to co-operate the Council did not approach Stoke-on-Trent Council, or Staffordshire County Council overuse of the Chatterley Valley development site in the local plan to meet the need for strategic employment sites. The Labour group is concerned that in the doing so, the Council has not legally satisfied the test within the Localism Act and therefore questions the proposal to meet the need for strategic employment sites through removal of land from the green belt.

Labour group proposals

Designating Chatterley Valley as a strategic enterprise zone would bring substantial economic, social, and environmental benefits to Newcastle-under-Lyme. It would unlock the area's potential for attracting investment, creating jobs, and fostering innovation while aligning with national strategies for regional development and sustainability. With its strong transport links and potential for brownfield redevelopment, Chatterley Valley is ideally positioned to become a thriving hub of economic activity.

Chatterley Valley is positioned near key transport links, making it ideal for a strategic enterprise zone. It lies close to the M6 motorway, the A500 (a key artery linking Stoke-on-Trent and Crewe), and major rail links, offering excellent access to the Northwest, the Midlands, and beyond. This location provides businesses with opportunities to easily transport goods and services across the UK, potentially reducing logistics costs and improving connectivity. The North Staffordshire region, including Newcastle-under-Lyme, has a long industrial heritage, particularly in ceramics, manufacturing, and logistics. This history has cultivated a skilled workforce that can readily adapt to new industries such as advanced manufacturing, logistics, and digital services. The creation of a strategic enterprise zone in Chatterley Valley would capitalize on this local expertise, attracting investment and providing job opportunities for the region.

Brownfield Redevelopment Potential

Chatterley Valley has a significant amount of underutilized and brownfield land, which presents a perfect opportunity for redevelopment without impacting greenfield sites. Developing this area would contribute to urban regeneration, transforming it into a hub for industries like green technology, logistics, or advanced manufacturing. Redeveloping brownfield sites aligns with sustainable development goals, boosting the region's environmental credentials.

Potential for Attracting Investment

Enterprise zones offer businesses tax incentives, simplified planning, and infrastructure support, all of which would make Chatterley Valley an attractive destination for both national and international investors. By designating it a strategic enterprise zone, the area could attract new companies and startups, as well as encourage the growth of existing businesses. This could significantly boost the local economy, creating jobs and increasing regional prosperity.

Locally, this would support Newcastle-under-Lyme Borough Council's economic plans, which focus on regeneration and business growth. The Labour Group want to see a borough strategy aimed at stimulating economic growth in the Midlands and the North to reduce regional disparities. Chatterley Valley could serve as a platform for innovation and the digital economy. With the rise of Industry 4.0, the area has potential to become a centre for businesses involved in automation, artificial intelligence, and digital services. The location could also foster collaboration with nearby Keele and North Staffordshire Universities, known for its research and innovation. Such collaborations could encourage knowledge transfer and innovation-led business growth.

Sustainability and Green Energy Opportunities

Given the global focus on sustainability and green energy, Chatterley Valley offers an opportunity for eco-friendly development. The site could house businesses focused on renewable energy, energy-efficient

technologies, and sustainability initiatives. This would not only contribute to the Councils net-zero goals but also attract companies prioritising sustainable operations, helping to future-proof the local economy.

Adherence to genuine consultation and due process

The Council is well aware of the large number of complaints and concerns raised at the first consultation stage of the draft plan (1st November 2021 - 13th December 2021), these were largely but not confined to, complaints around lack of face-to-face briefings, forms not being made available as stated, and technical issues and failures of the on line portal. It was clear at that time that the consultation was targeted at highly competent, computer literate regular laptop users, who could cross reference up to 200 public documents through the portal avenue to answer 37 planning specific questions. The readability of the document was poor and out of line with good practise.

https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/100807/file47158.pdf,

Labour Councillors raised concerns that the consultation was too focused on the on-line portal and digital access, which we believed would lead to exclusion for thousands of elderly residents, as well as those who did not or could not afford their own laptops, tablets or computers. We felt this approach was contrary to the community engagement and digital exclusion policies previously agreed by the Council.

The Labour welcomed the fact that these issues were focussed on in the second stage consultation and in the main remedied.

However, the Labour group raised a serious issue at a meeting of full council on 24-07-24, where Council was to approve that the plan be agreed and put forward to regulation 19 stage, that critical evidence based documents were still not available to members of council or the public.

The motion highlighting this failure is attached here:

Labour Group Amendments to the Report Titled;

Newcastle-under-Lyme Borough Local Plan 2040 of the 24-07-24

Background

The Newcastle Labour group of councillors met on Monday 22nd July to review the agenda for the meeting of full council taking place on 24-07-24. The agenda contained at item 5 - Newcastle-under-Lyme Borough Local Plan 2040. The item contains the paper which asks members and council to approve four recommendations as follows;

That Council:

- 1. Approves the Final Draft Newcastle-under-Lyme Borough Local Plan 2040 (at Regulation 19 stage), the Sustainability Appraisal, Habitats Regulations Assessment and supporting documentation for public consultation in line with the approved Local Development Scheme;*
- 2. Authorises the Service Director (Planning), in consultation with the Strategic Planning Portfolio Holder to make any necessary minor typographical changes and modifications to the Final Draft Newcastle-under-Lyme Borough Local Plan 2040, Sustainability Appraisal and Habitat Regulations Assessment prior to consultation;*
- 3. Subject to the outcome of consultation, and if no matters are raised that materially impact upon the Plan strategy, authorises the Deputy Chief Executive in consultation with the Strategic Planning Portfolio Holder to submit the Final Draft Newcastle-under-Lyme Borough Local Plan 2040 and supporting documents to the Secretary of State for formal examination by the end of 2024;*
- 4. Authorises the Service Director (Planning) to write to the appointed Inspector(s) at the start of the examination of the Final Draft Newcastle under-Lyme Borough Local Plan 2040 requesting them, under section 20(7C) of the Planning and Compulsory Purchase Act 2004, to recommend any main modifications necessary to ensure the Plan sound and legally compliant.*

Issues identified

In relation to recommendation 1

When the Labour group met on the 22-07-24, some 48 hours before the meeting to consider the recommendations we observed that the following supporting documents (none exhaustive) were not available;

1. Infrastructure Delivery Plan
2. Infrastructure Delivery Schedule
3. Strategic Housing and Employment land availability assessment 2024
4. Site assessments
5. Green Belt Assessment
6. Strategic transport assessment
7. Water cycle study
8. Gypsy and traveller site selection report
9. Duty to co-operate statement of compliance
10. Housing supply and delivery position statement

Clearly, the expectation that members approve a local plan through to the regulation 19 representation period, which is the last stage of public engagement before submitting the draft plan to the Inspectorate for examination, is unreasonable and does not adhere to sound governance of the council.

This is a formal process that requires comments on the soundness and legal compliance of the plan.

Members wish to be in a fully informed position in order to move the plan through its statutory process.

In relation to recommendation 3

Consultation is technically any activity that gives people a voice, in this context it is an exercise to provide local residents, businesses and stakeholders a voice and an opportunity to influence important decisions relating to the Borough's local plan.

Consultation requires listening to local people and learning from affected people before decisions are made or priorities are set.

Councils have a statutory requirement to consult their residents, this is especially true for planning or redevelopments. There are strict rules surrounding how consultations are conducted, and a failure to adhere to this could render the council liable for a judicial review.

It is in this regard that recommendation 3 is manifestly problematic – to agree to submit the Final Draft Newcastle-under-Lyme Borough Local Plan 2040 and supporting documents to the Secretary of State

for formal examination by the end of 2024, without affording council the time and space to review the consultation, in full, and to take account of residents, business and stakeholders views in our plan before submitting to the Secretary of State, does not accord with the fundamental principles of consultation compliance. A failure to demonstrate that council has undertaken meaningful consultation could leave council open to complaints of pre-determination.

The most common failures of local authority plans are due to inconsistencies with National Planning Policy, lack of evidence base and inadequate engagement. The amendments below seek to remedy any possible flaws in the plan and process. It is our view that a failure to do so would open the authority to the risk of litigation, reputational damage, and a loss of trust and confidence by those engaging with the process.

Proposed amendments

Replace recommendation(s) 1 and 3 with the following;

1. Council agrees to bring the final draft plan, and supporting documents to the September 2024 full council meeting seeking councils approval of the Final Draft Newcastle-under-Lyme Borough Local Plan 2040 (at Regulation 19 stage), the Sustainability Appraisal, Habitats Regulations Assessment and supporting documentation for public consultation in line with the approved Local Development Scheme.

3. Following completion of the consultation, council will meet to receive and consider the responses. If council agrees that no amendments to the plan are required and no matters are raised that materially impact upon the Plan strategy, council authorises the Deputy Chief Executive in consultation with the Strategic Planning Portfolio Holder to submit the Final Draft Newcastle-under-Lyme Borough Local Plan 2040 and supporting documents to the Secretary of State for formal examination at the earliest opportunity.

ENDS

Amendment Proposer

Cllr Dave Jones

Amendment Seconder

Cllr Andrew Fox-Hewitt

In response to this motion highlighting critical failures of due process, the Conservative group voted to dismiss the recommendations and voted to proceed to approve the plan through to regulation 19 stage. The Leader of the Council, Cllr Simon Tagg stated at this meeting that it was not true that documents were unavailable prior to group meetings on the 22nd July,

Subsequently to the council meeting however, a complaint and request under the Freedom of Information Act was made to provide details of when documents were made available. The Council response is here; (Table available in attachment)

As can be seen from the response, a total of 9 documents were in fact unavailable. The Labour Group therefore has serious concerns with the adherence to due process the probity of the Leaders actions in response to these issues being identified.

Conclusion

In summary whilst there is much within the Local Plan the Labour group can support, there are several weaknesses that we feel need to be addressed before the Local Plan can be adopted. These include:

I. Clear targets and delivery plan to ensure the ever-increasing demand for affordable and social housing is met over the lifetime of this Local plan.

II. Development of an integrated transport plan, including costings and delivery plan that is not subject solely to 106 contributions.

III. Work with existing primary schools in Knutton, Silverdale and Keele to explore potential expansion of their existing estate to increase pupil capacity.

IV. Work with Staffordshire County Council to identify capacity within proposed developments for provision of adult social care facilities.

V. Work with Primary Care Networks to identify mechanisms to increase GP capacity across the borough.

VI. Work with Staffordshire County Council and Stoke-on-Trent City Council to identify capacity within the Chatterley Valley site to accommodate the need for employment sites.

Further, the failure to co-operate on sharing of a major strategic employment site at Chatterley Valley, and concerns raised over the consultation process and availability of essential documents; further questions the plans compliance with the Localism Act.

Q4 Part of document	Policy
Q4 Policy	HOU2
Q6 Details	<p>Gladman Developments Ltd (Gladman) welcome the opportunity to comment on the Newcastle-under-Lyme Final Draft Local Plan 2020-2040 (Regulation 19) consultation and request to be updated on the progress of the emerging Local Plan. Please refer to attached representations. Gladman has fully engaged fully in the preparation of the emerging Newcastle-under-Lyme Local Plan 2040 to date. Feedback from the First Draft Local Plan (Regulation 18) consultation has been addressed and incorporated into the Final Draft Local Plan consultation document.</p> <p>In the sections below, Gladman have made specific comments where we consider the Final Draft Local Plan requires modifications or further clarification to ensure that it is capable of being found sound. Comments are focussed mainly on the consultation document, with references to the Duty to Cooperate and Sustainability Appraisal documents. Our representations also include details of Gladman's land interest at land south of Eccleshall Road, Loggerheads, which we are promoting as suitable for identification as a housing allocation in the emerging Local Plan. Please refer to attachment for more information.</p> <p>In relation to criterion c) of draft Policy HOU2, Gladman maintain that sites for residential development in the Rural Centres should be able to achieve higher densities of between 25-35 dwellings per hectare (dph) so that national housebuilders would be interested in submitting bids on housing sites which benefit from planning permission. National housebuilders don't tend to submit bids on sites where the housing density is less than 30dph. Furthermore, the density formula set out under draft Policy HOU2 could work against balanced and diverse new housing across the borough and result in crowded schemes in the strategic (Newcastle-under-Lyme) and urban centres (Kingsgrove).</p>
Q7 Modification	Please see attached representations
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	Please see attached representations

Title	Policy HOU2: Housing Mix and Density
Consultee Company / Organisation	Cross Heath, Wolstanton and May Bank Branch Labour Party
Consultee Position	Branch Secretary
Consultee Family Name	Gorton
Consultee Given Name	Richard
Q4 Part of document	Policy
Q4 Policy	HOU2
Q6 Details	<p>Policy Hou2: Housing Mix, Density and Standards – we have reservations about Policy Hou2, which can be summarized as follows: the different densities given in paragraph 1 for new dwellings in the urban and rural centres could encourage developers to focus on three and four bedroom homes in rural locations, while sites in the urban centre could become even more crowded. The density formula set out under Policy Hou2 could work against balanced and diverse new housing across the Borough. We are not convinced that steer given in Policy Hou2 will result in a level of housing density that will 'enhance the character and quality of a local area'.</p>
Q7 Modification	<p>Policy Hou2 - The Local Plan must reassure residents that more housing per hectare will not produce poorly designed, inferior homes, which rather than bringing people together will result in more noise, more disturbance, additional traffic, parking problems and erode privacy.</p>
Q9 Hearing reasons	<p>Conclusion</p> <p>Cross Heath, Wolstanton and May Bank Branch Labour Party welcomes the opportunity to give its views in response to the Regulation 19 stage of the draft Local Plan. If it is felt to be appropriate, a member of the Branch would be prepared to take part in the public scrutiny of the draft Local Plan.</p>

Title	Policy HOU2: Housing Mix and Density
Consultee Company / Organisation	Araripe Limited
Agent Company / Organisation	Pegasus Group

Agent Position	Executive Director
Agent Family Name	Onions
Agent Given Name	David
Q4 Part of document	Policy
Q4 Policy	PSD3
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>These representations are made in response to the Regulation 19 consultation on the final draft of the Newcastle-under-Lyme Local Plan 2020 – 2040. The representations are made by Pegasus Group on behalf of Araripe Limited and relate to their land interest at St Martins Road, Talke(hereafter referred to as the “Site”). The Site is greenfield land situated to the south of Talke. With regards to the Site, these representations should be read alongside the attachment.</p> <p>The Policy has been amended to remove the prescriptive mix which featured in the First Draft Local Plan. Whilst this is still set out within the supporting text (at paragraphs 7.18 and 7.19), the policy is clear that the mix only needs to be informed by the latest evidence at the point of submission, from a range of sources; material provided by the applicant or housebuilder, which can provide an up-to-date picture of demand and delivery for market homes, should also be used to inform housing mix where appropriate. The policy's reference to development having to be of an appropriate type and size to the site will allow for flexibility, which is welcome (as, for example, some sites may not be suitable for flats, or elderly accommodation). Indeed, the HENAFU, which contains the latest evidence on type and size, highlights the need for such flexibility, by stating, at paragraph 5.12, that this data continues= to represent only illustrative modelling, which should not be prescribed as an explicit requirement for all sites given the need to respond to changing market demands, local context and viability considerations. As such, the policy is justified in this regard, and its commitment to providing a mix of house types is consistent with national policy, namely Paragraph 60 of the NPPF.</p> <p>Notwithstanding, whilst Strategic Objective SO-5 (V) makes reference to the provision of aspirational housing, this is not referenced within the policy. The policy should align with and support the strategic objective to be justified and sound, and as such a reference to the provision of aspirational housing should be inserted. This type of housing can be delivered in locations outside of the inner city, on sites such as TK17.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	Sufficient land for housing should be planned for to meet the identified need for this within the Borough. Araripe Limited strongly support the allocation of Site TK17 for residential development, but several amendments are required to make Policy TK17 sound, as set out in paragraph 3.19 of the accompanying written representations. We would welcome the opportunity to participate in the hearing sessions to set these out, as well as to draw attention to the other matters which need to be addressed to ensure soundness elsewhere in the final draft plan, whilst emphasising site TK17's suitability, availability, and deliverability, being an optimum and sustainable location for high-quality residential development.

Q4 Part of document	Policy
Q4 Policy	HOU2
Q6 Details	<p>These representations are submitted by Stantec on behalf of Jones Homes (North West) Ltd (Jones Homes) and Renew Land Baldwins Gate Ltd (Renew Land), together known as "the Promoters", in response to the Final Publication Draft of the Newcastle-under-Lyme 2020- 2040 ('Local Plan') at Regulation 19 published by Newcastle-under-Lyme Borough Council (NuLBC) ('the Council') in August 2024. Please also see attached representations.</p> <p>The Council describe at provision 3 of Policy HOU2 that residential development should be of an appropriate type and size, consistent with the most up to date evidence. Our Client objects to any form of specific housing mix requirements being introduced through the Local Plan. It is considered that regard should be had to the conclusions of the evidence base documents, but there should be no specific housing mix imposed on sites, with housing mix instead informed by market conditions and the demand for housing within the marketplace. Housing needs will continue to shift over time, and it is therefore important that the Council's evidence base is continually reviewed and updated (as necessary).</p>

	Notwithstanding the above, the type and tenure of housing to be provided will need to have regard to any site-specific viability considerations and market demand/conditions at that time of any planning application being submitted; this will ensure a degree of flexibility in how the Policy is applied. This approach should ensure that housing delivery is not delayed as a result.
Q7 Modification	Please see attached representations.

Q4 Policy	HOU2
Q6 Details	It is noted that draft Policy HOU2 (Housing Mix and Density) specifically refers to the requirement for major development to make provision for specific housing needs, including older people. This reflects the findings that are set out within the Newcastle- under-Lyme Housing and Economic Needs Assessment (April 2024), indicating that the number of residents in the Borough aged 65 or above is projected to increase by 22% over the Plan period. This policy could be progressed further to explicitly support older persons' housing in sustainable locations.

Q6 Details	<p>Please see attached representations. The WMHAPC welcomes the Council's approach at criteria 3 of draft Policy HOU2, signposting readers to the most up to date evidence including the HEDNA and Housing Needs Assessments (HNA) to understand what housing mix may be appropriate.</p> <p>Supporting text at paragraph 7.20 acknowledges that various sources aside from the Council's own housing needs assessment can be considered to inform the housing mix of residential developments. Specifically, it states that: "local housing needs surveys, Neighbourhood Plans, Parish Surveys, Parish Plans and the latest Council Position Statements. The housing mix for affordable housing will be informed by the housing register and other relevant considerations including the demand for letting, management issues and affordability." The WMHAPC is pleased that the previously rigid housing mix policy set out in the previous round of consultation has been revised to broaden the evidence base. This more flexible approach recognises that housing needs are dynamic and are influenced by site location, geographical context and local socioeconomic factors.</p>

Policy HOU3: Housing Standards

Comment ID	NULLP764
Order	46
Title	Policy HOU3: Housing Standards
Consultee Company / Organisation	Gladman Developments Ltd
Consultee Position	Planning Manager
Consultee Family Name	Wilding
Consultee Given Name	Robert
Q4 Part of document	Policy
Q4 Policy	HOU3
Q6 Details	<p>Gladman Developments Ltd (Gladman) welcome the opportunity to comment on the Newcastle-under-Lyme Final Draft Local Plan 2020-2040 (Regulation 19) consultation and request to be updated on the progress of the emerging Local Plan. Please refer to attached representations. Gladman has fully engaged fully in the preparation of the emerging Newcastle-under-Lyme Local Plan 2040 to date. Feedback from the First Draft Local Plan (Regulation 18) consultation has been addressed and incorporated into the Final Draft Local Plan consultation document.</p> <p>In the sections below, Gladman have made specific comments where we consider the Final Draft Local Plan requires modifications or further clarification to ensure that it is capable of being found sound. Comments are focussed mainly on the consultation document, with references to the Duty to Cooperate and Sustainability Appraisal documents. Our representations also include details of Gladman's land interest at land south of Eccleshall Road, Loggerheads, which we are promoting as suitable for identification as a housing allocation in the emerging Local Plan. Please refer to attachment for more information.</p> <p>Following consultation in summer 2020, the Government published its response in July 2022 proposing to mandate all new build homes, both market and affordable, to meet the M4(2) (accessible and adaptable dwellings) standard through a new requirement in Building Regulations¹. The changes will be subject to a further consultation on the technical details and will be implemented in due course through the Building Regulations. As such, this should provide the Council with certainty that all new homes will be built to an acceptable standard.</p> <p>It is advised that the Council closely monitors these emerging amendments and if they are implemented in national standards, it won't be necessary to duplicate this in local planning policy.</p> <p>Criteria 4 of the policy requires all new dwellings to be built to the nationally described space standards (NDSS). The PPG is clear that "where a need for internal space standards is identified, local planning authorities should provide justification for requiring internal space policies."² To support this aspiration the Council will need to ensure that sufficient evidence is produced to justify this standard in line with national policy requirements and the PPG.</p> <p>Criteria 2 requires on all major residential developments and specialist housing for older people, 10% of market dwellings should meet the requirements of Building Regulations Part M4 (3) (2). Gladman are supportive of the need to provide an appropriate level of M4(3), however maintain that incorporating a policy for major developments to provide a fixed percentage of M4(3) Wheelchair User Housing is inappropriate.</p>

Title	Policy HOU3: Housing Standards
Consultee Company / Organisation	Araripe Limited
Agent Company / Organisation	Pegasus Group
Agent Position	Executive Director
Agent Family Name	Onions
Agent Given Name	David
Q4 Part of document	Policy
Q4 Policy	HOU3
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>These representations are made in response to the Regulation 19 consultation on the final draft of the Newcastle-under-Lyme Local Plan 2020 – 2040. The representations are made by Pegasus Group on behalf of Araripe Limited and relate to their land interest at St Martins Road, Talke(hereafter referred to as the "Site"). The Site is greenfield land situated to the south of Talke. With regards to the Site, these representations should be read alongside the attachment.</p> <p>This is a new policy, which previously formed part of Policy HOU 2 in the First Draft Local Plan. This includes a requirement to provide homes to M4(2) and M4(3) standards. The policy itself currently refers to the "Part 4(2)" standard, and this should be amended to read "Part M4(2)". The supporting text suggests, at paragraph 7.27, that a need to increase the supply of these dwellings has been identified in the Housing Needs Assessment. It is assumed that the Council mean the HENAFU, but accessible and adaptable dwellings are not referenced within this. The policy must be based on evidence in order to be justified, and this evidence should be clearly set out within the supporting text. Moreover, paragraph 7.28 of the supporting text implies that the M4 (3) (2) (a) requirements are optional, whereas the main policy makes</p>

	<p>clear that this is mandatory (for 10% of market dwellings on major developments). The supporting text should be amended for clarity.</p> <p>Policy HOU3 also states that new residential development must comply with the Nationally Described Space Standards (NDSS). Footnote 52 of the NPPF is clear that planning policies should only refer to NDSS where the need for this can be justified. Such a justification is not provided within the policy or its supporting text, with evidence instead provided in the NDSS Topic Paper (March 2024). The Topic Paper's analysis finds that 43% of dwellings recently approved in Newcastle-under-Lyme fail to comply with NDSS, with smaller dwellings the least likely to meet the standards. The Council assert, at paragraph 21 of the report, that this demonstrates a need to adopt the standards, as there is a record in failing to provide dwellings of an adequate size in the Borough. It is noted that the Council's Viability Assessment concludes that NDSS would not impact on the viability of schemes. Notwithstanding, it is considered that the study in the NDSS Topic Paper is highly flawed and lacks robustness. The sample size was small, with just 198 recently approved dwellings measured, and is not necessarily representative, as acknowledged in paragraph 24 of the Topic Paper. What's more, the data arguably suggests the opposite, with the average size of properties exceeding NDSS standards for all dwellings with two bedrooms or more. Almost 60% of all dwellings meet or exceed the standard. In any case, the Government does not state that dwellings which do not quite meet NDSS are too small for habitation, hence why the standard is not mandatory. As such, it is not considered that this high-level study provides the required robust justification for a NDSS policy, and therefore Policy HOU3 is currently unsound on this basis.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	Sufficient land for housing should be planned for to meet the identified need for this within the Borough. Araripe Limited strongly support the allocation of Site TK17 for residential development, but several amendments are required to make Policy TK17 sound, as set out in paragraph 3.19 of the accompanying written representations. We would welcome the opportunity to participate in the hearing sessions to set these out, as well as to draw attention to the other matters which need to be addressed to ensure soundness elsewhere in the final draft plan, whilst emphasising site TK17's suitability, availability, and deliverability, being an optimum and sustainable location for high-quality residential development.

Q4 Part of document	Policy
Q4 Policy	HOU1
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>3. Chapter 7: Housing</p> <p>Policy HOU3: Housing Standards</p> <p>3.2 For major developments, Policy HOU3 seeks that 10% of market dwellings should meet the requirements of Building Regulations Part M4(3)(2)A wheelchair adaptable homes standard and 10% of affordable / social rented housing should meet the requirements of Part M4(3)B accessible homes. Whilst we recognise the need to provide for such housing, this is a very significant cost to development. The Local Plan Viability Assessment (ED004) applies the following costs as an extra-over policy cost in the appraisals:</p> <ul style="list-style-type: none"> • M4(3)(A) Adaptable: £10,500 per house applied to 10% of open market houses. • M4(3)(A) Adaptable: £8,000 per flat applied to 10% of open market flats. • M4(3)(B) Accessible: £23,000 per house applied to 10% of affordable houses. • M4(3)(B) Accessible: £8,000 per flat applied to 10% of affordable flats.
Q7 Modification	<p>Given that ED004 identifies that the cumulative policy requirements (including affordable housing) are not viable in Value Area 1, we consider that the requirement to provide M4(3) housing should be removed in Value Area 1. However, if the affordable housing requirement in Value Area 1 is reduced as per our suggested amendment to Policy HOU1, then this amendment may not be necessary.</p>

Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	We wish to attend the hearings and make oral submissions, respond to the Inspector's questions and to the Council's case. The issues are complex and there is a need for detailed examination of the evidence.

Title	Policy HOU3: Housing Standards
Consultee Company / Organisation	Aspire Housing
Consultee Given Name	Aspire Housing
Agent Company / Organisation	Knights
Agent Family Name	Corinaldi-Knott
Agent Given Name	Alan
Q4 Part of document	Policy
Q4 Policy	HOU3
Q5 Legally compliant	Yes
Q5 Sound	Yes
Q5 DTC compliant	Yes
Q6 Details	<p>Please see supporting representation by Knights on behalf of Aspire. Policy HOU3 sets out policy on adaptable dwellings and space standards and standards for older persons housing. It is considered that this policy should be broken down into more distinct parts.</p> <p>With regard to criteria 1, it is considered that this should be split into two parts to separate NDSS from Part M4(2).</p> <p>With regard to Part M4(2), it states that all new homes should be built to accessible and adaptable dwellings standards, including conversions. With regard to this particular element, the requirement to build to M4(2) may not be practical to some conversions, particularly for older buildings and listed buildings. As such, the conversions element should be removed from the policy. In addition, Part M4(2) is not mandatory for conversions that could come forward under permitted development, so such fallback schemes could be used to negate this requirement where relevant and lead to protracted arguments/negotiations at application stage when applicants seek to remove such a requirement, which could negate much needed new housing which could come forward quickly. As such, the policy should reflect this by removing the requirement for conversions to meet Part M4(2).</p> <p>In addition to the above, mandatory M4(2) compliance should not apply to 100% affordable housing schemes in order to support the viability of affordable housing developments.</p> <p>With regard to Nationally Described Space Standards, this should be listed as a separate criteria in order to ensure that the policy is not conflated with the Part M4(2) requirement.</p> <p>In addition, it is considered that like in Cheshire East, some consideration be given to a transitional arrangement upon adoption of the plan. It is likely to be the case that a number of residential development proposals will already be subject to planning applications around the time that the plan is due to be adopted and that the adoption of a plan part way through the determination of an application could require schemes that are not wholly compliant with NDSS to need to be re-designed resulting in the delay to the delivery of such schemes if applications have to be amended or withdrawn. As such, it is suggested that NDSS is not a requirement of new development until 6 months from the date of the adoption of the Local Plan.</p> <p>With regard to NDSS and affordable housing in particular, the Homes England Capital Funding Guide 2021 – 2026 requires units to be sized to be at least 85% of NDSS as the benchmark for grant led affordable homes.</p> <p>The NDSS requirement can also affect the viability of bringing affordable housing forwards. Aspire have confirmed to us that if a property costs more than it is worth, which is often the case on design and build sites that are 100% affordable and in a low value areas, then it causes a financial impairment or a loss (if shared ownership). Therefore it's imperative to continue to provide good quality housing but at 85% NDSS rather than 100% due to build costs (which is the accepted position from Homes England as referred to above).</p> <p>If there is a risk of impairment as outlined above, then Aspire as an RP would be very unlikely to develop. Aspire have provided the figures below for one of their sites in Knutton to demonstrate that viability can become an issue when NDSS is enforced:</p> <p>Example: Knutton:</p> <p>85% NDSS</p> <p>Open Market Value per unit Average £210k</p> <p>Build Cost at 85% NDSS per unit plus acquisition and fees, less grant £196,503</p> <p>Headroom per unit of £13,497</p> <p>100% NDSS</p> <p>Open Market Value per unit average £210k</p> <p>Build Cost at 100% NDSS per unit plus acquisition and fees, less grant £213,352</p> <p>Therefore, headroom per unit of £3,352</p>

	<p>In light of this, it is suggested that some flexibility is included in the policy with regard to space standards for affordable housing that meet the benchmark for grant led affordable homes set out in the Homes England Capital Funding Guide (or its successor document).</p> <p>With regard to M4(3) provision, criteria 2 sets out policy for open market and affordable schemes. From an affordable housing perspective, there are some schemes which do not lend themselves to statutory provision of M3 units, or are financially unviable and the imposition of this requirement could affect the deliverability of a whole scheme while there are others that do. For example, Aspire are due to bring forward the former Zanzibar site on the edge of Newcastle-under-Lyme town centre, which is a key regeneration scheme with lots of abnormal costs. This will be a circa. 50 unit scheme across a number of floors while their Cross Street Phase 3 regeneration scheme in Knutton has bungalows which include M4(2) and M4(3) dwellings. Therefore an element of discretion / judgement is required. Likewise, the size threshold for the scheme should reflect the challenges faced by small and medium sized developers, such that the threshold for providing a percentage of M4(3) is increased above the current definition of major development of 10 dwellings to 50 dwellings</p> <p>As such, it is suggested that criteria 2 of the policy is broken down as follows for this element:</p> <p>(a) On major residential development sites of 50 dwellings or more, 10% of the open market dwellings proposed should be built to M4(3) wheelchair accessible standards</p> <p>(b) For developments of specialist housing for older people as defined by national policy, 10% dwellings proposed should be built to M4(3) wheelchair accessible standards</p> <p>(c) For developments of 100% affordable housing schemes the provision of M4(2) and M4(3) dwellings will be negotiated on a case by case basis.</p> <p>(d) For affordable housing coming forward as part of open market residential schemes, the provision of M4(3) dwellings coming forward as part of the affordable tenure mix will be negotiated on a case by case basis.</p> <p>In summary, it is recommended that the policy is re-worded as follows:</p> <p>Policy HOU3: Housing Standards:</p> <p>(a) All new dwellings (excluding conversions) will be provided to Part M4(2) (Accessible Adaptable Dwellings) set out in Building Regulations.</p> <p>(b) From 6 months following the date of the adoption of the Local Plan, all new open market dwellings will be provided to the Nationally Described Space Standard (NDSS) or the Building Control space standard relevant at the time of determining the application.</p> <p>(c) For affordable housing units, space standards should meet the minimum size thresholds that meet the benchmark for grant led affordable homes set out in the Homes England Capital Funding Guide (or its successor document).</p> <p>(d) On major residential development sites of 50 dwellings or more, 10% of the open market dwellings proposed should be built to M4(3) wheelchair accessible standards</p> <p>(e) For developments of specialist housing for older people as defined by national policy, 10% dwellings proposed should be built to M4(3) wheelchair accessible standards</p> <p>(f) For developments of 100% affordable housing schemes the provision of M4(3) dwellings will be negotiated on a case by case basis.</p> <p>(g) For affordable housing coming forward as part of open market residential schemes, the provision of M4(3) dwellings coming forward as part of the affordable tenure mix will be negotiated on a case by case basis.</p>

Q4 Part of document	Policy
Q4 Policy	HOU3
Q5 Legally compliant	No
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>Policy HOU3: Housing Standards and HOU5 Specialist Housing</p> <p>In relation to specialist housing for older people the policy requires 10% of market dwellings to meet the requirements of Building Regulations Part M4 (3) (2) A wheelchair adaptable homes standard.</p>

Again, this is not justified through testing in the plan wide viability study and even without the costs of meeting these requirements, specialist housing for older people is found within the council's study to be unviable.

There is no viability evidence base underpinning such a requirement.

Experience has shown that even where local authorities do test the viability of this requirement, they fail to test the implications of building larger flats and larger communal areas to achieve the desired standard. This is the case here also.

It is common for Local Authorities to confuse the needs of 'wheelchair users' with the needs of older people in the community. A supportive local planning policy framework will be crucial in increasing the delivery of specialist older persons' housing and it should be acknowledged that although adaptable and accessible housing can assist it does not remove the need for specific older person's housing. Housing particularly built to M4(3) standard may serve to institutionalise an older person's scheme reducing independence contrary to the ethos of older persons housing and particularly extra care housing. Older people's housing should therefore be incorporated into the emerging Local Plan separately to adaptable and accessible housing and not confused with it.

The PPG establishes that in order for a plan to introduce policy requirements such as the above, an assessment of the financial viability of doing so should be undertaken (in general with no exceptions highlighted). The PPG sets out the following pertinent points in this regard:

How should plan makers set policy requirements for contributions from development?

Plans should set out the contributions expected from development. This should include setting out the levels and types of affordable housing provision required, along with other infrastructure (such as that needed for education, health, transport, flood and water management, green and digital infrastructure). These policy requirements should be informed by evidence of infrastructure and affordable housing need, and a proportionate assessment of viability that takes into account all relevant policies, and local and national standards, including the cost implications of the Community Infrastructure Levy (CIL) and section 106. Policy requirements should be clear so that they can be accurately accounted for in the price paid for land. To provide this certainty, affordable housing requirements should be expressed as a single figure rather than a range. Different requirements may be set for different types or location of site or types of development.

See related policy: National Planning Policy Framework paragraph 34
Paragraph: 001 Reference ID: 10-001-20190509
Revision date: 09 05 2019 See previous version

What evidence should local planning authorities use to demonstrate a need to set higher accessibility, adaptability and wheelchair housing standards?

Based on their housing needs assessment and other available datasets it will be for local planning authorities to set out how they intend to approach demonstrating the need for Requirement M4(2) (accessible and adaptable dwellings), and/or M4(3) (wheelchair user dwellings), of the Building Regulations. There is a wide range of published official statistics and factors which local planning authorities can consider and take into account, including:

- the likely future need for housing for older and disabled people (including wheelchair user dwellings).
- size, location, type and quality of dwellings needed to meet specifically evidenced needs (for example retirement homes, sheltered homes or care homes).
- the accessibility and adaptability of existing housing stock.
- how needs vary across different housing tenures.
- the overall impact on viability.

How should local planning authorities establish a clear need?

It will be for a local planning authority to establish a clear need based on:

- existing sources of evidence.
- consultations with the local water and sewerage company, the Environment Agency and catchment partnerships. See paragraph 003 of the water supply guidance
- consideration of the impact on viability and housing supply of such a requirement.

Paragraph: 015 Reference ID: 56-015-20150327
Revision date: 27 03 2015

Should plan-making bodies set minimum requirements for accessible housing?

Where an identified need exists, plans are expected to make use of the optional technical housing standards (footnote 46 of the National Planning Policy Framework) to help bring forward an adequate supply of accessible housing. In doing so planning policies for housing can set out the proportion of new housing that will be delivered to the following standards:

M4(1) Category 1: Visitable dwellings (the minimum standard that applies where no planning condition is given unless a plan sets a higher minimum requirement)

M4(2) Category 2: Accessible and adaptable dwellings

M4(3) Category 3: Wheelchair user dwellings

Planning policies for accessible housing need to be based on evidence of need, viability and a consideration of site-specific factors.

Paragraph: 009 Reference ID: 63-009-20190626
Revision date: 26 June 2019

National policy and guidance are clear that the inclusion of minimum accessibility requirements must only be done so following a consideration of viability. Not all of the appraisals undertaken are provided within the plan wide study but the conclusions in respect of specialist housing for older people are quite clear. It is unviable to load design and sustainability requirements on these typologies.

In this case the council does not have the viability evidence base to support the inclusion of the M4(3) requirement and should be deleted as it is not justified to include this requirement.

Q7 Modification

Recommendation –the requirement to provide 10% of dwellings to M4(3) standard on older persons housing developments should be removed from both Policy HOU3 and Policy HOU5.

Q8 Hearing attendance

Yes, I wish to participate in hearing session(s)

Q9 Hearing reasons	It is important that the policy is discussed with those parties who will be involved in delivering the housing impacted by the proposed policies to understand the issues which are likely to arise.

Title	Policy HOU3: Housing Standards
Consultee Company / Organisation	Home Builders Federation
Consultee Position	Planning Manager - Local Plans (Midland and South West)
Consultee Family Name	Danemann
Consultee Given Name	Rachel
Q4 Part of document	Policy
Q4 Policy	HOU3
Q5 Sound	No
Q6 Details	<p>Please see attached representations.</p> <p>The Policy is not considered to be sound as it is not justified or effective or in line with national policy.</p> <p>The wording of criteria one of this policy could be open to misinterpretation. HBF are assuming the Council means residential development of homes and not 'residential homes' which many would take to mean specialist housing for the elderly. As such the policy wording should either say all new residential development, or all new homes.</p> <p>HBF do not support the need for Local Plan to include policies to deal with issues that already adequately addressed through Building Regulations. We also do not support the introduction of the optional Nationally Described Space Standard though policies in individual Local Plans.</p> <p>The Council will need robust justifiable evidence to introduce the NDSS, based on the criteria set out above. The HBF considers that if the Government had expected all properties to be built to NDSS that they would have made these standards mandatory not optional.</p> <p>Any policy which seeks to apply the optional nationally described space standards (NDSS) to all dwellings should only be done in accordance with the NPPF (para 130f & Footnote 49), which states that "policies may also make use of the NDSS where the need for an internal space standard can be justified". As set out in the NPPF (para 31), all policies should be underpinned by relevant and up to date evidence, which should be adequate, proportionate and focussed tightly on supporting and justifying the policies concerned.</p> <p>The PPG identifies the type of evidence required to introduce such a policy. It states that 'where a need for internal space standards is identified, local planning authorities should provide justification for requiring internal space policies. Local planning authorities should take account of the following areas:</p> <ul style="list-style-type: none"> •Need – evidence should be provided on the size and type of dwellings currently being built in the area, to ensure the impacts of adopting space standards can be properly assessed, for example, to consider any potential impact on meeting demand for starter homes. •Viability – the impact of adopting the space standard should be considered as part of a plan's viability assessment with account taken of the impact of potentially larger dwellings on land supply. Local planning authorities will also need to consider impacts on affordability where a space standard is to be adopted. •Timing – there may need to be a reasonable transitional period following adoption of a new policy on space standards to enable developers to factor the cost of space standards into future land acquisitions'. <p>HBF also remind the Council that there is a direct relationship between unit size, cost per square metre (sqm), selling price per sqm and affordability. The Council's policy approach should recognise that customers have different budgets and aspirations. An inflexible policy approach to NDSS for all new dwellings will impact on affordability and effect customer choice. Well-designed dwellings below NDSS can provide a good, functional home. Smaller dwellings play a valuable role in meeting specific needs for both open market and affordable home ownership housing.</p> <p>An inflexible policy approach imposing NDSS on all housing removes the most affordable homes and denies lower income households from being able to afford homeownership. The introduction of the NDSS for all dwellings may mean customers purchasing larger homes in floorspace but with bedrooms less suited to their housing needs with the unintended consequences of potentially increasing overcrowding and reducing the quality of their living environment. The Council should focus on good design and usable space to ensure that dwellings are fit for purpose rather than focusing on NDSS.</p> <p>If the proposed requirement for NDSS is carried forward, then the Council should put forward proposals for transitional arrangements. The land deals underpinning residential sites may have been secured prior to any proposed introduction of the NDSS. These sites should be allowed to move through the planning system before any proposed policy requirements are enforced. The NDSS should not be applied to any reserved matters applications or any outline or detailed approval prior to a specified date.</p> <p>HBF welcomes the fact that the Council have sought to differentiate between Part a) and part b) of M4(3) technical standards. M4(3)a sets out standards for wheelchair adaptable housing, where M4(3)b relates to wheelchair accessible housing which can only be required on affordable housing where the Council has nomination rights. We would also question whether the viability implications of this policy have been fully considered.</p> <p>HBF is unclear if this matter has been accurately and fully considered in the Whole Plan Viability Assessment. There are cost implications resulting from any requirements for the provision of M43a and/or M43b requirements as both M4(3) and M4(3)b impact on viability, with M4(3)b being considerably more expensive. HBF information suggests M4(3)b is at least ten time more expensive than M4(3)a.</p>

	<p>HBF also note that the requirements to meet Part M4(2) will be superseded by changes to residential Building Regulations. The Government response to 'Raising accessibility standards for new homes' states that the Government proposes to mandate the current M4(2) requirement in Building Regulations as a minimum for all new homes, with M4(1) applying in exceptional circumstances. This will be subject to a further consultation on the technical details and will be implemented in due course through the Building Regulations. There is therefore no need for this element of the proposed new policy.</p> <p>The PPG states:</p> <p>"What accessibility standards can local planning authorities require from new development?</p> <p>Where a local planning authority adopts a policy to provide enhanced accessibility or adaptability they should do so only by reference to Requirement M4(2) and/or M4(3) of the optional requirements in the Building Regulations and should not impose any additional information requirements (for instance provision of furnished layouts) or seek to determine compliance with these requirements, which is the role of the Building Control Body. They should clearly state in their Local Plan what proportion of new dwellings should comply with the requirements. There may be rare instances where an individual's needs are not met by the wheelchair accessible optional requirement'.</p> <p>Local Plan policies should also take into account site specific factors such as vulnerability to flooding, site topography, and other circumstances which may make a specific site less suitable for M4(2) and M4(3) compliant dwellings, particularly where step free access cannot be achieved or is not viable. Where step-free access is not viable, neither of the Optional Requirements in Part M should be applied."</p> <p>The PPG sets out some of the circumstances where it would be unreasonable to require M4(2) and M4(3) compliant dwellings. Such factors include flooding, typography and other circumstances. HBF suggest that flexibility is needed in the application of these standards to reflect site specific characteristics, and the policy wording should reflect this. HBF do not believe this policy is sound without this flexibility, as it fails to comply with national policy and is not effective or justified.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	HBF requests to participate in the Hearing Sessions for the Local Plan Examination, the HBF considers that their involvement is necessary to ensure that the home building industry is able to respond to any housing related issues raised during the hearing sessions.

Agent Company / Organisation	Tetlow King
Agent Position	Planner
Agent Family Name	Luong
Agent Given Name	Lisa
Q4 Part of document	Policy
Q4 Policy	HOU3
Q6 Details	<p>Please see attached representations. We note that housing standards, previously part of draft Policy HOU2, are now addressed in a standalone policy.</p> <p>The WMHAPC previously raised concerns about the blanket application of Nationally Described Space Standards (NDSS) for all new residential developments. There are concerns that the blanket application of the NDSS across all residential development, including affordable tenures, will undermine the viability of many development schemes. This will potentially result in fewer affordable homes being delivered as optional technical standards have implications for build costs and sales values, with implications in turn for development viability.</p> <p>We highlight that the Planning Practice Guidance (PPG) requires local authorities to justify the need for NDSS through considering:</p> <ul style="list-style-type: none"> •need – evidence should be provided on the size and type of dwellings currently being built in the area, to ensure the impacts of adopting space standards can be properly assessed, for example, to consider any potential impact on meeting demand for starter homes. •viability – the impact of adopting the space standard should be considered as part of a plan's viability assessment with account taken of the impact of potentially larger dwellings on land supply. Local planning authorities will also need to consider impacts on affordability where a space standard is to be adopted. •timing – there may need to be a reasonable transitional period following adoption of a new policy on space standards to enable developers to factor the cost of space standards into future land acquisitions." <p>(Paragraph: 020 Reference ID: 56-020-20150327)</p> <p>In light of the above, it is not clear that the Council has provided evidence demonstrating the need for NDSS across all new developments in Newcastle-under-Lyme. If the Council continues to seek the NDSS requirement, then it must do so in line with the PPG to ensure the policy is justified and found sound at examination. It is noted that the NDSS is not a building regulation and remains solely within the planning</p>

	<p>system as a form of technical planning standard. It is not essential for all dwellings to achieve these standards in order to provide good quality living.</p> <p>It is also relevant that Homes England only requires affordable homes to meet 85% of the NDSS to receive funding. For affordable housing in particular, there may be instances where achieving NDSS is impractical and unnecessary, as it may result in for example, higher rental and heating costs. Homes delivered in the current market by housebuilders are often lower than the 85% requirement. As such, the WMHAPC recommends that other quality standards should be used to determine housing quality, unless the Council can properly evidence the need for NDSS.</p> <p>On sites that deliver 100% affordable housing, NDSS presents issues in that it increases the risk of financial impairment. The WMHAPC members raise that if a property costs more than it is worth, which is often the case on design and build sites that are 100% affordable and in a low value area such as Newcastle-Under-Lyme, then it can cause a financial impairment, or in some cases, a loss. It is therefore imperative that schemes are able to continue to provide good quality housing but at 85% NDSS (which is the accepted position from Homes England) on sites that are delivering 100% affordable housing due to build costs. The below example has been provided by Aspire Housing Association in relation to a current scheme they have in Newcastle-Under-Lyme, which shows the financial implications of delivering 100% NDSS on 100% affordable housing schemes.</p> <p>85% NDSS Open Market Value per unit average £210k. Build Cost at 85% NDSS per unit plus acquisition and fees, less grant £196,503. Headroom per unit of £13,497</p> <p>100% NDSS Open Market Value per unit average £210k. Build Cost at 100% NDSS per unit plus acquisition and fees, less grant £213,352. Headroom per unit of £3,352.</p> <p>As can be seen, NDSS can have substantial impacts on viability. If there is an increased risk of impairment, developers will be more unlikely to deliver new affordable housing.</p> <p>Draft Policy HOU3 requires all new market and affordable housing developments to be built to meet Building Regulations M4(2) standard ('accessible and adaptable dwellings') and 10% should meet the requirements of Building Regulations M4(3) standard ('wheelchair user dwellings'). The WMHAPC accepts that there is a growing need for accessible and adaptable homes, however, there is concern that the 10% requirement for M4(3) dwellings could have considerable implications on viability and overall affordable housing delivery in Newcastle-under-Lyme. Some sites and/or schemes do not lend themselves to the statutory provision of M4(3) units. In light of this, the WMHAPC requests that the Council exercises an element of discretion when considering proposals.</p>

Title	Policy HOU3: Housing Standards
Consultee Given Name	McCarthy Stone
Agent Company / Organisation	THE PLANNING BUREAU
Agent Position	Planning Associate
Agent Family Name	Vlach
Agent Given Name	Jane
Q4 Part of document	Policy
Q4 Policy	HOU3
Q6 Details	<p>Please see attached representations.</p> <p>The council should initially recognise that the proposed changes in building regulations will require all homes to be built to part M4(2) of the Building Regulations. This will remove the need to reference this in the local plan and should be removed.</p> <p>It is common for Local Authorities to conflate the needs of 'wheelchair users' with the needs of older people in the community. A supportive local planning policy framework will be crucial in increasing the delivery of specialist older persons' housing and it should be acknowledged that although adaptable and accessible housing can assist it does not remove the need for specific older person's housing. Housing particularly built to M4(3) standard may serve to institutionalise an older person's scheme reducing independence contrary to the ethos of older persons and particularly extra care housing.</p> <p>In relation to specialist housing for older people the policy requires 10% of market dwellings to meet the requirements of Building Regulations Part M4 (3) (2) A wheelchair adaptable homes standard. Although, this requirement appears to have been tested within the Viability Study, when looking more closely it appears that a £0 level of additional cost has been applied. However, the council should note that any M4(3) requirement needs to be considered on top of M4(2) and would include additional costs for fixtures and fittings, services and controls and additionally room dimensions and layout which include up to 30% more floorspace and corresponding reduction in density, sales values and affordability of such housing'. While some value may be secured for larger units this is unlikely to mitigate the overall loss of units across the proposal as a result of the requirement. An additional cost must therefore be added for this policy requirement. As stated in our response to HOU1 its findings are that older persons' housing is</p>

	<p>unviable in all scenarios. Therefore, evidence has not been provided to show that compliance with 10% M4(3)A is viable given that all older persons' housing schemes tested have been shown to not be viable. This requirement is therefore contrary to government advice contained in PPG Older and Disabled People (Paragraph: 009 Reference ID: 63-009-20190626) which states that planning policies for accessible housing need to be based on evidence of need, viability and a consideration of site specific factors.</p> <p>Recommendation:</p> <p>In order for the plan to be justified and effective point 2 of policy HOU3 should be amended as follows:</p> <p>2. On major residential developments and specialist housing for older people, 10% of market dwellings should meet the requirements of Building Regulations Part M4 (3) (2) A wheelchair adaptable homes standard and 10% of affordable / social rented housing should meet the requirements of Part M4 (3) B accessible homes standard (or Government equivalent), where there is a demonstrable need in the local area. Older person's housing schemes are exempt from the above requirement.</p>
Q7 Modification	<p>Please see attached representations. In order for the plan to be justified and effective point 2 of policy HOU3 should be amended as follows:</p> <p>2. On major residential developments and specialist housing for older people, 10% of market dwellings should meet the requirements of Building Regulations Part M4 (3) (2) A wheelchair adaptable homes standard and 10% of affordable / social rented housing should meet the requirements of Part M4 (3) B accessible homes standard (or Government equivalent), where there is a demonstrable need in the local area. Title	Policy HOU4: Gypsy, Travellers and Travelling Showpeople
Consultee Family Name	Adcock
Consultee Given Name	Rupert
Q4 Part of document	Policy
Q4 Policy	HOU4
Q5 Legally compliant	No
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>G&T Site 8 may not be suitable for gypsy and traveller pitches for the following reasons.</p> <p>The Acres allotment site has existed since the late 19th Century was run by Borough Council until 2015 when it was passed to the Silverdale Parish Council and the Acres Allotment association. In 2021 they applied to the council and were granted permission for the land outlined in G&T 8 to be taken over as additional allotment land. However the land was never cleared by the council as agreed so was unable to be used for allotments.</p> <p>There is concern that the site was used to dump both buried asbestos sheeting (Chrysolite asbestos) and also used oil from the garage site on Cemetery Road.</p> <p>The site may be unsuitable for housing gypsies and travellers because of unsuitable access along footpath 22. The land is controlled by Staffordshire County Council as is not wide enough for many vehicles including service vehicles, refuse wagons and caravans. The path would have to be widened and strengthened and would involve taking away designated allotment land.</p> <p>This was a late addition into the local plan and there was little consultation with the allotment holders beforehand. Whilst they do not object to this land being used, it is believed the above issues need to be addressed before this land can be included in any housing policy.</p>
Q7 Modification	<p>Concerning G&T Site 8</p> <p>Clarification needed over whether or not this land is designated allotment land.</p> <p>Site inspection to confirm whether land is contaminated with buried asbestos before being deemed suitable.</p> <p>Access provisions to be reviewed to ensure this is a suitable access for vehicles to support gypsy pitches given the narrow and difficult access to the site. Alternative access arrangements to be explored.</p>

Title	Policy HOU4: Gypsy, Travellers and Travelling Showpeople
Consultee Family Name	Sims
Consultee Given Name	Julie
Q4 Part of document	Policy
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>This part of the Local Plan fails to comply with the duty to co-operate because the Acre Allotment Association became aware of these plans only two days before the Special Meeting on 11th July. At the time, incorrect information was provided to the Acre Allotment Association, in they were initially told the entire allotment site was to go, and during the recent consultation meeting on 16th September, I was advised that either changes had been made to the plans or incorrect information had once more being provided. Therefore this part of the Local Plan fails in its duty to co-operate as incorrect information has been provided, and at the latest possible date. Attending the Consultation meeting, the Council representatives could not answer a single question that I asked, and some could be seen smirking and laughing to each other at some of the attendees. This, and the lack of confirmed information did not fill me with confidence that local communities were going to be treated with respect or consideration.</p> <p>I think this part of the Local Plan is unsound because it does not address the effects of this plan on the current allotment site and surrounding area.</p> <p>The approach to the site is unsuitable for cars towing caravans, the roads approaching the site are too congested already and would be hazardous, particularly with the respect to the school along the route. Additional traffic, especially large vans and caravans will reduce visibility to a dangerous level. The access road from the road to the proposed site is also unsuitable, it is narrow and winding, with only sufficient room for a car. Widening or straightening the approach road would have a seriously detrimental effect on the surrounding area as it would entail the devastation of a long standing area of natural beauty, and long established trees and hedgerows. The same can be said for any inroads into the natural environment there which is a haven for birds, foxes, badgers and other wildlife.</p>

	<p>I have attached the Google View of the site access, showing the 90 degree turns, and the winding nature of the access road.</p> <p>The security of the site will be severely compromised because at the moment only plot holders are able to access the site by vehicle due to the locking system. This provides security for the site and the plots. I have been unable to obtain any information about how the Council plan to manage this. I currently leave my car on the car park along with other allotment holders, how safe will they be when there is no onsite security? How does the Council plan to maintain the security of the plots? Currently, they can only be accessed by foot, so if someone did manage to get into a plot, they can only remove what they can carry, however, if there is no security at the gate, cars/vans will be able to access the site and remove vast amounts of tools and or produce from peoples allotments.</p> <p>If there is to be changes made to the access route, what will be put in place to ensure the safety and security of plot holders in the meantime.</p> <p>The personal security of people onsite will be severely compromised. Currently, plots are usually locked by padlocks when the plot holder is absent. It is not possible to lock oneself into an allotment for safety reasons, however at the moment there are only plot holders accessing the site. What check will there be on the caravan site occupiers or their visitors? Will the Council be providing CCTV around the site to ensure that plot holders are safe and that if anything untoward takes place, it will be caught on camera? This is an imposition in itself on the freedom and relaxation of the plot holders, but otherwise there is no method to ensure the security of the plot holders. As a single woman who enjoys the privacy of my own allotment, I think my personal safety is being severely compromised by the Council plans to allow anyone, without checks, to access the allotment site. I would also like to know who will be held responsible if anything untoward does happen to me as I have now highlighted this issue a number of times and had no response.</p> <p>[redacted by admin] How will the Council ensure my safety and security with respect to the dogs owned by the G&T's and any visitors they have.</p> <p>I have asked a number of times regarding the security of the site and no-one can supply an answer. Will the G&T's have free access to the Allotment plots or not. What security will be put in place to ensure that travellers and their visitors are not free to come and go and wander around the allotments at any time of day or night.</p> <p>How will services eg Electricity, water, drains be provided to the site? Where will the access points for the pipework be routed, will it be across the allotment sites? If so, will these services also be shared amongst the allotment holders? If not, how will we be compensated for damage to our sites? There is already water supplied to our plots, will the water supply be affected? Regarding waste collections, what arrangements will be put in place to deal with the often massive amounts of waste that accumulate at G&T sites? Will they be included in the normal waste management collection services, and if so, how will these vehicles access the site as they are too large for the entrance route. If there is too much waste, how will that be dealt with.</p> <p>There is a public right of way running through the proposed site, how will the Council ensure the safety and security of people utilising that pathway?</p> <p>I raised all these issues at the Consultation on 11th September and received no answers from a variety of representatives, in fact it was clear that some Council representatives did not take any of our issues seriously at all.</p> <p>There needs to be a meeting with the planners and the local community ASAP where there are Council representatives prepared to discuss this plan, explain the choice in site, and address the concern of the plot holders and supply the correct information.</p> <p>There needs to be agreed, acceptable and effective plans to tackle all the issues raised, eg access from Silverdale to the Allotment entrance, and access from the entrance to the site, and what will be put in place to minimise disruption to the allotment site.</p> <p>There needs to be agreed, acceptable and effective plans to ensure the safety and security of the plot holders themselves, but also their vehicles and plot equipment and produce.</p> <p>There needs to be agreed, acceptable and effective plans to ensure that there is adequate services to the site, that there is not an unacceptable build up of waste from the G&T site, also for removal of waste.</p> <p>There needs to be agreed, acceptable and effective plans to ensure there is adequate security for plot holders, their vehicles, belongings and plots, from visitors to the site, including how visitors will be monitored and tracked, eg CCTV on the G&T site and at the entrance, plus vehicle identification systems.</p> <p>There needs to be agreed, acceptable and effective plans to ensure that excessive dogs are not allowed to live on the site [redacted by admin]</p> <p>The above is the minimum required to comply with the Duty to Cooperate.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	I consider this to be necessary because despite reading the plan and attending the Consultation meeting, it appears that information I was provided with was incorrect, and I would like to be sure that I am in possession of the correct information.

Title	Policy HOU4: Gypsy, Travellers and Travelling Showpeople
Consultee Family Name	Ritchie
Consultee Given Name	Peter
Q4 Part of document	Policy
Q4 Policy	HOU4
Q6 Details	<p>Reference is given to a GTAA for 2024. As a retired member of the travelling community now settled in this area for the last 3 yrs,(I also have historic ties to this area) I was not approached for the completion of the GTAA and I know of others in the travelling community that were also not approached. Therefor the figures for the stated and most recent GTAA are incorrect and incomplete.</p> <p>Furthermore, anonymous representations are barred leaving many travelers residing in the area without a voice fearing further persicution from both local authorities and discriminatory groups also residing in this area</p> <p>Local councils throughout England including NuL have kicked the can down the road for far to long providing the bare minimum for the traveling community leaving many of those still wishing to travel either forced into 'settlement camps' where residents feel unable to move on even if they wish to do so because on return they may find themselves no longer having a pitch to use. Forced onto illegal or roadside camps were they recieve further persecution from locals and local authorities alike.</p> <p>Often, the traveller sites that are, reluctantly provided, are hidden away near landfill, industrial areas and other undesirable locations and, again, NuL is no exception</p> <p>Furthermore, a new wave of Nomadic people have been rapidly growing over the past 10 yrs for which no account or provision has been made.</p> <p>The economic nomad often refered to as "Vanlifers"</p> <p>Many (but not all) of these have been forced out of bricks and mortar accomodation because of the presures of cost and availability of housing and other economic pressures</p> <p>I personally know of in excess of 50 of this type of traveller residing and working in this area, moving about from place to place. Some parking their vehicles at their place of work during the day and driving off in the evening parking in laybys and secluded spots for the evening.</p> <p>Again, many of these folk wish to remain hidden and anonymous so as not to draw attention to themselves because of the very real threat of persecution by local authorities</p> <p>The 2024 GTAA was incorrectly carried out and incomplete and, therefor, is unsound.</p>
Q7 Modification	<p>A proper GTAA needs to be carried out with liason from all the Nomadic groups in this area with proper consideration for needs and requirements for the varrying groups of Nomadic peoples within the community</p> <p>Representations, at the very least, need to be sought from the travelling community involving all groups</p> <p>Ideally liason officers should be sought from the travelling community and not rely on illinformed and uneducated officers from within the local council</p> <p>To exclude ethnic minority groups from the Local Plan would be discriminatory and, therefor, the Local Plan cannot and should not be considered for adoption until such time as a sound and complete GTAA has been executed</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	As a member of the travelling community for over 45yrs as a chosen lifestyle and a (retired) travelling Showman I feel that I can give some insite into the requirements and needs of my lifestyle as well as integration, as opposed to the ostracisation, of nomadic peoples into settled communities

Consultee Company / Organisation	Thistleberry Residents Association
Consultee Position	Chair
Consultee Family Name	Drakakis-Smith
Consultee Given Name	Angela
Q4 Part of document	Policy
Q4 Policy	HOU4
Q6 Details	<p>1. E Policy HOU 4:</p> <p>a. From the map produced it is difficult to see where the site locations are (the key and symbols are and too small to be usable and readable.</p> <p>b. RE Gypsy/Traveler Accommodation: This is a step in the right direction that land has finally been allocated for a site and that 5 extra pitches are suggested for the plan period. That said:</p> <p>c. It is concerning that the plan provision will not take effect until 2026 or later when the landfill ceases to collect waste. The families have lived (some of them next to this site since 1994). When the landfill site closes reconstitution will begin. This will involve the large-scale import of soil and other dust bearing materials, which could continue for possibly another 20 years (2046) and which will need suitable mitigation measures. Particulates smaller than 2.5 particulates have no acceptably safe limits re exposure. Limits, however, are imposed on levels of H2S exposure. (Perhaps this should have been considered in Local</p>

	<p>Plans when the landfill site was permitted in 1947 and subsequently when housing was being permitted ever closer to the site in 2004 which is ongoing.)</p> <p>d. The site that appears to be chosen is on land currently used to store waste white goods including fridges and other sundry contaminating materials. This would suggest that the land would be contaminated. The site would also be too close to the working surface of the landfill site as a permanent residence - ie across the road and within 80 metres. The original safe off-set limit for the housing site advocated by the EA was 250 meters. This was appealed and reduced to 100 m by Persimmon Homes in (2004) and more recently the off-set limit has been reduced to around 80m. The current Traveller site is within 49 m of the site. Given the issues that have arisen and that will arise after the site is closed to waste infilling, it will be imperative that the off-set limit of 250m be reinstated for any new development order to avoid serious issues over the next 20 years. This should be part of this plan.</p> <p>e. The former 9 hole golf course suggested by the TRA as a suitable site appears to have been ignored. It would be further away from this peri urban/semi -industrial fringe area of the borough, marked by Cemetery Road and the landfill site, which would be much more conducive to permanent and more sustainable residential use.</p> <p>f. The allocation over the plan period is for 5 pitches. At the moment there are around 16 families on the existing site. It is unclear if the 16 families are to be relocated to the new site and that the five pitches mentioned are to be graduated additions. There would seem to be little or no leeway for internal family growth or for transit families. Whilst guidance suggests that it is preferable for transit and resident families not share a site, this suggests that there might be no provision for transit families, which real data suggests is needed. This plan therefore would not provide the necessary accommodation for transit families.</p> <p>g. It was suggested that the currently used site be maintained as a short-term transit site for mobile families on a short-term-agreed basis. Issues of health and safety notwithstanding.</p> <p>h. It was also suggested that the accommodation, if any is to be offered on site, and given that this is a site for permanent occupation, that it be more aspirational and in keeping with the aspirations of the Gypsy families who might aspire to more than a caravan. This could include more permanent structures if needed. The current legal, definitions which tie families to caravans or a way of life enforcing mobility rather than permanence within a chosen way of life might be construed as discriminatory. Given that other special needs groups are being given consideration in this Plan, then this plan policy would be limiting for Gypsy/Traveller families and, therefore, unsound because it would not be meeting the real as opposed to the assumed needs of this particular community.</p>

Q6 Details	<p>RE the Draft Local Plan Consultation</p> <p>Please find enclosed a hard copy of the TRA submission to the Local Plan Consultation. Apologies that it is not on the proforma, but the proforma did not provide the space for issues that the TRA wanted to address and which it was of the view needed to be addressed if this Plan was to be considered sound.</p> <p>It is hopeful that the comments made and issues raised will be helpful and assist this plan in reaching a sound footing to cover the next 20 years.</p> <p>Many thanks</p> <p>Yours faithfully</p> <p>Dr A Drakakis-Smith</p> <p>Chair</p> <p>Thistleberry Residents Association</p> <p>THISTLEBERRY RESIDENTS ASSOCIATION</p> <p>LOCAL PLAN SUBMISSION</p> <p>The Thistleberry Residents Association wishes to submit the following comments and thoughts on what will hopefully be the final draft of the Local Plan and in the following way:</p> <p>1. E Policy HOU 4:</p> <p>a. From the map produced it is difficult to see where the site locations are (the key and symbols are and too small to be usable and readable.</p> <p>b. RE Gypsy/Traveler Accommodation: This is a step in the right direction that land has finally been allocated for a site and that 5 extra pitches are suggested for the plan period.</p> <p>That said:</p> <p>c. It is concerning that the plan provision will not take effect until 2026 or later when the landfill ceases to collect waste. The families have lived (some of them next to this site since 1994). When the landfill site closes reconstitution will begin. This will involve the large-scale import of soil and other dust bearing materials, which could continue for possibly another 20 years (2046) and which will need suitable mitigation measures. Particulates smaller than 2.5</p>

particulates have no acceptably safe limits re exposure. Limits, however, are imposed on levels of H2S exposure. (Perhaps this should have been considered in Local Plans when the landfill site was permitted in 1947 and subsequently when housing was being permitted ever closer to the site in 2004 which is ongoing.)

d. The site that appears to be chosen is on land currently used to store waste white goods including fridges and other sundry contaminating materials. This would suggest that the land would be contaminated. The site would also be too close to the working surface of the landfill site as a permanent residence - ie across the road and within 80 metres. The original safe off-set limit for the housing site advocated by the EA was 250 meters. This was appealed and reduced to 100 m by Persimmon Homes in (2004) and more recently the off-set limit has been reduced to around 80m. The current Traveller site is within 49 m of the site. Given the issues that have arisen and that will arise after the site is closed to waste infilling, it will be imperative that the off-set limit of 250m be reinstated for any new development order to avoid serious issues over the next 20 years. This should be part of this plan.

e. The former 9 hole golf course suggested by the TRA as a suitable site appears to have been ignored. It would be further away from this peri urban/semi -industrial fringe area of the borough, marked by Cemetery Road and the landfill site, which would be much more conducive to permanent and more sustainable residential use.

f. The allocation over the plan period is for 5 pitches. At the moment there are around 16 families on the existing site. It is unclear if the 16 families are to be relocated to the new site and that the five pitches mentioned are to be graduated additions. There would seem to be little or no leeway for internal family growth or for transit families. Whilst guidance suggests that it is preferable for transit and resident families not share a site, this suggests that there might be no provision for transit families, which real data suggests is needed. This plan therefore would not provide the necessary accommodation for transit families.

g. It was suggested that the currently used site be maintained as a short-term transit site for mobile families on a short term- agreed basis. Issues of health and safety notwithstanding.

h. It was also suggested that the accommodation, if any is to be offered on site, and given that this is a site for permanent occupation, that it be more aspirational and in keeping with the aspirations of the Gypsy families who might aspire to more than a caravan. This could include more permanent structures if needed. The current legal, definitions which tie families to caravans or a way of life enforcing mobility rather than permanence within a chosen way of life might be construed as discriminatory. Given that other special needs groups are being given consideration in this Plan, then this plan policy would be limiting for Gypsy/Traveller families and, therefore, unsound because it would not be meeting the real as opposed to the assumed needs of this particular community.

Q6 Details	This particular piece of land was donated to local people to use as allotments by the previous landowner. The Council passed part of the allotment land to the Acre Allotments in 2015, retaining the remainder for Council allotments. The Council have since allowed that portion of land to fall into disrepair which has now enabled them to identify it as land available for other use. This is clearly wrong and can be interpreted as a device to obtain the land for alternative use.
Q7 Modification	The land should be used for what it was intended for and managed by either the Council or the Acres Allotments for the benefit of local people
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)

Q4 Policy	HOU5
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	HOU5 relates to Specialist Needs Housing. It opens with "Proposals for new care homes and specialist accommodation, including for older people ...". The focus of HOU5 appears to relate solely to older people, which seems remiss. It is suggested that the reference to 'care homes' could just as easily relate to care homes for children, although this is not reflected in HOU5.
Q7 Modification	<p>Should care homes for children be specifically factored in to HOU5, it is recommended that the following comment is included:</p> <p>"Care homes for children will not be permitted where it can be demonstrated that despite the best efforts of those responsible for them, a concern has been identified that looked-after children, who may be vulnerable in general terms or have specific vulnerabilities based on their previous experience, could be exposed to a range of criminal and anti-social risks, including criminal or sexual exploitation and/or be drawn into such activity by connecting with those involved in such activities within the local area</p>

Consultee Given Name	McCarthy Stone
Agent Company / Organisation	THE PLANNING BUREAU
Agent Position	Planning Associate
Agent Family Name	Vlach
Agent Given Name	Jane
Q4 Part of document	Policy
Q4 Policy	HOU3

Q6 Details	<p>Please see attached representations. Whilst we are pleased to see a separate policy for specialist needs housing that includes for older people and are generally supportive, we make the following comments:</p> <p>1. point c, requires specialist housing for older people to meet the meet the accessibility and wheelchair standards set out in Policy HOU3. However, we noted in our response to HOU3 that In relation to specialist housing for older people the policy requires 10% of market dwellings to meet the requirements of Building Regulations Part M4 (3) (2) A wheelchair adaptable homes standard. Although, this requirement initially appears to be tested within the Viability Study, however on closer inspection this appears to be at a cost of £0. As stated in our response to HOU1 the viability study's findings are that older persons' housing is unviable in all scenarios and that M4 (3) housing has a large additional cost. Therefore, evidence has not been provided to show that compliance with 10% M4(3)A is viable given that all older persons' housing schemes tested have been shown to not be viable. This requirement is therefore contrary to government advice contained in PPG Older and Disabled People (Paragraph: 009 Reference ID: 63-009-20190626) which states that planning policies for accessible housing need to be based on evidence of need, viability and a consideration of site specific factors.</p> <p>2. in the Supporting Information to the policy Paragraph 7.38 includes a table from the HENA (2024) specifying the number of units needed for sheltered, enhanced sheltered and extra care retirement housing over the plan period. However, the HENA report states in paragraph 5.34 that it has not reconsidered the needs of specific groups in detail, rather the figures set out are only indicative estimates based on past trends. As such, it recognises that it is possible that 'more such specialist housing could be needed if it becomes favoured by more older people in the future'.</p> <p>Recommendation</p> <p>In order for policy Hou5 to be justified the following amendments should be made:</p> <ul style="list-style-type: none"> • Paragraph 7.38 should state clearly that the figures included in Table 4 are 'indicative estimates' based on past trends, as per the HENA (2024) • Point c of the policy should be deleted.
Q7 Modification	<p>Please see attached representations.</p> <p>In order for policy Hou5 to be justified the following amendments should be made:</p> <ul style="list-style-type: none"> • Paragraph 7.38 should state clearly that the figures included in Table 4 are 'indicative estimates' based on past trends, as per the HENA (2024) • Point c of the policy should be deleted.

Q4 Part of document	Policy
Q4 Policy	HOU5
Q5 Legally compliant	No
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>Policy HOU3: Housing Standards and HOU5 Specialist Housing</p> <p>In relation to specialist housing for older people the policy requires 10% of market dwellings to meet the requirements of Building Regulations Part M4 (3) (2) A wheelchair adaptable homes standard.</p> <p>Again, this is not justified through testing in the plan wide viability study and even without the costs of meeting these requirements, specialist housing for older people is found within the council's study to be unviable.</p> <p>There is no viability evidence base underpinning such a requirement.</p> <p>Experience has shown that even where local authorities do test the viability of this requirement, they fail to test the implications of building larger flats and larger communal areas to achieve the desired standard. This is the case here also.</p> <p>It is common for Local Authorities to confuse the needs of 'wheelchair users' with the needs of older people in the community. A supportive local planning policy framework will be crucial in increasing the delivery of specialist older persons' housing and it should be acknowledged that although adaptable and accessible housing can assist it does not remove the need for specific older person's housing. Housing particularly built to M4(3) standard may serve to institutionalise an older person's scheme reducing independence contrary to the ethos of older persons housing and particularly extra care housing. Older people's housing should therefore be incorporated into the emerging Local Plan separately to adaptable and accessible housing and not confused with it.</p> <p>The PPG establishes that in order for a plan to introduce policy requirements such as the above, an assessment of the financial viability of doing so should be undertaken (in general with no exceptions highlighted). The PPG sets out the following pertinent points in this regard:</p> <p>How should plan makers set policy requirements for contributions from development?</p> <p>Plans should set out the contributions expected from development. This should include setting out the levels and types of affordable housing provision required, along with other infrastructure (such as that needed for education, health, transport, flood and water management, green and digital infrastructure). These policy requirements should be informed by evidence of infrastructure and affordable housing need, and a proportionate assessment of viability that takes into account all relevant policies, and local and national standards, including the cost implications of the Community Infrastructure Levy (CIL) and section 106. Policy requirements should be clear so that they can be accurately accounted for in the price paid for land. To provide this certainty, affordable housing requirements should be expressed as a single figure rather than a range. Different requirements may be set for different types or location of site or types of development.</p> <p>See related policy: National Planning Policy Framework paragraph 34</p> <p>Paragraph: 001 Reference ID: 10-001-20190509</p> <p>Revision date: 09 05 2019 See previous version</p> <p>What evidence should local planning authorities use to demonstrate a need to set higher accessibility, adaptability and wheelchair housing standards?</p> <p>Based on their housing needs assessment and other available datasets it will be for local planning authorities to set out how they intend to approach demonstrating the need for Requirement M4(2) (accessible and adaptable dwellings), and/or M4(3) (wheelchair user dwellings), of the Building Regulations. There is a wide range of published official statistics and factors which local planning authorities can consider and take into account, including:</p> <ul style="list-style-type: none"> • the likely future need for housing for older and disabled people (including wheelchair user dwellings). • size, location, type and quality of dwellings needed to meet specifically evidenced needs (for example retirement homes, sheltered homes or care homes). • the accessibility and adaptability of existing housing stock. • how needs vary across different housing tenures. • the overall impact on viability. <p>How should local planning authorities establish a clear need?</p> <p>It will be for a local planning authority to establish a clear need based on:</p> <ul style="list-style-type: none"> • existing sources of evidence. • consultations with the local water and sewerage company, the Environment Agency and catchment partnerships. See paragraph 003 of the water supply guidance • consideration of the impact on viability and housing supply of such a requirement. <p>Paragraph: 015 Reference ID: 56-015-20150327</p> <p>Revision date: 27 03 2015</p> <p>Should plan-making bodies set minimum requirements for accessible housing?</p> <p>Where an identified need exists, plans are expected to make use of the optional technical housing standards (footnote 46 of the National Planning Policy Framework) to help bring forward an adequate supply of accessible housing. In doing so planning policies for housing can set out the proportion of new housing that will be delivered to the following standards:</p>

	<p>M4(1) Category 1: Visitable dwellings (the minimum standard that applies where no planning condition is given unless a plan sets a higher minimum requirement)</p> <p>M4(2) Category 2: Accessible and adaptable dwellings</p> <p>M4(3) Category 3: Wheelchair user dwellings</p> <p>Planning policies for accessible housing need to be based on evidence of need, viability and a consideration of site-specific factors.</p> <p>Paragraph: 009 Reference ID: 63-009-20190626</p> <p>Revision date: 26 June 2019</p> <p>National policy and guidance are clear that the inclusion of minimum accessibility requirements must only be done so following a consideration of viability. Not all of the appraisals undertaken are provided within the plan wide study but the conclusions in respect of specialist housing for older people are quite clear. It is unviable to load design and sustainability requirements on these typologies.</p> <p>In this case the council does not have the viability evidence base to support the inclusion of the M4(3) requirement and should be deleted as it is not justified to include this requirement.</p>
Q7 Modification	Recommendation –the requirement to provide 10% of dwellings to M4(3) standard on older persons housing developments should be removed from both Policy HOU3 and Policy HOU5.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	It is important that the policy is discussed with those parties who will be involved in delivering the housing impacted by the proposed policies to understand the issues which are likely to arise.

Q6 Details	<p>Gladman Developments Ltd (Gladman) welcome the opportunity to comment on the Newcastle-under-Lyme Final Draft Local Plan 2020-2040 (Regulation 19) consultation and request to be updated on the progress of the emerging Local Plan. Please refer to attached representations. Gladman has fully engaged fully in the preparation of the emerging Newcastle-under-Lyme Local Plan 2040 to date. Feedback from the First Draft Local Plan (Regulation 18) consultation has been addressed and incorporated into the Final Draft Local Plan consultation document.</p> <p>In the sections below, Gladman have made specific comments where we consider the Final Draft Local Plan requires modifications or further clarification to ensure that it is capable of being found sound. Comments are focussed mainly on the consultation document, with references to the Duty to Cooperate and Sustainability Appraisal documents. Our representations also include details of Gladman's land interest at land south of Eccleshall Road, Loggerheads, which we are promoting as suitable for identification as a housing allocation in the emerging Local Plan. Please refer to attachment for more information.</p> <p>Gladman encourages the Council to ensure that draft Policy HOU6 has sufficient flexibility, as there is no guarantee that these units will be delivered, and there may be situations when they are difficult to deliver that may result in the non-delivery of otherwise sustainable land for housing.</p> <p>Gladman broadly support draft Policy HOU6 in respect of self-build and custom housebuilding in line with current government thinking and objectives. Gladman considers it essential, however, that the policy wording should state that once a self-build and/or custom-build plot has been marketed for 6 months (rather than 1 year cited in the policy text under criterion 5) but failed to sell, it will revert to consideration by the Council to be built out as conventional open market housing.</p>

Agent Given Name	Lydia

Q4 Part of document	Policy
Q4 Policy	HOU2
Q6 Details	<p>These representations are submitted by Stantec on behalf of Jones Homes (North West) Ltd (Jones Homes) and Renew Land Baldwins Gate Ltd (Renew Land), together known as "the Promoters", in response to the Final Publication Draft of the Newcastle-under-Lyme 2020- 2040 ('Local Plan') at Regulation 19 published by Newcastle-under-Lyme Borough Council (NuLBC) ('the Council') in August 2024. Please also see attached representations.</p> <p>Our Client recognises national trends in relation to the promotion of custom and self-build housing in seeking to address the housing crisis; indeed, it is now identified within the Framework as a potential source of supply. However, our Client objects to the requirements of this Policy.</p> <p>As drafted, the policy requires major residential schemes to provide a proportion of serviced plots for self build / custom building opportunities. The proportion will be determined by the Council in line with demand identified on the Self and Custom Build Register, unless unviable. Jones Homes is concerned with the lack of transparency in this policy.</p> <p>The Self and Custom Build Register is a crucial source of information for developers and individuals looking to engage in self or custom build projects. Currently, the register is not available for public viewing on the Council's website. If applicants are expected to provide this type of housing to meet policy requirements, they need access to the register at an early stage in the development process. Making this information accessible will allow developers to evaluate demand and incorporate relevant costs into their financial appraisals from the outset, rather than being confronted with unexpected requirements at the preapplication or application stage. This proactive approach would enable better financial planning, improved project feasibility, and a more streamlined development process.</p> <p>To ensure transparency and efficiency, it is recommended that the register be made available online for easy access by all stakeholders, including potential developers, landowners, and community members. Providing visibility early on will not only help inform planning and decision-making but also support the Council's goals of meeting housing needs in a fair and efficient manner.</p> <p>Furthermore, the policy lacks transparency in outlining how requirements for Self Build and Custom Build plots will be implemented, which raises questions about its practicality and effectiveness. The ambiguity leaves developers uncertain about the expectations for each project, as there is no clear indication of whether the Council intends to apply this requirement as a fixed percentage of the total number of proposed units or if it will require a specific number of plots only after a particular threshold is met.</p> <p>For a policy to be sound and enforceable, it must provide unambiguous guidelines on its application. Therefore, the policy should explicitly state whether the Self Build and Custom Build requirement will be calculated as a percentage of the total housing units in a development or whether it will trigger a specific obligation based on a certain development size or threshold (e.g., only for sites with more than 10 units). Without this clarity, developers will struggle to interpret and comply with the policy, potentially leading to delays and disputes.</p> <p>It is recommended that the policy be revised to include a clear methodology that outlines how the requirement will be calculated, when it will be applicable, and what proportion or number of units must be dedicated to Self Build and Custom Build plots. This level of specificity will ensure the policy is applied consistently, making it more predictable and manageable for all parties involved.</p> <p>It would be appropriate for the need / demand for self build / custom build opportunities to be examined in a housing need assessment. This would allow stakeholders to engage with this type of provision in a positive and proactive manner</p>
