	Working with registered providers or community-led housing organisations to develop the plots as affordable housing for local residents." The WMHAPC supports this approach from the Council as it could allow for the self-build homes to be freed up for the affordable housing market if such homes remain unsold and would in turn increase the supply of affordable homes.

Title	Policy HOU6: Self Build and Custom Dwellings
Consultee Company / Organisation	Home Builders Federation
Consultee Position	Planning Manager - Local Plans (Midland and South West)
Consultee Family Name	Danemann
Consultee Given Name	Rachel
Q4 Part of document	Policy
Q4 Policy	HOU6
Q5 Sound	No
Q6 Details	<p>Please see attached representations.</p> <p>The Policy is not considered to be sound as it is not justified or effective or in line with national policy. HBF advocates for self and custom-build policies that encourage self and custom-build development by setting out where it will be supported in principle. HBF considers that Councils can play a key role in facilitating the provision of land as set in the PPG. This could be done, for example, by using the Councils' own land for such purposes and/or allocating sites specifically for self and custom-build home builders-although this would need to be done through discussion and negotiation with landowners.</p> <p>HBF consider it is unlikely that the provision of self and custom build plots on major residential development schemes can be co-ordinated with the development of the wider site. At any one time, there are often multiple contractors and large machinery operating on-site from both a practical and health and safety perspective, it is difficult to envisage the development of single plots by individuals operating alongside this construction activity. HBF also question is there is a mismatch between the kind of plots and locations that self-builders are looking for, and the kind of plots that would result from this policy. The issue of self and custom build plots is therefore not only one of viability but also deliverability and desirability to the self build and custom build plot market.</p> <p>Although HBF does not support the requirement for self build plots on allocated sites if they are to be required then HBF welcomes the Council's realistic policy approach to ensure that where self and custom build plots are provided, they are delivered and do not remain unsold. HBF agree that it is important that plots should not be left empty to the detriment of neighbouring properties or the whole development. The timescale for reversion of these plots to the original housebuilder should be as short as possible from the commencement of development because the consequential delay in developing those plots presents further practical difficulties in terms of co-ordinating their development with construction activity on the wider site.</p> <p>There are even greater logistical problems created if the original housebuilder has completed the development and is forced to return to site to build out plots which have not been sold to self and custom builders. HBF therefore strongly support a self-build policy that does make it clear that unsold plots remaining after a certain period would revert back to becoming open market housing but HBF suggest this should be after six months, not one year</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	HBF requests to participate in the Hearing Sessions for the Local Plan Examination, the HBF considers that their involvement is necessary to ensure that the home building industry is able to respond to any housing related issues raised during the hearing sessions.

Consultee Company / Organisation	Bignall End
Consultee Family Name	Willard
Consultee Given Name	Gerald
Q4 Part of document	Policy

Q4 Policy	PSD6
Q5 Sound	No
Q6 Details	The policy is generally supported. With more imagination and intent to meet the aspirations of self builders a policy change to support small plots for self build within or adjoin villages can do much to boost the supply of such sites that would be of interest to self builders. Generally and as a matter of proven fact self builders are rarely interested in sites forming part of large scale new housing sites. It is simply not what self builders seek. They seek singular or small sites within or adjacent to villages in the main
Q7 Modification	If the council is serious about boosting such supply the policy should be tweaked to read something like: The Council will view applications for self-build and custom-build housing favourably, subject to proposals being in accessible and sustainable locations and compliant with all other relevant Local Plan policies. Preference will be given to proposals located on suitable brownfield sites, infill plots within existing development curtilages "or small sites of no more than 2 units sites that adjoin villages". Nb My highlighting to show the suggested change.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	In seeking the following modifications to the plan, I do consider it necessary to participate in examination hearing session(s) in order advise the inspector of my clients concerns and to respond to any questions that the inspector may have.

Q4 Part of document	Policy
Q4 Policy	HOU8
Q5 Legally compliant	No
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	While we would not disagree with the principle of Rural Exception Sites, as referred to be above, national policy is changing in respect of the provision of affordable housing and the requirement to provide First Homes will be removed. As such, Policy HOU8 will need to be revised.
Q7 Modification	As discussed in relation to Policy HOU1, national policy in respect of affordable housing is changing including the removal of requirements to provide First Homes, and therefore Policy HOU8 will need to be modified accordingly. This can be achieved by removing 'First Homes' from the title of the policy, and deletion of point 2 from the policy.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	We consider that it is necessary for us to participate in the examination hearing session(s) as we are promoting a site that was allocated in the Regulation 18 draft, yet removed from the Regulation 19 draft despite nothing changing. In addition, we have further evidence to present within our hearing statement to reinforce the deliverability of the site, and the weaknesses of the plan as drafted.

Title	Policy HOU8: Rural and First Homes Exception Sites
Consultee Family Name	Windmill
Consultee Given Name	Paul
Q4 Part of document	Paragraph
Q4 Paragraph number	7.60 – 7.65
Q5 Sound	No
Q6 Details	It would generally also be expected that the local housing need assessment (LHNA) undertaken to support the release of the land for development should identify any market housing need (as well as affordable/social housing). Often the market housing delivered is for older people specifically to enable them to downsize and is supported by the evidence provided in the LHNA.

	<p>It's clear this Plan was drawn up with specific regard to affordable housing policy in the current NPPF that focuses on the delivery of First Homes. However, the draft proposed NPPF recognises that this focus is disproportionate and recommends authorities have regard to a mix of tenures.</p> <p>First Homes do meet certain, small need, they are not strictly affordable and prevent applicants from providing a greater proportion of social rented homes. The priority in the policy seems to be an unjustified emphasis on a particular niche housing product rather than for evidenced local need.</p> <p>The Policy is considered to be generally sound. However, in combination the issues raised above are considered to make the policy potentially unsound. It is suggested that this, and other parts of the Plan, should be considered under the NPPF in force at a specific date before the Examination.</p>
Q7 Modification	<p>Add an additional clause after existing clause g under part 1 of Policy HOU8 to read:</p> <p>h. If the survey and assessment indicates a need for First Homes these may be included providing that:-</p> <ul style="list-style-type: none"> • the homes will remain first homes in perpetuity; • the first homes provided are occupied by first-time buyers who meet the local connection test; <p>Remove the following from the policy:</p> <p>2. In addition to the requirements above, proposals for first homes exception sites will be permitted where the following criteria are met: a. the proposed development is located on unallocated land outside the Green Belt;</p> <p>b. Where a proposal also includes other forms of affordable housing, there must be evidence of local need and that it would assist with viability of the sustainability of the scheme. Applicants may alter the proportions of affordable housing to include small quantities (up to 25%) of other affordable housing products;</p> <p>Remove the phrase "and First Home" from paragraph 7.64. The new sentence should read:</p> <p>This policy recognises that and enables affordable housing on Rural Exception Sites to be cross subsidised from the sale of market homes where, without this element of market housing, the site would not come forward for affordable housing.</p> <p>Delete paragraph 7.65 and replace it with the following text:</p> <p>7.65 Affordable housing is to be of a good standard of design and layout, in keeping with the character of the settlement that it adjoins. Any market housing is to be similar so that the tenures are not distinguishable.</p>
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)

Title	Policy HOU8: Rural and First Homes Exception Sites
Consultee Company / Organisation	Aspire Housing
Consultee Given Name	Aspire Housing
Agent Company / Organisation	Knights
Agent Family Name	Corinaldi-Knott
Agent Given Name	Alan
Q4 Part of document	Policy
Q4 Policy	HOU8
Q5 Legally compliant	Yes
Q5 Sound	Yes
Q5 DTC compliant	Yes
Q6 Details	<p>Please see supporting representation by Knights on behalf of Aspire. Policy HOU8 sets out a proposed exception sites policy. Such a policy is welcome in principle, in particular, an attempt to define the size of site that would be acceptable in principle at criteria 1b.</p> <p>However, it is considered that the definition of an appropriately sized site could be improved and given more flexibility with thresholds provided for Rural Centres and thresholds for other settlements. The Rural Centres can clearly facilitate more development given the availability of services such as schools, a local shop, bus services, etc.</p> <p>However, it is considered that criteria 1a could be more appropriately worded in the case of some of the villages which are not identified as Rural Centres. If there is an acceptance of a need to provide affordable housing on rural exception sites, then the policy should recognise that there may be no large scale employment sites in reasonable proximity to the rural settlements and that some settlements may rely on services provided in another settlement nearby, as recognised in national policy. As such, the wording of criteria 1b may need to be amended to remove the words "and have reasonable access to existing employment, services and facilities including public transport" or add the words "where possible" at the end. There are instances where rural workers require housing in close proximity to rural employment</p>

	<p>and it is naturally more beneficial to provide this on the edge of existing settlement rather than as isolated dwellings.</p> <p>This may be better addressed through a refined definition of a small site at footnote 7 which will be set out below.</p> <p>With regard to the definition of an exception site in terms of size, it is suggested that a more detailed definition be provided to provide a more balanced approach between the larger and smaller rural settlements and that flexibility in approach is provided should there be a high level of affordable housing need. It is therefore suggested that the size threshold of an exceptions site is amended as follows:</p> <p>(a) For the Rural Centres, a small site is defined as a site which would not exceed whichever is the lesser of 5% of size of the settlement or 1 hectare, unless the local housing need assessment indicates a higher level of need than the lesser figure, in which case the higher may be used.</p> <p>(b) For other rural settlements, a small site is defined as a site which would not exceed whichever is the lesser of 10% of the number of dwellings within the main built up area of the village or 0.5 hectares, unless the local housing need assessment indicates a higher level of need than the lesser figure, in which case the higher may be used.</p> <p>The above is considered appropriate on the basis that for a smaller settlement that may have, for example, 50 dwellings within the settlement boundary, 5% would only yield 2.5 dwellings (or 3 rounded) in an area where the level of need may be greater. 10% would bring this up to 5 dwellings in such a scenario which would make a greater contribution to local needs which may arise and would still be proportionate to the size of the adjoining settlement. This re-wording of the policy would also provide a greater degree of flexibility to provide more rural affordable housing where it is needed and would provide further opportunities to address the very high levels of affordable housing need across the Borough. At present, Aspire are of the opinion that it is unclear as to how 278 affordable homes per annum will be achieved based on the percentages set out for large sites and allocations, and adopting a more flexible approach to rural affordable housing exception schemes would provide greater opportunities to addressing such needs. As set out earlier, an average of 68 affordable homes per annum could potentially be delivered on site allocations over the plan period, and the policy amendment as proposed above would provide a greater range of opportunities to increase the amount of affordable housing that is delivered if no further allocations are proposed over and above the current number of sites proposed for allocation in the DLP. With regard to criteria 1c, reference is made to taking into account the latest Housing Needs Assessment and other local data, such as a made Neighbourhood Plan. With regard to the latter, Aspire would urge that the council undertakes due caution with regard to using data from made Neighbourhood Plans, as the basic conditions test that Neighbourhood Plans need to pass to proceed to a referendum are very different to the tests of soundness that the Local Plan will need to pass at examination stage. If the Council wishes to have regard to data contained within Neighbourhood Plans, then a set of criteria should be put in place in the policy as to what sources of data within a Neighbourhood Plan can be relied upon and what methodology should underpin them.</p> <p>With regard to criteria 1h of Policy HOU 8, the ability to provide an element of market housing to support the viability of affordable housing exception sites is welcome. Given the high level of affordable housing need across the Borough, opportunities to facilitate as many exception sites as possible is to be welcomed, and provides an opportunity to unlock further sites than may otherwise be the case.</p> <p>With regard to criteria 1e, Aspire Housing have expressed concern relating to the requirement for housing to remain affordable in perpetuity. This because that such requirements secured through Section 106 agreements affects the ability of Registered Social Landlords to borrow other than at UEV for Social Housing which in turn affects providers financial capacity to invest in affordable homes. As such, the Council are encouraged to discuss this aspect of the policy further with registered providers and Aspire would welcome a further opportunity to discuss this with the Council in due course prior to the submission of the Plan to the Secretary of State</p>

Q4 Part of document	Policy
Q4 Policy	HOU8

Q6 Details	<p>Please see attached representations. It is positive to see that the Council has now introduced a standalone policy for rural exception sites. The delivery of rural housing in sustainable locations is critical in sustaining rural communities.</p> <p>With regards to the delivery of First Homes, some of the WMHAPC members have raised concerns over its effectiveness of as a route to deliver affordable housing. While First Homes may benefit first-time buyers, its contribution to affordable housing delivery remains uncertain. However, we acknowledge the importance of exception site policies in addressing local housing shortages, particularly in areas with limited development opportunities.</p> <p>It can be seen that draft Policy HOU9 requires at criteria C that: "The scale and location of the site relates well to the existing settlement and landscape character, with a site not exceeding a maximum of 1 hectare or 5% of the size of the existing settlement, whichever is the smaller". While this is an NPPF requirement (see footnote 37, page 20) for Community Led Exception Sites, the same does not apply to Rural and First Homes Exception Sites. The WMHAPC asks that this requirement is removed from draft Policy HOU8 as it may hinder the delivery of affordable homes in suitable rural locations across Newcastle-under-Lyme</p>

Q6 Details	Please see attached representations. The WMHAPC acknowledges Community Led Exception Sites as an effective policy tool to enable the delivery of affordable housing. We also understand that these developments can often unlock small sites (which may otherwise be unattractive to large scale housebuilders) and may often garner public support in providing benefit to the local community. We take this opportunity to highlight the successful proven track record that Community Land Trusts (CLTs) have in delivering affordable housing for local people. The Council may find it insightful to know that a number of the WMHAPC Housing Associations have delivered affordable housing through partnerships with CLTs across the West Midlands. Therefore, it would be particularly useful if the Local Plan acknowledges this working relationship in order to encourage commitment in the Local Plan to support CLTs in their choice of sites.

Title	Employment
Consultee Family Name	Withington
Consultee Given Name	Clare
Q4 Part of document	Policy
Q5 Legally compliant	No
Q5 Sound	No
Q6 Details	<p>AB2/A should be removed.</p> <p>It was stated in earlier site assessments carried out that the AB2 site had boundaries which are a mix of durable and non durable boundaries. Clearly these would stop any further development in the future due to the weakness of the non durable boundaries, and making it high risk of further encroachment? We have already seen the effect of this when AB2 became AB2A and suddenly expanded with an extra 20 odd hectares taken out of green belt over night - to extend it beyond the original boundary provides even more encroachment into the green belt that originally felt possible? I feel this site will put the surrounding green belt at risk as once developed it will be hard to defend any further encroachment. This includes hte green belt the other side of the M6. Therefore removal of this site from Green Belt (which is already acknowledged as being disconnected from the villages) will severely leave the surrounding green belt vulnerable to even more incursion.</p> <p>In 2022 officers assessed AB2 as being unsuitable for Employment and Housing. However it would seem that since then evidence has been reviewed several times, to suit and amended to in order to get the scheme to fit any exceptional circumstances which they believe exist. See attached - Newcastle under Lyme Strategic Housing & Employment Land Availability Assessment 2022Appendix 4 Site Assessment Proformas - Sites not in Deliverable & Developable Supply. This is all very confusing for the public and really doesnt give us much faith in the officers or the experts opinions.</p> <p>The Heritage assessment within the evidence base states "Where possible existing hedgerows and trees should be preserved to help to preserve the pattern of enclosure within the site and would help retain the sites neutral contribution to heritage assets within its environs". However St Modwens (site developer) in their response at Issues and Options have already confirmed they will remove the hedgerows - "The loss of hedgerow connectivity would be replaced by more substantial green links through and around the Site." It is clear the developer will not be looking to preserve (and potentially may be impossible due to site functionality) any of the local important heritage features which will be lost as a result.</p>
Q7 Modification	Removal of AB2/A which (for context only) if it were residential (as an example) would be a development of around 2400 homes in a parish with a council tax base of 2600! This is such a large incursion in one Parish it is unfathomable.

Consultee Family Name	Jogee MP
Consultee Given Name	Adam
Q4 Part of document	Policy
Q4 Policy	Employment
Q6 Details	<p>The need for economic growth is the key to the prosperity of the borough. This is true in many cases, whether that be the regeneration and diversification of our Town centre or bringing job opportunities to our rural communities.</p> <p>Newcastle-under-Lyme has a long and rich industrial heritage, particularly in ceramics, manufacturing, and logistics. This history has cultivated a skilled workforce that can readily adapt to new industries such as advanced manufacturing, logistics, and digital services.</p> <p>I want to work with the Council to identify areas of emerging markets to bring the job creation to the borough, but the council strategy appears to be solely focussed on the warehouse and distribution sector – with its focus on green belt land in Audley.</p> <p>The Audley or AB2 proposal has generated significant public opposition - very legitimately so - and I would therefore like to see what alternative proposals have been explored within the plan. Not least when we have to protect our valuable and much loved green spaces.</p>

Consultee Company / Organisation	Audley Rural Neighbourhood Plan Steering Group
Consultee Position	Secretary
Consultee Family Name	ARNP
Consultee Given Name	AR
Q4 Part of document	Policy
Q5 Legally compliant	No
Q5 Sound	No
Q6 Details	<p>Policy EMP 1: Employment</p> <p>ARNP would strongly object to strategic employment site allocation AB2.</p> <p>Sites AB2 and AB2A</p> <p>ARNP strongly objects to the proposed allocation of Site AB2/AB2A (A500/M6).</p> <p>The Green Belt Site Review Consolidated Report 16th July 2024 recommends exclusion of the site(s) from the process (Table 17, page 28). This issue was also considered in the Urban Vision Enterprise CIC Audley Parish Green Belt Review, V2.4, August 2022, commissioned by Staffordshire County Council, which found a strong contribution to green belt purposes, including safeguarding the countryside from encroachment and regeneration of urban land.</p> <p>These recent reports appear to have been ignored.</p> <p>Removal of the site(s) from the green belt would undermine the purposes for green belts set out in the NPPF, in particular by allowing major incursion and encroachment into the countryside and undermining of regeneration of the urban conurbation, by developing greenfield land in the countryside.</p> <p>The economic impact on the conurbation would be negative, due to:</p> <ul style="list-style-type: none"> the remoteness of the site(s); the impact on the viability of alternative urban sites in the conurbation. Harm to the rural economy, due to loss of the best and most versatile agricultural land and associated harm to local food growing capacity and agricultural employment. <p>The traffic impacts would be negative, including:</p> <ul style="list-style-type: none"> Generation of road-based traffic and lack of sustainable transport alternatives; Traffic impacts on the rural character of the area; Impacts on the amenity and safety of rural roads and lanes. <p>The development of this site would be unsustainable and environmentally harmful, due to:</p> <ul style="list-style-type: none"> biodiversity impacts on rural lanes, where they need to be widened, including destruction of adjoining landscapes; development of greenfield land in an unsustainable location, remote from the existing urban conurbation;

	<ul style="list-style-type: none"> a range of significant adverse impacts (visual, noise, light, disturbance, air quality). <p>The development would introduce a major urban employment site within a rural parish, near to small rural villages and remote from local services.</p> <p>The Strategic Employment Site Assessment - 2024 Update (Aspinall Verdi) has failed to deal with the previously highlighted contradiction with the ARUP and UVE green belt assessment reports.</p> <p>The updated Sustainability Appraisal July 2024 highlights adverse impacts of developing the site AB2. Paragraph D.5.2.11 states "The introduction of new large-scale developments has potential to be discordant with the landscape features of the associated character areas as identified in the LSCA34, especially given the location of Sites AB2 and KL15 within areas of 'high' sensitivity to development ...".</p> <p>The Table on page N37 identifies that site AB2 would have major negative impacts on:</p> <p>'Natural Resources and Waste', 'Flooding' and also 'Landscape'. Minor negative impacts include: Air, Biodiversity, Flora and Fauna, Water, Health and Wellbeing and Transport and Accessibility. There is only one other site that scores so negatively, and this is not being taken forward.</p> <p>We note that positive impacts are identified for 'Climate Change' and 'Economy'. We believe that this finding is perverse. It is difficult to see how the development of a remote site, well outside of the urban conurbation, involving the loss of agricultural land and relying on road based travel could contribute positively against climate change. In addition, the harm to the rural economy and to economic and physical regeneration in the urban conurbation has clearly not been taken into account.</p> <p>Site variation AB2A is not mentioned so presumably has not been assessed.</p> <p>Tables N10 and N11 set out growth strategy options. We note that option 6D does not include site AB2 and delivers better scores/outcomes.</p> <p>The Newcastle-under-Lyme Landscape & Visual Appraisal March 2023 identifies the site as having a major adverse impact. Mitigation measures would not be effective given the scale of development.</p> <p>The Audley Rural Civil Parish Natural Capital Assessment report (Staffordshire Wildlife Trust, June 2024) identifies ecological and wildlife features within the site, including a high distinctiveness wildlife corridor and Strategic Significance Areas within the Nature Recovery Network. A copy of this report is included.</p> <p>The Strategic Housing & Employment Land Availability Assessment (SHELAA), Report September 2022 Appendix 4 (Sites not in Deliverable & Developable Supply) included Site AB2. The AB2 site assessment proforma recognised that the site was in the green belt and was isolated, disconnected from Audley and Bignall End, partly affected by flood zones, with access limitations and with poor access to a range of services and facilities. The site appears to be missing from the 2024 update report. There is still a big inconsistency between NUL Borough Council's position in September 2022 and the present. A site identified as not deliverable or developable is now suggested for allocation.</p> <p>Allocation of this site is not justified by the Economic Needs Assessment Newcastle-under-Lyme & Stoke-on-Trent June 2020 which stated, 'overall need implied under any of the aforementioned scenarios could be met through the current supply of circa 293ha of employment land'. This further highlights how allocation of site AB2 would undermine regeneration elsewhere.</p> <p>Development of AB2 would be harmful to the local economy, community and environment.</p> <p>The site assessment is not supported by evidence and assessments (though we note the site has been deleted from updates of some of those assessments). Allocation of the site conflicts with several of the proposed policies of the Local Plan.</p>

Consultee Company / Organisation	Cross Heath, Wolstanton and May Bank Branch Labour Party
Consultee Position	Branch Secretary
Consultee Family Name	Gorton
Consultee Given Name	Richard
Q4 Part of document	Policy
Q4 Policy	EMP1
Q6 Details	<p>Policy EMP1: Employment – we accept that identifying sites for industrial or commercial development is essential for the Borough's future prosperity and agree that a mix of sites, differing in size and location, should feature in the Local Plan. The suggestion as set out in the Regulation 18 version of the draft Local Plan that new strategic employment sites should avoid a piecemeal or an ad hoc approach to development by adopting a masterplan is our view well worth pursuing. We agree that the Borough Council should vet a masterplan before work begins on site. The Branch takes the view that many Borough residents will welcome the reference in paragraph 8.3 to overnight lorry parks as lorries left stationary during the night can become a nuisance. Under site allocations, the Branch will comment on the low priority given in the Plan to Chatterley Valley.</p>
Q9 Hearing reasons	<p>Conclusion</p> <p>Cross Heath, Wolstanton and May Bank Branch Labour Party welcomes the opportunity to give its views in response to the Regulation 19 stage of the draft Local Plan. If it is felt to be appropriate, a member of the Branch would be prepared to take part in the public scrutiny of the draft Local Plan.</p>

Title	Policy EMP2: Existing Employment Sites
Consultee Family Name	Trading Limited
Consultee Given Name	Tarmac
Agent Family Name	Job
Agent Given Name	Alexander
Q4 Part of document	Policy
Q4 Policy	EMP2
Q6 Details	<p>Dear Sir / Madam,</p> <p>Regulation 19 Consultation on the Draft New Local Plan for Newcastle-Under-Lyme Borough Council – Representations on Behalf of Tarmac Trading Limited</p> <p>Introduction</p> <p>Heatons have been instructed by Tarmac Trading Limited ('Tarmac') to prepare and submit representations to the above public consultation for the emerging Newcastle-Under-Lyme Local Plan. The consultation closes 7th October 2024.</p> <p>Tarmac operates a concrete plant in Chesterton. This plant is vital for the importation and production of construction materials for Newcastle-under-Lyme and surrounding areas. The importance of minerals infrastructure such as the plant at Chesterton should be recognised in the emerging Local Plan to safeguard their use, especially from development that could cause conflict in adjoining land use or prejudice future minerals operations.</p> <p>Following a review of the published consultation documents, this letter is Tarmac's formal response to the Final Draft Newcastle-under-Lyme Local Plan. This review focuses on areas of the draft plan which are relevant to Tarmac and their commercial activities at Chesterton, we trust that this representation will positively contribute towards the submission of the Draft Local Plan for examination.</p> <p>Tarmac Interests in Newcastle</p> <p>Tarmac's Chesterton Concrete Plant is located in Rowhurst Industrial Estate, at the corner of Rowhurst Close and Watermills Road. The site is accessed directly from Watermills Road and is surrounded by other industrial uses, with vacant land opposite and adjacent to the site. The site's address is Tarmac Concrete Plant, Watermills Rd, Chesterton, Stoke-on-Trent, Newcastle, ST5 6BD.</p> <p>The site consists of a concrete batching plant and an aggregate storage building, with conveyors that feed the concrete plant as well as a site office and car park. The site is strategically located for the production and distribution of ready mixed concrete to Newcastle and Stoke.</p> <p><u>Planning Policy and Guidance Context</u></p> <p>National Planning Policy Framework (2023) –</p> <p>Section 17 of the National Planning Policy Framework (NPPF) relates to 'Facilitating the sustainable use of minerals'. Paragraph 215 confirms it is essential that there is a sufficient supply of minerals to provide the infrastructure, buildings, energy and goods that the country needs.</p> <p>The NPPF also states that planning policies and decisions should adopt the 'agent of change' principle to safeguard the operation of existing businesses from new development nearby. Paragraph 193 states that:</p> <p>"... Existing businesses and facilities should not have unreasonable restrictions placed on them as a result of development permitted after they were established. Where the operation of an existing business or community facility could have a significant adverse effect on new development (including changes of use) in its vicinity, the applicant (or 'agent of change') should be required to provide suitable mitigation before the development has been completed."</p> <p>The onus is therefore placed on new development to account for mitigation and the NPPF is clear that planning policies should reflect this principle.</p> <p>The recent draft version of the NPPF does not propose to remove the agent of change principle.</p> <p>Final Draft Newcastle-under-Lyme Local Plan – Regulation 19 Consultation Version July 2024</p> <p>The Final Draft Newcastle-under-Lyme Local Plan sets out the Council's vision for future development in Newcastle-under-Lyme until 2040. The Draft Local Plan places an emphasis on providing sustainable housing and employment opportunities for the borough.</p> <p>Draft Policy EMP2 'Existing Employment Sites' requires that development proposals adhere to the 'agent of change' principle, ensuring suitable mitigation to protect existing business operations from negative impacts.</p> <p>Draft Policy CT20 allocates 8.88 hectares of land next to Rowhurst Industrial Estate for employment uses, accessible off Watermills Road and therefore adjacent to Tarmac's site. This policy also requires development within the proposed allocation to consider the relationship of the site to surrounding development in line with the agent of change principle.</p> <p>Tarmac welcomes the agent of change principle in Draft Policy CT20 and EMP2 and consider its inclusion necessary to protect important industrial sites such as Chesterton Concrete Plant. The specific reference of and inclusion of the agent of change principle is considered necessary and is consistent with the existing and draft NPPF.</p> <p>Overall, Tarmac welcomes the focus on applying the agent of change principle in the Draft Newcastle-under-Lyme Local Plan – this should be retained in the submission of the Final Local Plan.</p>

Agent Given Name	Wakako
Q4 Part of document	Policy
Q4 Policy	EMP2
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>Allied Bakeries is a longstanding Class B2 wholesale bakery operating from its factory located on Liverpool Road in Newcastle under Lyme. The Allied Bakeries site and surrounding employment/commercial uses are not designated as employment land.</p> <p>In this context, we strongly object to Policy EMP2 which states that, within areas of existing employment land, proposals for alternative uses will be considered positively. The policy, as drafted, is not in line with the National Planning Policy Framework (NPPF) (2023), which places significant weight on the need to support economic growth and productivity as well as one of the draft Local Plan's strategic visions for the Borough seeking to support the growth of businesses (paragraph 4.2).</p> <p>The supporting information explains the intention of Policy EMP2, which is to retain existing employment areas unless there is a reasonable prospect of the land being use for that purpose and to ensure that existing businesses can continue to operate efficiently. However, the wording of the policy is such that it could potentially facilitate the development of residential use adjacent to existing Class B2 operations without a robust assessment and consideration of its impact on the ongoing operation and potential growth of the business. In particular:</p> <ul style="list-style-type: none"> • The reference to considering alternative uses positively, rather than robustly protecting existing employment uses and their potential growth, is inappropriate where the intention of the policy is to retain existing employment areas and to protect existing businesses continuing to operate and grow. • How criteria a) to d) should be assessed in the decision-making process is not clear or robust to ensure that existing businesses can continue to operate and grow. In particular, criterion d) is not clear.
Q7 Modification	See attached representations.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)

Consultee Given Name	Angela
Q4 Part of document	Policy
Q4 Policy	RET1
Q6 Details	PCD3 and 9 RET1, 4 Retail and service Issues: a. There are new large-scale developments proposed in this Plan (some suggested before 2019). It is difficult to know if these have now been secured or if they are still part of a wish list. Currently there are retail units which have never been wholly occupied (or have seen constant short-term turnover) in and around the town centre (York Place (1964), Lymelight Arcade (2014), the Roebuck Centre (1986) and the arcade linking Merrial Street with the Ironmarket (in 2000s?). Have the reasons for this phenomenon been factored into future developments, or the estimated suggested allocations, so that unnecessary demolition and destruction do not become part of the Plan? Formalising such practices as sustainable and acceptable processes are not necessarily the best use of resources, scarce or otherwise. b. Have the reasons for the demise of the town been sufficiently analysed and taken into account in order to avoid making the same mistakes? c. The former retail units mentioned above are now destined for demolition/partial demolition, with replacements advocated in the Plan. This should not be regarded as an acceptable or sustainable strategy and for the sake of complying with national government's overestimated allocations, and certainly not without factoring in up-to-date information. This is important in LAs where developable land is scarce, and where alternative uses might be preferable.

	<p>d. The issue of car parking in and around Newcastle-under-Lyme town centre, which has not been satisfactorily resolved, has had an impact on retailing in an already declining and reduced retail offer. Developing the smaller car parks around the town might not be a good idea in the long term. The issue of carparking might have been reassessed to inform the plan in order to come to a better solution to encourage a larger footfall to the town centre.</p> <p>e. Online shopping and the changed behaviour of customers, evident before Covid, and more pronounced afterwards, has reduced the patronage of high street shops. The cross-cutting issues compounding the decline of the high Street need to be satisfactorily explored and resolved if the Plan is to be effective over the next 20 years.</p>

Q4 Part of document	Policy
Q4 Policy	RET 2 Clause 2
Q6 Details	We support having a reference to heritage assets and shop fronts/advertisements within the Plan and consider that this is necessary. However, we consider that the wording is not appropriate in its current format. The wording should refer to heritage assets (designated and non designated) including Conservation Areas and their settings and then set out what is and is not appropriate in the context of heritage assets. For example, illuminated signs should be resisted and not carefully considered. Would benefit from including relevant details about shutter types too.

Q4 Policy	RET5
Q5 Legally compliant	No
Q5 Sound	No
Q6 Details	<p>This representation is drafted in a form that would assist the Local Plan Inspector in framing the Examination Matters and Issues, notwithstanding that in its current form the Draft Local Plan is unsound. All matters raised are in summary only, and would be taken forward in detail as Examination hearing statements as required in due course.</p> <p>The Draft Plan is unclear in a number of critical matters, which are raised in this representation. It should be re-drafted to take up these aspects.</p> <p>Policy RET 5 (Kidsgrove Town Centre) provides a policy context but there is nothing of substance in terms of planned development to achieve its effectiveness.</p> <p>Therefore, the Draft Plan does not appropriately reflect and respond to the economic context. Neither does it respond to the new mandatory up-to-date housing target nor deal with much publicised historic under delivery across the Borough resulting in numerous appeal related developments.</p> <p>RET5</p> <p>Policy RET5 sets a context for Kidsgrove Town Centre, but is merely a context for a public sector package of improvements. These will be short lived and in effect demonstrate a very lacking approach to stimulating growth of a second-tier town in the locality of significant employment growth.</p> <p>The housing target set is not being met by any distance – just 12no houses in Kidsgrove and Ravenscliffe – and should be seriously re-examined at least in the manner of taking forward the other sites recommended in the 2017 Arup report which were spuriously discarded.</p>
Q7 Modification	<p>Due to the scale and nature of the flaws identified in this representation so far in respect of Policies PSD1 and PSD3, the Council's new mandatory housing target, the NPPF planned changes in particular its advice in relation to Green Belt has major impact on Policy PSD5, there is need to fully re-evaluate the proposals in this regard. One straightforward matter is to re-prioritise the north of the Borough for development in order to re-balance the spatial economic strategy.</p> <p>The Green Belt Review 2017 needs fundamental review, including taking into account relevant NPPF changes like 'grey belt' and other more relaxed criteria-based approaches to appropriate development in the Green Belt. The current Review is rendered out of date by now not being consistent with current and proposed national policy.</p> <p>A distinct example of how a brownfield opportunity of appropriate development in the Green Belt (with others in locality) within a priority area for regeneration is demonstrated at the end of this representation.</p>

	<p>Plan changes</p> <p>Local Plan experience would say that it is highly questionable whether this version of the Draft Plan can proceed to Examination due to the significant matters raised above. In the event that the Draft Plan can take a positive forward direction the following actions are recommended:</p> <ul style="list-style-type: none"> • RET5 Kidsgrove needs a fundamental review, and an effective regeneration development package of growth promoted. <p>As a prime example of how the current Draft Plan has 'missed the boat' the following example demonstrates a totally discarded site which is surely amongst others which need a more justified approach and recognition rather than a simplistic dismissal.</p> <p>This particular site has been the subject of SHELAA submissions dating back to 2008 (ref 422) and has received analysis under the Green Belt Assessment (Part 2) Study as Site RC14.</p> <p>The aforementioned Assessment was very detailed in nature and in recognition of the site being assessed as making a weak contribution to Green Belt purposes and was recommended for further consideration. It's potential for sustainable small-scale growth adjacent to Kidsgrove and its local facilities was recognised.</p> <p>The site is clearly Brownfield / previously developed land with a substantial former farm complex of substantial buildings now in commercial use plus associated substantial hard standings. The site should form part of the Brownfield Land Register for Newcastle Borough.</p> <p>The Newcastle Borough Regulation 18 First Draft Local Plan (June 2023) Exceptional Circumstances for Green Belt release sets an important context. At 5.10 it states 'suitable previously developed land was prioritised for development during the site selection process'. It then refers to constraints typically associated with development of brownfield sites, such as lack of economic viability and land contamination. In relation to Site RC 14 – which does not form part of the Plan; 7.1 of the report confirms urban and brownfield sites have received site allocation focus, and that 'wherever a brownfield site was assessed to be suitable, this land has been allocated'. This is clearly not the case with Site RC 14. Perversely the Draft Plan at states that 'the lack of brownfield land ... within the urban boundary has resulted in the need to consider sites beyond the urban boundary'. This site being cross-boundary demonstrates an ever-greater justification for allocation in relation to Stoke's substantial housing requirements. Further, smaller sites such are critical to meeting early 5 year housing land supply requirements, with large strategic sites proven to have long lead-in times to delivery. This site could be fully developed within 3 years; at most 5 years. This is an example of how the Site selection process is flawed.</p> <p>The Draft Local Plan is scant in relation to its Spatial Growth reasoning, but clearly emanates from the more fulsome Issues & Options which showed strong reasoning behind Green Belt release around Kidsgrove, the Borough's second largest settlement with strong connectivity. The Green Belt Assessment Study in this context recommended that four sites (NC4, NC5, NC13 and RC14) be taken forward for further consideration. None of these sites are proposed allocations – only site KG6 is promoted in the Plan as offering estimated 6 dwellings. The Draft Plan Policy PSD 3: Settlement Hierarchy promoting substantial growth of Kidsgrove Urban Centre is totally imbalanced in this respect.</p> <p>The NPPF has a whole range of relevance to the allocation of Site RC 14. National policy calls for 'a variety and mix of land' (Para 60), a priority for sites that are deliverable in 5 years (69a) and that at least 10% of housing requirements should be made up of small sites (70) in recognition of main supply and delivery of housing requirements (74-77). Paras 24-27 highlight the need for joint co-operation in Plan making and the tests of soundness at Para 35. Para 1 refers to making effective use of land and emphasis to the role of small sites.</p> <p>The Levelling up & Regeneration Bill 2023 fingerposts 'local planning authorities to deliver as many houses as possible on land which has been previously developed'. Further, the Government announced on 13 February 2024 an even greater emphasis on prioritising such land and respect this in policy setting. They stated that 'the brownfield presumption will be strictly enforced' and announced 'a rocket boost to bringing forward as much previously used land as possible to deliver much needed housing'. This is stated to be followed up by an even stronger 'brownfield first presumption on development' through a planned revised NPPF and National Development Management Policies in 2024.</p> <p>The Draft Plan overlooks brownfield development opportunities in favour of in many instances open green belt sites with no logical circumstance in favour of allocation.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	<p>As a professionally qualified Planner I have been commissioned to represent a landowner in the Local Plan process for both Newcastle Borough and Stoke-on-Trent City Councils. I have significant experience in the Local Plan process including Plan Examinations.</p> <p>I wish to be offered the opportunity of further developing this representation through suitable topic hearing statements on key matters and issues, and appearance at Plan Examination sessions to ensure in particular participation on Plan soundness.</p> <p>As a professionally qualified Planner I have been commissioned to represent a landowner in the Local Plan process for both Newcastle Borough and Stoke-on-Trent City Councils. Agent Position	Projects Director
Agent Family Name	Proudlove
Agent Given Name	Dave
Q4 Part of document	Policy
Q4 Policy	RET5
Q5 Legally compliant	No
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	Policy RET5 provides the context for the regeneration of Kidsgrove town centre, and as such is a vitally important policy. However, as drafted, it is simply designed to support public sector-led interventions and projects and while these are welcomed, the policy needs to be much broader in order to stimulate further investment and development. Indeed, given the aspiration to drive the regeneration of Kidsgrove, the overall policy context – including the housing target detailed within Policy PSD3 – is somewhat lacking. Gaps within Policy RET5 included opportunities to diversify the town centre's offer beyond retail and other associated uses, and the importance of increased residential development, particularly in locations that benefit from public transport links to the town centre.
Q7 Modification	Given the Council's aspirations to drive the regeneration of Kidsgrove town centre, we consider that Policy RET5 is somewhat limited, and is not broad enough to deliver meaningful change. As such, we consider that Policy RET5 should be modified by adding the following to point 1 of the policy: <ul style="list-style-type: none"> • Support for opportunities to diversify the town centre offer by introducing other compatible uses in appropriate locations, including residential In addition, a point 2 should be added to the policy as follows: • The Council will support increased residential development in locations that benefit from good public transport links with the town centre and that will support the area's economic growth and the town centre's regeneration

Title	Infrastructure and Transport
Consultee Company / Organisation	Member of Parliament for Newcastle-under-Lyme
Consultee Family Name	Jogee MP
Consultee Given Name	Adam
Q4 Part of document	Policy
Q4 Policy	Infrastructure and Transport
Q6 Details	<p>It is important for local planning authorities to undertake an assessment of the transport implications in developing or reviewing their Local Plan so that a robust transport evidence base may be developed to support the preparation and/or review of that Plan.</p> <p>I have received representations from residents in Audley, Betley and Balterley regarding the lack of public transport provision in the borough's rural communities.</p> <p>Residents in Bradwell have raised the issue of difficulties in accessing healthcare provisions. In all of the cases raised with me, the cuts to local bus services, combined with the lack of alternative provisions, need addressing whilst also planning for future expansion of communities.</p> <p>Moving forward, I would like to see more detailed collaboration with transport providers across the North Staffordshire conurbation to deliver for – and properly connect - residents and businesses.</p>

Policy IN1: Infrastructure

Order	86
Title	Policy IN1: Infrastructure
Consultee Company / Organisation	The British Horse Society
Consultee Family Name	Bannerman
Consultee Given Name	Wendy
Q4 Part of document	Policy
Q4 Policy	IN1
Q6 Details	<p>Dear Local Plan Team</p> <p>Reg 19 Local Plan Newcastle-under-Lyme</p> <p>The response below is from the British Horse Society however our volunteers in the county may also respond at a local level.</p> <p>Overall</p> <p>The British Horse Society is the UK's largest equestrian Charity, representing the UK's 3 million horse riders. Nationally equestrians have just 22% of the rights of way network – only 16.4% in Staffordshire - and are increasingly forced to use busy roads to access them.</p> <p>Between 01.01.2023 – 31.12.2023 nationally:</p> <ul style="list-style-type: none"> • 3,345 road incidents involving horses have been reported to The British Horse Society • Of these, 50 horses have died and 77 have been injured • 3 people have died, and 94 people have been injured because of road incidents • 23% of riders were victims to road rage or abuse • 82% of incidents occurred because a vehicle passed by too closely to the horse • 79% of incidents occurred because a vehicle passed by too quickly <p>'Planning policies and decisions should protect and enhance public rights of way and access, including taking opportunities to provide better facilities for users' (NPPF, s104).</p> <p>DEFRA has recorded a population of 755 horses in the ST5 postcode area (2021). The contribution per horse to the economy, according to BETA (2023), is £6,887, therefore in this case a contribution of £5,199,685 per annum. Equestrian activities in semi-rural areas (bring your horse on holiday, pleasure rides, competitions) are increasingly popular in addition to established activities such as schooling and hacking. The equine industry provides diverse employment (vets, farriers, feed outlets, saddlers, instructors, venues, liveries, etc). Promoting, nurturing and enabling equestrian access would support the equestrian industry.</p> <p>IN1 and IN2 Infrastructure and Transport</p> <p>Where there are opportunities identified to make existing footpaths useable for cyclists or new paths connecting the network, these should be multi-user routes for all vulnerable road users, including equestrians. Crossings/bridges/underpasses should be designed to include equestrians (eg 'pegasus crossings'). Several categories of public rights of way (bridleways, restricted byways and byways) and minor public roads are already shared by cyclists and other user groups. For maximum public benefit and fairness, the reciprocal approach should be implemented, i.e. that new cycle paths should be shared with other user groups. The provisions will futureproof the routes and engage a wider range of users in active travel and leisure which in turn will impact positively on health and wellbeing and road safety statistics.</p>

Q4 Part of document	Policy
Q4 Policy	IN1
Q6 Details	Policy IN1: Infrastructure We welcome criteria 1, 2 and 4 of this policy relating to the delivery of infrastructure especially water and wastewater infrastructure.
Q7 Modification	We request that criterion 10 is expanded as follows: '10. Infrastructure must be provided in a timely and, where appropriate, phased manner to serve the occupants and users of the development. It may be necessary to co-ordinate the timing for the delivery of development with the timing for the delivery of infrastructure. For sites that are proposed for delivery over a number of phases/years, a Phasing and Delivery Strategy will be required to be submitted as part of any planning application.' This reflects the fact that the timing for the delivery of development may not coincide with the timing for the delivery of new infrastructure that is required to accommodate new growth or investment.

Title	Policy IN1: Infrastructure
Consultee Company / Organisation	Gladman Developments Ltd
Consultee Position	Planning Manager
Consultee Family Name	Wilding
Consultee Given Name	Robert
Q4 Part of document	Policy
Q4 Policy	IN1
Q6 Details	Gladman Developments Ltd (Gladman) welcome the opportunity to comment on the Newcastle-under-Lyme Final Draft Local Plan 2020-2040 (Regulation 19) consultation and request to be updated on the progress of the emerging Local Plan. Please refer to attached representations. Gladman has fully engaged fully in the preparation of the emerging Newcastle-under-Lyme Local Plan 2040 to date. Feedback from the First Draft Local Plan (Regulation 18) consultation has been addressed and incorporated into the Final Draft Local Plan consultation document. In the sections below, Gladman have made specific comments where we consider the Final Draft Local Plan requires modifications or further clarification to ensure that it is capable of being found sound. Comments are focussed mainly on the consultation document, with references to the Duty to Cooperate and Sustainability Appraisal documents. Our representations also include details of Gladman's land interest at land south of Eccleshall Road, Loggerheads, which we are promoting as suitable for identification as a housing allocation in the emerging Local Plan. Please refer to attachment for more information. Gladman support the policy's intention to secure developer contributions for infrastructure and facilities, subject to viability. The supporting text is clear that this can be done through Section 106 obligation and/or through any future Infrastructure Levy if one is introduced. Gladman would welcome an inclusion into the supporting text for negotiation regarding contributions when a development is rendered unviable by a proposed planning obligation. This ensures this policy is not restrictive and has an appropriate level of flexibility to allow sustainable development sites to come forward.
Q7 Modification	Please see attached representations

Title	Policy IN1: Infrastructure
Consultee Company / Organisation	Cross Heath, Wolstanton and May Bank Branch Labour Party
Consultee Position	Branch Secretary
Consultee Family Name	Gorton
Consultee Given Name	Richard
Q4 Part of document	Policy
Q4 Policy	IN1
Q6 Details	Policy IN1: Infrastructure – we agree with the statement given in paragraph 10.3 that ‘good infrastructure planning is essential to achieving a high quality of development’ and welcome the adoption of an Infrastructure Development Plan (IDP), which will identify ‘the key infrastructure needed during the period of the Local Plan, how much this will cost and the expected source of funding’. We view the use of an IDP as a key feature of the new Local Plan. In this section it is argued that new development can result in the provision of better infrastructure. While we hope that new development will be accompanied by either new infrastructure or improvements to existing services and facilities, the condition of some of the infrastructure currently in place across Newcastle Borough is poor.
Q9 Hearing reasons	Conclusion Cross Heath, Wolstanton and May Bank Branch Labour Party welcomes the opportunity to give its views in response to the Regulation 19 stage of the draft Local Plan. If it is felt to be appropriate, a member of the Branch would be prepared to take part in the public scrutiny of the draft Local Plan.

Q5 Legally compliant	Yes
Q5 Sound	Yes
Q5 DTC compliant	Yes
Q6 Details	<p>This representation is submitted on behalf of Richborough in response to the Newcastle-under-Lyme Draft Local Plan ("DLP") consultation. Please also refer to attached representations. Richborough recognise the need to secure the funding of infrastructure that is directly related in scale and kind and which is necessary to make development acceptable in planning terms.</p> <p>However, it is noted that the local healthcare trusts often request contributions towards healthcare provision, however such contributions should be justified and transparent. On this point, the Council should take into account recent case law² in formulating a policy for the provision of healthcare contributions and what such contributions should contribute towards. For example, these cases found that it was acceptable for contributions to be made to the provision of physical infrastructure, such as a new or extended GP surgery in response to additional demand arising from new development, however it is not acceptable to seek contributions towards services where no funding gaps have been identified when annual funding has been negotiated to account for population growth.</p> <p>The statutory framework for funding NHS services is summarised succinctly in the recent Worcestershire case at paragraphs 55 to 57 of the judgement as follows:</p> <p>55. A CCG has a duty to arrange for the provision of a range of health services to such extent as it considers necessary to meet the reasonable requirements of "the persons for whom it has responsibility." Essentially those are persons registered with GPs or otherwise "usually residing in the area" of the CCG ([46]). NHS England is responsible for allotting funds each financial year to each CCG towards meeting the expenditure of that group "attributable to the performance by it of its functions in that year." A CCG must then ensure that its expenditure on the performance of its functions does not exceed the amount allotted to it, plus any other sums received by it in that year ([50]).</p> <p>56. An NHS Trust provides services for the purposes of the health service. The claimant is one of the providers from whom CCGs obtain services in order to discharge their functions ([52]). CCGs and NHS Trusts negotiate contracts for these purposes ([54] et seq). An NHS Trust is obliged to ensure that its revenue is not less than sufficient, taking one financial year with another, to meet its revenue outgoings ([53]).</p> <p>57. The detailed schemes dealing with different types of funding arrangements are, to say the least, convoluted and lacking in transparency (Leicester at [66] to [72]). Even with the assistance in that case of experienced specialist counsel it was impossible to pin down which part of these schemes applied to block contracts. However, Mr Cairnes accepted in Leicester that the funding rules do not preclude a CCG and NHS Trust from negotiating a block contract for the next financial year which takes into account population growth, or additional hospital activity resulting from first year occupancy of new development during that financial year ([73]). The Trust in the present case did not adopt any different position. Indeed, the Trust's representations to the defendants proceeded on that basis (see e.g. para.30 of the representations dated 14 January 2021).</p> <p>Richborough note the Interim Infrastructure Delivery Plan as part of the Local Plan evidence base which includes commentary on healthcare provision, however this will not be a policy document, and the Council's approach to securing healthcare contributions and what those contributions can be used for should be clearly set out in Local Plan policy so that it is clear and transparent to health care providers, developers, elected Members and residents as to what funding can be secured for healthcare provision and what it can be used for. It should also make clear in supporting text what evidence healthcare providers should submit to the council to justify their request for contributions.</p> <p>The above points were raised in our response at Regulation 18 stage and do not appear to have been taken into account as part of the Regulation 19 Local Plan. It is considered that further consideration be given to the above matter and that the policy is amended accordingly.</p>

Q6 Details	<p>This representation is submitted on behalf of Evolution 500 Limited by Knights in response to the Newcastle-under-Lyme Borough Council Local Plan Regulation 19 consultation. Please also see attached representations.</p> <p>Our representations concern in particular the land to the west of Newcastle Road, Talke shown in the image at Figure 1 below ("the site", see attachment). We identify and promote this site as suitable for electric vehicle charging station, which could accommodate public electric vehicle charging facilities and associated development/uses for visiting members of the public.</p> <p>These representations follow a response to the previous Regulation 18 version of the Local Plan in August 2023, along with our Call for Sites submission at the same time, plus our subsequent (May 2024) provision of additional supporting material relating to the site's development potential for the uses mentioned at paragraph 1.3 above. A copy of the indicative site layout plan (see Appendix 1) and Transport Technical Note (Appendix 2) that accompanied our submissions in August 2023 and May 2024 are provided with this representation. The Transport Technical Note sets out the findings of SCP Transport's review of the highway and transport aspects of the proposed allocation of the land for an electric vehicle charging station.</p> <p>We have set out above need for a significant national expansion of public EV charging facilities and make reference to the government's electric vehicle infrastructure strategy¹¹. A key part of the Government Strategy is that the transition to zero emissions transport is to be led by industry and consumers and that private investment is expected to drive the EV revolution. The planning system should therefore provide a framework that would support the development of EV charging infrastructure.</p> <p>Policy IN1: Infrastructure (bullet point 1) expresses broad support for "infrastructure related development". There is however no mention of EV infrastructure. We therefore request that policy IN1 be amended to provide explicit support delivery for such development. We suggest adding wording to state that schemes that deliver public EV charging infrastructure will be supported.</p> <p>We also note this policy approach would align with Strategic Objective IV including to "Reduce the Borough's carbon footprint and mitigate the impact of climate change in the Borough ensuring local policies promote sustainability. . ." and with Strategic Objective VII including to "Support active and sustainable travel".</p> <p>With regard to NPPF para 35 the Local Plans must be prepared in accordance with the 'Tests of Soundness'. We consider this element of the Local Plan does not accord with the tests of soundness set out at NPPF paragraph 35 as it is:</p> <p>a) Not "Positively prepared", as it fails to ensure the area's future infrastructure needs are fully met;</p> <p>b) Not "Effective", as it would not help ensure the infrastructure needed is delivered over the plan period.</p>
Q7 Modification	See attached representations
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	To explain the respondent's case and provide details in respect of the proposals for the development of the site.

Title	Policy IN1: Infrastructure
Consultee Company / Organisation	Staffordshire County Council
Consultee Family Name	Chadwick
Consultee Given Name	James
Q4 Part of document	Policy
Q4 Policy	IN1
Q5 Legally compliant	Yes
Q5 Sound	Yes
Q5 DTC compliant	Yes
Q6 Details	<p>Policy IN1 is supported.</p> <p>The policy includes reference to the delivery schedule included in The Infrastructure Delivery Plan, which contains a comprehensive list of Infrastructure requirements.</p> <p>We note the inclusion of the requirement for all residential sites to provide an education contribution as requested by Staffordshire County Council where appropriate. We have worked closely with NBC to ensure the forward planning of future education infrastructure within the Local Plan.</p>

	<p>We support reference in IN1 to Land at Madeley High School being allocated in order for the future growth of the school through developer contributions. We have commented elsewhere regards this allocation needing to appear in the list of land removed from the Green Belt.</p> <p>Part 13 (b) of the Policy sets out improvements the Talke Signals (A34 Newcastle Road / Congleton Road / Coalpit Hill), which is identified in the Strategic Transport Assessment as necessary to mitigate the cumulative impact of development traffic. Staffordshire County Council will work collaboratively to forecast the future operation of the junction with the Local Plan allocations in place as per the recommendation in the Strategic Transport Assessment.</p> <p>The improvement scheme will require the incorporation of land (green space) under Newcastle Borough Council ownership being brought into the highway. This point is not made clear in the Plan. Therefore, it is suggested that additional text be added to the supporting information to ensure this requirement is understood.</p> <p>We acknowledge and support the Policy requirements for developer contributions towards the Talke Signals improvement in Policies BL8, BL18, BL32, TK6, TK10, TK17 and TK27</p>
Q7 Modification	<p>To strengthen the Local Plan and our joint position it would be beneficial to include reference to the Staffordshire Education Infrastructure contributions Policy (SEICP) to the Newcastle Borough Local Plan in the supporting text to policy IN1. The SEICP was widely consulted on and sets out the approach to identifying the impact of new residential development on education infrastructure and the likely mitigation to make developments acceptable in planning terms.</p> <p>As noted above a further change is required to the supporting text to clarify the requirements for the delivery of the infrastructure scheme listed at 13(b). It is requested that the following be added to the end of paragraph 10.3:</p> <p>'The highway scheme listed at IN1 - 13(b) will require part of the existing green space (Thomas Street Open Space) fronting the A34 to be brought into the highway to facilitate delivery of the improvement set out in the Strategic Transport Assessment.'</p>

Consultee Company / Organisation	Bignall End
Consultee Family Name	Willard
Consultee Given Name	Gerald
Q4 Part of document	Policy
Q4 Policy	IN1
Q5 Sound	No
Q6 Details	<p>Policy IN1: Infrastructure</p> <p>In common with many plans up and down the Country the council has not sought to maximise infrastructure delivery. It clings on to simple allocations of housing and employment land. It could have; with the right ambition; studied infrastructure deficiencies and sought to make allocations designed to deliver sufficient housing and employment to bring about improvements in highways, health care and community services. It has sought to provide for a 2nd country park in the Silverdale area (Lyme Park) but the justification for it are absent at worst or not clearly expressed at best. Moreover the allocation of SP11 fails to set out how the country park will actually be delivered and how it will be maintained.</p>
Q7 Modification	<p>IN1 should be expanded to include policy to ensure delivery of Lyme Park. Policy/text could say: No dwelling within allocation SP11 shall be occupied until the boundaries of the associated Country Park (Lyme Park) have been set out and its main features provided or protected in accord with a management and maintenance plan for the park. The intent would to ensure certain delivery of this new Country Park which the Council say is needed for health and well being. The country park shall be fully open and available for use before commencement has been made on the 451st dwelling (1/2 the allocation).</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)

Q9 Hearing reasons	In seeking the following modifications to the plan, I do consider it necessary to participate in examination hearing session(s) in order advise the inspector of my clients concerns and to respond to any questions that the inspector may have.

Q4 Policy	IN1
Q6 Details	<p>Please see attached representations. The WMHAPC welcomes the Council's support for developments which will help to deliver the necessary infrastructure to communities. However, as currently worded, the policy does not take into account the viability aspect of 100% affordable housing schemes. As such, the WMHAPC urges the Council to include an appropriate caveat that planning decision makers will need to consider the financial viability against the requirement of "incorporating new infrastructure on-site". The WMHAPC recommends that the level of financial contribution towards the provision of infrastructure should be exempt or reduced in order to practically deliver the affordable homes without compromising on viability.</p> <p>The Council should explore joint approaches and alternative funding mechanisms such as S106 agreements of neighbouring developments to aid in the improvement and development of new infrastructure of 100% affordable housing projects.</p>

Q6 Details	<p>Please see attached representations.</p> <p>The Policy is not considered to be sound as it is not justified or effective or in line with national policy. Section 106 contributions can only be sought to ensure a development mitigates its own impact. They cannot be required to address existing shortfalls. It will therefore be essential for the Council to have robust and up-to-date evidence and calculate any developer contributions arising at the time a planning application is made. It will be important that the CIL tests for s106 requests are considered at the decision-making stage, and the policy should make this clear.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	HBF requests to participate in the Hearing Sessions for the Local Plan Examination, the HBF considers that their involvement is necessary to ensure that the home building industry is able to respond to any housing related issues raised during the hearing sessions.

Q5 DTC compliant	Yes
Q6 Details	<p>Please see supporting representation by Knights on behalf of Aspire. Aspire Housing recognise the need to secure the funding of infrastructure that is directly related in scale and kind and which is necessary to make development acceptable in planning terms.</p> <p>However, policy IN 1 doesn't recognise the role that 100% affordable housing schemes make towards affordable housing provision. The DLP includes policies that allows developers of open market schemes to reduce affordable housing contributions if such contributions would render development proposals to be unviable under Policy HOU 1, however there appears to be no such scope to reduce the level of planning obligations for 100% affordable housing schemes under Policy IN 1 or Policy HOU 1.</p> <p>The Council clearly recognises that affordable housing schemes are subject to viability constraints as criteria 1h of Policy HOU 8 allows for the provision of an element of market housing on affordable housing schemes to assist with viability of such developments, however there needs to be greater policy direction to allow registered providers to reduce their planning obligations in order to guarantee the delivery of 100% affordable housing schemes and create certainty in order to deliver more affordable housing in an area where there is a significant need.</p> <p>It is quite often the case that those in affordable housing need are already resident in the Borough, and are either already living in existing affordable housing and need to relocate to alternative forms of affordable housing, are hidden households, are in temporary accommodation, or are households living in the private rental sector claiming housing related benefits to be able to subsidise their rental costs. As such, these households are unlikely to add further pressures or demands on existing facilities over and above what exists now.</p> <p>As such, a policy criteria should be included in Policy IN 1 (or Policy HOU 1, or a cross-referral between the two policies), which states that:</p> <p>For 100% affordable housing schemes, developer contributions towards off site infrastructure will not be sought.</p> <p>Further policy guidance on this matter could also be included within the Council's exception site policy.</p>

Title	Policy IN1: Infrastructure
Consultee Company / Organisation	Member of Parliament for Newcastle-under-Lyme
Consultee Family Name	Jogee MP
Consultee Given Name	Adam
Q4 Part of document	Policy
Q4 Policy	IN1
Q6 Details	<p>Across Newcastle-under-Lyme, and the wider North Staffordshire area, special educational needs (SEND) services are coordinated through various initiatives designed to support children and young people with disabilities. I have been contacted by dozens of residents with distressing stories of not being able to be assessed or have the support put in place for their child. Indeed, many schools leaders report of being exasperated at the backlog and capacity issues.</p> <p>One local school told me last week how some 30% of their learners had SEND requirements yet only 7% had plans in place. Whilst clearly the government has a role to play in getting to grips with the situation it has inherited by the last administration, local government has a fundamental role.</p>

	<p>The plan as presented proposes significant expansion of the local population but fails to set out how education will be supported. We need to see much more detail in the plan so that I can work with you to address some of the structural failings.</p> <p>I welcome the commitment to delivering affordable housing. There is a huge demand for affordable housing within the borough and I know from my meetings with Aspire Housing that there are long waiting lists for social housing from families in need of affordable accommodation.</p> <p>It is clear that historically the Council generally works with housing developers and other stakeholders to facilitate affordable housing projects, but these have not met the demand. Therefore I am keen to see more detail on how the quantity and quality of affordable homes and rents will be delivered within the plan.</p> <p>I have received many complaints about the poor state of the roads in Newcastle, such as Orme Road, Stanier Street, Bower End Lane and numerous roads in Town and Knutton.</p> <p>Many residents report the delays in getting urgent repairs actioned or roads resurfaced. The delivery of 8,000 new homes creates significant additional pressures on this critical area of infrastructure, therefore I would like to see more detailed plans for the delivery of road implementation, maintenance and repair alongside the associated infrastructure and utilities, in particular how the council has collaborated with neighbouring local authorities, infrastructure providers and environmental bodies.</p> <p>Alongside this the issue of localised flooding must be considered. It is clear to me that when developments take place and persistent flooding occurs the local authority (County Council) have failed to remedy the issues; take for example the many residents who have raised flooding outside their homes and on the A525 at Bar Hill, or Bradwell Lane.</p> <p>When proposing new areas of development we need to ensure that there is sufficient plans, capacity, resources and resilience to manage flood risk, and I hope to see evidence brought forward on where this collaboration and cooperation with stakeholders has taken place.</p> <p>There is a lot of work being undertaken by Staffordshire Integrated Care Board, NHS England, and Clinical Commissioning Group for new or improved services within our borough. The local plan seems light on detail on where these services may be located and what infrastructure will be required, despite these being key to accessing healthcare provision and the wider societal wellbeing.</p> <p>I would welcome more detail within the plan on how health and care services will be delivered for current residents and new communities that will be created within the plan.</p>

Title	Policy IN1: Infrastructure
Consultee Company / Organisation	NHS Property Services
Consultee Family Name	Fleet
Consultee Given Name	Daniel
Q4 Part of document	Policy
Q4 Policy	CRE1
Q6 Details	<p>Draft Policy HOU1 Affordable Housing</p> <p>As part of preparing additional guidance to inform detailed delivery of this policy, we suggest the Council consider the need for affordable housing for NHS staff and those employed by other health and care providers in the local authority area. The sustainability of the NHS is largely dependent on the recruitment and retention of its workforce. Most NHS staff need to be anchored at a specific workplace or within a specific geography to carry out their role. When staff cannot afford to rent or purchase suitable accommodation within reasonable proximity to their workplace, this has an impact on the ability of the NHS to recruit and retain staff.</p> <p>Housing affordability and availability can play a significant role in determining people's choices about where they work, and even the career paths they choose to follow. As the population grows in areas of new housing development, additional health services are required, meaning the NHS must grow its workforce to adequately serve population growth. Ensuring that NHS staff have access to suitable housing at an affordable price within reasonable commuting distance of the communities they serve is an important factor in supporting the delivery of high-quality local healthcare services. We recommend that the Council:</p> <ul style="list-style-type: none"> •Engage with local NHS partners such as the local Integrated Care Board (ICB), NHS Trusts and other relevant Integrated Care System (ICS) partners. •Ensure that the local need for affordable housing for NHS staff is factored into housing needs assessments, and any other relevant evidence base studies that inform the local plan (for example employment or other economic policies). •Consider site selection and site allocation policies in relation to any identified need for affordable housing for NHS staff, particularly where sites are near large healthcare employers.

Consultee Given Name	Daniel
Q4 Part of document	Policy
Q4 Policy	IN1
Q6 Details	<p>Draft Policy IN1 Infrastructure</p> <p>Draft Policy IN1 states that all new development will be required to provide for the necessary on-site or off-site infrastructure requirements arising from the proposal.</p> <p>We request that the Council continue its engagement with the NHS to further refine the identified healthcare needs and proposed solutions to support the level of growth proposed by the Local Plan, as identified in the IDP, prior to submission. Further comments on IDP are provided in the relevant section below.</p> <p>Healthcare providers should have flexibility in determining the most appropriate means of meeting the relevant healthcare needs arising from a new development. Where new developments create a demand for health services that cannot be supported by incremental extension or internal modification of existing facilities, this means the provision of new purpose-built healthcare infrastructure will be required to provide sustainable health services. Options should enable financial contributions, new-on-site healthcare infrastructure, free land/infrastructure/property, or a combination of these. It should be clarified that the NHS and its partners will need to work with the council in the formulation of appropriate mitigation measures.</p>

Title	Policy IN1: Infrastructure
Consultee Company / Organisation	National Highways
Consultee Position	Assistant Spatial Planner
Consultee Family Name	Pyner
Consultee Given Name	David
Q4 Part of document	Policy
Q4 Policy	IN1
Q6 Details	<p>Newcastle-Under-Lyme Local Plan Review - Regulation 19 Consultation (Final Draft)</p> <p>National Highways welcomes the opportunity to provide comments on the Final Draft Local Plan consultation (Regulation 19) prepared for Newcastle-Under-Lyme Borough Council, which is expected to cover the plan period up to 2040.</p> <p>National Highways has been appointed by the Secretary of State for Transport as a strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the Strategic Road Network (SRN). It is our role to maintain the safe and efficient operation of the SRN whilst acting as a delivery partner to national economic growth.</p> <p>In relation to this consultation, National Highways' principal interest is ensuring the safe and efficient operation of the SRN in the area, notably the M6, A50 and A500 network which routes through the Local Plan boundary.</p> <p>In responding to Local Plan consultations, we have regard to the Department of Transport's (DfT) revised Circular 01/2022 - Strategic Road Network and the delivery of sustainable development ('the Circular') which sets out how interactions with the SRN should be considered in the making of local plans. Paragraph 28 of the Circular sets out that:</p> <p>"The policies and allocations that result from plan-making must not compromise the SRN's prime function to enable the long-distance movement of people and goods. When the company assists local authorities in the development of their plans and strategies, the local authority should ensure that the SRN is not being relied upon for the transport accessibility of site allocations except where this relates to roadside facilities or SRN-dependent sectors (such as logistics and manufacturing). The company will also work with local authorities to explore opportunities to promote walking, wheeling, cycling, public transport and shared travel in plan-making, in line with the expectations set out in the NPPF and the Transport Decarbonisation Plan."</p> <p>In addition to the DfT Circular 01/2022, the response set out below is also in accordance with the National Planning Policy Framework (NPPF) and other relevant policies.</p> <p>Previous Consultations</p> <p>National Highways was consulted during the Regulation 18 consultation in August 2023. The Regulation 18 identified a minimum requirement of 7,160 dwellings (358 per year) and 69 hectares of employment land to be delivered during the plan period between 2020 and 2040. It also included potential sites for allocation, and we provided an indication of the potential sites that were expected to have traffic and boundary impacts on the SRN.</p> <p>In May 2024, National Highways was consulted to provide recommendations for the Infrastructure Delivery Plan preparation, where we provided comments on the infrastructure requirement.</p> <p>Final Draft Local Plan Regulation 19 Consultation</p>

The Final Draft Local Plan Regulation 19 includes locally specific policies and strategic / non-strategic site allocations to meet housing and employment needs across the Newcastle-Under-Lyme area for the plan period of up to 2040. Once adopted, this Local Plan will replace the policies in the Newcastle-Under-Lyme and Stoke-on-Trent Core Spatial Strategy (adopted 2009) and the saved policies of the Newcastle-Under-Lyme Local Plan (adopted 2003). Appendix 2 of the Local Plan consultation document outlines the list of previously adopted policies that will be retained or replaced. In principle, National Highways supports the vision and objectives set out in the Regulation 19 Draft Local Plan which aim to deliver the growth in a sustainable manner.

Housing and employment requirements

Based on our review of the Regulation 19 consultation, we note that the Final Draft Local Plan outlines a minimum requirement to deliver 63 hectares of employment land and 8,000 dwellings (400 dwellings per annum) over the plan period of up to 2040 as stated in the 'Policy PSD1: Overall Development Strategy'. We welcome that the housing and employment requirement have primarily been determined using a Housing and Economic Development Needs Assessment (HEDNA) in 2024, which in this case is expected to provide a higher housing demand when compared against the Government's standard method.

We acknowledge that a Sustainability Appraisal (SA) process has been undertaken to evaluate the different growth options considered, assess the impacts and identify the residual effects based on the social, economic and environmental parameters.

As outlined in Table 2 of the Final Draft a total of 8,663 dwellings are planned to be delivered over the plan period of up to 2040 to meet housing demands. This also includes a supply buffer of around 8.3% to address any potential delivery challenges. We acknowledge that the supply also factors in the windfall allowance estimated based on the Council's Strategic Housing Land Availability Assessment (SHLAA), historical trends, and future projections.

Policy SA1: Site Allocations indicates that a significant portion of the housing supply will be delivered through strategic allocations. When comparing the allocation sites included in the Regulation 19 consultation against those set out in the Regulation 18 consultation, we note some minor changes in the scale of growth at individual sites, with a few sites being removed and others added. However, the total housing growth from all strategic allocations remains at 4,512 dwellings. The table below outlines these changes (tables included in the attachment)

In the case of employment supply, we note that AB2 (Land at M6 Junction 16) and KL15 (Land at Barkers Wood, Keele) are key strategic sites contributing significantly to meet the employment needs.

Sustainable transport

We acknowledge that the Final Draft Local Plan has focussed on decarbonisation policies such as 'Policy CRE 1: Climate change' and 'Policy CRE 2: Renewable energy' to address climate change impacts by reducing carbon emissions. This also includes developing energy-efficient buildings, designing to BREEAM Excellent standards, optimising water use, adopting water conservation measures, and utilising renewable or low-carbon energy sources.

'Policy IN2: Transport and Accessibility' emphasises that new developments must provide access through sustainable transport modes to protect the integrity of the highway network. The Council will work with developers to ensure that the proposals contribute to a transport network that is accessible, efficient, and safe. We support this policy and acknowledge that developments likely to generate significant traffic will be required to produce Transport Assessments and Travel Plans, in accordance with the requirements set out. We appreciate that focus is also given to developments that facilitate sustainable movement of freight traffic.

'Policy IN4: Cycleways, Bridleways, and Public Rights of Way' highlights the importance of enhancing walking, cycling, and public transport facilities within the Borough.

We welcome these policies and note that these align with the expectations set out in the National Planning Policy Framework and National Highways' Net Zero Strategy.

Transport Evidence Base

Considering the scale and location of the allocations included in the Draft Final Local Plan, we expect impacts on the SRN in the area either independently or cumulatively.

Strategic Transport Assessment (document reference ED011)

We acknowledge that a Strategic Transport Assessment (STA) dated July 2024 has been prepared using the North Staffordshire Multi-Modal (NSMM) transport model to assess the likely traffic impacts of the site allocations proposed in the Regulation 19 consultation. We note that the model has been run for the following five scenarios in the forecast year of 2040.

Based on our review of the STA, we have the following comments to make:

Section 4.5 of the STA states that while the model emphasises the use of pre/post-COVID data, we note that accident data for the years 2018-2022 includes COVID data with relatively lower traffic flows and possibly fewer accidents. How has the impact of COVID been taken into account?

Section 5.3 of the STA states that the 2015 NSMM model is overestimating the flows by 26-28% when compared against 2022/23 observed WebTRIS data. It also notes that only 15-35% of counts pass in this validation exercise. Despite this shortcoming, model forecasts for 2040 were proposed to be used to inform future testing, which National Highways agreed to as it presents the worst-case scenario with overestimation of the traffic.

Section 7 provides details of the reference case model development, but note that finer details of the method applied are missing. We therefore have the following queries relating to this section:

- Does this scenario include constraining other local authorities to NTEM/TEMPPro?
- Does this scenario include any committed and under-construction developments within the local plan area?
- What is the background growth percentage between the base year and the forecast year 2040?

Regarding Figure 7-1, we are unable to find the basis for changing the junction delay definitions for slight, moderate, and severe delays from what was mentioned in the minutes of the meeting dated 15th May 2024. At present, delays of up to 3 minutes at junctions are reported as slight which is arguable.

Based on the model outcomes, improvement measures to enhance public transport connectivity and infrastructure schemes on the local highway network are proposed in the STA. We also note that a

detailed junction assessment will be undertaken for M6 J16 using a VISSIM model to accurately assess the traffic impacts of the AB2 allocation.

Regarding Section 8.3.2, bullet 1, we interpret that the new junction is the access to site AB2. Thus, we are surprised that the design of this new junction would still lead to 120-180 seconds of delays in the PM. A new access arrangement should work without that much stress.

We request that a summary table with delays (absolute numbers in seconds) at each of the approaches be prepared and shared with National Highways for M6 J16 and the new junction on A500 for site AM2. This is so we can understand the changes in delays between the base, reference case, and proposed scenarios.

We request that the basis for the 10% reduction in car users for the area around site AB2 set out within Section 8.6.6.1 be supported by further evidence.

We also request further details on how much total demand (in PCUs or vehicles) has been removed from the original matrix. Has a preliminary assessment been undertaken on the frequency of bus service that would be required to cater to that demand during peak hours to verify that this is a feasible option?

Regarding Section 8.6.3, while we do not have an issue with the bespoke approach to testing M6 J16 within VISSIM, considering that the NSMM is overestimating the traffic, the use of incremental addition of the difference from the NSMM may lead to an underestimation of traffic at this junction due to large delays in the NSMM reference case scenario. There is a possibility that any additional traffic from the AB2 site may divert to local or unrealistic routes within NSMM.

We therefore request that traffic flow distribution Select Link Analysis plots from site AB2 be shared with National Highways to verify that the routes assigned in the model are reasonable before being used for incremental addition for microsimulation assessment.

We also request that observed base and modelled reference case data be presented in a similar format as Table 8-6 for National Highways to understand the absolute traffic growth at each of the approaches.

National Highways Previous comments

While we are happy with the suggested incremental change in flow and delays analysis for 2040 forecast year models, we must establish a robust do – minimum reference case scenario developed using the base year model.

We note that our previous query dated May 2024 remains unanswered: “The further turning count comparison tables for the M6 J16 model are appreciated and provides comfort that many movements (particularly the A500 East approach) match the 2015 model. However the turning proportions provided for the M6 South to A500 East movement are of concern as these look significantly different to those that were modelled. National Highways would like to understand if there are any explanations of why these differences have occur and particularly why the model identifies such low percentage of car movements?”

STA Comments Summary

In summary, the modelling work to date is based on the NSMM model, which was previously approved by the DfT for other schemes. However, present-day validation using 2022/23 data shows that the model is overestimating traffic and not validating well. Hence, a bespoke approach is applied to assessing M6 J16, while the rest of the strategic assessment uses the forecast 2040 NSMM model which is still believed to be the best tool available. Analysis provided shows that parts of the A500 and junctions along it will be stressed by 2040 and that the level of stress will increase with the local plan. Strategic allocation sites tested will lead to some congestion but this would not lock out the network. The STA and IDP mention the possibility of developers' contributions for various infrastructure schemes including a new bus service along site AB2 among others that could potentially bring congestion levels down to a more comparable level with the reference case scenario, which should be acceptable.

We request responses to our queries above but are hopeful that the Local Plan can work with some support from the developers to mitigate any impact on the SRN.

Infrastructure Delivery Plan (IDP)

A total of 28 transport development schemes are listed in Table A.1 of Appendix A of the IDP to enhance the transport network and promote sustainable transport. The schemes that are of interest to National Highways are:

1. T9 (improvements between M6 J13 and J15) - part of the RIS 2 scheme
2. T14 to T20 schemes

We note that the finalisation of these schemes is subject to undertaking detailed junction capacity assessments. We appreciate that the list of potential allocations that are likely to impact the SRN has been included.

T14 specifically mentions a “Potential mitigation scheme involving widening and an additional lane at the gyratory on M6 J16. VISSIM modelling work is currently ongoing, and the need for any potential mitigation measures can be confirmed after the completion of a detailed capacity assessment as part of the planning application stage.” It should be noted that there is no confirmed scheme from National Highways perspective at the moment, and we seek confirmation as to whether such a scheme is included in the Local Plan assessment within Scenario 5.

We note that the funding mechanism to implement these mitigation schemes including T14 will likely be through developer funded Section 278 agreements. Considering that there could be cumulative impacts from different allocations in the area, a Section 278 agreement is likely to result in a piecemeal approach to the delivery of the improvement works. We would welcome some clarity on why a Section 278 agreement is preferred over a Section 106 agreement for the funding mechanism in this case.

Duty to Cooperate

We note that a Duty to Cooperate Interim Statement of Compliance has been submitted as part of the evidence base alongside the Final Draft Local Plan. We commend the Council's approach to collaborating with neighbouring local authorities, stakeholders, and other bodies to address issues related to local authority boundaries. This collaborative effort will help ensure that all parties' interests are considered and that a comprehensive solution is developed.

National Highways is committed to working with Newcastle-Under-Lyme Council to develop and draft a Statement of Common Ground (SoCG) to address any strategic cross-boundary issues and reach an agreement on how the traffic impacts from the allocations identified in the Local Plan are to be dealt with.

	<p>We understand that a final version of the Duty to Cooperate will be prepared to support the submission version by December 2024.</p> <p>Once again, National Highways appreciates the opportunity to comment on the Final Draft Local Plan Regulation 19 consultation and looks forward to working collaboratively with the Council to support the development and adoption of the Local Plan for Newcastle-Under-Lyme.</p>

Q6 Details	<p>The policy IN1 states that "The Local Plan is supported by an Infrastructure Delivery Plan (IDP) prepared through joint working with public and private infrastructure providers. The IDP sets out the key infrastructure needed during the period of the Local Plan, how much this will cost and the expected sources of funding." The IDP contains many inaccuracies and errors and fails to include several infrastructure developments referred to in individual site allocations and reliance on the IDP as a supporting document for this policy is fundamentally flawed.</p> <p>It makes reference to a potential "Infrastructure Levy" that appears not to be a policy of the government elected in July 2024, and is already out of date on that basis.</p> <p>In addition, the IDP indicates a reliance on developer contributions to provide essential infrastructure to support contentious development through S106 and S278 obligations - both of which can potentially be challenged by developers on the grounds of financial viability, and which (by their nature) fail to look at infrastructure delivery on an holistic basis - obligations are linked to the delivery of individual developments rather than to the more complex aggregated impact of multiple developments in localities - referring in</p>

	<p>particular to development in the Rural areas where individual developments have (for example) created a number of Local Equipped Areas for Play linked to each individual development, but have failed to look at the wider community needs for infrastructure support generated by multiple developments over a comparatively short period of time in a small area.</p> <p>The policy also does not specify whether S106 contributions linked to developments will be subject to local consultation (for example reflecting policies in Neighbourhood Plans) and so may well not be properly aligned to local need. The example of multiple LEAPs being implemented as a key element of S106 obligations is a case in point.</p>
Q7 Modification	The Council should consider the introduction of a Community Infrastructure Levy and should (at the very least) engage with Parish Councils and other local bodies to consult on S106 obligations so that they recognise local need.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)

Q4 Part of document	Policy
Q4 Policy	IN1
Q6 Details	<p>Introduction</p> <p>The Labour group on Newcastle-under-Lyme Borough council represents the authority's principal opposition group. The group comprises of 18 of the 44 total council members on the authority. Throughout the local plan process, the Labour group has scrutinised the plan, when afforded opportunity to do so, during scrutiny committee, planning committee and full council. Though several recommendations have been proposed, these have not been taken into account by the administration, and therefore the final version of the plan (at Regulation 19 stage) has not taken account of opposition suggestions. This response outlines several concerns that we feel critical to the success of the plan, and pertinent to the planning inspector during official examination of the plan.</p> <p>Overview</p> <p>The Labour group acknowledges the significant amount of work put into preparation of the regulation 19 pre-submission draft local plan. The Labour group acknowledges the need for a functional and sustainable local plan to ensure development within the borough is guided towards areas of unmet need, or suitability. We wish to be clear that there are many areas of the proposed plan that we agree with and support. However, there are areas of the plan where we have concerns. Whilst these concerns make up most of our comments, they are presented with due respect to several areas of the plan where we agree. We are committed to getting good value for money on behalf of our residents and delivering economic growth, but also protecting green spaces. Therefore, we are unable to support the plan in its current form, where the plans aspirations are unlikely to be matched by realised commitments. Our specific concerns, and proposals to help alleviate these are as follows:</p> <p>Housing Targets</p> <p>During Regulation 18 examination of the local plan the Labour group raised concerns over the adoption of a housing target of a minimum of 8,000 dwellings from 2020-40 equating to 400 dwellings per annum. Our objections to this housing target were based on a national minimum housing target calculation of 330 p.a. We further note that the housing and economic needs assessment commissioned by the council models a housing need of 347 p.a.1. In providing evidence for the adopted housing target of 400 dwellings p.a. the council relies on modelling provided by the housing and economic needs assessment update</p>

that suggests a forecast job creation of at mid-point between modelling forecasts 207 p.a.1, with a blended approach suggesting 237 p.a.

The Labour group notes the concern raised over available modelling data in the Turley Report:

“These are though becoming dated, with each provider having released new forecasts in the last year which envisage the creation of between 194 and 364 new jobs per annum between 2023 and 2040. Either would represent an improvement on the past trend, with Newcastle-under-Lyme having created only 20 jobs per annum on average since 2009, but the higher forecast – from Cambridge Econometrics – appears particularly optimistic given that it adds 100 jobs per year to its previous forecast, presented in the HENAU. This appears due to an unexplained upgrading of the growth prospects of three sectors that have not actually created any jobs in Newcastle-under-Lyme over the past five years, suggesting a need for caution before assuming that these sectors will indeed create far more jobs than forecast only a year ago.”

Turley (March 2024) Housing and Economic Needs Assessment Update: Newcastle-under-Lyme

Based on these job growth forecasts, the report recommends a housing need of 400 dwellings p.a. The Labour group notes that the Regulation 19 Draft Plan identifies a housing need of 400 dwellings p.a. Consistent with this assumed significant growth forecast in jobs p.a., whilst noting that such housing numbers would be dependant on a 1085% increase in job creation p.a. The Labour group has significant concerns that the level of house building will not match job growth, and thus raises objection to the sustainability of these developments.

Delivering Affordable and Social Housing

The Regulation 19 Draft Plan does not set specific targets for delivery of affordable or social housing. With no clear target on delivery, the Labour group has significant concerns that over the lifetime of the plan limited development of these much-needed dwellings will occur.

The Turley report identifies a calculated need of 278 affordable homes p.a. Whilst challenged on this number, the report does highlight the growing demand on the housing register but assumes that this growth will be met through rising earnings and private sector offerings. The Labour group challenges this assertion, given that wage growth has vastly tracked behind house price, and average rental costs, growth; and that mortgage affordability has been impacted by a significant rise in the Bank of England base rates. The Labour group has concerns that such assumptions will lead to an under-delivery of affordable homes.

The Regulation 19 Draft Plan recommends a number of policies for delivery of affordable and social housing. These are formed under Policy HOU1 Affordable Housing and include:

“On-site affordable housing provision will be required on sites of 10 dwellings or more, or sites of 0.5ha or more at the following percentages:

- a. 30% of all units on greenfield sites.*
- b. 15% of all units on brownfield sites within the ‘low value zone’ as shown on the policies map.*
- c. 25% of units on brownfield sites within the ‘high value zone’ as shown on the policies map.”*

“Given the acute need for social rented accommodation, the HNA Update (2024) recommends the tenure split of affordable homes to be 65% social rented, 10% other affordable housing product and 25% affordable home ownership through First Homes. Opportunities should also be taken to include a proportion of affordable older persons accommodation as part of the affordable housing provision, particularly involving care provision. Planning permission may be granted for an alternative tenure split provided that robust evidence demonstrates that a different split is more suitable. This will be informed by market conditions and local housing need at the time”

Unfortunately, at the time of writing we have not been able to locate within the Policies Map document any reference to distribution of sites across ‘low vale’ and ‘high value’ zones. However, on the assumption that delivery across non-greenfield sites will amount to 20% of dwellings in developments of 10 dwellings or more, or 0.5ha in size. On this assumption of the 400 dwellings-built p.a, only 80 p.a will be affordable or social housing. This is dramatically below the number of affordable of social rent dwellings needed. Whilst the plan mentions delivering affordable housing, the Labour Group finds no tangible commitments that provide reassurance of its delivery. Current housing policy has largely failed to produce affordable housing due to systemic issues affecting supply, demand, and financing. The introduction of ‘Right to Buy’ has seen local authorities struggle to replace housing stock, while lengthy approval processes, excessive regulations, and permitting delays have hindered new builds. Rising construction costs, driven by increased material prices, labour shortages, and supply chain issues, have pushed developers towards high-end housing. Limited government support, insufficient subsidies, and poorly targeted incentives have compounded the problem, with the previous government (2010-2024) failing to allocate adequate funding or attract developers. Housing is increasingly treated as an investment asset, with speculative bubbles inflating prices and reducing affordability. Ineffective policies, such as underfunded public housing and rent controls, exacerbate these challenges. In areas like Newcastle-under-Lyme and wider North Staffordshire, wages lag behind housing costs, leading to an affordability gap. Existing rental assistance schemes are often inadequate, failing to cover the full rent cost, and there is a failure to address the needs of the homeless and vulnerable populations, leaving affordable housing out of reach for those who need it most.

The Labour group believes the policies within the Regulation 19 Local Plan will not lead to the delivery of 278 affordable homes p.a. That whilst the commitment to secure between 15-30% of dwellings as affordable homes is a good first step. To meet the demand required, the policy would need to see 70% of new developments as affordable or socially rented. Whilst the Labour group accepts that this percentage would potentially deter developers, we have significant concern that the current 15-30% range will not be met. Rising construction costs has seen a significant number of developments across the borough seek to vary their social housing contributions under 106 agreements. This has led to significant under delivery of these much-needed homes across the borough. The Labour group proposes a recommendation to improve the deliverability of affordable and social housing.

Labour group proposal

That for developments on public owned land, the minimum percentage of dwellings allocated for affordable and social rented homes is increased to 50%. Given that several large housing developments will occur

on either Borough or County Council owned land, and increased allocation in these areas, where land purchase is not necessary will address significant shortfall between anticipated built and need. Further, whilst outside of the material considerations for the local plan, the Labour group proposes that the Council explore alternative options for delivery of affordable and social housing, including the reintroduction of council stock should delivery continue to be deficient.

The Council generally works with housing developers and other stakeholders to facilitate affordable housing projects – but these have not and will not meet the demand or provide the foundations required for the next twenty years. The argument for our council returning to build council houses revolves around several key points, emphasising the need for more affordable housing, the limitations of private market solutions, and the role of public investment in addressing the housing crisis.

If council builds and retains its housing stock, we create long-term assets that generate rental income and remain under public control. This is a sustainable approach to housing provision, as opposed to relying solely on private developers who may prioritise short-term profit over community needs.

Our proposal to return to council housebuilding is seen by our group as a crucial solution to the affordable housing crisis. By taking control of housing supply, council can directly address the needs of vulnerable residents, provide stability, and counter the failures of market-driven housing policies. Investing in council housing is also a long-term, sustainable approach that can contribute to the overall health and well-being of communities within the Borough.

Transport

It is important for local planning authorities to undertake an assessment of the transport implications in developing or reviewing their Local Plan so that a robust transport evidence base may be developed to support the preparation and/or review of that Plan.

Bus services connect the main towns in Staffordshire & Stoke-on-Trent and provide cross boundary links with neighbouring authorities and towns. Whilst bus services have declined in recent years, they continue to provide vital connections between people, services and places of work and enable people to make more sustainable travel choices.

Staffordshire & Stoke-on-Trent's bus network is operated by several private operators including Arriva Midlands, First Potteries (operating 70% of services in Stoke-on-Trent), D & G, and National Express West Midlands who are significantly increasing their presence in the county. Diamond Bus, Stagecoach and Select Buses also operate services on selected routes.

Key public transport issues include congestion and unreliable journey times, limited frequency of services and falling bus patronage levels affecting commercial viability. To reduce per capita road transport emissions, Staffordshire County Council wish to improve walking, cycling and bus facilities, and are promoting their use to encourage a modal shift away from car use.

Rail connectivity in Staffordshire is currently delivered through a comprehensive rail network and several different franchises. The West Coast Main Line is 700 miles in length from London Euston to Glasgow via Birmingham providing fast services from several Staffordshire stations to London. It is one of the busiest freight routes in Europe and part of the Trans-European Transport Network (TEN-T) route, carrying 40% of all UK rail freight traffic. There are at least 14 train operator companies using this line. Cross Country operate services from the South Coast, Reading, and Birmingham to Manchester calling at Stafford and Stoke-on-Trent. The Crewe to Derby Line which runs via Stoke-on-Trent and Uttoxeter currently suffers from overcrowding.

The local plan makes no proposals to address these issues other than a reference to:

High Speed Two (HS2) services will pass through Staffordshire when Phase 1 is operational. HS2 services will stop at Stafford Station and will improve journey times and connectivity to London and Birmingham. Phase 2b will provide further improvements in journey times and capacity from Stafford to London, Birmingham and the North West, while 27 releasing capacity on West Coast Main Line services for other Staffordshire & Stoke-on Trent stations."

Since the publication of the draft plan the HS2 project has been scrapped by the previous Conservative government.

"The need for a link between the M54 and the M6 was identified in the 2014 Road Investment Strategy (RIS) to relieve congestion on the A460, A449 and A5. The preferred option was announced in 2018 (and a planning application submitted in 2020) which includes a dual carriageway link between M54 J1 and M6 J11 and associated improvements. 6.9. The Midlands Connect studies for the A50 / A500 and A5 have already begun to consider how congestion issues can be addressed and growth supported along these key corridors. The case for investment and opportunities to deliver transport interventions to accelerate growth in the region are being explored. This will lead to preferred investment priorities along these routes which will likely need to be delivered to fully realise the growth potential of Staffordshire & Stoke-on-Trent."

No further announcements on this road infrastructure have been announced.

Critically however, there is no mention of improved transport links to the Town centre or the Royal Stoke Hospital or the new planned Integrated Care Hub at Bradwell or a plan to improve connection to the rural areas of the borough.

As part of the evidence base for the local plan the Council commissioned a Strategic Transport Assessment by Sweco UK Limited. The SWECO report outlines the existing pressures on the highways network throughout the borough, including the following locations:

- *Slow moving traffic observed in and around Newcastle-under-Lyme centre,*
- *Some limited speed reductions in southern areas of Newcastle-under-Lyme Borough, Madeley and Audley,*
- *Slow moving traffic on the A34 Newcastle Road from the A500 to north of Clough Hall Drive though largely no queuing. Some traffic congestion on signalised roundabout"*

SWECO (July 2024) Strategic Transport Assessment

The draft local plan makes no reference to these existing pressures, nor does it provide any solutions to these pressures.

The SWECO report also notes the existing pressures on links to the strategic road network, notably the M6 and A500.

“M16 J16 - Observed data shows traffic congestion along the A500 eastbound approach with decreased speeds (0-10mph AM, 10-0mph PM)

- M6 J15 - The speed data indicates that queued traffic (speed 1-10mph) is observed along the A500 approach to the A500 Queensway\ Newcastle Road roundabout in the PM peak,
- A500\Alsager Road – Can be inferred from data to be operating without any capacity related congestion,
- Talke Interchange - Some relatively slow-moving traffic, along the section between the Newcastle Road\Talke Road roundabout. However, the data indicates that this is slow moving traffic, but in general the data does not show any large reductions in speed due to queuing,
- A500/A527 - Data indicates that traffic is operating without the presence of queues long term queues during the peak hour,
- A500/A34 -In the AM peak observed speeds of around 20-30mph are in line with the speed limits in place on the A34. This is with the exception of the A34 northbound approach to the gyratory which shows lower observed speeds of around 10-20mph. In the PM peak lower speeds of 10-20mph are also observed on the southbound approach to the gyratory.”

SWECO (July 2024) Strategic Transport Assessment

Again, there are no proposals within the local plan to address these existing pressures on connectivity to the wider strategic road network.

The SWECO report modelled the impact of housing and strategic site developments on traffic flow and made the following conclusions.

Keele:

“It can be seen that there is a further worsening from the core-only scenario with now severe congestion forecast in both directions of Keele Road between the University and Gallowstree Lane roundabout. Evidence of re-routing is seen with increases in V/C forecast for Mill Street in Silverdale. Moderate junction delay issues begin to become apparent at the signalised junction of Cemetery Road/Church Lane/B5044. These patterns are also visible in the difference plots (Figure 8-15 and Figure 8-16) where volume has increased around the B5044 (Silverdale), A525 (Keele Road) and A53. It should be noted that the NSMM model is developed within the CUBE modelling software application. A limitation of the CUBE software is that it does not model blocking back (traffic queuing back to previous road links with potential to impact other links and junctions). Therefore, there is the possibility of additional related impacts to queuing traffic on Keele Road, for example to the Keele University roundabout.”

SWECO (July 2024) Strategic Transport Assessment

The report recommends mitigations at Keele:

“A new link road running between University Avenue/Barkers Wood Road to Whitmore Road. The link road will be a 30mph 7.3m wide road connecting the A525 with the A53 to provide an additional route to distribute trips and relieve pressure on the A525.

A new circular bus service serving Newcastle-under-Lyme bus station, Keele University, KL15, KL13, TB19, and SP11 sites via Keele Road, the new link road and Whitmore Road.”

The report notes the impact of these mitigation measures:

For Keele, the mitigation measure of a new link road added between the University and Whitmore Road is seen to have a positive impact on the reduction of traffic on Keele Road between the University Roundabout and Gallowstree Lane.

It can be seen that during the AM period, westbound traffic is most improved whilst in the PM period, eastbound traffic is most improved. This is likely to be of significant improvement for University traffic and related bus services.

It can also be seen that the mitigation brings volume back or nearly back to capacity for each direction and period. There is potential for additional improvements to be made with high impact travel plans and other local bus service improvements.”

SWECO (July 2024) Strategic Transport Assessment

The Labour group notes that this report only mitigates the impact of the proposed developments, and in doing so “brings volume back or nearly back to capacity for each direction and period”. The Labour group has significant concerns that the mitigation measures proposed in the report are not sufficient to provide long-term sustainable traffic flow in the area.

The report recommends the following mitigations at Audley:

“Bus provision connecting employees within Stoke-on-Trent, Newcastle-under-Lyme and Crewe with AB2 employment. It is assumed the service is timed to meet the needs of any shift patterns and enable some connection with other existing public transport services. This is expected to be a replacement for 10% of car trips originating in nearby zones that could use this and other existing public transport services to access AB2 within 1 hour.”

SWECO (July 2024) Strategic Transport Assessment

The report recommends the following mitigation measures in Talke:

“Extension of the NW-bound Newcastle Road two-lane approach to the signalised junction at Newcastle Road/Coalpit Hill. This will give additional space for right-turning traffic that is leading to junction delay issues in scenario 2 – core local plan sites.

Cedar Avenue – Community improvements to Cedar Avenue to increase attractiveness of walking, wheeling, and cycling (not able to model in the strategic NSMM transport model).”

SWECO (July 2024) Strategic Transport Assessment

The Labour group notes the Local plan has identified mitigation measures at Keele and Talke:

“13. Transport infrastructure identified through the Strategic Transport Assessment will be supported. This is to include: - a. a link road between A525 Keele Road and Whitmore Road. b. Improvements to Talke Signals (A34 Newcastle Road / Congleton Road / Coalpit Hill)”

SWECO (July 2024) Strategic Transport Assessment

Labour group notes that funding for these mitigation measures will be identified via 106 funding levied on developments in the area. The Labour group has significant concerns that mitigating the impact of these developments will require 106 funding, and that given the impact of rising cost of living, several developments have proceeded following waiver of the 106 funding requirements. We note within the councils own Infrastructure Baseline Report the following:

"At the same time, it is critical that any infrastructure expectations do not disincentivise development to such an extent that it becomes unviable, thus inhibiting Newcastle-under-Lyme's growth opportunities. This challenge is particularly acute in those parts of Newcastle-under-Lyme where land and property values are low and profit margins on development are small or even non-existent. In some parts of the Borough, the private sector will not be able to meet all of the infrastructure/policy requirements which are ultimately set out in the Local Plan. In such cases, an appropriate balance will need to be struck between competing interests and demands."

NBC (July 2024) Infrastructure Baseline Report

The Labour group also notes the Strategic Transport Assessment provided by the SWECO report does not include assessment of the impact of public transport, outside of assumed reductions in car usage. The borough of Newcastle-under-Lyme, like many other post-industrial non-metropolitan districts, can be considered as a deprived public transport area. Within the borough, public transport is provided via the bus network, and thus subject to the impact of increased traffic and lack of mitigation. At present, travel from Newcastle to connecting rail network stations at Stoke is a 40-minute bus journey outside of periods of high traffic congestion, with a 1 hour journey to Crewe. The Labour group has concerns that the local plan, whilst referring to increased walking and cycling, has no reference to improving the outdated, inefficient, and poor provision of existing public transport across the borough.

Labour group proposal

The Labour group wants to see the local plan have firm detailed and costed plans for a fully integrated transport plan that serves the current and proposed needs of our communities. That such integrated transport plan involves the combining of different modes of transport to maximise ease and efficiency for the user in terms of time, cost, comfort, safety, accessibility and convenience. We are aware that the cuts to bus routes and times across the borough are leading to difficulties in accessing employment, education and health services. We also know that lack of connectivity leads to social isolation.

The Labour group expects to see how the borough plans to address the needs of residents within the borough, demonstrate how it supports the proposed growth in development and population in the plan by working with bus operators, planners and other local authorities such as Staffordshire County Council and Stoke on Trent City Council to get Newcastle moving and growing.

Education

The Borough of Newcastle is divided into two distinct areas for the purpose of school place planning: 1) Newcastle and 2) Kidsgrove. These areas are further broken down into smaller planning areas, which are used to determine the number of school places required. These smaller planning areas have been grouped based on the geographical location of schools and by analysing pupil movement between schools and catchment areas.

A two-tier education system, consisting of Primary (ages 4-11) and Secondary (ages 11-16/18) schools, operates across the Borough. Sixth form provision is available on-site at two secondary schools within the district and is mainly accessible at Newcastle College, with The King's Church of England School, Kidsgrove, also providing this provision. As of September 2020, Newcastle has 30 primary schools, 1 infant school, 1 junior school, and 7 secondary schools, while Kidsgrove has 9 primary schools and 2 secondary schools.

The Infrastructure Baseline Report provided by the Council within the local plan evidence base identifies most areas of the borough have existing capacity within local primary schools to satisfy the proposed developments within the local plan. It is noted however that Newcastle region 5 covering the villages of Silverdale and Knutton would have insufficient school places for the proposed developments on the former municipal golf course.

In the infrastructure delivery plan, the local plan proposes the development of a new primary school on the former municipal golf course:

"The relatively large amount of development set out in the plan for the Keele University corridor (with the inclusion of development site SP11) means there is an identified need for a new 1 Form of Entry (FE) primary school."

Infrastructure delivery plan

The Labour group notes that the infrastructure baseline report does not include St John's primary school in Keele in meeting the numbers required by this development. Evidence from the school demonstrates the high number of pupils registered at the school from the villages of Silverdale and Knutton. Further, concerns have been raised by members of the governing bodies of the four existing catchment primary schools; St Johns Keele, St Luke's Silverdale, The Racecourse Silverdale and St Mary's Knutton regarding the impact of a new primary school on pupil numbers. More alarmingly, neither Staffordshire County Council, nor the Borough council have communicated with the existing primary schools, including discussions over expansion. The Labour group notes that the Borough council has held conversations with St Chads Kidsgrove, Sir John Offley Madeley and Baldwins Gate primary schools over expansions to their existing estate to sustain development, and therefore raises concerns over the unequitable approach to the schools in the Keele, Knutton and Silverdale area.

Labour group proposal

The Labour group proposes that the prior to adoption of the local plan, that the Council undertakes a consultation with existing primary schools in the Keele, Knutton and Silverdale area to determine if existing capacity can be increased through expansion of the existing estate.

Health & Social Care

Health services in England are overseen by NHS England, which operates five regional teams to commission healthcare services. NHS Midlands and East support the commissioning of services in the West Midlands in partnership with Clinical Commissioning Groups (CCGs) and Acute Trusts.

Clinical Commissioning Groups, established by the Health and Social Care Act 2012, changed how primary care services are planned. They commission most NHS hospital and community services, including hospital care, rehabilitative care, urgent care, community health services, and mental health and learning disability services.

The six Clinical Commissioning Groups serving Staffordshire and Stoke-on-Trent are:

- Cannock Chase CCG

- East Staffordshire CCG
- North Staffordshire CCG
- South East Staffordshire and Seisdon Peninsula CCG
- Stafford and Surrounds CCG
- Stoke-on-Trent CCG

The focus for health and social care is on prevention and providing care outside hospitals where possible. 'Together We're Better' is the Sustainability and Transformation Partnership (STP) for Staffordshire and Stoke-on-Trent. The Staffordshire and Stoke Sustainability Transformation Plan (2016) identifies key challenges, including:

- High rates of obesity, diabetes, and smoking in certain areas.
- An ageing and growing population driving up demand.
- Frequent A&E attendance and a risk-averse staff culture.
- A notable proportion of patients with common mental health conditions.
- Higher than average urgent care activity at acute trusts due to poor primary and community infrastructure and citizen behaviours.

In January 2019, NHS England published The NHS Long Term Plan (LTP) and the Five-Year Framework for GP contract reform, setting out ambitions for the next ten years to improve patient care, health outcomes, and to deliver more coordinated primary and community care. The Five-Year Framework introduced Primary Care Networks (PCNs) as the foundation of Integrated Care Systems (ICSs). Now established, PCNs are groups of one or more GP practices serving populations of 30,000 to 50,000 patients, providing a strategic view of primary care delivery and identifying estate requirements. ICSs, set to replace STPs in April 2021, will offer strategic oversight at the regional level, identifying opportunities for integrated working across health and social care partners. By April 2022, ICSs will become statutory bodies.

The infrastructure delivery plan notes the following:

"There are three Primary Care Networks (PCNs) in Newcastle-under-Lyme (Newcastle North, Newcastle Central and Newcastle South PCNs) that serve the residents of Newcastle-under-Lyme. These comprise 17 general practices. Of the practices in Newcastle-under-Lyme, only Silverdale Medical Centre is reported to have surplus capacity to accommodate patients with all other practices reporting insufficient capacity. In summation, there are capacity issues at many locations in Newcastle-under-Lyme with some of this attributed to the level of growth experienced by the borough in recent years and a historic lack of funding for the estate via mechanisms such as the planning system"

Infrastructure delivery plan

The Labour group notes all GP practices, outside of the practice in Silverdale, which must be noted is twinned with the Town Centre practice at Ryecroft, are currently at patient capacity. The Labour group further notes that the only proposal within the Local plan is for a new GP practice on the former Golf course, though we also note that this is a relocation of an existing local practice.

Social care

The Department of Health and Social Care oversees adult social care policy in England, with the Care Quality Commission acting as the independent regulator to ensure care services are safe, effective, compassionate, and high-quality.

In England, adult social care can be publicly or privately funded or provided voluntarily. Local authorities are responsible for publicly funded care and have a legal duty to provide care for those who meet nationally set needs and means tests, either by commissioning or directly delivering services.

Pressures on adult social care budgets have risen in recent years due to increasing demand (from a growing, ageing population with more long-term and multiple health conditions), reduced local government funding, and higher care costs.

Consequently, the adult social care sector is facing growing challenges, including a fragile provider market, increasing unmet needs, more strain on informal carers, reduced investment in prevention, pressure on an already overstretched care workforce, and a diminished capacity to help ease demand on the NHS.

In the infrastructure baseline report the following is noted:

"It should be noted that local demand for care services will vary based on the overall size of the population and specific population care needs, the affordability, quality and location of existing services. This is covered in more detail within Staffordshire County Council's market position statements and associated intelligence documents. Newcastle-under-Lyme currently has significant provision for extra care facilities, residential care homes & nursing homes, but it is anticipated that during the Local Plan period additional units within each of these sectors will be required."

Infrastructure baseline report

The Labour group notes that requirement of additional adult social care facilities during the local plan period. The Labour group further notes the lack of identified development within the local plan to meet the rising demands for adult social care.

Labour group proposals

The Labour group proposes that before adoption of the local plan:

- The Council work with Staffordshire County Council to identify suitable portions of developments sites within the local plan to meet the rising demand for adult social care provision.
- The council work with Primary care networks to increase GP capacity across the whole of the borough.

Strategic Employment Sites – the case against AB2 and the case for Chatterley Valley

The Labour group is opposed to the proposals for the AB2 employment site in Audley. Taking 80 hectares of land in the rural village of Audley out of the green belt and designating it as high-quality strategic employment site without the evidence base to do so and considering the significant recorded public opposition to the proposal appears to be flawed. The removal of green belt, the increase in traffic, noise and pollution combined with the lack of adequate local infrastructure across the locality is inappropriate, especially so when we already have Chatterley Valley strategic employment site that barely features in the Local Plan at all.

This is quite incredible considering Chatterley Valley has seen £3.5 Million investment from Staffordshire County Council into the site, alongside the £3.7 Million the borough council secured as part of the Kidsgrove Town Deal, and has seen infrastructure, utilities and access upgraded.

The Labour group further notes that under the duty to co-operate the Council did not approach Stoke-on-Trent Council, or Staffordshire County Council overuse of the Chatterley Valley development site in the local plan to meet the need for strategic employment sites. The Labour group is concerned that in the doing so, the Council has not legally satisfied the test within the Localism Act and therefore questions the proposal to meet the need for strategic employment sites through removal of land from the green belt.

Labour group proposals

Designating Chatterley Valley as a strategic enterprise zone would bring substantial economic, social, and environmental benefits to Newcastle-under-Lyme. It would unlock the area's potential for attracting investment, creating jobs, and fostering innovation while aligning with national strategies for regional development and sustainability. With its strong transport links and potential for brownfield redevelopment, Chatterley Valley is ideally positioned to become a thriving hub of economic activity.

Chatterley Valley is positioned near key transport links, making it ideal for a strategic enterprise zone. It lies close to the M6 motorway, the A500 (a key artery linking Stoke-on-Trent and Crewe), and major rail links, offering excellent access to the Northwest, the Midlands, and beyond. This location provides businesses with opportunities to easily transport goods and services across the UK, potentially reducing logistics costs and improving connectivity. The North Staffordshire region, including Newcastle-under-Lyme, has a long industrial heritage, particularly in ceramics, manufacturing, and logistics. This history has cultivated a skilled workforce that can readily adapt to new industries such as advanced manufacturing, logistics, and digital services. The creation of a strategic enterprise zone in Chatterley Valley would capitalize on this local expertise, attracting investment and providing job opportunities for the region.

Brownfield Redevelopment Potential

Chatterley Valley has a significant amount of underutilized and brownfield land, which presents a perfect opportunity for redevelopment without impacting greenfield sites. Developing this area would contribute to urban regeneration, transforming it into a hub for industries like green technology, logistics, or advanced manufacturing. Redeveloping brownfield sites aligns with sustainable development goals, boosting the region's environmental credentials.

Potential for Attracting Investment

Enterprise zones offer businesses tax incentives, simplified planning, and infrastructure support, all of which would make Chatterley Valley an attractive destination for both national and international investors. By designating it a strategic enterprise zone, the area could attract new companies and startups, as well as encourage the growth of existing businesses. This could significantly boost the local economy, creating jobs and increasing regional prosperity.

Locally, this would support Newcastle-under-Lyme Borough Council's economic plans, which focus on regeneration and business growth. The Labour Group want to see a borough strategy aimed at stimulating economic growth in the Midlands and the North to reduce regional disparities. Chatterley Valley could serve as a platform for innovation and the digital economy. With the rise of Industry 4.0, the area has potential to become a centre for businesses involved in automation, artificial intelligence, and digital services. The location could also foster collaboration with nearby Keele and North Staffordshire Universities, known for its research and innovation. Such collaborations could encourage knowledge transfer and innovation-led business growth.

Sustainability and Green Energy Opportunities

Given the global focus on sustainability and green energy, Chatterley Valley offers an opportunity for eco-friendly development. The site could house businesses focused on renewable energy, energy-efficient technologies, and sustainability initiatives. This would not only contribute to the Councils net-zero goals but also attract companies prioritising sustainable operations, helping to future-proof the local economy.

Adherence to genuine consultation and due process

The Council is well aware of the large number of complaints and concerns raised at the first consultation stage of the draft plan (1st November 2021 - 13th December 2021), these were largely but not confined to, complaints around lack of face-to-face briefings, forms not being made available as stated, and technical issues and failures of the on line portal. It was clear at that time that the consultation was targeted at highly competent, computer literate regular laptop users, who could cross reference up to 200 public documents through the portal avenue to answer 37 planning specific questions. The readability of the document was poor and out of line with good practise.

https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/100807/file47158.pdf,

Labour Councillors raised concerns that the consultation was too focused on the on-line portal and digital access, which we believed would lead to exclusion for thousands of elderly residents, as well as those who did not or could not afford their own laptops, tablets or computers. We felt this approach was contrary to the community engagement and digital exclusion policies previously agreed by the Council.

The Labour welcomed the fact that these issues were focussed on in the second stage consultation and in the main remedied.

However, the Labour group raised a serious issue at a meeting of full council on 24-07-24, where Council was to approve that the plan be agreed and put forward to regulation 19 stage, that critical evidence based documents were still not available to members of council or the public.

The motion highlighting this failure is attached here:

Labour Group Amendments to the Report Titled; Newcastle-under-Lyme Borough Local Plan 2040 of the 24-07-24

Background

The Newcastle Labour group of councillors met on Monday 22nd July to review the agenda for the meeting of full council taking place on 24-07-24. The agenda contained at item 5 - Newcastle-under-Lyme Borough Local Plan 2024. The item contains the paper which asks members and council to approve four recommendations as follows;

That Council: .

1. Approves the Final Draft Newcastle-under-Lyme Borough Local Plan 2040 (at Regulation 19 stage), the Sustainability Appraisal, Habitats Regulations Assessment and supporting documentation for public consultation in line with the approved Local Development Scheme;
2. Authorises the Service Director (Planning), in consultation with the Strategic Planning Portfolio Holder to make any necessary minor typographical changes and modifications to the Final Draft Newcastle-under-Lyme Borough Local Plan 2040, Sustainability Appraisal and Habitat Regulations Assessment prior to consultation;
3. Subject to the outcome of consultation, and if no matters are raised that materially impact upon the Plan strategy, authorises the Deputy Chief Executive in consultation with the Strategic Planning Portfolio Holder to submit the Final Draft Newcastle-under-Lyme Borough Local Plan 2040 and supporting documents to the Secretary of State for formal examination by the end of 2024;
4. Authorises the Service Director (Planning) to write to the appointed Inspector(s) at the start of the examination of the Final Draft Newcastle under-Lyme Borough Local Plan 2040 requesting them, under section 20(7C) of the Planning and Compulsory Purchase Act 2004, to recommend any main modifications necessary to ensure the Plan sound and legally compliant.

Issues identified

In relation to recommendation 1

When the Labour group met on the 22-07-24, some 48 hours before the meeting to consider the recommendations we observed that the following supporting documents (none exhaustive) were not available;

1. Infrastructure Delivery Plan
2. Infrastructure Delivery Schedule
3. Strategic Housing and Employment land availability assessment 2024
4. Site assessments
5. Green Belt Assessment
6. Strategic transport assessment
7. Water cycle study
8. Gypsy and traveller site selection report
9. Duty to co-operate statement of compliance
10. Housing supply and delivery position statement

Clearly, the expectation that members approve a local plan through to the regulation 19 representation period, which is the last stage of public engagement before submitting the draft plan to the Inspectorate for examination, is unreasonable and does not adhere to sound governance of the council.

This is a formal process that requires comments on the soundness and legal compliance of the plan.

Members wish to be in a fully informed position in order to move the plan through its statutory process.

In relation to recommendation 3

Consultation is technically any activity that gives people a voice, in this context it is an exercise to provide local residents, businesses and stakeholders a voice and an opportunity to influence important decisions relating to the Borough's local plan.

Consultation requires listening to local people and learning from affected people before decisions are made or priorities are set.

Councils have a statutory requirement to consult their residents, this is especially true for planning or redevelopments. There are strict rules surrounding how consultations are conducted, and a failure to adhere to this could render the council liable for a judicial review.

It is in this regard that recommendation 3 is manifestly problematic – to agree to submit the Final Draft Newcastle-under-Lyme Borough Local Plan 2040 and supporting documents to the Secretary of State for formal examination by the end of 2024, without affording council the time and space to review the consultation, in full, and to take account of residents, business and stakeholders views in our plan before submitting to the Secretary of State, does not accord with the fundamental principles of consultation compliance. A failure to demonstrate that council has undertaken meaningful consultation could leave council open to complaints of pre-determination.

The most common failures of local authority plans are due to inconsistencies with National Planning Policy, lack of evidence base and inadequate engagement. The amendments below seek to remedy any possible flaws in the plan and process. It is our view that a failure to do so would open the authority to the risk of litigation, reputational damage, and a loss of trust and confidence by those engaging with the process.

Proposed amendments

Replace recommendation(s) 1 and 3 with the following;

1. Council agrees to bring the final draft plan, and supporting documents to the September 2024 full council meeting seeking councils approval of the Final Draft Newcastle-under-Lyme Borough Local Plan 2040 (at Regulation 19 stage), the Sustainability Appraisal, Habitats Regulations Assessment and supporting documentation for public consultation in line with the approved Local Development Scheme.
3. Following completion of the consultation, council will meet to receive and consider the responses. If council agrees that no amendments to the plan are required and no matters are raised that materially impact upon the Plan strategy, council authorises the Deputy Chief Executive in consultation with the Strategic Planning Portfolio Holder to submit the Final Draft Newcastle-under-Lyme Borough Local Plan 2040 and supporting documents to the Secretary of State for formal examination at the earliest opportunity.

ENDS

Amendment Proposer

Cllr Dave Jones

Amendment Seconder

Cllr Andrew Fox-Hewitt

In response to this motion highlighting critical failures of due process, the Conservative group voted to dismiss the recommendations and voted to proceed to approve the plan through to regulation 19 stage.

The Leader of the Council, Cllr Simon Tagg stated at this meeting that it was not true that documents were unavailable prior to group meetings on the 22nd July, Subsequently to the council meeting however, a complaint and request under the Freedom of Information Act was made to provide details of when documents were made available. The Council response is here; (Table available in attachment)

As can be seen from the response, a total of 9 documents were in fact unavailable. The Labour Group therefore has serious concerns with the adherence to due process the probity of the Leaders actions in response to these issues being identified.

Conclusion

In summary whilst there is much within the Local Plan the Labour group can support, there are several weaknesses that we feel need to be addressed before the Local Plan can be adopted. These include:

I. Clear targets and delivery plan to ensure the ever-increasing demand for affordable and social housing is met over the lifetime of this Local plan.

II. Development of an integrated transport plan, including costings and delivery plan that is not subject solely to 106 contributions.

III. Work with existing primary schools in Knutton, Silverdale and Keele to explore potential expansion of their existing estate to increase pupil capacity.

IV. Work with Staffordshire County Council to identify capacity within proposed developments for provision of adult social care facilities.

V. Work with Primary Care Networks to identify mechanisms to increase GP capacity across the borough.

VI. Work with Staffordshire County Council and Stoke-on-Trent City Council to identify capacity within the Chatterley Valley site to accommodate the need for employment sites.

Further, the failure to co-operate on sharing of a major strategic employment site at Chatterley Valley, and concerns raised over the consultation process and availability of essential documents; further questions the plans compliance with the Localism Act.

Q4 Part of document	Policy
Q4 Policy	IN2
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>Why the Plan is Not Sound:</p> <p>While Policy IN2 addresses the need for sustainable transport and includes provisions for electric vehicle (EV) infrastructure, it is not sound due to several key shortcomings:</p> <ol style="list-style-type: none"> Lack of Specificity: The policy lacks clear, measurable targets for the deployment of EV infrastructure. It does not specify the number, type, or location of EV chargers that should be installed, particularly in areas like Kidsgrove where the current infrastructure is inadequate. Inadequate Existing Infrastructure: The policy does not sufficiently address the need to upgrade existing EV infrastructure. For instance, the 7kW chargers at Tesco in Kidsgrove are outdated and insufficient to meet current demand, and there is no mention of upgrading them to higher-output chargers. Insufficient Implementation and Monitoring Strategy: There is no detailed plan for the implementation and monitoring of EV infrastructure, which raises concerns about the policy's deliverability within the plan period to 2040. Without clear guidelines on funding and timelines, the policy may fail to achieve its objectives. Alignment with National Policy: Although the policy aims to support sustainable transport, it does not fully align with the National Planning Policy Framework (NPPF) because it lacks the detail and ambition needed to support the rapid adoption of EVs and ensure long-term sustainability.
Q7 Modification	<p>What Should Be Changed:</p> <ol style="list-style-type: none"> Set Clear and Measurable Targets: The policy should include specific targets for the number and type of EV chargers to be installed. This should be based on current and projected demand, with a focus on areas like Kidsgrove that currently have insufficient infrastructure. Upgrade Existing Infrastructure: The policy should include provisions to upgrade existing EV infrastructure, such as replacing 7kW chargers with higher-output units (50kW or more). This would ensure that the existing infrastructure can meet the growing demand for EV charging. Develop a Detailed Implementation and Monitoring Strategy: The policy should be supported by a clear implementation plan with timelines, funding mechanisms, and monitoring processes. This would ensure that the EV infrastructure is delivered effectively and on time, making the policy more effective and deliverable within the plan period. Strengthen Alignment with National Policy: To better align with the NPPF, the policy should incorporate more detailed provisions for EV infrastructure that support the transition to sustainable transport. This includes ensuring that the infrastructure is not only available but also accessible, equitable, and sufficient to meet future demand.

Title	Policy IN2: Transport and Accessibility
Consultee Company / Organisation	The British Horse Society
Consultee Family Name	Bannerman
Consultee Given Name	Wendy
Q4 Part of document	Policy
Q4 Policy	IN2

Q6 Details	<p>Dear Local Plan Team</p> <p>Reg 19 Local Plan Newcastle-under-Lyme</p> <p>The response below is from the British Horse Society however our volunteers in the county may also respond at a local level.</p> <p>Overall</p> <p>The British Horse Society is the UK's largest equestrian Charity, representing the UK's 3 million horse riders. Nationally equestrians have just 22% of the rights of way network – only 16.4% in Staffordshire - and are increasingly forced to use busy roads to access them.</p> <p>Between 01.01.2023 – 31.12.2023 nationally:</p> <ul style="list-style-type: none"> • 3,345 road incidents involving horses have been reported to The British Horse Society • Of these, 50 horses have died and 77 have been injured • 3 people have died, and 94 people have been injured because of road incidents • 23% of riders were victims to road rage or abuse • 82% of incidents occurred because a vehicle passed by too closely to the horse • 79% of incidents occurred because a vehicle passed by too quickly <p>'Planning policies and decisions should protect and enhance public rights of way and access, including taking opportunities to provide better facilities for users' (NPPF, s104).</p> <p>DEFRA has recorded a population of 755 horses in the ST5 postcode area (2021). The contribution per horse to the economy, according to BETA (2023), is £6,887, therefore in this case a contribution of £5,199,685 per annum. Equestrian activities in semi-rural areas (bring your horse on holiday, pleasure rides, competitions) are increasingly popular in addition to established activities such as schooling and hacking. The equine industry provides diverse employment (vets, farriers, feed outlets, saddlers, instructors, venues, liveries, etc). Promoting, nurturing and enabling equestrian access would support the equestrian industry.</p> <p>IN1 and IN2 Infrastructure and Transport</p> <p>Where there are opportunities identified to make existing footpaths useable for cyclists or new paths connecting the network, these should be multi-user routes for all vulnerable road users, including equestrians. Crossings/bridges/underpasses should be designed to include equestrians (eg 'pegasus crossings'). Several categories of public rights of way (bridleways, restricted byways and byways) and minor public roads are already shared by cyclists and other user groups. For maximum public benefit and fairness, the reciprocal approach should be implemented, i.e. that new cycle paths should be shared with other user groups. The provisions will futureproof the routes and engage a wider range of users in active travel and leisure which in turn will impact positively on health and wellbeing and road safety statistics.</p>

Title	Policy IN2: Transport and Accessibility
Consultee Company / Organisation	Cross Heath, Wolstanton and May Bank Branch Labour Party
Consultee Position	Branch Secretary
Consultee Family Name	Gorton
Consultee Given Name	Richard
Q4 Part of document	Policy
Q4 Policy	IN2
Q6 Details	<p>Policy IN2: Transport and Accessibility – while we welcome the stress placed throughout the draft Plan on the importance of using public transport to connect people to their homes, places of work, schools, colleges, shops and leisure and entertainment venues, we feel that the document does not pay sufficient attention to the challenge of using public transport, particularly buses, when operators have axed routes and reduced the frequency of many services. We note that some of the sites in rural areas which have been provisionally identified for development are poorly served by public transport.</p> <p>Apart from a reference a 'link road between A525 Keele Road and Whitmore Road' and improvements to Talke Signals (A38 Newcastle Road/ Congleton Road/ Coalpit Hill), the draft Local Plan fails to identify major improvements to the road network which will be needed to deliver the connectivity and prosperity the Plan is supposed to underpin. Branch members were disappointed that at Regulation 19 stage there was no reference in the Local Plan to improving access to M6 at Junctions 15 and 16.</p> <p>Under the accessibility heading, we understand that there have been examples of developers following approval of planning applications, approaching the Borough Council to secure a reduction in the number of car spaces reserved for drivers with disabilities. We believe this to be a thoroughly bad practice and would ask the Borough Council to include a statement in the draft Plan which would discourage developers from putting forward applications of this kind.</p>
Q7 Modification	Modification of Policy IN2 – The Branch believes that the draft Local Plan would be strengthened if it included a detailed and costed integrated transport plan which addressed the current problems faced by residents when trying to access public transport (cuts to routes and decreased frequency) and explained how an integrated transport plan would support both housing growth and economic development.
Q9 Hearing reasons	<p>Conclusion</p> <p>Cross Heath, Wolstanton and May Bank Branch Labour Party welcomes the opportunity to give its views in response to the Regulation 19 stage of the draft Local Plan. If it is felt to be appropriate, a member of the Branch would be prepared to take part in the public scrutiny of the draft Local Plan.</p>

Q4 Part of document	Policy
Q4 Policy	IN2
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>Policy IN2 is generally supported. However, there is need for some amendment to ensure consistency of approach and references to the relevant Transport policy and strategy documents of the County Council.</p> <p>IN2 Policy part 8 state that 'Development should take account of the Local Transport Plan and Bus Service Improvement Plan.' This part of the Policy should also include reference to the Local cycling and Walking Infrastructure Plan and Borough Integrated Transport Strategy.</p> <p>In the supporting information section bullet points 10.13 and 10.16 both refer to the LTP, which leads to duplication and potential confusion. We suggest these are merged and replaced with the text in part 7 below to aid interpretation of the Policy.</p>
Q7 Modification	<p>Policy IN2 part 8 should be amended to read:</p> <p>'8. Development should take account of the Local Transport Plan and associated documents including the Borough Integrated Transport Strategy, Bus Service Improvement Plan and Local cycling and Walking Infrastructure Plan.'</p>

	<p>In the Supporting Information paragraphs 10.13 and 10.16 should be combined into the following to avoid duplication and misinterpretation:</p> <p>'The Local Transport Plan, prepared by the County Council provides for an important reference guide to how the highway authority will respond to planning applications. The Local Transport Plan and associated documents should be considered in the development of any planning application. The most up to date iteration of the Infrastructure Delivery Plan will also be a significant determinant in establishing appropriate mitigation requirements.'</p>

Title	Policy IN2: Transport and Accessibility
Consultee Company / Organisation	National Highways
Consultee Position	Assistant Spatial Planner
Consultee Family Name	Pyner
Consultee Given Name	David
Q4 Part of document	Policy
Q4 Policy	IN2
Q6 Details	<p>Newcastle-Under-Lyme Local Plan Review - Regulation 19 Consultation (Final Draft)</p> <p>National Highways welcomes the opportunity to provide comments on the Final Draft Local Plan consultation (Regulation 19) prepared for Newcastle-Under-Lyme Borough Council, which is expected to cover the plan period up to 2040.</p> <p>National Highways has been appointed by the Secretary of State for Transport as a strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the Strategic Road Network (SRN). It is our role to maintain the safe and efficient operation of the SRN whilst acting as a delivery partner to national economic growth.</p> <p>In relation to this consultation, National Highways' principal interest is ensuring the safe and efficient operation of the SRN in the area, notably the M6, A50 and A500 network which routes through the Local Plan boundary.</p> <p>In responding to Local Plan consultations, we have regard to the Department of Transport's (DfT) revised Circular 01/2022 - Strategic Road Network and the delivery of sustainable development ('the Circular') which sets out how interactions with the SRN should be considered in the making of local plans. Paragraph 28 of the Circular sets out that:</p> <p>"The policies and allocations that result from plan-making must not compromise the SRN's prime function to enable the long-distance movement of people and goods. When the company assists local authorities in the development of their plans and strategies, the local authority should ensure that the SRN is not being relied upon for the transport accessibility of site allocations except where this relates to roadside facilities or SRN-dependent sectors (such as logistics and manufacturing). The company will also work with local authorities to explore opportunities to promote walking, wheeling, cycling, public transport and shared travel in plan-making, in line with the expectations set out in the NPPF and the Transport Decarbonisation Plan."</p> <p>In addition to the DfT Circular 01/2022, the response set out below is also in accordance with the National Planning Policy Framework (NPPF) and other relevant policies.</p> <p>Previous Consultations</p> <p>National Highways was consulted during the Regulation 18 consultation in August 2023. The Regulation 18 identified a minimum requirement of 7,160 dwellings (358 per year) and 69 hectares of employment land to be delivered during the plan period between 2020 and 2040. It also included potential sites for allocation, and we provided an indication of the potential sites that were expected to have traffic and boundary impacts on the SRN.</p> <p>In May 2024, National Highways was consulted to provide recommendations for the Infrastructure Delivery Plan preparation, where we provided comments on the infrastructure requirement.</p> <p>Final Draft Local Plan Regulation 19 Consultation</p> <p>The Final Draft Local Plan Regulation 19 includes locally specific policies and strategic / non-strategic site allocations to meet housing and employment needs across the Newcastle-Under-Lyme area for the plan period of up to 2040. Once adopted, this Local Plan will replace the policies in the Newcastle-Under-Lyme and Stoke-on-Trent Core Spatial Strategy (adopted 2009) and the saved policies of the Newcastle-Under-Lyme Local Plan (adopted 2003). Appendix 2 of the Local Plan consultation document outlines the list of previously adopted policies that will be retained or replaced.</p> <p>In principle, National Highways supports the vision and objectives set out in the Regulation 19 Draft Local Plan which aim to deliver the growth in a sustainable manner.</p> <p>Housing and employment requirements</p> <p>Based on our review of the Regulation 19 consultation, we note that the Final Draft Local Plan outlines a minimum requirement to deliver 63 hectares of employment land and 8,000 dwellings (400 dwellings per annum) over the plan period of up to 2040 as stated in the 'Policy PSD1: Overall Development Strategy'. We welcome that the housing and employment requirement have primarily been determined</p>

using a Housing and Economic Development Needs Assessment (HEDNA) in 2024, which in this case is expected to provide a higher housing demand when compared against the Government's standard method.

We acknowledge that a Sustainability Appraisal (SA) process has been undertaken to evaluate the different growth options considered, assess the impacts and identify the residual effects based on the social, economic and environmental parameters.

As outlined in Table 2 of the Final Draft a total of 8,663 dwellings are planned to be delivered over the plan period of up to 2040 to meet housing demands. This also includes a supply buffer of around 8.3% to address any potential delivery challenges. We acknowledge that the supply also factors in the windfall allowance estimated based on the Council's Strategic Housing Land Availability Assessment (SHLAA), historical trends, and future projections.

Policy SA1: Site Allocations indicates that a significant portion of the housing supply will be delivered through strategic allocations. When comparing the allocation sites included in the Regulation 19 consultation against those set out in the Regulation 18 consultation, we note some minor changes in the scale of growth at individual sites, with a few sites being removed and others added. However, the total housing growth from all strategic allocations remains at 4,512 dwellings. The table below outlines these changes (tables included in the attachment)

In the case of employment supply, we note that AB2 (Land at M6 Junction 16) and KL15 (Land at Barkers Wood, Keele) are key strategic sites contributing significantly to meet the employment needs.

Sustainable transport

We acknowledge that the Final Draft Local Plan has focussed on decarbonisation policies such as 'Policy CRE 1: Climate change' and 'Policy CRE 2: Renewable energy' to address climate change impacts by reducing carbon emissions. This also includes developing energy-efficient buildings, designing to BREEAM Excellent standards, optimising water use, adopting water conservation measures, and utilising renewable or low-carbon energy sources.

'Policy IN2: Transport and Accessibility' emphasises that new developments must provide access through sustainable transport modes to protect the integrity of the highway network. The Council will work with developers to ensure that the proposals contribute to a transport network that is accessible, efficient, and safe. We support this policy and acknowledge that developments likely to generate significant traffic will be required to produce Transport Assessments and Travel Plans, in accordance with the requirements set out. We appreciate that focus is also given to developments that facilitate sustainable movement of freight traffic.

'Policy IN4: Cycleways, Bridleways, and Public Rights of Way' highlights the importance of enhancing walking, cycling, and public transport facilities within the Borough.

We welcome these policies and note that these align with the expectations set out in the National Planning Policy Framework and National Highways' Net Zero Strategy.

Transport Evidence Base

Considering the scale and location of the allocations included in the Draft Final Local Plan, we expect impacts on the SRN in the area either independently or cumulatively.

Strategic Transport Assessment (document reference ED011)

We acknowledge that a Strategic Transport Assessment (STA) dated July 2024 has been prepared using the North Staffordshire Multi-Modal (NSMM) transport model to assess the likely traffic impacts of the site allocations proposed in the Regulation 19 consultation. We note that the model has been run for the following five scenarios in the forecast year of 2040.

Based on our review of the STA, we have the following comments to make:

Section 4.5 of the STA states that while the model emphasises the use of pre/post-COVID data, we note that accident data for the years 2018-2022 includes COVID data with relatively lower traffic flows and possibly fewer accidents. How has the impact of COVID been taken into account?

Section 5.3 of the STA states that the 2015 NSMM model is overestimating the flows by 26-28% when compared against 2022/23 observed WebTRIS data. It also notes that only 15-35% of counts pass in this validation exercise. Despite this shortcoming, model forecasts for 2040 were proposed to be used to inform future testing, which National Highways agreed to as it presents the worst-case scenario with overestimation of the traffic.

Section 7 provides details of the reference case model development, but note that finer details of the method applied are missing. We therefore have the following queries relating to this section:

- Does this scenario include constraining other local authorities to NTEM/TEMPPro?
- Does this scenario include any committed and under-construction developments within the local plan area?
- What is the background growth percentage between the base year and the forecast year 2040?

Regarding Figure 7-1, we are unable to find the basis for changing the junction delay definitions for slight, moderate, and severe delays from what was mentioned in the minutes of the meeting dated 15th May 2024. At present, delays of up to 3 minutes at junctions are reported as slight which is arguable.

Based on the model outcomes, improvement measures to enhance public transport connectivity and infrastructure schemes on the local highway network are proposed in the STA. We also note that a detailed junction assessment will be undertaken for M6 J16 using a VISSIM model to accurately assess the traffic impacts of the AB2 allocation.

Regarding Section 8.3.2, bullet 1, we interpret that the new junction is the access to site AB2. Thus, we are surprised that the design of this new junction would still lead to 120-180 seconds of delays in the PM. A new access arrangement should work without that much stress.

We request that a summary table with delays (absolute numbers in seconds) at each of the approaches be prepared and shared with National Highways for M6 J16 and the new junction on A500 for site AM2. This is so we can understand the changes in delays between the base, reference case, and proposed scenarios.

We request that the basis for the 10% reduction in car users for the area around site AB2 set out within Section 8.6.6.1 be supported by further evidence.

We also request further details on how much total demand (in PCUs or vehicles) has been removed from the original matrix. Has a preliminary assessment been undertaken on the frequency of bus service that would be required to cater to that demand during peak hours to verify that this is a feasible option?

Regarding Section 8.6.3, while we do not have an issue with the bespoke approach to testing M6 J16 within VISSIM, considering that the NSMM is overestimating the traffic, the use of incremental addition of the difference from the NSMM may lead to an underestimation of traffic at this junction due to large delays in the NSMM reference case scenario. There is a possibility that any additional traffic from the AB2 site may divert to local or unrealistic routes within NSMM.

We therefore request that traffic flow distribution Select Link Analysis plots from site AB2 be shared with National Highways to verify that the routes assigned in the model are reasonable before being used for incremental addition for microsimulation assessment.

We also request that observed base and modelled reference case data be presented in a similar format as Table 8-6 for National Highways to understand the absolute traffic growth at each of the approaches.

National Highways Previous comments

While we are happy with the suggested incremental change in flow and delays analysis for 2040 forecast year models, we must establish a robust do – minimum reference case scenario developed using the base year model.

We note that our previous query dated May 2024 remains unanswered: “The further turning count comparison tables for the M6 J16 model are appreciated and provides comfort that many movements (particularly the A500 East approach) match the 2015 model. However the turning proportions provided for the M6 South to A500 East movement are of concern as these look significantly different to those that were modelled. National Highways would like to understand if there are any explanations of why these differences have occur and particularly why the model identifies such low percentage of car movements?”

STA Comments Summary

In summary, the modelling work to date is based on the NSMM model, which was previously approved by the DfT for other schemes. However, present-day validation using 2022/23 data shows that the model is overestimating traffic and not validating well. Hence, a bespoke approach is applied to assessing M6 J16, while the rest of the strategic assessment uses the forecast 2040 NSMM model which is still believed to be the best tool available. Analysis provided shows that parts of the A500 and junctions along it will be stressed by 2040 and that the level of stress will increase with the local plan. Strategic allocation sites tested will lead to some congestion but this would not lock out the network. The STA and IDP mention the possibility of developers’ contributions for various infrastructure schemes including a new bus service along site AB2 among others that could potentially bring congestion levels down to a more comparable level with the reference case scenario, which should be acceptable.

We request responses to our queries above but are hopeful that the Local Plan can work with some support from the developers to mitigate any impact on the SRN.

Infrastructure Delivery Plan (IDP)

A total of 28 transport development schemes are listed in Table A.1 of Appendix A of the IDP to enhance the transport network and promote sustainable transport. The schemes that are of interest to National Highways are:

1. T9 (improvements between M6 J13 and J15) - part of the RIS 2 scheme
2. T14 to T20 schemes

We note that the finalisation of these schemes is subject to undertaking detailed junction capacity assessments. We appreciate that the list of potential allocations that are likely to impact the SRN has been included.

T14 specifically mentions a “Potential mitigation scheme involving widening and an additional lane at the gyratory on M6 J16. VISSIM modelling work is currently ongoing, and the need for any potential mitigation measures can be confirmed after the completion of a detailed capacity assessment as part of the planning application stage.” It should be noted that there is no confirmed scheme from National Highways perspective at the moment, and we seek confirmation as to whether such a scheme is included in the Local Plan assessment within Scenario 5.

We note that the funding mechanism to implement these mitigation schemes including T14 will likely be through developer funded Section 278 agreements. Considering that there could be cumulative impacts from different allocations in the area, a Section 278 agreement is likely to result in a piecemeal approach to the delivery of the improvement works. We would welcome some clarity on why a Section 278 agreement is preferred over a Section 106 agreement for the funding mechanism in this case.

Duty to Cooperate

We note that a Duty to Cooperate Interim Statement of Compliance has been submitted as part of the evidence base alongside the Final Draft Local Plan. We commend the Council's approach to collaborating with neighbouring local authorities, stakeholders, and other bodies to address issues related to local authority boundaries. This collaborative effort will help ensure that all parties' interests are considered and that a comprehensive solution is developed.

National Highways is committed to working with Newcastle-Under-Lyme Council to develop and draft a Statement of Common Ground (SoCG) to address any strategic cross-boundary issues and reach an agreement on how the traffic impacts from the allocations identified in the Local Plan are to be dealt with. We understand that a final version of the Duty to Cooperate will be prepared to support the submission version by December 2024.

Once again, National Highways appreciates the opportunity to comment on the Final Draft Local Plan Regulation 19 consultation and looks forward to working collaboratively with the Council to support the development and adoption of the Local Plan for Newcastle-Under-Lyme.

Title	Policy IN2: Transport and Accessibility
Consultee Family Name	Jones

Consultee Given Name	Cllr David
Q4 Part of document	Policy
Q4 Policy	IN2
Q6 Details	<p>Introduction</p> <p>The Labour group on Newcastle-under-Lyme Borough council represents the authority's principal opposition group. The group comprises of 18 of the 44 total council members on the authority. Throughout the local plan process, the Labour group has scrutinised the plan, when afforded opportunity to do so, during scrutiny committee, planning committee and full council. Though several recommendations have been proposed, these have not been taken into account by the administration, and therefore the final version of the plan (at Regulation 19 stage) has not taken account of opposition suggestions. This response outlines several concerns that we feel critical to the success of the plan, and pertinent to the planning inspector during official examination of the plan.</p> <p>Overview</p> <p>The Labour group acknowledges the significant amount of work put into preparation of the regulation 19 pre-submission draft local plan. The Labour group acknowledges the need for a functional and sustainable local plan to ensure development within the borough is guided towards areas of unmet need, or suitability. We wish to be clear that there are many areas of the proposed plan that we agree with and support. However, there are areas of the plan where we have concerns. Whilst these concerns make up most of our comments, they are presented with due respect to several areas of the plan where we agree. We are committed to getting good value for money on behalf of our residents and delivering economic growth, but also protecting green spaces. Therefore, we are unable to support the plan in its current form, where the plans aspirations are unlikely to be matched by realised commitments. Our specific concerns, and proposals to help alleviate these are as follows:</p> <p>Housing Targets</p> <p>During Regulation 18 examination of the local plan the Labour group raised concerns over the adoption of a housing target of a minimum of 8,000 dwellings from 2020-40 equating to 400 dwellings per annum. Our objections to this housing target were based on a national minimum housing target calculation of 330 p.a. We further note that the housing and economic needs assessment commissioned by the council models a housing need of 347 p.a.1. In providing evidence for the adopted housing target of 400 dwellings p.a. the council relies on modelling provided by the housing and economic needs assessment update that suggests a forecast job creation of at mid-point between modelling forecasts 207 p.a.1, with a blended approach suggesting 237 p.a.</p> <p>The Labour group notes the concern raised over available modelling data in the Turley Report:</p> <p><i>"These are though becoming dated, with each provider having released new forecasts in the last year which envisage the creation of between 194 and 364 new jobs per annum between 2023 and 2040. Either would represent an improvement on the past trend, with Newcastle-under-Lyme having created only 20 jobs per annum on average since 2009, but the higher forecast – from Cambridge Econometrics – appears particularly optimistic given that it adds 100 jobs per year to its previous forecast, presented in the HENAU. This appears due to an unexplained upgrading of the growth prospects of three sectors that have not actually created any jobs in Newcastle-under-Lyme over the past five years, suggesting a need for caution before assuming that these sectors will indeed create far more jobs than forecast only a year ago."</i></p> <p>Turley (March 2024) Housing and Economic Needs Assessment Update: Newcastle-under-Lyme</p> <p>Based on these job growth forecasts, the report recommends a housing need of 400 dwellings p.a. The Labour group notes that the Regulation 19 Draft Plan identifies a housing need of 400 dwellings p.a. Consistent with this assumed significant growth forecast in jobs p.a., whilst noting that such housing numbers would be dependant on a 1085% increase in job creation p.a. The Labour group has significant concerns that the level of house building will not match job growth, and thus raises objection to the sustainability of these developments.</p> <p>Delivering Affordable and Social Housing</p> <p>The Regulation 19 Draft Plan does not set specific targets for delivery of affordable or social housing. With no clear target on delivery, the Labour group has significant concerns that over the lifetime of the plan limited development of these much-needed dwellings will occur.</p> <p>The Turley report identifies a calculated need of 278 affordable homes p.a. Whilst challenged on this number, the report does highlight the growing demand on the housing register but assumes that this growth will be met through rising earnings and private sector offerings. The Labour group challenges this assertion, given that wage growth has vastly tracked behind house price, and average rental costs, growth; and that mortgage affordability has been impacted by a significant rise in the Bank of England base rates. The Labour group has concerns that such assumptions will lead to an under-delivery of affordable homes.</p> <p>The Regulation 19 Draft Plan recommends a number of policies for delivery of affordable and social housing. These are formed under Policy HOU1 Affordable Housing and include:</p> <p><i>"On-site affordable housing provision will be required on sites of 10 dwellings or more, or sites of 0.5ha or more at the following percentages:</i></p> <ul style="list-style-type: none"> <i>a. 30% of all units on greenfield sites.</i> <i>b. 15% of all units on brownfield sites within the 'low value zone' as shown on the policies map.</i> <i>c. 25% of units on brownfield sites within the 'high value zone' as shown on the policies map."</i> <p><i>"Given the acute need for social rented accommodation, the HNA Update (2024) recommends the tenure split of affordable homes to be 65% social rented, 10% other affordable housing product and 25% affordable home ownership through First Homes. Opportunities should also be taken to include a proportion of affordable older persons accommodation as part of the affordable housing provision, particularly involving care provision. Planning permission may be granted for an alternative tenure split provided that robust evidence demonstrates that a different split is more suitable. This will be informed by market conditions and local housing need at the time"</i></p>

Unfortunately, at the time of writing we have not been able to locate within the Policies Map document any reference to distribution of sites across 'low vale' and 'high value' zones. However, on the assumption that delivery across non-greenfield sites will amount to 20% of dwellings in developments of 10 dwellings or more, or 0.5ha in size. On this assumption of the 400 dwellings-built p.a, only 80 p.a will be affordable or social housing. This is dramatically below the number of affordable or social rent dwellings needed. Whilst the plan mentions delivering affordable housing, the Labour Group finds no tangible commitments that provide reassurance of its delivery. Current housing policy has largely failed to produce affordable housing due to systemic issues affecting supply, demand, and financing. The introduction of 'Right to Buy' has seen local authorities struggle to replace housing stock, while lengthy approval processes, excessive regulations, and permitting delays have hindered new builds. Rising construction costs, driven by increased material prices, labour shortages, and supply chain issues, have pushed developers towards high-end housing. Limited government support, insufficient subsidies, and poorly targeted incentives have compounded the problem, with the previous government (2010-2024) failing to allocate adequate funding or attract developers. Housing is increasingly treated as an investment asset, with speculative bubbles inflating prices and reducing affordability. Ineffective policies, such as underfunded public housing and rent controls, exacerbate these challenges. In areas like Newcastle-under-Lyme and wider North Staffordshire, wages lag behind housing costs, leading to an affordability gap. Existing rental assistance schemes are often inadequate, failing to cover the full rent cost, and there is a failure to address the needs of the homeless and vulnerable populations, leaving affordable housing out of reach for those who need it most.

The Labour group believes the policies within the Regulation 19 Local Plan will not lead to the delivery of 278 affordable homes p.a. That whilst the commitment to secure between 15-30% of dwellings as affordable homes is a good first step. To meet the demand required, the policy would need to see 70% of new developments as affordable or socially rented. Whilst the Labour group accepts that this percentage would potentially deter developers, we have significant concern that the current 15-30% range will not be met. Rising construction costs has seen a significant number of developments across the borough seek to vary their social housing contributions under 106 agreements. This has led to significant under delivery of these much-needed homes across the borough. The Labour group proposes a recommendation to improve the deliverability of affordable and social housing.

Labour group proposal

That for developments on public owned land, the minimum percentage of dwellings allocated for affordable and social rented homes is increased to 50%. Given that several large housing developments will occur on either Borough or County Council owned land, and increased allocation in these areas, where land purchase is not necessary will address significant shortfall between anticipated built and need.

Further, whilst outside of the material considerations for the local plan, the Labour group proposes that the Council explore alternative options for delivery of affordable and social housing, including the reintroduction of council stock should delivery continue to be deficient.

The Council generally works with housing developers and other stakeholders to facilitate affordable housing projects – but these have not and will not meet the demand or provide the foundations required for the next twenty years. The argument for our council returning to build council houses revolves around several key points, emphasising the need for more affordable housing, the limitations of private market solutions, and the role of public investment in addressing the housing crisis.

If council builds and retains its housing stock, we create long-term assets that generate rental income and remain under public control. This is a sustainable approach to housing provision, as opposed to relying solely on private developers who may prioritise short-term profit over community needs.

Our proposal to return to council housebuilding is seen by our group as a crucial solution to the affordable housing crisis. By taking control of housing supply, council can directly address the needs of vulnerable residents, provide stability, and counter the failures of market-driven housing policies. Investing in council housing is also a long-term, sustainable approach that can contribute to the overall health and well-being of communities within the Borough.

Transport

It is important for local planning authorities to undertake an assessment of the transport implications in developing or reviewing their Local Plan so that a robust transport evidence base may be developed to support the preparation and/or review of that Plan.

Bus services connect the main towns in Staffordshire & Stoke-on-Trent and provide cross boundary links with neighbouring authorities and towns. Whilst bus services have declined in recent years, they continue to provide vital connections between people, services and places of work and enable people to make more sustainable travel choices.

Staffordshire & Stoke-on-Trent's bus network is operated by several private operators including Arriva Midlands, First Potteries (operating 70% of services in Stoke-on-Trent), D & G, and National Express West Midlands who are significantly increasing their presence in the county. Diamond Bus, Stagecoach and Select Buses also operate services on selected routes.

Key public transport issues include congestion and unreliable journey times, limited frequency of services and falling bus patronage levels affecting commercial viability. To reduce per capita road transport emissions, Staffordshire County Council wish to improve walking, cycling and bus facilities, and are promoting their use to encourage a modal shift away from car use.

Rail connectivity in Staffordshire is currently delivered through a comprehensive rail network and several different franchises. The West Coast Main Line is 700 miles in length from London Euston to Glasgow via Birmingham providing fast services from several Staffordshire stations to London. It is one of the busiest freight routes in Europe and part of the Trans-European Transport Network (TEN-T) route, carrying 40% of all UK rail freight traffic. There are at least 14 train operator companies using this line. Cross Country operate services from the South Coast, Reading, and Birmingham to Manchester calling at Stafford and Stoke-on-Trent. The Crewe to Derby Line which runs via Stoke-on-Trent and Uttoxeter currently suffers from overcrowding.

The local plan makes no proposals to address these issues other than a reference to:

High Speed Two (HS2) services will pass through Staffordshire when Phase 1 is operational. HS2 services will stop at Stafford Station and will improve journey times and connectivity to London and

Birmingham. Phase 2b will provide further improvements in journey times and capacity from Stafford to London, Birmingham and the North West, while 27 releasing capacity on West Coast Main Line services for other Staffordshire & Stoke-on Trent stations.”

Since the publication of the draft plan the HS2 project has been scrapped by the previous Conservative government.

“The need for a link between the M54 and the M6 was identified in the 2014 Road Investment Strategy (RIS) to relieve congestion on the A460, A449 and A5. The preferred option was announced in 2018 (and a planning application submitted in 2020) which includes a dual carriageway link between M54 J1 and M6 J11 and associated improvements. 6.9. The Midlands Connect studies for the A50 / A500 and A5 have already begun to consider how congestion issues can be addressed and growth supported along these key corridors. The case for investment and opportunities to deliver transport interventions to accelerate growth in the region are being explored. This will lead to preferred investment priorities along these routes which will likely need to be delivered to fully realise the growth potential of Staffordshire & Stoke-on-Trent.”

No further announcements on this road infrastructure have been announced.

Critically however, there is no mention of improved transport links to the Town centre or the Royal Stoke Hospital or the new planned Integrated Care Hub at Bradwell or a plan to improve connection to the rural areas of the borough.

As part of the evidence base for the local plan the Council commissioned a Strategic Transport Assessment by Sweco UK Limited. The SWECO report outlines the existing pressures on the highways network throughout the borough, including the following locations:

- Slow moving traffic observed in and around Newcastle-under-Lyme centre,
- Some limited speed reductions in southern areas of Newcastle-under-Lyme Borough, Madeley and Audley,
- Slow moving traffic on the A34 Newcastle Road from the A500 to north of Clough Hall Drive though largely no queuing. Some traffic congestion on signalised roundabout”

SWECO (July 2024) Strategic Transport Assessment

The draft local plan makes no reference to these existing pressures, nor does it provide any solutions to these pressures.

The SWECO report also notes the existing pressures on links to the strategic road network, notably the M6 and A500.

“• M16 J16 - Observed data shows traffic congestion along the A500 eastbound approach with decreased speeds (0-10mph AM, 10-0mph PM)

- M6 J15 - The speed data indicates that queued traffic (speed 1-10mph) is observed along the A500 approach to the A500 Queensway\ Newcastle Road roundabout in the PM peak,
- A500\Alsager Road – Can be inferred from data to be operating without any capacity related congestion,
- Talke Interchange - Some relatively slow-moving traffic, along the section between the Newcastle Road\Talke Road roundabout. However, the data indicates that this is slow moving traffic, but in general the data does not show any large reductions in speed due to queuing,
- A500/A527 - Data indicates that traffic is operating without the presence of queues long term queues during the peak hour,
- A500/A34 -In the AM peak observed speeds of around 20-30mph are in line with the speed limits in place on the A34. This is with the exception of the A34 northbound approach to the gyratory which shows lower observed speeds of around 10-20mph. In the PM peak lower speeds of 10-20mph are also observed on the southbound approach to the gyratory.”

SWECO (July 2024) Strategic Transport Assessment

Again, there are no proposals within the local plan to address these existing pressures on connectivity to the wider strategic road network.

The SWECO report modelled the impact of housing and strategic site developments on traffic flow and made the following conclusions.

Keele:

“It can be seen that there is a further worsening from the core-only scenario with now severe congestion forecast in both directions of Keele Road between the University and Gallowstree Lane roundabout. Evidence of re-routing is seen with increases in V/C forecast for Mill Street in Silverdale. Moderate junction delay issues begin to become apparent at the signalised junction of Cemetery Road/Church Lane/B5044. These patterns are also visible in the difference plots (Figure 8-15 and Figure 8-16) where volume has increased around the B5044 (Silverdale), A525 (Keele Road) and A53. It should be noted that the NSMM model is developed within the CUBE modelling software application. A limitation of the CUBE software is that it does not model blocking back (traffic queuing back to previous road links with potential to impact other links and junctions). Therefore, there is the possibility of additional related impacts to queuing traffic on Keele Road, for example to the Keele University roundabout.”

SWECO (July 2024) Strategic Transport Assessment

The report recommends mitigations at Keele:

“A new link road running between University Avenue/Barkers Wood Road to Whitmore Road. The link road will be a 30mph 7.3m wide road connecting the A525 with the A53 to provide an additional route to distribute trips and relieve pressure on the A525.

A new circular bus service serving Newcastle-under-Lyme bus station, Keele University, KL15, KL13, TB19, and SP11 sites via Keele Road, the new link road and Whitmore Road.”

The report notes the impact of these mitigation measures:

For Keele, the mitigation measure of a new link road added between the University and Whitmore Road is seen to have a positive impact on the reduction of traffic on Keele Road between the University Roundabout and Gallowstree Lane.

It can be seen that during the AM period, westbound traffic is most improved whilst in the PM period, eastbound traffic is most improved. This is likely to be of significant improvement for University traffic and related bus services.

It can also be seen that the mitigation brings volume back or nearly back to capacity for each direction and period. There is potential for additional improvements to be made with high impact travel plans and other local bus service improvements."

SWECO (July 2024) Strategic Transport Assessment

The Labour group notes that this report only mitigates the impact of the proposed developments, and in doing so "brings volume back or nearly back to capacity for each direction and period". The Labour group has significant concerns that the mitigation measures proposed in the report are not sufficient to provide long-term sustainable traffic flow in the area.

The report recommends the following mitigations at Audley:

"Bus provision connecting employees within Stoke-on-Trent, Newcastle-under-Lyme and Crewe with AB2 employment. It is assumed the service is timed to meet the needs of any shift patterns and enable some connection with other existing public transport services. This is expected to be a replacement for 10% of car trips originating in nearby zones that could use this and other existing public transport services to access AB2 within 1 hour."

SWECO (July 2024) Strategic Transport Assessment

The report recommends the following mitigation measures in Talke:

"Extension of the NW-bound Newcastle Road two-lane approach to the signalised junction at Newcastle Road/Coalpit Hill. This will give additional space for right-turning traffic that is leading to junction delay issues in scenario 2 – core local plan sites."

Cedar Avenue – Community improvements to Cedar Avenue to increase attractiveness of walking, wheeling, and cycling (not able to model in the strategic NSMM transport model)."

SWECO (July 2024) Strategic Transport Assessment

The Labour group notes the Local plan has identified mitigation measures at Keele and Talke:

"13. Transport infrastructure identified through the Strategic Transport Assessment will be supported. This is to include: - a. a link road between A525 Keele Road and Whitmore Road. b. Improvements to Talke Signals (A34 Newcastle Road / Congleton Road / Coalpit Hill)"

SWECO (July 2024) Strategic Transport Assessment

Labour group notes that funding for these mitigation measures will be identified via 106 funding levied on developments in the area. The Labour group has significant concerns that mitigating the impact of these developments will require 106 funding, and that given the impact of rising cost of living, several developments have proceeded following waiver of the 106 funding requirements. We note within the councils own Infrastructure Baseline Report the following:

"At the same time, it is critical that any infrastructure expectations do not disincentivise development to such an extent that it becomes unviable, thus inhibiting Newcastle-under-Lyme's growth opportunities. This challenge is particularly acute in those parts of Newcastle-under-Lyme where land and property values are low and profit margins on development are small or even non-existent. In some parts of the Borough, the private sector will not be able to meet all of the infrastructure/policy requirements which are ultimately set out in the Local Plan. In such cases, an appropriate balance will need to be struck between competing interests and demands."

NBC (July 2024) Infrastructure Baseline Report

The Labour group also notes the Strategic Transport Assessment provided by the SWECO report does not include assessment of the impact of public transport, outside of assumed reductions in car usage. The borough of Newcastle-under-Lyme, like many other post-industrial non-metropolitan districts, can be considered as a deprived public transport area. Within the borough, public transport is provided via the bus network, and thus subject to the impact of increased traffic and lack of mitigation. At present, travel from Newcastle to connecting rail network stations at Stoke is a 40-minute bus journey outside of periods of high traffic congestion, with a 1 hour journey to Crewe. The Labour group has concerns that the local plan, whilst referring to increased walking and cycling, has no reference to improving the outdated, inefficient, and poor provision of existing public transport across the borough.

Labour group proposal

The Labour group wants to see the local plan have firm detailed and costed plans for a fully integrated transport plan that serves the current and proposed needs of our communities. That such integrated transport plan involves the combining of different modes of transport to maximise ease and efficiency for the user in terms of time, cost, comfort, safety, accessibility and convenience. We are aware that the cuts to bus routes and times across the borough are leading to difficulties in accessing employment, education and health services. We also know that lack of connectivity leads to social isolation.

The Labour group expects to see how the borough plans to address the needs of residents within the borough, demonstrate how it supports the proposed growth in development and population in the plan by working with bus operators, planners and other local authorities such as Staffordshire County Council and Stoke on Trent City Council to get Newcastle moving and growing.

Education

The Borough of Newcastle is divided into two distinct areas for the purpose of school place planning: 1) Newcastle and 2) Kidsgrove. These areas are further broken down into smaller planning areas, which are used to determine the number of school places required. These smaller planning areas have been grouped based on the geographical location of schools and by analysing pupil movement between schools and catchment areas.

A two-tier education system, consisting of Primary (ages 4-11) and Secondary (ages 11-16/18) schools, operates across the Borough. Sixth form provision is available on-site at two secondary schools within the district and is mainly accessible at Newcastle College, with The King's Church of England School, Kidsgrove, also providing this provision. As of September 2020, Newcastle has 30 primary schools, 1 infant school, 1 junior school, and 7 secondary schools, while Kidsgrove has 9 primary schools and 2 secondary schools.

The Infrastructure Baseline Report provided by the Council within the local plan evidence base identifies most areas of the borough have existing capacity within local primary schools to satisfy the proposed developments within the local plan. It is noted however that Newcastle region 5 covering the villages of Silverdale and Knutton would have insufficient school places for the proposed developments on the former municipal golf course.

In the infrastructure delivery plan, the local plan proposes the development of a new primary school on the former municipal golf course:

"The relatively large amount of development set out in the plan for the Keele University corridor (with the inclusion of development site SP11) means there is an identified need for a new 1 Form of Entry (FE) primary school."

Infrastructure delivery plan

The Labour group notes that the infrastructure baseline report does not include St John's primary school in Keele in meeting the numbers required by this development. Evidence from the school demonstrates the high number of pupils registered at the school from the villages of Silverdale and Knutton. Further, concerns have been raised by members of the governing bodies of the four existing catchment primary schools; St Johns Keele, St Luke's Silverdale, The Racecourse Silverdale and St Mary's Knutton regarding the impact of a new primary school on pupil numbers. More alarmingly, neither Staffordshire County Council, nor the Borough council have communicated with the existing primary schools, including discussions over expansion. The Labour group notes that the Borough council has held conversations with St Chads Kidsgrove, Sir John Offley Madeley and Baldwins Gate primary schools over expansions to their existing estate to sustain development, and therefore raises concerns over the unequitable approach to the schools in the Keele, Knutton and Silverdale area.

Labour group proposal

The Labour group proposes that the prior to adoption of the local plan, that the Council undertakes a consultation with existing primary schools in the Keele, Knutton and Silverdale area to determine if existing capacity can be increased through expansion of the existing estate.

Health & Social Care

Health services in England are overseen by NHS England, which operates five regional teams to commission healthcare services. NHS Midlands and East support the commissioning of services in the West Midlands in partnership with Clinical Commissioning Groups (CCGs) and Acute Trusts. Clinical Commissioning Groups, established by the Health and Social Care Act 2012, changed how primary care services are planned. They commission most NHS hospital and community services, including hospital care, rehabilitative care, urgent care, community health services, and mental health and learning disability services.

The six Clinical Commissioning Groups serving Staffordshire and Stoke-on-Trent are:

- Cannock Chase CCG
- East Staffordshire CCG
- North Staffordshire CCG
- South East Staffordshire and Seisdon Peninsula CCG
- Stafford and Surrounds CCG
- Stoke-on-Trent CCG

The focus for health and social care is on prevention and providing care outside hospitals where possible. 'Together We're Better' is the Sustainability and Transformation Partnership (STP) for Staffordshire and Stoke-on-Trent. The Staffordshire and Stoke Sustainability Transformation Plan (2016) identifies key challenges, including:

- High rates of obesity, diabetes, and smoking in certain areas.
- An ageing and growing population driving up demand.
- Frequent A&E attendance and a risk-averse staff culture.
- A notable proportion of patients with common mental health conditions.
- Higher than average urgent care activity at acute trusts due to poor primary and community infrastructure and citizen behaviours.

In January 2019, NHS England published The NHS Long Term Plan (LTP) and the Five-Year Framework for GP contract reform, setting out ambitions for the next ten years to improve patient care, health outcomes, and to deliver more coordinated primary and community care. The Five-Year Framework introduced Primary Care Networks (PCNs) as the foundation of Integrated Care Systems (ICSs). Now established, PCNs are groups of one or more GP practices serving populations of 30,000 to 50,000 patients, providing a strategic view of primary care delivery and identifying estate requirements. ICSs, set to replace STPs in April 2021, will offer strategic oversight at the regional level, identifying opportunities for integrated working across health and social care partners. By April 2022, ICSs will become statutory bodies.

The infrastructure delivery plan notes the following:

"There are three Primary Care Networks (PCNs) in Newcastle-under-Lyme (Newcastle North, Newcastle Central and Newcastle South PCNs) that serve the residents of Newcastle-under-Lyme. These comprise 17 general practices. Of the practices in Newcastle-under-Lyme, only Silverdale Medical Centre is reported to have surplus capacity to accommodate patients with all other practices reporting insufficient capacity. In summation, there are capacity issues at many locations in Newcastle-under-Lyme with some of this attributed to the level of growth experienced by the borough in recent years and a historic lack of funding for the estate via mechanisms such as the planning system"

Infrastructure delivery plan

The Labour group notes all GP practices, outside of the practice in Silverdale, which must be noted is twinned with the Town Centre practice at Ryecroft, are currently at patient capacity. The Labour group further notes that the only proposal within the Local plan is for a new GP practice on the former Golf course, though we also note that this is a relocation of an existing local practice.

Social care

The Department of Health and Social Care oversees adult social care policy in England, with the Care Quality Commission acting as the independent regulator to ensure care services are safe, effective, compassionate, and high-quality.

In England, adult social care can be publicly or privately funded or provided voluntarily. Local authorities are responsible for publicly funded care and have a legal duty to provide care for those who meet nationally set needs and means tests, either by commissioning or directly delivering services.

Pressures on adult social care budgets have risen in recent years due to increasing demand (from a growing, ageing population with more long-term and multiple health conditions), reduced local government funding, and higher care costs.

Consequently, the adult social care sector is facing growing challenges, including a fragile provider market, increasing unmet needs, more strain on informal carers, reduced investment in prevention, pressure on an already overstretched care workforce, and a diminished capacity to help ease demand on the NHS.

In the infrastructure baseline report the following is noted:

"It should be noted that local demand for care services will vary based on the overall size of the population and specific population care needs, the affordability, quality and location of existing services. This is covered in more detail within Staffordshire County Council's market position statements and associated intelligence documents. Newcastle-under-Lyme currently has significant provision for extra care facilities, residential care homes & nursing homes, but it is anticipated that during the Local Plan period additional units within each of these sectors will be required."

Infrastructure baseline report

The Labour group notes that requirement of additional adult social care facilities during the local plan period. The Labour group further notes the lack of identified development within the local plan to meet the rising demands for adult social care.

Labour group proposals

The Labour group proposes that before adoption of the local plan:

- I. The Council work with Staffordshire County Council to identify suitable portions of developments sites within the local plan to meet the rising demand for adult social care provision.
- II. The council work with Primary care networks to increase GP capacity across the whole of the borough.

Strategic Employment Sites – the case against AB2 and the case for Chatterley Valley

The Labour group is opposed to the proposals for the AB2 employment site in Audley. Taking 80 hectares of land in the rural village of Audley out of the green belt and designating it as high-quality strategic employment site without the evidence base to do so and considering the significant recorded public opposition to the proposal appears to be flawed. The removal of green belt, the increase in traffic, noise and pollution combined with the lack of adequate local infrastructure across the locality is inappropriate, especially so when we already have Chatterley Valley strategic employment site that barely features in the Local Plan at all.

This is quite incredible considering Chatterley Valley has seen £3.5 Million investment from Staffordshire County Council into the site, alongside the £3.7 Million the borough council secured as part of the Kidsgrove Town Deal, and has seen infrastructure, utilities and access upgraded.

The Labour group further notes that under the duty to co-operate the Council did not approach Stoke-on-Trent Council, or Staffordshire County Council overuse of the Chatterley Valley development site in the local plan to meet the need for strategic employment sites. The Labour group is concerned that in the doing so, the Council has not legally satisfied the test within the Localism Act and therefore questions the proposal to meet the need for strategic employment sites through removal of land from the green belt.

Labour group proposals

Designating Chatterley Valley as a strategic enterprise zone would bring substantial economic, social, and environmental benefits to Newcastle-under-Lyme. It would unlock the area's potential for attracting investment, creating jobs, and fostering innovation while aligning with national strategies for regional development and sustainability. With its strong transport links and potential for brownfield redevelopment, Chatterley Valley is ideally positioned to become a thriving hub of economic activity.

Chatterley Valley is positioned near key transport links, making it ideal for a strategic enterprise zone. It lies close to the M6 motorway, the A500 (a key artery linking Stoke-on-Trent and Crewe), and major rail links, offering excellent access to the Northwest, the Midlands, and beyond. This location provides businesses with opportunities to easily transport goods and services across the UK, potentially reducing logistics costs and improving connectivity. The North Staffordshire region, including Newcastle-under-Lyme, has a long industrial heritage, particularly in ceramics, manufacturing, and logistics. This history has cultivated a skilled workforce that can readily adapt to new industries such as advanced manufacturing, logistics, and digital services. The creation of a strategic enterprise zone in Chatterley Valley would capitalize on this local expertise, attracting investment and providing job opportunities for the region.

Brownfield Redevelopment Potential

Chatterley Valley has a significant amount of underutilized and brownfield land, which presents a perfect opportunity for redevelopment without impacting greenfield sites. Developing this area would contribute to urban regeneration, transforming it into a hub for industries like green technology, logistics, or advanced manufacturing. Redeveloping brownfield sites aligns with sustainable development goals, boosting the region's environmental credentials.

Potential for Attracting Investment

Enterprise zones offer businesses tax incentives, simplified planning, and infrastructure support, all of which would make Chatterley Valley an attractive destination for both national and international investors. By designating it a strategic enterprise zone, the area could attract new companies and startups, as well as encourage the growth of existing businesses. This could significantly boost the local economy, creating jobs and increasing regional prosperity.

Locally, this would support Newcastle-under-Lyme Borough Council's economic plans, which focus on regeneration and business growth. The Labour Group want to see a borough strategy aimed at stimulating economic growth in the Midlands and the North to reduce regional disparities. Chatterley Valley could serve as a platform for innovation and the digital economy. With the rise of Industry 4.0, the area has potential to become a centre for businesses involved in automation, artificial intelligence, and digital services. The location could also foster collaboration with nearby Keele and North Staffordshire Universities, known for its research and innovation. Such collaborations could encourage knowledge transfer and innovation-led business growth.

Sustainability and Green Energy Opportunities

Given the global focus on sustainability and green energy, Chatterley Valley offers an opportunity for eco-friendly development. The site could house businesses focused on renewable energy, energy-efficient technologies, and sustainability initiatives. This would not only contribute to the Councils net-zero goals but also attract companies prioritising sustainable operations, helping to future-proof the local economy.

Adherence to genuine consultation and due process

The Council is well aware of the large number of complaints and concerns raised at the first consultation stage of the draft plan (1st November 2021 - 13th December 2021), these were largely but not confined to, complaints around lack of face-to-face briefings, forms not being made available as stated, and technical issues and failures of the on line portal. It was clear at that time that the consultation was targeted at highly competent, computer literate regular laptop users, who could cross reference up to 200 public documents through the portal avenue to answer 37 planning specific questions. The readability of the document was poor and out of line with good practise.

https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/100807/file47158.pdf,

Labour Councillors raised concerns that the consultation was too focused on the on-line portal and digital access, which we believed would lead to exclusion for thousands of elderly residents, as well as those who did not or could not afford their own laptops, tablets or computers. We felt this approach was contrary to the community engagement and digital exclusion policies previously agreed by the Council.

The Labour welcomed the fact that these issues were focussed on in the second stage consultation and in the main remedied.

However, the Labour group raised a serious issue at a meeting of full council on 24-07-24, where Council was to approve that the plan be agreed and put forward to regulation 19 stage, that critical evidence based documents were still not available to members of council or the public.

The motion highlighting this failure is attached here:

Labour Group Amendments to the Report Titled; Newcastle-under-Lyme Borough Local Plan 2040 of the 24-07-24

Background

The Newcastle Labour group of councillors met on Monday 22nd July to review the agenda for the meeting of full council taking place on 24-07-24. The agenda contained at item 5 - Newcastle-under-Lyme Borough Local Plan 2040. The item contains the paper which asks members and council to approve four recommendations as follows;

That Council: .

- 1. Approves the Final Draft Newcastle-under-Lyme Borough Local Plan 2040 (at Regulation 19 stage), the Sustainability Appraisal, Habitats Regulations Assessment and supporting documentation for public consultation in line with the approved Local Development Scheme;*
- 2. Authorises the Service Director (Planning), in consultation with the Strategic Planning Portfolio Holder to make any necessary minor typographical changes and modifications to the Final Draft Newcastle-under-Lyme Borough Local Plan 2040, Sustainability Appraisal and Habitat Regulations Assessment prior to consultation;*
- 3. Subject to the outcome of consultation, and if no matters are raised that materially impact upon the Plan strategy, authorises the Deputy Chief Executive in consultation with the Strategic Planning Portfolio Holder to submit the Final Draft Newcastle-under-Lyme Borough Local Plan 2040 and supporting documents to the Secretary of State for formal examination by the end of 2024;*
- 4. Authorises the Service Director (Planning) to write to the appointed Inspector(s) at the start of the examination of the Final Draft Newcastle under-Lyme Borough Local Plan 2040 requesting them, under section 20(7C) of the Planning and Compulsory Purchase Act 2004, to recommend any main modifications necessary to ensure the Plan sound and legally compliant.*

Issues identified

In relation to recommendation 1

When the Labour group met on the 22-07-24, some 48 hours before the meeting to consider the recommendations we observed that the following supporting documents (none exhaustive) were not available;

1. Infrastructure Delivery Plan
2. Infrastructure Delivery Schedule
3. Strategic Housing and Employment land availability assessment 2024
4. Site assessments
5. Green Belt Assessment
6. Strategic transport assessment
7. Water cycle study
8. Gypsy and traveller site selection report
9. Duty to co-operate statement of compliance
10. Housing supply and delivery position statement

Clearly, the expectation that members approve a local plan through to the regulation 19 representation period, which is the last stage of public engagement before submitting the draft plan to the Inspectorate for examination, is unreasonable and does not adhere to sound governance of the council.

This is a formal process that requires comments on the soundness and legal compliance of the plan.

Members wish to be in a fully informed position in order to move the plan through its statutory process.

In relation to recommendation 3

Consultation is technically any activity that gives people a voice, in this context it is an exercise to provide local residents, businesses and stakeholders a voice and an opportunity to influence important decisions relating to the Borough's local plan.

Consultation requires listening to local people and learning from affected people before decisions are made or priorities are set.

Councils have a statutory requirement to consult their residents, this is especially true for planning or redevelopments. There are strict rules surrounding how consultations are conducted, and a failure to adhere to this could render the council liable for a judicial review.

It is in this regard that recommendation 3 is manifestly problematic – to agree to submit the Final Draft Newcastle-under-Lyme Borough Local Plan 2040 and supporting documents to the Secretary of State for formal examination by the end of 2024, without affording council the time and space to review the consultation, in full, and to take account of residents, business and stakeholders views in our plan before submitting to the Secretary of State, does not accord with the fundamental principles of consultation compliance. A failure to demonstrate that council has undertaken meaningful consultation could leave council open to complaints of pre-determination.

The most common failures of local authority plans are due to inconsistencies with National Planning Policy, lack of evidence base and inadequate engagement. The amendments below seek to remedy any possible flaws in the plan and process. It is our view that a failure to do so would open the authority to the risk of litigation, reputational damage, and a loss of trust and confidence by those engaging with the process.

Proposed amendments

Replace recommendation(s) 1 and 3 with the following;

1. Council agrees to bring the final draft plan, and supporting documents to the September 2024 full council meeting seeking councils approval of the Final Draft Newcastle-under-Lyme Borough Local Plan 2040 (at Regulation 19 stage), the Sustainability Appraisal, Habitats Regulations Assessment and supporting documentation for public consultation in line with the approved Local Development Scheme.
3. Following completion of the consultation, council will meet to receive and consider the responses. If council agrees that no amendments to the plan are required and no matters are raised that materially impact upon the Plan strategy, council authorises the Deputy Chief Executive in consultation with the Strategic Planning Portfolio Holder to submit the Final Draft Newcastle-under-Lyme Borough Local Plan 2040 and supporting documents to the Secretary of State for formal examination at the earliest opportunity.

ENDS

Amendment Proposer

Cllr Dave Jones

Amendment Seconder

Cllr Andrew Fox-Hewitt

In response to this motion highlighting critical failures of due process, the Conservative group voted to dismiss the recommendations and voted to proceed to approve the plan through to regulation 19 stage. The Leader of the Council, Cllr Simon Tagg stated at this meeting that it was not true that documents were unavailable prior to group meetings on the 22nd July,

Subsequently to the council meeting however, a complaint and request under the Freedom of Information Act was made to provide details of when documents were made available. The Council response is here;

(Table available in attachment)

As can be seen from the response, a total of 9 documents were in fact unavailable. The Labour Group therefore has serious concerns with the adherence to due process the probity of the Leaders actions in response to these issues being identified.

Conclusion

In summary whilst there is much within the Local Plan the Labour group can support, there are several weaknesses that we feel need to be addressed before the Local Plan can be adopted. These include:

I. Clear targets and delivery plan to ensure the ever-increasing demand for affordable and social housing is met over the lifetime of this Local plan.

II. Development of an integrated transport plan, including costings and delivery plan that is not subject solely to 106 contributions.

III. Work with existing primary schools in Knutton, Silverdale and Keele to explore potential expansion of their existing estate to increase pupil capacity.

IV. Work with Staffordshire County Council to identify capacity within proposed developments for provision of adult social care facilities.

V. Work with Primary Care Networks to identify mechanisms to increase GP capacity across the borough.

VI. Work with Staffordshire County Council and Stoke-on-Trent City Council to identify capacity within the Chatterley Valley site to accommodate the need for employment sites.

Further, the failure to co-operate on sharing of a major strategic employment site at Chatterley Valley, and concerns raised over the consultation process and availability of essential documents; further questions the plans compliance with the Localism Act.

Consultee Company / Organisation	The British Horse Society
Consultee Family Name	Bannerman
Consultee Given Name	Wendy
Q4 Part of document	Policy
Q4 Policy	IN4
Q6 Details	<p>Dear Local Plan Team</p> <p>Reg 19 Local Plan Newcastle-under-Lyme</p> <p>The response below is from the British Horse Society however our volunteers in the county may also respond at a local level.</p> <p>Overall</p> <p>The British Horse Society is the UK's largest equestrian Charity, representing the UK's 3 million horse riders. Nationally equestrians have just 22% of the rights of way network – only 16.4% in Staffordshire - and are increasingly forced to use busy roads to access them.</p> <p>Between 01.01.2023 – 31.12.2023 nationally:</p> <ul style="list-style-type: none"> • 3,345 road incidents involving horses have been reported to The British Horse Society • Of these, 50 horses have died and 77 have been injured • 3 people have died, and 94 people have been injured because of road incidents • 23% of riders were victims to road rage or abuse • 82% of incidents occurred because a vehicle passed by too closely to the horse • 79% of incidents occurred because a vehicle passed by too quickly <p>'Planning policies and decisions should protect and enhance public rights of way and access, including taking opportunities to provide better facilities for users' (NPPF, s104).</p> <p>DEFRA has recorded a population of 755 horses in the ST5 postcode area (2021). The contribution per horse to the economy, according to BETA (2023), is £6,887, therefore in this case a contribution of £5,199,685 per annum. Equestrian activities in semi-rural areas (bring your horse on holiday, pleasure rides, competitions) are increasingly popular in addition to established activities such as schooling and hacking. The equine industry provides diverse employment (vets, farriers, feed outlets, saddlers, instructors, venues, liveries, etc). Promoting, nurturing and enabling equestrian access would support the equestrian industry.</p> <p>Policy IN4 Cycleways, Bridleways and Public Rights of Way</p> <p>It is encouraging to see the proposed principles. Please add 'horse' to the phrase 'walking, cycling and riding' in point 1 to be clear. Carriage drivers are also vulnerable road users so where public rights of way are restricted byways or BOATs, carriage drivers must also be included. Modern carriages tend to be lightweight and small, around 1.6m wide. Horse riding and carriage driving can provide access to the outdoors for people with mobility issues who would not walk or cycle any distance.</p> <p>Point 2 - Where a development engulfs a bridleway which does not have a sealed surface then the bridleway should be preserved as an equestrian route. Any plan to increase cycling provision should take place separately or ensure that the bridleway is given sufficient width. Additional width will be needed if it is considered necessary to provide asphalt for cycling as it is very undesirable for horses, and indeed many pedestrians. A separate cycle track ensures that riders are able to continue to use the bridleway in safety without the hazard of a sealed surface and cyclists do not have to slow down and give way to horses, which is the legal requirement on a bridleway.</p> <p>Point 3 – whether a bridleway is enclosed or not, the useable width should be no less than 3m ie a level surface with maintained vegetation.</p>

Consultee Given Name	Richard
Q4 Part of document	Policy
Q4 Policy	IN4
Q6 Details	<p>Policy IN4 – Cycleways, Bridleways and Public Rights of Way – this section of the draft Plan is sound and deserves to be adopted. We believe that development proposals should improve the opportunities residents have to walk, cycle and ride, particularly in those parts of the Borough where access is limited.</p>
Q7 Modification	<p>Modification of Policy IN4 - we take the view that paragraph 1c gives considerable leeway to developers and therefore suggest that 'normally' is deleted from the sentence, which should read; development will not be allowed to lead to the closure of a public right of way unless a suitable replacement can be established. To promote the safety of cyclists and walkers, we suggest that cycle and walkways</p>

	should connect with the main pedestrian crossing points. There are examples in the Borough of walk and cycle ways which require cyclists and pedestrians to cross busy main roads. The mineral line through Knutton is an example of a walk and cycle way which is split between a busy road with the result that cyclists and walkers have to contend with traffic using Lower Milehouse.
Q9 Hearing reasons	Conclusion Cross Heath, Wolstanton and May Bank Branch Labour Party welcomes the opportunity to give its views in response to the Regulation 19 stage of the draft Local Plan. If it is felt to be appropriate, a member of the Branch would be prepared to take part in the public scrutiny of the draft Local Plan.

Title	Policy IN4 Cycleways, Bridleways and Public Rights of Way
Consultee Company / Organisation	National Highways
Consultee Position	Assistant Spatial Planner
Consultee Family Name	Pyner
Consultee Given Name	David
Q4 Part of document	Policy
Q4 Policy	IN4
Q6 Details	<p>Newcastle-Under-Lyme Local Plan Review - Regulation 19 Consultation (Final Draft)</p> <p>National Highways welcomes the opportunity to provide comments on the Final Draft Local Plan consultation (Regulation 19) prepared for Newcastle-Under-Lyme Borough Council, which is expected to cover the plan period up to 2040.</p> <p>National Highways has been appointed by the Secretary of State for Transport as a strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority</p>

and street authority for the Strategic Road Network (SRN). It is our role to maintain the safe and efficient operation of the SRN whilst acting as a delivery partner to national economic growth.

In relation to this consultation, National Highways' principal interest is ensuring the safe and efficient operation of the SRN in the area, notably the M6, A50 and A500 network which routes through the Local Plan boundary.

In responding to Local Plan consultations, we have regard to the Department of Transport's (DfT) revised Circular 01/2022 - Strategic Road Network and the delivery of sustainable development ('the Circular') which sets out how interactions with the SRN should be considered in the making of local plans. Paragraph 28 of the Circular sets out that:

"The policies and allocations that result from plan-making must not compromise the SRN's prime function to enable the long-distance movement of people and goods. When the company assists local authorities in the development of their plans and strategies, the local authority should ensure that the SRN is not being relied upon for the transport accessibility of site allocations except where this relates to roadside facilities or SRN-dependent sectors (such as logistics and manufacturing). The company will also work with local authorities to explore opportunities to promote walking, wheeling, cycling, public transport and shared travel in plan-making, in line with the expectations set out in the NPPF and the Transport Decarbonisation Plan."

In addition to the DfT Circular 01/2022, the response set out below is also in accordance with the National Planning Policy Framework (NPPF) and other relevant policies.

Previous Consultations

National Highways was consulted during the Regulation 18 consultation in August 2023. The Regulation 18 identified a minimum requirement of 7,160 dwellings (358 per year) and 69 hectares of employment land to be delivered during the plan period between 2020 and 2040. It also included potential sites for allocation, and we provided an indication of the potential sites that were expected to have traffic and boundary impacts on the SRN.

In May 2024, National Highways was consulted to provide recommendations for the Infrastructure Delivery Plan preparation, where we provided comments on the infrastructure requirement.

Final Draft Local Plan Regulation 19 Consultation

The Final Draft Local Plan Regulation 19 includes locally specific policies and strategic / non-strategic site allocations to meet housing and employment needs across the Newcastle-Under-Lyme area for the plan period of up to 2040. Once adopted, this Local Plan will replace the policies in the Newcastle-Under-Lyme and Stoke-on-Trent Core Spatial Strategy (adopted 2009) and the saved policies of the Newcastle-Under-Lyme Local Plan (adopted 2003). Appendix 2 of the Local Plan consultation document outlines the list of previously adopted policies that will be retained or replaced.

In principle, National Highways supports the vision and objectives set out in the Regulation 19 Draft Local Plan which aim to deliver the growth in a sustainable manner.

Housing and employment requirements

Based on our review of the Regulation 19 consultation, we note that the Final Draft Local Plan outlines a minimum requirement to deliver 63 hectares of employment land and 8,000 dwellings (400 dwellings per annum) over the plan period of up to 2040 as stated in the 'Policy PSD1: Overall Development Strategy'. We welcome that the housing and employment requirement have primarily been determined using a Housing and Economic Development Needs Assessment (HEDNA) in 2024, which in this case is expected to provide a higher housing demand when compared against the Government's standard method.

We acknowledge that a Sustainability Appraisal (SA) process has been undertaken to evaluate the different growth options considered, assess the impacts and identify the residual effects based on the social, economic and environmental parameters.

As outlined in Table 2 of the Final Draft a total of 8,663 dwellings are planned to be delivered over the plan period of up to 2040 to meet housing demands. This also includes a supply buffer of around 8.3% to address any potential delivery challenges. We acknowledge that the supply also factors in the windfall allowance estimated based on the Council's Strategic Housing Land Availability Assessment (SHLAA), historical trends, and future projections.

Policy SA1: Site Allocations indicates that a significant portion of the housing supply will be delivered through strategic allocations. When comparing the allocation sites included in the Regulation 19 consultation against those set out in the Regulation 18 consultation, we note some minor changes in the scale of growth at individual sites, with a few sites being removed and others added. However, the total housing growth from all strategic allocations remains at 4,512 dwellings. The table below outlines these changes (tables included in the attachment)

In the case of employment supply, we note that AB2 (Land at M6 Junction 16) and KL15 (Land at Barkers Wood, Keele) are key strategic sites contributing significantly to meet the employment needs.

Sustainable transport

We acknowledge that the Final Draft Local Plan has focussed on decarbonisation policies such as 'Policy CRE 1: Climate change' and 'Policy CRE 2: Renewable energy' to address climate change impacts by reducing carbon emissions. This also includes developing energy-efficient buildings, designing to BREEAM Excellent standards, optimising water use, adopting water conservation measures, and utilising renewable or low-carbon energy sources.

'Policy IN2: Transport and Accessibility' emphasises that new developments must provide access through sustainable transport modes to protect the integrity of the highway network. The Council will work with developers to ensure that the proposals contribute to a transport network that is accessible, efficient, and safe. We support this policy and acknowledge that developments likely to generate significant traffic will be required to produce Transport Assessments and Travel Plans, in accordance with the requirements set out. We appreciate that focus is also given to developments that facilitate sustainable movement of freight traffic.

'Policy IN4: Cycleways, Bridleways, and Public Rights of Way' highlights the importance of enhancing walking, cycling, and public transport facilities within the Borough.

We welcome these policies and note that these align with the expectations set out in the National Planning Policy Framework and National Highways' Net Zero Strategy.

Transport Evidence Base

Considering the scale and location of the allocations included in the Draft Final Local Plan, we expect impacts on the SRN in the area either independently or cumulatively.

Strategic Transport Assessment (document reference ED011)

We acknowledge that a Strategic Transport Assessment (STA) dated July 2024 has been prepared using the North Staffordshire Multi-Modal (NSMM) transport model to assess the likely traffic impacts of the site allocations proposed in the Regulation 19 consultation. We note that the model has been run for the following five scenarios in the forecast year of 2040.

Based on our review of the STA, we have the following comments to make:

Section 4.5 of the STA states that while the model emphasises the use of pre/post-COVID data, we note that accident data for the years 2018-2022 includes COVID data with relatively lower traffic flows and possibly fewer accidents. How has the impact of COVID been taken into account?

Section 5.3 of the STA states that the 2015 NSMM model is overestimating the flows by 26-28% when compared against 2022/23 observed WebTRIS data. It also notes that only 15-35% of counts pass in this validation exercise. Despite this shortcoming, model forecasts for 2040 were proposed to be used to inform future testing, which National Highways agreed to as it presents the worst-case scenario with overestimation of the traffic.

Section 7 provides details of the reference case model development, but note that finer details of the method applied are missing. We therefore have the following queries relating to this section:

- Does this scenario include constraining other local authorities to NTEM/TEMPro?
- Does this scenario include any committed and under-construction developments within the local plan area?
- What is the background growth percentage between the base year and the forecast year 2040?

Regarding Figure 7-1, we are unable to find the basis for changing the junction delay definitions for slight, moderate, and severe delays from what was mentioned in the minutes of the meeting dated 15th May 2024. At present, delays of up to 3 minutes at junctions are reported as slight which is arguable.

Based on the model outcomes, improvement measures to enhance public transport connectivity and infrastructure schemes on the local highway network are proposed in the STA. We also note that a detailed junction assessment will be undertaken for M6 J16 using a VISSIM model to accurately assess the traffic impacts of the AB2 allocation.

Regarding Section 8.3.2, bullet 1, we interpret that the new junction is the access to site AB2. Thus, we are surprised that the design of this new junction would still lead to 120-180 seconds of delays in the PM. A new access arrangement should work without that much stress.

We request that a summary table with delays (absolute numbers in seconds) at each of the approaches be prepared and shared with National Highways for M6 J16 and the new junction on A500 for site AM2. This is so we can understand the changes in delays between the base, reference case, and proposed scenarios.

We request that the basis for the 10% reduction in car users for the area around site AB2 set out within Section 8.6.6.1 be supported by further evidence.

We also request further details on how much total demand (in PCUs or vehicles) has been removed from the original matrix. Has a preliminary assessment been undertaken on the frequency of bus service that would be required to cater to that demand during peak hours to verify that this is a feasible option?

Regarding Section 8.6.3, while we do not have an issue with the bespoke approach to testing M6 J16 within VISSIM, considering that the NSMM is overestimating the traffic, the use of incremental addition of the difference from the NSMM may lead to an underestimation of traffic at this junction due to large delays in the NSMM reference case scenario. There is a possibility that any additional traffic from the AB2 site may divert to local or unrealistic routes within NSMM.

We therefore request that traffic flow distribution Select Link Analysis plots from site AB2 be shared with National Highways to verify that the routes assigned in the model are reasonable before being used for incremental addition for microsimulation assessment.

We also request that observed base and modelled reference case data be presented in a similar format as Table 8-6 for National Highways to understand the absolute traffic growth at each of the approaches.

National Highways Previous comments

While we are happy with the suggested incremental change in flow and delays analysis for 2040 forecast year models, we must establish a robust do – minimum reference case scenario developed using the base year model.

We note that our previous query dated May 2024 remains unanswered: “The further turning count comparison tables for the M6 J16 model are appreciated and provides comfort that many movements (particularly the A500 East approach) match the 2015 model. However the turning proportions provided for the M6 South to A500 East movement are of concern as these look significantly different to those that were modelled. National Highways would like to understand if there are any explanations of why these differences have occur and particularly why the model identifies such low percentage of car movements?”

STA Comments Summary

In summary, the modelling work to date is based on the NSMM model, which was previously approved by the DfT for other schemes. However, present-day validation using 2022/23 data shows that the model is overestimating traffic and not validating well. Hence, a bespoke approach is applied to assessing M6 J16, while the rest of the strategic assessment uses the forecast 2040 NSMM model which is still believed to be the best tool available. Analysis provided shows that parts of the A500 and junctions along it will be stressed by 2040 and that the level of stress will increase with the local plan. Strategic allocation sites tested will lead to some congestion but this would not lock out the network. The STA and IDP mention the possibility of developers' contributions for various infrastructure schemes including a new bus service along site AB2 among others that could potentially bring congestion levels down to a more comparable level with the reference case scenario, which should be acceptable.

We request responses to our queries above but are hopeful that the Local Plan can work with some support from the developers to mitigate any impact on the SRN.

Infrastructure Delivery Plan (IDP)

	<p>A total of 28 transport development schemes are listed in Table A.1 of Appendix A of the IDP to enhance the transport network and promote sustainable transport. The schemes that are of interest to National Highways are:</p> <p>1. T9 (improvements between M6 J13 and J15) - part of the RIS 2 scheme</p> <p>2. T14 to T20 schemes</p> <p>We note that the finalisation of these schemes is subject to undertaking detailed junction capacity assessments. We appreciate that the list of potential allocations that are likely to impact the SRN has been included.</p> <p>T14 specifically mentions a "Potential mitigation scheme involving widening and an additional lane at the gyratory on M6 J16. VISSIM modelling work is currently ongoing, and the need for any potential mitigation measures can be confirmed after the completion of a detailed capacity assessment as part of the planning application stage." It should be noted that there is no confirmed scheme from National Highways perspective at the moment, and we seek confirmation as to whether such a scheme is included in the Local Plan assessment within Scenario 5.</p> <p>We note that the funding mechanism to implement these mitigation schemes including T14 will likely be through developer funded Section 278 agreements. Considering that there could be cumulative impacts from different allocations in the area, a Section 278 agreement is likely to result in a piecemeal approach to the delivery of the improvement works. We would welcome some clarity on why a Section 278 agreement is preferred over a Section 106 agreement for the funding mechanism in this case.</p> <p>Duty to Cooperate</p> <p>We note that a Duty to Cooperate Interim Statement of Compliance has been submitted as part of the evidence base alongside the Final Draft Local Plan. We commend the Council's approach to collaborating with neighbouring local authorities, stakeholders, and other bodies to address issues related to local authority boundaries. This collaborative effort will help ensure that all parties' interests are considered and that a comprehensive solution is developed.</p> <p>National Highways is committed to working with Newcastle-Under-Lyme Council to develop and draft a Statement of Common Ground (SoCG) to address any strategic cross-boundary issues and reach an agreement on how the traffic impacts from the allocations identified in the Local Plan are to be dealt with. We understand that a final version of the Duty to Cooperate will be prepared to support the submission version by December 2024.</p> <p>Once again, National Highways appreciates the opportunity to comment on the Final Draft Local Plan Regulation 19 consultation and looks forward to working collaboratively with the Council to support the development and adoption of the Local Plan for Newcastle-Under-Lyme.</p>

Title	Policy IN4 Cycleways, Bridleways and Public Rights of Way
Consultee Company / Organisation	Natural England
Consultee Position	Senior Officer
Consultee Family Name	McLaughlin
Consultee Given Name	Sally
Q4 Part of document	Policy
Q4 Policy	IN4
Q6 Details	<p>Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.</p> <p>Natural England welcomes the opportunity to comment at this stage of the Local Plan and particularly supports the inclusion of policies on green and blue infrastructure, biodiversity, health and wellbeing, trees hedgerows and woodlands. We have reviewed the consultation documents and provide comments that relate to the soundness of the Local Plan and that are most relevant to our interest in the Natural Environment.</p> <p>Natural England has adopted a robust precautionary approach within this plan response. Whilst we welcome the content of the Local Plan, Natural England advises that the plan is currently at risk of being unsound and/or not legally compliant due to the potential impacts on air quality in relation to internationally designated nature conservation sites and the justification for the potential loss of 263ha best and most versatile (BMV) agricultural land. Further detail is provided below.</p> <p>Natural England have also provided other advice within this submission relating to further improvements that could strengthen plan policies and specific strategic site options and related mitigation.</p> <p>Do you consider that the Newcastle Under Lyme Plan is Sound and Legally Compliant?</p> <p>Natural England notes that the plan is at the pre-submission stage and as such your authority is seeking confirmation on the soundness of the plan. Having reviewed the plan and supporting documents, Natural England considers the pre-submission plan in its current form is not sound or legally compliant, this is due to a lack of evidence with regards to air quality and the cumulative loss of BMV agricultural land both in a local and national context.</p> <p>Air quality</p> <p>Natural England notes that the Sustainability Appraisal states that "Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)</p>

As Natural England understands it the current evidence base used to conduct the HRA cannot rule out adverse impacts on designated sites. The HRA states at page 22 3.4.16 "At the time of writing, the traffic modelling run for the final suite of Regulation 19 allocations had not been undertaken." Appendix A lists the local plans for neighbouring LPA's concluding that 'in combination' with plans and projects (approved and those yet to be implemented) they may trigger in-combination effects on European sites as a result of air quality, particularly as we understand it in the key commuting areas.

Natural England notes that Annual Average Daily Traffic (AADT) data and traffic modelling in the Strategic Transport Assessment (STA) concludes a potential reduction in travel and related air pollution at allocated sites as a result of a predicted preference in the use of public transport. We are surprised by this projected decrease in both traffic and related air pollution, particularly as one employment allocation site includes a 200-bay lorry park and increased congestion is predicted at junction 16 of the M6 where it joins the A500 in a rural location with no existing rural transport provision. The Sustainability Appraisal also notes that: "There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work". (p 206)

Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot therefore currently be ruled out at the following internationally designated sites:

- Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI
- Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI

The HRA outlines that the main source of ammonia emissions is agricultural practice, and that material increases in NH3 emissions are unlikely to be associated with the proposed local plan. At Black Firs and Cranberry Bog and Oakhanger Moss, any increase in nitrogen deposition has the potential to exacerbate pollution levels and thereby undermine the reasons for notification of these sites as a Ramsar.

Ammonia can be emitted from vehicle exhaust emissions as a by-product of the catalytic conversion process designed to reduce emissions of nitrogen oxide. As traffic composition transitions toward more petrol and electric cars (i.e., fewer diesel cars on the road), catalytic converters may aid in reducing NOx emissions but result in increased ammonia emissions. Ammonia emissions from road traffic therefore could make a significant difference to nitrogen deposition close to roads.

Natural England therefore advise that ammonia sourced from traffic emissions should be included for assessment within the local plan HRA, as the impact from this source on designated sites is currently unclear. For further information please see this report from Air Quality Consultants (AQC) that looks at ammonia emissions from roads for assessing impacts on nitrogen-sensitive habitats. Whilst we are aware that the current CREAM model created by AQC used to assess ammonia emissions from road traffic has not been peer reviewed, at this time it has been recognised as a Best Available Tool and we deem it appropriate to be used where any caveats associated with this model are also considered within the assessment. An assessment based on the best available approach is necessary. The next stage of assessment can then consider uncertainties in the model and site specifics to decide if mitigation needs to be considered.

Further work is therefore required to inform the Habitat Regulations Assessment. Natural England will engage with the Local Planning Authority in order to produce a Statement of Common Ground (SoCG) on this matter.

'Best and most versatile' (BMV) agricultural land

Natural England notes that "the proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land, A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of 'best and most versatile' (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services". (page 74 Sustainability Appraisal).

Under the Town and Country Planning (Development Management Procedure) (England) Order 2015 (DMPO) Natural England is a statutory consultee on development that would lead to the loss of over 20ha of 'best and most versatile' (BMV) agricultural land (land graded as 1, 2 and 3a in the Agricultural Land Classification (ALC) system, where this is not in accordance with an approved plan.

Natural England would like to understand how the local planning authority have produced the evidence base and options assessment which informs the strategic site allocations.

Natural England will engage with the local planning authority to consider the cumulative impacts of the loss of BMV both in the local and national context and the challenges related to environmental impact, infrastructure, and the requirement to deliver a balance between the need for development and the potential urbanisation of the countryside including the potential mitigation measures that need to be considered.

NPPF paragraph 174e states:

Planning policies and decisions should contribute to and enhance the natural and local environment by: ... preventing new and existing development from contributing to, being put at unacceptable risk from, or being adversely affected by, unacceptable levels of soil, air, water or noise pollution or land instability. Development should, wherever possible, help to improve local environmental conditions such as air and water quality, taking into account relevant information such as river basin management plans.

Natural England provides guidance to inform further assessment of air quality and the loss of BMV agricultural land in our response to the content of the plans Strategic Policies as set out below.

Do you consider that the Newcastle-under-Lyme Borough Council Regulation 19 pre-submission draft Plan is compliant with Duty to Co-operate?

In terms of working with neighbouring authorities, Natural England notes that initially the plan was intended to be produced jointly with the City of Stoke-on-Trent, the plan does not however currently present an evidence base that demonstrates that a collaborative approach has been adopted and that the Duty to Co-operate has been fully complied with.

The Sustainability Appraisal states that: "Overall, there is potential for a cumulative adverse effect on biodiversity, owing to the fragmentation of the ecological network... Where a large amount of development is located on previously undeveloped land surrounding rural settlements, this is likely to produce a long-term irreversible negative cumulative effect regarding the urbanisation of the countryside" (p 71)

Natural England would therefore like to further understand how the areas identified to meet the City of Stoke-on-Trent's unmet employment needs are justified and appropriate and whether meeting some of the employment needs of the City of Stoke-on-Trent has led to the need to release or safeguard more

land from the Green Belt in Newcastle under Lyme. If this is the case, what are the exceptional circumstances for doing this and how does this align with the allocated sites options assessment?

Recreational Pressure

In terms of the South Pennine Moors SAC and recreational impacts, the Local Plan does comply with the Duty to Co-operate. Natural England recommends that reference is made to the 'Recreation use of the South Pennine Moors and implications for strategic housing growth' report by Footprint Ecology Ref 778 date 27th March 2024. This report should both inform the evidence base and ensure that policies relating to open space/green infrastructure are as rigorous and robust as possible.

The report concludes that more data/evidence is required to determine if recreational use is causing an impact across to the South Pennine Moors and to get a better understanding of the scale and location of any impact. Natural England notes that the report records 7,000 additional dwellings in Newcastle-under-Lyme over the plan period rather than the 8,000 included in this regulation 19 submission. Newcastle-under-Lyme Borough Council should therefore continue to work with local authority and other partners to ensure coordinated and continued cross boundary action.

Other matters

Natural England has specific concerns related to allocations in the Green Belt. Notwithstanding that, Natural England considers most of the policies within the plan to be sound and deliverable. The plan is consistent with national policy with regard to those policies that are within Natural England's remit. Further information on strengthening policies including but not limited to Soils and best and most versatile (BMV) agricultural land, preventing loss and fragmentation of habitats and supporting green infrastructure are provided below.

Vision and Strategy

Natural England notes that the Plan's vision and emerging development strategy set out a framework for the future development of Newcastle-under-Lyme and addresses the needs in relation to housing, the economy, community facilities and infrastructure, including specific reference to a proposed employment site allocation.

This vision and the related objectives should also set out the environmental ambition for the plan area and form the basis for nature recovery and enhancement, supported by the policies and proposals in the plan.

Natural England advises that the vision should also incorporate more on the local ecology and landscape features which underpin local distinctiveness such as the "strong rural character with long open views across the surrounding rural landscape, towards more distant hills often framed by trees" (p 69) Part 3 Site Specific Landscape & Visual Appraisal. "Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms" (p 187) Sustainability Appraisal.

Strategic Objectives

Natural England welcome strategic objective SO-4 relating to carbon reduction and climate change, however we do not feel that this group of thirteen strategic objectives value or reflect the Boroughs whole ecology and landscape including but not limited to the protection of soil and best and most versatile (BMV) agricultural land. We would suggest that additional objectives are added relating to: air quality, water quality and quantity, soils and landscape.

Natural England would also like to see stronger reference to the Nature Recovery Network which is one of the specific aims of the Environment Act 2021 and will underpin the approach to the enhancement of nature.

Air quality is a major threat to habitats and species. Many ecological sites are exceeding their critical loads and levels for ammonia, nitrogen deposition and acid deposition. The strengthening of the policies and the rationale behind site allocations within this plan will ensure that new development does not contribute to the further deterioration of habitats and species due to air pollution. Further advice on strengthening the plans evidence base with regards to air quality is provided in the links below:

Strategic Policies

5 Planning for Sustainable Development

Policy PSD5: Green Belt

Natural England notes that this policy "aims to protect the Borough's essential open spaces, prioritise the use of brownfield land, and guide potential future development in accordance with the National Planning Policy Framework (NPPF)".

Natural England however notes that amendments to the Green Belt boundary are proposed in the form of 14 site allocations to accommodate both the growth requirements of the borough and the employment requirements of wider Stoke-on-Trent conurbation. Natural England's has some site-specific concerns

about the potential impacts of some of the green belt sites selected on the natural environment with regards to habitat loss, fragmentation and justification for the loss of BMV agricultural land.

We note the LPA's intention to release and compensate for the loss of green belt and prioritise the use of suitable brownfield land. However, the site allocations in the green belt would result in the potential loss of 263ha of Best and Most Versatile (BMV) agricultural land. The council should satisfy itself that it is making a balanced decision for sustainable development, the Sustainability Appraisal concludes that: "The Green Belt Study assessed land parcels against the contribution they make to the five purposes of the Green Belt on a four-point scale...Three allocated sites (AB12, AB33 and TK10) are located in areas which make a 'strong' overall contribution to the purposes of the Green Belt where "the site contributes to the purpose in a strong and undeniable way, whereby removal of the site from the Green Belt will detrimentally undermine this purpose" (p101)

"Site allocations on previously undeveloped land or that would result in a net loss of GI / vegetation could result in a reduced capability of the environment to provide ecosystem services including carbon storage, the storage and filtration of water including natural flood protection, as well as reduced availability and connectivity of habitats within the green network enabling movement of species. (p 165)

Strategic Site Allocations

Natural England suggests that the HRA should include a "requirement for project-level/site specific HRA's and targeted ecological surveys".

The Sustainability Appraisal concludes that:

"Some 12 allocated sites partially coincide with priority habitats, where 3.43% of the total site allocation areas coinciding with priority habitats which include deciduous woodland, good quality semi-improved grassland and Site BL18 coincides with lowland fens which is a very high distinctiveness habitat in the BNG handbook (2024). These habitats can support a range of species of principal importance. Allocated Site KL15 is adjacent to 'The Butts and Hands Wood' ancient woodland, with a further 20 allocated sites located in close proximity to ancient woodlands. P158

"Six allocated sites (Sites CT20, HD10, KL13, RC8, SP11(2) and SP23) are located within areas of 'high' or 'very high' habitat distinctiveness that provide high biodiversity value. Whilst in many cases these habitats can be conserved alongside development, it is likely that in some cases fragmentation or loss of habitats and connections between habitats will occur"

"The majority of allocated sites are located on previously undeveloped land, which would result in the loss of soil resources and the ecosystem services they provide. (p 159) The development of new buildings on previously undeveloped land would be expected to result in a direct loss of soil resource, with little or no scope for mitigation" (p 216)

"The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution. (p 68)

For all sites, Natural England advises that the hydrological catchment within which the site sits is taken into consideration, with regards to the potential impact of the developments proposed on the adjoining watercourses and wider catchments, including but not limited to surface water runoff (including during construction), existing and required capacity of Waste Water Treatment Works (WwTW) and water supply and flooding issues. Each site will require site specific investigation, and the council should understand the impact of all the sites put forward individually and in combination.

Natural England has specific concerns and or requires further information about the following 'Strategic Site Allocations' which could potentially impact on designated sites as a result of air and water quality and/or lead to the loss and / or fragmentation of priority habitats and BMV agricultural land:

BL18 – Clough Hall Playing Fields, Talke

Natural England would like to further understand this larger residential development proposal with regards to the potential impacts on the lowland fen habitat.

KL13 & KL15 – Land South of A525 between Keele University and Newcastle

Natural England notes this proposal for Employment development is immediately adjacent to ancient woodland priority habitat.

HM28 – Land off East Lawns, Betley

Existing and projected water quality issues at Betley Mere will need to be considered with regards to this allocation.

LW53 – Loggerheads

Natural England notes this residential housing development proposal is located within the IRZ of protected sites (Burnt Wood SSSI) which states that development proposals of 50 or more homes outside existing settlements/urban areas in these zones should be consulted upon with Natural England.

SP11 – Former Keele Municipal Golf Course

This Larger residential development is categorised in the Landscape Assessment as having a Major adverse impact on the local Landscape.

AB2 – Land Adjoining Corner of A500 and M6 Southbound

Natural England notes this proposed employment allocation released entirely from the green belt, which comprises 70ha of grade 2 BMV agricultural land. The Landscape study concludes that the: "Proposed development scenario is likely to have a major adverse effect on the SA objective with no satisfactory mitigation possible" (p 15). With regards to potential Air Quality impacts on protected sites Natural England notes from the options analysis that "The loss or potential moving of a layby to enable access to the site could be problematic indicating potential issues with site access and traffic flow. An increase in HGV and personal vehicle traffic is anticipated, which could lead to potential congestion and air pollution in the area". Natural England would therefore also like to understand the evidence base further including the rationale for an alternative site TK30 @ Talke A34 / A500 roundabout being ruled out.

Policy PSD6: Health and Wellbeing

Natural England welcome this policy direction in terms of safeguarding health and amenity and supporting healthy communities, through the protection and provision of high-quality open spaces, including allotments and the promotion of active travel transport choices Further information on joining up Nature Recovery and Green Infrastructure (GI) with health priorities is set out below. If more cities and towns can be creatively designed and managed, with nature and communities at their heart, we will see nature and people thrive. This is something we set out to inspire at Natural England when developing the Green

Infrastructure Framework and Design Guide. Natural England's People and Nature survey tells us that, for 82% of people 'being in nature makes me happy'. With the cost-of-living crisis, 'free' places like local parks and greenspace, have become even more important. The value of these spaces for the economy is estimated at £28.7 billion per year.

Green infrastructure in towns and cities provides places to relax, exercise, and spend time outdoors; cools urban areas; reduces flooding by allowing water to permeate the ground rather than overwhelm our drains; increases biodiversity and helps to reduce inequalities in access to nature. Options assessments for development sites and related green and blue Infrastructure within and between developments, green spaces and designated sites should; include soft transition and consider potential direct and indirect implications on sustainable use for example visitor pressure and transport / access options.

The natural environment affords the best 'natural' play opportunities for children while offering multifunctional nature-based solutions to climate change etc. These can be blended into wildlife rich green infrastructure and green open spaces that can act as destination play sites for local children (See best practice at Play England and Play Wales) that have proven health and wellbeing value.

Evidence for nature play and health:
 Play, naturally: a review of children's natural play
 Nature for health and wellbeing | The Wildlife Trusts
 Good practice in social prescribing for mental health: the role of nature-based interventions - NECR228 (naturalengland.org.uk)

6 Climate and Renewable Energy
 Whilst Natural England welcomes this group of policies we recommend including Policy CRE1: Climate Change and Policy CRE2: Renewable Energy within the Sustainable Environment (SE) group of policies to achieve a collective strategic focus on sustainable development and working toward achieving net zero alongside the SE policies relating to Pollution and Air Quality (SE1) and requirements for sustainable water management measures to reduce water use, natural flood protection features alongside the specific policies on Sustainable Drainage Systems (Policy SE4:)

Natural England continues to work with the LPAs across the region on understanding air pollution across area boundaries (see comments and links in objectives section.)

10 Infrastructure and Transport Policy.
 Policy IN4 Cycleways, Bridleways and Public Rights of Way
 Natural England welcomes the inclusion of this group of policies which seek to maintain and enhance the network of public rights of way that cross the borough. We note that the sustainability appraisal states that "the borough has relatively poor accessibility to the cycle network and is the lowest performing in the county for walking zones" (p 206) and that, "eight allocated sites (AB2, AB12, AB33, HD10, KL15, MD29, SP11(3) and TK10) do not currently have safe pedestrian or cycle access adjacent to the site, where site end users may reliant upon less sustainable modes of transport including private car use". (p 180)

11 Sustainable Environment
 Natural England welcomes this group of policies and has the following policy specific comments:
 Policy SE1: Pollution and Air Pollution.
 Natural England welcomes this policy that notes that development proposals which are likely to result in detrimental impacts on air quality, will not be permitted unless it can be demonstrated that mitigation measures effectively address these impacts. (Comments on Air Quality are also provided on page 2 and 4 of this letter). The promotion of sustainable and active travel options, low-emission technologies and enhancement of green infrastructure to absorb air pollution is also noted. (see comment above re integrating the group: 6 Policies Climate and Renewable Energy).

Policy SE7: Biodiversity Net Gain
 Natural England supports the inclusion of a policy on BNG. We suggest the following minor amendments to further improve the plan policy.
 The BNG policy should make it clear that biodiversity net gain is not applied to irreplaceable habitats, and that any mitigation and/or compensation requirements for Habitats sites should be dealt with separately from biodiversity net gain provision. The policy should also set out how biodiversity net gain will be delivered and managed through the lifetime of the scheme and including monitoring requirements. This should include indicators to demonstrate the amount and type of gain provided through development. The indicators should be as specific as possible to help build an evidence base to take forward for future reviews of the plan, for example the total number and type of biodiversity units created, the number of developments achieving biodiversity net gains and a record of on-site and off-site contributions.
 Natural England notes that the Sustainability Appraisal states "Despite the BNG provisions at the site level, there remains potential for a cumulative adverse impact on biodiversity at the landscape scale, owing to incremental habitat losses. As a result of development within the Local Plan undeveloped land will be lost which will include the loss of soil resources, habitats recognised as being of 'high' and 'very high' distinctiveness, and potentially ecological links between biodiversity assets, whereby the policies will not be expected to fully mitigate the fragmentation of the ecological network. Fragmentation of the ecological network across Newcastle-under-Lyme is expected to be a long-term and permanent significant effect." (p 162)

Policy SE8: Biodiversity and Geodiversity
 Natural England supports the inclusion of this policy to protect the Boroughs internationally, nationally and locally designated sites important for their biodiversity value and to enhance the natural environment and work with partners toward Nature Recovery.
 We particularly welcome the plans recognition of the value of "wider ecological networks" stating that "Other sites, both individually and collectively, that are not designated can also contribute towards protecting and enhancing diversity of species locally".

Policy SE10: Landscape
 Natural England welcomes this policy aimed at ensuring that "development proposals should protect and enhance the character, quality, beauty, and tranquillity of the Borough". We note from the sustainability appraisal that "The entirety of the south of the borough is identified as being high in relation to landscape sensitivity, which starts in Audley in the north and covers the southern area of the borough, including

Loggerheads and Alington.” We agree that “Alteration of the landscape character is a long-term and permanent significant effect...There is potential for a cumulative adverse effect on landscape character resulting from the development proposed in the Plan”. (p193) SA.

Natural England has divided England into 159 distinct natural areas called National Character Areas (NCAs) Newcastle-under-Lyme falls within two NCAs: Shropshire, Cheshire and Staffordshire Plain: gently rolling plains dominated by intensive dairy farming, beef and arable production; The Potteries and Churnet Valley: strong contrast between the industrialised landscape of the Potteries and the pastoral, strongly dissected hills and small plateaux that flank the Churnet and Dove valleys.

Natural agrees with the following statement in the sustainability appraisal: “Although various policies aim to ensure that development conserves and enhances landscape character and distinctiveness, when combined with Local Plan policies that support infrastructural improvements such as for transportation, water, and waste, this is likely to lead to a long-term and irreversible cumulative adverse effect on landscape character and tranquillity and associated indicators such as dark skies.” (p72)

Policy SE11: Trees, hedgerows, and woodland

Natural England welcomes this plans recognition that “Trees, hedgerows, and woodlands are integral to the distinctive character and ecological health of the Borough of Newcastle-under-Lyme, defining landscapes across both urban and rural settlements.” And that “This policy prioritises the protection of existing natural assets, seeking to not only preserve, but actively enhance, these valuable features wherever possible”.

Policy SE13: Soil and Agricultural Land

Natural England has concerns about the justification for the loss of BMV agricultural land within this plan. “The proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land, A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of ‘best and most versatile’ (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services.” (page74) (SA)

Natural England notes that policy SE13 states: “Outside of sites allocated for development in the Local Plan, development proposals should avoid the loss of best and most versatile agricultural land (BMV) unless it can be demonstrated that the benefits of development clearly outweigh the loss of the land and every effort has been made to mitigate for the overall impact of the development on best and most versatile agricultural land.”

With regards to Soil and Agricultural Land Quality, Natural England advises that The Local Plan should give appropriate weight to the roles performed by the area’s soils. These should be valued as a finite multi-functional resource which underpin our wellbeing and prosperity. Decisions about development should take full account of the impact on soils, their intrinsic character and the sustainability of the many ecosystem services they deliver.

The 25 Year Environment Plan (25YEP) sets out government action to help the natural world regain and retain good health, including highlighting the need to:

- protect the best agricultural land
- put a value on natural capital, including healthy soil
- ensure all soils are managed sustainably by 2030
- restore and protect peatland

Soil is a finite resource which plays an essential role within sustainable ecosystems, performing an array of functions supporting a range of ecosystem services, including storage of carbon and water, the infiltration and transport of water, nutrient cycling, a buffer against pollution and provision of food. In order to safeguard soil resources as part of the overall sustainability of the development, it is important that the soil resource is able to retain as many of its important functions as possible. This can be achieved through careful soil management and appropriate, beneficial soil re-use, with consideration on how any adverse impacts on soils can be avoided or minimised.

The conservation and sustainable management of soils is reflected in the National Planning Policy Framework (NPPF), particularly in paragraph 180(a), 180(b) and 181 (footnote 62). When planning authorities are considering land use change, the permanency of the impact on soils is an important consideration. Particular care over planned changes to the most potentially productive soil is needed, for the ecosystem services it supports including its role in agriculture and food production.

Plan policies should therefore take account of the impact on land and soil resources and the wide range of vital functions (ecosystem services) they provide in line with paragraph 180(b) of the NPPF.

Soil Plan Policies

We strongly advise that at a minimum, the plan includes core policies for:

- the protection of best and most versatile (BMV) agricultural land (Grades 1, 2 and 3a in the Agricultural Land Classification (ALC)); and
- for the protection of and sustainable management of soils as a resource for the future.

-Areas of poorer quality land (ALC grades 3b, 4, 5) should be preferred to areas of higher quality land (grades 1, 2 and 3a).

-Recognise that development has an irreversible adverse impact on the finite national and local stock of BMV land.

-Conforms to NPPF and Planning Practice Guidance (Natural Environment and Minerals).

-Requires detailed ALC surveys to support plan allocations and for subsequent planning applications (for all sites larger than 5 ha). ALC surveys to support plan allocations and for subsequent planning applications for smaller sites (1 – 5 ha) would be welcomed.

-Recognise that development (soil sealing) has a major and usually irreversible adverse impact on soils.

-Soils of high environmental value (e.g., wetland and carbon stores such as peatland, low nutrient soils; or soils of high environmental value in the local context) should also be considered as part of ecological connectivity (Nature Recovery Network / Green Infrastructure).

-Requires soil handling and sustainable soil management strategies based on a detailed assessment of the soil resource based on best practice guidance (for all sites larger than 5 ha), ideally as part of the planning application process for major sites to help inform master-planning, and to safeguard the continued delivery of ecosystem services through careful soil management and appropriate, beneficial soil re-use. Soil handling and sustainable soil management strategies for smaller sites (1 – 5 ha) would be welcomed.

-Reference should be made to Defra's Construction Code of Practice for the Sustainable Use of Soils on Construction Sites

-In addition, for minerals and other temporary forms of development, plans for reinstatement, restoration and aftercare will be required (or for solar, a commitment to do so if the operational life is in decades); normally this will be return to the former land quality (ALC grade)

-Refers to soils issues within relevant policy areas such as renewable energy, climate change, green infrastructure and biodiversity net gain, flood schemes, managed realignment, development design and landscaping.

Policy SE14: Green and Blue Infrastructure

Natural England supports this policy. Well-designed cross boundary multi-functional green infrastructure contributes greatly to a number of benefits both for people and nature. Your green and blue (for example cross boundary canals) infrastructure should dovetail with your biodiversity net gain strategies to maximise benefits.

We would advise that the Local Authority also considers Natural England's Green Infrastructure Framework of Principles and Standards for England. As stated in our document, "Green infrastructure (GI) is part of the solution to many of the challenges we face; health inequalities, biodiversity crisis, climate change, nature recovery and levelling up. The GI framework supports local authorities, developers, parks and greenspace managers and local communities to enhance and create new good quality green infrastructure."

We would also suggest reference is made to the emerging Local Nature Recovery Strategy. Preparing Local Nature Recovery Strategies (LNRS) is a statutory requirement under the Environment Act 2021. LNRS are designed to work closely alongside other measures in the Act including supporting the delivery of mandatory biodiversity net gain and providing a focus for a strengthened duty on all public authorities to conserve and enhance biodiversity. They will also underpin the Nature Recovery Network, alongside work to develop partnerships and to integrate nature into our incentives and land management activities. Each LNRS will be specific and tailored to its area. The responsible authorities and people involved in preparing a strategy can choose how they want it to look, but every strategy must contain:

1. A local habitat map.

2. A written statement of biodiversity priorities. Statutory guidance for responsible authorities explains in detail what these 2 things should contain. Together they set out what the strategy is aiming to achieve and what practical actions will help do this. They will also propose where actions could be carried out for best effect and to connect and expand existing areas that are important for nature. We expect local nature recovery strategies to propose actions such as the:

- creation of wetlands
 - restoration of peatlands
 - planting of trees and hedgerows
 - more sustainable management of existing woodlands and other habitats like grasslands
- These actions are intended to help nature itself and to also help improve the wider natural environment.

Whilst the Staffordshire Local Nature Recovery Strategy (LNRS) is currently a work in progress, Newcastle-under-Lyme Borough Council Regulation 19 pre-submission should still be consistent with NPPF Paragraph 185 in terms of setting out local habitat priorities and identifying potential measures by which they can be achieved, alongside mapping areas that could become of particular importance in the future.

Natural England encourages Newcastle Under Lyme Borough Council via their Local Nature Recovery Strategy to actively develop cross border cooperation between other Local Planning Authorities (LPA) (for example Staffordshire Moorlands Borough Council) in coordinating land development projects that impact on local biodiversity sites to ensure that local biodiversity corridors are maintained and link up other local important sites for nature conservation.

This is a good way of achieving nature recovery and preparing to deliver the LNRS alongside enabling the local authority and its partners to identify, map and safeguard site areas, including green and blue infrastructure opportunities and interlinkages.

Habitats Regulations Assessment

Natural England notes that this Local Plan is not directly connected with or necessary to the management of any European site. A screening assessment has been undertaken which identified a number of Likely Significant Effects (LSE) associated with the Local Plan. Taking no account of mitigation measures, the HRA concludes that Local Plan has the potential to affect the following European sites:

-Cannock Chase SAC

-Humber Estuary SAC, SPA and Ramsar

-Mersey Estuary SPA and Ramsar

-Midland Meres and Mosses Phase 1 Ramsar

-Midland Meres and Mosses Phase 2 Ramsar

-Pasturefields Salt Marsh SAC

-Peak District Dales SAC

-Peak District Moors (South Pennine Moors Phase 1) SPA

-Severn Estuary SAC, SPA and Ramsar

-South Pennine Moors SAC

-West Midland Mosses SAC

We welcome that your HRA includes the Humber Estuary SAC, SPA and Ramsar site which is hydrologically connected to the river Trent. If the Local Plan resulted in significant water pollution, this European site could be affected and has therefore been screened in, in relation to water quality only, on a precautionary basis. Natural England however notes that the Sustainability Appraisal identifies "A long-term cumulative adverse effect ...in terms of water quality" (p 148) as a result of the plan, this is not fully reflected in the current HRA.

Natural England note that the Sustainability Appraisal states: that "the entirety of the borough falls within IRZs of one or more SSSIs. All five SSSIs within the borough are in 'unfavourable' condition: Burnt Wood SSSI, Maer Pool SSSI, Black Firs and Cranberry Bog SSSI (Midlands Meres and Mosses Phase 2 Ramsar), Betley Mere SSSI (Midlands Meres and Mosses Phase 1 Ramsar) and Metallic Tileries, Parkhouse SSSI."

Natural England are also aware of the extensive network of ancient woodland spread across the borough, totalling 707.60 hectares, as well as a large quantity of priority habitats, totalling 1,791 hectares. Natural England agree that the following designated sites and related priority habitats in adjoining LPA areas may also be affected by development through several pathways, including fragmentation, recreational pressure and/or pollution (including Air and Water Quality). Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI, Wyburnbury Moss SAC SSSI, Tyrley Canal Cutting SSSI, King's and Hargreaves Wood SSSI, Gannister Quarry SSSI, Roe Park Woods SSSI, Wetley Moore SSSI, Churnet Valley SSSI, Hatherton Flush SSSI, Sounds Heath SSSI, Ford Green Redebed SSSI, and Cop Mere SSSI.

It is noted that the Appropriate Assessment stage of the HRA assessed potential impacts by topic;

- Impacts on designated features affected by a possible deterioration in air quality
- Impacts on water quality and quantity associated with increased levels of built development.
- Impacts associated with increased recreational pressure at European sites; and
- Consideration of impacts at associated functionally linked land.

Natural England notes that the HRA also factored the following into the assessment process "the protective framework provided by the Local Plan and existing protection measures set out in high level strategic policy and existing planning policy frameworks that serve to help overcome the identified potential adverse effects" and that "taking into consideration these factors, it is concluded that the Local Plan would have no adverse impact on site integrity at any European site, either alone or in-combination.

Natural England disagree agree with this conclusion that for those Habitats sites in the area of search with features sensitive to air pollution, adverse effects on their integrity, alone or in-combination, can be ruled out for the reasons set out at the beginning of this letter on page 2 and repeated in part below:

Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot currently be ruled out at the following internationally designated sites:

- Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI
- Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI

Natural England are currently in discussion with a number of the Staffordshire and West Midlands LPA's with regards to the cumulative impacts of air quality. We advise that further work is required to inform the HRA. The HRA should demonstrate that there are no adverse effects on integrity of Habitat sites as a result of this Local Plan, alone and in combination with other plans and projects. With regards to allocated sites, it is unclear whether the individual sites put forward in the Local Plan have been assessed through the Habitat Regulations Assessment process and how mitigation will be applied here.

Sustainability Appraisal

Natural England has reviewed the Sustainability Appraisal (SA) and included comments taken from the document throughout our response.

The SA is a comprehensive document which should be reviewed in strengthening the HRA, particularly with regards to residual adverse effects that would be expected to remain in terms of wastewater following the implementation of the Local Plan policies. (p 141) Natural England notes that "Increased pressure on wastewater treatment has the potential to be a long term and potentially permanent significant effect" (p 142)

The SA recognises the local distinctiveness of the plan area;

"The Borough itself is largely rural in nature and supports some high-quality agricultural land, but is more heavily built up towards the north east surrounding Stoke-on-Trent. (p 8)

Newcastle-under-Lyme has a strong rural character with a high-quality landscape and countryside, with some areas identified as being sensitive to change as a result of new development. (p 19)

Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms make up the key features of some of these Landscape Character Types." (p 20)

Sets out the area specific barriers to achieving sustainable growth;

"Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)

Loss of tranquillity The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution.(p 68)

"The pre-mitigation SA assessments identified negative impacts in relation to air quality due to the proximity of sites to major roads, landscape character due to the location of sites within areas of high landscape sensitivity, close proximity to the PRoW network and potential for coalescence and urban sprawl, habitat sites, priority habitats, habitat distinctiveness, loss of undeveloped land, 'best and most versatile' (BMV) agricultural land, coinciding with mineral safeguarding areas (MSAs) and areas of surface water flood risk (SWFR); and access to healthcare facilities, schools, the local cycle network and railway network. (p 40)

There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work. (p 21)

Trends in transport choice are unlikely to change significantly, and private car use would continue to increase as the selected method of transport to work, with potential adverse impacts on air quality in the borough."(p 23)

Considers the local and cumulative significance of soil loss alongside the ecological implications:

"Loss of soil resources, BMV land and ecosystem services The proposed allocations would cumulatively result in the loss of up to approximately 342ha of previously undeveloped land, including up to 263ha of BMV agricultural land. The proposed development would be expected to reduce the ability of the local soil biome to effectively provide ecosystem services, to some extent. Additionally, the loss of permeable soils could potentially increase the risk of flooding and result in a loss of biodiversity across the Plan area. Loss of soil can also result in an increase in soil erosion and have subsequent impacts on agricultural yield.(p 68) The majority of the borough is ALC Grade 3 soil, with areas of ALC Grade 2 scattered across the borough. Grade 2 and potentially Grade 3 represents some of the borough's BMV agricultural land and should be conserved wherever possible (p 21)

	<p>A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of BMV land to be lost as a result of the development proposed in the Local Plan." (p 59)'</p> <p>Other Advice</p> <p>Further general advice is provided within Natural England Advice Note – Local Plans February 2024, attached at (Appendix A) - see attachment</p>

Policy IN5 Provision of Community Facilities

Comment ID	NULLP893
Order	94
Title	Policy IN5 Provision of Community Facilities
Consultee Company / Organisation	NHS Property Services
Consultee Family Name	Fleet
Consultee Given Name	Daniel
Q4 Part of document	Policy
Q4 Policy	IN5
Q6 Details	<p>Draft Policy IN5 Provision of Community Facilities</p> <p>Draft Policy IN5 focuses on both the provision and protection of Community Facilities such as Health Centres. NHSPS supports the provision of sufficient, quality community facilities but does not consider the proposed policy approach to be positively prepared or effective in its current form. Where healthcare facilities are included within the Local's Plan definition of community facilities, policies aimed at preventing the loss or change of use of community facilities and assets can potentially have a harmful impact on the NHS's ability to ensure the delivery of essential facilities and services for the community.</p> <p>The NHS requires flexibility with regards to the use of its estate to deliver its core objective of enabling excellent patient care and support key healthcare strategies such as the NHS Long Term Plan. In particular, the disposal of sites and properties which are redundant or no longer suitable for healthcare for best value (open market value) is a critical component in helping to fund new or improved services within a local area. Requiring NHS disposal sites to explore the potential for alternative community uses and/or to retain a substantial proportion of community facility provision adds unjustified delay to vital reinvestment in facilities and services for the community.</p> <p>All NHS land disposals must follow a rigorous process to ensure that levels of healthcare service provision in the locality of disposals are maintained or enhanced, and proceeds from land sales are re-invested in the provision of healthcare services locally and nationally. The decision about whether a property is surplus to NHS requirements is made by local health commissioners and NHS England. Sites can only be disposed of once the operational health requirement has ceased. This does not mean that the healthcare services are no longer needed in the area, rather it means that there are alternative provisions that are being invested in to modernise services.</p> <p>Where it can be demonstrated that health facilities are surplus to requirements or will be changed as part of wider NHS estate reorganisation and service transformation programmes, it should be accepted that a facility is neither needed nor viable for its current use, and policies within the Local Plan should support the principle of alternative uses for NHS sites with no requirement for retention of a community facility use on the land or submission of onerous information. To ensure the Plan is positively prepared and effective, NHSPS are seeking the following modification (shown in red italics) to Draft Policy IN5.</p>
Q7 Modification	<p>Proposed Modification to Draft Policy IN5:</p> <p>1.</p> <p>Areas defined on the Policies Map, or land and buildings currently used or last used for community facilities, will be retained or serve as locations for development for such purposes. Development resulting in the loss of an existing community facility, or land allocated for such purpose, will be assessed on merit and only be permitted where:</p> <p>A.the buildings or land are no longer fit for the purpose which they were being used due to size, layout, design and condition and that no alternative community use can be found; orB.</p> <p>there is no longer a need or demand for the facility as evidenced by it being formally declared surplus to the operational requirements of the provider such as the NHS or identified as surplus as part of a published estates strategy or service transformation plan, or it's no longer viable; or</p> <p>C.where there is recognised need, alternative provision can be made on another site to the same or higher standard in terms of quantity, quality and community benefit; or</p> <p>D.the current use will be retained and enhanced by the development of a small portion of the development site</p>

Consultee Position	Planning and Environment Committee
Consultee Family Name	Love
Consultee Given Name	Jeff
Q4 Part of document	Policy
Q4 Policy	IN5

Q5 Sound	No
Q6 Details	<p>This policy appears only to cover the retention of areas and facilities already in place and what is required should those community facilities be removed through development.</p> <p>It fails to recognise the need for "new" community facilities to be created to support development where no existing facilities are in place or where there is no opportunity to develop existing facilities.</p> <p>This is a crucial issue where development is being proposed in rural areas where community facilities, where they exist, are limited because they were never intended to meet the level of demand from a much larger population.</p> <p>Para 10.28 of the policy references the importance of community facilities in ensuring sustainability but then goes on solely to refer to actions to be taken to respond to the loss of such facilities, not that developers should (through s106 or other obligations) be expected to contribute to the development of community facilities required as a result of the increase in population caused by their proposed development.</p>
Q7 Modification	<p>The policy needs to be amended to make reference to an obligation on developers to ensure that appropriate community facilities are in place to support their development proposals and that they should consider setting land aside for the development of such facilities on site or work with local partners to ensure that facilities can be made available.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	<p>As the corporate body responsible for Loggerheads Neighbourhood Plan, and as a statutory consultee on Planning matters, the Parish Council would wish to ensure its views are considered and responded to</p>

Q4 Part of document	Policy
Q4 Policy	PSD5
Q6 Details	<p>5. The Issues of the Green Belt and the Countryside development - Sustainable Environment Policies and the issue of the 5 year supply of land for housing and employment and town centre uplift:</p> <p>a. In order to comply with NPPF rules and guidance, there are some LAs which might over-develop in order to avoid national government interference. This could lead not only to saturation but also to unnecessary encroachment into the green belt and/or countryside. The issue of the land (especially farmland) alienated by the HS2 project has not been dealt with or clarified given that so much land has been appropriated and taken out of commission from farms (the countryside (and the green belt?)) and may not be used again as farming land. If this is the case this will have been a back door enclosure of the countryside, cutting a swathe down the centre of England, and providing developers with land they have always wanted.</p> <p>b. The (Stones) Market is regularly 'improved' (revamped/reduced) but solutions have not led to its development or improvement, success and well being, only its decline. Given that the identity of Newcastle-under-Lyme is that of 'Market Town' this is becoming harder to justify. Developers would be aware of the difference between the statements and claims about Newcastle-under-Lyme (appearance) and its reality.</p> <p>c. It is only recently that the NBC has viewed itself as a University Town – which it has been for the past 75 years – an opportunity missed or possibly not even recognised?</p>

Policy SE1: Pollution and Air Quality

Comment ID	NULLP370

Consultee Position	Branch Secretary
Consultee Family Name	Gorton
Consultee Given Name	Richard
Q4 Part of document	Policy
Q4 Policy	SE1
Q6 Details	Policy SE1: Pollution and Amenity – concern over air quality has resulted in parts of Wolstanton, Porthill and May Bank being designated as an Air Quality Management Area. We note that the draft Local Plan expects development proposals not to produce ‘significant adverse effects on public health, the environment or amenity from polluting emissions or odours’. We are of the opinion that this section should be strengthened and suggest that ‘significant’ should be deleted from the sentence. Residents across the Borough should enjoy clean air, and the emphasis placed by the Local Plan on encouraging development that is clean, and green is particularly welcome. We noted that this section referred to initiatives which could be adopted to improve air quality. Omitted from the list was the imposition of a Bus Gate along Basford Bank. We were encouraged by this omission, as we view a Bus Gate as a flawed and misguided response which will export traffic congestion and pollution to other parts of May Bank, Wolstanton and Porthill.
Q7 Modification	Modification of Policy SE1 – we believe that the draft Local Plan should confirm that the Borough Council expects development proposals not to have any adverse effects on public health, the environment or amenity.

Q9 Hearing reasons	Conclusion Cross Heath, Wolstanton and May Bank Branch Labour Party welcomes the opportunity to give its views in response to the Regulation 19 stage of the draft Local Plan. If it is felt to be appropriate, a member of the Branch would be prepared to take part in the public scrutiny of the draft Local Plan.

NEWCASTLE-UNDER-LYME BOROUGH COUNCIL MARSH PARADE DEVELOPMENT BRIEF COMMENTS BY MUSIC VENUE TRUST IN SUPPORT OF THE RIGGER GRASSROOTS MUSIC VENUE

(1). MUSIC VENUE TRUST'S POSITION

These comments have been prepared by Music Venue Trust (MVT) and respond to the consultation being undertaken by Newcastle-under-Lyme Borough Council on the draft Local Plan 2020-2040. Music Venue Trust's key concern is the impact of proposals that may come forward in the future following the adoption of this draft Local Plan as a Supplementary Planning Document (SPD); proposals that could impact on The Rigger, a grassroots music venue (GMV) and a key cultural asset in Newcastle-under-Lyme.

MVT would like to first focus on policy TC22 (p.154): Marsh Parade, Newcastle (former Zanzibar nightclub), which allocates the land for the development of 70 dwellings and commercial units. While MVT does not oppose the development of this land in principle, we'd like to ensure that any development that does take place is done in a way that ensures the continued operation and financial viability of The Rigger and protects any potential residents from negative impact of noise typical of a thriving grassroots music venue like The Rigger which could lead to noise complaints that impact the operation of the GMV.

MVT is pleased to see policies SE1 (p.67) and SE12 (p.90) of the draft Local Plan refer to the Agent of Change principle, as well as reference to noise assessments within policy TC22. However, no reference is made to supporting grassroots music venues and other similar cultural businesses. We would like to see more specificity with regards to issues like noise assessment and insulation when developing residential units in close proximity to existing GMVs. A key area to consider would be the need to have opening windows in residential accommodation without this subjecting the residents to unacceptable noise levels, nor prompting noise complaints from residents relating to the operation of the pre-existing GMV. Details about deeds of easement as a means to prevent noise complaints negatively impacting the operation of the existing GMV should also be addressed in order to protect the venue.

The Rigger is a nationally recognised grassroots music venue which has been in operation for 20 years, establishing itself as central to the cultural fabric of Newcastle-under-Lyme. As such, any Local Plan adopted should set out criteria which must be followed in order to protect existing business, particularly those with cultural value. The operators of the music venue have sought to establish contact with the council in order to address noise mitigation measures for the proposed residential units on the site of the former Zanzibar nightclub, however the operators have still not been consulted. As the Local Plan potentially impacts The Rigger, the operators of the venue should be consulted in order to ensure any impact is not negative.

MVT and the operators of The Rigger would strongly object to any future planning application in the vicinity of the venue that may impact the venue's operation or future viability.

(2). THE AGENT OF CHANGE PRINCIPLE

At a national level, the Agent of Change principle in the National Planning Policy Framework is very clear that the responsibility to effectively mitigate the impact of the proposed redevelopment on existing businesses falls to the developers who act as the 'Agent of Change'.

The intention of the agent of change principle can best be seen in highlighting the following passages from the National Planning Policy Framework:

The agent of change principle was introduced by the NPPF in 2018. Paragraph 193 of the updated NPPF (December 2023) states:

"Planning policies and decisions should ensure that new development can be integrated effectively with existing businesses and community facilities (such as places of worship, pubs, music venues and sports clubs). Existing businesses and facilities should not have unreasonable restrictions placed on them as a result of development permitted after they were established. Where the operation of an existing business or community facility could have a significant adverse effect on new development (including changes of use) in its vicinity, the applicant (or 'agent of change') should be required to provide suitable mitigation before the development has been completed."

Other guidance within the NPPF is also a material planning consideration. Paragraph 97 states that:

"To deliver the social, recreational and cultural facilities and services the community needs, planning policies and decisions should... guard against the unnecessary loss of valued facilities and services, particularly where this would reduce the community's ability to meet its day-to-day needs"

(3). MVT AND THE GMV SECTOR

About us:

Music Venue Trust is a UK registered charity established in 2014 that acts to protect, secure and improve the UK's Grassroots Music Venue circuit. Music Venue Trust provides advice to the government, the cultural sector and the music industry on issues impacting the network of venues and is the nominated representative that speaks on behalf of the Music Venues Alliance, an association of over 800 venues from across the UK.

Economic & Cultural Responsibility and Impact of the GMV sector:

Music Venue Trust recognises that Grassroots Music Venues (GMVs) contribute to creating a rich cultural environment for the local community, boost the local economy and increase footfall to high streets. GMVs provide new and emerging artists and musicians with a space to hone their craft, develop their fanbase and increase access to cultural opportunities for the local community: MVT makes the case to Government and industry that they are the 'research and development' arm of the music industry. However, in the aftermath of the Covid-19 Pandemic, the economic resilience of Grassroots Music Venues has been pushed to the limit. In Music Venue Trust's 2023 Annual report we announced at Parliament the startling statistic that the average profit margin of a GMV is 0.5%, and that at its core, the provision purely of live music is a loss-making activity - one that is essentially subsidised nationally by GMVs to the tune of

	<p>£114.8 million. It is other revenue streams, like the provision of food & beverages, which enable GMVs to provide their cultural activity.</p> <p>GMVs and incoming neighbourhood developments:</p> <p>Our concerns for The Rigger are informed by experience and statistical analysis of the sector. The Music Venue Trust's Annual Report for 2023 shows a sharp increase in the number of noise complaints placed against grassroots music venues, and a correlation between areas of redevelopment and spikes of noise complaints.</p> <p>Through this we're directly observing the impact noise complaints have on Grassroots Music Venues, the financial outlay operators have had to make as a direct result and the escalation of policing of the spaces by Environmental Health Officers. Music Venue Trust's Annual Reports for 2022 and 2023 showed an increase in the number of noise complaints placed against grassroots music venues from pre-pandemic levels, and a correlation between areas of redevelopment and spikes of noise complaints.</p> <p>Over the past 20 years 35% of Grassroots Music Venues (GMVs) have closed in the UK and this is still ongoing; at the start of 2023 Music Venue Trust reported that the UK was continuing to lose GMVs at an average rate of one a week. Set against this challenging climate, we urge Newcastle-under-Lyme Borough Council to take meaningful steps to protect Newcastle-under-Lyme's successful existing GMV, The Rigger, and not add to the ongoing loss of grassroots music venue spaces both nationally and locally.</p> <p>(4). Concluding points</p> <ul style="list-style-type: none"> - The Local Plan must stipulate that noise assessments be carried out by developers, with participation from the neighbouring GMV to ensure a survey captures true 'worst case scenario' data. The survey must then appropriately detail noise mitigation measures specifically in place to ensure the continued viable operation of the GMV The Rigger. - The venue operator should be considered a key stakeholder and consulted with at every stage of the residential planning process. - The Agent of Change principle needs to be thoroughly considered with specific reference to the impact of the development on a Grassroots Music Venue.

Title	Policy SE1: Pollution and Air Quality
Consultee Company / Organisation	Natural England
Consultee Position	Senior Officer
Consultee Family Name	McLaughlin
Consultee Given Name	Sally
Q4 Part of document	Policy
Q4 Policy	SE1
Q6 Details	<p>Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.</p> <p>Natural England welcomes the opportunity to comment at this stage of the Local Plan and particularly supports the inclusion of policies on green and blue infrastructure, biodiversity, health and wellbeing, trees hedgerows and woodlands. We have reviewed the consultation documents and provide comments that relate to the soundness of the Local Plan and that are most relevant to our interest in the Natural Environment.</p> <p>Natural England has adopted a robust precautionary approach within this plan response. Whilst we welcome the content of the Local Plan, Natural England advises that the plan is currently at risk of being unsound and/or not legally compliant due to the potential impacts on air quality in relation to internationally designated nature conservation sites and the justification for the potential loss of 263ha best and most versatile (BMV) agricultural land. Further detail is provided below.</p> <p>Natural England have also provided other advice within this submission relating to further improvements that could strengthen plan policies and specific strategic site options and related mitigation.</p> <p>Do you consider that the Newcastle Under Lyme Plan is Sound and Legally Compliant?</p> <p>Natural England notes that the plan is at the pre-submission stage and as such your authority is seeking confirmation on the soundness of the plan. Having reviewed the plan and supporting documents, Natural England considers the pre-submission plan in its current form is not sound or legally compliant, this is due to a lack of evidence with regards to air quality and the cumulative loss of BMV agricultural land both in a local and national context.</p> <p>Air quality</p> <p>Natural England notes that the Sustainability Appraisal states that "Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)</p> <p>As Natural England understands it the current evidence base used to conduct the HRA cannot rule out adverse impacts on designated sites. The HRA states at page 22 3.4.16 "At the time of writing, the traffic modelling run for the final suite of Regulation 19 allocations had not been undertaken." Appendix A lists the local plans for neighbouring LPA's concluding that 'in combination' with plans and projects (approved</p>

and those yet to be implemented) they may trigger in-combination effects on European sites as a result of air quality, particularly as we understand it in the key commuting areas.

Natural England notes that Annual Average Daily Traffic (AADT) data and traffic modelling in the Strategic Transport Assessment (STA) concludes a potential reduction in travel and related air pollution at allocated sites as a result of a predicted preference in the use of public transport. We are surprised by this projected decrease in both traffic and related air pollution, particularly as one employment allocation site includes a 200-bay lorry park and increased congestion is predicted at junction 16 of the M6 where it joins the A500 in a rural location with no existing rural transport provision. The Sustainability Appraisal also notes that: "There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work". (p 206)

Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot therefore currently be ruled out at the following internationally designated sites:

- Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI
- Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI

The HRA outlines that the main source of ammonia emissions is agricultural practice, and that material increases in NH₃ emissions are unlikely to be associated with the proposed local plan. At Black Firs and Cranberry Bog and Oakhanger Moss, any increase in nitrogen deposition has the potential to exacerbate pollution levels and thereby undermine the reasons for notification of these sites as a Ramsar.

Ammonia can be emitted from vehicle exhaust emissions as a by-product of the catalytic conversion process designed to reduce emissions of nitrogen oxide. As traffic composition transitions toward more petrol and electric cars (i.e., fewer diesel cars on the road), catalytic converters may aid in reducing NO_x emissions but result in increased ammonia emissions. Ammonia emissions from road traffic therefore could make a significant difference to nitrogen deposition close to roads.

Natural England therefore advise that ammonia sourced from traffic emissions should be included for assessment within the local plan HRA, as the impact from this source on designated sites is currently unclear. For further information please see this report from Air Quality Consultants (AQC) that looks at ammonia emissions from roads for assessing impacts on nitrogen-sensitive habitats. Whilst we are aware that the current CREAM model created by AQC used to assess ammonia emissions from road traffic has not been peer reviewed, at this time it has been recognised as a Best Available Tool and we deem it appropriate to be used where any caveats associated with this model are also considered within the assessment. An assessment based on the best available approach is necessary. The next stage of assessment can then consider uncertainties in the model and site specifics to decide if mitigation needs to be considered.

Further work is therefore required to inform the Habitat Regulations Assessment. Natural England will engage with the Local Planning Authority in order to produce a Statement of Common Ground (SoCG) on this matter.

'Best and most versatile' (BMV) agricultural land

Natural England notes that "the proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land. A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of 'best and most versatile' (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services". (page 74 Sustainability Appraisal).

Under the Town and Country Planning (Development Management Procedure) (England) Order 2015 (DMPO) Natural England is a statutory consultee on development that would lead to the loss of over 20ha of 'best and most versatile' (BMV) agricultural land (land graded as 1, 2 and 3a in the Agricultural Land Classification (ALC) system, where this is not in accordance with an approved plan.

Natural England would like to understand how the local planning authority have produced the evidence base and options assessment which informs the strategic site allocations.

Natural England will engage with the local planning authority to consider the cumulative impacts of the loss of BMV both in the local and national context and the challenges related to environmental impact, infrastructure, and the requirement to deliver a balance between the need for development and the potential urbanisation of the countryside including the potential mitigation measures that need to be considered.

NPPF paragraph 174e states:

Planning policies and decisions should contribute to and enhance the natural and local environment by:

- ... preventing new and existing development from contributing to, being put at unacceptable risk from, or being adversely affected by, unacceptable levels of soil, air, water or noise pollution or land instability.

Development should, wherever possible, help to improve local environmental conditions such as air and water quality, taking into account relevant information such as river basin management plans.

Natural England provides guidance to inform further assessment of air quality and the loss of BMV agricultural land in our response to the content of the plans Strategic Policies as set out below.

Do you consider that the Newcastle-under-Lyme Borough Council Regulation 19 pre-submission draft Plan is compliant with Duty to Co-operate?

In terms of working with neighbouring authorities, Natural England notes that initially the plan was intended to be produced jointly with the City of Stoke-on-Trent, the plan does not however currently present an evidence base that demonstrates that a collaborative approach has been adopted and that the Duty to Co-operate has been fully complied with.

The Sustainability Appraisal states that: "Overall, there is potential for a cumulative adverse effect on biodiversity, owing to the fragmentation of the ecological network... Where a large amount of development is located on previously undeveloped land surrounding rural settlements, this is likely to produce a long-term irreversible negative cumulative effect regarding the urbanisation of the countryside" (p 71)

Natural England would therefore like to further understand how the areas identified to meet the City of Stoke-on-Trent's unmet employment needs are justified and appropriate and whether meeting some of the employment needs of the City of Stoke-on-Trent has led to the need to release or safeguard more land from the Green Belt in Newcastle under Lyme. If this is the case, what are the exceptional circumstances for doing this and how does this align with the allocated sites options assessment?

Recreational Pressure

In terms of the South Pennine Moors SAC and recreational impacts, the Local Plan does comply with the Duty to Co-operate. Natural England recommends that reference is made to the 'Recreation use of the South Pennine Moors and implications for strategic housing growth' report by Footprint Ecology Ref 778 date 27th March 2024. This report should both inform the evidence base and ensure that policies relating to open space/green infrastructure are as rigorous and robust as possible.

The report concludes that more data/evidence is required to determine if recreational use is causing an impact across to the South Pennine Moors and to get a better understanding of the scale and location of any impact. Natural England notes that the report records 7,000 additional dwellings in Newcastle-under-Lyme over the plan period rather than the 8,000 included in this regulation 19 submission. Newcastle-under-Lyme Borough Council should therefore continue to work with local authority and other partners to ensure coordinated and continued cross boundary action.

Other matters

Natural England has specific concerns related to allocations in the Green Belt. Notwithstanding that, Natural England considers most of the policies within the plan to be sound and deliverable. The plan is consistent with national policy with regard to those policies that are within Natural England's remit. Further information on strengthening policies including but not limited to Soils and best and most versatile (BMV) agricultural land, preventing loss and fragmentation of habitats and supporting green infrastructure are provided below.

Vision and Strategy

Natural England notes that the Plan's vision and emerging development strategy set out a framework for the future development of Newcastle-under-Lyme and addresses the needs in relation to housing, the economy, community facilities and infrastructure, including specific reference to a proposed employment site allocation.

This vision and the related objectives should also set out the environmental ambition for the plan area and form the basis for nature recovery and enhancement, supported by the policies and proposals in the plan.

Natural England advises that the vision should also incorporate more on the local ecology and landscape features which underpin local distinctiveness such as the "strong rural character with long open views across the surrounding rural landscape, towards more distant hills often framed by trees" (p 69) Part 3 Site Specific Landscape & Visual Appraisal. "Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms" (p 187) Sustainability Appraisal.

Strategic Objectives

Natural England welcome strategic objective SO-4 relating to carbon reduction and climate change, however we do not feel that this group of thirteen strategic objectives value or reflect the Boroughs whole ecology and landscape including but not limited to the protection of soil and best and most versatile (BMV) agricultural land. We would suggest that additional objectives are added relating to: air quality, water quality and quantity, soils and landscape.

Natural England would also like to see stronger reference to the Nature Recovery Network which is one of the specific aims of the Environment Act 2021 and will underpin the approach to the enhancement of nature.

Air quality is a major threat to habitats and species. Many ecological sites are exceeding their critical loads and levels for ammonia, nitrogen deposition and acid deposition. The strengthening of the policies and the rationale behind site allocations within this plan will ensure that new development does not contribute to the further deterioration of habitats and species due to air pollution. Further advice on strengthening the plans evidence base with regards to air quality is provided in the links below:

Strategic Policies

5 Planning for Sustainable Development

Policy PSD5: Green Belt

Natural England notes that this policy "aims to protect the Borough's essential open spaces, prioritise the use of brownfield land, and guide potential future development in accordance with the National Planning Policy Framework (NPPF)".

Natural England however notes that amendments to the Green Belt boundary are proposed in the form of 14 site allocations to accommodate both the growth requirements of the borough and the employment requirements of wider Stoke-on-Trent conurbation. Natural England's has some site-specific concerns about the potential impacts of some of the green belt sites selected on the natural environment with regards to habitat loss, fragmentation and justification for the loss of BMV agricultural land.

We note the LPA's intention to release and compensate for the loss of green belt and prioritise the use of suitable brownfield land. However, the site allocations in the green belt would result in the potential

loss of 263ha of Best and Most Versatile (BMV) agricultural land. The council should satisfy itself that it is making a balanced decision for sustainable development, the Sustainability Appraisal concludes that: "The Green Belt Study assessed land parcels against the contribution they make to the five purposes of the Green Belt on a four-point scale... Three allocated sites (AB12, AB33 and TK10) are located in areas which make a 'strong' overall contribution to the purposes of the Green Belt where "the site contributes to the purpose in a strong and undeniable way, whereby removal of the site from the Green Belt will detrimentally undermine this purpose" (p101)

"Site allocations on previously undeveloped land or that would result in a net loss of GI / vegetation could result in a reduced capability of the environment to provide ecosystem services including carbon storage, the storage and filtration of water including natural flood protection, as well as reduced availability and connectivity of habitats within the green network enabling movement of species. (p 165)

Strategic Site Allocations

Natural England suggests that the HRA should include a "requirement for project-level/site specific HRA's and targeted ecological surveys".

The Sustainability Appraisal concludes that:

"Some 12 allocated sites partially coincide with priority habitats, where 3.43% of the total site allocation areas coinciding with priority habitats which include deciduous woodland, good quality semi-improved grassland and Site BL18 coincides with lowland fens which is a very high distinctiveness habitat in the BNG handbook (2024). These habitats can support a range of species of principal importance. Allocated Site KL15 is adjacent to 'The Butts and Hands Wood' ancient woodland, with a further 20 allocated sites located in close proximity to ancient woodlands. P158

"Six allocated sites (Sites CT20, HD10, KL13, RC8, SP11(2) and SP23) are located within areas of 'high' or 'very high' habitat distinctiveness that provide high biodiversity value. Whilst in many cases these habitats can be conserved alongside development, it is likely that in some cases fragmentation or loss of habitats and connections between habitats will occur"

"The majority of allocated sites are located on previously undeveloped land, which would result in the loss of soil resources and the ecosystem services they provide. (p 159) The development of new buildings on previously undeveloped land would be expected to result in a direct loss of soil resource, with little or no scope for mitigation" (p 216)

"The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution. (p 68)

For all sites, Natural England advises that the hydrological catchment within which the site sits is taken into consideration, with regards to the potential impact of the developments proposed on the adjoining watercourses and wider catchments, including but not limited to surface water runoff (including during construction), existing and required capacity of Waste Water Treatment Works (WwTW) and water supply and flooding issues. Each site will require site specific investigation, and the council should understand the impact of all the sites put forward individually and in combination.

Natural England has specific concerns and or requires further information about the following 'Strategic Site Allocations' which could potentially impact on designated sites as a result of air and water quality and/or lead to the loss and / or fragmentation of priority habitats and BMV agricultural land:

BL18 – Clough Hall Playing Fields, Talke

Natural England would like to further understand this larger residential development proposal with regards to the potential impacts on the lowland fen habitat.

KL13 & KL15 – Land South of A525 between Keele University and Newcastle

Natural England notes this proposal for Employment development is immediately adjacent to ancient woodland priority habitat.

HM28 – Land off East Lawns, Betley

Existing and projected water quality issues at Betley Mere will need to be considered with regards to this allocation.

LW53 – Loggerheads

Natural England notes this residential housing development proposal is located within the IRZ of protected sites (Burnt Wood SSSI) which states that development proposals of 50 or more homes outside existing settlements/urban areas in these zones should be consulted upon with Natural England.

SP11 – Former Keele Municipal Golf Course

This Larger residential development is categorised in the Landscape Assessment as having a Major adverse impact on the local Landscape.

AB2 – Land Adjoining Corner of A500 and M6 Southbound

Natural England notes this proposed employment allocation released entirely from the green belt, which comprises 70ha of grade 2 BMV agricultural land. The Landscape study concludes that the: "Proposed development scenario is likely to have a major adverse effect on the SA objective with no satisfactory mitigation possible" (p 15). With regards to potential Air Quality impacts on protected sites Natural England notes from the options analysis that "The loss or potential moving of a layby to enable access to the site could be problematic indicating potential issues with site access and traffic flow. An increase in HGV and personal vehicle traffic is anticipated, which could lead to potential congestion and air pollution in the area". Natural England would therefore also like to understand the evidence base further including the rationale for an alternative site TK30 @ Talke A34 / A500 roundabout being ruled out.

Policy PSD6: Health and Wellbeing

Natural England welcome this policy direction in terms of safeguarding health and amenity and supporting healthy communities, through the protection and provision of high-quality open spaces, including allotments and the promotion of active travel transport choices Further information on joining up Nature Recovery and Green Infrastructure (GI) with health priorities is set out below. If more cities and towns can be creatively designed and managed, with nature and communities at their heart, we will see nature and people thrive. This is something we set out to inspire at Natural England when developing the Green Infrastructure Framework and Design Guide. Natural England's People and Nature survey tells us that, for 82% of people 'being in nature makes me happy'. With the cost-of-living crisis, 'free' places like local parks and greenspace, have become even more important. The value of these spaces for the economy is estimated at £28.7 billion per year.

Green infrastructure in towns and cities provides places to relax, exercise, and spend time outdoors; cools urban areas; reduces flooding by allowing water to permeate the ground rather than overwhelm our drains; increases biodiversity and helps to reduce inequalities in access to nature. Options assessments for development sites and related green and blue Infrastructure within and between developments, green spaces and designated sites should; include soft transition and consider potential direct and indirect implications on sustainable use for example visitor pressure and transport / access options.

The natural environment affords the best 'natural' play opportunities for children while offering multifunctional nature-based solutions to climate change etc. These can be blended into wildlife rich green infrastructure and green open spaces that can act as destination play sites for local children (See best practice at Play England and Play Wales) that have proven health and wellbeing value.

Good practice in social prescribing for mental health: the role of nature-based interventions - NECR228 (naturalengland.org.uk)

6 Climate and Renewable Energy

Whilst Natural England welcomes this group of policies we recommend including Policy CRE1: Climate Change and Policy CRE2: Renewable Energy within the Sustainable Environment (SE) group of policies to achieve a collective strategic focus on sustainable development and working toward achieving net zero alongside the SE policies relating to Pollution and Air Quality (SE1) and requirements for sustainable water management measures to reduce water use, natural flood protection features alongside the specific policies on Sustainable Drainage Systems (Policy SE4:)

Natural England continues to work with the LPAs across the region on understanding air pollution across area boundaries (see comments and links in objectives section.)

10 Infrastructure and Transport Policy.

Policy IN4 Cycleways, Bridleways and Public Rights of Way

Natural England welcomes the inclusion of this group of policies which seek to maintain and enhance the network of public rights of way that cross the borough. We note that the sustainability appraisal states that "the borough has relatively poor accessibility to the cycle network and is the lowest performing in the county for walking zones" (p 206) and that, "eight allocated sites (AB2, AB12, AB33, HD10, KL15, MD29, SP11(3) and TK10) do not currently have safe pedestrian or cycle access adjacent to the site, where site end users may reliant upon less sustainable modes of transport including private car use". (p 180)

11 Sustainable Environment

Natural England welcomes this group of policies and has the following policy specific comments:

Policy SE1: Pollution and Air Pollution.

Natural England welcomes this policy that notes that development proposals which are likely to result in detrimental impacts on air quality, will not be permitted unless it can be demonstrated that mitigation measures effectively address these impacts. (Comments on Air Quality are also provided on page 2 and 4 of this letter). The promotion of sustainable and active travel options, low-emission technologies and enhancement of green infrastructure to absorb air pollution is also noted. (see comment above re integrating the group: 6 Policies Climate and Renewable Energy).

Policy SE7: Biodiversity Net Gain

Natural England supports the inclusion of a policy on BNG. We suggest the following minor amendments to further improve the plan policy.

The BNG policy should make it clear that biodiversity net gain is not applied to irreplaceable habitats, and that any mitigation and/or compensation requirements for Habitats sites should be dealt with separately from biodiversity net gain provision. The policy should also set out how biodiversity net gain will be delivered and managed through the lifetime of the scheme and including monitoring requirements. This should include indicators to demonstrate the amount and type of gain provided through development.

The indicators should be as specific as possible to help build an evidence base to take forward for future reviews of the plan, for example the total number and type of biodiversity units created, the number of developments achieving biodiversity net gains and a record of on-site and off-site contributions.

Natural England notes that the Sustainability Appraisal states "Despite the BNG provisions at the site level, there remains potential for a cumulative adverse impact on biodiversity at the landscape scale, owing to incremental habitat losses. As a result of development within the Local Plan undeveloped land will be lost which will include the loss of soil resources, habitats recognised as being of 'high' and 'very high' distinctiveness, and potentially ecological links between biodiversity assets, whereby the policies will not be expected to fully mitigate the fragmentation of the ecological network. Fragmentation of the ecological network across Newcastle-under-Lyme is expected to be a long-term and permanent significant effect." (p 162)

Policy SE8: Biodiversity and Geodiversity

Natural England supports the inclusion of this policy to protect the Boroughs internationally, nationally and locally designated sites important for their biodiversity value and to enhance the natural environment and work with partners toward Nature Recovery.

We particularly welcome the plans recognition of the value of "wider ecological networks" stating that "Other sites, both individually and collectively, that are not designated can also contribute towards protecting and enhancing diversity of species locally".

Policy SE10: Landscape

Natural England welcomes this policy aimed at ensuring that "development proposals should protect and enhance the character, quality, beauty, and tranquillity of the Borough". We note from the sustainability appraisal that "The entirety of the south of the borough is identified as being high in relation to landscape sensitivity, which starts in Audley in the north and covers the southern area of the borough, including Loggerheads and Almington." We agree that "Alteration of the landscape character is a long-term and permanent significant effect... There is potential for a cumulative adverse effect on landscape character resulting from the development proposed in the Plan". (p193) SA.

Natural England has divided England into 159 distinct natural areas called National Character Areas (NCAs) Newcastle-under-Lyme falls within two NCAs: Shropshire, Cheshire and Staffordshire Plain: gently rolling plains dominated by intensive dairy farming, beef and arable production; The Potteries and Churnet Valley: strong contrast between the industrialised landscape of the Potteries and the pastoral, strongly dissected hills and small plateaux that flank the Churnet and Dove valleys.

Natural agrees with the following statement in the sustainability appraisal: "Although various policies aim to ensure that development conserves and enhances landscape character and distinctiveness, when combined with Local Plan policies that support infrastructural improvements such as for transportation, water, and waste, this is likely to lead to a long-term and irreversible cumulative adverse effect on landscape character and tranquillity and associated indicators such as dark skies." (p72)

Policy SE11: Trees, hedgerows, and woodland

Natural England welcomes this plans recognition that "Trees, hedgerows, and woodlands are integral to the distinctive character and ecological health of the Borough of Newcastle-under-Lyme, defining landscapes across both urban and rural settlements." And that "This policy prioritises the protection of existing natural assets, seeking to not only preserve, but actively enhance, these valuable features wherever possible".

Policy SE13: Soil and Agricultural Land

Natural England has concerns about the justification for the loss of BMV agricultural land within this plan. "The proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land, A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of 'best and most versatile' (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services." (page74) (SA)

Natural England notes that policy SE13 states: "Outside of sites allocated for development in the Local Plan, development proposals should avoid the loss of best and most versatile agricultural land (BMV) unless it can be demonstrated that the benefits of development clearly outweigh the loss of the land and every effort has been made to mitigate for the overall impact of the development on best and most versatile agricultural land."

With regards to Soil and Agricultural Land Quality, Natural England advises that The Local Plan should give appropriate weight to the roles performed by the area's soils. These should be valued as a finite multi-functional resource which underpin our wellbeing and prosperity. Decisions about development should take full account of the impact on soils, their intrinsic character and the sustainability of the many ecosystem services they deliver.

The 25 Year Environment Plan (25YEP) sets out government action to help the natural world regain and retain good health, including highlighting the need to:

- protect the best agricultural land
- put a value on natural capital, including healthy soil
- ensure all soils are managed sustainably by 2030
- restore and protect peatland

Soil is a finite resource which plays an essential role within sustainable ecosystems, performing an array of functions supporting a range of ecosystem services, including storage of carbon and water, the infiltration and transport of water, nutrient cycling, a buffer against pollution and provision of food. In order to safeguard soil resources as part of the overall sustainability of the development, it is important that the soil resource is able to retain as many of its important functions as possible. This can be achieved through careful soil management and appropriate, beneficial soil re-use, with consideration on how any adverse impacts on soils can be avoided or minimised.

The conservation and sustainable management of soils is reflected in the National Planning Policy Framework (NPPF), particularly in paragraph 180(a), 180(b) and 181 (footnote 62). When planning authorities are considering land use change, the permanency of the impact on soils is an important consideration. Particular care over planned changes to the most potentially productive soil is needed, for the ecosystem services it supports including its role in agriculture and food production.

Plan policies should therefore take account of the impact on land and soil resources and the wide range of vital functions (ecosystem services) they provide in line with paragraph 180(b) of the NPPF.

Soil Plan Policies

We strongly advise that at a minimum, the plan includes core policies for:

- the protection of best and most versatile (BMV) agricultural land (Grades 1, 2 and 3a in the Agricultural Land Classification (ALC)); and
- for the protection of and sustainable management of soils as a resource for the future.

-Areas of poorer quality land (ALC grades 3b, 4, 5) should be preferred to areas of higher quality land (grades 1, 2 and 3a).

-Recognise that development has an irreversible adverse impact on the finite national and local stock of BMV land.

-Conforms to NPPF and Planning Practice Guidance (Natural Environment and Minerals).

-Requires detailed ALC surveys to support plan allocations and for subsequent planning applications (for all sites larger than 5 ha). ALC surveys to support plan allocations and for subsequent planning applications for smaller sites (1 – 5 ha) would be welcomed.

-Recognise that development (soil sealing) has a major and usually irreversible adverse impact on soils.

-Soils of high environmental value (e.g., wetland and carbon stores such as peatland, low nutrient soils; or soils of high environmental value in the local context) should also be considered as part of ecological connectivity (Nature Recovery Network / Green Infrastructure).

-Requires soil handling and sustainable soil management strategies based on a detailed assessment of the soil resource based on best practice guidance (for all sites larger than 5 ha), ideally as part of the planning application process for major sites to help inform master-planning, and to safeguard the continued delivery of ecosystem services through careful soil management and appropriate, beneficial soil re-use. Soil handling and sustainable soil management strategies for smaller sites (1 – 5 ha) would be welcomed.

-Reference should be made to Defra's Construction Code of Practice for the Sustainable Use of Soils on Construction Sites

-In addition, for minerals and other temporary forms of development, plans for reinstatement, restoration and aftercare will be required (or for solar, a commitment to do so if the operational life is in decades); normally this will be return to the former land quality (ALC grade)

-Refers to soils issues within relevant policy areas such as renewable energy, climate change, green infrastructure and biodiversity net gain, flood schemes, managed realignment, development design and landscaping.

Policy SE14: Green and Blue Infrastructure

Natural England supports this policy. Well-designed cross boundary multi-functional green infrastructure contributes greatly to a number of benefits both for people and nature. Your green and blue (for example cross boundary canals) infrastructure should dovetail with your biodiversity net gain strategies to maximise benefits.

We would advise that the Local Authority also considers Natural England's Green Infrastructure Framework of Principles and Standards for England. As stated in our document, "Green infrastructure (GI) is part of the solution to many of the challenges we face; health inequalities, biodiversity crisis, climate change, nature recovery and levelling up. The GI framework supports local authorities, developers, parks and greenspace managers and local communities to enhance and create new good quality green infrastructure."

We would also suggest reference is made to the emerging Local Nature Recovery Strategy. Preparing Local Nature Recovery Strategies (LNRS) is a statutory requirement under the Environment Act 2021. LNRS are designed to work closely alongside other measures in the Act including supporting the delivery of mandatory biodiversity net gain and providing a focus for a strengthened duty on all public authorities to conserve and enhance biodiversity. They will also underpin the Nature Recovery Network, alongside work to develop partnerships and to integrate nature into our incentives and land management activities. Each LNRS will be specific and tailored to its area. The responsible authorities and people involved in preparing a strategy can choose how they want it to look, but every strategy must contain:

1. A local habitat map.
2. A written statement of biodiversity priorities. Statutory guidance for responsible authorities explains in detail what these 2 things should contain. Together they set out what the strategy is aiming to achieve and what practical actions will help do this. They will also propose where actions could be carried out for best effect and to connect and expand existing areas that are important for nature. We expect local nature recovery strategies to propose actions such as the:
 - creation of wetlands
 - restoration of peatlands
 - planting of trees and hedgerows
 - more sustainable management of existing woodlands and other habitats like grasslands
 These actions are intended to help nature itself and to also help improve the wider natural environment.

Whilst the Staffordshire Local Nature Recovery Strategy (LNRS) is currently a work in progress, Newcastle-under-Lyme Borough Council Regulation 19 pre-submission should still be consistent with NPPF Paragraph 185 in terms of setting out local habitat priorities and identifying potential measures by which they can be achieved, alongside mapping areas that could become of particular importance in the future.

Natural England encourages Newcastle Under Lyme Borough Council via their Local Nature Recovery Strategy to actively develop cross border cooperation between other Local Planning Authorities (LPA) (for example Staffordshire Moorlands Borough Council) in coordinating land development projects that impact on local biodiversity sites to ensure that local biodiversity corridors are maintained and link up other local important sites for nature conservation.

This is a good way of achieving nature recovery and preparing to deliver the LNRS alongside enabling the local authority and its partners to identify, map and safeguard site areas, including green and blue infrastructure opportunities and interlinkages.

Habitats Regulations Assessment

Natural England notes that this Local Plan is not directly connected with or necessary to the management of any European site. A screening assessment has been undertaken which identified a number of Likely Significant Effects (LSE) associated with the Local Plan. Taking no account of mitigation measures, the HRA concludes that Local Plan has the potential to affect the following European sites:

- Cannock Chase SAC
- Humber Estuary SAC, SPA and Ramsar
- Mersey Estuary SPA and Ramsar
- Midland Meres and Mosses Phase 1 Ramsar
- Midland Meres and Mosses Phase 2 Ramsar
- Pasturefields Salt Marsh SAC
- Peak District Dales SAC
- Peak District Moors (South Pennine Moors Phase 1) SPA
- Severn Estuary SAC, SPA and Ramsar
- South Pennine Moors SAC
- West Midland Mosses SAC

We welcome that your HRA includes the Humber Estuary SAC, SPA and Ramsar site which is hydrologically connected to the river Trent. If the Local Plan resulted in significant water pollution, this European site could be affected and has therefore been screened in, in relation to water quality only, on a precautionary basis. Natural England however notes that the Sustainability Appraisal identifies "A long-term cumulative adverse effect ...in terms of water quality" (p 148) as a result of the plan, this is not fully reflected in the current HRA.

Natural England note that the Sustainability Appraisal states: that "the entirety of the borough falls within IRZs of one or more SSSIs. All five SSSIs within the borough are in 'unfavourable' condition: Burnt Wood SSSI, Maer Pool SSSI, Black Firs and Cranberry Bog SSSI (Midlands Meres and Mosses Phase 2 Ramsar), Betley Mere SSSI (Midlands Meres and Mosses Phase 1 Ramsar) and Metallic Tileries, Parkhouse SSSI."

Natural England are also aware of the extensive network of ancient woodland spread across the borough, totalling 707.60 hectares, as well as a large quantity of priority habitats, totalling 1,791 hectares.

Natural England agree that the following designated sites and related priority habitats in adjoining LPA areas may also be affected by development through several pathways, including fragmentation, recreational pressure and/or pollution (including Air and Water Quality). Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI, Wybunbury Moss SAC SSSI, Tyrley Canal Cutting SSSI, King's and Hargreaves Wood SSSI, Gannister Quarry SSSI, Roe Park Woods SSSI, Wetley Moore SSSI, Churnet Valley SSSI, Hatherton Flush SSSI, Sounds Heath SSSI, Ford Green Redebed SSSI, and Cop Mere SSSI.

It is noted that the Appropriate Assessment stage of the HRA assessed potential impacts by topic;

- Impacts on designated features affected by a possible deterioration in air quality
- Impacts on water quality and quantity associated with increased levels of built development.
- Impacts associated with increased recreational pressure at European sites; and
- Consideration of impacts at associated functionally linked land.

Natural England notes that the HRA also factored the following into the assessment process "the protective framework provided by the Local Plan and existing protection measures set out in high level strategic policy and existing planning policy frameworks that serve to help overcome the identified potential adverse effects" and that "taking into consideration these factors, it is concluded that the Local Plan would have no adverse impact on site integrity at any European site, either alone or in-combination.

Natural England disagree agree with this conclusion that for those Habitats sites in the area of search with features sensitive to air pollution, adverse effects on their integrity, alone or in-combination, can be ruled out for the reasons set out at the beginning of this letter on page 2 and repeated in part below:

Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot currently be ruled out at the following internationally designated sites:

- Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI
- Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI

Natural England are currently in discussion with a number of the Staffordshire and West Midlands LPA's with regards to the cumulative impacts of air quality. We advise that further work is required to inform the HRA. The HRA should demonstrate that there are no adverse effects on integrity of Habitat sites as a result of this Local Plan, alone and in combination with other plans and projects. With regards to allocated sites, it is unclear whether the individual sites put forward in the Local Plan have been assessed through the Habitat Regulations Assessment process and how mitigation will be applied here.

Sustainability Appraisal

Natural England has reviewed the Sustainability Appraisal (SA) and included comments taken from the document throughout our response.

The SA is a comprehensive document which should be reviewed in strengthening the HRA, particularly with regards to residual adverse effects that would be expected to remain in terms of wastewater following the implementation of the Local Plan policies. (p 141) Natural England notes that "Increased pressure on wastewater treatment has the potential to be a long term and potentially permanent significant effect" (p 142)

The SA recognises the local distinctiveness of the plan area;

"The Borough itself is largely rural in nature and supports some high-quality agricultural land, but is more heavily built up towards the north east surrounding Stoke-on-Trent. (p 8)

Newcastle-under-Lyme has a strong rural character with a high-quality landscape and countryside, with some areas identified as being sensitive to change as a result of new development. (p 19)

Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms make up the key features of some of these Landscape Character Types." (p 20)

Sets out the area specific barriers to achieving sustainable growth;

"Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)

Loss of tranquillity The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution.(p 68)

"The pre-mitigation SA assessments identified negative impacts in relation to air quality due to the proximity of sites to major roads, landscape character due to the location of sites within areas of high landscape sensitivity, close proximity to the PRoW network and potential for coalescence and urban sprawl, habitat sites, priority habitats, habitat distinctiveness, loss of undeveloped land, 'best and most versatile' (BMV) agricultural land, coinciding with mineral safeguarding areas (MSAs) and areas of surface water flood risk (SWFR); and access to healthcare facilities, schools, the local cycle network and railway network. (p 40)

There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work. (p 21)

Trends in transport choice are unlikely to change significantly, and private car use would continue to increase as the selected method of transport to work, with potential adverse impacts on air quality in the borough."(p 23)

Considers the local and cumulative significance of soil loss alongside the ecological implications:

"Loss of soil resources, BMV land and ecosystem services The proposed allocations would cumulatively result in the loss of up to approximately 342ha of previously undeveloped land, including up to 263ha of BMV agricultural land. The proposed development would be expected to reduce the ability of the local soil biome to effectively provide ecosystem services, to some extent. Additionally, the loss of permeable soils could potentially increase the risk of flooding and result in a loss of biodiversity across the Plan area. Loss of soil can also result in an increase in soil erosion and have subsequent impacts on agricultural yield.(p 68) The majority of the borough is ALC Grade 3 soil, with areas of ALC Grade 2 scattered across the borough. Grade 2 and potentially Grade 3 represents some of the borough's BMV agricultural land and should be conserved wherever possible (p 21)

A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of BMV land to be lost as a result of the development proposed in the Local Plan." (p 59)

Consultee Given Name	Emma
Q4 Part of document	Policy
Q4 Policy	SE3 Flood Risk Management
Q5 Sound	No
Q6 Details	<p>The policy should have more regard to and focus on specific local Newcastle Under Lyme flood risk requirements linked to the Strategic Flood Risk Assessment (SFRA).</p> <p>Sections 1 to 3 largely duplicate existing national policy and guidance (NPPF and NPPG) and could be more concise with relevant signposting.</p> <p>Section 3 :</p> <p>(b) is this missing the word 'requirements' ?</p> <p>(e) mentions modelling of ordinary watercourses which is welcomed. However, there may be main rivers that need modelling. Also, this section does not mention the need to model or assess functional floodplain (zone 3b) for all rivers, to inform the appropriateness of development and identify flood flow impacts/improvements.</p> <p>Section 4 Policy wording is poor and lacks clarity. What is meant by 'high risk' areas - is this focusing on flood zones e.g 'high risk' flood zone 3, or cumulative impact areas?</p> <p>(a) what are the specific minimum floor levels?</p> <p>(b) This (8 metre easement from top of bank of) is required regardless of the extent and location of the floodplain. It also relates to culverted watercourses, with the area above to be a 'no build zone' .</p> <p>(c) Should also include River Basin Management Plans.</p> <p>SFRA Cumulative Impact Assessment (pg 11) Table 2 -4: Catchments deemed highly sensitive - includes Lyme Brook, Fowlea Brook, Valley Brook and Englesea Brook as high risk cumulative impact catchments.</p> <p>The SFRA suggests that Local planning policies can also be used to identify areas where the potential for development to increase flood risk is highest and identify opportunities for such new</p>

	<p>development to positively contribute to decreases in flood risk downstream. To be more effective and link up with the SFRA, the policy should have specific regard to these.</p> <p>The policy should also require flood risk reduction and promote natural flood risk management.</p>
Q7 Modification	<p>The following lines could be incorporated:</p> <p>The FRA shall use modelled flood level data where possible and shall take into account appropriate allowances for climate change, using the latest Environment Agency's WMD Area Climate Change Guide.</p> <p>The flood zone 3b functional floodplain extent should be modelled as part of any detailed FRA.</p> <p>The policy should require flood risk reduction and promote natural flood risk management.</p> <p>The high risk catchments could be referred to in the policy or text (Catchments deemed highly sensitive) and explain what your intention is for development in these areas.</p> <p>You may wish to seek a FRA for proposals on land in those catchments identified in the SFRA as being at highest risk from the cumulative impacts of development.</p> <p>In those catchments where the cumulative effect of development is likely to have the greatest impact on flood risk, (as set out in the SFRA) other LPA's have included opportunities which should be maximised, such as:</p> <ul style="list-style-type: none"> a. Natural flood management (in rural areas); b. SuDS retrofit (in urban areas); c. River restoration; d. Wider community flood risk benefits; e. Developer contributions to community flood defences outside the site boundary; f. On- and off-site flood storage and safeguarding of land for such. <p>You should refer to Appendix F of the SFRA (this is missing from the final SFRA submission document). Your LLFA and/or Floods section may be able to further advise on this recommendation.</p> <p>Supporting text should also reference/ signpost to the appropriate River Basin Management Plans. e.g The Humber RBMP and North West RBMP.</p>
Q8 Hearing attendance	<p>No, I do not wish to participate in hearing session(s)</p>

Order	107
Title	Policy SE4: Sustainable Drainage Systems
Consultee Company / Organisation	United Utilities
Consultee Family Name	Leysens
Consultee Given Name	Andrew
Q4 Part of document	Policy
Q4 Policy	SE4
Q6 Details	<p>Policy SE4: Sustainable Drainage Systems We request the following amendments to Policy SE4:</p> <p>‘1. Development proposals should manage and discharge surface water through a sustainable drainage system. Smaller developments may be exempt from full Sustainable Drainage Systems (SuDS) implementation but should still apply the surface water hierarchy and incorporate appropriate measures to manage surface water runoff sustainably, such as the use of permeable paving, rain gardens, or soakaways, wherever feasible.</p> <p>2. Development proposals should prioritise the following approaches for surface water management in this order of preference:</p> <ol style="list-style-type: none"> a. Infiltration: Discharge of rainwater into the ground through infiltration techniques such as soakaways. b. Attenuated Discharge to a Surface Water Body: Discharge of rainwater to streams, rivers, lakes, canals (with permission), or other surface water features, ensuring minimal impact on flow rates. c. Attenuated Discharge to a Surface Water Sewer, Highway Drain, or another Drainage System, Discharge to existing public surface water drainage systems, but only after exploring infiltration and surface water body discharge options. d. Attenuated Discharge to a Combined Sewer: Discharge to a combined sewer system that collects both surface water and foul sewage (wastewater). This should only be considered as a last resort after exhausting all other options above. <p>Departures from this hierarchy should be fully justified and may require additional mitigation measures.</p> <p>3. A foul and surface water SuDS drainage strategy, incorporating SuDS where required, should be submitted with the planning application. This strategy should:</p> <p>Demonstrate a clear understanding of site-specific conditions including soil permeability, groundwater levels, overland flow and exceedance routes, any ephemeral watercourses, and contamination risks (which may influence SuDS suitability).</p> <p>Design SuDS solutions appropriate to the scale and nature of the development, following the surface water hierarchy and prioritising infiltration.</p> <p>Provide calculations for runoff rates, attenuation volumes, and demonstrate how the system will manage storm events up to and including the 1 in 100-year event with climate change allowances.</p> <p>Address the potential impacts of climate change on the long-term performance of SuDS and incorporate adaptation measures, where appropriate.</p> <p>e. Where applications are submitted on land which is part of a wider allocation / development, applicants will be expected to submit allocation/development wide foul and surface water strategies to demonstrate how the site will be brought forward holistically and in a co-ordinated manner.</p>

	<p>4. Early engagement with the Lead Local Flood Authority (LLFA), Severn Trent and United Utilities is important to explore SuDS feasibility and design. For sites with potential canal discharge, the Canal and Rivers Trust should be consulted.</p> <p>5. SuDS proposals must be integrated with on-site landscaping, prioritise multi-functional SuDS and align with the latest SFRA recommendations, LLFA guidance, and relevant SuDS design standards. The incorporation of surface water management measures and SuDS should commence at the outset of the design process.</p> <p>6. A detailed maintenance plan for the approved SuDS system should be submitted, addressing ongoing responsibility, inspection regimes, and funding mechanisms for the SuDS lifespan.</p> <p>7. The maintenance plan should outline the long-term funding mechanism for the SuDS scheme and the management arrangements and maintenance plan for any on-site riparian watercourses. Options may include:</p> <p>a. Establishment of a dedicated management company. This company would be responsible for ongoing maintenance, funded through service charges levied on residents or businesses within the development.</p> <p>b. Community-based stewardship: explore opportunities for community involvement in SuDS maintenance, such as volunteer groups or partnerships with local organisations.</p> <p>c. Financial contributions from developers: Developers may be required to provide financial contributions towards the long-term maintenance of the SuDS, secured through planning obligations or a sinking fund.</p> <p>d. Pumped drainage systems should be minimised. Proposals should prioritise gravity-based, naturally functioning SuDS solutions wherever possible.'</p>

Q4 Part of document	Policy
Q4 Policy	SE4
Q5 Legally compliant	Yes
Q5 Sound	Yes
Q5 DTC compliant	Yes
Q6 Details	<p>Policy SE4: Sustainable drainage Systems – Point 3 (b) – currently reads:</p> <p>Design SuDS solutions appropriate to the scale and nature of the development, following the surface water hierarchy and prioritising infiltration.</p> <p>The LLFA's experience of reviewing sustainable drainage systems submitted under planning applications within the Borough is that they often lack features to provide water treatment, particularly when discharging into a neighbouring watercourse. Most developers will argue</p>

	<p>that as they are discharging into a sewer then additional treatment is not necessary, however, it is worth noting that the surface water sewerage system will always discharge to a</p> <p>watercourse somewhere so the provision of a management train of features to improve water quality is key design requirement. Above ground conveyance (swales) and attenuation features (basins) not only provide water treatment benefits but also bring amenity and biodiversity benefits and will often aid in the developer achieving a Nett Gain of 10% required under Biodiversity Net Gain requirements. As such, we believe that Policy should seek to prioritise the</p> <p>use of above ground SuDS features to boost water treatment, amenity and biodiversity wherever possible.</p>
Q7 Modification	Suggested re-wording to Point 3 (b): Design SuDS solutions which prioritise infiltration in line with the surface water drainage hierarchy and which are appropriate to the scale and nature of the development. Where possible, surface water should be managed at source and above ground conveyance (swales) and attenuation features (e.g. tanks) to provide a SuDS management chain to provide water treatment, amenity and biodiversity benefits in line with the CIRIA SuDS Manual

Title	Policy SE4: Sustainable Drainage Systems
Consultee Company / Organisation	Natural England
Consultee Position	Senior Officer
Consultee Family Name	McLaughlin
Consultee Given Name	Sally
Q4 Part of document	Policy
Q4 Policy	SE4
Q6 Details	<p>Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.</p> <p>Natural England welcomes the opportunity to comment at this stage of the Local Plan and particularly supports the inclusion of policies on green and blue infrastructure, biodiversity, health and wellbeing, trees hedgerows and woodlands. We have reviewed the consultation documents and provide comments</p>

that relate to the soundness of the Local Plan and that are most relevant to our interest in the Natural Environment.

Natural England has adopted a robust precautionary approach within this plan response. Whilst we welcome the content of the Local Plan, Natural England advises that the plan is currently at risk of being unsound and/or not legally compliant due to the potential impacts on air quality in relation to internationally designated nature conservation sites and the justification for the potential loss of 263ha best and most versatile (BMV) agricultural land. Further detail is provided below.

Natural England have also provided other advice within this submission relating to further improvements that could strengthen plan policies and specific strategic site options and related mitigation.

Do you consider that the Newcastle Under Lyme Plan is Sound and Legally Compliant?

Natural England notes that the plan is at the pre-submission stage and as such your authority is seeking confirmation on the soundness of the plan. Having reviewed the plan and supporting documents, Natural England considers the pre-submission plan in its current form is not sound or legally compliant, this is due to a lack of evidence with regards to air quality and the cumulative loss of BMV agricultural land both in a local and national context.

Air quality

Natural England notes that the Sustainability Appraisal states that "Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)

As Natural England understands it the current evidence base used to conduct the HRA cannot rule out adverse impacts on designated sites. The HRA states at page 22 3.4.16 "At the time of writing, the traffic modelling run for the final suite of Regulation 19 allocations had not been undertaken." Appendix A lists the local plans for neighbouring LPA's concluding that 'in combination' with plans and projects (approved and those yet to be implemented) they may trigger in-combination effects on European sites as a result of air quality, particularly as we understand it in the key commuting areas.

Natural England notes that Annual Average Daily Traffic (AADT) data and traffic modelling in the Strategic Transport Assessment (STA) concludes a potential reduction in travel and related air pollution at allocated sites as a result of a predicted preference in the use of public transport. We are surprised by this projected decrease in both traffic and related air pollution, particularly as one employment allocation site includes a 200-bay lorry park and increased congestion is predicted at junction 16 of the M6 where it joins the A500 in a rural location with no existing rural transport provision. The Sustainability Appraisal also notes that: "There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work". (p 206)

Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot therefore currently be ruled out at the following internationally designated sites:

- Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI
- Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI

The HRA outlines that the main source of ammonia emissions is agricultural practice, and that material increases in NH3 emissions are unlikely to be associated with the proposed local plan. At Black Firs and Cranberry Bog and Oakhanger Moss, any increase in nitrogen deposition has the potential to exacerbate pollution levels and thereby undermine the reasons for notification of these sites as a Ramsar.

Ammonia can be emitted from vehicle exhaust emissions as a by-product of the catalytic conversion process designed to reduce emissions of nitrogen oxide. As traffic composition transitions toward more petrol and electric cars (i.e., fewer diesel cars on the road), catalytic converters may aid in reducing NOx emissions but result in increased ammonia emissions. Ammonia emissions from road traffic therefore could make a significant difference to nitrogen deposition close to roads.

Natural England therefore advise that ammonia sourced from traffic emissions should be included for assessment within the local plan HRA, as the impact from this source on designated sites is currently unclear. For further information please see this report from Air Quality Consultants (AQC) that looks at ammonia emissions from roads for assessing impacts on nitrogen-sensitive habitats. Whilst we are aware that the current CREAM model created by AQC used to assess ammonia emissions from road traffic has not been peer reviewed, at this time it has been recognised as a Best Available Tool and we deem it appropriate to be used where any caveats associated with this model are also considered within the assessment. An assessment based on the best available approach is necessary. The next stage of assessment can then consider uncertainties in the model and site specifics to decide if mitigation needs to be considered.

Further work is therefore required to inform the Habitat Regulations Assessment. Natural England will engage with the Local Planning Authority in order to produce a Statement of Common Ground (SoCG) on this matter.

'Best and most versatile' (BMV) agricultural land

Natural England notes that "the proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land, A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of 'best and most versatile' (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services". (page 74 Sustainability Appraisal).

Under the Town and Country Planning (Development Management Procedure) (England) Order 2015 (DMPO) Natural England is a statutory consultee on development that would lead to the loss of over 20ha of 'best and most versatile' (BMV) agricultural land (land graded as 1, 2 and 3a in the Agricultural Land Classification (ALC) system, where this is not in accordance with an approved plan.

Natural England would like to understand how the local planning authority have produced the evidence base and options assessment which informs the strategic site allocations.

Natural England will engage with the local planning authority to consider the cumulative impacts of the loss of BMV both in the local and national context and the challenges related to environmental impact, infrastructure, and the requirement to deliver a balance between the need for development and the potential urbanisation of the countryside including the potential mitigation measures that need to be considered.

NPPF paragraph 174e states:

Planning policies and decisions should contribute to and enhance the natural and local environment by: ... preventing new and existing development from contributing to, being put at unacceptable risk from, or being adversely affected by, unacceptable levels of soil, air, water or noise pollution or land instability. Development should, wherever possible, help to improve local environmental conditions such as air and water quality, taking into account relevant information such as river basin management plans.

Natural England provides guidance to inform further assessment of air quality and the loss of BMV agricultural land in our response to the content of the plans Strategic Policies as set out below.

Do you consider that the Newcastle-under-Lyme Borough Council Regulation 19 pre-submission draft Plan is compliant with Duty to Co-operate?

In terms of working with neighbouring authorities, Natural England notes that initially the plan was intended to be produced jointly with the City of Stoke-on-Trent, the plan does not however currently present an evidence base that demonstrates that a collaborative approach has been adopted and that the Duty to Co-operate has been fully complied with.

The Sustainability Appraisal states that: "Overall, there is potential for a cumulative adverse effect on biodiversity, owing to the fragmentation of the ecological network... Where a large amount of development is located on previously undeveloped land surrounding rural settlements, this is likely to produce a long-term irreversible negative cumulative effect regarding the urbanisation of the countryside" (p 71)

Natural England would therefore like to further understand how the areas identified to meet the City of Stoke-on-Trent's unmet employment needs are justified and appropriate and whether meeting some of the employment needs of the City of Stoke-on-Trent has led to the need to release or safeguard more land from the Green Belt in Newcastle under Lyme. If this is the case, what are the exceptional circumstances for doing this and how does this align with the allocated sites options assessment?

Recreational Pressure

In terms of the South Pennine Moors SAC and recreational impacts, the Local Plan does comply with the Duty to Co-operate. Natural England recommends that reference is made to the 'Recreation use of the South Pennine Moors and implications for strategic housing growth' report by Footprint Ecology Ref 778 date 27th March 2024. This report should both inform the evidence base and ensure that policies relating to open space/green infrastructure are as rigorous and robust as possible.

The report concludes that more data/evidence is required to determine if recreational use is causing an impact across to the South Pennine Moors and to get a better understanding of the scale and location of any impact. Natural England notes that the report records 7,000 additional dwellings in

Newcastle-under-Lyme over the plan period rather than the 8,000 included in this regulation 19 submission. Newcastle-under-Lyme Borough Council should therefore continue to work with local authority and other partners to ensure coordinated and continued cross boundary action.

Other matters

Natural England has specific concerns related to allocations in the Green Belt. Notwithstanding that, Natural England considers most of the policies within the plan to be sound and deliverable. The plan is consistent with national policy with regard to those policies that are within Natural England's remit. Further information on strengthening policies including but not limited to Soils and best and most versatile (BMV) agricultural land, preventing loss and fragmentation of habitats and supporting green infrastructure are provided below.

Vision and Strategy

Natural England notes that the Plan's vision and emerging development strategy set out a framework for the future development of Newcastle-under-Lyme and addresses the needs in relation to housing, the economy, community facilities and infrastructure, including specific reference to a proposed employment site allocation.

This vision and the related objectives should also set out the environmental ambition for the plan area and form the basis for nature recovery and enhancement, supported by the policies and proposals in the plan.

Natural England advises that the vision should also incorporate more on the local ecology and landscape features which underpin local distinctiveness such as the "strong rural character with long open views across the surrounding rural landscape, towards more distant hills often framed by trees" (p 69) Part 3 Site Specific Landscape & Visual Appraisal. "Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms" (p 187) Sustainability Appraisal.

Strategic Objectives

Natural England welcome strategic objective SO-4 relating to carbon reduction and climate change, however we do not feel that this group of thirteen strategic objectives value or reflect the Boroughs whole ecology and landscape including but not limited to the protection of soil and best and most versatile (BMV) agricultural land. We would suggest that additional objectives are added relating to: air quality, water quality and quantity, soils and landscape.

Natural England would also like to see stronger reference to the Nature Recovery Network which is one of the specific aims of the Environment Act 2021 and will underpin the approach to the enhancement of nature.

Air quality is a major threat to habitats and species. Many ecological sites are exceeding their critical loads and levels for ammonia, nitrogen deposition and acid deposition. The strengthening of the policies and the rationale behind site allocations within this plan will ensure that new development does not contribute to the further deterioration of habitats and species due to air pollution. Further advice on strengthening the plans evidence base with regards to air quality is provided in the links below:

 Strategic Policies
 5 Planning for Sustainable Development
 Policy PSD5: Green Belt
 Natural England notes that this policy “aims to protect the Borough's essential open spaces, prioritise the use of brownfield land, and guide potential future development in accordance with the National Planning Policy Framework (NPPF)”.
 Natural England however notes that amendments to the Green Belt boundary are proposed in the form of 14 site allocations to accommodate both the growth requirements of the borough and the employment requirements of wider Stoke-on-Trent conurbation. Natural England's has some site-specific concerns about the potential impacts of some of the green belt sites selected on the natural environment with regards to habitat loss, fragmentation and justification for the loss of BMV agricultural land.
 We note the LPA's intention to release and compensate for the loss of green belt and prioritise the use of suitable brownfield land. However, the site allocations in the green belt would result in the potential loss of 263ha of Best and Most Versatile (BMV) agricultural land. The council should satisfy itself that it is making a balanced decision for sustainable development, the Sustainability Appraisal concludes that: “The Green Belt Study assessed land parcels against the contribution they make to the five purposes of the Green Belt on a four-point scale...Three allocated sites (AB12, AB33 and TK10) are located in areas which make a ‘strong’ overall contribution to the purposes of the Green Belt where “the site contributes to the purpose in a strong and undeniable way, whereby removal of the site from the Green Belt will detrimentally undermine this purpose” (p101)
 “Site allocations on previously undeveloped land or that would result in a net loss of GI / vegetation could result in a reduced capability of the environment to provide ecosystem services including carbon storage, the storage and filtration of water including natural flood protection, as well as reduced availability and connectivity of habitats within the green network enabling movement of species. (p 165)
 Strategic Site Allocations
 Natural England suggests that the HRA should include a “requirement for project-level/site specific HRA's and targeted ecological surveys”.
 The Sustainability Appraisal concludes that:
 “Some 12 allocated sites partially coincide with priority habitats, where 3.43% of the total site allocation areas coinciding with priority habitats which include deciduous woodland, good quality semi-improved grassland and Site BL18 coincides with lowland fens which is a very high distinctiveness habitat in the BNG handbook (2024). These habitats can support a range of species of principal importance. Allocated Site KL15 is adjacent to ‘The Butts and Hands Wood’ ancient woodland, with a further 20 allocated sites located in close proximity to ancient woodlands. P158
 “Six allocated sites (Sites CT20, HD10, KL13, RC8, SP11(2) and SP23) are located within areas of ‘high’ or ‘very high’ habitat distinctiveness that provide high biodiversity value. Whilst in many cases these habitats can be conserved alongside development, it is likely that in some cases fragmentation or loss of habitats and connections between habitats will occur”
 “The majority of allocated sites are located on previously undeveloped land, which would result in the loss of soil resources and the ecosystem services they provide. (p 159) The development of new buildings on previously undeveloped land would be expected to result in a direct loss of soil resource, with little or no scope for mitigation” (p 216)
 “The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution. (p 68)
 For all sites, Natural England advises that the hydrological catchment within which the site sits is taken into consideration, with regards to the potential impact of the developments proposed on the adjoining watercourses and wider catchments, including but not limited to surface water runoff (including during construction), existing and required capacity of Waste Water Treatment Works (WwTW) and water supply and flooding issues. Each site will require site specific investigation, and the council should understand the impact of all the sites put forward individually and in combination.
 Natural England has specific concerns and or requires further information about the following ‘Strategic Site Allocations’ which could potentially impact on designated sites as a result of air and water quality and/or lead to the loss and / or fragmentation of priority habitats and BMV agricultural land:
 BL18 – Clough Hall Playing Fields, Talke
 Natural England would like to further understand this larger residential development proposal with regards to the potential impacts on the lowland fen habitat.
 KL13 & KL15 – Land South of A525 between Keele University and Newcastle
 Natural England notes this proposal for Employment development is immediately adjacent to ancient woodland priority habitat.
 HM28 – Land off East Lawns, Betley
 Existing and projected water quality issues at Betley Mere will need to be considered with regards to this allocation.
 LW53 – Loggerheads
 Natural England notes this residential housing development proposal is located within the IRZ of protected sites (Burnt Wood SSSI) which states that development proposals of 50 or more homes outside existing settlements/urban areas in these zones should be consulted upon with Natural England.
 SP11 – Former Keele Municipal Golf Course

This Larger residential development is categorised in the Landscape Assessment as having a Major adverse impact on the local Landscape.

AB2 – Land Adjoining Corner of A500 and M6 Southbound

Natural England notes this proposed employment allocation released entirely from the green belt, which comprises 70ha of grade 2 BMV agricultural land. The Landscape study concludes that the: “Proposed development scenario is likely to have a major adverse effect on the SA objective with no satisfactory mitigation possible” (p 15). With regards to potential Air Quality impacts on protected sites Natural England notes from the options analysis that “The loss or potential moving of a layby to enable access to the site could be problematic indicating potential issues with site access and traffic flow. An increase in HGV and personal vehicle traffic is anticipated, which could lead to potential congestion and air pollution in the area”. Natural England would therefore also like to understand the evidence base further including the rationale for an alternative site TK30 @ Talke A34 / A500 roundabout being ruled out.

Policy PSD6: Health and Wellbeing

Natural England welcome this policy direction in terms of safeguarding health and amenity and supporting healthy communities, through the protection and provision of high-quality open spaces, including allotments and the promotion of active travel transport choices Further information on joining up Nature Recovery and Green Infrastructure (GI) with health priorities is set out below. If more cities and towns can be creatively designed and managed, with nature and communities at their heart, we will see nature and people thrive. This is something we set out to inspire at Natural England when developing the Green Infrastructure Framework and Design Guide. Natural England's People and Nature survey tells us that, for 82% of people 'being in nature makes me happy'. With the cost-of-living crisis, 'free' places like local parks and greenspace, have become even more important. The value of these spaces for the economy is estimated at £28.7 billion per year.

Green infrastructure in towns and cities provides places to relax, exercise, and spend time outdoors; cools urban areas; reduces flooding by allowing water to permeate the ground rather than overwhelm our drains; increases biodiversity and helps to reduce inequalities in access to nature. Options assessments for development sites and related green and blue Infrastructure within and between developments, green spaces and designated sites should; include soft transition and consider potential direct and indirect implications on sustainable use for example visitor pressure and transport / access options.

The natural environment affords the best 'natural' play opportunities for children while offering multifunctional nature-based solutions to climate change etc. These can be blended into wildlife rich green infrastructure and green open spaces that can act as destination play sites for local children (See best practice at Play England and Play Wales) that have proven health and wellbeing value.

Evidence for nature play and health:

Play, naturally: a review of children's natural play

Nature for health and wellbeing | The Wildlife Trusts

Good practice in social prescribing for mental health: the role of nature-based interventions - NECR228 (naturalengland.org.uk)

6 Climate and Renewable Energy

Whilst Natural England welcomes this group of policies we recommend including Policy CRE1: Climate Change and Policy CRE2: Renewable Energy within the Sustainable Environment (SE) group of policies to achieve a collective strategic focus on sustainable development and working toward achieving net zero alongside the SE policies relating to Pollution and Air Quality (SE1) and requirements for sustainable water management measures to reduce water use, natural flood protection features alongside the specific policies on Sustainable Drainage Systems (Policy SE4:)

Natural England continues to work with the LPAs across the region on understanding air pollution across area boundaries (see comments and links in objectives section.)

10 Infrastructure and Transport Policy.

Policy IN4 Cycleways, Bridleways and Public Rights of Way

Natural England welcomes the inclusion of this group of policies which seek to maintain and enhance the network of public rights of way that cross the borough. We note that the sustainability appraisal states that “the borough has relatively poor accessibility to the cycle network and is the lowest performing in the county for walking zones” (p 206) and that, “eight allocated sites (AB2, AB12, AB33, HD10, KL15, MD29, SP11(3) and TK10) do not currently have safe pedestrian or cycle access adjacent to the site, where site end users may reliant upon less sustainable modes of transport including private car use”. (p 180)

11 Sustainable Environment

Natural England welcomes this group of policies and has the following policy specific comments:

Policy SE1: Pollution and Air Pollution.

Natural England welcomes this policy that notes that development proposals which are likely to result in detrimental impacts on air quality, will not be permitted unless it can be demonstrated that mitigation measures effectively address these impacts. (Comments on Air Quality are also provided on page 2 and 4 of this letter). The promotion of sustainable and active travel options, low-emission technologies and enhancement of green infrastructure to absorb air pollution is also noted. (see comment above re integrating the group: 6 Policies Climate and Renewable Energy).

Policy SE7: Biodiversity Net Gain

Natural England supports the inclusion of a policy on BNG. We suggest the following minor amendments to further improve the plan policy.

The BNG policy should make it clear that biodiversity net gain is not applied to irreplaceable habitats, and that any mitigation and/or compensation requirements for Habitats sites should be dealt with separately from biodiversity net gain provision. The policy should also set out how biodiversity net gain will be delivered and managed through the lifetime of the scheme and including monitoring requirements. This should include indicators to demonstrate the amount and type of gain provided through development. The indicators should be as specific as possible to help build an evidence base to take forward for future reviews of the plan, for example the total number and type of biodiversity units created, the number of developments achieving biodiversity net gains and a record of on-site and off-site contributions.

Natural England notes that the Sustainability Appraisal states “Despite the BNG provisions at the site level, there remains potential for a cumulative adverse impact on biodiversity at the landscape scale, owing to incremental habitat losses. As a result of development within the Local Plan undeveloped land will be lost which will include the loss of soil resources, habitats recognised as being of ‘high’ and ‘very high’ distinctiveness, and potentially ecological links between biodiversity assets, whereby the policies will not be expected to fully mitigate the fragmentation of the ecological network. Fragmentation of the ecological network across Newcastle-under-Lyme is expected to be a long-term and permanent significant effect.” (p 162)

Policy SE8: Biodiversity and Geodiversity

Natural England supports the inclusion of this policy to protect the Boroughs internationally, nationally and locally designated sites important for their biodiversity value and to enhance the natural environment and work with partners toward Nature Recovery.

We particularly welcome the plans recognition of the value of “wider ecological networks” stating that “Other sites, both individually and collectively, that are not designated can also contribute towards protecting and enhancing diversity of species locally”.

Policy SE10: Landscape

Natural England welcomes this policy aimed at ensuring that “development proposals should protect and enhance the character, quality, beauty, and tranquillity of the Borough”. We note from the sustainability appraisal that “The entirety of the south of the borough is identified as being high in relation to landscape sensitivity, which starts in Audley in the north and covers the southern area of the borough, including Loggerheads and Alington.” We agree that “Alteration of the landscape character is a long-term and permanent significant effect...There is potential for a cumulative adverse effect on landscape character resulting from the development proposed in the Plan”. (p193) SA.

Natural England has divided England into 159 distinct natural areas called National Character Areas (NCAs) Newcastle-under-Lyme falls within two NCAs: Shropshire, Cheshire and Staffordshire Plain: gently rolling plains dominated by intensive dairy farming, beef and arable production; The Potteries and Churnet Valley: strong contrast between the industrialised landscape of the Potteries and the pastoral, strongly dissected hills and small plateaux that flank the Churnet and Dove valleys.

Natural agrees with the following statement in the sustainability appraisal: “Although various policies aim to ensure that development conserves and enhances landscape character and distinctiveness, when combined with Local Plan policies that support infrastructural improvements such as for transportation, water, and waste, this is likely to lead to a long-term and irreversible cumulative adverse effect on landscape character and tranquillity and associated indicators such as dark skies.” (p72)

Policy SE11: Trees, hedgerows, and woodland

Natural England welcomes this plans recognition that “Trees, hedgerows, and woodlands are integral to the distinctive character and ecological health of the Borough of Newcastle-under-Lyme, defining landscapes across both urban and rural settlements.” And that “This policy prioritises the protection of existing natural assets, seeking to not only preserve, but actively enhance, these valuable features wherever possible”.

Policy SE13: Soil and Agricultural Land

Natural England has concerns about the justification for the loss of BMV agricultural land within this plan. “The proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land, A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of ‘best and most versatile’ (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services.” (page74) (SA)

Natural England notes that policy SE13 states: “Outside of sites allocated for development in the Local Plan, development proposals should avoid the loss of best and most versatile agricultural land (BMV) unless it can be demonstrated that the benefits of development clearly outweigh the loss of the land and every effort has been made to mitigate for the overall impact of the development on best and most versatile agricultural land.”

With regards to Soil and Agricultural Land Quality, Natural England advises that The Local Plan should give appropriate weight to the roles performed by the area’s soils. These should be valued as a finite multi-functional resource which underpin our wellbeing and prosperity. Decisions about development should take full account of the impact on soils, their intrinsic character and the sustainability of the many ecosystem services they deliver.

The 25 Year Environment Plan (25YEP) sets out government action to help the natural world regain and retain good health, including highlighting the need to:

- protect the best agricultural land
- put a value on natural capital, including healthy soil
- ensure all soils are managed sustainably by 2030
- restore and protect peatland

Soil is a finite resource which plays an essential role within sustainable ecosystems, performing an array of functions supporting a range of ecosystem services, including storage of carbon and water, the infiltration and transport of water, nutrient cycling, a buffer against pollution and provision of food. In order to safeguard soil resources as part of the overall sustainability of the development, it is important that the soil resource is able to retain as many of its important functions as possible. This can be achieved through careful soil management and appropriate, beneficial soil re-use, with consideration on how any adverse impacts on soils can be avoided or minimised.

The conservation and sustainable management of soils is reflected in the National Planning Policy Framework (NPPF), particularly in paragraph 180(a), 180(b) and 181 (footnote 62). When planning authorities are considering land use change, the permanency of the impact on soils is an important consideration. Particular care over planned changes to the most potentially productive soil is needed, for the ecosystem services it supports including its role in agriculture and food production.

Plan policies should therefore take account of the impact on land and soil resources and the wide range of vital functions (ecosystem services) they provide in line with paragraph 180(b) of the NPPF.

Soil Plan Policies

We strongly advise that at a minimum, the plan includes core policies for:

- the protection of best and most versatile (BMV) agricultural land (Grades 1, 2 and 3a in the Agricultural Land Classification (ALC)); and
- for the protection of and sustainable management of soils as a resource for the future.
- Areas of poorer quality land (ALC grades 3b, 4, 5) should be preferred to areas of higher quality land (grades 1, 2 and 3a).
- Recognise that development has an irreversible adverse impact on the finite national and local stock of BMV land.
- Conforms to NPPF and Planning Practice Guidance (Natural Environment and Minerals).
- Requires detailed ALC surveys to support plan allocations and for subsequent planning applications (for all sites larger than 5 ha). ALC surveys to support plan allocations and for subsequent planning applications for smaller sites (1 – 5 ha) would be welcomed.
- Recognise that development (soil sealing) has a major and usually irreversible adverse impact on soils.
- Soils of high environmental value (e.g., wetland and carbon stores such as peatland, low nutrient soils; or soils of high environmental value in the local context) should also be considered as part of ecological connectivity (Nature Recovery Network / Green Infrastructure).
- Requires soil handling and sustainable soil management strategies based on a detailed assessment of the soil resource based on best practice guidance (for all sites larger than 5 ha), ideally as part of the planning application process for major sites to help inform master-planning, and to safeguard the continued delivery of ecosystem services through careful soil management and appropriate, beneficial soil re-use. Soil handling and sustainable soil management strategies for smaller sites (1 – 5 ha) would be welcomed.
- Reference should be made to Defra's Construction Code of Practice for the Sustainable Use of Soils on Construction Sites
- In addition, for minerals and other temporary forms of development, plans for reinstatement, restoration and aftercare will be required (or for solar, a commitment to do so if the operational life is in decades); normally this will be return to the former land quality (ALC grade)
- Refers to soils issues within relevant policy areas such as renewable energy, climate change, green infrastructure and biodiversity net gain, flood schemes, managed realignment, development design and landscaping.

Policy SE14: Green and Blue Infrastructure

Natural England supports this policy. Well-designed cross boundary multi-functional green infrastructure contributes greatly to a number of benefits both for people and nature. Your green and blue (for example cross boundary canals) infrastructure should dovetail with your biodiversity net gain strategies to maximise benefits.

We would advise that the Local Authority also considers Natural England's Green Infrastructure Framework of Principles and Standards for England. As stated in our document, "Green infrastructure (GI) is part of the solution to many of the challenges we face; health inequalities, biodiversity crisis, climate change, nature recovery and levelling up. The GI framework supports local authorities, developers, parks and greenspace managers and local communities to enhance and create new good quality green infrastructure."

We would also suggest reference is made to the emerging Local Nature Recovery Strategy. Preparing Local Nature Recovery Strategies (LNRS) is a statutory requirement under the Environment Act 2021. LNRS are designed to work closely alongside other measures in the Act including supporting the delivery of mandatory biodiversity net gain and providing a focus for a strengthened duty on all public authorities to conserve and enhance biodiversity. They will also underpin the Nature Recovery Network, alongside work to develop partnerships and to integrate nature into our incentives and land management activities. Each LNRS will be specific and tailored to its area. The responsible authorities and people involved in preparing a strategy can choose how they want it to look, but every strategy must contain:

1. A local habitat map.
2. A written statement of biodiversity priorities. Statutory guidance for responsible authorities explains in detail what these 2 things should contain. Together they set out what the strategy is aiming to achieve and what practical actions will help do this. They will also propose where actions could be carried out for best effect and to connect and expand existing areas that are important for nature. We expect local nature recovery strategies to propose actions such as the:
 - creation of wetlands
 - restoration of peatlands
 - planting of trees and hedgerows
 - more sustainable management of existing woodlands and other habitats like grasslands
 These actions are intended to help nature itself and to also help improve the wider natural environment.

Whilst the Staffordshire Local Nature Recovery Strategy (LNRS) is currently a work in progress, Newcastle-under-Lyme Borough Council Regulation 19 pre-submission should still be consistent with NPPF Paragraph 185 in terms of setting out local habitat priorities and identifying potential measures by which they can be achieved, alongside mapping areas that could become of particular importance in the future.

Natural England encourages Newcastle Under Lyme Borough Council via their Local Nature Recovery Strategy to actively develop cross border cooperation between other Local Planning Authorities (LPA) (for example Staffordshire Moorlands Borough Council) in coordinating land development projects that impact on local biodiversity sites to ensure that local biodiversity corridors are maintained and link up other local important sites for nature conservation.

This is a good way of achieving nature recovery and preparing to deliver the LNRS alongside enabling the local authority and its partners to identify, map and safeguard site areas, including green and blue infrastructure opportunities and interlinkages.

Habitats Regulations Assessment

Natural England notes that this Local Plan is not directly connected with or necessary to the management of any European site. A screening assessment has been undertaken which identified a number of Likely Significant Effects (LSE) associated with the Local Plan. Taking no account of mitigation measures, the HRA concludes that Local Plan has the potential to affect the following European sites:

- Cannock Chase SAC
- Humber Estuary SAC, SPA and Ramsar

- Mersey Estuary SPA and Ramsar
- Midland Meres and Mosses Phase 1 Ramsar
- Midland Meres and Mosses Phase 2 Ramsar
- Pasturefields Salt Marsh SAC
- Peak District Dales SAC
- Peak District Moors (South Pennine Moors Phase 1) SPA
- Severn Estuary SAC, SPA and Ramsar
- South Pennine Moors SAC
- West Midland Mosses SAC

We welcome that your HRA includes the Humber Estuary SAC, SPA and Ramsar site which is hydrologically connected to the river Trent. If the Local Plan resulted in significant water pollution, this European site could be affected and has therefore been screened in, in relation to water quality only, on a precautionary basis. Natural England however notes that the Sustainability Appraisal identifies "A long-term cumulative adverse effect ...in terms of water quality" (p 148) as a result of the plan, this is not fully reflected in the current HRA.

Natural England note that the Sustainability Appraisal states: that "the entirety of the borough falls within IRZs of one or more SSSIs. All five SSSIs within the borough are in 'unfavourable' condition: Burnt Wood SSSI, Maer Pool SSSI, Black Firs and Cranberry Bog SSSI (Midlands Meres and Mosses Phase 2 Ramsar), Betley Mere SSSI (Midlands Meres and Mosses Phase 1 Ramsar) and Metallic Tileries, Parkhouse SSSI."

Natural England are also aware of the extensive network of ancient woodland spread across the borough, totalling 707.60 hectares, as well as a large quantity of priority habitats, totalling 1,791 hectares.

Natural England agree that the following designated sites and related priority habitats in adjoining LPA areas may also be affected by development through several pathways, including fragmentation, recreational pressure and/or pollution (including Air and Water Quality). Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI, Wybunbury Moss SAC SSSI, Tyrley Canal Cutting SSSI, King's and Hargreaves Wood SSSI, Gannister Quarry SSSI, Roe Park Woods SSSI, Wetley Moore SSSI, Churnet Valley SSSI, Hatherton Flush SSSI, Sounds Heath SSSI, Ford Green Redebed SSSI, and Cop Mere SSSI.

It is noted that the Appropriate Assessment stage of the HRA assessed potential impacts by topic;

- Impacts on designated features affected by a possible deterioration in air quality
- Impacts on water quality and quantity associated with increased levels of built development.
- Impacts associated with increased recreational pressure at European sites; and
- Consideration of impacts at associated functionally linked land.

Natural England notes that the HRA also factored the following into the assessment process "the protective framework provided by the Local Plan and existing protection measures set out in high level strategic policy and existing planning policy frameworks that serve to help overcome the identified potential adverse effects" and that "taking into consideration these factors, it is concluded that the Local Plan would have no adverse impact on site integrity at any European site, either alone or in-combination.

Natural England disagree agree with this conclusion that for those Habitats sites in the area of search with features sensitive to air pollution, adverse effects on their integrity, alone or in-combination, can be ruled out for the reasons set out at the beginning of this letter on page 2 and repeated in part below:

Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot currently be ruled out at the following internationally designated sites:

- Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI
- Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI

Natural England are currently in discussion with a number of the Staffordshire and West Midlands LPA's with regards to the cumulative impacts of air quality. We advise that further work is required to inform the HRA. The HRA should demonstrate that there are no adverse effects on integrity of Habitat sites as a result of this Local Plan, alone and in combination with other plans and projects. With regards to allocated sites, it is unclear whether the individual sites put forward in the Local Plan have been assessed through the Habitat Regulations Assessment process and how mitigation will be applied here.

Sustainability Appraisal

Natural England has reviewed the Sustainability Appraisal (SA) and included comments taken from the document throughout our response.

The SA is a comprehensive document which should be reviewed in strengthening the HRA, particularly with regards to residual adverse effects that would be expected to remain in terms of wastewater following the implementation of the Local Plan policies. (p 141) Natural England notes that "Increased pressure on wastewater treatment has the potential to be a long term and potentially permanent significant effect" (p 142)

The SA recognises the local distinctiveness of the plan area;

"The Borough itself is largely rural in nature and supports some high-quality agricultural land, but is more heavily built up towards the north east surrounding Stoke-on-Trent. (p 8)

Newcastle-under-Lyme has a strong rural character with a high-quality landscape and countryside, with some areas identified as being sensitive to change as a result of new development. (p 19)

Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms make up the key features of some of these Landscape Character Types." (p 20)

Sets out the area specific barriers to achieving sustainable growth;

"Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)

Loss of tranquillity The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution.(p 68)

"The pre-mitigation SA assessments identified negative impacts in relation to air quality due to the proximity of sites to major roads, landscape character due to the location of sites within areas of high landscape sensitivity, close proximity to the PRoW network and potential for coalescence and urban

	<p> sprawl, habitat sites, priority habitats, habitat distinctiveness, loss of undeveloped land, 'best and most versatile' (BMV) agricultural land, coinciding with mineral safeguarding areas (MSAs) and areas of surface water flood risk (SWFR); and access to healthcare facilities, schools, the local cycle network and railway network. (p 40)</p> <p> There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work. (p 21)</p> <p> Trends in transport choice are unlikely to change significantly, and private car use would continue to increase as the selected method of transport to work, with potential adverse impacts on air quality in the borough."(p 23)</p> <p> Considers the local and cumulative significance of soil loss alongside the ecological implications: "Loss of soil resources, BMV land and ecosystem services The proposed allocations would cumulatively result in the loss of up to approximately 342ha of previously undeveloped land, including up to 263ha of BMV agricultural land. The proposed development would be expected to reduce the ability of the local soil biome to effectively provide ecosystem services, to some extent. Additionally, the loss of permeable soils could potentially increase the risk of flooding and result in a loss of biodiversity across the Plan area. Loss of soil can also result in an increase in soil erosion and have subsequent impacts on agricultural yield.(p 68) The majority of the borough is ALC Grade 3 soil, with areas of ALC Grade 2 scattered across the borough. Grade 2 and potentially Grade 3 represents some of the borough's BMV agricultural land and should be conserved wherever possible (p 21)</p> <p> A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of BMV land to be lost as a result of the development proposed in the Local Plan." (p 59)'</p> <p> Other Advice</p> <p> Further general advice is provided within Natural England Advice Note – Local Plans February 2024, attached at (Appendix A) - see attachment</p>

Q4 Part of document	Paragraph
Q4 Paragraph number	11.19
Q6 Details	This paragraph references heritage and we support this. The reference is to consider heritage assets and how SuDs can complement them. It may also be useful to cite that only appropriate SuDs schemes should be accepted and the harm to heritage assets and their setting needs to be fully considered and avoided. Any potential changes to the watercourse could have an impact on heritage assets further down the watercourse, for example affecting waterlogged archaeology, amongst other types. It would be useful to include this issue within the policy text itself rather than solely in the supporting information.

Q4 Part of document	Policy
Q4 Policy	SE5
Q6 Details	<p>Final Draft Local Plan Representation</p> <p>Environment Agency response dated 2/10/24. –Water Cycle Study Evidence Base – waste water and quality.</p> <p>We previously sought the submission of a Water Cycle Study (WCS) update to address some wastewater infrastructure issues.</p> <p>For completeness, our Regulation 18 response (14 August 2023) included:</p> <p>Waste water infrastructure: “Your water cycle study should ensure that your strategic growth can be accommodated in consideration of waste water infrastructure. Information on local treatment works and their ability to accommodate housing and employment growth is set out in the WCS. This looks at physical capacity issues (e.g. network pipes) and environmental capacity (water quality of treated effluent) issues. Where there is an identified constraint (amber or red) you should demonstrate that there is a solution (it may be already programmed or could be a possible future infrastructure upgrade) to help improve the capacity issue and enable the development to go ahead. This will require consultation with the Water Company and we have developed some general questions to assist this process (below). The outcome of this may inform a ‘phasing’ policy within your plan where appropriate. It may also be necessary to produce an ‘Infrastructure Delivery Plan’ to set out any key milestones for waste water infrastructure upgrades and improvements. The evidence you produce should give a reasonable degree of certainty to all parties, helping demonstrate development is deliverable, and importantly ensure that your plan is ‘sound’. Note: Government Guidance states that sufficient detail should be provided to give clarity to all parties on when infrastructure upgrades will be provided, looking at the needs and costs (what and how much). The NPPG refers to “ensuring viability and deliverability – pursuing sustainable development requires careful attention to viability and costs in plan making and decision making”. Plans should be “deliverable”. The WCS highlights that as a result of planned growth increased discharges at the wastewater treatment works may lead to a deterioration in water quality in the receiving waterbodies. As such, the WSC recommends a water quality impact assessment is undertaken through a Phase 2 Water Cycle Study. This does not yet appear to form part of the evidence base to support the local plan. To ensure a sound plan this should be provided to inform appropriateness and deliverability of sites”.</p> <p>Latest Water Cycle Study</p> <p>We note the submission of the updated WCS (July 2024), JBA, reference MEN-JBAU-XX-XX-RP-EN-0001 Revision D1.C01.</p> <p>With regard to wastewater treatment and water quality we are not in a position to make a detailed assessment at this time. However, we have done a high-level review of the report and make the following comments.</p> <p>The JBA headroom assessment identified Waste Water Treatment Works (WwTW) which have limited treatment capacity during the plan period. It suggests Severn Trent Water and United Utilities highlighted upgrades to these works are planned in the short term to increase capacity. As such, treatment capacity should not be a constraint to growth in the borough.</p> <p>The report details the STW plan, highlighting that WwTW improvement works are planned in AMP8 (2025 to 2030) for Baldwin's Gate WwTW. Improvement Works are a long-term priority for Strongford and Ashley, spanning from 2020 to 2050. Loggerheads Sanatorium was identified for WwTW Improvement Works as a focus between 2030 and 2050.</p> <p>We support JBA recommendations in section 8.7 (page 81) and would advise that you consult with Severn Trent Water and United Utilities who are the operators of the WwTWs serving growth across the borough; to ensure that provision of WwTW capacity is aligned with delivery of development. This will inform your plan phasing and infrastructure plan delivery.</p> <p>We acknowledge the Water Quality assessment within the WCS.</p> <p>This considers the increase in the discharge of effluent from WwTW as a result of development and growth in the area. Under the Water Framework Directive (WFD), a watercourse is not allowed to deteriorate from its current WFD classification (either as an overall watercourse or for individual elements assessed).</p> <p>As the WCS confirms, a new/variation to the Environmental Permit (EP) may be required (from the Environment Agency) for the WwTW to improve the quality of the final effluent, so that the increased pollution load will not result in a deterioration in the water quality of the watercourse. This is known as "no deterioration" or "load standstill". The need to meet river quality targets is also taken into consideration when setting or varying a permit.</p> <p>The WCS has considered this in section 9.2 onwards.</p>

	<p>We have not reviewed the modelling but note that there were 'no significant deteriorations' found in the WFD assessment which JBA suggest can't be prevented by improved treatment standards. There are no red GES assessment outcomes, which indicates growth alone would not prevent achievement of good ecological status in future across the borough.</p> <p>Baldwins Gate is identified as an 'amber site' where the WCS suggests - Proposed development can be accommodated with a tighter permit and upgrade to treatment. This is achievable with current technology.</p> <p>We support the recommendation in section 9.8 – "You should liaise with STW to determine whether Baldwins Gate WwTW upgrades planned in AMP8 (2025 to 2030) will prevent >10% deterioration of river Ammonia concentration". As your WCS suggests – "The timing of occupation of potential allocation 'Land at Baldwins Gate Farm, Site B (LW74)' is significant here, as it has a relatively high number of dwellings proposed (200). As such, it is likely the cause of deterioration".</p> <p>You could include this in the reasoned justification for that allocation and/or your Infrastructure Plan.</p> <p>Other adopted plans have included text such as – 'Proposals within areas of infrastructure capacity constraint, as identified by the Water Cycle Study (and any major development) demonstrates that there is adequate water infrastructure in place to serve the development'.</p>

Q6 Details	<p>Final Draft Local Plan Representation</p> <p>Environment Agency response dated 2/10/24. –Water Cycle Study Evidence Base – waste water and quality.</p> <p>We previously sought the submission of a Water Cycle Study (WCS) update to address some wastewater infrastructure issues.</p> <p>For completeness, our Regulation 18 response (14 August 2023) included:</p> <p>Waste water infrastructure: “Your water cycle study should ensure that your strategic growth can be accommodated in consideration of waste water infrastructure. Information on local treatment works and their ability to accommodate housing and employment growth is set out in the WCS. This looks at physical capacity issues (e.g. network pipes) and environmental capacity (water quality of treated effluent) issues. Where there is an identified constraint (amber or red) you should demonstrate that there is a solution (it may be already programmed or could be a possible future infrastructure upgrade) to help improve the capacity issue and enable the development to go ahead. This will require consultation with the Water Company and we have developed some general questions to assist this process (below). The outcome of this may inform a ‘phasing’ policy within your plan where appropriate. It may also be necessary to produce an ‘Infrastructure Delivery Plan’ to set out any key milestones for waste water infrastructure upgrades and improvements. The evidence you produce should give a reasonable degree of certainty to all parties, helping demonstrate development is deliverable, and importantly ensure that your plan is ‘sound’. Note: Government Guidance states that sufficient detail should be provided to give clarity to all parties on when infrastructure upgrades will be provided, looking at the needs and costs (what and how much). The NPPG refers to “ensuring viability and deliverability – pursuing sustainable development requires careful attention to viability and costs in plan making and decision making”. Plans should be “deliverable”. The WCS highlights that as a result of planned growth increased discharges at the wastewater treatment works may lead to a deterioration in water quality in the receiving waterbodies. As such, the WCS recommends a water quality impact assessment is undertaken through a Phase 2 Water Cycle Study. This does not yet appear to form part of the evidence base to support the local plan. To ensure a sound plan this should be provided to inform appropriateness and deliverability of sites”.</p> <p>Latest Water Cycle Study</p> <p>We note the submission of the updated WCS (July 2024), JBA, reference MEN-JBAU-XX-XX-RP-EN-0001 Revision D1.C01.</p> <p>With regard to wastewater treatment and water quality we are not in a position to make a detailed assessment at this time. However, we have done a high-level review of the report and make the following comments.</p> <p>The JBA headroom assessment identified Waste Water Treatment Works (WwTW) which have limited treatment capacity during the plan period. It suggests Severn Trent Water and United Utilities highlighted upgrades to these works are planned in the short term to increase capacity. As such, treatment capacity should not be a constraint to growth in the borough.</p> <p>The report details the STW plan, highlighting that WwTW improvement works are planned in AMP8 (2025 to 2030) for Baldwin's Gate WwTW. Improvement Works are a long-term priority for Strongford and Ashley, spanning from 2020 to 2050. Loggerheads Sanatorium was identified for WwTW Improvement Works as a focus between 2030 and 2050.</p> <p>We support JBA recommendations in section 8.7 (page 81) and would advise that you consult with Severn Trent Water and United Utilities who are the operators of the WwTWs serving growth across the borough; to ensure that provision of WwTW capacity is aligned with delivery of development. This will inform your plan phasing and infrastructure plan delivery.</p> <p>We acknowledge the Water Quality assessment within the WCS.</p> <p>This considers the increase in the discharge of effluent from WwTW as a result of development and growth in the area. Under the Water Framework Directive (WFD), a watercourse is not allowed to deteriorate from its current WFD classification (either as an overall watercourse or for individual elements assessed).</p> <p>As the WCS confirms, a new/variation to the Environmental Permit (EP) may be required (from the Environment Agency) for the WwTW to improve the quality of the final effluent, so that the increased pollution load will not result in a deterioration in the water quality of the watercourse. This is known as "no deterioration" or "load standstill". The need to meet river quality targets is also taken into consideration when setting or varying a permit.</p>

The WCS has considered this in section 9.2 onwards.

We have not reviewed the modelling but note that there were 'no significant deteriorations' found in the WFD assessment which JBA suggest can't be prevented by improved treatment standards. There are no red GES assessment outcomes, which indicates growth alone would not prevent achievement of good ecological status in future across the borough.

Baldwins Gate is identified as an 'amber site' where the WCS suggests - Proposed development can be accommodated with a tighter permit and upgrade to treatment. This is achievable with current technology.

We support the recommendation in section 9.8 – "You should liaise with STW to determine whether Baldwins Gate WwTW upgrades planned in AMP8 (2025 to 2030) will prevent >10% deterioration of river Ammonia concentration". As your WCS suggests – "The timing of occupation of potential allocation 'Land at Baldwins Gate Farm, Site B (LW74)' is significant here, as it has a relatively high number of dwellings proposed (200). As such, it is likely the cause of deterioration".

You could include this in the reasoned justification for that allocation and/or your Infrastructure Plan.

Other adopted plans have included text such as – 'Proposals within areas of infrastructure capacity constraint, as identified by the Water Cycle Study (and any major development) demonstrates that there is adequate water infrastructure in place to serve the development'.

Q4 Policy	SE6
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	Sport England considers that Policy SE6 point 4 is not consistent with National Planning Policy Framework (NPPF) paragraph 103 (a). This is due to the policy not allowing for the loss of existing open space, sports and recreational buildings and land, including playing fields, following an assessment being undertaken which has clearly shown the open space, buildings or land to be surplus to requirements.

	It is noted that the supporting text for the policy, paragraph 11.33, seeks the submission of evidence where a facility is no longer meeting the needs of the community. However, this is not a policy requirement and the wording is not consistent with NPPF paragraph 103 (a).
Q7 Modification	SE6 point 4 should include a criteria consistent with NPPF paragraph 103 (a) and the policy supporting text at paragraph 11.33 seeking the submission of evidence where a facility is no longer meeting the needs of the community, should be removed. These proposed changes would ensure that the policy would be consistent with rNPPF paragraph 103.

Title	Policy SE6: Open Space, Sports and Leisure Provision
Consultee Company / Organisation	The British Horse Society
Consultee Family Name	Bannerman
Consultee Given Name	Wendy
Q4 Part of document	Policy
Q4 Policy	SE6
Q6 Details	<p>Dear Local Plan Team Reg 19 Local Plan Newcastle-under-Lyme</p> <p>The response below is from the British Horse Society however our volunteers in the county may also respond at a local level.</p> <p>Overall The British Horse Society is the UK's largest equestrian Charity, representing the UK's 3 million horse riders. Nationally equestrians have just 22% of the rights of way network – only 16.4% in Staffordshire - and are increasingly forced to use busy roads to access them.</p> <p>Between 01.01.2023 – 31.12.2023 nationally:</p> <ul style="list-style-type: none"> • 3,345 road incidents involving horses have been reported to The British Horse Society • Of these, 50 horses have died and 77 have been injured • 3 people have died, and 94 people have been injured because of road incidents • 23% of riders were victims to road rage or abuse • 82% of incidents occurred because a vehicle passed by too closely to the horse • 79% of incidents occurred because a vehicle passed by too quickly <p>'Planning policies and decisions should protect and enhance public rights of way and access, including taking opportunities to provide better facilities for users' (NPPF, s104).</p> <p>DEFRA has recorded a population of 755 horses in the ST5 postcode area (2021). The contribution per horse to the economy, according to BETA (2023), is £6,887, therefore in this case a contribution of £5,199,685 per annum. Equestrian activities in semi-rural areas (bring your horse on holiday, pleasure rides, competitions) are increasingly popular in addition to established activities such as schooling and hacking. The equine industry provides diverse employment (vets, farriers, feed outlets, saddlers, instructors, venues, liveries, etc). Promoting, nurturing and enabling equestrian access would support the equestrian industry.</p> <p>SE6 Open Space and SE14 Green Infrastructure Open space and green infrastructure may provide essential links to connect equestrians from one bridleway/byway to another. Therefore the inclusion of equestrian access where this would enhance the PRoW network as advised in the NPPF should be acknowledged.</p>

Title	Policy SE6: Open Space, Sports and Leisure Provision
Consultee Company / Organisation	Keele University
Consultee Family Name	Cain
Consultee Given Name	Jonathan
Agent Family Name	Plant
Agent Given Name	Clare
Q4 Part of document	Policy
Q4 Policy	SE6
Q5 Legally compliant	No
Q5 Sound	No

Q6 Details	<p>Policy SE6: Open Space, Sports and Leisure Provision</p> <p>There are several issues raised by the 'Open Space Strategy Sites' designation on the Site as shown on the adopted Proposals Map. We object to the application of this designation as shown on the Policies Map in relation to the University campus on the following basis.</p> <p>The 'Open Space Strategy Sites' designation as identified on the Policies Map is not directly referenced in any of the written policies of the draft plan raising adding uncertainty regarding the implications of the designation. The areas covered by the designation are based on a 2022 report prepared by RSK. However, that report was written as a strategic assessment of general areas and was not intended to form the basis for specific large scale blanket open space designations.</p> <p>There is reference to the designation within the supporting text to Policy SE6, however the policy itself is a generic open space policy, which could be applied to relevant areas of open space, without the need to identify these on the Proposals Map. Other policy protection is also afforded to open spaces surrounding sensitive areas such as heritage assets, which appropriately protects these spaces from inappropriate development.</p> <p>If Policy SE6 were to be applied to Open Space Strategy areas, as currently drafted, the wording makes the application of the policy unclear. Part 2 of the policy fails to specify after each bullet point whether this is a cumulative or single scenario test (whereby accordance with one element of the policy avoids the need to comply with other elements). This should be amended to reflect the intentions of open space guidance in the NPPF. The wording of the policy also fails to reflect the unique circumstances of the University campus in terms of the protection and provision of open space areas. The University recognises that much of the area to the east and southeast is Green Belt, except for KL13 and KL15 which are the subject of separate designation. Much of the campus lies within an historic park and gardens or is within the curtilage of listed buildings. To the north and north west there are significant areas of playing pitches upon which any development would be controlled through the development management process including consultation with Sport England.</p> <p>The areas to which the designation applies within the Keele University campus includes existing infrastructure, car parks, roads, buildings and built form (as shown on the OS base map to the Council's own plans as per Figures 2 and 3 of this document), which should not be covered by such a designation. Furthermore, the Council's Open Space and Green Infrastructure Study 2022 does not identify the campus for proposed strategic GI intervention (pg 138). The Study notes that the site is appropriately managed as part of the University's greenspace estate, indicating that further safeguarding beyond broader policies nationally and locally to protect biodiversity is not necessary.</p> <p>The University recognises the amenity & ecology value of the green spaces within the campus and notes the importance of Policy SE8 on Biodiversity. With the centrality of the campus to Keele University student and staff recruitment and securing local businesses, the University is aware of the role as custodian of an important land resource. There is adequate protection for the campus as an important land resource within the general written policies as drafted, and the Open Space designation in the Proposals Map is therefore not required.</p> <p>The designation as drafted would dramatically restrict any redevelopment proposals within the campus and would add additional complexity where overlapped with other policy designations. The policy is not justified, particularly where there is existing infrastructure, car parks, roads, buildings and built form already present, is not consistently applied as other areas of the campus including proposed designations KL13 and KL15 are not covered by this designation despite being green in character and would not support the significant investment in the campus required to ensure the University remains sustainable in the long term.</p> <p>The blanket protection of large areas of incidental space and built form, tenuously linked to an unclear open space policy will cause great confusion and uncertainty and is unnecessary and harmful to the overall objectives of the plan.</p>
Q7 Modification	<p>Recommendations</p> <p>Within the above context, we strongly recommended that the Open Space Strategy Sites designation is removed from the Policies Map.</p> <p>This amendment will ensure that the plan is positively prepared and effective in supporting the continued investment in and growth of the University, as an important economic asset to the Borough.</p> <p>3.60</p> <p>Should a designation be sought to reflect the outcomes of the Open Space and Green Infrastructure Study 2022, this policy designation should be more specifically defined to reflect the objectives of specific written policies, such as Policy SE6. It is not considered to be appropriate to apply the designation to the Keele University campus given the specific circumstances and developed nature of this site. It is the University's aspirations to enhance the overarching biodiversity of the site and the protection of green infrastructure within this area will benefit from protection under other national and local ecology related policies and legislation.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	<p>We request the right to make representations on behalf of Keele University, in order to examine the Council's evidence in support of the proposed approach to Green Belt and Open Space matters in order to ensure that the plan is effective and justified within the context of the University's future investment proposals, and with reference to the importance of this investment for the wider economy of Newcastle Under Lyme.</p>

Consultee Given Name	James
Q4 Part of document	Policy
Q4 Policy	SE6
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>Whilst we are supportive of the general principles of Policy SE6 it fails to recognise the required loss of Open Space for the improvement scheme identified at the signalised junction at Newcastle Road/Coalpit Hill. Delivery of the improvement could therefore be hampered by the policy and it is therefore suggested that amendment is required to part 4 as set out below. This will ensure the essential infrastructure improvement can go ahead. The improvement scheme requires the extension of the north west-bound Newcastle Road two-lane approach to the signalised junction to give additional space for right-turning traffic. Therefore the land required from the open space will be a narrow linear strip that will not affect the overall usability of the open space</p>
Q7 Modification	<p>Add in a new 4 d. stating:</p> <p>Proposals which result in the loss of green /open space, sports and recreational buildings and land will only be permitted where:</p> <p>'d. land is required for the delivery of infrastructure schemes identified in the IDP'</p>

Q6 Details	<p>Please see supporting representation by Knights on behalf of Aspire. Policy SE 4, among other criteria, seeks financial contributions towards off site provision of sports and leisure. As per the response to Policy IN 1 above, off-site open space contributions can often be an issue for affordable housing viability on 100% affordable housing schemes, and as such, it is suggested that 100% affordable housing schemes are excluded from this requirement of Policy SE 4. 18.2 With regard to the on-site open space provision, criteria 3 sets out the types of open space that should be provided on site, and the amount of open space that should be provided. 18.3 This aspect of the policy should be re-worded to have a more flexible approach, as some of the types of open space that a development can provide on site may be affected by what needs to be delivered as part of any Biodiversity Net Gain requirement, which may require particular types of habitat, such as woodland or scrub/meadow to be provided over managed greenspace, such as amenity space or parks/gardens. As such, the wording of the policy should be provided as a more flexible approach, or the standards set out should be provided as supporting text to the policy as an indicative standard that can be deviated from should BNG requirements suggest that this may be required.</p>
Q7 Modification	Please see supporting representation by Knights on behalf of Aspire

Q4 Policy	SE6
Q6 Details	Please see attached representations. The WMHAPC supports the Council's shift toward assessing open space provision on a site-by-site basis, considering the location, type, and scale of the development, rather than applying a blanket requirement to all new residential developments. This tailored approach allows for more appropriate and context-sensitive open space solutions. We recommend that proposed open space provisions demonstrate community support, rather than solely relying on existing strategies. This would ensure that developments align with local needs and preferences. but as an additional requirement for example provision types need to show community support not just reliance on strategies. The WMHAPC suggests that draft Policy SE6 could be improved by establishing clearer links to Policy SE7 Biodiversity Net Gain (BNG).

Policy SE7: Biodiversity Net Gain

Comment ID	NULLP770
Order	113
Title	Policy SE7: Biodiversity Net Gain
Consultee Company / Organisation	Gladman Developments Ltd
Consultee Position	Planning Manager
Consultee Family Name	Wilding
Consultee Given Name	Robert
Q4 Part of document	Policy
Q4 Policy	SE7
Q6 Details	<p>Gladman Developments Ltd (Gladman) welcome the opportunity to comment on the Newcastle-under-Lyme Final Draft Local Plan 2020-2040 (Regulation 19) consultation and request to be updated on the progress of the emerging Local Plan. Please refer to attached representations. Gladman has fully engaged fully in the preparation of the emerging Newcastle-under-Lyme Local Plan 2040 to date. Feedback from the First Draft Local Plan (Regulation 18) consultation has been addressed and incorporated into the Final Draft Local Plan consultation document.</p> <p>In the sections below, Gladman have made specific comments where we consider the Final Draft Local Plan requires modifications or further clarification to ensure that it is capable of being found sound. Comments are focussed mainly on the consultation document, with references to the Duty to Cooperate and Sustainability Appraisal documents. Our representations also include details of Gladman's land interest at land south of Eccleshall Road, Loggerheads, which we are promoting as suitable for identification as a housing allocation in the emerging Local Plan. Please refer to attachment for more information.</p> <p>Gladman recognise the importance of this objective and the need to ensure that an environment is left in a measurably better state than found prior to development. The requirement to ensure at least a 10% biodiversity net gain (BNG) on developments was implemented earlier this year (12th February for large sites and 2nd April for small sites). The Local Plan should provide certainty for developers and a clear BNG policy with a fixed 10% figure, rather than the draft policy including the phrase "at least 10%", would provide this.</p> <p>Criteria 2 of draft Policy SE7 outlines the Council's aspiration for proposals for BNG should consider opportunities to form part of, connect to or support restoration of the Local Nature Recovery Network and implement opportunities identified in the Local Nature Recovery Strategy (LNRS). It would be helpful for the emerging Local Plan to include a link to this once it has been prepared, or if the Staffordshire LNRS is not available in time, a reference to the timetable for its production should be included. The Council should ensure that any future wording of the policy in relation to BNG is drafted in a way that is consistent with national policy and guidance, otherwise it risks being found unsound for failing to comply.</p> <p>With this in mind, Gladman would remind the Council of the updated guidance in the PPG that was published on 12th February 2024. It states: 'plan makers should not seek a higher percentage than the statutory objective of 10% biodiversity net gain, either on an area-wide basis or for specific allocations for development unless justified. To justify such policies, they will need to be evidenced including as to local need for a higher percentage, local opportunities for a higher percentage and any impacts on viability for development'</p> <p>Gladman request further clarity from the Council on the availability of habitat banking and biodiversity units in the borough</p>
Q7 Modification	Please see attached representations
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)

Order	113
Title	Policy SE7: Biodiversity Net Gain
Consultee Company / Organisation	United Utilities
Consultee Family Name	Leyssens
Consultee Given Name	Andrew
Q4 Part of document	Policy
Q4 Policy	SE7
Q6 Details	<p>Policy SE7: Biodiversity Net Gain</p> <p>We are keen to ensure that BNG is delivered in the most appropriate locations and without restricting the potential future expansion and operation of key operational infrastructure which is often very geographically restricted and critical to meeting future growth and environmental drivers. On-site provision</p>

	<p>may not be the most appropriate long term solution for the delivery of BNG when investing in key infrastructure such as water and wastewater assets. It is critical that land at and around our key infrastructure sites is not sterilised to ensure that we are able to flexibly and most appropriately respond to future growth and environmental drivers. This approach is supported by the planning practice guidance which states that the approach to BNG should be resilient to future pressures from further development. It states:</p> <p>'When assessing opportunities and proposals to secure biodiversity net gain, the local planning authority will need to have regard to all relevant policies, especially those on open space, health, green infrastructure, Green Belt and landscape. It will also be important to consider whether provisions for biodiversity net gain will be resilient to future pressures from further development or climate change, and supported by appropriate maintenance arrangements.</p> <p>Paragraph: 023 Reference ID: 8-023-20190721</p> <p>Revision date: 21 07 2019'</p>
Q7 Modification	<p>Therefore for consistency with Paragraph: 023 Reference ID: 8-023-20190721, we request that the following additional criterion is added to this policy:</p> <p>'5. Consider whether provisions for biodiversity net gain will be resilient to future pressures from further development or climate change.'</p>

Consultee Family Name	Danemann
Consultee Given Name	Rachel
Q4 Part of document	Policy
Q4 Policy	IN1
Q5 Sound	No
Q6 Details	<p>Please see attached representations.</p> <p>The Policy is not considered to be sound as it is not justified or effective or in line with national policy. HBF objects to any requirement for applicants to have to assess or demonstrate the capacity of the water company to connect a development with water services (e.g. the supply of fresh water and the treatment of wastewater).</p> <p>This is not a land use planning matter. This matter is managed under a separate statutory regime. Matters relating to water and sewerage infrastructure and its availability and/or network capacity are both controlled by separate, dedicated legislation, i.e., s37 (water) and s94 (sewerage) of the Water Industry Act 1991. Second, the planning process should not be used as a route to subjugate established primary legislation.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	HBF requests to participate in the Hearing Sessions for the Local Plan Examination, the HBF considers that their involvement is necessary to ensure that the home building industry is able to respond to any housing related issues raised during the hearing sessions.

Title	Policy SE7: Biodiversity Net Gain
Consultee Company / Organisation	Home Builders Federation
Consultee Position	Planning Manager - Local Plans (Midland and South West)
Consultee Family Name	Danemann
Consultee Given Name	Rachel
Q4 Part of document	Policy
Q4 Policy	IN1
Q5 Sound	No
Q6 Details	<p>Please see attached representations.</p> <p>The Policy is not considered to be sound as it is not justified or effective or in line with national policy. HBF note the introduction of Biodiversity Net Gain which came in for large sites on Feb 12th 2024, and for small sites from 2nd April 2024. In order for the plan to be sound it will be important for this policy to fully reflect all the new legislation, national policy and DLUHC and DEFRA guidance.</p>

	<p>HBF has been involved in a significant amount of work, being led by the Future Homes Hub, on BNG preparedness for some time, including feeding into the BNG Planning Practice Guidance from DLUHC and the DEFRA BNG Guidance. HBF note that this represents a lot of new information that the Council will need work though and consider the implications of, in order to ensure that any policy on Biodiversity Net Gain policy complies with the latest policy and guidance now it has been published. It should also be noted that</p> <p>the PPG is clear that there is no need for individual Local Plans to repeat national BNG guidance.</p> <p>It is the HBF's opinion that the Council should not deviate from the Government's requirement for 10% biodiversity net gain as set out in the Environment Act. The Plan should provide certainty for developers and a clear BNG policy with a fixed 10% figure, rather than the policy including the phrase "at least 10%" would help to provide this.</p> <p>It is also important to note that for large and complex sites where the development is phased, the guidance is clear that the 10% must be delivered at the end of the development, and this may not result in 10% BNG on each phase. Additional advice on phased development has been provided in the new BNG PPG.</p> <p>The wording of the first criteria of the policy is inaccurate as there are some exemptions to BNG requirements that could mean for example a new self-build house is not required to provide BNG.</p> <p>The characterisation of the BNG hierarchy is criteria 3 is also not quite right. The hierarchy in on-site units, then off-site units, then statutory credits (not onsite, then onsite and offsite and then statutory credits).</p> <p>There may also be circumstances where off-site BNG provision is preferred This could include for example, whether the site is suitable for the type of BNG to be provided, what the priorities of the Local Nature Recovery Strategy are and/or the opportunity to coordinate contributions from a range of sites to provide for large landscape scale BNG schemes. The metric already compensates for off-site BNG provided when this is provided further away from the site, by requiring more of it to be provided.</p> <p>Our comments about the costs and viability implications of BNG are set out in our response to the Housing Chapter, and not repeated here, other than to highlight that the costs of BNG must also be considered as part of the whole plan viability assessment and should be specified as a single specific item, not combined into a generic s106 costs item. There are significant additional costs associated with biodiversity net gain, which should be fully accounted for in the Council's viability assessment, some of which are unknown at this time. It is important that BNG does not prevent, delay or reduce housing delivery. The costs relate both the financial costs and also land take- which will impact on densities achievable if BNG is provided on site.</p> <p>HBF would also encourage the Council to ensure the Local Plan fully considers the new BNG requirements in relation to site allocations. This is likely to require undertaking an assessment of the baseline to support the allocation to enable an understanding the BNG requirements for a site to be allocated and the impact this may have on viability and other policy requirements and considerations. It will be important to understand the BNG costs of mandatory BNG as this is non-negotiable and as such may impact on the viability of the site and its ability to deliver against other policy requirements such as affordable housing or other s106 asks. The Plan should include reference to this within the supporting text.</p> <p>Reference could also usefully be made within the Plan to the small sites metric. This is intended to be a less complex statutory metric that can be used to set out how 10% BNG will be secured on small sites. It can only be used for on-site BNG delivery. The national mandatory 10% BNG policy has applied to small sites since April 2024.</p> <p>BNG will also impacts on the density of housing schemes that can be provided, as land used for on-site BNG is not available for housing. This may require larger and/or additional housing sites to be allocated.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	HBF requests to participate in the Hearing Sessions for the Local Plan Examination, the HBF considers that their involvement is necessary to ensure that the home building industry is able to respond to any housing related issues raised during the hearing sessions.

Q5 Sound	Yes
Q5 DTC compliant	Yes
Q6 Details	<p>Please see supporting representation by Knights on behalf of Aspire. This policy sets out the Council's approach to Biodiversity Net Gain.</p> <p>Criteria 1 sets out that development should provide 10% BNG, however reference should be made to the exemptions set out in the Environment Act 2021, as some residential development proposals will be excluded from providing BNG.</p> <p>As such the wording of criteria 1 should be amended as follows:</p> <p>Development proposals (excluding exempt development as defined by the Environment Act 2021) will be permitted provided that they are designed to deliver at least a 10% measurable net gain of biodiversity habitat using the relevant statutory Biodiversity Net Gain (BNG) Metric. Provision of BNG should be secured and maintained for a period of 30 years.</p> <p>With regard to Criteria 3, this sets out the BNG hierarchy, and in cases where BNG is provided off site, suggests that such sites should be as close as possible to the development site.</p> <p>For off site BNG provision it is not a requirement of national policy and the Environment Act to require off site provision to be as close as possible to the development site.</p> <p>Planning Practice Guidance is clear that "Plan-makers should be aware of the statutory framework for biodiversity net gain, but they do not need to include policies which duplicate the detailed provisions of this statutory framework. It will also be inappropriate for plans or supplementary planning documents to include policies or guidance which are incompatible with this framework, for instance by applying biodiversity net gain to exempt categories of development or encouraging the use of a different biodiversity metric or biodiversity gain hierarchy".</p> <p>As such, this policy should be reviewed to ensure that there is no duplication or enhanced requirements when compared to national policy and legislation.</p>

Title	Policy SE7: Biodiversity Net Gain
Consultee Company / Organisation	Natural England
Consultee Position	Senior Officer
Consultee Family Name	McLaughlin

Consultee Given Name	Sally
Q4 Part of document	Policy
Q4 Policy	SE7
Q6 Details	<p>Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.</p> <p>Natural England welcomes the opportunity to comment at this stage of the Local Plan and particularly supports the inclusion of policies on green and blue infrastructure, biodiversity, health and wellbeing, trees hedgerows and woodlands. We have reviewed the consultation documents and provide comments that relate to the soundness of the Local Plan and that are most relevant to our interest in the Natural Environment.</p> <p>Natural England has adopted a robust precautionary approach within this plan response. Whilst we welcome the content of the Local Plan, Natural England advises that the plan is currently at risk of being unsound and/or not legally compliant due to the potential impacts on air quality in relation to internationally designated nature conservation sites and the justification for the potential loss of 263ha best and most versatile (BMV) agricultural land. Further detail is provided below.</p> <p>Natural England have also provided other advice within this submission relating to further improvements that could strengthen plan policies and specific strategic site options and related mitigation.</p> <p>Do you consider that the Newcastle Under Lyme Plan is Sound and Legally Compliant?</p> <p>Natural England notes that the plan is at the pre-submission stage and as such your authority is seeking confirmation on the soundness of the plan. Having reviewed the plan and supporting documents, Natural England considers the pre-submission plan in its current form is not sound or legally compliant, this is due to a lack of evidence with regards to air quality and the cumulative loss of BMV agricultural land both in a local and national context.</p> <p>Air quality</p> <p>Natural England notes that the Sustainability Appraisal states that “Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)</p> <p>As Natural England understands it the current evidence base used to conduct the HRA cannot rule out adverse impacts on designated sites. The HRA states at page 22 3.4.16 “At the time of writing, the traffic modelling run for the final suite of Regulation 19 allocations had not been undertaken.” Appendix A lists the local plans for neighbouring LPA's concluding that ‘in combination’ with plans and projects (approved and those yet to be implemented) they may trigger in-combination effects on European sites as a result of air quality, particularly as we understand it in the key commuting areas.</p> <p>Natural England notes that Annual Average Daily Traffic (AADT) data and traffic modelling in the Strategic Transport Assessment (STA) concludes a potential reduction in travel and related air pollution at allocated sites as a result of a predicted preference in the use of public transport. We are surprised by this projected decrease in both traffic and related air pollution, particularly as one employment allocation site includes a 200-bay lorry park and increased congestion is predicted at junction 16 of the M6 where it joins the A500 in a rural location with no existing rural transport provision. The Sustainability Appraisal also notes that: “There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work”. (p 206)</p> <p>Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot therefore currently be ruled out at the following internationally designated sites:</p> <ul style="list-style-type: none"> •Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI •Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI <p>The HRA outlines that the main source of ammonia emissions is agricultural practice, and that material increases in NH3 emissions are unlikely to be associated with the proposed local plan. At Black Firs and Cranberry Bog and Oakhanger Moss, any increase in nitrogen deposition has the potential to exacerbate pollution levels and thereby undermine the reasons for notification of these sites as a Ramsar.</p> <p>Ammonia can be emitted from vehicle exhaust emissions as a by-product of the catalytic conversion process designed to reduce emissions of nitrogen oxide. As traffic composition transitions toward more petrol and electric cars (i.e., fewer diesel cars on the road), catalytic converters may aid in reducing NOx emissions but result in increased ammonia emissions. Ammonia emissions from road traffic therefore could make a significant difference to nitrogen deposition close to roads.</p> <p>Natural England therefore advise that ammonia sourced from traffic emissions should be included for assessment within the local plan HRA, as the impact from this source on designated sites is currently unclear. For further information please see this report from Air Quality Consultants (AQC) that looks at ammonia emissions from roads for assessing impacts on nitrogen-sensitive habitats. Whilst we are aware that the current CREAM model created by AQC used to assess ammonia emissions from road traffic has not been peer reviewed, at this time it has been recognised as a Best Available Tool and we deem it appropriate to be used where any caveats associated with this model are also considered within the assessment. An assessment based on the best available approach is necessary. The next stage of assessment can then consider uncertainties in the model and site specifics to decide if mitigation needs to be considered.</p> <p>Further work is therefore required to inform the Habitat Regulations Assessment. Natural England will engage with the Local Planning Authority in order to produce a Statement of Common Ground (SoCG) on this matter.</p> <p>‘Best and most versatile’ (BMV) agricultural land</p> <p>Natural England notes that “the proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land, A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of ‘best and most versatile’ (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services”. (page 74 Sustainability Appraisal).</p>

Under the Town and Country Planning (Development Management Procedure) (England) Order 2015 (DMPO) Natural England is a statutory consultee on development that would lead to the loss of over 20ha of 'best and most versatile' (BMV) agricultural land (land graded as 1, 2 and 3a in the Agricultural Land Classification (ALC) system, where this is not in accordance with an approved plan. Natural England would like to understand how the local planning authority have produced the evidence base and options assessment which informs the strategic site allocations.

Natural England will engage with the local planning authority to consider the cumulative impacts of the loss of BMV both in the local and national context and the challenges related to environmental impact, infrastructure, and the requirement to deliver a balance between the need for development and the potential urbanisation of the countryside including the potential mitigation measures that need to be considered.

NPPF paragraph 174e states:

Planning policies and decisions should contribute to and enhance the natural and local environment by: ... preventing new and existing development from contributing to, being put at unacceptable risk from, or being adversely affected by, unacceptable levels of soil, air, water or noise pollution or land instability. Development should, wherever possible, help to improve local environmental conditions such as air and water quality, taking into account relevant information such as river basin management plans.

Natural England provides guidance to inform further assessment of air quality and the loss of BMV agricultural land in our response to the content of the plans Strategic Policies as set out below.

Do you consider that the Newcastle-under-Lyme Borough Council Regulation 19 pre-submission draft Plan is compliant with Duty to Co-operate?

In terms of working with neighbouring authorities, Natural England notes that initially the plan was intended to be produced jointly with the City of Stoke-on-Trent, the plan does not however currently present an evidence base that demonstrates that a collaborative approach has been adopted and that the Duty to Co-operate has been fully complied with.

The Sustainability Appraisal states that: "Overall, there is potential for a cumulative adverse effect on biodiversity, owing to the fragmentation of the ecological network... Where a large amount of development is located on previously undeveloped land surrounding rural settlements, this is likely to produce a long-term irreversible negative cumulative effect regarding the urbanisation of the countryside" (p 71)

Natural England would therefore like to further understand how the areas identified to meet the City of Stoke-on-Trent's unmet employment needs are justified and appropriate and whether meeting some of the employment needs of the City of Stoke-on-Trent has led to the need to release or safeguard more land from the Green Belt in Newcastle under Lyme. If this is the case, what are the exceptional circumstances for doing this and how does this align with the allocated sites options assessment?

Recreational Pressure

In terms of the South Pennine Moors SAC and recreational impacts, the Local Plan does comply with the Duty to Co-operate. Natural England recommends that reference is made to the 'Recreation use of the South Pennine Moors and implications for strategic housing growth' report by Footprint Ecology Ref 778 date 27th March 2024. This report should both inform the evidence base and ensure that policies relating to open space/green infrastructure are as rigorous and robust as possible.

The report concludes that more data/evidence is required to determine if recreational use is causing an impact across to the South Pennine Moors and to get a better understanding of the scale and location of any impact. Natural England notes that the report records 7,000 additional dwellings in Newcastle-under-Lyme over the plan period rather than the 8,000 included in this regulation 19 submission. Newcastle-under-Lyme Borough Council should therefore continue to work with local authority and other partners to ensure coordinated and continued cross boundary action.

Other matters

Natural England has specific concerns related to allocations in the Green Belt. Notwithstanding that, Natural England considers most of the policies within the plan to be sound and deliverable. The plan is consistent with national policy with regard to those policies that are within Natural England's remit. Further information on strengthening policies including but not limited to Soils and best and most versatile (BMV) agricultural land, preventing loss and fragmentation of habitats and supporting green infrastructure are provided below.

Vision and Strategy

Natural England notes that the Plan's vision and emerging development strategy set out a framework for the future development of Newcastle-under-Lyme and addresses the needs in relation to housing, the economy, community facilities and infrastructure, including specific reference to a proposed employment site allocation.

This vision and the related objectives should also set out the environmental ambition for the plan area and form the basis for nature recovery and enhancement, supported by the policies and proposals in the plan.

Natural England advises that the vision should also incorporate more on the local ecology and landscape features which underpin local distinctiveness such as the "strong rural character with long open views across the surrounding rural landscape, towards more distant hills often framed by trees" (p 69) Part 3 Site Specific Landscape & Visual Appraisal. "Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms" (p 187) Sustainability Appraisal.

Strategic Objectives

Natural England welcome strategic objective SO-4 relating to carbon reduction and climate change, however we do not feel that this group of thirteen strategic objectives value or reflect the Boroughs whole ecology and landscape including but not limited to the protection of soil and best and most versatile (BMV) agricultural land. We would suggest that additional objectives are added relating to: air quality, water quality and quantity, soils and landscape.

Natural England would also like to see stronger reference to the Nature Recovery Network which is one of the specific aims of the Environment Act 2021 and will underpin the approach to the enhancement of nature.

Air quality is a major threat to habitats and species. Many ecological sites are exceeding their critical loads and levels for ammonia, nitrogen deposition and acid deposition. The strengthening of the policies and the rationale behind site allocations within this plan will ensure that new development does not

contribute to the further deterioration of habitats and species due to air pollution. Further advice on strengthening the plans evidence base with regards to air quality is provided in the links below:

 Strategic Policies
 5 Planning for Sustainable Development
 Policy PSD5: Green Belt
 Natural England notes that this policy "aims to protect the Borough's essential open spaces, prioritise the use of brownfield land, and guide potential future development in accordance with the National Planning Policy Framework (NPPF)".
 Natural England however notes that amendments to the Green Belt boundary are proposed in the form of 14 site allocations to accommodate both the growth requirements of the borough and the employment requirements of wider Stoke-on-Trent conurbation. Natural England's has some site-specific concerns about the potential impacts of some of the green belt sites selected on the natural environment with regards to habitat loss, fragmentation and justification for the loss of BMV agricultural land.
 We note the LPA's intention to release and compensate for the loss of green belt and prioritise the use of suitable brownfield land. However, the site allocations in the green belt would result in the potential loss of 263ha of Best and Most Versatile (BMV) agricultural land. The council should satisfy itself that it is making a balanced decision for sustainable development, the Sustainability Appraisal concludes that: "The Green Belt Study assessed land parcels against the contribution they make to the five purposes of the Green Belt on a four-point scale...Three allocated sites (AB12, AB33 and TK10) are located in areas which make a 'strong' overall contribution to the purposes of the Green Belt where "the site contributes to the purpose in a strong and undeniable way, whereby removal of the site from the Green Belt will detrimentally undermine this purpose" (p101)
 "Site allocations on previously undeveloped land or that would result in a net loss of GI / vegetation could result in a reduced capability of the environment to provide ecosystem services including carbon storage, the storage and filtration of water including natural flood protection, as well as reduced availability and connectivity of habitats within the green network enabling movement of species. (p 165)
 Strategic Site Allocations
 Natural England suggests that the HRA should include a "requirement for project-level/site specific HRA's and targeted ecological surveys".
 The Sustainability Appraisal concludes that:
 "Some 12 allocated sites partially coincide with priority habitats, where 3.43% of the total site allocation areas coinciding with priority habitats which include deciduous woodland, good quality semi-improved grassland and Site BL18 coincides with lowland fens which is a very high distinctiveness habitat in the BNG handbook (2024). These habitats can support a range of species of principal importance. Allocated Site KL15 is adjacent to 'The Butts and Hands Wood' ancient woodland, with a further 20 allocated sites located in close proximity to ancient woodlands. P158
 "Six allocated sites (Sites CT20, HD10, KL13, RC8, SP11(2) and SP23) are located within areas of 'high' or 'very high' habitat distinctiveness that provide high biodiversity value. Whilst in many cases these habitats can be conserved alongside development, it is likely that in some cases fragmentation or loss of habitats and connections between habitats will occur"
 "The majority of allocated sites are located on previously undeveloped land, which would result in the loss of soil resources and the ecosystem services they provide. (p 159) The development of new buildings on previously undeveloped land would be expected to result in a direct loss of soil resource, with little or no scope for mitigation" (p 216)
 "The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution. (p 68)
 For all sites, Natural England advises that the hydrological catchment within which the site sits is taken into consideration, with regards to the potential impact of the developments proposed on the adjoining watercourses and wider catchments, including but not limited to surface water runoff (including during construction), existing and required capacity of Waste Water Treatment Works (WwTW) and water supply and flooding issues. Each site will require site specific investigation, and the council should understand the impact of all the sites put forward individually and in combination.
 Natural England has specific concerns and or requires further information about the following 'Strategic Site Allocations' which could potentially impact on designated sites as a result of air and water quality and/or lead to the loss and / or fragmentation of priority habitats and BMV agricultural land:
 BL18 – Clough Hall Playing Fields, Talke

Natural England would like to further understand this larger residential development proposal with regards to the potential impacts on the lowland fen habitat.

KL13 & KL15 – Land South of A525 between Keele University and Newcastle

Natural England notes this proposal for Employment development is immediately adjacent to ancient woodland priority habitat.

HM28 – Land off East Lawns, Betley

Existing and projected water quality issues at Betley Mere will need to be considered with regards to this allocation.

LW53 – Loggerheads

Natural England notes this residential housing development proposal is located within the IRZ of protected sites (Burnt Wood SSSI) which states that development proposals of 50 or more homes outside existing settlements/urban areas in these zones should be consulted upon with Natural England.

SP11 – Former Keele Municipal Golf Course

This Larger residential development is categorised in the Landscape Assessment as having a Major adverse impact on the local Landscape.

AB2 – Land Adjoining Corner of A500 and M6 Southbound

Natural England notes this proposed employment allocation released entirely from the green belt, which comprises 70ha of grade 2 BMV agricultural land. The Landscape study concludes that the: “Proposed development scenario is likely to have a major adverse effect on the SA objective with no satisfactory mitigation possible” (p 15). With regards to potential Air Quality impacts on protected sites Natural England notes from the options analysis that “The loss or potential moving of a layby to enable access to the site could be problematic indicating potential issues with site access and traffic flow. An increase in HGV and personal vehicle traffic is anticipated, which could lead to potential congestion and air pollution in the area”. Natural England would therefore also like to understand the evidence base further including the rationale for an alternative site TK30 @ Talke A34 / A500 roundabout being ruled out.

Policy PSD6: Health and Wellbeing

Natural England welcome this policy direction in terms of safeguarding health and amenity and supporting healthy communities, through the protection and provision of high-quality open spaces, including allotments and the promotion of active travel transport choices Further information on joining up Nature Recovery and Green Infrastructure (GI) with health priorities is set out below. If more cities and towns can be creatively designed and managed, with nature and communities at their heart, we will see nature and people thrive. This is something we set out to inspire at Natural England when developing the Green Infrastructure Framework and Design Guide. Natural England's People and Nature survey tells us that, for 82% of people 'being in nature makes me happy'. With the cost-of-living crisis, 'free' places like local parks and greenspace, have become even more important. The value of these spaces for the economy is estimated at £28.7 billion per year.

Green infrastructure in towns and cities provides places to relax, exercise, and spend time outdoors; cools urban areas; reduces flooding by allowing water to permeate the ground rather than overwhelm our drains; increases biodiversity and helps to reduce inequalities in access to nature. Options assessments for development sites and related green and blue Infrastructure within and between developments, green spaces and designated sites should; include soft transition and consider potential direct and indirect implications on sustainable use for example visitor pressure and transport / access options.

The natural environment affords the best 'natural' play opportunities for children while offering multifunctional nature-based solutions to climate change etc. These can be blended into wildlife rich green infrastructure and green open spaces that can act as destination play sites for local children (See best practice at Play England and Play Wales) that have proven health and wellbeing value.

Evidence for nature play and health:

Play, naturally: a review of children's natural play

Nature for health and wellbeing | The Wildlife Trusts

Good practice in social prescribing for mental health: the role of nature-based interventions - NECR228 (naturalengland.org.uk)

6 Climate and Renewable Energy

Whilst Natural England welcomes this group of policies we recommend including Policy CRE1: Climate Change and Policy CRE2: Renewable Energy within the Sustainable Environment (SE) group of policies to achieve a collective strategic focus on sustainable development and working toward achieving net zero alongside the SE policies relating to Pollution and Air Quality (SE1) and requirements for sustainable water management measures to reduce water use, natural flood protection features alongside the specific policies on Sustainable Drainage Systems (Policy SE4:)

Natural England continues to work with the LPAs across the region on understanding air pollution across area boundaries (see comments and links in objectives section.)

10 Infrastructure and Transport Policy.

Policy IN4 Cycleways, Bridleways and Public Rights of Way

Natural England welcomes the inclusion of this group of policies which seek to maintain and enhance the network of public rights of way that cross the borough. We note that the sustainability appraisal states that “the borough has relatively poor accessibility to the cycle network and is the lowest performing in the county for walking zones” (p 206) and that, “eight allocated sites (AB2, AB12, AB33, HD10, KL15, MD29, SP11(3) and TK10) do not currently have safe pedestrian or cycle access adjacent to the site, where site end users may be reliant upon less sustainable modes of transport including private car use”. (p 180)

11 Sustainable Environment

Natural England welcomes this group of policies and has the following policy specific comments:

Policy SE1: Pollution and Air Pollution.

Natural England welcomes this policy that notes that development proposals which are likely to result in detrimental impacts on air quality, will not be permitted unless it can be demonstrated that mitigation measures effectively address these impacts. (Comments on Air Quality are also provided on page 2 and 4 of this letter). The promotion of sustainable and active travel options, low-emission technologies and

enhancement of green infrastructure to absorb air pollution is also noted. (see comment above re integrating the group: 6 Policies Climate and Renewable Energy).

Policy SE7: Biodiversity Net Gain

Natural England supports the inclusion of a policy on BNG. We suggest the following minor amendments to further improve the plan policy.

The BNG policy should make it clear that biodiversity net gain is not applied to irreplaceable habitats, and that any mitigation and/or compensation requirements for Habitats sites should be dealt with separately from biodiversity net gain provision. The policy should also set out how biodiversity net gain will be delivered and managed through the lifetime of the scheme and including monitoring requirements. This should include indicators to demonstrate the amount and type of gain provided through development.

The indicators should be as specific as possible to help build an evidence base to take forward for future reviews of the plan, for example the total number and type of biodiversity units created, the number of developments achieving biodiversity net gains and a record of on-site and off-site contributions.

Natural England notes that the Sustainability Appraisal states "Despite the BNG provisions at the site level, there remains potential for a cumulative adverse impact on biodiversity at the landscape scale, owing to incremental habitat losses. As a result of development within the Local Plan undeveloped land will be lost which will include the loss of soil resources, habitats recognised as being of 'high' and 'very high' distinctiveness, and potentially ecological links between biodiversity assets, whereby the policies will not be expected to fully mitigate the fragmentation of the ecological network. Fragmentation of the ecological network across Newcastle-under-Lyme is expected to be a long-term and permanent significant effect." (p 162)

Policy SE8: Biodiversity and Geodiversity

Natural England supports the inclusion of this policy to protect the Boroughs internationally, nationally and locally designated sites important for their biodiversity value and to enhance the natural environment and work with partners toward Nature Recovery.

We particularly welcome the plans recognition of the value of "wider ecological networks" stating that "Other sites, both individually and collectively, that are not designated can also contribute towards protecting and enhancing diversity of species locally".

Policy SE10: Landscape

Natural England welcomes this policy aimed at ensuring that "development proposals should protect and enhance the character, quality, beauty, and tranquillity of the Borough". We note from the sustainability appraisal that "The entirety of the south of the borough is identified as being high in relation to landscape sensitivity, which starts in Audley in the north and covers the southern area of the borough, including Loggerheads and Alington." We agree that "Alteration of the landscape character is a long-term and permanent significant effect... There is potential for a cumulative adverse effect on landscape character resulting from the development proposed in the Plan". (p193) SA.

Natural England has divided England into 159 distinct natural areas called National Character Areas (NCAs) Newcastle-under-Lyme falls within two NCAs: Shropshire, Cheshire and Staffordshire Plain: gently rolling plains dominated by intensive dairy farming, beef and arable production; The Potteries and Churnet Valley: strong contrast between the industrialised landscape of the Potteries and the pastoral, strongly dissected hills and small plateaux that flank the Churnet and Dove valleys.

Natural England agrees with the following statement in the sustainability appraisal: "Although various policies aim to ensure that development conserves and enhances landscape character and distinctiveness, when combined with Local Plan policies that support infrastructural improvements such as for transportation, water, and waste, this is likely to lead to a long-term and irreversible cumulative adverse effect on landscape character and tranquillity and associated indicators such as dark skies." (p72)

Policy SE11: Trees, hedgerows, and woodland

Natural England welcomes this plans recognition that "Trees, hedgerows, and woodlands are integral to the distinctive character and ecological health of the Borough of Newcastle-under-Lyme, defining landscapes across both urban and rural settlements." And that "This policy prioritises the protection of existing natural assets, seeking to not only preserve, but actively enhance, these valuable features wherever possible".

Policy SE13: Soil and Agricultural Land

Natural England has concerns about the justification for the loss of BMV agricultural land within this plan. "The proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land, A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of 'best and most versatile' (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services." (page74) (SA)

Natural England notes that policy SE13 states: "Outside of sites allocated for development in the Local Plan, development proposals should avoid the loss of best and most versatile agricultural land (BMV) unless it can be demonstrated that the benefits of development clearly outweigh the loss of the land and every effort has been made to mitigate for the overall impact of the development on best and most versatile agricultural land."

With regards to Soil and Agricultural Land Quality, Natural England advises that The Local Plan should give appropriate weight to the roles performed by the area's soils. These should be valued as a finite multi-functional resource which underpin our wellbeing and prosperity. Decisions about development should take full account of the impact on soils, their intrinsic character and the sustainability of the many ecosystem services they deliver.

The 25 Year Environment Plan (25YEP) sets out government action to help the natural world regain and retain good health, including highlighting the need to:

- protect the best agricultural land
- put a value on natural capital, including healthy soil
- ensure all soils are managed sustainably by 2030
- restore and protect peatland

Soil is a finite resource which plays an essential role within sustainable ecosystems, performing an array of functions supporting a range of ecosystem services, including storage of carbon and water, the infiltration and transport of water, nutrient cycling, a buffer against pollution and provision of food. In

order to safeguard soil resources as part of the overall sustainability of the development, it is important that the soil resource is able to retain as many of its important functions as possible. This can be achieved through careful soil management and appropriate, beneficial soil re-use, with consideration on how any adverse impacts on soils can be avoided or minimised.

The conservation and sustainable management of soils is reflected in the National Planning Policy Framework (NPPF), particularly in paragraph 180(a), 180(b) and 181 (footnote 62). When planning authorities are considering land use change, the permanency of the impact on soils is an important consideration. Particular care over planned changes to the most potentially productive soil is needed, for the ecosystem services it supports including its role in agriculture and food production. Plan policies should therefore take account of the impact on land and soil resources and the wide range of vital functions (ecosystem services) they provide in line with paragraph 180(b) of the NPPF.

Soil Plan Policies

We strongly advise that at a minimum, the plan includes core policies for:

- the protection of best and most versatile (BMV) agricultural land (Grades 1, 2 and 3a in the Agricultural Land Classification (ALC)); and
- for the protection of and sustainable management of soils as a resource for the future.

-Areas of poorer quality land (ALC grades 3b, 4, 5) should be preferred to areas of higher quality land (grades 1, 2 and 3a).

-Recognise that development has an irreversible adverse impact on the finite national and local stock of BMV land.

-Conforms to NPPF and Planning Practice Guidance (Natural Environment and Minerals).

-Requires detailed ALC surveys to support plan allocations and for subsequent planning applications (for all sites larger than 5 ha). ALC surveys to support plan allocations and for subsequent planning applications for smaller sites (1 – 5 ha) would be welcomed.

-Recognise that development (soil sealing) has a major and usually irreversible adverse impact on soils.

-Soils of high environmental value (e.g., wetland and carbon stores such as peatland, low nutrient soils; or soils of high environmental value in the local context) should also be considered as part of ecological connectivity (Nature Recovery Network / Green Infrastructure).

-Requires soil handling and sustainable soil management strategies based on a detailed assessment of the soil resource based on best practice guidance (for all sites larger than 5 ha), ideally as part of the planning application process for major sites to help inform master-planning, and to safeguard the continued delivery of ecosystem services through careful soil management and appropriate, beneficial soil re-use. Soil handling and sustainable soil management strategies for smaller sites (1 – 5 ha) would be welcomed.

-Reference should be made to Defra's Construction Code of Practice for the Sustainable Use of Soils on Construction Sites

-In addition, for minerals and other temporary forms of development, plans for reinstatement, restoration and aftercare will be required (or for solar, a commitment to do so if the operational life is in decades); normally this will be return to the former land quality (ALC grade)

-Refers to soils issues within relevant policy areas such as renewable energy, climate change, green infrastructure and biodiversity net gain, flood schemes, managed realignment, development design and landscaping.

Policy SE14: Green and Blue Infrastructure

Natural England supports this policy. Well-designed cross boundary multi-functional green infrastructure contributes greatly to a number of benefits both for people and nature. Your green and blue (for example cross boundary canals) infrastructure should dovetail with your biodiversity net gain strategies to maximise benefits.

We would advise that the Local Authority also considers Natural England's Green Infrastructure Framework of Principles and Standards for England. As stated in our document, "Green infrastructure (GI) is part of the solution to many of the challenges we face; health inequalities, biodiversity crisis, climate change, nature recovery and levelling up. The GI framework supports local authorities, developers, parks and greenspace managers and local communities to enhance and create new good quality green infrastructure."

We would also suggest reference is made to the emerging Local Nature Recovery Strategy. Preparing Local Nature Recovery Strategies (LNRS) is a statutory requirement under the Environment Act 2021. LNRS are designed to work closely alongside other measures in the Act including supporting the delivery of mandatory biodiversity net gain and providing a focus for a strengthened duty on all public authorities to conserve and enhance biodiversity. They will also underpin the Nature Recovery Network, alongside work to develop partnerships and to integrate nature into our incentives and land management activities. Each LNRS will be specific and tailored to its area. The responsible authorities and people involved in preparing a strategy can choose how they want it to look, but every strategy must contain:

1. A local habitat map.
2. A written statement of biodiversity priorities. Statutory guidance for responsible authorities explains in detail what these 2 things should contain. Together they set out what the strategy is aiming to achieve and what practical actions will help do this. They will also propose where actions could be carried out for best effect and to connect and expand existing areas that are important for nature. We expect local nature recovery strategies to propose actions such as the:
 - creation of wetlands
 - restoration of peatlands
 - planting of trees and hedgerows
 - more sustainable management of existing woodlands and other habitats like grasslands These actions are intended to help nature itself and to also help improve the wider natural environment.

Whilst the Staffordshire Local Nature Recovery Strategy (LNRS) is currently a work in progress, Newcastle-under-Lyme Borough Council Regulation 19 pre-submission should still be consistent with NPPF Paragraph 185 in terms of setting out local habitat priorities and identifying potential measures by which they can be achieved, alongside mapping areas that could become of particular importance in the future.

Natural England encourages Newcastle Under Lyme Borough Council via their Local Nature Recovery Strategy to actively develop cross border cooperation between other Local Planning Authorities (LPA)

(for example Staffordshire Moorlands Borough Council) in coordinating land development projects that impact on local biodiversity sites to ensure that local biodiversity corridors are maintained and link up other local important sites for nature conservation.

This is a good way of achieving nature recovery and preparing to deliver the LNRS alongside enabling the local authority and its partners to identify, map and safeguard site areas, including green and blue infrastructure opportunities and interlinkages.

Habitats Regulations Assessment

Natural England notes that this Local Plan is not directly connected with or necessary to the management of any European site. A screening assessment has been undertaken which identified a number of Likely Significant Effects (LSE) associated with the Local Plan. Taking no account of mitigation measures, the HRA concludes that Local Plan has the potential to affect the following European sites:

- Cannock Chase SAC
- Humber Estuary SAC, SPA and Ramsar
- Mersey Estuary SPA and Ramsar
- Midland Meres and Mosses Phase 1 Ramsar
- Midland Meres and Mosses Phase 2 Ramsar
- Pasturefields Salt Marsh SAC
- Peak District Dales SAC
- Peak District Moors (South Pennine Moors Phase 1) SPA
- Severn Estuary SAC, SPA and Ramsar
- South Pennine Moors SAC
- West Midland Mosses SAC

We welcome that your HRA includes the Humber Estuary SAC, SPA and Ramsar site which is hydrologically connected to the river Trent. If the Local Plan resulted in significant water pollution, this European site could be affected and has therefore been screened in, in relation to water quality only, on a precautionary basis. Natural England however notes that the Sustainability Appraisal identifies "A long-term cumulative adverse effect ...in terms of water quality" (p 148) as a result of the plan, this is not fully reflected in the current HRA.

Natural England note that the Sustainability Appraisal states: that "the entirety of the borough falls within IRZs of one or more SSSIs. All five SSSIs within the borough are in 'unfavourable' condition: Burnt Wood SSSI, Maer Pool SSSI, Black Firs and Cranberry Bog SSSI (Midlands Meres and Mosses Phase 2 Ramsar), Betley Mere SSSI (Midlands Meres and Mosses Phase 1 Ramsar) and Metallic Tileries, Parkhouse SSSI."

Natural England are also aware of the extensive network of ancient woodland spread across the borough, totalling 707.60 hectares, as well as a large quantity of priority habitats, totalling 1,791 hectares.

Natural England agree that the following designated sites and related priority habitats in adjoining LPA areas may also be affected by development through several pathways, including fragmentation, recreational pressure and/or pollution (including Air and Water Quality). Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI, Wybunbury Moss SAC SSSI, Tyrley Canal Cutting SSSI, King's and Hargreaves Wood SSSI, Gannister Quarry SSSI, Roe Park Woods SSSI, Wetley Moore SSSI, Churnet Valley SSSI, Hatherton Flush SSSI, Sounds Heath SSSI, Ford Green Redebed SSSI, and Cop Mere SSSI.

It is noted that the Appropriate Assessment stage of the HRA assessed potential impacts by topic;

- Impacts on designated features affected by a possible deterioration in air quality
- Impacts on water quality and quantity associated with increased levels of built development.
- Impacts associated with increased recreational pressure at European sites; and
- Consideration of impacts at associated functionally linked land.

Natural England notes that the HRA also factored the following into the assessment process "the protective framework provided by the Local Plan and existing protection measures set out in high level strategic policy and existing planning policy frameworks that serve to help overcome the identified potential adverse effects" and that "taking into consideration these factors, it is concluded that the Local Plan would have no adverse impact on site integrity at any European site, either alone or in-combination.

Natural England disagree agree with this conclusion that for those Habitats sites in the area of search with features sensitive to air pollution, adverse effects on their integrity, alone or in-combination, can be ruled out for the reasons set out at the beginning of this letter on page 2 and repeated in part below:

Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot currently be ruled out at the following internationally designated sites:

- Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI
- Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI

Natural England are currently in discussion with a number of the Staffordshire and West Midlands LPA's with regards to the cumulative impacts of air quality. We advise that further work is required to inform the HRA. The HRA should demonstrate that there are no adverse effects on integrity of Habitat sites as a result of this Local Plan, alone and in combination with other plans and projects. With regards to allocated sites, it is unclear whether the individual sites put forward in the Local Plan have been assessed through the Habitat Regulations Assessment process and how mitigation will be applied here.

Sustainability Appraisal

Natural England has reviewed the Sustainability Appraisal (SA) and included comments taken from the document throughout our response.

The SA is a comprehensive document which should be reviewed in strengthening the HRA, particularly with regards to residual adverse effects that would be expected to remain in terms of wastewater following the implementation of the Local Plan policies. (p 141) Natural England notes that "Increased pressure on wastewater treatment has the potential to be a long term and potentially permanent significant effect" (p 142)

The SA recognises the local distinctiveness of the plan area;

"The Borough itself is largely rural in nature and supports some high-quality agricultural land, but is more heavily built up towards the north east surrounding Stoke-on-Trent. (p 8)

Newcastle-under-Lyme has a strong rural character with a high-quality landscape and countryside, with some areas identified as being sensitive to change as a result of new development. (p 19)

	<p>Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms make up the key features of some of these Landscape Character Types.” (p 20)</p> <p>Sets out the area specific barriers to achieving sustainable growth;</p> <p>“Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)</p> <p>Loss of tranquillity The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution.(p 68)</p> <p>“The pre-mitigation SA assessments identified negative impacts in relation to air quality due to the proximity of sites to major roads, landscape character due to the location of sites within areas of high landscape sensitivity, close proximity to the PRoW network and potential for coalescence and urban sprawl, habitat sites, priority habitats, habitat distinctiveness, loss of undeveloped land, ‘best and most versatile’ (BMV) agricultural land, coinciding with mineral safeguarding areas (MSAs) and areas of surface water flood risk (SWFR); and access to healthcare facilities, schools, the local cycle network and railway network. (p 40)</p> <p>There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work. (p 21)</p> <p>Trends in transport choice are unlikely to change significantly, and private car use would continue to increase as the selected method of transport to work, with potential adverse impacts on air quality in the borough.”(p 23)</p> <p>Considers the local and cumulative significance of soil loss alongside the ecological implications:</p> <p>“Loss of soil resources, BMV land and ecosystem services The proposed allocations would cumulatively result in the loss of up to approximately 342ha of previously undeveloped land, including up to 263ha of BMV agricultural land. The proposed development would be expected to reduce the ability of the local soil biome to effectively provide ecosystem services, to some extent. Additionally, the loss of permeable soils could potentially increase the risk of flooding and result in a loss of biodiversity across the Plan area. Loss of soil can also result in an increase in soil erosion and have subsequent impacts on agricultural yield.(p 68) The majority of the borough is ALC Grade 3 soil, with areas of ALC Grade 2 scattered across the borough. Grade 2 and potentially Grade 3 represents some of the borough’s BMV agricultural land and should be conserved wherever possible (p 21)</p> <p>A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of BMV land to be lost as a result of the development proposed in the Local Plan.” (p 59)’</p> <p>Other Advice</p> <p>Further general advice is provided within Natural England Advice Note – Local Plans February 2024, attached at (Appendix A) - see attachment</p>

Q6 Details	<p>We wish to draw attention to the Great Crested Newt District Licencing Scheme, for which Newcastle Under Lyme Borough Council hold the licence that has been granted by Natural England. NatureSpace is the delivery partner of this scheme working with the Council.</p> <p>Supporting text that explains that you have a District Licence Scheme available for use could be included as part of the pre-text for your Biodiversity Policy SE8, if you feel this would be appropriate. The following text is given as an example of a paragraph that you could use or adapt as you see fit:</p> <p>Newcastle Under Lyme Borough Council holds a Great Crested Newt Organisational (or 'District') Licence granted by Natural England. The associated District Licensing Scheme, which is currently administered and managed by NatureSpace Partnership, provides an alternative licensing option for developers to address impacts on protected great crested newts by enabling a 'conservation payment' towards high quality habitat creation and long-term management and monitoring. In the District Licensing Scheme, developers can engage with NatureSpace at the pre-application stage or at the planning application stage. It is based on a great crested newt landscape-scale conservation strategy, which aims to focus the creation of new habitats where they will be of maximum benefit to the species, whilst also reducing risk and uncertainty through the planning process for developers and planning authorities. The strategy results in a range of other biodiversity benefits and contributes towards nature recovery at the landscape scale.</p> <p>The following paragraph is a suggested Definition of the District Licence Scheme that could be used in the Local Plan Glossary:</p> <p>District Licensing or DL is used to describe a new approach to authorising developments affecting great crested newts, by focusing conservation efforts where it will create maximum benefit for the species - whilst reducing delays, costs, risks and uncertainty for developers. Newcastle Under Lyme Borough Council holds a Great Crested Newt Organisational (or "District") Licence granted by Natural England so in this authority an additional licensing option for developers is available that enables new sustainable development whilst also conserving great crested newts (and wider biodiversity).</p> <p>If there is any scope to include reference to the Council's great crested newt District Licence in the Local Plan, we would consider this would be beneficial to raise awareness of the Scheme and support sustainable development in your area where there is a risk to great crested newts.</p>

Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.</p> <p>Natural England welcomes the opportunity to comment at this stage of the Local Plan and particularly supports the inclusion of policies on green and blue infrastructure, biodiversity, health and wellbeing, trees hedgerows and woodlands. We have reviewed the consultation documents and provide comments that relate to the soundness of the Local Plan and that are most relevant to our interest in the Natural Environment.</p> <p>Natural England has adopted a robust precautionary approach within this plan response. Whilst we welcome the content of the Local Plan, Natural England advises that the plan is currently at risk of being unsound and/or not legally compliant due to the potential impacts on air quality in relation to internationally</p>

designated nature conservation sites and the justification for the potential loss of 263ha best and most versatile (BMV) agricultural land. Further detail is provided below.

Natural England have also provided other advice within this submission relating to further improvements that could strengthen plan policies and specific strategic site options and related mitigation.

Do you consider that the Newcastle Under Lyme Plan is Sound and Legally Compliant?

Natural England notes that the plan is at the pre-submission stage and as such your authority is seeking confirmation on the soundness of the plan. Having reviewed the plan and supporting documents, Natural England considers the pre-submission plan in its current form is not sound or legally compliant, this is due to a lack of evidence with regards to air quality and the cumulative loss of BMV agricultural land both in a local and national context.

Air quality

Natural England notes that the Sustainability Appraisal states that "Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)

As Natural England understands it the current evidence base used to conduct the HRA cannot rule out adverse impacts on designated sites. The HRA states at page 22 3.4.16 "At the time of writing, the traffic modelling run for the final suite of Regulation 19 allocations had not been undertaken." Appendix A lists the local plans for neighbouring LPA's concluding that 'in combination' with plans and projects (approved and those yet to be implemented) they may trigger in-combination effects on European sites as a result of air quality, particularly as we understand it in the key commuting areas.

Natural England notes that Annual Average Daily Traffic (AADT) data and traffic modelling in the Strategic Transport Assessment (STA) concludes a potential reduction in travel and related air pollution at allocated sites as a result of a predicted preference in the use of public transport. We are surprised by this projected decrease in both traffic and related air pollution, particularly as one employment allocation site includes a 200-bay lorry park and increased congestion is predicted at junction 16 of the M6 where it joins the A500 in a rural location with no existing rural transport provision. The Sustainability Appraisal also notes that: "There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work". (p 206)

Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot therefore currently be ruled out at the following internationally designated sites:

- Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI
- Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI

The HRA outlines that the main source of ammonia emissions is agricultural practice, and that material increases in NH3 emissions are unlikely to be associated with the proposed local plan. At Black Firs and Cranberry Bog and Oakhanger Moss, any increase in nitrogen deposition has the potential to exacerbate pollution levels and thereby undermine the reasons for notification of these sites as a Ramsar.

Ammonia can be emitted from vehicle exhaust emissions as a by-product of the catalytic conversion process designed to reduce emissions of nitrogen oxide. As traffic composition transitions toward more petrol and electric cars (i.e., fewer diesel cars on the road), catalytic converters may aid in reducing NOx emissions but result in increased ammonia emissions. Ammonia emissions from road traffic therefore could make a significant difference to nitrogen deposition close to roads.

Natural England therefore advise that ammonia sourced from traffic emissions should be included for assessment within the local plan HRA, as the impact from this source on designated sites is currently unclear. For further information please see this report from Air Quality Consultants (AQC) that looks at ammonia emissions from roads for assessing impacts on nitrogen-sensitive habitats. Whilst we are aware that the current CREAM model created by AQC used to assess ammonia emissions from road traffic has not been peer reviewed, at this time it has been recognised as a Best Available Tool and we deem it appropriate to be used where any caveats associated with this model are also considered within the assessment. An assessment based on the best available approach is necessary. The next stage of assessment can then consider uncertainties in the model and site specifics to decide if mitigation needs to be considered.

Further work is therefore required to inform the Habitat Regulations Assessment. Natural England will engage with the Local Planning Authority in order to produce a Statement of Common Ground (SoCG) on this matter.

'Best and most versatile' (BMV) agricultural land

Natural England notes that "the proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land, A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of 'best and most versatile' (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services". (page 74 Sustainability Appraisal).

Under the Town and Country Planning (Development Management Procedure) (England) Order 2015 (DMPO) Natural England is a statutory consultee on development that would lead to the loss of over 20ha of 'best and most versatile' (BMV) agricultural land (land graded as 1, 2 and 3a in the Agricultural Land Classification (ALC) system, where this is not in accordance with an approved plan.

Natural England would like to understand how the local planning authority have produced the evidence base and options assessment which informs the strategic site allocations.

Natural England will engage with the local planning authority to consider the cumulative impacts of the loss of BMV both in the local and national context and the challenges related to environmental impact, infrastructure, and the requirement to deliver a balance between the need for development and the potential urbanisation of the countryside including the potential mitigation measures that need to be considered.

NPPF paragraph 174e states:

Planning policies and decisions should contribute to and enhance the natural and local environment by: ... preventing new and existing development from contributing to, being put at unacceptable risk from, or being adversely affected by, unacceptable levels of soil, air, water or noise pollution or land instability. Development should, wherever possible, help to improve local environmental conditions such as air and water quality, taking into account relevant information such as river basin management plans.

Natural England provides guidance to inform further assessment of air quality and the loss of BMV agricultural land in our response to the content of the plans Strategic Policies as set out below.

Do you consider that the Newcastle-under-Lyme Borough Council Regulation 19 pre-submission draft Plan is compliant with Duty to Co-operate?

In terms of working with neighbouring authorities, Natural England notes that initially the plan was intended to be produced jointly with the City of Stoke-on-Trent, the plan does not however currently present an evidence base that demonstrates that a collaborative approach has been adopted and that the Duty to Co-operate has been fully complied with.

The Sustainability Appraisal states that: "Overall, there is potential for a cumulative adverse effect on biodiversity, owing to the fragmentation of the ecological network... Where a large amount of development is located on previously undeveloped land surrounding rural settlements, this is likely to produce a long-term irreversible negative cumulative effect regarding the urbanisation of the countryside" (p 71)

Natural England would therefore like to further understand how the areas identified to meet the City of Stoke-on-Trent's unmet employment needs are justified and appropriate and whether meeting some of the employment needs of the City of Stoke-on-Trent has led to the need to release or safeguard more land from the Green Belt in Newcastle under Lyme. If this is the case, what are the exceptional circumstances for doing this and how does this align with the allocated sites options assessment?

Recreational Pressure

In terms of the South Pennine Moors SAC and recreational impacts, the Local Plan does comply with the Duty to Co-operate. Natural England recommends that reference is made to the 'Recreation use of the South Pennine Moors and implications for strategic housing growth' report by Footprint Ecology Ref 778 date 27th March 2024. This report should both inform the evidence base and ensure that policies relating to open space/green infrastructure are as rigorous and robust as possible.

The report concludes that more data/evidence is required to determine if recreational use is causing an impact across to the South Pennine Moors and to get a better understanding of the scale and location of any impact. Natural England notes that the report records 7,000 additional dwellings in Newcastle-under-Lyme over the plan period rather than the 8,000 included in this regulation 19 submission. Newcastle-under-Lyme Borough Council should therefore continue to work with local authority and other partners to ensure coordinated and continued cross boundary action.

Other matters

Natural England has specific concerns related to allocations in the Green Belt. Notwithstanding that, Natural England considers most of the policies within the plan to be sound and deliverable. The plan is consistent with national policy with regard to those policies that are within Natural England's remit. Further information on strengthening policies including but not limited to Soils and best and most versatile (BMV) agricultural land, preventing loss and fragmentation of habitats and supporting green infrastructure are provided below.

Vision and Strategy

Natural England notes that the Plan's vision and emerging development strategy set out a framework for the future development of Newcastle-under-Lyme and addresses the needs in relation to housing, the economy, community facilities and infrastructure, including specific reference to a proposed employment site allocation.

This vision and the related objectives should also set out the environmental ambition for the plan area and form the basis for nature recovery and enhancement, supported by the policies and proposals in the plan.

Natural England advises that the vision should also incorporate more on the local ecology and landscape features which underpin local distinctiveness such as the "strong rural character with long open views across the surrounding rural landscape, towards more distant hills often framed by trees" (p 69) Part 3 Site Specific Landscape & Visual Appraisal. "Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms" (p 187) Sustainability Appraisal.

Strategic Objectives

Natural England welcome strategic objective SO-4 relating to carbon reduction and climate change, however we do not feel that this group of thirteen strategic objectives value or reflect the Boroughs whole ecology and landscape including but not limited to the protection of soil and best and most versatile (BMV) agricultural land. We would suggest that additional objectives are added relating to: air quality, water quality and quantity, soils and landscape.

Natural England would also like to see stronger reference to the Nature Recovery Network which is one of the specific aims of the Environment Act 2021 and will underpin the approach to the enhancement of nature.

Air quality is a major threat to habitats and species. Many ecological sites are exceeding their critical loads and levels for ammonia, nitrogen deposition and acid deposition. The strengthening of the policies and the rationale behind site allocations within this plan will ensure that new development does not contribute to the further deterioration of habitats and species due to air pollution. Further advice on strengthening the plans evidence base with regards to air quality is provided in the links below:

Strategic Policies

5 Planning for Sustainable Development

Policy PSD5: Green Belt

Natural England notes that this policy “aims to protect the Borough’s essential open spaces, prioritise the use of brownfield land, and guide potential future development in accordance with the National Planning Policy Framework (NPPF)”.

Natural England however notes that amendments to the Green Belt boundary are proposed in the form of 14 site allocations to accommodate both the growth requirements of the borough and the employment requirements of wider Stoke-on-Trent conurbation. Natural England’s has some site-specific concerns about the potential impacts of some of the green belt sites selected on the natural environment with regards to habitat loss, fragmentation and justification for the loss of BMV agricultural land.

We note the LPA’s intention to release and compensate for the loss of green belt and prioritise the use of suitable brownfield land. However, the site allocations in the green belt would result in the potential loss of 263ha of Best and Most Versatile (BMV) agricultural land. The council should satisfy itself that it is making a balanced decision for sustainable development, the Sustainability Appraisal concludes that:

“The Green Belt Study assessed land parcels against the contribution they make to the five purposes of the Green Belt on a four-point scale...Three allocated sites (AB12, AB33 and TK10) are located in areas which make a ‘strong’ overall contribution to the purposes of the Green Belt where “the site contributes to the purpose in a strong and undeniable way, whereby removal of the site from the Green Belt will detrimentally undermine this purpose” (p101)

“Site allocations on previously undeveloped land or that would result in a net loss of GI / vegetation could result in a reduced capability of the environment to provide ecosystem services including carbon storage, the storage and filtration of water including natural flood protection, as well as reduced availability and connectivity of habitats within the green network enabling movement of species. (p 165)

Strategic Site Allocations

Natural England suggests that the HRA should include a “requirement for project-level/site specific HRA’s and targeted ecological surveys”.

The Sustainability Appraisal concludes that:

“Some 12 allocated sites partially coincide with priority habitats, where 3.43% of the total site allocation areas coinciding with priority habitats which include deciduous woodland, good quality semi-improved grassland and Site BL18 coincides with lowland fens which is a very high distinctiveness habitat in the BNG handbook (2024). These habitats can support a range of species of principal importance. Allocated Site KL15 is adjacent to ‘The Butts and Hands Wood’ ancient woodland, with a further 20 allocated sites located in close proximity to ancient woodlands. P158

“Six allocated sites (Sites CT20, HD10, KL13, RC8, SP11(2) and SP23) are located within areas of ‘high’ or ‘very high’ habitat distinctiveness that provide high biodiversity value. Whilst in many cases these habitats can be conserved alongside development, it is likely that in some cases fragmentation or loss of habitats and connections between habitats will occur”

“The majority of allocated sites are located on previously undeveloped land, which would result in the loss of soil resources and the ecosystem services they provide. (p 159) The development of new buildings on previously undeveloped land would be expected to result in a direct loss of soil resource, with little or no scope for mitigation” (p 216)

“The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution. (p 68)

For all sites, Natural England advises that the hydrological catchment within which the site sits is taken into consideration, with regards to the potential impact of the developments proposed on the adjoining watercourses and wider catchments, including but not limited to surface water runoff (including during construction), existing and required capacity of Waste Water Treatment Works (WwTW) and water supply and flooding issues. Each site will require site specific investigation, and the council should understand the impact of all the sites put forward individually and in combination.

Natural England has specific concerns and or requires further information about the following ‘Strategic Site Allocations’ which could potentially impact on designated sites as a result of air and water quality and/or lead to the loss and / or fragmentation of priority habitats and BMV agricultural land:

BL18 – Clough Hall Playing Fields, Talke

Natural England would like to further understand this larger residential development proposal with regards to the potential impacts on the lowland fen habitat.

KL13 & KL15 – Land South of A525 between Keele University and Newcastle

Natural England notes this proposal for Employment development is immediately adjacent to ancient woodland priority habitat.

HM28 – Land off East Lawns, Betley

Existing and projected water quality issues at Betley Mere will need to be considered with regards to this allocation.

LW53 – Loggerheads

Natural England notes this residential housing development proposal is located within the IRZ of protected sites (Burnt Wood SSSI) which states that development proposals of 50 or more homes outside existing settlements/urban areas in these zones should be consulted upon with Natural England.

SP11 – Former Keele Municipal Golf Course

This Larger residential development is categorised in the Landscape Assessment as having a Major adverse impact on the local Landscape.

AB2 – Land Adjoining Corner of A500 and M6 Southbound

Natural England notes this proposed employment allocation released entirely from the green belt, which comprises 70ha of grade 2 BMV agricultural land. The Landscape study concludes that the: “Proposed

development scenario is likely to have a major adverse effect on the SA objective with no satisfactory mitigation possible" (p 15). With regards to potential Air Quality impacts on protected sites Natural England notes from the options analysis that "The loss or potential moving of a layby to enable access to the site could be problematic indicating potential issues with site access and traffic flow. An increase in HGV and personal vehicle traffic is anticipated, which could lead to potential congestion and air pollution in the area". Natural England would therefore also like to understand the evidence base further including the rationale for an alternative site TK30 @ Talke A34 / A500 roundabout being ruled out.

Policy PSD6: Health and Wellbeing

Natural England welcome this policy direction in terms of safeguarding health and amenity and supporting healthy communities, through the protection and provision of high-quality open spaces, including allotments and the promotion of active travel transport choices Further information on joining up Nature Recovery and Green Infrastructure (GI) with health priorities is set out below. If more cities and towns can be creatively designed and managed, with nature and communities at their heart, we will see nature and people thrive. This is something we set out to inspire at Natural England when developing the Green Infrastructure Framework and Design Guide. Natural England's People and Nature survey tells us that, for 82% of people 'being in nature makes me happy'. With the cost-of-living crisis, 'free' places like local parks and greenspace, have become even more important. The value of these spaces for the economy is estimated at £28.7 billion per year.

Green infrastructure in towns and cities provides places to relax, exercise, and spend time outdoors; cools urban areas; reduces flooding by allowing water to permeate the ground rather than overwhelm our drains; increases biodiversity and helps to reduce inequalities in access to nature. Options assessments for development sites and related green and blue Infrastructure within and between developments, green spaces and designated sites should; include soft transition and consider potential direct and indirect implications on sustainable use for example visitor pressure and transport / access options.

The natural environment affords the best 'natural' play opportunities for children while offering multifunctional nature-based solutions to climate change etc. These can be blended into wildlife rich green infrastructure and green open spaces that can act as destination play sites for local children (See best practice at Play England and Play Wales) that have proven health and wellbeing value.

Evidence for nature play and health:

Play, naturally: a review of children's natural play

Nature for health and wellbeing | The Wildlife Trusts

Good practice in social prescribing for mental health: the role of nature-based interventions - NECR228 (naturalengland.org.uk)

6 Climate and Renewable Energy

Whilst Natural England welcomes this group of policies we recommend including Policy CRE1: Climate Change and Policy CRE2: Renewable Energy within the Sustainable Environment (SE) group of policies to achieve a collective strategic focus on sustainable development and working toward achieving net zero alongside the SE policies relating to Pollution and Air Quality (SE1) and requirements for sustainable water management measures to reduce water use, natural flood protection features alongside the specific policies on Sustainable Drainage Systems (Policy SE4:)

Natural England continues to work with the LPAs across the region on understanding air pollution across area boundaries (see comments and links in objectives section.)

10 Infrastructure and Transport Policy.

Policy IN4 Cycleways, Bridleways and Public Rights of Way

Natural England welcomes the inclusion of this group of policies which seek to maintain and enhance the network of public rights of way that cross the borough. We note that the sustainability appraisal states that "the borough has relatively poor accessibility to the cycle network and is the lowest performing in the county for walking zones" (p 206) and that, "eight allocated sites (AB2, AB12, AB33, HD10, KL15, MD29, SP11(3) and TK10) do not currently have safe pedestrian or cycle access adjacent to the site, where site end users may reliant upon less sustainable modes of transport including private car use". (p 180)

11 Sustainable Environment

Natural England welcomes this group of policies and has the following policy specific comments:

Policy SE1: Pollution and Air Pollution.

Natural England welcomes this policy that notes that development proposals which are likely to result in detrimental impacts on air quality, will not be permitted unless it can be demonstrated that mitigation measures effectively address these impacts. (Comments on Air Quality are also provided on page 2 and 4 of this letter). The promotion of sustainable and active travel options, low-emission technologies and enhancement of green infrastructure to absorb air pollution is also noted. (see comment above re integrating the group: 6 Policies Climate and Renewable Energy).

Policy SE7: Biodiversity Net Gain

Natural England supports the inclusion of a policy on BNG. We suggest the following minor amendments to further improve the plan policy.

The BNG policy should make it clear that biodiversity net gain is not applied to irreplaceable habitats, and that any mitigation and/or compensation requirements for Habitats sites should be dealt with separately from biodiversity net gain provision. The policy should also set out how biodiversity net gain will be delivered and managed through the lifetime of the scheme and including monitoring requirements. This should include indicators to demonstrate the amount and type of gain provided through development. The indicators should be as specific as possible to help build an evidence base to take forward for future reviews of the plan, for example the total number and type of biodiversity units created, the number of developments achieving biodiversity net gains and a record of on-site and off-site contributions.

Natural England notes that the Sustainability Appraisal states "Despite the BNG provisions at the site level, there remains potential for a cumulative adverse impact on biodiversity at the landscape scale, owing to incremental habitat losses. As a result of development within the Local Plan undeveloped land will be lost which will include the loss of soil resources, habitats recognised as being of 'high' and 'very high' distinctiveness, and potentially ecological links between biodiversity assets, whereby the policies will not be expected to fully mitigate the fragmentation of the ecological network. Fragmentation of the

ecological network across Newcastle-under-Lyme is expected to be a long-term and permanent significant effect.” (p 162)

Policy SE8: Biodiversity and Geodiversity

Natural England supports the inclusion of this policy to protect the Boroughs internationally, nationally and locally designated sites important for their biodiversity value and to enhance the natural environment and work with partners toward Nature Recovery.

We particularly welcome the plans recognition of the value of “wider ecological networks” stating that “Other sites, both individually and collectively, that are not designated can also contribute towards protecting and enhancing diversity of species locally”.

Policy SE10: Landscape

Natural England welcomes this policy aimed at ensuring that “development proposals should protect and enhance the character, quality, beauty, and tranquillity of the Borough”. We note from the sustainability appraisal that “The entirety of the south of the borough is identified as being high in relation to landscape sensitivity, which starts in Audley in the north and covers the southern area of the borough, including Loggerheads and Almington.” We agree that “Alteration of the landscape character is a long-term and permanent significant effect... There is potential for a cumulative adverse effect on landscape character resulting from the development proposed in the Plan”. (p193) SA.

Natural England has divided England into 159 distinct natural areas called National Character Areas (NCAs) Newcastle-under-Lyme falls within two NCAs: Shropshire, Cheshire and Staffordshire Plain: gently rolling plains dominated by intensive dairy farming, beef and arable production; The Potteries and Churnet Valley: strong contrast between the industrialised landscape of the Potteries and the pastoral, strongly dissected hills and small plateaux that flank the Churnet and Dove valleys.

Natural agrees with the following statement in the sustainability appraisal: “Although various policies aim to ensure that development conserves and enhances landscape character and distinctiveness, when combined with Local Plan policies that support infrastructural improvements such as for transportation, water, and waste, this is likely to lead to a long-term and irreversible cumulative adverse effect on landscape character and tranquillity and associated indicators such as dark skies.” (p72)

Policy SE11: Trees, hedgerows, and woodland

Natural England welcomes this plans recognition that “Trees, hedgerows, and woodlands are integral to the distinctive character and ecological health of the Borough of Newcastle-under-Lyme, defining landscapes across both urban and rural settlements.” And that “This policy prioritises the protection of existing natural assets, seeking to not only preserve, but actively enhance, these valuable features wherever possible”.

Policy SE13: Soil and Agricultural Land

Natural England has concerns about the justification for the loss of BMV agricultural land within this plan.

“The proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land, A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of ‘best and most versatile’ (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services.” (page74) (SA)

Natural England notes that policy SE13 states: “Outside of sites allocated for development in the Local Plan, development proposals should avoid the loss of best and most versatile agricultural land (BMV) unless it can be demonstrated that the benefits of development clearly outweigh the loss of the land and every effort has been made to mitigate for the overall impact of the development on best and most versatile agricultural land.”

With regards to Soil and Agricultural Land Quality, Natural England advises that The Local Plan should give appropriate weight to the roles performed by the area’s soils. These should be valued as a finite multi-functional resource which underpin our wellbeing and prosperity. Decisions about development should take full account of the impact on soils, their intrinsic character and the sustainability of the many ecosystem services they deliver.

The 25 Year Environment Plan (25YEP) sets out government action to help the natural world regain and retain good health, including highlighting the need to:

- protect the best agricultural land
- put a value on natural capital, including healthy soil
- ensure all soils are managed sustainably by 2030
- restore and protect peatland

Soil is a finite resource which plays an essential role within sustainable ecosystems, performing an array of functions supporting a range of ecosystem services, including storage of carbon and water, the infiltration and transport of water, nutrient cycling, a buffer against pollution and provision of food. In order to safeguard soil resources as part of the overall sustainability of the development, it is important that the soil resource is able to retain as many of its important functions as possible. This can be achieved through careful soil management and appropriate, beneficial soil re-use, with consideration on how any adverse impacts on soils can be avoided or minimised.

The conservation and sustainable management of soils is reflected in the National Planning Policy Framework (NPPF), particularly in paragraph 180(a), 180(b) and 181 (footnote 62). When planning authorities are considering land use change, the permanency of the impact on soils is an important consideration. Particular care over planned changes to the most potentially productive soil is needed, for the ecosystem services it supports including its role in agriculture and food production.

Plan policies should therefore take account of the impact on land and soil resources and the wide range of vital functions (ecosystem services) they provide in line with paragraph 180(b) of the NPPF.

Soil Plan Policies

We strongly advise that at a minimum, the plan includes core policies for:

- the protection of best and most versatile (BMV) agricultural land (Grades 1, 2 and 3a in the Agricultural Land Classification (ALC)); and
- for the protection of and sustainable management of soils as a resource for the future.
- Areas of poorer quality land (ALC grades 3b, 4, 5) should be preferred to areas of higher quality land (grades 1, 2 and 3a).

- Recognise that development has an irreversible adverse impact on the finite national and local stock of BMV land.
- Conforms to NPPF and Planning Practice Guidance (Natural Environment and Minerals).
- Requires detailed ALC surveys to support plan allocations and for subsequent planning applications (for all sites larger than 5 ha). ALC surveys to support plan allocations and for subsequent planning applications for smaller sites (1 – 5 ha) would be welcomed.
- Recognise that development (soil sealing) has a major and usually irreversible adverse impact on soils.
- Soils of high environmental value (e.g., wetland and carbon stores such as peatland, low nutrient soils; or soils of high environmental value in the local context) should also be considered as part of ecological connectivity (Nature Recovery Network / Green Infrastructure).
- Requires soil handling and sustainable soil management strategies based on a detailed assessment of the soil resource based on best practice guidance (for all sites larger than 5 ha), ideally as part of the planning application process for major sites to help inform master-planning, and to safeguard the continued delivery of ecosystem services through careful soil management and appropriate, beneficial soil re-use. Soil handling and sustainable soil management strategies for smaller sites (1 – 5 ha) would be welcomed.
- Reference should be made to Defra's Construction Code of Practice for the Sustainable Use of Soils on Construction Sites
- In addition, for minerals and other temporary forms of development, plans for reinstatement, restoration and aftercare will be required (or for solar, a commitment to do so if the operational life is in decades); normally this will be return to the former land quality (ALC grade)
- Refers to soils issues within relevant policy areas such as renewable energy, climate change, green infrastructure and biodiversity net gain, flood schemes, managed realignment, development design and landscaping.

Policy SE14: Green and Blue Infrastructure

Natural England supports this policy. Well-designed cross boundary multi-functional green infrastructure contributes greatly to a number of benefits both for people and nature. Your green and blue (for example cross boundary canals) infrastructure should dovetail with your biodiversity net gain strategies to maximise benefits.

We would advise that the Local Authority also considers Natural England's Green Infrastructure Framework of Principles and Standards for England. As stated in our document, "Green infrastructure (GI) is part of the solution to many of the challenges we face; health inequalities, biodiversity crisis, climate change, nature recovery and levelling up. The GI framework supports local authorities, developers, parks and greenspace managers and local communities to enhance and create new good quality green infrastructure."

We would also suggest reference is made to the emerging Local Nature Recovery Strategy. Preparing Local Nature Recovery Strategies (LNRS) is a statutory requirement under the Environment Act 2021. LNRS are designed to work closely alongside other measures in the Act including supporting the delivery of mandatory biodiversity net gain and providing a focus for a strengthened duty on all public authorities to conserve and enhance biodiversity. They will also underpin the Nature Recovery Network, alongside work to develop partnerships and to integrate nature into our incentives and land management activities. Each LNRS will be specific and tailored to its area. The responsible authorities and people involved in preparing a strategy can choose how they want it to look, but every strategy must contain:

1. A local habitat map.
2. A written statement of biodiversity priorities. Statutory guidance for responsible authorities explains in detail what these 2 things should contain. Together they set out what the strategy is aiming to achieve and what practical actions will help do this. They will also propose where actions could be carried out for best effect and to connect and expand existing areas that are important for nature. We expect local nature recovery strategies to propose actions such as the:
 - creation of wetlands
 - restoration of peatlands
 - planting of trees and hedgerows
 - more sustainable management of existing woodlands and other habitats like grasslands
 These actions are intended to help nature itself and to also help improve the wider natural environment.

Whilst the Staffordshire Local Nature Recovery Strategy (LNRS) is currently a work in progress, Newcastle-under-Lyme Borough Council Regulation 19 pre-submission should still be consistent with NPPF Paragraph 185 in terms of setting out local habitat priorities and identifying potential measures by which they can be achieved, alongside mapping areas that could become of particular importance in the future.

Natural England encourages Newcastle Under Lyme Borough Council via their Local Nature Recovery Strategy to actively develop cross border cooperation between other Local Planning Authorities (LPA) (for example Staffordshire Moorlands Borough Council) in coordinating land development projects that impact on local biodiversity sites to ensure that local biodiversity corridors are maintained and link up other local important sites for nature conservation.

This is a good way of achieving nature recovery and preparing to deliver the LNRS alongside enabling the local authority and its partners to identify, map and safeguard site areas, including green and blue infrastructure opportunities and interlinkages.

Habitats Regulations Assessment

Natural England notes that this Local Plan is not directly connected with or necessary to the management of any European site. A screening assessment has been undertaken which identified a number of Likely Significant Effects (LSE) associated with the Local Plan. Taking no account of mitigation measures, the HRA concludes that Local Plan has the potential to affect the following European sites:

- Cannock Chase SAC
- Humber Estuary SAC, SPA and Ramsar
- Mersey Estuary SPA and Ramsar
- Midland Meres and Mosses Phase 1 Ramsar
- Midland Meres and Mosses Phase 2 Ramsar
- Pasturefields Salt Marsh SAC
- Peak District Dales SAC

-Peak District Moors (South Pennine Moors Phase 1) SPA

-Severn Estuary SAC, SPA and Ramsar

-South Pennine Moors SAC

-West Midland Mosses SAC

We welcome that your HRA includes the Humber Estuary SAC, SPA and Ramsar site which is hydrologically connected to the river Trent. If the Local Plan resulted in significant water pollution, this European site could be affected and has therefore been screened in, in relation to water quality only, on a precautionary basis. Natural England however notes that the Sustainability Appraisal identifies "A long-term cumulative adverse effect ...in terms of water quality" (p 148) as a result of the plan, this is not fully reflected in the current HRA.

Natural England note that the Sustainability Appraisal states: that "the entirety of the borough falls within IRZs of one or more SSSIs. All five SSSIs within the borough are in 'unfavourable' condition: Burnt Wood SSSI, Maer Pool SSSI, Black Firs and Cranberry Bog SSSI (Midlands Meres and Mosses Phase 2 Ramsar), Betley Mere SSSI (Midlands Meres and Mosses Phase 1 Ramsar) and Metallic Tileries, Parkhouse SSSI."

Natural England are also aware of the extensive network of ancient woodland spread across the borough, totalling 707.60 hectares, as well as a large quantity of priority habitats, totalling 1,791 hectares.

Natural England agree that the following designated sites and related priority habitats in adjoining LPA areas may also be affected by development through several pathways, including fragmentation, recreational pressure and/or pollution (including Air and Water Quality). Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI, Wybunbury Moss SAC SSSI, Tyrley Canal Cutting SSSI, King's and Hargreaves Wood SSSI, Gannister Quarry SSSI, Roe Park Woods SSSI, Wetley Moore SSSI, Churnet Valley SSSI, Hatherton Flush SSSI, Sounds Heath SSSI, Ford Green Redebed SSSI, and Cop Mere SSSI.

It is noted that the Appropriate Assessment stage of the HRA assessed potential impacts by topic;

-Impacts on designated features affected by a possible deterioration in air quality

-Impacts on water quality and quantity associated with increased levels of built development.

-Impacts associated with increased recreational pressure at European sites; and

-Consideration of impacts at associated functionally linked land.

Natural England notes that the HRA also factored the following into the assessment process "the protective framework provided by the Local Plan and existing protection measures set out in high level strategic policy and existing planning policy frameworks that serve to help overcome the identified potential adverse effects" and that "taking into consideration these factors, it is concluded that the Local Plan would have no adverse impact on site integrity at any European site, either alone or in-combination.

Natural England disagree agree with this conclusion that for those Habitats sites in the area of search with features sensitive to air pollution, adverse effects on their integrity, alone or in-combination, can be ruled out for the reasons set out at the beginning of this letter on page 2 and repeated in part below:

Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot currently be ruled out at the following internationally designated sites:

•Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI

•Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI

Natural England are currently in discussion with a number of the Staffordshire and West Midlands LPA's with regards to the cumulative impacts of air quality. We advise that further work is required to inform the HRA. The HRA should demonstrate that there are no adverse effects on integrity of Habitat sites as a result of this Local Plan, alone and in combination with other plans and projects. With regards to allocated sites, it is unclear whether the individual sites put forward in the Local Plan have been assessed through the Habitat Regulations Assessment process and how mitigation will be applied here.

Sustainability Appraisal

Natural England has reviewed the Sustainability Appraisal (SA) and included comments taken from the document throughout our response.

The SA is a comprehensive document which should be reviewed in strengthening the HRA, particularly with regards to residual adverse effects that would be expected to remain in terms of wastewater following the implementation of the Local Plan policies. (p 141) Natural England notes that "Increased pressure on wastewater treatment has the potential to be a long term and potentially permanent significant effect" (p 142)

The SA recognises the local distinctiveness of the plan area;

"The Borough itself is largely rural in nature and supports some high-quality agricultural land, but is more heavily built up towards the north east surrounding Stoke-on-Trent. (p 8)

Newcastle-under-Lyme has a strong rural character with a high-quality landscape and countryside, with some areas identified as being sensitive to change as a result of new development. (p 19)

Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms make up the key features of some of these Landscape Character Types." (p 20)

Sets out the area specific barriers to achieving sustainable growth;

"Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)

Loss of tranquillity The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution.(p 68)

"The pre-mitigation SA assessments identified negative impacts in relation to air quality due to the proximity of sites to major roads, landscape character due to the location of sites within areas of high landscape sensitivity, close proximity to the PRoW network and potential for coalescence and urban sprawl, habitat sites, priority habitats, habitat distinctiveness, loss of undeveloped land, 'best and most versatile' (BMV) agricultural land, coinciding with mineral safeguarding areas (MSAs) and areas of surface water flood risk (SWFR); and access to healthcare facilities, schools, the local cycle network and railway network. (p 40)

	<p>There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work. (p 21)</p> <p>Trends in transport choice are unlikely to change significantly, and private car use would continue to increase as the selected method of transport to work, with potential adverse impacts on air quality in the borough.”(p 23)</p> <p>Considers the local and cumulative significance of soil loss alongside the ecological implications:</p> <p>“Loss of soil resources, BMV land and ecosystem services The proposed allocations would cumulatively result in the loss of up to approximately 342ha of previously undeveloped land, including up to 263ha of BMV agricultural land. The proposed development would be expected to reduce the ability of the local soil biome to effectively provide ecosystem services, to some extent. Additionally, the loss of permeable soils could potentially increase the risk of flooding and result in a loss of biodiversity across the Plan area. Loss of soil can also result in an increase in soil erosion and have subsequent impacts on agricultural yield.(p 68) The majority of the borough is ALC Grade 3 soil, with areas of ALC Grade 2 scattered across the borough. Grade 2 and potentially Grade 3 represents some of the borough’s BMV agricultural land and should be conserved wherever possible (p 21)</p> <p>A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of BMV land to be lost as a result of the development proposed in the Local Plan.” (p 59)’</p> <p>Other Advice</p> <p>Further general advice is provided within Natural England Advice Note – Local Plans February 2024, attached at (Appendix A) - see attachment</p>

Consultee Company / Organisation	Historic England
Consultee Position	Historic Environment Planning Adviser
Consultee Family Name	Taylerson
Consultee Given Name	Kezia
Q4 Part of document	Policy
Q4 Policy	SE9
Q6 Details	<p>We welcome the inclusion of a specific policy for the historic environment.</p> <p>Clause 1, a) considers a wide range of issues and may be more readable if the issues are broken down into bullet points, so that it is clear how each of the issues need to be considered.</p> <p>Links to the specific urban and townscape heritage characterisation studies would be useful.</p> <p>e) we support the reference to Conservation Area Appraisals and Management Plans. A link to these would also be beneficial.</p> <p>Clause 2. In the first instance the policy should set out that where a proposal will cause harm to a heritage asset, this should be resisted. The National Planning Policy Framework (NPPF) is clear that heritage assets are an 'irreplaceable resource' and any harm should be 'wholly/ exceptional' (NPPF paragraphs 195/206). The policy should set out a hierarchical approach on how harm will be resisted, and all opportunities sought to avoid and mitigate harm, enhancement measures sought and only after all other issues have been exhausted would the issues of public benefit tests and clear and convincing justification apply.</p> <p>Consider the hierarchy within this policy between clause a and b. If clause a is to be resisted, then it stands that clause b should also be resisted.</p> <p>c) Less than substantial harm may still amount to considerable harm and reason for planning applications to be refused. It may be that the public benefit tests apply but in the first instance development which causes less than substantial harm should be resisted and more suitable locations sought.</p> <p>g) we support the inclusion of the two bullet points in this clause and consider both are essential. No demolition should occur before it has been confirmed that the development will go ahead.</p> <p>Clause 3, b) Proposals should include in their HA where harm may occur so that the Local Authority can make an informed decision. The HA should further include avoidance/mitigation measures where they are possible. Where harm cannot be avoided then applications should be refused, except in exceptional circumstances in line with the NPPF.</p> <p>Clause 4, b) Consider removing from the Plan. Enabling development is development that is contrary to policy and as such does not sit comfortably within a policy. It is beneficial to have a section on heritage at risk and the Plan to provide a positive strategy for these assets. However, an enabling development strategy may not be the best approach and all viable options should be considered in the first instance to ensure harm will not occur to these heritage assets.</p> <p>Clause 5, this information would be beneficial in the Shopfront and Advertisement Policy. Inappropriate shopfronts, signage, lighting and shutters should be refused.</p> <p>There is no policy clause included within the Plan to assess archaeological features, including designated archaeology, non designated archaeology and non designated archaeology that has the potential to be of national importance. The policy should include a clause for archaeology and further set out details about the requirements for archaeological assessment including desk based and field evaluation, to be carried out by an appropriate professional.</p> <p>Does the Council have a local list of non designated heritage assets? If so this should be incorporated in the policy text.</p> <p>It would be beneficial for the policy to set out the need to assess setting, where it contributes to significance and how development proposals need to respond to this, including details on views analysis.</p>

Q6 Details	<p>Please see supporting representation by Knights on behalf of Aspire.</p> <p>Policy SE9 appears to contain a lot of duplicated policy to national policy, in particular criteria 2 and its sub-paragraphs relating to the assessment of harm to a designated heritage asset. It is considered that parts 2 and 3 of this policy can be re-worded to be more concise.</p> <p>20.2 With regard to non-designated heritage assets, Aspire consider that more clarity could be given in terms of archaeology.</p> <p>20.3 In a couple of cases, Aspire have been subject to incurring additional costs on sites where buildings have previously stood. One was a former farmhouse that had already been built over and the other was a site that contained old terraced homes that had also been subsequently built over, and Aspire were ask to conduct archaeological investigations prior to obtaining planning permission which resulted in additional cost and risk in terms of delivery timescales. In circumstances where a development site comprises a redevelopment site that has already been built on that is likely to have destroyed historical remains, then the policy should set out that in these circumstances, archaeological surveys and investigations should note be required</p>

Q4 Part of document	Policy
Q4 Policy	SE10
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	The policy recognises the importance of landscape character and sets out requirements which development proposals must address. This policy is supported. Part 2 of the Policy sets out when a Landscape and Visual impact Assessment (LVIA) is required. However, there is little detail on how an LVIA should be prepared. It is usually recommended that it should be prepared in accordance with the Landscape Institute's 'Guidelines for Landscape and Visual Impact Assessment' 3rd Edition (GLVIA3) 2013, or subsequent updates, to ensure suitable methodology is used to address all relevant landscape issues.
Q7 Modification	It is suggested that paragraph 11.58 is amended to include the following as a final sentence – 'Where a LVIA is to be completed it should be prepared in accordance with the Landscape Institute's 'Guidelines for Landscape and Visual Impact Assessment' 3rd Edition (GLVIA3) 2013, or subsequent updates.'
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)

Q6 Details

Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.

Natural England welcomes the opportunity to comment at this stage of the Local Plan and particularly supports the inclusion of policies on green and blue infrastructure, biodiversity, health and wellbeing, trees hedgerows and woodlands. We have reviewed the consultation documents and provide comments that relate to the soundness of the Local Plan and that are most relevant to our interest in the Natural Environment.

Natural England has adopted a robust precautionary approach within this plan response. Whilst we welcome the content of the Local Plan, Natural England advises that the plan is currently at risk of being unsound and/or not legally compliant due to the potential impacts on air quality in relation to internationally designated nature conservation sites and the justification for the potential loss of 263ha best and most versatile (BMV) agricultural land. Further detail is provided below.

Natural England have also provided other advice within this submission relating to further improvements that could strengthen plan policies and specific strategic site options and related mitigation.

Do you consider that the Newcastle Under Lyme Plan is Sound and Legally Compliant?

Natural England notes that the plan is at the pre-submission stage and as such your authority is seeking confirmation on the soundness of the plan. Having reviewed the plan and supporting documents, Natural England considers the pre-submission plan in its current form is not sound or legally compliant, this is due to a lack of evidence with regards to air quality and the cumulative loss of BMV agricultural land both in a local and national context.

Air quality

Natural England notes that the Sustainability Appraisal states that "Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)

As Natural England understands it the current evidence base used to conduct the HRA cannot rule out adverse impacts on designated sites. The HRA states at page 22 3.4.16 "At the time of writing, the traffic modelling run for the final suite of Regulation 19 allocations had not been undertaken." Appendix A lists the local plans for neighbouring LPA's concluding that 'in combination' with plans and projects (approved and those yet to be implemented) they may trigger in-combination effects on European sites as a result of air quality, particularly as we understand it in the key commuting areas.

Natural England notes that Annual Average Daily Traffic (AADT) data and traffic modelling in the Strategic Transport Assessment (STA) concludes a potential reduction in travel and related air pollution at allocated sites as a result of a predicted preference in the use of public transport. We are surprised by this projected decrease in both traffic and related air pollution, particularly as one employment allocation site includes a 200-bay lorry park and increased congestion is predicted at junction 16 of the M6 where it joins the A500 in a rural location with no existing rural transport provision. The Sustainability Appraisal also notes that: "There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work". (p 206)

Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot therefore currently be ruled out at the following internationally designated sites:

- Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI
- Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI

The HRA outlines that the main source of ammonia emissions is agricultural practice, and that material increases in NH3 emissions are unlikely to be associated with the proposed local plan. At Black Firs and Cranberry Bog and Oakhanger Moss, any increase in nitrogen deposition has the potential to exacerbate pollution levels and thereby undermine the reasons for notification of these sites as a Ramsar.

Ammonia can be emitted from vehicle exhaust emissions as a by-product of the catalytic conversion process designed to reduce emissions of nitrogen oxide. As traffic composition transitions toward more petrol and electric cars (i.e., fewer diesel cars on the road), catalytic converters may aid in reducing NOx emissions but result in increased ammonia emissions. Ammonia emissions from road traffic therefore could make a significant difference to nitrogen deposition close to roads.

Natural England therefore advise that ammonia sourced from traffic emissions should be included for assessment within the local plan HRA, as the impact from this source on designated sites is currently unclear. For further information please see this report from Air Quality Consultants (AQC) that looks at ammonia emissions from roads for assessing impacts on nitrogen-sensitive habitats. Whilst we are aware that the current CREAM model created by AQC used to assess ammonia emissions from road traffic has not been peer reviewed, at this time it has been recognised as a Best Available Tool and we deem it appropriate to be used where any caveats associated with this model are also considered within the assessment. An assessment based on the best available approach is necessary. The next stage of assessment can then consider uncertainties in the model and site specifics to decide if mitigation needs to be considered.

Further work is therefore required to inform the Habitat Regulations Assessment. Natural England will engage with the Local Planning Authority in order to produce a Statement of Common Ground (SoCG) on this matter.

'Best and most versatile' (BMV) agricultural land

Natural England notes that "the proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land. A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of 'best and most versatile' (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services". (page 74 Sustainability Appraisal).

Under the Town and Country Planning (Development Management Procedure) (England) Order 2015 (DMPO) Natural England is a statutory consultee on development that would lead to the loss of over 20ha of 'best and most versatile' (BMV) agricultural land (land graded as 1, 2 and 3a in the Agricultural Land Classification (ALC) system, where this is not in accordance with an approved plan.

Natural England would like to understand how the local planning authority have produced the evidence base and options assessment which informs the strategic site allocations.

Natural England will engage with the local planning authority to consider the cumulative impacts of the loss of BMV both in the local and national context and the challenges related to environmental impact, infrastructure, and the requirement to deliver a balance between the need for development and the potential urbanisation of the countryside including the potential mitigation measures that need to be considered.

NPPF paragraph 174e states:

Planning policies and decisions should contribute to and enhance the natural and local environment by: ... preventing new and existing development from contributing to, being put at unacceptable risk from, or being adversely affected by, unacceptable levels of soil, air, water or noise pollution or land instability. Development should, wherever possible, help to improve local environmental conditions such as air and water quality, taking into account relevant information such as river basin management plans.

Natural England provides guidance to inform further assessment of air quality and the loss of BMV agricultural land in our response to the content of the plans Strategic Policies as set out below.

Do you consider that the Newcastle-under-Lyme Borough Council Regulation 19 pre-submission draft Plan is compliant with Duty to Co-operate?

In terms of working with neighbouring authorities, Natural England notes that initially the plan was intended to be produced jointly with the City of Stoke-on-Trent, the plan does not however currently present an evidence base that demonstrates that a collaborative approach has been adopted and that the Duty to Co-operate has been fully complied with.

The Sustainability Appraisal states that: "Overall, there is potential for a cumulative adverse effect on biodiversity, owing to the fragmentation of the ecological network... Where a large amount of development is located on previously undeveloped land surrounding rural settlements, this is likely to produce a long-term irreversible negative cumulative effect regarding the urbanisation of the countryside" (p 71)

Natural England would therefore like to further understand how the areas identified to meet the City of Stoke-on-Trent's unmet employment needs are justified and appropriate and whether meeting some of the employment needs of the City of Stoke-on-Trent has led to the need to release or safeguard more land from the Green Belt in Newcastle under Lyme. If this is the case, what are the exceptional circumstances for doing this and how does this align with the allocated sites options assessment?

Recreational Pressure

In terms of the South Pennine Moors SAC and recreational impacts, the Local Plan does comply with the Duty to Co-operate. Natural England recommends that reference is made to the 'Recreation use of the South Pennine Moors and implications for strategic housing growth' report by Footprint Ecology Ref 778 date 27th March 2024. This report should both inform the evidence base and ensure that policies relating to open space/green infrastructure are as rigorous and robust as possible.

The report concludes that more data/evidence is required to determine if recreational use is causing an impact across to the South Pennine Moors and to get a better understanding of the scale and location of any impact. Natural England notes that the report records 7,000 additional dwellings in

Newcastle-under-Lyme over the plan period rather than the 8,000 included in this regulation 19 submission. Newcastle-under-Lyme Borough Council should therefore continue to work with local authority and other partners to ensure coordinated and continued cross boundary action.

Other matters

Natural England has specific concerns related to allocations in the Green Belt. Notwithstanding that, Natural England considers most of the policies within the plan to be sound and deliverable. The plan is consistent with national policy with regard to those policies that are within Natural England's remit. Further information on strengthening policies including but not limited to Soils and best and most versatile (BMV) agricultural land, preventing loss and fragmentation of habitats and supporting green infrastructure are provided below.

Vision and Strategy

Natural England notes that the Plan's vision and emerging development strategy set out a framework for the future development of Newcastle-under-Lyme and addresses the needs in relation to housing, the economy, community facilities and infrastructure, including specific reference to a proposed employment site allocation.

This vision and the related objectives should also set out the environmental ambition for the plan area and form the basis for nature recovery and enhancement, supported by the policies and proposals in the plan.

Natural England advises that the vision should also incorporate more on the local ecology and landscape features which underpin local distinctiveness such as the "strong rural character with long open views across the surrounding rural landscape, towards more distant hills often framed by trees" (p 69) Part 3 Site Specific Landscape & Visual Appraisal. "Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms" (p 187) Sustainability Appraisal.

Strategic Objectives

Natural England welcome strategic objective SO-4 relating to carbon reduction and climate change, however we do not feel that this group of thirteen strategic objectives value or reflect the Boroughs whole ecology and landscape including but not limited to the protection of soil and best and most versatile (BMV) agricultural land. We would suggest that additional objectives are added relating to: air quality, water quality and quantity, soils and landscape.

Natural England would also like to see stronger reference to the Nature Recovery Network which is one of the specific aims of the Environment Act 2021 and will underpin the approach to the enhancement of nature.

Air quality is a major threat to habitats and species. Many ecological sites are exceeding their critical loads and levels for ammonia, nitrogen deposition and acid deposition. The strengthening of the policies and the rationale behind site allocations within this plan will ensure that new development does not contribute to the further deterioration of habitats and species due to air pollution. Further advice on strengthening the plans evidence base with regards to air quality is provided in the links below:

 Strategic Policies
 5 Planning for Sustainable Development
 Policy PSD5: Green Belt
 Natural England notes that this policy “aims to protect the Borough’s essential open spaces, prioritise the use of brownfield land, and guide potential future development in accordance with the National Planning Policy Framework (NPPF)”.
 Natural England however notes that amendments to the Green Belt boundary are proposed in the form of 14 site allocations to accommodate both the growth requirements of the borough and the employment requirements of wider Stoke-on-Trent conurbation. Natural England’s has some site-specific concerns about the potential impacts of some of the green belt sites selected on the natural environment with regards to habitat loss, fragmentation and justification for the loss of BMV agricultural land.
 We note the LPA’s intention to release and compensate for the loss of green belt and prioritise the use of suitable brownfield land. However, the site allocations in the green belt would result in the potential loss of 263ha of Best and Most Versatile (BMV) agricultural land. The council should satisfy itself that it is making a balanced decision for sustainable development, the Sustainability Appraisal concludes that: “The Green Belt Study assessed land parcels against the contribution they make to the five purposes of the Green Belt on a four-point scale...Three allocated sites (AB12, AB33 and TK10) are located in areas which make a ‘strong’ overall contribution to the purposes of the Green Belt where “the site contributes to the purpose in a strong and undeniable way, whereby removal of the site from the Green Belt will detrimentally undermine this purpose” (p101)
 “Site allocations on previously undeveloped land or that would result in a net loss of GI / vegetation could result in a reduced capability of the environment to provide ecosystem services including carbon storage, the storage and filtration of water including natural flood protection, as well as reduced availability and connectivity of habitats within the green network enabling movement of species. (p 165)
 Strategic Site Allocations
 Natural England suggests that the HRA should include a “requirement for project-level/site specific HRA’s and targeted ecological surveys”.
 The Sustainability Appraisal concludes that:
 “Some 12 allocated sites partially coincide with priority habitats, where 3.43% of the total site allocation areas coinciding with priority habitats which include deciduous woodland, good quality semi-improved grassland and Site BL18 coincides with lowland fens which is a very high distinctiveness habitat in the BNG handbook (2024). These habitats can support a range of species of principal importance. Allocated Site KL15 is adjacent to ‘The Butts and Hands Wood’ ancient woodland, with a further 20 allocated sites located in close proximity to ancient woodlands. P158
 “Six allocated sites (Sites CT20, HD10, KL13, RC8, SP11(2) and SP23) are located within areas of ‘high’ or ‘very high’ habitat distinctiveness that provide high biodiversity value. Whilst in many cases these habitats can be conserved alongside development, it is likely that in some cases fragmentation or loss of habitats and connections between habitats will occur”
 “The majority of allocated sites are located on previously undeveloped land, which would result in the loss of soil resources and the ecosystem services they provide. (p 159) The development of new buildings on previously undeveloped land would be expected to result in a direct loss of soil resource, with little or no scope for mitigation” (p 216)
 “The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution. (p 68)
 For all sites, Natural England advises that the hydrological catchment within which the site sits is taken into consideration, with regards to the potential impact of the developments proposed on the adjoining watercourses and wider catchments, including but not limited to surface water runoff (including during construction), existing and required capacity of Waste Water Treatment Works (WwTW) and water supply and flooding issues. Each site will require site specific investigation, and the council should understand the impact of all the sites put forward individually and in combination.
 Natural England has specific concerns and or requires further information about the following ‘Strategic Site Allocations’ which could potentially impact on designated sites as a result of air and water quality and/or lead to the loss and / or fragmentation of priority habitats and BMV agricultural land:
 BL18 – Clough Hall Playing Fields, Talke
 Natural England would like to further understand this larger residential development proposal with regards to the potential impacts on the lowland fen habitat.
 KL13 & KL15 – Land South of A525 between Keele University and Newcastle
 Natural England notes this proposal for Employment development is immediately adjacent to ancient woodland priority habitat.
 HM28 – Land off East Lawns, Betley

Existing and projected water quality issues at Betley Mere will need to be considered with regards to this allocation.

LW53 – Loggerheads

Natural England notes this residential housing development proposal is located within the IRZ of protected sites (Burnt Wood SSSI) which states that development proposals of 50 or more homes outside existing settlements/urban areas in these zones should be consulted upon with Natural England.

SP11 – Former Keele Municipal Golf Course

This Larger residential development is categorised in the Landscape Assessment as having a Major adverse impact on the local Landscape.

AB2 – Land Adjoining Corner of A500 and M6 Southbound

Natural England notes this proposed employment allocation released entirely from the green belt, which comprises 70ha of grade 2 BMV agricultural land. The Landscape study concludes that the: "Proposed development scenario is likely to have a major adverse effect on the SA objective with no satisfactory mitigation possible" (p 15). With regards to potential Air Quality impacts on protected sites Natural England notes from the options analysis that "The loss or potential moving of a layby to enable access to the site could be problematic indicating potential issues with site access and traffic flow. An increase in HGV and personal vehicle traffic is anticipated, which could lead to potential congestion and air pollution in the area". Natural England would therefore also like to understand the evidence base further including the rationale for an alternative site TK30 @ Talke A34 / A500 roundabout being ruled out.

Policy PSD6: Health and Wellbeing

Natural England welcome this policy direction in terms of safeguarding health and amenity and supporting healthy communities, through the protection and provision of high-quality open spaces, including allotments and the promotion of active travel transport choices. Further information on joining up Nature Recovery and Green Infrastructure (GI) with health priorities is set out below. If more cities and towns can be creatively designed and managed, with nature and communities at their heart, we will see nature and people thrive. This is something we set out to inspire at Natural England when developing the Green Infrastructure Framework and Design Guide. Natural England's People and Nature survey tells us that, for 82% of people 'being in nature makes me happy'. With the cost-of-living crisis, 'free' places like local parks and greenspace, have become even more important. The value of these spaces for the economy is estimated at £28.7 billion per year.

Green infrastructure in towns and cities provides places to relax, exercise, and spend time outdoors; cools urban areas; reduces flooding by allowing water to permeate the ground rather than overwhelm our drains; increases biodiversity and helps to reduce inequalities in access to nature. Options assessments for development sites and related green and blue Infrastructure within and between developments, green spaces and designated sites should; include soft transition and consider potential direct and indirect implications on sustainable use for example visitor pressure and transport / access options.

The natural environment affords the best 'natural' play opportunities for children while offering multifunctional nature-based solutions to climate change etc. These can be blended into wildlife rich green infrastructure and green open spaces that can act as destination play sites for local children (See best practice at Play England and Play Wales) that have proven health and wellbeing value.

Evidence for nature play and health:

Play, naturally: a review of children's natural play

Nature for health and wellbeing | The Wildlife Trusts

Good practice in social prescribing for mental health: the role of nature-based interventions - NECR228 (naturalengland.org.uk)

6 Climate and Renewable Energy

Whilst Natural England welcomes this group of policies we recommend including Policy CRE1: Climate Change and Policy CRE2: Renewable Energy within the Sustainable Environment (SE) group of policies to achieve a collective strategic focus on sustainable development and working toward achieving net zero alongside the SE policies relating to Pollution and Air Quality (SE1) and requirements for sustainable water management measures to reduce water use, natural flood protection features alongside the specific policies on Sustainable Drainage Systems (Policy SE4:)

Natural England continues to work with the LPAs across the region on understanding air pollution across area boundaries (see comments and links in objectives section.)

10 Infrastructure and Transport Policy.

Policy IN4 Cycleways, Bridleways and Public Rights of Way

Natural England welcomes the inclusion of this group of policies which seek to maintain and enhance the network of public rights of way that cross the borough. We note that the sustainability appraisal states that "the borough has relatively poor accessibility to the cycle network and is the lowest performing in the county for walking zones" (p 206) and that, "eight allocated sites (AB2, AB12, AB33, HD10, KL15, MD29, SP11(3) and TK10) do not currently have safe pedestrian or cycle access adjacent to the site, where site end users may be reliant upon less sustainable modes of transport including private car use". (p 180)

11 Sustainable Environment

Natural England welcomes this group of policies and has the following policy specific comments:

Policy SE1: Pollution and Air Pollution.

Natural England welcomes this policy that notes that development proposals which are likely to result in detrimental impacts on air quality, will not be permitted unless it can be demonstrated that mitigation measures effectively address these impacts. (Comments on Air Quality are also provided on page 2 and 4 of this letter). The promotion of sustainable and active travel options, low-emission technologies and enhancement of green infrastructure to absorb air pollution is also noted. (see comment above re integrating the group: 6 Policies Climate and Renewable Energy).

Policy SE7: Biodiversity Net Gain

Natural England supports the inclusion of a policy on BNG. We suggest the following minor amendments to further improve the plan policy.

The BNG policy should make it clear that biodiversity net gain is not applied to irreplaceable habitats, and that any mitigation and/or compensation requirements for Habitats sites should be dealt with separately

from biodiversity net gain provision. The policy should also set out how biodiversity net gain will be delivered and managed through the lifetime of the scheme and including monitoring requirements. This should include indicators to demonstrate the amount and type of gain provided through development. The indicators should be as specific as possible to help build an evidence base to take forward for future reviews of the plan, for example the total number and type of biodiversity units created, the number of developments achieving biodiversity net gains and a record of on-site and off-site contributions. Natural England notes that the Sustainability Appraisal states "Despite the BNG provisions at the site level, there remains potential for a cumulative adverse impact on biodiversity at the landscape scale, owing to incremental habitat losses. As a result of development within the Local Plan undeveloped land will be lost which will include the loss of soil resources, habitats recognised as being of 'high' and 'very high' distinctiveness, and potentially ecological links between biodiversity assets, whereby the policies will not be expected to fully mitigate the fragmentation of the ecological network. Fragmentation of the ecological network across Newcastle-under-Lyme is expected to be a long-term and permanent significant effect." (p 162)

Policy SE8: Biodiversity and Geodiversity

Natural England supports the inclusion of this policy to protect the Boroughs internationally, nationally and locally designated sites important for their biodiversity value and to enhance the natural environment and work with partners toward Nature Recovery.

We particularly welcome the plans recognition of the value of "wider ecological networks" stating that "Other sites, both individually and collectively, that are not designated can also contribute towards protecting and enhancing diversity of species locally".

Policy SE10: Landscape

Natural England welcomes this policy aimed at ensuring that "development proposals should protect and enhance the character, quality, beauty, and tranquillity of the Borough". We note from the sustainability appraisal that "The entirety of the south of the borough is identified as being high in relation to landscape sensitivity, which starts in Audley in the north and covers the southern area of the borough, including Loggerheads and Almington." We agree that "Alteration of the landscape character is a long-term and permanent significant effect... There is potential for a cumulative adverse effect on landscape character resulting from the development proposed in the Plan". (p193) SA.

Natural England has divided England into 159 distinct natural areas called National Character Areas (NCAs) Newcastle-under-Lyme falls within two NCAs: Shropshire, Cheshire and Staffordshire Plain: gently rolling plains dominated by intensive dairy farming, beef and arable production; The Potteries and Churnet Valley: strong contrast between the industrialised landscape of the Potteries and the pastoral, strongly dissected hills and small plateaux that flank the Churnet and Dove valleys.

Natural agrees with the following statement in the sustainability appraisal: "Although various policies aim to ensure that development conserves and enhances landscape character and distinctiveness, when combined with Local Plan policies that support infrastructural improvements such as for transportation, water, and waste, this is likely to lead to a long-term and irreversible cumulative adverse effect on landscape character and tranquillity and associated indicators such as dark skies." (p72)

Policy SE11: Trees, hedgerows, and woodland

Natural England welcomes this plans recognition that "Trees, hedgerows, and woodlands are integral to the distinctive character and ecological health of the Borough of Newcastle-under-Lyme, defining landscapes across both urban and rural settlements." And that "This policy prioritises the protection of existing natural assets, seeking to not only preserve, but actively enhance, these valuable features wherever possible".

Policy SE13: Soil and Agricultural Land

Natural England has concerns about the justification for the loss of BMV agricultural land within this plan. "The proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land, A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of 'best and most versatile' (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services." (page74) (SA)

Natural England notes that policy SE13 states: "Outside of sites allocated for development in the Local Plan, development proposals should avoid the loss of best and most versatile agricultural land (BMV) unless it can be demonstrated that the benefits of development clearly outweigh the loss of the land and every effort has been made to mitigate for the overall impact of the development on best and most versatile agricultural land."

With regards to Soil and Agricultural Land Quality, Natural England advises that The Local Plan should give appropriate weight to the roles performed by the area's soils. These should be valued as a finite multi-functional resource which underpin our wellbeing and prosperity. Decisions about development should take full account of the impact on soils, their intrinsic character and the sustainability of the many ecosystem services they deliver.

The 25 Year Environment Plan (25YEP) sets out government action to help the natural world regain and retain good health, including highlighting the need to:

- protect the best agricultural land
- put a value on natural capital, including healthy soil
- ensure all soils are managed sustainably by 2030
- restore and protect peatland

Soil is a finite resource which plays an essential role within sustainable ecosystems, performing an array of functions supporting a range of ecosystem services, including storage of carbon and water, the infiltration and transport of water, nutrient cycling, a buffer against pollution and provision of food. In order to safeguard soil resources as part of the overall sustainability of the development, it is important that the soil resource is able to retain as many of its important functions as possible. This can be achieved through careful soil management and appropriate, beneficial soil re-use, with consideration on how any adverse impacts on soils can be avoided or minimised.

The conservation and sustainable management of soils is reflected in the National Planning Policy Framework (NPPF), particularly in paragraph 180(a), 180(b) and 181 (footnote 62). When planning authorities are considering land use change, the permanency of the impact on soils is an important

consideration. Particular care over planned changes to the most potentially productive soil is needed, for the ecosystem services it supports including its role in agriculture and food production.

Plan policies should therefore take account of the impact on land and soil resources and the wide range of vital functions (ecosystem services) they provide in line with paragraph 180(b) of the NPPF.

Soil Plan Policies

We strongly advise that at a minimum, the plan includes core policies for:

- the protection of best and most versatile (BMV) agricultural land (Grades 1, 2 and 3a in the Agricultural Land Classification (ALC)); and

- for the protection of and sustainable management of soils as a resource for the future.

- Areas of poorer quality land (ALC grades 3b, 4, 5) should be preferred to areas of higher quality land (grades 1, 2 and 3a).

- Recognise that development has an irreversible adverse impact on the finite national and local stock of BMV land.

- Conforms to NPPF and Planning Practice Guidance (Natural Environment and Minerals).

- Requires detailed ALC surveys to support plan allocations and for subsequent planning applications (for all sites larger than 5 ha). ALC surveys to support plan allocations and for subsequent planning applications for smaller sites (1 – 5 ha) would be welcomed.

- Recognise that development (soil sealing) has a major and usually irreversible adverse impact on soils.

- Soils of high environmental value (e.g., wetland and carbon stores such as peatland, low nutrient soils; or soils of high environmental value in the local context) should also be considered as part of ecological connectivity (Nature Recovery Network / Green Infrastructure).

- Requires soil handling and sustainable soil management strategies based on a detailed assessment of the soil resource based on best practice guidance (for all sites larger than 5 ha), ideally as part of the planning application process for major sites to help inform master-planning, and to safeguard the continued delivery of ecosystem services through careful soil management and appropriate, beneficial soil re-use. Soil handling and sustainable soil management strategies for smaller sites (1 – 5 ha) would be welcomed.

- Reference should be made to Defra's Construction Code of Practice for the Sustainable Use of Soils on Construction Sites

- In addition, for minerals and other temporary forms of development, plans for reinstatement, restoration and aftercare will be required (or for solar, a commitment to do so if the operational life is in decades); normally this will be return to the former land quality (ALC grade)

- Refers to soils issues within relevant policy areas such as renewable energy, climate change, green infrastructure and biodiversity net gain, flood schemes, managed realignment, development design and landscaping.

Policy SE14: Green and Blue Infrastructure

Natural England supports this policy. Well-designed cross boundary multi-functional green infrastructure contributes greatly to a number of benefits both for people and nature. Your green and blue (for example cross boundary canals) infrastructure should dovetail with your biodiversity net gain strategies to maximise benefits.

We would advise that the Local Authority also considers Natural England's Green Infrastructure Framework of Principles and Standards for England. As stated in our document, "Green infrastructure (GI) is part of the solution to many of the challenges we face; health inequalities, biodiversity crisis, climate change, nature recovery and levelling up. The GI framework supports local authorities, developers, parks and greenspace managers and local communities to enhance and create new good quality green infrastructure."

We would also suggest reference is made to the emerging Local Nature Recovery Strategy. Preparing Local Nature Recovery Strategies (LNRS) is a statutory requirement under the Environment Act 2021. LNRS are designed to work closely alongside other measures in the Act including supporting the delivery of mandatory biodiversity net gain and providing a focus for a strengthened duty on all public authorities to conserve and enhance biodiversity. They will also underpin the Nature Recovery Network, alongside work to develop partnerships and to integrate nature into our incentives and land management activities. Each LNRS will be specific and tailored to its area. The responsible authorities and people involved in preparing a strategy can choose how they want it to look, but every strategy must contain:

1. A local habitat map.

2. A written statement of biodiversity priorities. Statutory guidance for responsible authorities explains in detail what these 2 things should contain. Together they set out what the strategy is aiming to achieve and what practical actions will help do this. They will also propose where actions could be carried out for best effect and to connect and expand existing areas that are important for nature. We expect local nature recovery strategies to propose actions such as the:

- creation of wetlands
- restoration of peatlands
- planting of trees and hedgerows
- more sustainable management of existing woodlands and other habitats like grasslands These actions are intended to help nature itself and to also help improve the wider natural environment.

Whilst the Staffordshire Local Nature Recovery Strategy (LNRS) is currently a work in progress, Newcastle-under-Lyme Borough Council Regulation 19 pre-submission should still be consistent with NPPF Paragraph 185 in terms of setting out local habitat priorities and identifying potential measures by which they can be achieved, alongside mapping areas that could become of particular importance in the future.

Natural England encourages Newcastle Under Lyme Borough Council via their Local Nature Recovery Strategy to actively develop cross border cooperation between other Local Planning Authorities (LPA) (for example Staffordshire Moorlands Borough Council) in coordinating land development projects that impact on local biodiversity sites to ensure that local biodiversity corridors are maintained and link up other local important sites for nature conservation.

This is a good way of achieving nature recovery and preparing to deliver the LNRS alongside enabling the local authority and its partners to identify, map and safeguard site areas, including green and blue infrastructure opportunities and interlinkages.

Habitats Regulations Assessment

Natural England notes that this Local Plan is not directly connected with or necessary to the management of any European site. A screening assessment has been undertaken which identified a number of Likely Significant Effects (LSE) associated with the Local Plan. Taking no account of mitigation measures, the HRA concludes that Local Plan has the potential to affect the following European sites:

- Cannock Chase SAC
- Humber Estuary SAC, SPA and Ramsar
- Mersey Estuary SPA and Ramsar
- Midland Meres and Mosses Phase 1 Ramsar
- Midland Meres and Mosses Phase 2 Ramsar
- Pasturefields Salt Marsh SAC
- Peak District Dales SAC
- Peak District Moors (South Pennine Moors Phase 1) SPA
- Severn Estuary SAC, SPA and Ramsar
- South Pennine Moors SAC
- West Midland Mosses SAC

We welcome that your HRA includes the Humber Estuary SAC, SPA and Ramsar site which is hydrologically connected to the river Trent. If the Local Plan resulted in significant water pollution, this European site could be affected and has therefore been screened in, in relation to water quality only, on a precautionary basis. Natural England however notes that the Sustainability Appraisal identifies "A long-term cumulative adverse effect ...in terms of water quality" (p 148) as a result of the plan, this is not fully reflected in the current HRA.

Natural England note that the Sustainability Appraisal states: that "the entirety of the borough falls within IRZs of one or more SSSIs. All five SSSIs within the borough are in 'unfavourable' condition: Burnt Wood SSSI, Maer Pool SSSI, Black Firs and Cranberry Bog SSSI (Midlands Meres and Mosses Phase 2 Ramsar), Betley Mere SSSI (Midlands Meres and Mosses Phase 1 Ramsar) and Metallic Tileries, Parkhouse SSSI."

Natural England are also aware of the extensive network of ancient woodland spread across the borough, totalling 707.60 hectares, as well as a large quantity of priority habitats, totalling 1,791 hectares.

Natural England agree that the following designated sites and related priority habitats in adjoining LPA areas may also be affected by development through several pathways, including fragmentation, recreational pressure and/or pollution (including Air and Water Quality). Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI, Wybunbury Moss SAC SSSI, Tyrley Canal Cutting SSSI, King's and Hargreaves Wood SSSI, Gannister Quarry SSSI, Roe Park Woods SSSI, Wetley Moore SSSI, Churnet Valley SSSI, Hatherton Flush SSSI, Sounds Heath SSSI, Ford Green Redebed SSSI, and Cop Mere SSSI.

It is noted that the Appropriate Assessment stage of the HRA assessed potential impacts by topic;

- Impacts on designated features affected by a possible deterioration in air quality
- Impacts on water quality and quantity associated with increased levels of built development.
- Impacts associated with increased recreational pressure at European sites; and
- Consideration of impacts at associated functionally linked land.

Natural England notes that the HRA also factored the following into the assessment process "the protective framework provided by the Local Plan and existing protection measures set out in high level strategic policy and existing planning policy frameworks that serve to help overcome the identified potential adverse effects" and that "taking into consideration these factors, it is concluded that the Local Plan would have no adverse impact on site integrity at any European site, either alone or in-combination.

Natural England disagree agree with this conclusion that for those Habitats sites in the area of search with features sensitive to air pollution, adverse effects on their integrity, alone or in-combination, can be ruled out for the reasons set out at the beginning of this letter on page 2 and repeated in part below:

Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot currently be ruled out at the following internationally designated sites:

- Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI
- Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI

Natural England are currently in discussion with a number of the Staffordshire and West Midlands LPA's with regards to the cumulative impacts of air quality. We advise that further work is required to inform the HRA. The HRA should demonstrate that there are no adverse effects on integrity of Habitat sites as a result of this Local Plan, alone and in combination with other plans and projects. With regards to allocated sites, it is unclear whether the individual sites put forward in the Local Plan have been assessed through the Habitat Regulations Assessment process and how mitigation will be applied here.

Sustainability Appraisal

Natural England has reviewed the Sustainability Appraisal (SA) and included comments taken from the document throughout our response.

The SA is a comprehensive document which should be reviewed in strengthening the HRA, particularly with regards to residual adverse effects that would be expected to remain in terms of wastewater following the implementation of the Local Plan policies. (p 141) Natural England notes that "Increased pressure on wastewater treatment has the potential to be a long term and potentially permanent significant effect" (p 142)

The SA recognises the local distinctiveness of the plan area;

"The Borough itself is largely rural in nature and supports some high-quality agricultural land, but is more heavily built up towards the north east surrounding Stoke-on-Trent. (p 8)

Newcastle-under-Lyme has a strong rural character with a high-quality landscape and countryside, with some areas identified as being sensitive to change as a result of new development. (p 19)

Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms make up the key features of some of these Landscape Character Types." (p 20)

Sets out the area specific barriers to achieving sustainable growth;

"Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)

	<p>Loss of tranquillity The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution.(p 68)</p> <p>"The pre-mitigation SA assessments identified negative impacts in relation to air quality due to the proximity of sites to major roads, landscape character due to the location of sites within areas of high landscape sensitivity, close proximity to the PRoW network and potential for coalescence and urban sprawl, habitat sites, priority habitats, habitat distinctiveness, loss of undeveloped land, 'best and most versatile' (BMV) agricultural land, coinciding with mineral safeguarding areas (MSAs) and areas of surface water flood risk (SWFR); and access to healthcare facilities, schools, the local cycle network and railway network. (p 40)</p> <p>There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work. (p 21)</p> <p>Trends in transport choice are unlikely to change significantly, and private car use would continue to increase as the selected method of transport to work, with potential adverse impacts on air quality in the borough."(p 23)</p> <p>Considers the local and cumulative significance of soil loss alongside the ecological implications:</p> <p>"Loss of soil resources, BMV land and ecosystem services The proposed allocations would cumulatively result in the loss of up to approximately 342ha of previously undeveloped land, including up to 263ha of BMV agricultural land. The proposed development would be expected to reduce the ability of the local soil biome to effectively provide ecosystem services, to some extent. Additionally, the loss of permeable soils could potentially increase the risk of flooding and result in a loss of biodiversity across the Plan area. Loss of soil can also result in an increase in soil erosion and have subsequent impacts on agricultural yield.(p 68) The majority of the borough is ALC Grade 3 soil, with areas of ALC Grade 2 scattered across the borough. Grade 2 and potentially Grade 3 represents some of the borough's BMV agricultural land and should be conserved wherever possible (p 21)</p> <p>A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of BMV land to be lost as a result of the development proposed in the Local Plan." (p 59)'</p> <p>Other Advice</p> <p>Further general advice is provided within Natural England Advice Note – Local Plans February 2024, attached at (Appendix A) - see attachment</p>

Title	Policy SE11: Trees, hedgerows, and woodland
Consultee Company / Organisation	Natural England
Consultee Position	Senior Officer
Consultee Family Name	McLaughlin
Consultee Given Name	Sally
Q4 Part of document	Policy
Q4 Policy	SE11
Q6 Details	<p>Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.</p> <p>Natural England welcomes the opportunity to comment at this stage of the Local Plan and particularly supports the inclusion of policies on green and blue infrastructure, biodiversity, health and wellbeing, trees hedgerows and woodlands. We have reviewed the consultation documents and provide comments that relate to the soundness of the Local Plan and that are most relevant to our interest in the Natural Environment.</p> <p>Natural England has adopted a robust precautionary approach within this plan response. Whilst we welcome the content of the Local Plan, Natural England advises that the plan is currently at risk of being unsound and/or not legally compliant due to the potential impacts on air quality in relation to internationally designated nature conservation sites and the justification for the potential loss of 263ha best and most versatile (BMV) agricultural land. Further detail is provided below.</p> <p>Natural England have also provided other advice within this submission relating to further improvements that could strengthen plan policies and specific strategic site options and related mitigation.</p> <p>Do you consider that the Newcastle Under Lyme Plan is Sound and Legally Compliant?</p> <p>Natural England notes that the plan is at the pre-submission stage and as such your authority is seeking confirmation on the soundness of the plan. Having reviewed the plan and supporting documents, Natural England considers the pre-submission plan in its current form is not sound or legally compliant, this is due to a lack of evidence with regards to air quality and the cumulative loss of BMV agricultural land both in a local and national context.</p> <p>Air quality</p> <p>Natural England notes that the Sustainability Appraisal states that “Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)</p> <p>As Natural England understands it the current evidence base used to conduct the HRA cannot rule out adverse impacts on designated sites. The HRA states at page 22 3.4.16 “At the time of writing, the traffic modelling run for the final suite of Regulation 19 allocations had not been undertaken.” Appendix A lists the local plans for neighbouring LPA’s concluding that ‘in combination’ with plans and projects (approved and those yet to be implemented) they may trigger in-combination effects on European sites as a result of air quality, particularly as we understand it in the key commuting areas.</p> <p>Natural England notes that Annual Average Daily Traffic (AADT) data and traffic modelling in the Strategic Transport Assessment (STA) concludes a potential reduction in travel and related air pollution at allocated sites as a result of a predicted preference in the use of public transport. We are surprised by this projected decrease in both traffic and related air pollution, particularly as one employment allocation site includes a 200-bay lorry park and increased congestion is predicted at junction 16 of the M6 where it joins the A500 in a rural location with no existing rural transport provision. The Sustainability Appraisal also notes that: “There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work”. (p 206)</p> <p>Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot therefore currently be ruled out at the following internationally designated sites:</p> <ul style="list-style-type: none"> •Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI •Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI <p>The HRA outlines that the main source of ammonia emissions is agricultural practice, and that material increases in NH3 emissions are unlikely to be associated with the proposed local plan. At Black Firs and Cranberry Bog and Oakhanger Moss, any increase in nitrogen deposition has the potential to exacerbate pollution levels and thereby undermine the reasons for notification of these sites as a Ramsar.</p> <p>Ammonia can be emitted from vehicle exhaust emissions as a by-product of the catalytic conversion process designed to reduce emissions of nitrogen oxide. As traffic composition transitions toward more petrol and electric cars (i.e., fewer diesel cars on the road), catalytic converters may aid in reducing NOx emissions but result in increased ammonia emissions. Ammonia emissions from road traffic therefore could make a significant difference to nitrogen deposition close to roads.</p> <p>Natural England therefore advise that ammonia sourced from traffic emissions should be included for assessment within the local plan HRA, as the impact from this source on designated sites is currently unclear. For further information please see this report from Air Quality Consultants (AQC) that looks at ammonia emissions from roads for assessing impacts on nitrogen-sensitive habitats. Whilst we are aware that the current CREAM model created by AQC used to assess ammonia emissions from road traffic has not been peer reviewed, at this time it has been recognised as a Best Available Tool and we deem it appropriate to be used where any caveats associated with this model are also considered within the assessment. An assessment based on the best available approach is necessary. The next stage of</p>

assessment can then consider uncertainties in the model and site specifics to decide if mitigation needs to be considered.

Further work is therefore required to inform the Habitat Regulations Assessment. Natural England will engage with the Local Planning Authority in order to produce a Statement of Common Ground (SoCG) on this matter.

'Best and most versatile' (BMV) agricultural land

Natural England notes that "the proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land. A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of 'best and most versatile' (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services". (page 74 Sustainability Appraisal).

Under the Town and Country Planning (Development Management Procedure) (England) Order 2015 (DMPO) Natural England is a statutory consultee on development that would lead to the loss of over 20ha of 'best and most versatile' (BMV) agricultural land (land graded as 1, 2 and 3a in the Agricultural Land Classification (ALC) system, where this is not in accordance with an approved plan.

Natural England would like to understand how the local planning authority have produced the evidence base and options assessment which informs the strategic site allocations.

Natural England will engage with the local planning authority to consider the cumulative impacts of the loss of BMV both in the local and national context and the challenges related to environmental impact, infrastructure, and the requirement to deliver a balance between the need for development and the potential urbanisation of the countryside including the potential mitigation measures that need to be considered.

NPPF paragraph 174e states:

Planning policies and decisions should contribute to and enhance the natural and local environment by: ... preventing new and existing development from contributing to, being put at unacceptable risk from, or being adversely affected by, unacceptable levels of soil, air, water or noise pollution or land instability. Development should, wherever possible, help to improve local environmental conditions such as air and water quality, taking into account relevant information such as river basin management plans.

Natural England provides guidance to inform further assessment of air quality and the loss of BMV agricultural land in our response to the content of the plans Strategic Policies as set out below.

Do you consider that the Newcastle-under-Lyme Borough Council Regulation 19 pre-submission draft Plan is compliant with Duty to Co-operate?

In terms of working with neighbouring authorities, Natural England notes that initially the plan was intended to be produced jointly with the City of Stoke-on-Trent, the plan does not however currently present an evidence base that demonstrates that a collaborative approach has been adopted and that the Duty to Co-operate has been fully complied with.

The Sustainability Appraisal states that: "Overall, there is potential for a cumulative adverse effect on biodiversity, owing to the fragmentation of the ecological network... Where a large amount of development is located on previously undeveloped land surrounding rural settlements, this is likely to produce a long-term irreversible negative cumulative effect regarding the urbanisation of the countryside" (p 71)

Natural England would therefore like to further understand how the areas identified to meet the City of Stoke-on-Trent's unmet employment needs are justified and appropriate and whether meeting some of the employment needs of the City of Stoke-on-Trent has led to the need to release or safeguard more land from the Green Belt in Newcastle under Lyme. If this is the case, what are the exceptional circumstances for doing this and how does this align with the allocated sites options assessment?

Recreational Pressure

In terms of the South Pennine Moors SAC and recreational impacts, the Local Plan does comply with the Duty to Co-operate. Natural England recommends that reference is made to the 'Recreation use of the South Pennine Moors and implications for strategic housing growth' report by Footprint Ecology Ref 778 date 27th March 2024. This report should both inform the evidence base and ensure that policies relating to open space/green infrastructure are as rigorous and robust as possible.

The report concludes that more data/evidence is required to determine if recreational use is causing an impact across to the South Pennine Moors and to get a better understanding of the scale and location of any impact. Natural England notes that the report records 7,000 additional dwellings in

Newcastle-under-Lyme over the plan period rather than the 8,000 included in this regulation 19 submission. Newcastle-under-Lyme Borough Council should therefore continue to work with local authority and other partners to ensure coordinated and continued cross boundary action.

Other matters

Natural England has specific concerns related to allocations in the Green Belt. Notwithstanding that, Natural England considers most of the policies within the plan to be sound and deliverable. The plan is consistent with national policy with regard to those policies that are within Natural England's remit. Further information on strengthening policies including but not limited to Soils and best and most versatile (BMV) agricultural land, preventing loss and fragmentation of habitats and supporting green infrastructure are provided below.

Vision and Strategy

Natural England notes that the Plan's vision and emerging development strategy set out a framework for the future development of Newcastle-under-Lyme and addresses the needs in relation to housing, the economy, community facilities and infrastructure, including specific reference to a proposed employment site allocation.

This vision and the related objectives should also set out the environmental ambition for the plan area and form the basis for nature recovery and enhancement, supported by the policies and proposals in the plan.

Natural England advises that the vision should also incorporate more on the local ecology and landscape features which underpin local distinctiveness such as the "strong rural character with long open views across the surrounding rural landscape, towards more distant hills often framed by trees" (p 69) Part 3 Site Specific Landscape & Visual Appraisal. "Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms" (p 187) Sustainability Appraisal.

Strategic Objectives

Natural England welcome strategic objective SO-4 relating to carbon reduction and climate change, however we do not feel that this group of thirteen strategic objectives value or reflect the Boroughs whole ecology and landscape including but not limited to the protection of soil and best and most versatile (BMV) agricultural land. We would suggest that additional objectives are added relating to: air quality, water quality and quantity, soils and landscape.

Natural England would also like to see stronger reference to the Nature Recovery Network which is one of the specific aims of the Environment Act 2021 and will underpin the approach to the enhancement of nature.

Air quality is a major threat to habitats and species. Many ecological sites are exceeding their critical loads and levels for ammonia, nitrogen deposition and acid deposition. The strengthening of the policies and the rationale behind site allocations within this plan will ensure that new development does not contribute to the further deterioration of habitats and species due to air pollution. Further advice on strengthening the plans evidence base with regards to air quality is provided in the links below:

Strategic Policies

5 Planning for Sustainable Development

Policy PSD5: Green Belt

Natural England notes that this policy "aims to protect the Borough's essential open spaces, prioritise the use of brownfield land, and guide potential future development in accordance with the National Planning Policy Framework (NPPF)".

Natural England however notes that amendments to the Green Belt boundary are proposed in the form of 14 site allocations to accommodate both the growth requirements of the borough and the employment requirements of wider Stoke-on-Trent conurbation. Natural England's has some site-specific concerns about the potential impacts of some of the green belt sites selected on the natural environment with regards to habitat loss, fragmentation and justification for the loss of BMV agricultural land.

We note the LPA's intention to release and compensate for the loss of green belt and prioritise the use of suitable brownfield land. However, the site allocations in the green belt would result in the potential loss of 263ha of Best and Most Versatile (BMV) agricultural land. The council should satisfy itself that it is making a balanced decision for sustainable development, the Sustainability Appraisal concludes that:

"The Green Belt Study assessed land parcels against the contribution they make to the five purposes of the Green Belt on a four-point scale...Three allocated sites (AB12, AB33 and TK10) are located in areas which make a 'strong' overall contribution to the purposes of the Green Belt where "the site contributes to the purpose in a strong and undeniable way, whereby removal of the site from the Green Belt will detrimentally undermine this purpose" (p101)

"Site allocations on previously undeveloped land or that would result in a net loss of GI / vegetation could result in a reduced capability of the environment to provide ecosystem services including carbon storage, the storage and filtration of water including natural flood protection, as well as reduced availability and connectivity of habitats within the green network enabling movement of species. (p 165)

Strategic Site Allocations

Natural England suggests that the HRA should include a "requirement for project-level/site specific HRA's and targeted ecological surveys".

The Sustainability Appraisal concludes that:

"Some 12 allocated sites partially coincide with priority habitats, where 3.43% of the total site allocation areas coinciding with priority habitats which include deciduous woodland, good quality semi-improved grassland and Site BL18 coincides with lowland fens which is a very high distinctiveness habitat in the BNG handbook (2024). These habitats can support a range of species of principal importance. Allocated Site KL15 is adjacent to 'The Butts and Hands Wood' ancient woodland, with a further 20 allocated sites located in close proximity to ancient woodlands. P158

"Six allocated sites (Sites CT20, HD10, KL13, RC8, SP11(2) and SP23) are located within areas of 'high' or 'very high' habitat distinctiveness that provide high biodiversity value. Whilst in many cases these habitats can be conserved alongside development, it is likely that in some cases fragmentation or loss of habitats and connections between habitats will occur"

"The majority of allocated sites are located on previously undeveloped land, which would result in the loss of soil resources and the ecosystem services they provide. (p 159) The development of new buildings on previously undeveloped land would be expected to result in a direct loss of soil resource, with little or no scope for mitigation" (p 216)

"The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution. (p 68)

For all sites, Natural England advises that the hydrological catchment within which the site sits is taken into consideration, with regards to the potential impact of the developments proposed on the adjoining watercourses and wider catchments, including but not limited to surface water runoff (including during construction), existing and required capacity of Waste Water Treatment Works (WwTW) and water supply and flooding issues. Each site will require site specific investigation, and the council should understand the impact of all the sites put forward individually and in combination.

Natural England has specific concerns and or requires further information about the following 'Strategic Site Allocations' which could potentially impact on designated sites as a result of air and water quality and/or lead to the loss and / or fragmentation of priority habitats and BMV agricultural land:

BL18 – Clough Hall Playing Fields, Talke

Natural England would like to further understand this larger residential development proposal with regards to the potential impacts on the lowland fen habitat.

KL13 & KL15 – Land South of A525 between Keele University and Newcastle

Natural England notes this proposal for Employment development is immediately adjacent to ancient woodland priority habitat.

HM28 – Land off East Lawns, Betley

Existing and projected water quality issues at Betley Mere will need to be considered with regards to this allocation.

LW53 – Loggerheads

Natural England notes this residential housing development proposal is located within the IRZ of protected sites (Burnt Wood SSSI) which states that development proposals of 50 or more homes outside existing settlements/urban areas in these zones should be consulted upon with Natural England.

SP11 – Former Keele Municipal Golf Course

This Larger residential development is categorised in the Landscape Assessment as having a Major adverse impact on the local Landscape.

AB2 – Land Adjoining Corner of A500 and M6 Southbound

Natural England notes this proposed employment allocation released entirely from the green belt, which comprises 70ha of grade 2 BMV agricultural land. The Landscape study concludes that the: "Proposed development scenario is likely to have a major adverse effect on the SA objective with no satisfactory mitigation possible" (p 15). With regards to potential Air Quality impacts on protected sites Natural England notes from the options analysis that "The loss or potential moving of a layby to enable access to the site could be problematic indicating potential issues with site access and traffic flow. An increase in HGV and personal vehicle traffic is anticipated, which could lead to potential congestion and air pollution in the area". Natural England would therefore also like to understand the evidence base further including the rationale for an alternative site TK30 @ Talke A34 / A500 roundabout being ruled out.

Policy PSD6: Health and Wellbeing

Natural England welcome this policy direction in terms of safeguarding health and amenity and supporting healthy communities, through the protection and provision of high-quality open spaces, including allotments and the promotion of active travel transport choices Further information on joining up Nature Recovery and Green Infrastructure (GI) with health priorities is set out below. If more cities and towns can be creatively designed and managed, with nature and communities at their heart, we will see nature and people thrive. This is something we set out to inspire at Natural England when developing the Green Infrastructure Framework and Design Guide. Natural England's People and Nature survey tells us that, for 82% of people 'being in nature makes me happy'. With the cost-of-living crisis, 'free' places like local parks and greenspace, have become even more important. The value of these spaces for the economy is estimated at £28.7 billion per year.

Green infrastructure in towns and cities provides places to relax, exercise, and spend time outdoors; cools urban areas; reduces flooding by allowing water to permeate the ground rather than overwhelm our drains; increases biodiversity and helps to reduce inequalities in access to nature. Options assessments for development sites and related green and blue Infrastructure within and between developments, green spaces and designated sites should; include soft transition and consider potential direct and indirect implications on sustainable use for example visitor pressure and transport / access options.

The natural environment affords the best 'natural' play opportunities for children while offering multifunctional nature-based solutions to climate change etc. These can be blended into wildlife rich green infrastructure and green open spaces that can act as destination play sites for local children (See best practice at Play England and Play Wales) that have proven health and wellbeing value.

Evidence for nature play and health:

Play, naturally: a review of children's natural play

Nature for health and wellbeing | The Wildlife Trusts

Good practice in social prescribing for mental health: the role of nature-based interventions - NECR228 (naturalengland.org.uk)

6 Climate and Renewable Energy

Whilst Natural England welcomes this group of policies we recommend including Policy CRE1: Climate Change and Policy CRE2: Renewable Energy within the Sustainable Environment (SE) group of policies to achieve a collective strategic focus on sustainable development and working toward achieving net zero alongside the SE policies relating to Pollution and Air Quality (SE1) and requirements for sustainable water management measures to reduce water use, natural flood protection features alongside the specific policies on Sustainable Drainage Systems (Policy SE4:)

Natural England continues to work with the LPAs across the region on understanding air pollution across area boundaries (see comments and links in objectives section.)

10 Infrastructure and Transport Policy.

Policy IN4 Cycleways, Bridleways and Public Rights of Way

Natural England welcomes the inclusion of this group of policies which seek to maintain and enhance the network of public rights of way that cross the borough. We note that the sustainability appraisal states that "the borough has relatively poor accessibility to the cycle network and is the lowest performing in the county for walking zones" (p 206) and that, "eight allocated sites (AB2, AB12, AB33, HD10, KL15, MD29, SP11(3) and TK10) do not currently have safe pedestrian or cycle access adjacent to the site,

where site end users may be reliant upon less sustainable modes of transport including private car use". (p 180)

11 Sustainable Environment

Natural England welcomes this group of policies and has the following policy specific comments:

Policy SE1: Pollution and Air Pollution.

Natural England welcomes this policy that notes that development proposals which are likely to result in detrimental impacts on air quality, will not be permitted unless it can be demonstrated that mitigation measures effectively address these impacts. (Comments on Air Quality are also provided on page 2 and 4 of this letter). The promotion of sustainable and active travel options, low-emission technologies and enhancement of green infrastructure to absorb air pollution is also noted. (see comment above re integrating the group: 6 Policies Climate and Renewable Energy).

Policy SE7: Biodiversity Net Gain

Natural England supports the inclusion of a policy on BNG. We suggest the following minor amendments to further improve the plan policy.

The BNG policy should make it clear that biodiversity net gain is not applied to irreplaceable habitats, and that any mitigation and/or compensation requirements for Habitats sites should be dealt with separately from biodiversity net gain provision. The policy should also set out how biodiversity net gain will be delivered and managed through the lifetime of the scheme and including monitoring requirements. This should include indicators to demonstrate the amount and type of gain provided through development. The indicators should be as specific as possible to help build an evidence base to take forward for future reviews of the plan, for example the total number and type of biodiversity units created, the number of developments achieving biodiversity net gains and a record of on-site and off-site contributions.

Natural England notes that the Sustainability Appraisal states "Despite the BNG provisions at the site level, there remains potential for a cumulative adverse impact on biodiversity at the landscape scale, owing to incremental habitat losses. As a result of development within the Local Plan undeveloped land will be lost which will include the loss of soil resources, habitats recognised as being of 'high' and 'very high' distinctiveness, and potentially ecological links between biodiversity assets, whereby the policies will not be expected to fully mitigate the fragmentation of the ecological network. Fragmentation of the ecological network across Newcastle-under-Lyme is expected to be a long-term and permanent significant effect." (p 162)

Policy SE8: Biodiversity and Geodiversity

Natural England supports the inclusion of this policy to protect the Boroughs internationally, nationally and locally designated sites important for their biodiversity value and to enhance the natural environment and work with partners toward Nature Recovery.

We particularly welcome the plans recognition of the value of "wider ecological networks" stating that "Other sites, both individually and collectively, that are not designated can also contribute towards protecting and enhancing diversity of species locally".

Policy SE10: Landscape

Natural England welcomes this policy aimed at ensuring that "development proposals should protect and enhance the character, quality, beauty, and tranquillity of the Borough". We note from the sustainability appraisal that "The entirety of the south of the borough is identified as being high in relation to landscape sensitivity, which starts in Audley in the north and covers the southern area of the borough, including Loggerheads and Alington." We agree that "Alteration of the landscape character is a long-term and permanent significant effect... There is potential for a cumulative adverse effect on landscape character resulting from the development proposed in the Plan". (p193) SA.

Natural England has divided England into 159 distinct natural areas called National Character Areas (NCAs) Newcastle-under-Lyme falls within two NCAs: Shropshire, Cheshire and Staffordshire Plain: gently rolling plains dominated by intensive dairy farming, beef and arable production; The Potteries and Churnet Valley: strong contrast between the industrialised landscape of the Potteries and the pastoral, strongly dissected hills and small plateaux that flank the Churnet and Dove valleys.

Natural agrees with the following statement in the sustainability appraisal: "Although various policies aim to ensure that development conserves and enhances landscape character and distinctiveness, when combined with Local Plan policies that support infrastructural improvements such as for transportation, water, and waste, this is likely to lead to a long-term and irreversible cumulative adverse effect on landscape character and tranquillity and associated indicators such as dark skies." (p72)

Policy SE11: Trees, hedgerows, and woodland

Natural England welcomes this plans recognition that "Trees, hedgerows, and woodlands are integral to the distinctive character and ecological health of the Borough of Newcastle-under-Lyme, defining landscapes across both urban and rural settlements." And that "This policy prioritises the protection of existing natural assets, seeking to not only preserve, but actively enhance, these valuable features wherever possible".

Policy SE13: Soil and Agricultural Land

Natural England has concerns about the justification for the loss of BMV agricultural land within this plan. "The proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land. A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of 'best and most versatile' (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services." (page74) (SA)

Natural England notes that policy SE13 states: "Outside of sites allocated for development in the Local Plan, development proposals should avoid the loss of best and most versatile agricultural land (BMV) unless it can be demonstrated that the benefits of development clearly outweigh the loss of the land and every effort has been made to mitigate for the overall impact of the development on best and most versatile agricultural land."

With regards to Soil and Agricultural Land Quality, Natural England advises that The Local Plan should give appropriate weight to the roles performed by the area's soils. These should be valued as a finite multi-functional resource which underpin our wellbeing and prosperity. Decisions about development should take full account of the impact on soils, their intrinsic character and the sustainability of the many ecosystem services they deliver.

The 25 Year Environment Plan (25YEP) sets out government action to help the natural world regain and retain good health, including highlighting the need to:

- protect the best agricultural land
- put a value on natural capital, including healthy soil
- ensure all soils are managed sustainably by 2030
- restore and protect peatland

Soil is a finite resource which plays an essential role within sustainable ecosystems, performing an array of functions supporting a range of ecosystem services, including storage of carbon and water, the infiltration and transport of water, nutrient cycling, a buffer against pollution and provision of food. In order to safeguard soil resources as part of the overall sustainability of the development, it is important that the soil resource is able to retain as many of its important functions as possible. This can be achieved through careful soil management and appropriate, beneficial soil re-use, with consideration on how any adverse impacts on soils can be avoided or minimised.

The conservation and sustainable management of soils is reflected in the National Planning Policy Framework (NPPF), particularly in paragraph 180(a), 180(b) and 181 (footnote 62). When planning authorities are considering land use change, the permanency of the impact on soils is an important consideration. Particular care over planned changes to the most potentially productive soil is needed, for the ecosystem services it supports including its role in agriculture and food production.

Plan policies should therefore take account of the impact on land and soil resources and the wide range of vital functions (ecosystem services) they provide in line with paragraph 180(b) of the NPPF.

Soil Plan Policies

We strongly advise that at a minimum, the plan includes core policies for:

- the protection of best and most versatile (BMV) agricultural land (Grades 1, 2 and 3a in the Agricultural Land Classification (ALC)); and
- for the protection of and sustainable management of soils as a resource for the future.
- Areas of poorer quality land (ALC grades 3b, 4, 5) should be preferred to areas of higher quality land (grades 1, 2 and 3a).
- Recognise that development has an irreversible adverse impact on the finite national and local stock of BMV land.
- Conforms to NPPF and Planning Practice Guidance (Natural Environment and Minerals).
- Requires detailed ALC surveys to support plan allocations and for subsequent planning applications (for all sites larger than 5 ha). ALC surveys to support plan allocations and for subsequent planning applications for smaller sites (1 – 5 ha) would be welcomed.
- Recognise that development (soil sealing) has a major and usually irreversible adverse impact on soils.
- Soils of high environmental value (e.g., wetland and carbon stores such as peatland, low nutrient soils; or soils of high environmental value in the local context) should also be considered as part of ecological connectivity (Nature Recovery Network / Green Infrastructure).
- Requires soil handling and sustainable soil management strategies based on a detailed assessment of the soil resource based on best practice guidance (for all sites larger than 5 ha), ideally as part of the planning application process for major sites to help inform master-planning, and to safeguard the continued delivery of ecosystem services through careful soil management and appropriate, beneficial soil re-use.
- Soil handling and sustainable soil management strategies for smaller sites (1 – 5 ha) would be welcomed.
- Reference should be made to Defra's Construction Code of Practice for the Sustainable Use of Soils on Construction Sites
- In addition, for minerals and other temporary forms of development, plans for reinstatement, restoration and aftercare will be required (or for solar, a commitment to do so if the operational life is in decades); normally this will be return to the former land quality (ALC grade)
- Refers to soils issues within relevant policy areas such as renewable energy, climate change, green infrastructure and biodiversity net gain, flood schemes, managed realignment, development design and landscaping.

Policy SE14: Green and Blue Infrastructure

Natural England supports this policy. Well-designed cross boundary multi-functional green infrastructure contributes greatly to a number of benefits both for people and nature. Your green and blue (for example cross boundary canals) infrastructure should dovetail with your biodiversity net gain strategies to maximise benefits.

We would advise that the Local Authority also considers Natural England's Green Infrastructure Framework of Principles and Standards for England. As stated in our document, "Green infrastructure (GI) is part of the solution to many of the challenges we face; health inequalities, biodiversity crisis, climate change, nature recovery and levelling up. The GI framework supports local authorities, developers, parks and greenspace managers and local communities to enhance and create new good quality green infrastructure."

We would also suggest reference is made to the emerging Local Nature Recovery Strategy. Preparing Local Nature Recovery Strategies (LNRS) is a statutory requirement under the Environment Act 2021. LNRS are designed to work closely alongside other measures in the Act including supporting the delivery of mandatory biodiversity net gain and providing a focus for a strengthened duty on all public authorities to conserve and enhance biodiversity. They will also underpin the Nature Recovery Network, alongside work to develop partnerships and to integrate nature into our incentives and land management activities. Each LNRS will be specific and tailored to its area. The responsible authorities and people involved in preparing a strategy can choose how they want it to look, but every strategy must contain:

1. A local habitat map.
2. A written statement of biodiversity priorities. Statutory guidance for responsible authorities explains in detail what these 2 things should contain. Together they set out what the strategy is aiming to achieve and what practical actions will help do this. They will also propose where actions could be carried out for best effect and to connect and expand existing areas that are important for nature. We expect local nature recovery strategies to propose actions such as the:
 - creation of wetlands
 - restoration of peatlands
 - planting of trees and hedgerows

- more sustainable management of existing woodlands and other habitats like grasslands These actions are intended to help nature itself and to also help improve the wider natural environment.

Whilst the Staffordshire Local Nature Recovery Strategy (LNRS) is currently a work in progress, Newcastle-under-Lyme Borough Council Regulation 19 pre-submission should still be consistent with NPPF Paragraph 185 in terms of setting out local habitat priorities and identifying potential measures by which they can be achieved, alongside mapping areas that could become of particular importance in the future.

Natural England encourages Newcastle Under Lyme Borough Council via their Local Nature Recovery Strategy to actively develop cross border cooperation between other Local Planning Authorities (LPA) (for example Staffordshire Moorlands Borough Council) in coordinating land development projects that impact on local biodiversity sites to ensure that local biodiversity corridors are maintained and link up other local important sites for nature conservation.

This is a good way of achieving nature recovery and preparing to deliver the LNRS alongside enabling the local authority and its partners to identify, map and safeguard site areas, including green and blue infrastructure opportunities and interlinkages.

Habitats Regulations Assessment

Natural England notes that this Local Plan is not directly connected with or necessary to the management of any European site. A screening assessment has been undertaken which identified a number of Likely Significant Effects (LSE) associated with the Local Plan. Taking no account of mitigation measures, the HRA concludes that Local Plan has the potential to affect the following European sites:

- Cannock Chase SAC
- Humber Estuary SAC, SPA and Ramsar
- Mersey Estuary SPA and Ramsar
- Midland Meres and Mosses Phase 1 Ramsar
- Midland Meres and Mosses Phase 2 Ramsar
- Pasturefields Salt Marsh SAC
- Peak District Dales SAC
- Peak District Moors (South Pennine Moors Phase 1) SPA
- Severn Estuary SAC, SPA and Ramsar
- South Pennine Moors SAC
- West Midland Mosses SAC

We welcome that your HRA includes the Humber Estuary SAC, SPA and Ramsar site which is hydrologically connected to the river Trent. If the Local Plan resulted in significant water pollution, this European site could be affected and has therefore been screened in, in relation to water quality only, on a precautionary basis. Natural England however notes that the Sustainability Appraisal identifies "A long-term cumulative adverse effect ...in terms of water quality" (p 148) as a result of the plan, this is not fully reflected in the current HRA.

Natural England note that the Sustainability Appraisal states: that "the entirety of the borough falls within IRZs of one or more SSSIs. All five SSSIs within the borough are in 'unfavourable' condition: Burnt Wood SSSI, Maer Pool SSSI, Black Firs and Cranberry Bog SSSI (Midlands Meres and Mosses Phase 2 Ramsar), Betley Mere SSSI (Midlands Meres and Mosses Phase 1 Ramsar) and Metallic Tileries, Parkhouse SSSI."

Natural England are also aware of the extensive network of ancient woodland spread across the borough, totalling 707.60 hectares, as well as a large quantity of priority habitats, totalling 1,791 hectares.

Natural England agree that the following designated sites and related priority habitats in adjoining LPA areas may also be affected by development through several pathways, including fragmentation, recreational pressure and/or pollution (including Air and Water Quality). Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI, Wybunbury Moss SAC SSSI, Tyrley Canal Cutting SSSI, King's and Hargreaves Wood SSSI, Gannister Quarry SSSI, Roe Park Woods SSSI, Wetley Moore SSSI, Churnet Valley SSSI, Hatherton Flush SSSI, Sounds Heath SSSI, Ford Green Redebed SSSI, and Cop Mere SSSI.

It is noted that the Appropriate Assessment stage of the HRA assessed potential impacts by topic;

- Impacts on designated features affected by a possible deterioration in air quality
- Impacts on water quality and quantity associated with increased levels of built development.
- Impacts associated with increased recreational pressure at European sites; and
- Consideration of impacts at associated functionally linked land.

Natural England notes that the HRA also factored the following into the assessment process "the protective framework provided by the Local Plan and existing protection measures set out in high level strategic policy and existing planning policy frameworks that serve to help overcome the identified potential adverse effects" and that "taking into consideration these factors, it is concluded that the Local Plan would have no adverse impact on site integrity at any European site, either alone or in-combination.

Natural England disagree agree with this conclusion that for those Habitats sites in the area of search with features sensitive to air pollution, adverse effects on their integrity, alone or in-combination, can be ruled out for the reasons set out at the beginning of this letter on page 2 and repeated in part below:

Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot currently be ruled out at the following internationally designated sites:

- Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI
- Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI

Natural England are currently in discussion with a number of the Staffordshire and West Midlands LPA's with regards to the cumulative impacts of air quality. We advise that further work is required to inform the HRA. The HRA should demonstrate that there are no adverse effects on integrity of Habitat sites as a result of this Local Plan, alone and in combination with other plans and projects. With regards to allocated sites, it is unclear whether the individual sites put forward in the Local Plan have been assessed through the Habitat Regulations Assessment process and how mitigation will be applied here.

Sustainability Appraisal

Natural England has reviewed the Sustainability Appraisal (SA) and included comments taken from the document throughout our response.

	<p>The SA is a comprehensive document which should be reviewed in strengthening the HRA, particularly with regards to residual adverse effects that would be expected to remain in terms of wastewater following the implementation of the Local Plan policies. (p 141) Natural England notes that "Increased pressure on wastewater treatment has the potential to be a long term and potentially permanent significant effect" (p 142)</p> <p>The SA recognises the local distinctiveness of the plan area;</p> <p>"The Borough itself is largely rural in nature and supports some high-quality agricultural land, but is more heavily built up towards the north east surrounding Stoke-on-Trent. (p 8)</p> <p>Newcastle-under-Lyme has a strong rural character with a high-quality landscape and countryside, with some areas identified as being sensitive to change as a result of new development. (p 19)</p> <p>Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms make up the key features of some of these Landscape Character Types." (p 20)</p> <p>Sets out the area specific barriers to achieving sustainable growth;</p> <p>"Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)</p> <p>Loss of tranquillity The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution.(p 68)</p> <p>"The pre-mitigation SA assessments identified negative impacts in relation to air quality due to the proximity of sites to major roads, landscape character due to the location of sites within areas of high landscape sensitivity, close proximity to the PRoW network and potential for coalescence and urban sprawl, habitat sites, priority habitats, habitat distinctiveness, loss of undeveloped land, 'best and most versatile' (BMV) agricultural land, coinciding with mineral safeguarding areas (MSAs) and areas of surface water flood risk (SWFR); and access to healthcare facilities, schools, the local cycle network and railway network. (p 40)</p> <p>There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work. (p 21)</p> <p>Trends in transport choice are unlikely to change significantly, and private car use would continue to increase as the selected method of transport to work, with potential adverse impacts on air quality in the borough."(p 23)</p> <p>Considers the local and cumulative significance of soil loss alongside the ecological implications:</p> <p>"Loss of soil resources, BMV land and ecosystem services The proposed allocations would cumulatively result in the loss of up to approximately 342ha of previously undeveloped land, including up to 263ha of BMV agricultural land. The proposed development would be expected to reduce the ability of the local soil biome to effectively provide ecosystem services, to some extent. Additionally, the loss of permeable soils could potentially increase the risk of flooding and result in a loss of biodiversity across the Plan area. Loss of soil can also result in an increase in soil erosion and have subsequent impacts on agricultural yield.(p 68) The majority of the borough is ALC Grade 3 soil, with areas of ALC Grade 2 scattered across the borough. Grade 2 and potentially Grade 3 represents some of the borough's BMV agricultural land and should be conserved wherever possible (p 21)</p> <p>A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of BMV land to be lost as a result of the development proposed in the Local Plan." (p 59)</p> <p>Other Advice</p> <p>Further general advice is provided within Natural England Advice Note – Local Plans February 2024, attached at (Appendix A) - see attachment</p>

Q4 Policy	SE12
Q6 Details	<p>NEWCASTLE-UNDER-LYME BOROUGH COUNCIL MARSH PARADE DEVELOPMENT BRIEF COMMENTS BY MUSIC VENUE TRUST IN SUPPORT OF THE RIGGER GRASSROOTS MUSIC VENUE</p> <p>(1). MUSIC VENUE TRUST'S POSITION</p> <p>These comments have been prepared by Music Venue Trust (MVT) and respond to the consultation being undertaken by Newcastle-under-Lyme Borough Council on the draft Local Plan 2020-2040. Music Venue Trust's key concern is the impact of proposals that may come forward in the future following the adoption of this draft Local Plan as a Supplementary Planning Document (SPD); proposals that could impact on The Rigger, a grassroots music venue (GMV) and a key cultural asset in Newcastle-under-Lyme.</p> <p>MVT would like to first focus on policy TC22 (p.154): Marsh Parade, Newcastle (former Zanzibar nightclub), which allocates the land for the development of 70 dwellings and commercial units. While MVT does not oppose the development of this land in principle, we'd like to ensure that any development that does take place is done in a way that ensures the continued operation and financial viability of The Rigger and protects any potential residents from negative impact of noise typical of a thriving grassroots music venue like The Rigger which could lead to noise complaints that impact the operation of the GMV.</p> <p>MVT is pleased to see policies SE1 (p.67) and SE12 (p.90) of the draft Local Plan refer to the Agent of Change principle, as well as reference to noise assessments within policy TC22. However, no reference is made to supporting grassroots music venues and other similar cultural businesses. We would like to see more specificity with regards to issues like noise assessment and insulation when developing residential units in close proximity to existing GMVs. A key area to consider would be the need to have opening windows in residential accommodation without this subjecting the residents to unacceptable noise levels, nor prompting noise complaints from residents relating to the operation of the pre-existing GMV. Details about deeds of easement as a means to prevent noise complaints negatively impacting the operation of the existing GMV should also be addressed in order to protect the venue.</p> <p>The Rigger is a nationally recognised grassroots music venue which has been in operation for 20 years, establishing itself as central to the cultural fabric of Newcastle-under-Lyme. As such, any Local Plan adopted should set out criteria which must be followed in order to protect existing business, particularly those with cultural value. The operators of the music venue have sought to establish contact with the council in order to address noise mitigation measures for the proposed residential units on the site of the former Zanzibar nightclub, however the operators have still not been consulted. As the Local Plan potentially impacts The Rigger, the operators of the venue should be consulted in order to ensure any impact is not negative.</p> <p>MVT and the operators of The Rigger would strongly object to any future planning application in the vicinity of the venue that may impact the venue's operation or future viability.</p> <p>(2). THE AGENT OF CHANGE PRINCIPLE</p>

At a national level, the Agent of Change principle in the National Planning Policy Framework is very clear that the responsibility to effectively mitigate the impact of the proposed redevelopment on existing businesses falls to the developers who act as the 'Agent of Change'.

The intention of the agent of change principle can best be seen in highlighting the following passages from the National Planning Policy Framework:

The agent of change principle was introduced by the NPPF in 2018. Paragraph 193 of the updated NPPF (December 2023) states:

"Planning policies and decisions should ensure that new development can be integrated effectively with existing businesses and community facilities (such as places of worship, pubs, music venues and sports clubs). Existing businesses and facilities should not have unreasonable restrictions placed on them as a result of development permitted after they were established. Where the operation of an existing business or community facility could have a significant adverse effect on new development (including changes of use) in its vicinity, the applicant (or 'agent of change') should be required to provide suitable mitigation before the development has been completed."

Other guidance within the NPPF is also a material planning consideration. Paragraph 97 states that:

"To deliver the social, recreational and cultural facilities and services the community needs, planning policies and decisions should... guard against the unnecessary loss of valued facilities and services, particularly where this would reduce the community's ability to meet its day-to-day needs"

(3). MVT AND THE GMV SECTOR

About us:

Music Venue Trust is a UK registered charity established in 2014 that acts to protect, secure and improve the UK's Grassroots Music Venue circuit. Music Venue Trust provides advice to the government, the cultural sector and the music industry on issues impacting the network of venues and is the nominated representative that speaks on behalf of the Music Venues Alliance, an association of over 800 venues from across the UK.

Economic & Cultural Responsibility and Impact of the GMV sector:

Music Venue Trust recognises that Grassroots Music Venues (GMVs) contribute to creating a rich cultural environment for the local community, boost the local economy and increase footfall to high streets. GMVs provide new and emerging artists and musicians with a space to hone their craft, develop their fanbase and increase access to cultural opportunities for the local community: MVT makes the case to Government and industry that they are the 'research and development' arm of the music industry. However, in the aftermath of the Covid-19 Pandemic, the economic resilience of Grassroots Music Venues has been pushed to the limit. In Music Venue Trust's 2023 Annual report we announced at Parliament the startling statistic that the average profit margin of a GMV is 0.5%, and that at its core, the provision purely of live music is a loss-making activity - one that is essentially subsidised nationally by GMVs to the tune of £114.8 million. It is other revenue streams, like the provision of food & beverages, which enable GMVs to provide their cultural activity.

GMVs and incoming neighbourhood developments:

Our concerns for The Rigger are informed by experience and statistical analysis of the sector. The Music Venue Trust's Annual Report for 2023 shows a sharp increase in the number of noise complaints placed against grassroots music venues, and a correlation between areas of redevelopment and spikes of noise complaints.

Through this we're directly observing the impact noise complaints have on Grassroots Music Venues, the financial outlay operators have had to make as a direct result and the escalation of policing of the spaces by Environmental Health Officers. Music Venue Trust's Annual Reports for 2022 and 2023 showed an increase in the number of noise complaints placed against grassroots music venues from pre-pandemic levels, and a correlation between areas of redevelopment and spikes of noise complaints.

Over the past 20 years 35% of Grassroots Music Venues (GMVs) have closed in the UK and this is still ongoing; at the start of 2023 Music Venue Trust reported that the UK was continuing to lose GMVs at an average rate of one a week. Set against this challenging climate, we urge Newcastle-under-Lyme Borough Council to take meaningful steps to protect Newcastle-under-Lyme's successful existing GMV, The Rigger, and not add to the ongoing loss of grassroots music venue spaces both nationally and locally.

(4). Concluding points

- The Local Plan must stipulate that noise assessments be carried out by developers, with participation from the neighbouring GMV to ensure a survey captures true 'worst case scenario' data. The survey must then appropriately detail noise mitigation measures specifically in place to ensure the continued viable operation of the GMV The Rigger.

- The venue operator should be considered a key stakeholder and consulted with at every stage of the residential planning process.

- The Agent of Change principle needs to be thoroughly considered with specific reference to the impact of the development on a Grassroots Music Venue.

Q7 Modification

Please see representations above.

Policy SE13: Soil and Agricultural Land

Comment ID	NULLP1335
Order	125
Title	Policy SE13: Soil and Agricultural Land
Consultee Company / Organisation	Natural England
Consultee Position	Senior Officer
Consultee Family Name	McLaughlin
Consultee Given Name	Sally
Q4 Part of document	Policy
Q4 Policy	SE13
Q6 Details	<p>Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.</p> <p>Natural England welcomes the opportunity to comment at this stage of the Local Plan and particularly supports the inclusion of policies on green and blue infrastructure, biodiversity, health and wellbeing, trees hedgerows and woodlands. We have reviewed the consultation documents and provide comments that relate to the soundness of the Local Plan and that are most relevant to our interest in the Natural Environment.</p> <p>Natural England has adopted a robust precautionary approach within this plan response. Whilst we welcome the content of the Local Plan, Natural England advises that the plan is currently at risk of being unsound and/or not legally compliant due to the potential impacts on air quality in relation to internationally designated nature conservation sites and the justification for the potential loss of 263ha best and most versatile (BMV) agricultural land. Further detail is provided below.</p> <p>Natural England have also provided other advice within this submission relating to further improvements that could strengthen plan policies and specific strategic site options and related mitigation.</p> <p>Do you consider that the Newcastle Under Lyme Plan is Sound and Legally Compliant?</p> <p>Natural England notes that the plan is at the pre-submission stage and as such your authority is seeking confirmation on the soundness of the plan. Having reviewed the plan and supporting documents, Natural England considers the pre-submission plan in its current form is not sound or legally compliant, this is due to a lack of evidence with regards to air quality and the cumulative loss of BMV agricultural land both in a local and national context.</p> <p>Air quality</p> <p>Natural England notes that the Sustainability Appraisal states that "Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)</p> <p>As Natural England understands it the current evidence base used to conduct the HRA cannot rule out adverse impacts on designated sites. The HRA states at page 22 3.4.16 "At the time of writing, the traffic modelling run for the final suite of Regulation 19 allocations had not been undertaken." Appendix A lists the local plans for neighbouring LPA's concluding that 'in combination' with plans and projects (approved and those yet to be implemented) they may trigger in-combination effects on European sites as a result of air quality, particularly as we understand it in the key commuting areas.</p> <p>Natural England notes that Annual Average Daily Traffic (AADT) data and traffic modelling in the Strategic Transport Assessment (STA) concludes a potential reduction in travel and related air pollution at allocated sites as a result of a predicted preference in the use of public transport. We are surprised by this projected decrease in both traffic and related air pollution, particularly as one employment allocation site includes a 200-bay lorry park and increased congestion is predicted at junction 16 of the M6 where it joins the A500 in a rural location with no existing rural transport provision. The Sustainability Appraisal also notes that: "There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work". (p 206)</p> <p>Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot therefore currently be ruled out at the following internationally designated sites:</p> <ul style="list-style-type: none"> •Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI •Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI <p>The HRA outlines that the main source of ammonia emissions is agricultural practice, and that material increases in NH3 emissions are unlikely to be associated with the proposed local plan. At Black Firs and Cranberry Bog and Oakhanger Moss, any increase in nitrogen deposition has the potential to exacerbate pollution levels and thereby undermine the reasons for notification of these sites as a Ramsar.</p> <p>Ammonia can be emitted from vehicle exhaust emissions as a by-product of the catalytic conversion process designed to reduce emissions of nitrogen oxide. As traffic composition transitions toward more petrol and electric cars (i.e., fewer diesel cars on the road), catalytic converters may aid in reducing NOx emissions but result in increased ammonia emissions. Ammonia emissions from road traffic therefore could make a significant difference to nitrogen deposition close to roads.</p> <p>Natural England therefore advise that ammonia sourced from traffic emissions should be included for assessment within the local plan HRA, as the impact from this source on designated sites is currently unclear. For further information please see this report from Air Quality Consultants (AQC) that looks at ammonia emissions from roads for assessing impacts on nitrogen-sensitive habitats. Whilst we are aware that the current CREAM model created by AQC used to assess ammonia emissions from road traffic has not been peer reviewed, at this time it has been recognised as a Best Available Tool and we deem it appropriate to be used where any caveats associated with this model are also considered within the assessment. An assessment based on the best available approach is necessary. The next stage of</p>

assessment can then consider uncertainties in the model and site specifics to decide if mitigation needs to be considered.

Further work is therefore required to inform the Habitat Regulations Assessment. Natural England will engage with the Local Planning Authority in order to produce a Statement of Common Ground (SoCG) on this matter.

'Best and most versatile' (BMV) agricultural land

Natural England notes that "the proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land. A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of 'best and most versatile' (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services". (page 74 Sustainability Appraisal).

Under the Town and Country Planning (Development Management Procedure) (England) Order 2015 (DMPO) Natural England is a statutory consultee on development that would lead to the loss of over 20ha of 'best and most versatile' (BMV) agricultural land (land graded as 1, 2 and 3a in the Agricultural Land Classification (ALC) system, where this is not in accordance with an approved plan.

Natural England would like to understand how the local planning authority have produced the evidence base and options assessment which informs the strategic site allocations.

Natural England will engage with the local planning authority to consider the cumulative impacts of the loss of BMV both in the local and national context and the challenges related to environmental impact, infrastructure, and the requirement to deliver a balance between the need for development and the potential urbanisation of the countryside including the potential mitigation measures that need to be considered.

NPPF paragraph 174e states:

Planning policies and decisions should contribute to and enhance the natural and local environment by: ... preventing new and existing development from contributing to, being put at unacceptable risk from, or being adversely affected by, unacceptable levels of soil, air, water or noise pollution or land instability. Development should, wherever possible, help to improve local environmental conditions such as air and water quality, taking into account relevant information such as river basin management plans.

Natural England provides guidance to inform further assessment of air quality and the loss of BMV agricultural land in our response to the content of the plans Strategic Policies as set out below.

Do you consider that the Newcastle-under-Lyme Borough Council Regulation 19 pre-submission draft Plan is compliant with Duty to Co-operate?

In terms of working with neighbouring authorities, Natural England notes that initially the plan was intended to be produced jointly with the City of Stoke-on-Trent, the plan does not however currently present an evidence base that demonstrates that a collaborative approach has been adopted and that the Duty to Co-operate has been fully complied with.

The Sustainability Appraisal states that: "Overall, there is potential for a cumulative adverse effect on biodiversity, owing to the fragmentation of the ecological network... Where a large amount of development is located on previously undeveloped land surrounding rural settlements, this is likely to produce a long-term irreversible negative cumulative effect regarding the urbanisation of the countryside" (p 71)

Natural England would therefore like to further understand how the areas identified to meet the City of Stoke-on-Trent's unmet employment needs are justified and appropriate and whether meeting some of the employment needs of the City of Stoke-on-Trent has led to the need to release or safeguard more land from the Green Belt in Newcastle under Lyme. If this is the case, what are the exceptional circumstances for doing this and how does this align with the allocated sites options assessment?

Recreational Pressure

In terms of the South Pennine Moors SAC and recreational impacts, the Local Plan does comply with the Duty to Co-operate. Natural England recommends that reference is made to the 'Recreation use of the South Pennine Moors and implications for strategic housing growth' report by Footprint Ecology Ref 778 date 27th March 2024. This report should both inform the evidence base and ensure that policies relating to open space/green infrastructure are as rigorous and robust as possible.

The report concludes that more data/evidence is required to determine if recreational use is causing an impact across to the South Pennine Moors and to get a better understanding of the scale and location of any impact. Natural England notes that the report records 7,000 additional dwellings in

Newcastle-under-Lyme over the plan period rather than the 8,000 included in this regulation 19 submission. Newcastle-under-Lyme Borough Council should therefore continue to work with local authority and other partners to ensure coordinated and continued cross boundary action.

Other matters

Natural England has specific concerns related to allocations in the Green Belt. Notwithstanding that, Natural England considers most of the policies within the plan to be sound and deliverable. The plan is consistent with national policy with regard to those policies that are within Natural England's remit. Further information on strengthening policies including but not limited to Soils and best and most versatile (BMV) agricultural land, preventing loss and fragmentation of habitats and supporting green infrastructure are provided below.

Vision and Strategy

Natural England notes that the Plan's vision and emerging development strategy set out a framework for the future development of Newcastle-under-Lyme and addresses the needs in relation to housing, the economy, community facilities and infrastructure, including specific reference to a proposed employment site allocation.

This vision and the related objectives should also set out the environmental ambition for the plan area and form the basis for nature recovery and enhancement, supported by the policies and proposals in the plan.

Natural England advises that the vision should also incorporate more on the local ecology and landscape features which underpin local distinctiveness such as the "strong rural character with long open views across the surrounding rural landscape, towards more distant hills often framed by trees" (p 69) Part 3 Site Specific Landscape & Visual Appraisal. "Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms" (p 187) Sustainability Appraisal.

Strategic Objectives

Natural England welcome strategic objective SO-4 relating to carbon reduction and climate change, however we do not feel that this group of thirteen strategic objectives value or reflect the Boroughs whole ecology and landscape including but not limited to the protection of soil and best and most versatile (BMV) agricultural land. We would suggest that additional objectives are added relating to: air quality, water quality and quantity, soils and landscape.

Natural England would also like to see stronger reference to the Nature Recovery Network which is one of the specific aims of the Environment Act 2021 and will underpin the approach to the enhancement of nature.

Air quality is a major threat to habitats and species. Many ecological sites are exceeding their critical loads and levels for ammonia, nitrogen deposition and acid deposition. The strengthening of the policies and the rationale behind site allocations within this plan will ensure that new development does not contribute to the further deterioration of habitats and species due to air pollution. Further advice on strengthening the plans evidence base with regards to air quality is provided in the links below:

Strategic Policies

5 Planning for Sustainable Development

Policy PSD5: Green Belt

Natural England notes that this policy "aims to protect the Borough's essential open spaces, prioritise the use of brownfield land, and guide potential future development in accordance with the National Planning Policy Framework (NPPF)".

Natural England however notes that amendments to the Green Belt boundary are proposed in the form of 14 site allocations to accommodate both the growth requirements of the borough and the employment requirements of wider Stoke-on-Trent conurbation. Natural England's has some site-specific concerns about the potential impacts of some of the green belt sites selected on the natural environment with regards to habitat loss, fragmentation and justification for the loss of BMV agricultural land.

We note the LPA's intention to release and compensate for the loss of green belt and prioritise the use of suitable brownfield land. However, the site allocations in the green belt would result in the potential loss of 263ha of Best and Most Versatile (BMV) agricultural land. The council should satisfy itself that it is making a balanced decision for sustainable development, the Sustainability Appraisal concludes that: "The Green Belt Study assessed land parcels against the contribution they make to the five purposes of the Green Belt on a four-point scale...Three allocated sites (AB12, AB33 and TK10) are located in areas which make a 'strong' overall contribution to the purposes of the Green Belt where "the site contributes to the purpose in a strong and undeniable way, whereby removal of the site from the Green Belt will detrimentally undermine this purpose" (p101)

"Site allocations on previously undeveloped land or that would result in a net loss of GI / vegetation could result in a reduced capability of the environment to provide ecosystem services including carbon storage, the storage and filtration of water including natural flood protection, as well as reduced availability and connectivity of habitats within the green network enabling movement of species. (p 165)

Strategic Site Allocations

Natural England suggests that the HRA should include a "requirement for project-level/site specific HRA's and targeted ecological surveys".

The Sustainability Appraisal concludes that:

"Some 12 allocated sites partially coincide with priority habitats, where 3.43% of the total site allocation areas coinciding with priority habitats which include deciduous woodland, good quality semi-improved grassland and Site BL18 coincides with lowland fens which is a very high distinctiveness habitat in the BNG handbook (2024). These habitats can support a range of species of principal importance. Allocated Site KL15 is adjacent to 'The Butts and Hands Wood' ancient woodland, with a further 20 allocated sites located in close proximity to ancient woodlands. P158

"Six allocated sites (Sites CT20, HD10, KL13, RC8, SP11(2) and SP23) are located within areas of 'high' or 'very high' habitat distinctiveness that provide high biodiversity value. Whilst in many cases these habitats can be conserved alongside development, it is likely that in some cases fragmentation or loss of habitats and connections between habitats will occur"

"The majority of allocated sites are located on previously undeveloped land, which would result in the loss of soil resources and the ecosystem services they provide. (p 159) The development of new buildings on previously undeveloped land would be expected to result in a direct loss of soil resource, with little or no scope for mitigation" (p 216)

"The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution. (p 68)

For all sites, Natural England advises that the hydrological catchment within which the site sits is taken into consideration, with regards to the potential impact of the developments proposed on the adjoining watercourses and wider catchments, including but not limited to surface water runoff (including during construction), existing and required capacity of Waste Water Treatment Works (WwTW) and water supply and flooding issues. Each site will require site specific investigation, and the council should understand the impact of all the sites put forward individually and in combination.

Natural England has specific concerns and or requires further information about the following 'Strategic Site Allocations' which could potentially impact on designated sites as a result of air and water quality and/or lead to the loss and / or fragmentation of priority habitats and BMV agricultural land:

BL18 – Clough Hall Playing Fields, Talke

Natural England would like to further understand this larger residential development proposal with regards to the potential impacts on the lowland fen habitat.

KL13 & KL15 – Land South of A525 between Keele University and Newcastle

Natural England notes this proposal for Employment development is immediately adjacent to ancient woodland priority habitat.

HM28 – Land off East Lawns, Betley

Existing and projected water quality issues at Betley Mere will need to be considered with regards to this allocation.

LW53 – Loggerheads

Natural England notes this residential housing development proposal is located within the IRZ of protected sites (Burnt Wood SSSI) which states that development proposals of 50 or more homes outside existing settlements/urban areas in these zones should be consulted upon with Natural England.

SP11 – Former Keele Municipal Golf Course

This Larger residential development is categorised in the Landscape Assessment as having a Major adverse impact on the local Landscape.

AB2 – Land Adjoining Corner of A500 and M6 Southbound

Natural England notes this proposed employment allocation released entirely from the green belt, which comprises 70ha of grade 2 BMV agricultural land. The Landscape study concludes that the: "Proposed development scenario is likely to have a major adverse effect on the SA objective with no satisfactory mitigation possible" (p 15). With regards to potential Air Quality impacts on protected sites Natural England notes from the options analysis that "The loss or potential moving of a layby to enable access to the site could be problematic indicating potential issues with site access and traffic flow. An increase in HGV and personal vehicle traffic is anticipated, which could lead to potential congestion and air pollution in the area". Natural England would therefore also like to understand the evidence base further including the rationale for an alternative site TK30 @ Talke A34 / A500 roundabout being ruled out.

Policy PSD6: Health and Wellbeing

Natural England welcome this policy direction in terms of safeguarding health and amenity and supporting healthy communities, through the protection and provision of high-quality open spaces, including allotments and the promotion of active travel transport choices Further information on joining up Nature Recovery and Green Infrastructure (GI) with health priorities is set out below. If more cities and towns can be creatively designed and managed, with nature and communities at their heart, we will see nature and people thrive. This is something we set out to inspire at Natural England when developing the Green Infrastructure Framework and Design Guide. Natural England's People and Nature survey tells us that, for 82% of people 'being in nature makes me happy'. With the cost-of-living crisis, 'free' places like local parks and greenspace, have become even more important. The value of these spaces for the economy is estimated at £28.7 billion per year.

Green infrastructure in towns and cities provides places to relax, exercise, and spend time outdoors; cools urban areas; reduces flooding by allowing water to permeate the ground rather than overwhelm our drains; increases biodiversity and helps to reduce inequalities in access to nature. Options assessments for development sites and related green and blue Infrastructure within and between developments, green spaces and designated sites should; include soft transition and consider potential direct and indirect implications on sustainable use for example visitor pressure and transport / access options.

The natural environment affords the best 'natural' play opportunities for children while offering multifunctional nature-based solutions to climate change etc. These can be blended into wildlife rich green infrastructure and green open spaces that can act as destination play sites for local children (See best practice at Play England and Play Wales) that have proven health and wellbeing value.

Evidence for nature play and health:

Play, naturally: a review of children's natural play

Nature for health and wellbeing | The Wildlife Trusts

Good practice in social prescribing for mental health: the role of nature-based interventions - NECR228 (naturalengland.org.uk)

6 Climate and Renewable Energy

Whilst Natural England welcomes this group of policies we recommend including Policy CRE1: Climate Change and Policy CRE2: Renewable Energy within the Sustainable Environment (SE) group of policies to achieve a collective strategic focus on sustainable development and working toward achieving net zero alongside the SE policies relating to Pollution and Air Quality (SE1) and requirements for sustainable water management measures to reduce water use, natural flood protection features alongside the specific policies on Sustainable Drainage Systems (Policy SE4:)

Natural England continues to work with the LPAs across the region on understanding air pollution across area boundaries (see comments and links in objectives section.)

10 Infrastructure and Transport Policy.

Policy IN4 Cycleways, Bridleways and Public Rights of Way

Natural England welcomes the inclusion of this group of policies which seek to maintain and enhance the network of public rights of way that cross the borough. We note that the sustainability appraisal states that "the borough has relatively poor accessibility to the cycle network and is the lowest performing in the county for walking zones" (p 206) and that, "eight allocated sites (AB2, AB12, AB33, HD10, KL15, MD29, SP11(3) and TK10) do not currently have safe pedestrian or cycle access adjacent to the site,

where site end users may rely upon less sustainable modes of transport including private car use". (p 180)

11 Sustainable Environment

Natural England welcomes this group of policies and has the following policy specific comments:

Policy SE1: Pollution and Air Pollution.

Natural England welcomes this policy that notes that development proposals which are likely to result in detrimental impacts on air quality, will not be permitted unless it can be demonstrated that mitigation measures effectively address these impacts. (Comments on Air Quality are also provided on page 2 and 4 of this letter). The promotion of sustainable and active travel options, low-emission technologies and enhancement of green infrastructure to absorb air pollution is also noted. (see comment above re integrating the group: 6 Policies Climate and Renewable Energy).

Policy SE7: Biodiversity Net Gain

Natural England supports the inclusion of a policy on BNG. We suggest the following minor amendments to further improve the plan policy.

The BNG policy should make it clear that biodiversity net gain is not applied to irreplaceable habitats, and that any mitigation and/or compensation requirements for Habitats sites should be dealt with separately from biodiversity net gain provision. The policy should also set out how biodiversity net gain will be delivered and managed through the lifetime of the scheme and including monitoring requirements. This should include indicators to demonstrate the amount and type of gain provided through development. The indicators should be as specific as possible to help build an evidence base to take forward for future reviews of the plan, for example the total number and type of biodiversity units created, the number of developments achieving biodiversity net gains and a record of on-site and off-site contributions.

Natural England notes that the Sustainability Appraisal states "Despite the BNG provisions at the site level, there remains potential for a cumulative adverse impact on biodiversity at the landscape scale, owing to incremental habitat losses. As a result of development within the Local Plan undeveloped land will be lost which will include the loss of soil resources, habitats recognised as being of 'high' and 'very high' distinctiveness, and potentially ecological links between biodiversity assets, whereby the policies will not be expected to fully mitigate the fragmentation of the ecological network. Fragmentation of the ecological network across Newcastle-under-Lyme is expected to be a long-term and permanent significant effect." (p 162)

Policy SE8: Biodiversity and Geodiversity

Natural England supports the inclusion of this policy to protect the Boroughs internationally, nationally and locally designated sites important for their biodiversity value and to enhance the natural environment and work with partners toward Nature Recovery.

We particularly welcome the plans recognition of the value of "wider ecological networks" stating that "Other sites, both individually and collectively, that are not designated can also contribute towards protecting and enhancing diversity of species locally".

Policy SE10: Landscape

Natural England welcomes this policy aimed at ensuring that "development proposals should protect and enhance the character, quality, beauty, and tranquillity of the Borough". We note from the sustainability appraisal that "The entirety of the south of the borough is identified as being high in relation to landscape sensitivity, which starts in Audley in the north and covers the southern area of the borough, including Loggerheads and Alington." We agree that "Alteration of the landscape character is a long-term and permanent significant effect... There is potential for a cumulative adverse effect on landscape character resulting from the development proposed in the Plan". (p193) SA.

Natural England has divided England into 159 distinct natural areas called National Character Areas (NCAs) Newcastle-under-Lyme falls within two NCAs: Shropshire, Cheshire and Staffordshire Plain: gently rolling plains dominated by intensive dairy farming, beef and arable production; The Potteries and Churnet Valley: strong contrast between the industrialised landscape of the Potteries and the pastoral, strongly dissected hills and small plateaux that flank the Churnet and Dove valleys.

Natural agrees with the following statement in the sustainability appraisal: "Although various policies aim to ensure that development conserves and enhances landscape character and distinctiveness, when combined with Local Plan policies that support infrastructural improvements such as for transportation, water, and waste, this is likely to lead to a long-term and irreversible cumulative adverse effect on landscape character and tranquillity and associated indicators such as dark skies." (p72)

Policy SE11: Trees, hedgerows, and woodland

Natural England welcomes this plans recognition that "Trees, hedgerows, and woodlands are integral to the distinctive character and ecological health of the Borough of Newcastle-under-Lyme, defining landscapes across both urban and rural settlements." And that "This policy prioritises the protection of existing natural assets, seeking to not only preserve, but actively enhance, these valuable features wherever possible".

Policy SE13: Soil and Agricultural Land

Natural England has concerns about the justification for the loss of BMV agricultural land within this plan. "The proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land. A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of 'best and most versatile' (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services." (page74) (SA)

Natural England notes that policy SE13 states: "Outside of sites allocated for development in the Local Plan, development proposals should avoid the loss of best and most versatile agricultural land (BMV) unless it can be demonstrated that the benefits of development clearly outweigh the loss of the land and every effort has been made to mitigate for the overall impact of the development on best and most versatile agricultural land."

With regards to Soil and Agricultural Land Quality, Natural England advises that The Local Plan should give appropriate weight to the roles performed by the area's soils. These should be valued as a finite multi-functional resource which underpin our wellbeing and prosperity. Decisions about development should take full account of the impact on soils, their intrinsic character and the sustainability of the many ecosystem services they deliver.

The 25 Year Environment Plan (25YEP) sets out government action to help the natural world regain and retain good health, including highlighting the need to:

- protect the best agricultural land
- put a value on natural capital, including healthy soil
- ensure all soils are managed sustainably by 2030
- restore and protect peatland

Soil is a finite resource which plays an essential role within sustainable ecosystems, performing an array of functions supporting a range of ecosystem services, including storage of carbon and water, the infiltration and transport of water, nutrient cycling, a buffer against pollution and provision of food. In order to safeguard soil resources as part of the overall sustainability of the development, it is important that the soil resource is able to retain as many of its important functions as possible. This can be achieved through careful soil management and appropriate, beneficial soil re-use, with consideration on how any adverse impacts on soils can be avoided or minimised.

The conservation and sustainable management of soils is reflected in the National Planning Policy Framework (NPPF), particularly in paragraph 180(a), 180(b) and 181 (footnote 62). When planning authorities are considering land use change, the permanency of the impact on soils is an important consideration. Particular care over planned changes to the most potentially productive soil is needed, for the ecosystem services it supports including its role in agriculture and food production.

Plan policies should therefore take account of the impact on land and soil resources and the wide range of vital functions (ecosystem services) they provide in line with paragraph 180(b) of the NPPF.

Soil Plan Policies

We strongly advise that at a minimum, the plan includes core policies for:

- the protection of best and most versatile (BMV) agricultural land (Grades 1, 2 and 3a in the Agricultural Land Classification (ALC)); and
- for the protection of and sustainable management of soils as a resource for the future.
- Areas of poorer quality land (ALC grades 3b, 4, 5) should be preferred to areas of higher quality land (grades 1, 2 and 3a).
- Recognise that development has an irreversible adverse impact on the finite national and local stock of BMV land.
- Conforms to NPPF and Planning Practice Guidance (Natural Environment and Minerals).
- Requires detailed ALC surveys to support plan allocations and for subsequent planning applications (for all sites larger than 5 ha). ALC surveys to support plan allocations and for subsequent planning applications for smaller sites (1 – 5 ha) would be welcomed.
- Recognise that development (soil sealing) has a major and usually irreversible adverse impact on soils.
- Soils of high environmental value (e.g., wetland and carbon stores such as peatland, low nutrient soils; or soils of high environmental value in the local context) should also be considered as part of ecological connectivity (Nature Recovery Network / Green Infrastructure).
- Requires soil handling and sustainable soil management strategies based on a detailed assessment of the soil resource based on best practice guidance (for all sites larger than 5 ha), ideally as part of the planning application process for major sites to help inform master-planning, and to safeguard the continued delivery of ecosystem services through careful soil management and appropriate, beneficial soil re-use. Soil handling and sustainable soil management strategies for smaller sites (1 – 5 ha) would be welcomed.
- Reference should be made to Defra's Construction Code of Practice for the Sustainable Use of Soils on Construction Sites
- In addition, for minerals and other temporary forms of development, plans for reinstatement, restoration and aftercare will be required (or for solar, a commitment to do so if the operational life is in decades); normally this will be return to the former land quality (ALC grade)
- Refers to soils issues within relevant policy areas such as renewable energy, climate change, green infrastructure and biodiversity net gain, flood schemes, managed realignment, development design and landscaping.

Policy SE14: Green and Blue Infrastructure

Natural England supports this policy. Well-designed cross boundary multi-functional green infrastructure contributes greatly to a number of benefits both for people and nature. Your green and blue (for example cross boundary canals) infrastructure should dovetail with your biodiversity net gain strategies to maximise benefits.

We would advise that the Local Authority also considers Natural England's Green Infrastructure Framework of Principles and Standards for England. As stated in our document, "Green infrastructure (GI) is part of the solution to many of the challenges we face; health inequalities, biodiversity crisis, climate change, nature recovery and levelling up. The GI framework supports local authorities, developers, parks and greenspace managers and local communities to enhance and create new good quality green infrastructure."

We would also suggest reference is made to the emerging Local Nature Recovery Strategy. Preparing Local Nature Recovery Strategies (LNRS) is a statutory requirement under the Environment Act 2021. LNRS are designed to work closely alongside other measures in the Act including supporting the delivery of mandatory biodiversity net gain and providing a focus for a strengthened duty on all public authorities to conserve and enhance biodiversity. They will also underpin the Nature Recovery Network, alongside work to develop partnerships and to integrate nature into our incentives and land management activities. Each LNRS will be specific and tailored to its area. The responsible authorities and people involved in preparing a strategy can choose how they want it to look, but every strategy must contain:

1. A local habitat map.
2. A written statement of biodiversity priorities. Statutory guidance for responsible authorities explains in detail what these 2 things should contain. Together they set out what the strategy is aiming to achieve and what practical actions will help do this. They will also propose where actions could be carried out for best effect and to connect and expand existing areas that are important for nature. We expect local nature recovery strategies to propose actions such as the:
 - creation of wetlands
 - restoration of peatlands
 - planting of trees and hedgerows

- more sustainable management of existing woodlands and other habitats like grasslands These actions are intended to help nature itself and to also help improve the wider natural environment.

Whilst the Staffordshire Local Nature Recovery Strategy (LNRS) is currently a work in progress, Newcastle-under-Lyme Borough Council Regulation 19 pre-submission should still be consistent with NPPF Paragraph 185 in terms of setting out local habitat priorities and identifying potential measures by which they can be achieved, alongside mapping areas that could become of particular importance in the future.

Natural England encourages Newcastle Under Lyme Borough Council via their Local Nature Recovery Strategy to actively develop cross border cooperation between other Local Planning Authorities (LPA) (for example Staffordshire Moorlands Borough Council) in coordinating land development projects that impact on local biodiversity sites to ensure that local biodiversity corridors are maintained and link up other local important sites for nature conservation.

This is a good way of achieving nature recovery and preparing to deliver the LNRS alongside enabling the local authority and its partners to identify, map and safeguard site areas, including green and blue infrastructure opportunities and interlinkages.

Habitats Regulations Assessment

Natural England notes that this Local Plan is not directly connected with or necessary to the management of any European site. A screening assessment has been undertaken which identified a number of Likely Significant Effects (LSE) associated with the Local Plan. Taking no account of mitigation measures, the HRA concludes that Local Plan has the potential to affect the following European sites:

- Cannock Chase SAC
- Humber Estuary SAC, SPA and Ramsar
- Mersey Estuary SPA and Ramsar
- Midland Meres and Mosses Phase 1 Ramsar
- Midland Meres and Mosses Phase 2 Ramsar
- Pasturefields Salt Marsh SAC
- Peak District Dales SAC
- Peak District Moors (South Pennine Moors Phase 1) SPA
- Severn Estuary SAC, SPA and Ramsar
- South Pennine Moors SAC
- West Midland Mosses SAC

We welcome that your HRA includes the Humber Estuary SAC, SPA and Ramsar site which is hydrologically connected to the river Trent. If the Local Plan resulted in significant water pollution, this European site could be affected and has therefore been screened in, in relation to water quality only, on a precautionary basis. Natural England however notes that the Sustainability Appraisal identifies "A long-term cumulative adverse effect ...in terms of water quality" (p 148) as a result of the plan, this is not fully reflected in the current HRA.

Natural England note that the Sustainability Appraisal states: that "the entirety of the borough falls within IRZs of one or more SSSIs. All five SSSIs within the borough are in 'unfavourable' condition: Burnt Wood SSSI, Maer Pool SSSI, Black Firs and Cranberry Bog SSSI (Midlands Meres and Mosses Phase 2 Ramsar), Betley Mere SSSI (Midlands Meres and Mosses Phase 1 Ramsar) and Metallic Tileries, Parkhouse SSSI."

Natural England are also aware of the extensive network of ancient woodland spread across the borough, totalling 707.60 hectares, as well as a large quantity of priority habitats, totalling 1,791 hectares.

Natural England agree that the following designated sites and related priority habitats in adjoining LPA areas may also be affected by development through several pathways, including fragmentation, recreational pressure and/or pollution (including Air and Water Quality). Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI, Wybunbury Moss SAC SSSI, Tyrley Canal Cutting SSSI, King's and Hargreaves Wood SSSI, Gannister Quarry SSSI, Roe Park Woods SSSI, Wetley Moore SSSI, Churnet Valley SSSI, Hatherton Flush SSSI, Sounds Heath SSSI, Ford Green Redebed SSSI, and Cop Mere SSSI.

It is noted that the Appropriate Assessment stage of the HRA assessed potential impacts by topic;

- Impacts on designated features affected by a possible deterioration in air quality
- Impacts on water quality and quantity associated with increased levels of built development.
- Impacts associated with increased recreational pressure at European sites; and
- Consideration of impacts at associated functionally linked land.

Natural England notes that the HRA also factored the following into the assessment process "the protective framework provided by the Local Plan and existing protection measures set out in high level strategic policy and existing planning policy frameworks that serve to help overcome the identified potential adverse effects" and that "taking into consideration these factors, it is concluded that the Local Plan would have no adverse impact on site integrity at any European site, either alone or in-combination.

Natural England disagree agree with this conclusion that for those Habitats sites in the area of search with features sensitive to air pollution, adverse effects on their integrity, alone or in-combination, can be ruled out for the reasons set out at the beginning of this letter on page 2 and repeated in part below:

Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot currently be ruled out at the following internationally designated sites:

- Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI
- Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI

Natural England are currently in discussion with a number of the Staffordshire and West Midlands LPA's with regards to the cumulative impacts of air quality. We advise that further work is required to inform the HRA. The HRA should demonstrate that there are no adverse effects on integrity of Habitat sites as a result of this Local Plan, alone and in combination with other plans and projects. With regards to allocated sites, it is unclear whether the individual sites put forward in the Local Plan have been assessed through the Habitat Regulations Assessment process and how mitigation will be applied here.

Sustainability Appraisal

Natural England has reviewed the Sustainability Appraisal (SA) and included comments taken from the document throughout our response.

	<p>The SA is a comprehensive document which should be reviewed in strengthening the HRA, particularly with regards to residual adverse effects that would be expected to remain in terms of wastewater following the implementation of the Local Plan policies. (p 141) Natural England notes that “Increased pressure on wastewater treatment has the potential to be a long term and potentially permanent significant effect” (p 142)</p> <p>The SA recognises the local distinctiveness of the plan area;</p> <p>“The Borough itself is largely rural in nature and supports some high-quality agricultural land, but is more heavily built up towards the north east surrounding Stoke-on-Trent. (p 8)</p> <p>Newcastle-under-Lyme has a strong rural character with a high-quality landscape and countryside, with some areas identified as being sensitive to change as a result of new development. (p 19)</p> <p>Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms make up the key features of some of these Landscape Character Types.” (p 20)</p> <p>Sets out the area specific barriers to achieving sustainable growth;</p> <p>“Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)</p> <p>Loss of tranquillity The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution.(p 68)</p> <p>“The pre-mitigation SA assessments identified negative impacts in relation to air quality due to the proximity of sites to major roads, landscape character due to the location of sites within areas of high landscape sensitivity, close proximity to the PRoW network and potential for coalescence and urban sprawl, habitat sites, priority habitats, habitat distinctiveness, loss of undeveloped land, ‘best and most versatile’ (BMV) agricultural land, coinciding with mineral safeguarding areas (MSAs) and areas of surface water flood risk (SWFR); and access to healthcare facilities, schools, the local cycle network and railway network. (p 40)</p> <p>There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work. (p 21)</p> <p>Trends in transport choice are unlikely to change significantly, and private car use would continue to increase as the selected method of transport to work, with potential adverse impacts on air quality in the borough.”(p 23)</p> <p>Considers the local and cumulative significance of soil loss alongside the ecological implications:</p> <p>“Loss of soil resources, BMV land and ecosystem services The proposed allocations would cumulatively result in the loss of up to approximately 342ha of previously undeveloped land, including up to 263ha of BMV agricultural land. The proposed development would be expected to reduce the ability of the local soil biome to effectively provide ecosystem services, to some extent. Additionally, the loss of permeable soils could potentially increase the risk of flooding and result in a loss of biodiversity across the Plan area. Loss of soil can also result in an increase in soil erosion and have subsequent impacts on agricultural yield.(p 68) The majority of the borough is ALC Grade 3 soil, with areas of ALC Grade 2 scattered across the borough. Grade 2 and potentially Grade 3 represents some of the borough’s BMV agricultural land and should be conserved wherever possible (p 21)</p> <p>A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of BMV land to be lost as a result of the development proposed in the Local Plan.” (p 59)’</p> <p>Other Advice</p> <p>Further general advice is provided within Natural England Advice Note – Local Plans February 2024, attached at (Appendix A) - see attachment</p>

Q6 Details	<p>Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.</p> <p>Natural England welcomes the opportunity to comment at this stage of the Local Plan and particularly supports the inclusion of policies on green and blue infrastructure, biodiversity, health and wellbeing, trees hedgerows and woodlands. We have reviewed the consultation documents and provide comments that relate to the soundness of the Local Plan and that are most relevant to our interest in the Natural Environment.</p> <p>Natural England has adopted a robust precautionary approach within this plan response. Whilst we welcome the content of the Local Plan, Natural England advises that the plan is currently at risk of being unsound and/or not legally compliant due to the potential impacts on air quality in relation to internationally designated nature conservation sites and the justification for the potential loss of 263ha best and most versatile (BMV) agricultural land. Further detail is provided below.</p> <p>Natural England have also provided other advice within this submission relating to further improvements that could strengthen plan policies and specific strategic site options and related mitigation.</p> <p>Do you consider that the Newcastle Under Lyme Plan is Sound and Legally Compliant?</p> <p>Natural England notes that the plan is at the pre-submission stage and as such your authority is seeking confirmation on the soundness of the plan. Having reviewed the plan and supporting documents, Natural England considers the pre-submission plan in its current form is not sound or legally compliant, this is due to a lack of evidence with regards to air quality and the cumulative loss of BMV agricultural land both in a local and national context.</p> <p>Air quality</p> <p>Natural England notes that the Sustainability Appraisal states that "Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)</p> <p>As Natural England understands it the current evidence base used to conduct the HRA cannot rule out adverse impacts on designated sites. The HRA states at page 22 3.4.16 "At the time of writing, the traffic modelling run for the final suite of Regulation 19 allocations had not been undertaken." Appendix A lists the local plans for neighbouring LPA's concluding that 'in combination' with plans and projects (approved and those yet to be implemented) they may trigger in-combination effects on European sites as a result of air quality, particularly as we understand it in the key commuting areas.</p> <p>Natural England notes that Annual Average Daily Traffic (AADT) data and traffic modelling in the Strategic Transport Assessment (STA) concludes a potential reduction in travel and related air pollution at allocated sites as a result of a predicted preference in the use of public transport. We are surprised by this projected decrease in both traffic and related air pollution, particularly as one employment allocation site includes a 200-bay lorry park and increased congestion is predicted at junction 16 of the M6 where it joins the A500 in a rural location with no existing rural transport provision. The Sustainability Appraisal also notes that: "There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work". (p 206)</p>

Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot therefore currently be ruled out at the following internationally designated sites:

- Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI
- Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI

The HRA outlines that the main source of ammonia emissions is agricultural practice, and that material increases in NH₃ emissions are unlikely to be associated with the proposed local plan. At Black Firs and Cranberry Bog and Oakhanger Moss, any increase in nitrogen deposition has the potential to exacerbate pollution levels and thereby undermine the reasons for notification of these sites as a Ramsar.

Ammonia can be emitted from vehicle exhaust emissions as a by-product of the catalytic conversion process designed to reduce emissions of nitrogen oxide. As traffic composition transitions toward more petrol and electric cars (i.e., fewer diesel cars on the road), catalytic converters may aid in reducing NO_x emissions but result in increased ammonia emissions. Ammonia emissions from road traffic therefore could make a significant difference to nitrogen deposition close to roads.

Natural England therefore advise that ammonia sourced from traffic emissions should be included for assessment within the local plan HRA, as the impact from this source on designated sites is currently unclear. For further information please see this report from Air Quality Consultants (AQC) that looks at ammonia emissions from roads for assessing impacts on nitrogen-sensitive habitats. Whilst we are aware that the current CREAM model created by AQC used to assess ammonia emissions from road traffic has not been peer reviewed, at this time it has been recognised as a Best Available Tool and we deem it appropriate to be used where any caveats associated with this model are also considered within the assessment. An assessment based on the best available approach is necessary. The next stage of assessment can then consider uncertainties in the model and site specifics to decide if mitigation needs to be considered.

Further work is therefore required to inform the Habitat Regulations Assessment. Natural England will engage with the Local Planning Authority in order to produce a Statement of Common Ground (SoCG) on this matter.

'Best and most versatile' (BMV) agricultural land

Natural England notes that "the proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land. A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of 'best and most versatile' (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services". (page 74 Sustainability Appraisal).

Under the Town and Country Planning (Development Management Procedure) (England) Order 2015 (DMPO) Natural England is a statutory consultee on development that would lead to the loss of over 20ha of 'best and most versatile' (BMV) agricultural land (land graded as 1, 2 and 3a in the Agricultural Land Classification (ALC) system, where this is not in accordance with an approved plan.

Natural England would like to understand how the local planning authority have produced the evidence base and options assessment which informs the strategic site allocations.

Natural England will engage with the local planning authority to consider the cumulative impacts of the loss of BMV both in the local and national context and the challenges related to environmental impact, infrastructure, and the requirement to deliver a balance between the need for development and the potential urbanisation of the countryside including the potential mitigation measures that need to be considered.

NPPF paragraph 174e states:

Planning policies and decisions should contribute to and enhance the natural and local environment by: ... preventing new and existing development from contributing to, being put at unacceptable risk from, or being adversely affected by, unacceptable levels of soil, air, water or noise pollution or land instability. Development should, wherever possible, help to improve local environmental conditions such as air and water quality, taking into account relevant information such as river basin management plans.

Natural England provides guidance to inform further assessment of air quality and the loss of BMV agricultural land in our response to the content of the plans Strategic Policies as set out below.

Do you consider that the Newcastle-under-Lyme Borough Council Regulation 19 pre-submission draft Plan is compliant with Duty to Co-operate?

In terms of working with neighbouring authorities, Natural England notes that initially the plan was intended to be produced jointly with the City of Stoke-on-Trent, the plan does not however currently present an evidence base that demonstrates that a collaborative approach has been adopted and that the Duty to Co-operate has been fully complied with.

The Sustainability Appraisal states that: "Overall, there is potential for a cumulative adverse effect on biodiversity, owing to the fragmentation of the ecological network... Where a large amount of development is located on previously undeveloped land surrounding rural settlements, this is likely to produce a long-term irreversible negative cumulative effect regarding the urbanisation of the countryside" (p 71) Natural England would therefore like to further understand how the areas identified to meet the City of Stoke-on-Trent's unmet employment needs are justified and appropriate and whether meeting some of the employment needs of the City of Stoke-on-Trent has led to the need to release or safeguard more land from the Green Belt in Newcastle under Lyme. If this is the case, what are the exceptional circumstances for doing this and how does this align with the allocated sites options assessment?

Recreational Pressure

In terms of the South Pennine Moors SAC and recreational impacts, the Local Plan does comply with the Duty to Co-operate. Natural England recommends that reference is made to the 'Recreation use of the South Pennine Moors and implications for strategic housing growth' report by Footprint Ecology Ref 778 date 27th March 2024. This report should both inform the evidence base and ensure that policies relating to open space/green infrastructure are as rigorous and robust as possible.

The report concludes that more data/evidence is required to determine if recreational use is causing an impact across to the South Pennine Moors and to get a better understanding of the scale and location of any impact. Natural England notes that the report records 7,000 additional dwellings in Newcastle-under-Lyme over the plan period rather than the 8,000 included in this regulation 19 submission. Newcastle-under-Lyme Borough Council should therefore continue to work with local authority and other partners to ensure coordinated and continued cross boundary action.

Other matters

Natural England has specific concerns related to allocations in the Green Belt. Notwithstanding that, Natural England considers most of the policies within the plan to be sound and deliverable. The plan is consistent with national policy with regard to those policies that are within Natural England's remit. Further information on strengthening policies including but not limited to Soils and best and most versatile (BMV) agricultural land, preventing loss and fragmentation of habitats and supporting green infrastructure are provided below.

Vision and Strategy

Natural England notes that the Plan's vision and emerging development strategy set out a framework for the future development of Newcastle-under-Lyme and addresses the needs in relation to housing, the economy, community facilities and infrastructure, including specific reference to a proposed employment site allocation.

This vision and the related objectives should also set out the environmental ambition for the plan area and form the basis for nature recovery and enhancement, supported by the policies and proposals in the plan.

Natural England advises that the vision should also incorporate more on the local ecology and landscape features which underpin local distinctiveness such as the "strong rural character with long open views across the surrounding rural landscape, towards more distant hills often framed by trees" (p 69) Part 3 Site Specific Landscape & Visual Appraisal. "Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms" (p 187) Sustainability Appraisal.

Strategic Objectives

Natural England welcome strategic objective SO-4 relating to carbon reduction and climate change, however we do not feel that this group of thirteen strategic objectives value or reflect the Boroughs whole ecology and landscape including but not limited to the protection of soil and best and most versatile (BMV) agricultural land. We would suggest that additional objectives are added relating to: air quality, water quality and quantity, soils and landscape.

Natural England would also like to see stronger reference to the Nature Recovery Network which is one of the specific aims of the Environment Act 2021 and will underpin the approach to the enhancement of nature.

Air quality is a major threat to habitats and species. Many ecological sites are exceeding their critical loads and levels for ammonia, nitrogen deposition and acid deposition. The strengthening of the policies and the rationale behind site allocations within this plan will ensure that new development does not contribute to the further deterioration of habitats and species due to air pollution. Further advice on strengthening the plans evidence base with regards to air quality is provided in the links below:

Strategic Policies

5 Planning for Sustainable Development

Policy PSD5: Green Belt

Natural England notes that this policy "aims to protect the Borough's essential open spaces, prioritise the use of brownfield land, and guide potential future development in accordance with the National Planning Policy Framework (NPPF)".

Natural England however notes that amendments to the Green Belt boundary are proposed in the form of 14 site allocations to accommodate both the growth requirements of the borough and the employment requirements of wider Stoke-on-Trent conurbation. Natural England's has some site-specific concerns about the potential impacts of some of the green belt sites selected on the natural environment with regards to habitat loss, fragmentation and justification for the loss of BMV agricultural land.

We note the LPA's intention to release and compensate for the loss of green belt and prioritise the use of suitable brownfield land. However, the site allocations in the green belt would result in the potential loss of 263ha of Best and Most Versatile (BMV) agricultural land. The council should satisfy itself that it is making a balanced decision for sustainable development, the Sustainability Appraisal concludes that: "The Green Belt Study assessed land parcels against the contribution they make to the five purposes of the Green Belt on a four-point scale...Three allocated sites (AB12, AB33 and TK10) are located in areas which make a 'strong' overall contribution to the purposes of the Green Belt where "the site contributes to the purpose in a strong and undeniable way, whereby removal of the site from the Green Belt will detrimentally undermine this purpose" (p101)

"Site allocations on previously undeveloped land or that would result in a net loss of GI / vegetation could result in a reduced capability of the environment to provide ecosystem services including carbon storage, the storage and filtration of water including natural flood protection, as well as reduced availability and connectivity of habitats within the green network enabling movement of species. (p 165)

Strategic Site Allocations

Natural England suggests that the HRA should include a “requirement for project-level/site specific HRA’s and targeted ecological surveys”.

The Sustainability Appraisal concludes that:

“Some 12 allocated sites partially coincide with priority habitats, where 3.43% of the total site allocation areas coinciding with priority habitats which include deciduous woodland, good quality semi-improved grassland and Site BL18 coincides with lowland fens which is a very high distinctiveness habitat in the BNG handbook (2024). These habitats can support a range of species of principal importance. Allocated Site KL15 is adjacent to ‘The Butts and Hands Wood’ ancient woodland, with a further 20 allocated sites located in close proximity to ancient woodlands. P158

“Six allocated sites (Sites CT20, HD10, KL13, RC8, SP11(2) and SP23) are located within areas of ‘high’ or ‘very high’ habitat distinctiveness that provide high biodiversity value. Whilst in many cases these habitats can be conserved alongside development, it is likely that in some cases fragmentation or loss of habitats and connections between habitats will occur”

“The majority of allocated sites are located on previously undeveloped land, which would result in the loss of soil resources and the ecosystem services they provide. (p 159) The development of new buildings on previously undeveloped land would be expected to result in a direct loss of soil resource, with little or no scope for mitigation” (p 216)

“The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution. (p 68)

For all sites, Natural England advises that the hydrological catchment within which the site sits is taken into consideration, with regards to the potential impact of the developments proposed on the adjoining watercourses and wider catchments, including but not limited to surface water runoff (including during construction), existing and required capacity of Waste Water Treatment Works (WwTW) and water supply and flooding issues. Each site will require site specific investigation, and the council should understand the impact of all the sites put forward individually and in combination.

Natural England has specific concerns and or requires further information about the following ‘Strategic Site Allocations’ which could potentially impact on designated sites as a result of air and water quality and/or lead to the loss and / or fragmentation of priority habitats and BMV agricultural land:

BL18 – Clough Hall Playing Fields, Talke

Natural England would like to further understand this larger residential development proposal with regards to the potential impacts on the lowland fen habitat.

KL13 & KL15 – Land South of A525 between Keele University and Newcastle

Natural England notes this proposal for Employment development is immediately adjacent to ancient woodland priority habitat.

HM28 – Land off East Lawns, Betley

Existing and projected water quality issues at Betley Mere will need to be considered with regards to this allocation.

LW53 – Loggerheads

Natural England notes this residential housing development proposal is located within the IRZ of protected sites (Burnt Wood SSSI) which states that development proposals of 50 or more homes outside existing settlements/urban areas in these zones should be consulted upon with Natural England.

SP11 – Former Keele Municipal Golf Course

This Larger residential development is categorised in the Landscape Assessment as having a Major adverse impact on the local Landscape.

AB2 – Land Adjoining Corner of A500 and M6 Southbound

Natural England notes this proposed employment allocation released entirely from the green belt, which comprises 70ha of grade 2 BMV agricultural land. The Landscape study concludes that the: “Proposed development scenario is likely to have a major adverse effect on the SA objective with no satisfactory mitigation possible” (p 15). With regards to potential Air Quality impacts on protected sites Natural England notes from the options analysis that “The loss or potential moving of a layby to enable access to the site could be problematic indicating potential issues with site access and traffic flow. An increase in HGV and personal vehicle traffic is anticipated, which could lead to potential congestion and air pollution in the area”. Natural England would therefore also like to understand the evidence base further including the rationale for an alternative site TK30 @ Talke A34 / A500 roundabout being ruled out.

Policy PSD6: Health and Wellbeing

Natural England welcome this policy direction in terms of safeguarding health and amenity and supporting healthy communities, through the protection and provision of high-quality open spaces, including allotments and the promotion of active travel transport choices Further information on joining up Nature Recovery and Green Infrastructure (GI) with health priorities is set out below. If more cities and towns can be creatively designed and managed, with nature and communities at their heart, we will see nature and people thrive. This is something we set out to inspire at Natural England when developing the Green Infrastructure Framework and Design Guide. Natural England’s People and Nature survey tells us that, for 82% of people ‘being in nature makes me happy’. With the cost-of-living crisis, ‘free’ places like local parks and greenspace, have become even more important. The value of these spaces for the economy is estimated at £28.7 billion per year.

Green infrastructure in towns and cities provides places to relax, exercise, and spend time outdoors; cools urban areas; reduces flooding by allowing water to permeate the ground rather than overwhelm our drains; increases biodiversity and helps to reduce inequalities in access to nature. Options assessments for development sites and related green and blue Infrastructure within and between developments, green spaces and designated sites should; include soft transition and consider potential direct and indirect implications on sustainable use for example visitor pressure and transport / access options.

The natural environment affords the best ‘natural’ play opportunities for children while offering multifunctional nature-based solutions to climate change etc. These can be blended into wildlife rich green infrastructure and green open spaces that can act as destination play sites for local children (See best practice at Play England and Play Wales) that have proven health and wellbeing value.

Evidence for nature play and health:

Play, naturally: a review of children's natural play

Nature for health and wellbeing | The Wildlife Trusts

Good practice in social prescribing for mental health: the role of nature-based interventions - NECR228 (naturalengland.org.uk)

6 Climate and Renewable Energy

Whilst Natural England welcomes this group of policies we recommend including Policy CRE1: Climate Change and Policy CRE2: Renewable Energy within the Sustainable Environment (SE) group of policies to achieve a collective strategic focus on sustainable development and working toward achieving net zero alongside the SE policies relating to Pollution and Air Quality (SE1) and requirements for sustainable water management measures to reduce water use, natural flood protection features alongside the specific policies on Sustainable Drainage Systems (Policy SE4:)

Natural England continues to work with the LPAs across the region on understanding air pollution across area boundaries (see comments and links in objectives section.)

10 Infrastructure and Transport Policy.

Policy IN4 Cycleways, Bridleways and Public Rights of Way

Natural England welcomes the inclusion of this group of policies which seek to maintain and enhance the network of public rights of way that cross the borough. We note that the sustainability appraisal states that "the borough has relatively poor accessibility to the cycle network and is the lowest performing in the county for walking zones" (p 206) and that, "eight allocated sites (AB2, AB12, AB33, HD10, KL15, MD29, SP11(3) and TK10) do not currently have safe pedestrian or cycle access adjacent to the site, where site end users may be reliant upon less sustainable modes of transport including private car use". (p 180)

11 Sustainable Environment

Natural England welcomes this group of policies and has the following policy specific comments:

Policy SE1: Pollution and Air Pollution.

Natural England welcomes this policy that notes that development proposals which are likely to result in detrimental impacts on air quality, will not be permitted unless it can be demonstrated that mitigation measures effectively address these impacts. (Comments on Air Quality are also provided on page 2 and 4 of this letter). The promotion of sustainable and active travel options, low-emission technologies and enhancement of green infrastructure to absorb air pollution is also noted. (see comment above re integrating the group: 6 Policies Climate and Renewable Energy).

Policy SE7: Biodiversity Net Gain

Natural England supports the inclusion of a policy on BNG. We suggest the following minor amendments to further improve the plan policy.

The BNG policy should make it clear that biodiversity net gain is not applied to irreplaceable habitats, and that any mitigation and/or compensation requirements for Habitats sites should be dealt with separately from biodiversity net gain provision. The policy should also set out how biodiversity net gain will be delivered and managed through the lifetime of the scheme and including monitoring requirements. This should include indicators to demonstrate the amount and type of gain provided through development.

The indicators should be as specific as possible to help build an evidence base to take forward for future reviews of the plan, for example the total number and type of biodiversity units created, the number of developments achieving biodiversity net gains and a record of on-site and off-site contributions.

Natural England notes that the Sustainability Appraisal states "Despite the BNG provisions at the site level, there remains potential for a cumulative adverse impact on biodiversity at the landscape scale, owing to incremental habitat losses. As a result of development within the Local Plan undeveloped land will be lost which will include the loss of soil resources, habitats recognised as being of 'high' and 'very high' distinctiveness, and potentially ecological links between biodiversity assets, whereby the policies will not be expected to fully mitigate the fragmentation of the ecological network. Fragmentation of the ecological network across Newcastle-under-Lyme is expected to be a long-term and permanent significant effect." (p 162)

Policy SE8: Biodiversity and Geodiversity

Natural England supports the inclusion of this policy to protect the Boroughs internationally, nationally and locally designated sites important for their biodiversity value and to enhance the natural environment and work with partners toward Nature Recovery.

We particularly welcome the plans recognition of the value of "wider ecological networks" stating that "Other sites, both individually and collectively, that are not designated can also contribute towards protecting and enhancing diversity of species locally".

Policy SE10: Landscape

Natural England welcomes this policy aimed at ensuring that "development proposals should protect and enhance the character, quality, beauty, and tranquillity of the Borough". We note from the sustainability appraisal that "The entirety of the south of the borough is identified as being high in relation to landscape sensitivity, which starts in Audley in the north and covers the southern area of the borough, including Loggerheads and Alington." We agree that "Alteration of the landscape character is a long-term and permanent significant effect... There is potential for a cumulative adverse effect on landscape character resulting from the development proposed in the Plan". (p193) SA.

Natural England has divided England into 159 distinct natural areas called National Character Areas (NCAs) Newcastle-under-Lyme falls within two NCAs: Shropshire, Cheshire and Staffordshire Plain: gently rolling plains dominated by intensive dairy farming, beef and arable production; The Potteries and Churnet Valley: strong contrast between the industrialised landscape of the Potteries and the pastoral, strongly dissected hills and small plateaux that flank the Churnet and Dove valleys.

Natural agrees with the following statement in the sustainability appraisal: "Although various policies aim to ensure that development conserves and enhances landscape character and distinctiveness, when combined with Local Plan policies that support infrastructural improvements such as for transportation, water, and waste, this is likely to lead to a long-term and irreversible cumulative adverse effect on landscape character and tranquillity and associated indicators such as dark skies." (p72)

Policy SE11: Trees, hedgerows, and woodland

Natural England welcomes this plans recognition that “Trees, hedgerows, and woodlands are integral to the distinctive character and ecological health of the Borough of Newcastle-under-Lyme, defining landscapes across both urban and rural settlements.” And that “This policy prioritises the protection of existing natural assets, seeking to not only preserve, but actively enhance, these valuable features wherever possible”.

Policy SE13: Soil and Agricultural Land

Natural England has concerns about the justification for the loss of BMV agricultural land within this plan. “The proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land, A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of ‘best and most versatile’ (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services.” (page74) (SA)

Natural England notes that policy SE13 states: “Outside of sites allocated for development in the Local Plan, development proposals should avoid the loss of best and most versatile agricultural land (BMV) unless it can be demonstrated that the benefits of development clearly outweigh the loss of the land and every effort has been made to mitigate for the overall impact of the development on best and most versatile agricultural land.”

With regards to Soil and Agricultural Land Quality, Natural England advises that The Local Plan should give appropriate weight to the roles performed by the area’s soils. These should be valued as a finite multi-functional resource which underpin our wellbeing and prosperity. Decisions about development should take full account of the impact on soils, their intrinsic character and the sustainability of the many ecosystem services they deliver.

The 25 Year Environment Plan (25YEP) sets out government action to help the natural world regain and retain good health, including highlighting the need to:

- protect the best agricultural land
- put a value on natural capital, including healthy soil
- ensure all soils are managed sustainably by 2030
- restore and protect peatland

Soil is a finite resource which plays an essential role within sustainable ecosystems, performing an array of functions supporting a range of ecosystem services, including storage of carbon and water, the infiltration and transport of water, nutrient cycling, a buffer against pollution and provision of food. In order to safeguard soil resources as part of the overall sustainability of the development, it is important that the soil resource is able to retain as many of its important functions as possible. This can be achieved through careful soil management and appropriate, beneficial soil re-use, with consideration on how any adverse impacts on soils can be avoided or minimised.

The conservation and sustainable management of soils is reflected in the National Planning Policy Framework (NPPF), particularly in paragraph 180(a), 180(b) and 181 (footnote 62). When planning authorities are considering land use change, the permanency of the impact on soils is an important consideration. Particular care over planned changes to the most potentially productive soil is needed, for the ecosystem services it supports including its role in agriculture and food production.

Plan policies should therefore take account of the impact on land and soil resources and the wide range of vital functions (ecosystem services) they provide in line with paragraph 180(b) of the NPPF.

Soil Plan Policies

We strongly advise that at a minimum, the plan includes core policies for:

- the protection of best and most versatile (BMV) agricultural land (Grades 1, 2 and 3a in the Agricultural Land Classification (ALC)); and
- for the protection of and sustainable management of soils as a resource for the future.
- Areas of poorer quality land (ALC grades 3b, 4, 5) should be preferred to areas of higher quality land (grades 1, 2 and 3a).
- Recognise that development has an irreversible adverse impact on the finite national and local stock of BMV land.
- Conforms to NPPF and Planning Practice Guidance (Natural Environment and Minerals).
- Requires detailed ALC surveys to support plan allocations and for subsequent planning applications (for all sites larger than 5 ha). ALC surveys to support plan allocations and for subsequent planning applications for smaller sites (1 – 5 ha) would be welcomed.
- Recognise that development (soil sealing) has a major and usually irreversible adverse impact on soils.
- Soils of high environmental value (e.g., wetland and carbon stores such as peatland, low nutrient soils; or soils of high environmental value in the local context) should also be considered as part of ecological connectivity (Nature Recovery Network / Green Infrastructure).
- Requires soil handling and sustainable soil management strategies based on a detailed assessment of the soil resource based on best practice guidance (for all sites larger than 5 ha), ideally as part of the planning application process for major sites to help inform master-planning, and to safeguard the continued delivery of ecosystem services through careful soil management and appropriate, beneficial soil re-use. Soil handling and sustainable soil management strategies for smaller sites (1 – 5 ha) would be welcomed.
- Reference should be made to Defra’s Construction Code of Practice for the Sustainable Use of Soils on Construction Sites
- In addition, for minerals and other temporary forms of development, plans for reinstatement, restoration and aftercare will be required (or for solar, a commitment to do so if the operational life is in decades); normally this will be return to the former land quality (ALC grade)
- Refers to soils issues within relevant policy areas such as renewable energy, climate change, green infrastructure and biodiversity net gain, flood schemes, managed realignment, development design and landscaping.

Policy SE14: Green and Blue Infrastructure

Natural England supports this policy. Well-designed cross boundary multi-functional green infrastructure contributes greatly to a number of benefits both for people and nature. Your green and blue (for example cross boundary canals) infrastructure should dovetail with your biodiversity net gain strategies to maximise benefits.

We would advise that the Local Authority also considers Natural England's Green Infrastructure Framework of Principles and Standards for England. As stated in our document, "Green infrastructure (GI) is part of the solution to many of the challenges we face; health inequalities, biodiversity crisis, climate change, nature recovery and levelling up. The GI framework supports local authorities, developers, parks and greenspace managers and local communities to enhance and create new good quality green infrastructure."

We would also suggest reference is made to the emerging Local Nature Recovery Strategy. Preparing Local Nature Recovery Strategies (LNRS) is a statutory requirement under the Environment Act 2021. LNRS are designed to work closely alongside other measures in the Act including supporting the delivery of mandatory biodiversity net gain and providing a focus for a strengthened duty on all public authorities to conserve and enhance biodiversity. They will also underpin the Nature Recovery Network, alongside work to develop partnerships and to integrate nature into our incentives and land management activities. Each LNRS will be specific and tailored to its area. The responsible authorities and people involved in preparing a strategy can choose how they want it to look, but every strategy must contain:

1. A local habitat map.

2. A written statement of biodiversity priorities. Statutory guidance for responsible authorities explains in detail what these 2 things should contain. Together they set out what the strategy is aiming to achieve and what practical actions will help do this. They will also propose where actions could be carried out for best effect and to connect and expand existing areas that are important for nature. We expect local nature recovery strategies to propose actions such as the:

- creation of wetlands
 - restoration of peatlands
 - planting of trees and hedgerows
 - more sustainable management of existing woodlands and other habitats like grasslands
- These actions are intended to help nature itself and to also help improve the wider natural environment.

Whilst the Staffordshire Local Nature Recovery Strategy (LNRS) is currently a work in progress, Newcastle-under-Lyme Borough Council Regulation 19 pre-submission should still be consistent with NPPF Paragraph 185 in terms of setting out local habitat priorities and identifying potential measures by which they can be achieved, alongside mapping areas that could become of particular importance in the future.

Natural England encourages Newcastle Under Lyme Borough Council via their Local Nature Recovery Strategy to actively develop cross border cooperation between other Local Planning Authorities (LPA) (for example Staffordshire Moorlands Borough Council) in coordinating land development projects that impact on local biodiversity sites to ensure that local biodiversity corridors are maintained and link up other local important sites for nature conservation.

This is a good way of achieving nature recovery and preparing to deliver the LNRS alongside enabling the local authority and its partners to identify, map and safeguard site areas, including green and blue infrastructure opportunities and interlinkages.

Habitats Regulations Assessment

Natural England notes that this Local Plan is not directly connected with or necessary to the management of any European site. A screening assessment has been undertaken which identified a number of Likely Significant Effects (LSE) associated with the Local Plan. Taking no account of mitigation measures, the HRA concludes that Local Plan has the potential to affect the following European sites:

- Cannock Chase SAC
- Humber Estuary SAC, SPA and Ramsar
- Mersey Estuary SPA and Ramsar
- Midland Meres and Mosses Phase 1 Ramsar
- Midland Meres and Mosses Phase 2 Ramsar
- Pasturefields Salt Marsh SAC
- Peak District Dales SAC
- Peak District Moors (South Pennine Moors Phase 1) SPA
- Severn Estuary SAC, SPA and Ramsar
- South Pennine Moors SAC
- West Midland Mosses SAC

We welcome that your HRA includes the Humber Estuary SAC, SPA and Ramsar site which is hydrologically connected to the river Trent. If the Local Plan resulted in significant water pollution, this European site could be affected and has therefore been screened in, in relation to water quality only, on a precautionary basis. Natural England however notes that the Sustainability Appraisal identifies "A long-term cumulative adverse effect ...in terms of water quality" (p 148) as a result of the plan, this is not fully reflected in the current HRA.

Natural England note that the Sustainability Appraisal states: that "the entirety of the borough falls within IRZs of one or more SSSIs. All five SSSIs within the borough are in 'unfavourable' condition: Burnt Wood SSSI, Maer Pool SSSI, Black Firs and Cranberry Bog SSSI (Midlands Meres and Mosses Phase 2 Ramsar), Betley Mere SSSI (Midlands Meres and Mosses Phase 1 Ramsar) and Metallic Tileries, Parkhouse SSSI."

Natural England are also aware of the extensive network of ancient woodland spread across the borough, totalling 707.60 hectares, as well as a large quantity of priority habitats, totalling 1,791 hectares.

Natural England agree that the following designated sites and related priority habitats in adjoining LPA areas may also be affected by development through several pathways, including fragmentation, recreational pressure and/or pollution (including Air and Water Quality). Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI, Wyburnbury Moss SAC SSSI, Tyrley Canal Cutting SSSI, King's and Hargreaves Wood SSSI, Gannister Quarry SSSI, Roe Park Woods SSSI, Wetley Moore SSSI, Churnet Valley SSSI, Hatherton Flush SSSI, Sounds Heath SSSI, Ford Green Redebed SSSI, and Cop Mere SSSI.

It is noted that the Appropriate Assessment stage of the HRA assessed potential impacts by topic;

- Impacts on designated features affected by a possible deterioration in air quality
- Impacts on water quality and quantity associated with increased levels of built development.
- Impacts associated with increased recreational pressure at European sites; and

	<p>-Consideration of impacts at associated functionally linked land.</p> <p>Natural England notes that the HRA also factored the following into the assessment process “the protective framework provided by the Local Plan and existing protection measures set out in high level strategic policy and existing planning policy frameworks that serve to help overcome the identified potential adverse effects” and that “taking into consideration these factors, it is concluded that the Local Plan would have no adverse impact on site integrity at any European site, either alone or in-combination.</p> <p>Natural England disagree agree with this conclusion that for those Habitats sites in the area of search with features sensitive to air pollution, adverse effects on their integrity, alone or in-combination, can be ruled out for the reasons set out at the beginning of this letter on page 2 and repeated in part below:</p> <p>Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot currently be ruled out at the following internationally designated sites:</p> <ul style="list-style-type: none"> •Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI •Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI <p>Natural England are currently in discussion with a number of the Staffordshire and West Midlands LPA's with regards to the cumulative impacts of air quality. We advise that further work is required to inform the HRA. The HRA should demonstrate that there are no adverse effects on integrity of Habitat sites as a result of this Local Plan, alone and in combination with other plans and projects. With regards to allocated sites, it is unclear whether the individual sites put forward in the Local Plan have been assessed through the Habitat Regulations Assessment process and how mitigation will be applied here.</p> <p>Sustainability Appraisal</p> <p>Natural England has reviewed the Sustainability Appraisal (SA) and included comments taken from the document throughout our response.</p> <p>The SA is a comprehensive document which should be reviewed in strengthening the HRA, particularly with regards to residual adverse effects that would be expected to remain in terms of wastewater following the implementation of the Local Plan policies. (p 141) Natural England notes that “Increased pressure on wastewater treatment has the potential to be a long term and potentially permanent significant effect” (p 142)</p> <p>The SA recognises the local distinctiveness of the plan area;</p> <p>“The Borough itself is largely rural in nature and supports some high-quality agricultural land, but is more heavily built up towards the north east surrounding Stoke-on-Trent. (p 8)</p> <p>Newcastle-under-Lyme has a strong rural character with a high-quality landscape and countryside, with some areas identified as being sensitive to change as a result of new development. (p 19)</p> <p>Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms make up the key features of some of these Landscape Character Types.” (p 20)</p> <p>Sets out the area specific barriers to achieving sustainable growth;</p> <p>“Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)</p> <p>Loss of tranquillity The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution.(p 68)</p> <p>“The pre-mitigation SA assessments identified negative impacts in relation to air quality due to the proximity of sites to major roads, landscape character due to the location of sites within areas of high landscape sensitivity, close proximity to the PRoW network and potential for coalescence and urban sprawl, habitat sites, priority habitats, habitat distinctiveness, loss of undeveloped land, ‘best and most versatile’ (BMV) agricultural land, coinciding with mineral safeguarding areas (MSAs) and areas of surface water flood risk (SWFR); and access to healthcare facilities, schools, the local cycle network and railway network. (p 40)</p> <p>There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work. (p 21)</p> <p>Trends in transport choice are unlikely to change significantly, and private car use would continue to increase as the selected method of transport to work, with potential adverse impacts on air quality in the borough.”(p 23)</p> <p>Considers the local and cumulative significance of soil loss alongside the ecological implications:</p> <p>“Loss of soil resources, BMV land and ecosystem services The proposed allocations would cumulatively result in the loss of up to approximately 342ha of previously undeveloped land, including up to 263ha of BMV agricultural land. The proposed development would be expected to reduce the ability of the local soil biome to effectively provide ecosystem services, to some extent. Additionally, the loss of permeable soils could potentially increase the risk of flooding and result in a loss of biodiversity across the Plan area. Loss of soil can also result in an increase in soil erosion and have subsequent impacts on agricultural yield.(p 68) The majority of the borough is ALC Grade 3 soil, with areas of ALC Grade 2 scattered across the borough. Grade 2 and potentially Grade 3 represents some of the borough's BMV agricultural land and should be conserved wherever possible (p 21)</p> <p>A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of BMV land to be lost as a result of the development proposed in the Local Plan.” (p 59)</p> <p>Other Advice</p> <p>Further general advice is provided within Natural England Advice Note – Local Plans February 2024, attached at (Appendix A) - see attachment</p>

Title	Site Allocations
Consultee Family Name	Foss
Consultee Given Name	Deborah
Q5 Legally compliant	No
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>It is unclear how previous comments from Audley residents and representations made by Audley Parish Council on Site AB2 were taken into account, or whether they were taken into account as this has not been addressed or fully explained. I strongly object to the proposed allocation of Site AB2/AB2A (A500/M6).</p> <p>The Green Belt Site Review Consolidated Report 16th July 2024 recommends exclusion of the site(s) from the process (Table 17, page 28). This issue was also considered in the Urban Vision Enterprise CIC Audley Parish Green Belt Review, V2.4, August 2022, commissioned by Staffordshire County Council, which found a strong contribution to green belt purposes, including safeguarding the countryside from encroachment and regeneration of urban land. These recent reports appear to have been ignored. hence regulation 18 consultation not being lawful.</p> <p>Removal of the site(s) from the green belt would undermine the purposes for green belts set out in the NPPF, in particular by allowing major incursion and encroachment into the countryside and undermining of regeneration of the urban conurbation, by developing greenfield land in the countryside. The economic impact on the conurbation would be negative, due to:</p> <ul style="list-style-type: none"> • the remoteness of the site(s); • the impact on the viability of alternative urban sites in the conurbation. • Harm to the rural economy, due to loss of the best and most versatile agricultural land and associated harm to land used for growing food and agricultural employment. <p>The traffic impacts would be negative, including:</p> <ul style="list-style-type: none"> • Generation of road-based traffic and lack of sustainable transport alternatives; • Traffic impacts on the rural character of the area; • Impacts on the amenity and safety of rural roads and lanes. <p>The development of this site would be unsustainable and environmentally harmful, due to:</p> <ul style="list-style-type: none"> • biodiversity impacts on rural lanes, where they need to be widened, including destruction of adjoining landcsapes; • development of greenfield land in an unsustainable location, remote from the

existing urban conurbation;

- a range of significant adverse impacts (visual, noise, light, disturbance, air quality).

The development would introduce a major urban employment site within a rural parish, near to small rural villages and remote from local services.

The Strategic Employment Site Assessment - 2024 Update (Aspinall Verdi) has failed to deal with the previously highlighted contradiction with the ARUP and UVE green belt assessment reports.

The updated Sustainability Appraisal July 2024 highlights adverse impacts of developing the site AB2. Paragraph D.5.2.11 states "The introduction of new large-scale developments has potential to be discordant with the landscape features of the associated character areas as identified in the LSCA34, especially given the location of Sites AB2 and KL15 within areas of 'high' sensitivity to development ...". The Table on page N37 identifies that site AB2 would have major negative impacts on: 'Natural Resources and Waste', 'Flooding' and also 'Landscape'. Minor negative impacts include: Air, Biodiversity, Flora and Fauna, Water, Health and Wellbeing and Transport and Accessibility. There is only one other site that scores so negatively, and this is not being taken forward.

I note that positive impacts are identified for 'Climate Change' and 'Economy'. I believe that this finding is perverse. It is difficult to see how the development of a remote site, well outside of the urban conurbation, involving the loss of agricultural land and relying on road-based travel could contribute positively against climate change. In addition, the harm to the rural economy and to economic and physical regeneration in the urban conurbation has not been taken into account.

Site variation AB2A is not mentioned so presumably this site has not been assessed. Tables N10 and N11 set out growth strategy options. Option 6D does not include site AB2 and delivers better scores/outcomes. The Newcastle-under-Lyme Landscape & Visual Appraisal dated March 2023 identifies the site as having a major adverse impact. Mitigation measures would not be effective given the scale of development. The Audley Rural Civil Parish Natural Capital Assessment report (Staffordshire Wildlife Trust, June 2024) identifies ecological and wildlife features within the site, including a high distinctiveness wildlife corridor and Strategic Significance Areas within the Nature Recovery Network.

The Strategic Housing & Employment Land Availability Assessment (SHELAA), Report September 2022 Appendix 4 (Sites not in Deliverable & Developable Supply) included Site AB2. The AB2 site assessment proforma recognised that the site was in the green belt and was isolated, disconnected from Audley and Bignall End, partly affected by flood zones, with access limitations and with poor access to a range of services and facilities. The site appears to be missing from the 2024 update report. There is still a big inconsistency between Newcastle Under Lyme Borough Council's position in September 2022 and the present position in that a site identified as not deliverable or developable is now suggested for allocation, a complete contradiction.

Allocation of this site is not justified by the Economic Needs Assessment Newcastle-under-Lyme & Stoke-on-Trent June 2020 which stated, 'overall need implied under any of the aforementioned scenarios could be met through the current supply of circa 293ha of employment land'. This further highlights how allocation of site AB2 would undermine regeneration elsewhere. Development of AB2 would be harmful to the local economy, community and environment.

The site assessment is not supported by evidence and assessments. The site has been deleted from updates of some assessments. Allocation of the site conflicts with several of the proposed policies of the Local Plan.

Housing site allocations AB12, AB15 and AB33 are all within Audley Parish. The sites are close to existing settlements and do not create coalescence between settlements. Green belt release should only occur in exceptional circumstances.

The targets for new housing in the borough and in the Audley Parish are unnecessarily high and will involve the destruction of valuable greenbelt and serve to further undermine the weaker housing markets in the Borough, Stoke-on-Trent and Crewe. Despite the completion of 2,240 dwellings between 2011/12 and 2020/21, the population actually decreased (from 123,871 to 123,300) and the number of households grew by only 849. Government data on empty homes indicates that there were 1,688 empty homes in the Borough in October 2023. The 2021 census indicates that there were 53,423 households in 2021, whereas council tax records indicate that there were 57,627 dwellings. The planned level of growth will simply accelerate problems of urban decay, especially in Stoke-on-Trent. There is no economic or social case for the numbers involved.

Audley should be classed as a 'Local Centre' rather than a 'District Centre' as in previous versions of the Plan.

The Local Plan is fundamentally flawed. Allocation of site AB2/AB2A is in contradiction to the Local Plan's own evidence base and emerging policies and also inconsistent with national policy and guidance. It would cause substantial social, economic and environmental harm to the Parish, the Borough and the wider North Staffordshire conurbation. There is a lack of consistency with national policy.

Q4 Part of document	Policy
Q4 Policy	Site Allocations (Omission Site)
Q6 Details	<p>Gladman Developments Ltd (Gladman) welcome the opportunity to comment on the Newcastle-under-Lyme Final Draft Local Plan 2020-2040 (Regulation 19) consultation and request to be updated on the progress of the emerging Local Plan. Please refer to attached representations. Gladman has fully engaged fully in the preparation of the emerging Newcastle-under-Lyme Local Plan 2040 to date. Feedback from the First Draft Local Plan (Regulation 18) consultation has been addressed and incorporated into the Final Draft Local Plan consultation document.</p> <p>In the sections below, Gladman have made specific comments where we consider the Final Draft Local Plan requires modifications or further clarification to ensure that it is capable of being found sound. Comments are focussed mainly on the consultation document, with references to the Duty to Cooperate and Sustainability Appraisal documents. Our representations also include details of Gladman's land interest at land south of Eccleshall Road, Loggerheads, which we are promoting as suitable for identification as a housing allocation in the emerging Local Plan. Please refer to attachment for more information.</p> <p>As demonstrated in the Site Selection Report and Assessments report, there is minimal difference between sites LW53 (land corner of Muckleston Wood Lane & Rock Lane, Loggerheads) and LW54 (land south of Eccleshall Road, Loggerheads) in terms of the planning policy team's comments and conclusions on both of the sites.</p> <p>The SHELAA and Site Selection comments for LW54 are pretty much identical. There is discussion around a reason for refusal based on landscape impact on the character and appearance of the area in relation to two outline applications on a neighbouring site. The comments also note that the site is close proximity to a number of listed buildings – it is anticipated that there will be no objection from the Conservation officer in response to Gladman's application on the site. Its pertinent to note that one of the reasons for refusal on the application on LW53 was due to the impact on a nearby listed building. The Sustainability Appraisal (July 2024) scores LW53 marginally better than site LW54 on four technical aspects as shown in the table below (see attachment):</p> <p>Gladman have provided comments on each of the disciplines below:</p> <p>Air – LW54 does not lie in Air Quality Management Area and proposed residential development on the site would not lead to unacceptable pollutions levels. This score should therefore be negligible. It is pertinent to note there is no objection to Gladman's application (24/00162/OUT) by the Environmental Health Officer in relation to air quality concerns.</p> <p>Biodiversity, Flora & Fauna – The proposed scheme would be able to achieve a 7.32% BNG on-site (+2.47 habitat units) and +2.24 hedgerow units (+29.82%). The remainder BNG units (2.68%) are to be provided off-site from a habitat bank. The southern area of the site would be kept free from any developable area. This score should therefore be minor positive.</p> <p>Cultural Heritage – There is a Grade II Listed Milepost which is situated to the north of the site on Eccleshall Road. The Heritage report submitted in support of the application concludes that the site does not have a relationship to the milepost either at present or historically and as such does not contribute to the setting, or significance of the designated asset. Furthermore, there was no heritage reason for refusal identified for the Tadgedale Quarry planning application and it is anticipated to be the same for site LW54. At the time of writing, the Conservation officer has not responded to Gladman's application on the site. This score should therefore be negligible.</p> <p>Flooding – LW54 is situated in Flood Risk Zone 1 and is therefore at the lowest risk of flooding (<1 in 100 chance). The brook which runs along the southern boundary of the site is at risk from surface water flooding, however as shown on the indicative Development Framework Plan, Gladman is not proposing</p>

to locate any developable area along the southern boundary parcel and this area will be kept as public open space. This score should therefore be negligible.

Land south of Eccleshall Road, Loggerheads

Gladman is promoting land south of Eccleshall Road, Loggerheads ('the site') for residential development. Gladman submitted an outline planning application for up to 150 dwellings on the site to the Council in February 2024 (application ref: 24/00162/OUT). The application is currently under consideration by the Council and a decision is anticipated in autumn 2024.

A Site Location Plan is included on Figure 1 below (see attachment).

Site Context and Surroundings

The 9.11 ha site comprises two arable fields and is located in the administrative area of NuLBC. It is bound by Eccleshall Road to the north with a residential development for 128 homes, which is currently under construction by Wain Homes beyond. Shropshire Homes have a 'live' appeal for up to 130 dwellings on land to the east of Rock Lane / north of Muckleston Wood Lane3 which is situated to the north-east of the site.

To the east, the site is bound by a cluster of residential dwellings and includes hedgerows and garden fences along the boundary. A Waste Water Treatment Plant is situated to the south-east beyond the site boundary. To the immediate south of the site is a dense and mature tree line along the Tadgedale Brook, with arable farmland and Ben's Eggs Farm located immediately beyond. Further south is Oakley Folly Road (A53) bounded by a partial hedgerow to either side. Beyond lies a small cluster of residential dwellings within arable land and a large area of woodland (Burnt Wood SSSI), with a cul-de-sac residential development located within it. The Leightons Drumble Local Wildlife Site is located partially on-site, within the south east section along the stream corridor encompassing the woodland belt, ponds and Tadgedale Brook.

The site is sustainably located with a number of services and facilities within easy walking and cycling distance, including a primary school, a convenience store, a post office and a church. In addition, there is a bus service (no. 64 Shrewsbury - Hanley) throughout the day (Monday – Saturday) to the larger settlements of Market Drayton, Newcastle, Hanley and Shrewsbury.

New Homes

The site would be deliverable in the short term and will help to increase the supply and choice of housing in Loggerheads. The site can deliver a wide range of market and affordable homes to meet the borough's general and specialist housing needs, with potential to deliver up to 150 new homes. The site would deliver a policy compliant level of affordable homes. The development of the site would contribute significantly towards the Council's affordable housing supply requirements, without subsidy, and would provide people with the opportunity to have an affordable property to call their own.

Furthermore, development of the site would contribute towards economic growth and have wider social benefits to the local community including increased footfall for existing businesses, helping to sustain their vitality.

Landscape

The site is not subject to any landscape quality designation and lies outside of the Green Belt. It is anticipated that the landscape character of the site and immediate context has the ability to accommodate the proposed high-quality residential development, which includes extensive green infrastructure proposals.

Highways

It is proposed that the site will be accessed from Eccleshall Road, forming a 'T' junction which will operate under priority control. The site access will measure 5.5m wide with 2.0m wide footways. Eccleshall Road will be widened (on the site side) to provide a right turn lane, formed by ghost island hatching, to cater for movements into the site access. It has been confirmed that the required visibility splays can be achieved and that the site access junction will operate comfortably within capacity in both the morning and evening peak periods with the proposed development traffic.

Heritage

There Heritage Desk-Based Assessment submitted in support of Gladman's application, notes that there is a Grade II milepost which is located on the verge to the north of Eccleshall Road which is now largely masked from the road by a substantial hedge which lies to its rear. It derives its significance from its architectural and historical value as a cast iron milepost. The site is screened from the milepost by a substantial hedgerow which defines the southern edge of Eccleshall Road/the northern boundary of the site. Views of the asset along the line of Eccleshall Road are limited due to the hedgerow and topography. The site does not have a relationship to the milepost either at present or historically and as such does not contribute to the setting, or significance of the designated asset.

Flood Risk

The site falls within the Environment Agency's flood risk zone 1 (i.e. land assessed as having a less than 1 in 1,000 annual probability, or <0.1% chance of flooding from rivers or the sea). It is anticipated that the site will be at low risk from all sources of flooding and will not increase the risk of flooding elsewhere as a result of the development of the site.

Green Infrastructure

The green infrastructure within the built development will sit as an integral part of the framework and is key in creating an accessible, open and engaging place within which to live. The green infrastructure will contribute positively to the site's landscape character, enhance biodiversity and provide community benefits through the provision of public open space and recreational facilities.

Development Framework Plan

Gladman has prepared an indicative Development Framework Plan to indicatively demonstrate how any development on the site may take shape and how the aforementioned benefits will be integrated into the site. This Plan is included at Figure 2 below.

There are multiple benefits that could be delivered through residential development at this location:

-

The provision of up to 150 homes, of which 30% can be affordable housing (compliant with draft Policy HOU1). This should be considered as a significant benefit in the context of the affordable housing driven strategy.

-

	<p>New residents will increase demand for and use of local services and facilities. This increased spending in the locality will help protect, maintain and enhance the services in the area, ensuring the long-term viability and vitality of the settlement.</p> <ul style="list-style-type: none"> • The scheme can deliver public open space and green infrastructure for use by new and existing residents. Its long-term management can be secured to safeguard its use for the community, and the improved connectivity to the public rights of way in the area. • Biodiversity will be protected, diversified, and improved through new hedgerow and tree planting, landscaping and informal green spaces. The provision of 10% BNG on-site. • There are multiple economic benefits to be realised through the provision of housing. The delivery of this site will generate construction spend, annual household expenditure and supporting a relatively significant number of Full-time Equivalent (FTE) and indirect FTE construction jobs. <p>Overall, Gladman consider that land south of Eccleshall Road, Loggerheads is a suitable and sustainable location for development. The site is available and can be delivered in the early years of the plan period which will assist the Council in meeting its future housing needs and boosting its five-year housing land supply. Gladman would welcome further discussions with the Council during the Local Plan's preparation. Gladman welcomes the opportunity to comment on the Newcastle-under-Lyme Final Draft Local Plan Document. These representations have been drafted with reference to the National Planning Policy Framework (December 2023) and the associated updates that were made to Planning Practice Guidance. It is essential that the Council prepares a positive plan that can stand up to scrutiny at examination. Gladman have provided comments on issues that have been identified in the Council's consultation material and recommend that the matters raised are carefully explored in advance of the Council submitting the Plan to the Secretary of State for Examination. Gladman formally requests to participate at the Examination in Public to discuss the issues raised with this representation.</p>

Q6 Details	<p>These representations are submitted by Stantec on behalf of Jones Homes (North West) Ltd (Jones Homes) and Renew Land Baldwins Gate Ltd (Renew Land), together known as "the Promoters", in response to the Final Publication Draft of the Newcastle-under-Lyme 2020- 2040 ('Local Plan') at Regulation 19 published by Newcastle-under-Lyme Borough Council (NuLBC) ('the Council') in August 2024. Please also see attached representations.</p> <p>Land off Woodside</p> <p>As previously stated, the Promoters have a land interest at Woodside, Baldwins Gate. The precise location of the land is shown on the Site Location Plan at Appendix C.</p> <p>The Site lies on the south western edge of Baldwin's Gate within the borough of Newcastleunder-Lyme and extends to approximately 2.5 hectares comprising of pastoral land with the easternmost part including some coppiced woodland.</p> <p>The Site is currently the subject of a pending planning application for 40 homes which was submitted by Jones Homes and validated on 8 March 2023. This is currently pending consideration under reference 22/01105/FUL.</p> <p>In terms of the adopted planning policy, the Site sits outside of the Green Belt. It is allocated as an Area for Landscape Restoration (Policy N21). This policy states that the Council will support, subject to other plan policies, proposals that would regenerate the landscape appropriate to its urban or rural location. Where development can be permitted, developers will be expected to use the opportunity provided by the development to make a positive contribution towards landscape regeneration.</p> <p>The Site is within the Neighbourhood Area of the Chapel and Hill Chorlton, Maer and Aston and Whitmore Neighbourhood Development Plan adopted on 21st January 2020. The Neighbourhood Development</p>

	<p>Plan does not make any specific allocations or designations in relation to the land. It is worthy of note that the NDP does not make any allocations for residential development within the Plan, nor does it seek to deliver any housing requirement attributed to it through the remainder of the Development Plan.</p> <p>Baldwins Gate</p> <p>Baldwins Gate is proposed to be designated as a Rural Centre in the NuLLP and provides a significant role in meeting the day to day needs of its local population and rural hinterland. It is the largest settlement in Whitmore Parish and has a number of facilities and services available such as a primary school, doctor's surgery, church, butcher's shop and a post office with shop. However, it should be noted that the majority of the Site itself is in Chapel & Hill Chorlton Parish.</p> <p>There is also a bus service (64) linking the village with key local centres such as Shrewsbury, Market Drayton, Newcastle-under-Lyme and Hanley.</p> <p>Relevant Planning History</p> <p>Application reference 22/01105/FUL was validated 8th March 2023 and is pending determination. An online planning history search has also been undertaken, and no other planning applications were found for the application Site, dating back to 1992.</p> <p>The Site directly adjacent to the north of our side has been subject to numerous planning applications for residential development. Planning application 13/00551/OUT for outline planning permission for 4 residential dwellings was approved in 2014 and there have been a number of associated approval of details and subsequent amendments since (those are not repeated here). Development at the Site now appears to be completed.</p> <p>There have been a number of Planning Appeal decisions from the Secretary of State, pertaining to residential development within Baldwins Gate. Those decisions have considered in depth the suitability of the village to accommodate housing development.</p> <p>One of those appeals refers to land to the immediate north of the Site by Richborough Estates (Pins Ref: APP/P3420/W/23/3314808) which was allowed for up to 200 homes at land at Baldwins Gate Farm, Newcastle Road, Baldwins Gate, Newcastle Under Lyme ST5 5ES. The appeal confirmed that Baldwins Gate was a suitable location for development by virtue of a number of existing services and facilities. The Inspector identified the village as being reasonably well served in terms of facilities and concluded that the village was a sustainable settlement. They noted that the village contains a range of facilities including a Primary School, petrol filling station, shop, village hall, doctor's surgery and a public house. As such, there is an acceptable level of services available for meeting the majority of day-to-day needs. They noted, however, the village has limited employment and retail opportunities and therefore future occupiers of the proposed development would need to access these in other higher order settlements, such as Market Drayton and Newcastle Under Lyme; albeit this did not undermine the conclusion that Baldwins Gate was a suitable location for development.</p>

Q6 Details	<p>These representations are submitted by Stantec on behalf of Jones Homes (North West) Ltd (Jones Homes) and Renew Land Baldwins Gate Ltd (Renew Land), together known as "the Promoters", in response to the Final Publication Draft of the Newcastle-under-Lyme 2020- 2040 ('Local Plan') at Regulation 19 published by Newcastle-under-Lyme Borough Council (NuLBC) ('the Council') in August 2024. Please also see attached representations.</p> <p>Settlement Hierarchy and Distribution</p> <p>The adoption of a clear adoption of a clear settlement hierarchy within the NuLLP is supported, as is the recognition of the role that Rural Centres can play in meeting the development needs of the Borough as a whole. We agree that maintaining the role of the rural centre by securing their ongoing vitality and viability is fundamental to their continuing role as well as the health of their communities and surrounding hinterlands.</p> <p>Jones Homes and Renew Land support draft Policy PSD2: Settlement Hierarchy which seeks to maintain the role and function of Baldwins Gate as a Rural Centre.</p> <p>Policy PSD 2 states, in relation to Rural Centres: "Rural Centres provide a role in service provision to the local population and contain several essential services and facilities in order to meet the day to day needs of residents. The Rural Centres will meet some of the development needs of the Borough,</p>

commensurate with their role as villages and with the type, density and design of development seeking to protect and enhance their rural and historic character. It is recognised that there are differences between these villages in terms of their sizes and available facilities and therefore the scale of development in each area should be relative to its role, function and infrastructure capacity. The Rural Centres are Audley and Bignall End (joint), Baldwins Gate, Betley and Wrinehill (joint), Keele Village (with University Hub), Loggerheads, Madeley and Madeley Heath (joint). The University Hub is expected to receive a balanced level of growth commensurate with its role as a strategic hub whilst recognising its rural role and function.”

We support the above policy that recognises that there are differences between villages in terms of their sizes and available facilities and therefore the scale of development in each area should be relative to its role, function and infrastructure capacity.

Draft policy PSD3 seeks therefore to distribute development throughout the settlement hierarchy. The supporting text to PSD3 sets out, however, that the figures presented in this policy are intended as a guide and are neither a ceiling nor a specific target. We consider that whilst figures set out within PSD3 should certainly not be a ceiling, delivery of those number of dwellings is essential to the borough meeting its housing needs as a whole. We consider, therefore that PSD3 should require that the level of development it seeks to distribute should be met as a ‘minimum’.

The resulting Distribution of Development the Rural Centres is set out as follows:

- Audley and Bignall End (joint) in the order of 250 new homes
- Betley and Wrinehill (joint) and Madeley and Madeley Heath (joint) in the order of 250 new homes
- Loggerheads in the order of 450 new homes
- Baldwins Gate in the order of 250 new homes
- Keele and Keele University (joint) in the order of 800 new homes

The Local Plan notes that commitments and completions since the start of the Plan period will contribute towards the indicative targets outlined above and to maintain an available supply of housing land. The broad level of development proposed for those settlements will be delivered through a combination of Local Plan site allocations and through existing housing land supply.

We have fundamental objections to the Local Plan's approach to the distribution of development to the Rural Centres. We will demonstrate below that the Local Plan does not have a robust, consistent or transparent methodology for determining the level of growth distributed to each settlement. We conclude that the eventual distribution of growth which has been landed on has been based loosely on a perceived availability of housing land supply at those centres which, again, has not been assessed in a robust, consistent or transparent way. We conclude that the Local Plan, in this regard does not pass any of the tests of soundness set out within the NPPF.

The supporting text to PSD3 at 5.15 of the Local Plan states that the proposed distribution of development for the Borough has been established from: “assessing reasonable alternative options for the distribution of development informed by previous Local Plan consultation stages, the evidence base and Sustainability Appraisal (SA). The process undertaken to establish a development distribution and the consideration of site options is set out in the Plan Strategy Topic Papers, Site Selection Paper and SA Report.”

In the first instance, disappointingly, there is no one source of truth for how the above distribution model has been arrived at or how a methodology has been applied. The closest document to providing an explanation is the Housing Spatial Strategy Topic Paper [ED031] which seeks to show the evolution of the distribution model from the Regulation 18 draft of the Local Plan. Paragraph 5.18 of that document sets out that, at Regulation 18, “Housing site options for these settlements were considered in relation to broad distribution factors, settlement hierarchy and the merits of individual sites through the site selection process.”

For the rural service centres, paragraph 5.86 – 5.88 explains:

In accordance with strategic factors it is appropriate to primarily direct growth to the strategic and urban centres. As part of a balanced distribution of development a proportionate level of growth is also appropriate in the rural service centres commensurate with their role and function including the range of key facilities and infrastructure. The Regulation 18 preferred spatial strategy identified a proportionate quantum of development for the rural service centres that combined with the strategy for the strategic and urban centre provided for LHN.

A site selection process was also undertaken for the rural service centres consistent with the broad distribution factors and settlement hierarchy to direct an appropriate scale of growth to these settlements. Bottom-up considerations and the merits of the sites have then been considered informed by site specific SA, key evidence studies and ongoing stakeholder engagement to identify a shortlist of preferred sites. It is considered that there are no further reasonable alternative growth scenarios for the rural service centres. Scenarios identifying higher levels of growth in these settlements would be inappropriate in relation to broad distribution factors, settlement hierarchy and the availability of key facilities / infrastructure. The most sustainable sites for these

settlements have been identified through the site selection process. It is considered that there are no further reasonable alternative growth scenarios to appraise for these settlements.

In essence then, ED031 sets out that the Reg 18 Local Plan sought to distribute development between the Rural Centres (having decided what the overall level of growth would be) in accordance with the suitability of the rural centre for growth (based on services and facilities).

The Rural Area Topic Paper (RATP) (2024) sets out the methodology for establishing the position of the rural settlements. Table 3 of the RATP sets out the sustainability of settlements and shows that Baldwins Gate and Loggerheads are the only Rural Centres that meet all sustainability criteria for meeting the day to day needs of their populations on their own, without the reliance of being considered alongside a nearby settlement.

Notwithstanding the above, and without any reasonable explanation the Reg 18 Local Plan failed to allocate any development towards Baldwins Gate. Our Representations to the Reg 18 Local Plan consultation (at Appendix 2) set out the reasons that approach was unsound and stressed the importance of providing a proportionate level of growth to the Rural Centres to maintain their vitality and viability. The Reg 18 Local Plan did set out that a Planning Appeal at Baldwins Gate Farm was due to be determined at Inquiry following the consultation on the Local Plan and that the LPA would revisit its

position on allocating development to Baldwins Gate subject to that appeal. That appeal was subsequently allowed and that site has subsequently been allocated for development.

The failure of the previous local plan to allocate any development towards Baldwins Gate despite it being demonstrated as equally the most sustainable Rural Centre within the borough demonstrates that the conclusions reached by the Local Plan (not to allocate growth) were not reflective of the approach reported to be being taken within the Plan Strategy Topic Paper. Indeed, the approach to Site Selection is completely absent insofar as the only Site which was to be allocated was one which was successful at appeal.

Contrary to paragraph 5.15 of the draft Local Plan, the Sustainability Appraisal (SA), Site Selection Methodology or other parts of the evidence base do not provide any further information as to how the decision has been made to proportion development among the rural centres. The resulting distribution of development does not bear out a logical approach to distribution on any one of, or combination of the factors set out to have been considered within ED031; or if it has, it has not been presented transparently to the reader of the plan or its evidence base.

This lack of evidence based approach is borne out in the disparities between the different Rural Centres and how growth has been distributed amongst them.

Notwithstanding having identical settlement status, and sharing an equivalent number of services and facilities, draft Policy PSD3 seeks to apportion some 450 dwellings to Loggerheads over the plan period in comparison to 250 dwellings at Baldwins Gate. We consider that failing a more robust methodology than the Council has provided, the Local

Plan should be bound to at least a fair and even distribution of development across its sustainable settlements in line with their access to services and facilities; i.e. Baldwins Gate should at least be apportioned 450 homes in line with Loggerheads.

Notwithstanding the lack of methodology for the distribution of growth having been provided within the evidence base for the Local Plan, it can be fairly readily deduced that the eventual quantum of development for each Rural Centre has been arrived at as a result of the number of sites (and their capacity) that the Council considered was available and appropriate to bring forwards. In the case of Baldwins Gate, that is certainly true where the disaggregation of development towards it has only happened as a result of planning permission having been granted at appeal; as made clear by the Reg 18 Local Plan and the Plan Strategy Topic Paper [ED031].

We do not consider it inherently unsound to distribute development across a range of settlements based on, in part, the availability of suitable sites for development. However, if that is the approach that a Local Plan is to take, it must be soundly done and, as such, must be positively prepared, justified, effective and compliant with national policy. Notwithstanding those tests, it must also be done fairly and with transparency such that the reader (including a Local Plan Inspector Examining the Plan) can see and understand the process which has been undertaken.

Such an approach has not been executed in the case of the NuLLP. Putting to one side that the methodology purported within the evidence base (distribution commensurate with the role of the settlement) doesn't reflect the one that has been taken (distribution based on site availability), the approach to Site selection is not considered to be robust or transparent.

The Site Selection Methodology (SSM) Report within the Council's evidence base at paragraph 2.1 sets out the stages to site selection as: The site selection process comprises several stages. There may be instances where sites have had to move between stages on an iterative basis. The stages are: -

Stage 1: establish a pool of sites to consider through the Strategic Housing and Economic Land Availability Assessment (SHELAA)

Stage 2: First site sift using the list of SHELAA to generate a list of sites for further consideration through the process

Stage 3: Decision point, to determine if there is there a need to continue with site selection process based on alignment with the distribution of development and relationship to the settlement hierarchy of centres".

Stage 4: Site Assessment using SA (Sustainability Appraisal), HRA (Habitats Regulations Assessment) and appropriate relevant evidence.

Stage 5: Evaluation and initial recommendations - have enough non-Green Belt sites been identified in the centre to meet the distribution of development. If development needs have not been met through: -

- Allocation of non-greenbelt sites
- Discussions with neighbouring authorities to meet the Borough's need
- There are exceptional circumstances Then consider Green Belt sites for allocation

Stage 6: Public consultation and input from statutory consultees

Stage 7: Final site sift and site selection (our emphasis)

We have no material objection to Stage 1 and Stage 2 of the SSM as a mechanism; we consider that it is appropriate for the SHELAA (informed by the call for sites process) to inform the pool for sites to be considered. Taking Baldwins Gate as an example, some 9 sites were identified in that process in Baldwins Gate and a further 4 within the surrounding area. All were sifted in to Stage 3.

The fundamental objection we have with the SSM is in Stage 3 which, as above, is stated as: "Stage 3: Decision point, to determine if there is there a need to continue with site selection process based on alignment with the distribution of development and relationship to the settlement hierarchy of centres"

In essence, the SSM states that once it has found enough sites to meet the required number of dwellings within a centre, it can take the decision to discontinue the search for sites.

In the case of Baldwins Gate specifically, this is a completely circular argument and self fulfilling. Table 35 of the SSM sets out the summary position for Baldwins Gate that there is a 'target of 250 dwellings' and 49 committed dwellings within the settlement.

At Stage 3 (paragraph 10.1-10.3), it sets out: "10.1. Table 35 (above) highlights that commitments and completions are insufficient to meet the indicative development requirements for Baldwins Gate Therefore, it is necessary to continue with the site selection process.

However, site LW74 (Baldwins Gate Farm, Newcastle Road) has planning permission granted post 31 March 2023 at appeal for 200 dwellings within a community parkland. The appeal decision, alongside planning permissions and completions in Baldwins Gate are considered to be in the order of 250 dwellings."

	<p>The SSM suggest that, co-incidentally, the distribution model has a 201 dwelling deficit which has been filled by development of 200 dwellings won at appeal and therefore, the SSM can end its search for further sites for development. However, as set out above, we know from the previous Reg 18 Local Plan, and the lack of other methodology provided, that the figure of 250 dwellings has been arrived at precisely because there was an appeal decision which allowed 200 dwellings (in addition to 49 dwellings which are existing commitments).</p> <p>As above, this methodology is entirely circular, is not based on a robust methodology and is not plan led.</p> <p>Indeed, as set out below, even if the above circular methodology was applied and development was to be allocated to the Rural Centres based only on the Council's preferred Sites, that selection methodology (for the comparison and selection of sites) must, in itself, be robust. Again, we consider that no such fair and transparent process has been undertaken, particularly with regard to Baldwins Gate.</p> <p>Indeed, as set out within both the SHELAA, the SSM and the Sustainability Appraisal, the land at Baldwins Gate Farm (which has been allocated) does not perform materially differently to other Sites which have been sifted into the SHELAA by the Council's assessment. Indeed, the Council itself refused development for Baldwins Gate Farm. We provide a commentary on that process below.</p> <p>Jones Homes' site has been considered within the Site Selection Report (informed by the SHELAA) under reference LW38. However, this was discounted from consideration for allocation based on "concerns over access arrangements into the site and the loss of agricultural land."</p> <p>In terms of the loss of agricultural land, the Baldwins Gate Farm appeal was allowed despite the site being located on Grade 2 and 3 agricultural land. Jones Homes' site is on exclusively Grade 3 land. Moreover, that Grade 3 land is predominantly 3b land which is not Best and Most Versatile land and prevents the Site as a whole from being farmed as BMV (as demonstrated within the Agricultural Land Classification Report submitted with Jones Homes pending planning applications). Loss of agricultural land should not be seen as a barrier to development.</p> <p>In terms of access concerns expressed, no detail is given as to what these relate to specifically. However, transport assessment work undertaken by Jones Homes in support of the pending planning application has shown that the Site can be accessed safely.</p> <p>Responses from the LHA in relation to the planning application demonstrates the same.</p> <p>Furthermore, the recent appeal decision at Baldwins Gate Farm showed that there is the potential for safe access to be delivered in this part of the settlement based on existing highway capacity. The development of the Jones Homes' site offers the opportunity to provide a more recognisable gateway into the settlement from the west and as such increase highway safety further.</p> <p>As such, not only is the Jones Homes site is an entirely suitable site for allocation within the NuLLP (and would assist in meeting the established spatial strategy of the Plan) we consider it performs equal or better than the Site at Baldwins Gate Farm which was allowed at appeal and other comparison sites assessed within the SHELAA.</p> <p>As such, the site selection methodology needs revisiting in order to accurately assess Jones Homes' site and conclude that it is appropriate for allocation.</p>

Q4 Part of document	Paragraph
Q4 Paragraph number	13.157 - 13.163
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>This report has been prepared on behalf of Seddon Homes Limited by Knights, in respect of the Newcastle-under-Lyme Local Plan regulation 19 consultation. Please see attached representations.</p> <p>Local Plan Chapter 13 sets out a series of land allocations to accommodate housing and employment requirements. We agree land should be allocated for development as part to provide a level of certainty over the Plan period in respect of the level and location of new development.</p>

We object however to the non-inclusion of the land to the south of High Street, Newchapel and request that it be added to these sites at Chapter 13 of the draft plan. Paragraphs 13.157 – 13.163 cover the Newchapel and Mow Cop ward and we therefore object to these for the reasons set out below.

It is important that the plan should seek not only to provide sufficient development opportunities to meet the housing requirement but also to provide a buffer over and above this requirement. Firstly, the NPPF is clear that plans should be positively prepared and significantly boost housing supply. In this regard the housing requirements set within the plan should be viewed as a minimum requirement, and additional sites are required to enable the plan requirements to be met and indeed exceeded. NPPF paragraph 69 requires that planning policies identify a sufficient supply and mix of sites, taking into account their availability, suitability and likely economic viability.

Not all sites considered deliverable will be realised during the plan period. It is considered that greater flexibility is required in the housing supply in order to reflect delayed sites and non-delivery and ensure sufficient flexibility over the plan period

Additional specific deliverable sites are required in accordance with NPPF paragraph 69. Green Belt tightly surrounds the urban area with no provision for safeguarded land in the local plan between the urban area and the Green Belt. The supply of housing land however is limited to a 10% buffer. We would advocate a 20% buffer of sites be provided, to be available from the outset of the plan and that the sites comprising the buffer include land to the south of High Street, Newchapel.

The land to the south of High Street, Newchapel extends to around 5.0 ha in total extent and the site boundaries are shown outlined red on the aerial image at Appendix 1. The site is located to the northern edge of the conurbation, around 2km east of Kidsgrove.

The site is divided into 7 no. small fields of rough grazing, located to the rear of residential properties off Pennyfields Road, to the northeast, Marsh Avenue and High Street to the north and Station Road to the west. Agricultural land lies to the south and west. There is an established hedge along much of the southern boundary, with the remainder comprising a post and wire fence. There is a churchyard and public house to the southeast corner. The northern, eastern and north western boundaries to the site comprise various types of rear boundaries to properties located along Pennyfields Road, Marsh Avenue, High Street and Station Road.

The main northwestern and southeastern parts of the site are controlled by Seddon Homes Limited. Between these, to the south of Marsh Avenue, lies a smaller area of land in Newcastle under Lyme Borough Council ownership. This area is outlined in yellow on the image at Appendix 1 and totals 0.44ha. This area formerly housed a playground, although little trace of this remains.

Vehicular access to the site is proposed from the northeast via High Street in the location shown on the plan. An access drawing has been completed and there is previous 'agreement in principle' from the Highway Authority to the access here, on the basis of this proposed design based on standards. The roads in the site vicinity all have footways to the side, are street lit and subject to a 30mph speed limit.

Aside from the Green Belt designation, no other restrictive designations apply. The site is located in EA Zone 1 for fluvial flood risk (the lowest risk zone). Seddon Homes have undertaken a coalmining risk assessment in which the conclusion is the site is developable. The site is not located within a Conservation Area, although the church to the southeast is a listed building. Agricultural land classification maps at a regional scale available from the Natural England website and suggest that the land is all likely to be Grade 4.

There is no relevant planning history for the site available from the Council's online planning applications database.

The site would provide residents with good access to local services via a range of transport modes, other than car use. These include:

- Convenience Store 1km south (One Stop 103 Silverstone Cres, Stoke-on-Trent ST6 6XP)
- Primary School 730m north (Chapel Lane, ST7 4JL) and 740m east Packmoor Ormiston Academy Carr St, Packmoor ST7 4SP
- Secondary School St Joseph's catholic Academy 1.6km south (Mobberley Rd, Goldenhill, ST6 5RN) and Kidsgrove Secondary School 1.6km west (Gloucester Rd, Kidsgrove, ST7 4DL)
- Gordon Hill Medical Centre 100m south east, (High Street, Newchapel).
- Packmoor Pharmacy 600m south east (Thomas Street, Packmoor)
- Packmoor Community Hall, 650m south east (Lorraine Street, Packmoor)

Kidsgrove town centre lies around 2km to the west and Tunstall town centre around 3.5 km south, offering a wide choice of local services. There are bus stops on High Street, providing buses to Kidsgrove and Hanley City Centre. Kidsgrove rail station is at around 2.5km with services to Crewe, Stoke, Derby and Manchester.

The site is proposed to be brought forward by Seddon Homes, a family-owned house builder based in the Northwest, with a diverse range of current residential developments bringing forward homes of a wide range of types and sizes on sites from Staffordshire to Lancashire. The closest current development by Seddon Homes is to the east of the A34 at Ashway Park, Bradwell, Newcastle-under-Lyme, Newcastle ST5 8FB, where Seddon are on site delivering 85 homes ranging from 2 – 4 beds. They are also on site at another nearby location at Pepper Street, Keele and have recently completed a joint venture with Keele University delivering private and affordable housing and student accommodation.

The proposed development would provide a policy compliant proportion of affordable housing and where appropriate the potential for affordable housing provision over and above this level could be explored, proving significant assistance to the Council in meeting the targets for affordable housing.

Given that the Land south of High Street, Newchapel is a greenfield site, that there are no access constraints or any known physical constraints or restrictive designations and the site is controlled by a housebuilder, it is therefore considered that the site can begin to deliver housing within 5 years following adoption of the Local Plan. The indicative capacity is approximately 130 dwellings. Seddon Homes would seek to submit a planning application once the land is removed from the Green Belt and anticipate a first year build out rate of approximately 20 units, then between 35-40 in subsequent years.

We therefore object to the non-inclusion of the land to the south of High Street, Newchapel and as an allocated housing site at Chapter 13 of the draft plan. We consider this element of the Local Plan does not accord with the tests of soundness set out at NPPF paragraph 35 as it is:

a) Not "Positively prepared", as it fails to ensure the area's objectively assessed needs are fully met;

	b) Not “Effective”, as it would not help ensure sufficient housing is delivered over the plan period, c) Not “Consistent with national policy” as it fails to reflect the specific requirements of NPPF paragraph aragraph 69 that planning policies identify a sufficient supply and mix of sites, taking into account their availability, suitability and likely economic viability.
Q7 Modification	Please see attached representations
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	To explain the respondent's case and provide details in respect of the progress of the proposals for the development of the site for housing.

Q4 Part of document	Paragraph
Q4 Paragraph number	13.194 - 13.231
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>This representation is submitted on behalf of Evolution 500 Limited by Knights in response to the Newcastle-under-Lyme Borough Council Local Plan Regulation 19 consultation. Please also see attached representations.</p> <p>Our representations concern in particular the land to the west of Newcastle Road, Talke shown in the image at Figure 1 below (“the site”, see attachment). We identify and promote this site as suitable for electric vehicle charging station, which could accommodate public electric vehicle charging facilities and associated development/uses for visiting members of the public.</p> <p>These representations follow a response to the previous Regulation 18 version of the Local Plan in August 2023, along with our Call for Sites submission at the same time, plus our subsequent (May 2024) provision of additional supporting material relating to the site's development potential for the uses mentioned at paragraph 1.3 above. A copy of the indicative site layout plan (see Appendix 1) and Transport Technical Note (Appendix 2) that accompanied our submissions in August 2023 and May 2024 are provided with this representation. The Transport Technical Note sets out the findings of SCP Transport's review of the highway and transport aspects of the proposed allocation of the land for an electric vehicle charging station.</p> <p>Chapter 13 of the Draft Local Plan sets out proposed site allocations. Paragraphs 13.194 - 13.231 relate to Talke and Butt Lane ward. All of the sites identified are either housing site allocations or employment site allocations. As detailed above we consider that the Local Plan should contribute to meeting the urgent need for EV charging infrastructure and we consider that the Site should be allocated for an EV charging facility and related development. This reflects the findings of the Council's own Economic Needs Assessment which recognises the site's suitability for “employment or roadside uses”.</p> <p>With regard to the specifics of the Site, the land is not in any beneficial use at present. The Environment Agency Flood Risk Map shows the site to be situated within Flood Zone 1. This is land assessed as having a less than 1 in 1,000 annual probability of river or sea flooding (<0.1%), the lowest risk of flooding. No surface water flood risk is identified. Other than being included in the North Staffordshire Green Belt, the Site is not subject to any other statutory or non-statutory designations.</p> <p>The site is flat (and indeed it appears to have been levelled at some previous point) and it has a roundabout to the immediate north with an arm that leads to the edge of the land. Arranging a suitable highway connection is therefore likely to be relatively straightforward. A public right of way (PROW) runs to the south of the land (PROW Kidsgrove 205) but it sits beyond the Site's boundary and would be unaffected by the development, although it does provide a connection with the hotel and facilities to the south. The land is currently well-screened, but is nonetheless its character is very much set by the the relatively busy roads that form its northern and eastern boundaries. It also has the A500 200m to the south. The former road to the west is disused and no longer adopted highway.</p> <p>In respect of constraints the Council's SHELAA highlights that the site sits within a Coal Authority High Risk Area. This is however a constraint that affects many sites in the North Staffordshire area. It requires a Coal Mining Risk Assessment and Geo-environmental report ground to be prepared and submitted as part of a planning application. Remediation works and/or mitigation measures would then be required to be undertaken to the satisfaction of the contaminated land officer and Coal Authority. Any remedial measures requires would ensure that the site is made safe for development. Many sites across the</p>

	<p>conurbation are brought forward for development in this way and there is no reason to consider that any issues affecting the site cannot be overcome.</p> <p>The proposals of Evolution 500 Limited for the Site are currently being progressed and focus on a proposed EV charging facility on the land. This would provide an 'on route' charging facility. It is expected that a large proportion of the charging points would be rapid chargers (allowing a vehicle to charge up to most of its battery capacity within 30-45 minutes).</p> <p>Toilets and café restaurant facilities with broadband Wi-Fi are envisaged to be provided in service buildings for the use of customers whilst their car is charging. Vehicular access via the existing connection to the roundabout to the north is proposed and a circular traffic arrangement looping around the site is proposed.</p> <p>In addition to the electricity required for the charging points being sourced from the grid, solar panels would be mounted on the roof of the service buildings and potentially on canopies over the charging bays. Storage batteries are also proposed to balance out peak demand.</p> <p>An indicative site layout plan is provided at Appendix 1. Please note this is illustrative at this stage and subsequent liaison with the Council is proposed for which a further layout plan would be supplied.</p> <p>The technologies associated with EVs and their charging requirements are still emerging and rapidly evolving the development may need to come forward in phases to respond to changing demands and opportunities in respect of new EV charging infrastructure. Given this, and the need to ensure commercial viability for the developer, we would suggest the allocation of the land should not be prescriptive in respect of the proposed number of charge points or the ancillary facilities required.</p> <p>With reference to Chapter 15: Residential and employment allocations, we therefore request the land west of Newcastle Road, Talke be identified as a site allocation for EV charging and ancillary facilities. With regard to NPPF para 35 the Local Plans must be prepared in accordance with the 'Tests of Soundness'. We consider this element of the Local Plan does not accord with the tests of soundness set out at NPPF paragraph 35 as it is:</p> <p>a) Not "Positively prepared", as it fails to ensure the area's future infrastructure needs are fully met;</p> <p>b) Not "Effective", as it would not help ensure the infrastructure needed is delivered over the plan period.</p>

Q4 Part of document	Policy
Q4 Policy	Site Allocations (Omission Site)
Q5 Sound	No
Q6 Details	<p>We consider that the Local Plan is not sound on the basis that it is (1) not positively prepared, (2) not justified, (3) not effective, and (4) not consistent with national policy. The Local Plan as drafted fails to provide sufficient housing and employment land, and the proposed length of the Local Plan is not long enough in line with national policy requirements. Our rationale is set out in the supporting covering letter.</p> <p>This representation is submitted on behalf of Harworth Group PLC (herein "Harworth") and Graham Ward Farms Limited to the Newcastle-under-Lyme Borough Council Final Draft Local Plan. This letter provides our comments as referenced in the completed Representation Form, in support of our response to questions 6 and 7 regarding the soundness of the Local Plan. Our comments go to the heart of the Local Plan and, whilst our Representation Form notes this relates to Policy PSD1: Overall Development Strategy, our amendments sought would require updates across the Local Plan document and Proposals Map.</p> <p>The specific matter which we dispute is the council's proposed approach to allocate two strategic employment sites (ref: AB2 - 'Land adjoining corner of A500 and M6 Southbound' and ref: KL15 - 'Land South of A525 between Keele University and Newcastle') and not 'Land off Talke Roundabout / A500', which was previously assessed in the Local Plan preparation under ref: TK30. We also consider the Local Plan does not cover a sufficient period of time. The Local Plan as drafted fails to provide sufficient housing and employment land. As such, we consider that the proposed approach to the Local Plan is (1) not positively prepared, (2) not justified, (3) not effective, and (4) not consistent with national policy.</p>

We consider that the extension of the Local Plan duration to 2042 as a minimum or ideally 2045, and the allocation of 'Land off Talke Roundabout / A500' (herein 'Talke Park') would resolve this soundness matter. We request that the council consider the contents of this letter and update the Local Plan prior to the submission for Examination. Otherwise, we would request that these comments are passed to the Planning Inspector(s).

In addition to this letter and our completed representation form, this submission is supported by the following documentation:

- Updated Vision Document (October 2024);
- Updated Indicative Proposed Masterplan;
- Housing and Economic Growth Evidence (October 2024);
- Letter from Wendy Lancaster at Tyler Grange, with enclosed Accurate Visual Representations, dated 30th September 2024;
- Geo-environmental Desk Study (August 2023);
- Highways Access Appraisal (August 2023);
- Heritage Briefing Note (August 2023);
- Note on Socio-economic Benefits; and
- Ecology and Landscaping Combined Technical Note (August 2023).

Appended to this letter is a plan of land to the north of Peacock Hay Road, which is also within Harworth's ownership, demonstrating that they have available land in the authority to compensate for the removal of this site from the Green Belt and contribute towards biodiversity net gain.

HARWORTH GROUP PLC

Harworth is one of the leading land and property regeneration companies in the UK, owning and managing c.16,000 acres on c.100 sites in the North of England and the Midlands. The company originated as the property division of UK Coal and is therefore an expert at dealing with complex sites with abnormal ground conditions and topography.

Harworth is one of the key developers presently working in Newcastle under Lyme, currently delivering 'Chatterley Park' (previously referred to as 'Chatterley Valley' prior to the commencement of development), which is the authority's Regional Investment Site, and less than 1km from 'Talke Park'. Harworth fully acquired the land forming Chatterley Park in August 2017, and has subsequently secured planning permissions to allow earthworks to progress, with 1.2m sqft of industrial and logistics floorspace set to come forward, creating around 1,700 jobs.

At Chatterley Park, Harworth has received significant interest from large national and international businesses attracted by the central location, access to the motorway network and ability to service major conurbations in all of the North West, East and West Midlands. There has been a range of occupiers with an interest for a variety of unit sizes. Harworth have also identified interest for "mid-box" (50,000 – 150,000 sqft) units and smaller units (20,000 – 50,000 sqft) and a pent-up demand for an underserved and important segment of the market.

Whilst the larger and "mid box" units do attract distribution warehouses, there is range of occupiers with an interest in the range of unit sizes:

- national/international logistics companies;
- a pharmaceutical distributor;
- manufacturing businesses;
- a bespoke requirement for glass manufacturing;
- a vehicle preparation centre for an automotive occupier; and
- a local business in the medical field, looking to amalgamate operations across the North West centrally to the Stoke/Newcastle area.

The interest across all unit sizes includes occupiers looking to replace older premises, secure larger premises to align with growth of their business and/or amalgamate operations. This includes local businesses and national/ international businesses including one looking for a hub to service the north of England.

Talke Park is the logical extension/ next step to Chatterley Park in terms of its proximity to both that site and the strategic road network. The sites have a similar industrial history and topography, neither of which are deemed to be constraints by Harworth and Graham Ward Farms Limited to their proposed redevelopment of either site.

Harworth's proven track record in the area and strong relationship with stakeholders (including the Councils and potential occupiers) demonstrates that, in partnership with Graham Ward Farms Limited, it can deliver Talke Park and its associated benefits within the plan period. Harworth has an extensive track record of delivering large-scale employment, residential and mixed-use developments. Further information is provided in the submitted Vision document.

TESTS OF SOUNDNESS

In order to be deemed sound, paragraph 35 of the NPPF (2023) states that a Local Plan must be:

- a) Positively prepared – this strategy must, as a minimum, meet the area's objectively assessed needs. Paragraph 16 adds that a Local Plan should be "aspirational but deliverable". The government has recently closed its consultation on updates to the NPPF. Whilst the transitional arrangements may mean that the Local Plan is examined under the currently adopted NPPF, the Government has made it clear through their consultation that "sustained economic growth is the only route to improving the prosperity of our country and the living standards of working people"¹.
- b) Justified – an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence;
- c) Effective – deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and
- d) Consistent with national policy – enabling the delivery of sustainable development in accordance with the policies in the NPPF and other statements of national planning policy, where relevant.

SUMMARY ASSESSMENT AGAINST THE TESTS OF SOUNDNESS

We contest that the 'Final Local Plan' is:

- a) Not positively prepared – The allocation of two strategic sites is a low growth option and does not present an aspirational strategy. At a time when housing delivery is critical (evidenced by the government's

proposed reforms to the planning system to make the standard method for assessing housing needs mandatory) and economic growth is deemed essential to improving prosperity and living standards, the LPA should be pursuing an ambitious strategy. In order to be positively prepared and “aspirational”, the Council should target high growth scenarios, so far as any site allocations and policies are deliverable. The draft Local Plan fails to provide sufficient homes and does not plan for all types of employment growth. The Final Draft Local Plan proposes to allocate two strategic employment sites, which are aimed at different uses (AB2 seeks to support a sub-regional logistics focused employment development and KL15 seeks

to support the expansion of the existing science park and create an innovation zone, linked to research and innovation of Keele University). The overall delivery for industrial and logistics sites is therefore very low and limited. In terms of housing, the Local Plan should allocate additional sites to meet the housing need and this would also allow for delays to sites coming forward.

b)Not justified – In the context of the above, we do not consider that the proposal represents an appropriate strategy, when a reasonable alternative would be to allocate ‘Talke Park’ (ref: TK30) as a strategic location, increasing housing numbers and employment land. The council’s evidence base is flawed, and the conclusions reached are incorrect in deeming that the allocation of the site in this plan would be premature. Indeed, the Strategic Employment Sites Assessment – 2024 Update (June 2024), prepared by Aspinall Verdi notes that it “has the potential to be a high-quality site for local employment in a future local plan”, thereby indicating that the perceived “considerable issues” associated with the site’s delivery (considered below) can be overcome, but that the lead-in time until development proceeds would not render the site suitable for allocation. This is not accurate, as outlined below. It is not justified to pursue low growth for housing and employment land.

c)Not effective – The Local Plan will not deliver the housing need of the authority. As detailed in the Housing and Economic Growth Evidence and summarised below, the Council will fail to meet its five year housing land supply upon adoption of the Local Plan. With the requirement for Green Belt release established to even meet the low growth option, this suggests that it will not be possible to meet the shortage on windfall sites; as such, additional site/s need to be allocated; and

d)Not consistent with national policy – The social objective of the NPPF concerns “ensuring that a sufficient number and range of homes can be provided to meet the needs of present and future generations”. We consider that the Final Local Plan would not deliver a sufficient number of homes and therefore does not meet this fundamental requirement of sustainable development. The NPPF seeks for the planning system to help build a “strong, responsive and competitive economy, by ensuring that sufficient land of the right types is available in the right places and at the right time to support growth, innovation and improved productivity; and by identifying and coordinating the provision of infrastructure” (paragraph 8). The failure to allocate Talke Park represents a low growth scenario, which is not akin to a strong, responsive or competitive economy. Without this site, there would not be the right type of land in the right place to support businesses (considered below). The Council have acknowledged that Talke Park is in a sustainable location and it therefore follows to allocate further housing and employment land in this location. Furthermore, the proposed length of the Local Plan is not long enough in line with national policy requirements. The NPPF states, at paragraph 22, that strategic policies should look ahead over a minimum 15-year period from adoption. The Local Plan the Plan seeks to cover the plan period 2020 – 2040. This approach would therefore only meet the minimum timeframe as required by the NPPF if adopted before the end of 2025. This is a short timeframe allowing for the review and potential update of the Local Plan prior to submission and matters arising during examination. We consider the Local Plan should therefore cover up to 2042 as a minimum and ideally to 2045. Further detail is set out below. THE COUNCIL’S APPROACH TO TALKE PARK (REF: TK30)

The Land off Talke Roundabout / A500 (Talke Park) was identified as one of three potential strategic locations in the First Draft Local Plan (ref: TK30), potentially capable of delivering new homes and employment land. One of the evidence base documents supporting that consultation, the Strategic Employment Site Assessment Report (April 2023), which was prepared by Aspinall Verdi, concluded that there is a clear regional rationale for the allocation of at least two Strategic Sites in Newcastle-under-Lyme (paragraph 11.5).

The Final Draft Local Plan proposes two of the three sites are allocated. Talke Park is not proposed for allocation, and is proposed to remain in the Green Belt. The evidence base for the Final Draft Local Plan includes the Strategic Employment Sites Assessment – 2024 Update (June 2024), prepared by Aspinall Verdi. This provides their professional opinion that there is a need for two Strategic Sites in the new local plan, which should be AB2 (‘Land at J16 of the M6’) and KL15 (‘Land at Barkers Wood, (Keele University) Keele’). We consider that some of the assumptions made in reaching this conclusion are incorrect, and subsequently the summary of our case is that:

1)

There is a need for three strategic sites in order to meet the housing and employment needs of the area; and

2)

Talke Park is a deliverable, sustainable site, and its allocation would represent growth aligning with the NPPF and aspirations of the government.

HOUSING AND EMPLOYMENT NEED ASSESSMENT

Harworth and Graham Ward Farms Limited have commissioned WSP to undertake a series of analyses into the housing and economic growth options for Newcastle under Lyme, and the approach taken to informing the Local Plan. The findings are presented in the Housing and Economic Growth Evidence which highlights Talke Park’s role in generating local employment opportunities and providing housing for existing and new residents of Newcastle under Lyme.

The report identifies flaws in the Council’s approach which relies upon an overly optimistic housing supply pipeline to meet long-term needs, which may lead to potential housing shortfall in the long-term. The government’s consultation on changes to the NPPF includes a standard methodology to housing need. Whilst the transitional arrangements may mean that the Local Plan is not assessed against this higher housing target, this approach would need to be applied once the Local Plan has been adopted in order to assess their five-year housing land supply, and could therefore render policies out of date.

The report also highlights the Council's under-appreciation of emerging employment land needs, which may limit the Borough's growth potential. The strategic need and economic life of properties for warehousing and logistic sectors is overlooked, and the fast-growing and emerging sectors that are not captured by traditional UK SIC sectors are under-appreciated. Talke Park can provide a strategic employment site and a different offer to the proposed strategic sites AB2 and KL15 which can bring a variety of opportunities to existing and future employers in the area.

DELIVERABILITY OF TALKE PARK (REF: TK30)

The Strategic Employment Sites Assessment – 2024 Update (June 2024) (herein 'SESA 2024'), prepared by Aspinall Verdi, concludes that there are "considerable issues to overcome" associated with the delivery of Talke Park, and "there will be a long lead in period before any development takes place", suggesting this renders an allocation premature. We consider the perceived "issues" would not prevent development or cause a significant delay. Whilst the site is not an immediate short-term opportunity in the Local Plan, it can be delivered in the plan period. Our response to the comments made are set out in Table 1, which should be read alongside the Vision Document and the supporting technical reports (Geo-environmental Desk Study; Highways Access Appraisal; Heritage Briefing Note; Note on Socio-economic Benefits; and Ecology and Landscaping Combined Technical Note). These were prepared in support of the submission to the previous First Draft Local Plan consultation and, whilst some changes have been made to the Indicative Proposed Masterplan since that submission, the assessments are still applicable and accurate. Note that the masterplan has been underpinned by significant technical work such as an earthworks cut and fill model to demonstrate that the site is deliverable and this indicative layout could be achieved.

This establishes that the site can provide up to 390 new homes, and 95,500sqm (1m sqft) of employment floorspace (see attachment, table 1, Response to commentary in the Strategic Employment Sites Assessment – 2024 Update)

GREEN BELT

The main current constraint to the development of Talke Park is its location within the Green Belt. The preparation of a new Local Plan for Newcastle-under-Lyme presents an opportunity for this to be reviewed and the LPA has demonstrated exceptional circumstances to justify the release of land from the Green Belt in order to meet its development needs over the plan period.

Our previous representations submitted to the Draft Local Plan were supported by an Ecology and Landscaping Combined Technical Note, which set out the high-level baseline and opportunities and constraints to development within the Site.

The council has now published a Green Belt Assessment Part 4 (July 2024) which specifically assesses Talke Park (TK30), finding that its development would not constitute unrestricted sprawl, would not result in neighbouring towns merging; and would not impact upon the setting or character of the historic town. Whilst it finds that it would represent an incursion into undeveloped countryside, this would be the case for any greenfield site. The Assessment concludes that Talke Park (TK30) did not make a greater contribution to the purposes of the Green Belt than AB2 which is proposed for allocation; indeed TK30 is recommended to be taken forward for consideration, whilst AB2 is not. Its current Green Belt status cannot therefore be a reason for the non-allocation of Talke Park.

The letter from Tyler Grange dated 26 September 2024 provides a number of indicative visuals which demonstrate that development within the site will not obstruct views to and from the Wedgwood Monument, and that the Monument would continue to be seen as a distinct element on high ground separate from and raised above the development. The illustrative mitigation strategy in Appendix 1 demonstrates where opportunities existing to create visual and physical enclosure through the use of green infrastructure. This, together with careful use of cladding tones and designs will further reduce the visual impact of the proposed buildings in views to and from the monument.

In addition to the land at Chatterley Valley and Talke Park, Harworth is in control of additional land in the authority, namely land to the north of Peacock Hay Road (north of Chatterley Valley). A plan is provided at Appendix A (taken from a previous SHLAA assessment). This land, extending to 6.65ha and would be available to offer Biodiversity Offset and any Green Belt compensation land required in association with the allocation of land at Talke Park.

SITE DELIVERY TIMEFRAMES

The Strategic Employment Sites Assessment – 2024 Update (June 2024), prepared by Aspinall Verdi considers that Talke Park "has the potential be a high-quality site for local employment in a future local plan", thereby indicating that if the potential issues associated with the site's delivery can be overcome (as the above table demonstrates is the case), it is the lead-in time until development proceeds which would render the site unsuitable for allocation. However, Harworth and Graham Ward Farms Limited are confident that the site can be delivered in the Local Plan period, whether this be up to 2040, or indeed longer (as considered below). The anticipated programme for delivery and rationale is set out below:

The key constraint to the development of the site, at this time, is its Green Belt designation. An application would not be progressed until the site were to be released from the Green Belt. Should this be proposed prior to the submission of the Local Plan for Examination, the following timeframe may be brought forward as pre-application discussions and surveys could be progressed with greater comfort that the allocation is likely to be brought forward;

Whilst the Local Development Scheme targets the adoption of the Local Plan in 2025 Q5, we anticipate that a more realistic target would be 2026 Q4. If this is the case, then an application could be progressed with the necessary surveys/ assessments and consultation, to lead to the submission of an outline or hybrid planning application by the end of 2027. Note the hybrid application approach was taken at Chatterley Valley to ensure full planning permission was secured for the earthworks, allowing them to get underway sooner. The application could be determined in 2028 Q2/ Q3;

Earthworks could then proceed with the submission of reserved matters application/s for the first phase/s in 2028 Q3/4. The application could be determined in 2029 Q2/ Q3;

The first units could then be constructed and available before the end of 2029. We would expect this to include the first homes;

Harworth and Graham Ward Farms Limited expect a delivery programme of circa 5-6 years for the employment units, which may run from 2029 to 2035. This would form a logical continuation of the anticipated construction and occupation programme at Chatterley Park, whereby it is envisaged this will be constructed and fully occupied by 2030;

Harworth and Graham Ward Farms Limited expect a delivery programme of circa 8 years for the homes, on the basis of 50 being delivered per year, which may run from 2029 to 2037;

Harworth and Graham Ward Farms Limited are confident that the site can be delivered within the Local Plan period, whether this be up to 2040, or indeed longer (as considered below).

In summary, Harworth and Graham Ward Farms Limited do not consider that the design, planning, earthworks and construction programme for the site will not prevent it from being delivered in the Local Plan period. Indeed, we do not anticipate that this would be significantly different to the delivery of proposed strategic site AB2 given its location, so the availability of employment space will be limited, warranting the allocation of Talke Park.

BENEFITS

The allocation of Talke Park would:

Provide up to 390 new homes, housing needs/ growth;

Provide 95,500sqm (1m sqft)/ circa 21ha of employment floorspace, emp needs/ growth, providing up to 1,000 jobs in the construction phase and circa 3,600 permanent jobs once operational, of which around 1,000 would be taken by residents of Newcastle-Under-Lyme;

Meet local need for school places;

The Gross Value Added to the economy is estimated to be circa £15.3 million per year during the construction phase and £140 million per year during operation. It is also anticipated around £1.9 million per year in revenue would be generated through Council Tax and Business Rates receipts;

The location of Talke Park directly adjacent to the existing settlement limits offers clear benefits in terms of easy access to jobs, new homes, sustainable travel and green spaces. This local area would directly benefit from local expenditure of around £85,000 per year from the construction workforce over the construction phase, and around £5.3 million per year from the new residents;

Talke Park will promote sustainable communities, supporting improvements, connections and relationship with the wider area such as Wedgwood Monument;

Harworth and Graham Ward Farms Limited envisage the development to of high quality design and sustainability standards providing market leading approaches to ESG and Carbon Reduction, incorporating Net Zero design criteria and contributing to the delivery of Harworth's Net Zero Carbon Pathway2. This means that all commercial buildings Talke Park will be:

—Net Zero Carbon in operation (subject to occupier process requirements);

—Net Zero Carbon in construction and operation for any units build after 2030; and

—BREEAM Excellent.

DURATION OF THE LOCAL PLAN PERIOD

The NPPF states, at paragraph 22, that strategic policies should look ahead over a minimum 15 year period from adoption, in order to anticipate and respond to long-term requirements and opportunities, such as those arising from major improvements in infrastructure. It adds that, where larger scale developments such as new settlements or significant extensions to existing villages and towns form part of the strategy for the area (as is the case here where two strategic sites are currently proposed for allocation), policies should be set within a vision that looks further ahead (at least 30 years), to take into account the likely timescale for delivery.

The Local Plan the Plan seeks to cover the plan period 2020 – 2040. This approach would therefore only meet the minimum timeframe as required by the NPPF if adopted before the end of 2025. This is a short timeframe allowing for the review and potential update of the Local Plan prior to submission and matters arising during examination. The Local Plan is therefore at significant risk of not being consistent with national policy.

The Local Plan should therefore cover up to 2042 as a minimum and ideally to 2045. This will require additional land to be allocated for employment and residential use. The allocation of Talke Park would assist in addressing this subsequent shortfall.

CHANGES SOUGHT TO THE LOCAL PLAN

Harworth and Graham Ward Farms Limited seeks the allocation of TK30 as a Strategic Site, including the following:

Policy PSD1 – the inclusion of the site under point 3 as a strategic site “Land off Talke Roundabout / A500 to offer a sustainable urban extension providing a strategic employment location, new homes, and public space”.

Policy PSD5 – the site should be listed for removal from the Green Belt.

Update to Policy PSD3 – the figures in terms of housing and employment provision should be updated to account for the allocation of TK30.

Addition of a new Policy TK30 relating to the site's development. A suggested policy is provided below, which we would be happy to discuss further.

Policy TK30 'Land off Talke Roundabout / A500'

Land off Talke Roundabout / A500 is allocated as a sustainable urban extension providing employment land, new homes and public space. The site extends to circa 66 hectares and is allocated for uses including circa 390 new homes and 21 hectares (circa 95,500 sqm of floorspace) of employment land. Where ancillary non-employment uses are proposed, these will primarily support the onsite businesses and industrial processes. Development will be permitted subject to:

- 1.Satisfactorily addressing the site allocation requirements set out in Policy SA1 (General Requirements),
- 2.Safe and convenient access into the development via a new access on Talke Road for the employment development and provision of two access points on Deans Lane for the residential development,
- 3.In line with Policy SA1 (General Requirements), a masterplan and design code should be prepared and agreed for the site which will:

- a.Consider sustainable travel links including cycle and pedestrian connectivity including to public transport links. Development should also consider walking and active travel for health and wellbeing purposes within the site,

- b.provide for appropriate boundary treatments to the existing Green Belt,

- c.Facilitate improvements to local footpaths and linkages to Wedgwood Monument

	<p>d.Achieve high quality design reflecting the landscape location of the site and creating a vibrant destination and attractive public realm. This should recognise the transitional location between the higher density urban and rural area,</p> <p>e.Ensure the layout and development of the site is landscape led and buildings or structures are designed to ensure they are not intrusive in significant views from the surrounding area including the Wedgwood Monument.</p> <p>4.Submission of a coal mining risk assessment, land contamination assessment and mitigation strategy,</p> <p>5.Submission of a drainage strategy,</p> <p>6.Appropriate measures to control impact of increased traffic movement or uses within the site on local amenity including noise and air quality on the surrounding area. This should include submission of a noise and air quality assessment and mitigation strategy,</p> <p>7.Submission of a Heritage Impact Assessment to demonstrate how the layout and design of the development will respond sensitively to the setting of Wedgwood Monument,</p> <p>8.Financial contributions to improvements in the capacity of local schools and health facilities.</p> <p>9.Provision of a new and / or enhanced bus service from Newcastle-under-Lyme to the site.</p> <p>10.Employment units to achieve at least BREEAM excellent standard with an aim for the most recent BREEAM outstanding standard,</p> <p>11.Retention and enhancement of mature trees and existing hedgerows on the site and its boundaries, with minimal breaks in hedgerows to facilitate vehicular traffic. Strengthened boundaries to the site, comprising landscape buffers, and the creation of new strong, defensible boundaries to the Green Belt,</p> <p>12.The development being subject to an agreed Employment and Skills Plan secured through a S.106 agreement.</p> <p>We also consider that the period which the Local Plan covers should be extended beyond 2040, and cover up to 2042 as a minimum and ideally to 2045. This will require additional land to be allocated for employment and residential use. The allocation of Talke Park would assist in addressing this subsequent shortfall.</p> <p>CONCLUSION</p> <p>We consider that, in its current form, the Final Draft Local Plan is not sound, on the basis that it is (1) not positively prepared, (2) not justified, and (3) not consistent with national policy. We consider that the allocation of 'Land off Talke Roundabout / A500' (herein 'Talke Park') would resolve this soundness matter. Harworth and Graham Ward Farms Limited are in control of the site and would therefore lead its design and delivery, as per Chatterley Park. Exceptional circumstances have been demonstrated to justify the release of land from the Green Belt. Allocating Talke Park would meet the Council's growth aspirations in terms of delivering sustainable new homes and jobs, meeting local needs and providing more economic opportunities for residents of Newcastle-under-Lyme. Harworth is an experienced land and property regeneration company which is currently investing in Newcastle under Lyme at the nearby Chatterley Valley site. The above commentary demonstrates why the site is suitable and available for allocation, notably:</p> <p>The Council's own evidence base supports the allocation of the site. The Strategic Employment Sites Assessment – 2024 Update (June 2024), prepared by Aspinall Verdi notes that it "has the potential be a high-quality site for local employment [albeit] in a future local plan". There is therefore recognition that the perceived issues associated with the site's delivery can be overcome, but the Council are uncertain on programme.</p> <p>The SWECO report which forms part of the evidence base notes that the Talke Site has the best walking accessibility score of the three potential strategic sites. That SWECO report, and Mosodi's independent assessment of the site, confirm that there are no highways or accessibility constraints to prevent the site being allocated.</p> <p>The council's Green Belt Assessment Part 4 (July 2024) concludes that the development of Talke Park would not constitute unrestricted sprawl, would not result in neighbouring towns merging; and would not impact upon the setting or character of the historic town.</p> <p>Harworth and Graham Ward Farms Limited are confident that the site can be delivered in the Local Plan period, whether this be up to 2040, or indeed longer.</p>
Q7 Modification	We consider that the period which the Local Plan covers should be extended beyond 2040, and cover up to 2042 as a minimum and ideally to 2045. We consider that the allocation of site ref: TK30 (the Land off Talke Roundabout / A500), as a strategic location, for housing and employment would resolve the soundness matters outlined at 6 above. Further detail is provided in the supporting covering letter.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	In order to accurately outline our client's position and aid the Inspector in providing any further information relating to site TK30, on the basis we consider the allocation of the site would resolve our concerns about the Local Plan being unsound.

Q4 Part of document	Paragraph
Q4 Paragraph number	13.157
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>This report has been prepared on behalf of Gleeson Regeneration Limited by Knights, in respect of the Newcastle-under-Lyme Local Plan regulation 19 consultation.</p> <p>These representations respond to:</p> <ul style="list-style-type: none"> • Chapter 13 - Site Allocations. • Policies map <p>These representations refer in particular to land at Slacken Lane, Kidsgrove, shown on plan ref. UA22-005/P/SLP01-A at Appendix 1 ("The Site"). The land shown at Appendix 1 is subject to planning application ref 24/00089/FUL for housing development: application (170 dwellings, including 43 affordable homes) submitted in February 2024 and awaiting determination at the time of writing.</p>

This statement is accompanied by a Part A form and 2no. separate Part B response forms and responds to the draft plan as follows:

- To object to the omission of land at Slacken Lane, Kidsgrove as a site allocation in Chapter 13, paragraphs 13.157 – 13.163.
- To object to the omission on the Proposals Map of the land at Slacken Lane, Kidsgrove as a housing site allocation and to the shading of this land green as open space.

Chapter 13, paragraphs 13.157 – 13.163 should be amended to include land at Slacken Lane, Kidsgrove as a site allocation

Local Plan Chapter 13 sets out a series of land allocations to accommodate housing and employment requirements. We agree land should be allocated for development as part of the plan to provide a level of certainty over the Plan period in respect of the level and location of new development. We object however to the non-inclusion of the land at Slacken Lane, Kidsgrove and request that it be added to these sites at Chapter 13 of the draft plan. Paragraphs 13.99 – 13.105 cover the Kidsgrove and Ravenscliffe ward and we therefore object to these paragraphs for the reasons that are set out below. It is important that the plan should seek not only to provide sufficient development opportunities to meet the housing requirement, but also to provide a buffer over and above this requirement. Firstly, the NPPF is clear that plans should be positively prepared and significantly boost housing supply. In this regard the housing requirements set within the plan should be viewed as a minimum requirement, and additional sites are required to enable the plan requirements to be met and indeed exceeded. NPPF paragraph 69 requires that planning policies identify a sufficient supply and mix of sites, taking into account their availability, suitability and likely economic viability.

Not all sites considered deliverable will be realised during the plan period. It is considered that greater flexibility is required in the housing supply in order to reflect delayed sites and non-delivery and ensure sufficient flexibility over the plan period

Additional specific deliverable sites are required in accordance with NPPF paragraph 69. Green Belt tightly surrounds the urban area with no provision for safeguarded land in the local plan between the urban area and the Green Belt. The supply of housing land however is limited to a 10% buffer. We would advocate a 20% buffer of sites be provided, to be available from the outset of the plan and that the sites comprising the buffer include land at Slacken Lane Kidsgrove.

Kidsgrove is the main settlement in the north of the Borough. Under the Local Plan settlement hierarchy set out in policy PSD2 Kidsgrove forms the only tier 2 Urban Centre. The policy states “The centre performs a secondary, but complementary role to the Strategic Centre, providing a high number of services and facilities, retail and leisure, economic and residential areas, sustainable transport connections and accessible public open space. It is a key location for growth”.

The land at Slacken Lane site is 5.9 ha in extent of vacant land included in the Council's Strategic Housing and Economic Land Availability Assessment (SHELAA) referenced as site 'BL4 - Land at Slacken Lane, Kidsgrove'. The site is accessed from Slacken Lane to the northwest. A public footpath extends east from Slacken Lane, along the southern edge of the site. The site is vacant with encroaching tree cover. It includes a significant proportion of made ground resulting from past tipping of former colliery spoil. The land rises to the centre of the site and drops to the southeast margin. The accompanying policies map shows that the land is not included in the Green Belt.

The site is shown on the plan below: (see attachment)

The site is located around 1km to the west of Kidsgrove Town Centre. It has housing to the south, east and west and the Stoke to Crewe railway line runs immediately to the north, with employment uses beyond. Slacken Lane connects from the northwest corner of the Site to Congleton Rd South (A34), 150m to the west of The Site.

The locational sustainability of the site at Slacken Lane is clear when considering the proximity of services and facilities on the ground. These include a primary school at around 750m; a high school at around 700m; a Lidl store at around 500m and a Tesco supermarket at around 600m, along with multiple restaurants; public houses; churches and other facilities in the Kidsgrove area. Bus services are available from the stops on the A50 Liverpool Road to the north offering frequent services throughout the week to destinations including Alsager, Kidsgrove, Congleton and Crewe. Kidsgrove rail station is at around 800m with services to Manchester, Birmingham, Stoke and Crewe.

In preparing a Local Plan, National Planning Policy Framework, paragraph 69 makes clear “Strategic policy-making authorities should have a clear understanding of the land available in their area through the preparation of a strategic housing land availability assessment. From this, planning policies should identify a sufficient supply and mix of sites, taking into account their availability, suitability and likely economic viability”. The site has been promoted previously for development via the Council's Call for Sites process and accordingly the Site has been reviewed in the NULBC Strategic Housing Land Availability Assessment November 2022 (SHELAA) referenced as BL4 – Land at Slacken Lane. The SHELAA assessment of the Site is that it is ‘achievable’ and ‘viable’, but also however that it is ‘unsuitable’ and ‘unavailable’. This is clearly incorrect however as the site sits within the urban area development boundary and we strongly consider should be considered ‘suitable’ and it is clearly ‘available’ given planning application ref 24/00089/FUL. We also note the significant technical work undertaken as part of the planning application that that clearly underlies its deliverability.

Application ref 24/00089/FUL by Gleeson Development Limited is for 170 dwellings, including 43 affordable homes, with associated access and landscaping. This application was submitted in February 2024 and is awaiting determination at the time of writing. The site is to be brought forward by Gleeson Homes, a leading housebuilder, mainly focussed on building homes in the Midlands and North of England. Nearby Gleeson housing sites currently being brought forward are 330 homes (‘Watermills’) at Apedale Road, Chesterton ST5 6BH (5km south in Newcastle-under-Lyme District) and a 42 home development (‘The Hawthorns’) on former employment land at Anchor Road, Adderley Green, Stoke-on-Trent, ST3 5BL (around 13km to the south east)

The proposed development would provide a policy compliant proportion of affordable housing, proving significant assistance to the Council in meeting the targets for affordable housing.

	<p>Given that the site is controlled by a housebuilder, it is therefore considered that the site can begin to deliver housing within 18 months of planning consent being granted. Gleeson anticipate a first year build out rate of approximately 25 units, then around 40 in subsequent years.</p> <p>We therefore request the housing allocations included in the Local Plan of the Local Plan are amended and that the land Slacken Lane, Kildgrove be allocated for housing development prior to submission for examination.</p> <p>We therefore object to the non-inclusion of the land to the south of High Street, Newchapel and as an allocated housing site at Chapter 13 of the draft plan. We consider this element of the Local Plan does not accord with the tests of soundness set out at NPPF paragraph 35 as it is:</p> <ul style="list-style-type: none"> • Not “Positively prepared”, as it fails to ensure the area’s objectively assessed needs are fully met; • Not “Effective”, as it would not help ensure sufficient housing is delivered over the plan period, • Not “Consistent with national policy” as it fails to reflect the specific requirements of NPPF paragraph 69 that planning policies identify a sufficient supply and mix of sites, taking into account their availability, suitability and likely economic viability.
Q7 Modification	Please see accompanying statement of representations
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)

Q4 Part of document	Policy
Q4 Policy	Site Allocations (Omission Site)
Q6 Details	<p>Please see attached representations. Knights have been instructed by our client to promote land located adjacent to their home at Stone House Farm, Woodside within a settlement boundary for Baldwin's Gate in the emerging Local Plan 2020-2040.</p> <p>Our clients live at Stone House Farm which comprises their main family home, arecently approved residential annexe for their parents (LPA ref. 21/00479/FUL) and a cluster of steel framed commercial buildings. Their property sits centrally within 4.68 hectares of land which bounds Woodside and Sandy Lane to the east and the Newcastle Road (A53) to the north. The extent of our client's ownership is contained in Appendix A (see attachment).</p> <p>Our clients previously promoted this site as a residential development in August 2023 through the Regulation 18 version of the Local Plan.</p> <p>Knights have engaged in pre-application discussions with the LPA in respect of redeveloping the eastern portion of the site (fronting Sandy Lane and Woodside) for residential development (during 2023 and 2024) where the LPA have accepted that this site would constitute a sustainable location for new housing. It is anticipated that an outline planning application will be submitted towards the end of 2024. To support the pre-application submission, PGLA Landscape Architects produced a landscape led indicative layout, Charnia Ecology produced a Preliminary Ecological Appraisal and Pell Frischmann produced a Technical Transport Note (including consideration of the access to the site) all of which demonstrates how the development could be accessed and to demonstrate that the scheme could be technically sound.</p> <p>However, given the sustainable location of this site, and the need for land for additional housing in the borough, the whole of our client's land interests are presented for allocation, which is a site beyond the extent of that presented at preapplication stage.</p> <p>Planning permission has recently been approved on 12 July 2023 (at appeal) to develop land at Baldwins Gate Farm (to the north of the site) under LPA ref 21/01041/OUT to provide 200no. dwellings set within a community parkland. This would be located directly to the north of our client's land (bounding the NewcastleRoad). When allowing that appeal, the Inspector concluded at paragraph 16 that that site “would be in a suitable location for new housing having regard to the availability of public transport” thereby complying with Policy SP3 of the Core Strategy and paragraph 109 of the Framework. As part of that proposal substantial highway improvements are proposed around the Sandy Lane junction which is located adjacent to our client's site, and this will serve as a key gateway feature when entering the village from the west.</p> <p>Planning permission has also been approved for a small infill development along Madeley Road (LPA ref 21/00217/REM). To the east of our client's site, a planning application was submitted by Jones Homes in March 2023 proposing 40no. dwellings at a site known as ‘Land to East of Woodside’ which as an LPA ref. of 22/01105/FUL. At the time of submission this application remains undetermined.</p> <p>The draft Policy Map currently shows our client's site located outside of the Baldwin's Gate settlement boundary. However, the approval of the Baldwin's Gate Farm site at appeal has resulted in this site being</p>

	<p>allocated as a residential allocation (Allocation ref. LW74) in the Regulation 19 version of the Local Plan. Equally, should the Jones Homes site be approved by that time, this would also expand the extent of built development towards the eastern side of Sandy Lane. In such an event, it is considered that our client's site would form a logical bookend to the western portion of Baldwins' Gate village boundary, providing residential dwellings fronting Sandy Lane and Woodside and rounding off the village. Our clients' site is located just outside of the settlement boundary for Baldwin's Gate in the Draft Policy Map allocation, as shown in Figure 1. The site therefore presently falls within the open countryside (but not Green Belt).</p> <p>It is requested that our client's site be included within the proposed Policy Map to enable it to be developed for residential purposes.</p> <p>PROPOSED RESIDENTIAL DEVELOPMENT AT STONE HOUSE FARM</p> <p>It is envisaged that the entire Stone House Farm site could be redeveloped to provide a mix of dwellings, which would include an internal access road.</p> <p>It is intended that a proportion of these dwellings could be self-build plots, thereby introducing an opportunity for people wishing to design and build their own homes.</p> <p>Initial advice from Pell Frischmann has informed the indicative layout presented at pre-application stage, with the scheme utilising only the existing access off Woodside (rather than proposing additional access to the north to avoid potential conflict with the road infrastructure that is being proposed on adjacent sites).</p> <p>The proposed pre-app scheme is in its very early stages of development however a landscaped-led scheme is being developed by PGLA Landscape Architects which could introduce areas of biodiversity rich landscaping as well as reinforce a defensible boundary on the western edge of the site.</p> <p>SUMMARY</p> <p>It has been demonstrated that there is a clear and robust argument in favour of including Land at Stone House Farm within the proposed settlement boundary for Baldwins Gate set out in Figure 2 of this report. This site would be a logical addition to the Rural Centre of Baldwin's Gate, an area which has been established as part of the Baldwins Gate Farm appeal to be an inherently sustainable location. The site would bring forward substantial benefits to Baldwin's Gate and the Borough as a whole and would align with the Government's aspirations to deliver 1.5 million homes during the next parliament (with the Borough identified as needing to accommodate 193 new homes per year). The proposal would provide much needed family market and potentially self-build homes.</p>
Q7 Modification	Please see attached representations.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	Knights wish to participate at the hearing sessions for Policies PSD3 and PSD4 so that we can demonstrate why the Stone House Farm, Baldwin's Gate site should be included as a residential allocation in the Policies Map.

Q4 Policy	Site Allocations (omision site)
Q6 Details	<p>Please see attached representations. Knights have been instructed by Manor View Care Home Limited to promote Land at New Farm, Cross Lane, Audley as a housing allocation in the emerging Local Plan 2020-2040. Knights previously promoted this site through the Regulation 18 Local Plan consultation in August 2022 and a Call for Sites Nomination Form in August 2022 and this submission serves as an update to the previous representations.</p> <p>The site measures 2.6 hectares, it is located a short distance to the north of the settlement boundary of Audley and is washed over by the Green Belt. The site is shown in context on the adopted Policy Map in Figure 1.</p> <p>Knights have previously promoted this site (along with wider land within our client's ownership which totals 22.4 hectares) on behalf of our client requesting this site to be considered for housing through the submission of a Call for Sites submission in January 2022.</p> <p>Planning permission was granted at appeal to replace a builder's yard with 7no. dwellings on 7 June 2019 (LPA ref. 18/00122/FUL and PINS reference APP/P3420/W/18/3219254). This development has been commenced. This site is located immediately to the west of the New Farm site. In allowing that appeal, the Planning Inspector considered that the site was a sustainable location for housing which would enhance the vitality of Audley. Planning permission has also been applied on the New Farm site to erect 39no. market homes and associated recreational areas as an off-site enabling development to facilitate the conversion and retention of Madeley Manor which is also owned by our client. This application was submitted in June 2023 under LPA ref. 23/00522/FUL and is pending determination (with an anticipated planning committee date of 8 October 2024 (with an anticipated officer recommendation for</p>

	<p>approval and an acknowledgement that the scheme would be technically sound). The application follows substantial pre-application discussions with the LPA and has been subject to an Urban Vision design review panel, SPCG engagement and a public engagement exercise.</p> <p>Madeley Manor itself is a grade II listed building and is also located in the Green Belt, it has been vacant since July 2015 and has been marketed for over two years. Planning permission was previously submitted in January 2021 (LPA refs. 21/00021/FUL and 21/00022/LBC) to convert the manor house and provide on-site enabling development in the form of two apartment blocks that would provide a total 52no. apartments however objections were raised by the Council's conservation officer and Historic England and that scheme was subsequently withdrawn.</p> <p>A subsequent planning application and application for listed building consent was submitted and approved to convert the manor house to provide 14no. dwellings (with no on-site enabling development proposed) and this was subsequently approved (LPA refs. 21/01175/FUL and 21/01176/LBC) in March 2023.</p> <p>However it isn't financially viable to undertake the approved conversion works, as there would be a circa. £2.7m shortfall (which is referred to as a conservation deficit). As such, it is probable that these works would not be undertaken without some degree of funding from another source. The development proposals at New Farm include a viability appraisal which confirm that would generate a net profit of 16.19% (which is at the lower range of profit margins expected by developers) and therefore it has been demonstrated that the provision of 39 dwellings is the minimum amount of development required to enable the implementation of the Madeley Manor consents.</p> <p>The Regulation 19 Local Plan seeks to allocate several sites around the edge of Audley and Bignall End as residential allocations (and remove them from the Green Belt) which would provide a total of 270no. dwellings. Our client's site is not proposed to be taken out of the Green Belt as part of the draft Local Plan and it is therefore recommended that this site be allocated as a residential development.</p> <p>SUMMARY</p> <p>It has been demonstrated that there is a clear and robust argument in favour of removing New Farm, Cross Lane, Audley from the Green Belt and allocating it for residential purposes. The site would bring forward substantial benefits to Audley and the Borough as a whole (as demonstrated by the Economic Benefits Statement that was produced by Pegasus Group in support of planning application 23/00522/FUL) and would also facilitate the redevelopment of Madeley Manor to enable it to be conserved and put to a viable use consistent with its conservation for the foreseeable future. The proposal would provide much needed family housing which is currently underprovided within Audley, which would attract new upwardly mobile families to the area, particularly those who may be associated with the new employment allocation at Junction 16 of the M6.</p> <p>The site (as well as land beyond which is also within the ownership of our client as set out in Appendix B) would bring forward substantial benefits to Audley, Bignall End and the Borough as a whole and would align with the Government's aspirations to deliver 1.5 million homes during the next parliament.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	Knights wish to participate at the hearing sessions for Policies PSD3, PSD4 and PSD5 so that we can demonstrate why the New Farm, Audley site should be included as a residential allocation in the Policies Map.

Q6 Details	<p>Please see supporting representation by Knights on behalf of Shropshire Homes for an omission site adjacent to allocation reference LW53.</p> <p>ALLOCATIONS</p> <p>Shropshire Homes has an interest in this site on the edge of Loggerheads on Mucklestone Wood Lane, as well as the adjoining site to the west which is proposed for allocation (LW53). As per our separate representation the proposed LW53 allocation in the Regulation 19 Local Plan is supported and the inclusion of this omission site would complement that.</p> <p>In addition to the above allocation, this representation puts forward the allocation of an additional field parcel to the east of proposed site allocation reference LW53 for in the region of 50 dwellings.</p>

The Inspector conducting the examination is invited to allocate this additional land on the basis of the following:

- (a) that in the event that the Inspector considers that the allocation of additional land for development will make the plan sound in order to ensure that the emerging housing requirement is met in full;
- (b) That the site is located adjacent to a proposed allocation in the Regulation 19 LP;
- (c) that the site is being promoted by a housebuilder involved in the promotion of the adjoining allocation, which would ensure that the site could be delivered quickly and in the earlier part of the plan period to ensure that a 5 year housing land supply can be achieved upon the adoption of the plan;
- (d) that the site is located in a sustainable location that would enhance the provision of additional affordable housing in a more rural location;
- (e) that the provision of additional development in this location would enhance the support and sustainability of existing services and facilities in the village that would make the village more sustainable in the long term;
- (f) that the development would be able to contribute to the provision of additional community facilities on Neighbourhood Plan sites LV1 and LV2 which are allocated for community uses.

With regard to the specific requirements of the site, it is considered that the site can deliver against, and comply with the requirements set out at both Policy SA1 and the requirements set out under Policy LW53 for the adjoining allocation.

Policy SA1

With regard to criteria SA1, a number of criteria need to be satisfied, and the commentary below will explore how relevant criteria can be addressed. A number of submissions in relation to SA1 are similar for this site as they are for LW53, so in the interest of brevity, the proposed allocation of additional land can deliver upon all of the criteria that can be delivered on site allocation LW53, so this representation will deal with the masterplanning, heritage and landscape matters that will be relevant to the consideration of this additional parcel of land.

Master Plans

A masterplan has already been provided to the Development Management section of the Council as part of application reference 23/00002/OUT (prior to the reduction in scale of the application to 150 dwellings within the LW53 allocation), with the masterplan setting out how the site can deliver the proposed dwellings, access roads, open space, trees and landscaping in tandem with LW53 whilst respecting surrounding character of the settlement and the setting of the nearby listed building. A copy of the masterplan is provided as Appendix 2 to demonstrate how the Council's policy objectives can be delivered on this site. This masterplan was informed through pre-application discussions with the Council, as well as being shaped through the Design Review Panel process. The additional land can otherwise be delivered in a comprehensive and cohesive manner with LW53. It should be noted that the access shown on the attached masterplan has since been superseded and the access into the omission site would be taken through allocation reference LW53 via the access as shown on the masterplan that is submitted with the representation supporting that allocation.

Historic Environment

It is accepted that the proposal would result in some visual change within the setting of White House Farm which is a Grade II listed building. As with LW53, it is accepted that the development of this additional parcel of land would result in less than substantial harm. A heritage briefing note by Pegasus (Appendix 3) suggests such harm that would fall at the lower-moderate end of the spectrum of less than substantial harm and that this should be weighed against the public benefits of the proposal.

This less than substantial harm would occur through the anticipated visibility of development in views to and from the asset, although it should be noted that a significant area of intervening agricultural land will remain between the asset and the proposed allocation and there will be a green landscaped buffer to the eastern boundary of the site that would provide a transition between built form and the boundary to the adjoining field parcel.

With regard to the significance and setting of known heritage assets, the Council's HIA concludes for LW53, with regard to the contribution that the site makes to the significance of White House Farm, that: The closest designated heritage assets to the site are a mid-to-late 19th century milepost (1205706) on Eccleshall Road, c 230m west of the site, and White House Farmhouse (1377586), c 240m east of the site. Despite its proximity, there is no intervisibility between the milepost (1205706) on Eccleshall Road and the site, however, there is partial intervisibility between the White House Farmhouse (1377586) and the majority of the site – the significance of this asset is derived, in part, from its imposing and prominent position within the existing landscape but also as a defining feature within a previous post-medieval agricultural landscape. Despite its continued agricultural use there are no 'positive' remains of previous medieval/postmedieval features indicative of this activity within the site, and the extent to which belowground elements of these features survive is unknown. As such, the site makes a neutral contribution to the setting/significance of known heritage assets within the study area. (emphasis added).

It is considered that the above conclusions also apply to the additional field parcel, and whilst this would bring development closer to the listed building, there would still be a significant gap between the proposed development and the listed building, and that any less than substantial harm can be mitigated through appropriate landscaping of the eastern site boundary, along with the design and layout of the development, which can include street design and layout, open space provision, tree planting, and the use of smaller house types such as single storey dwellings to the east of the site to create a tapering off of the development, rather than a hard edge.

With regard to an overall impact assessment, the HIA acknowledges that development could impact upon on heritage assets within the environs of the site and makes recommendations for minimising harm and maximising enhancement. These recommendations include:

- (a) Where possible existing hedgerows and trees should be retained to help to preserve the pattern of enclosure within the site.
- (b) Additional areas of screening/planting should be considered at the eastern extent of the site, to reduce harm to White House Farmhouse.
- (c) Development within the site should attempt to preserve long range views of the farmhouse, particularly those along the key approaches into the village from the north (Rock Lane), and west (Eccleshall Road)

of the site. This would help to maintain the site's existing neutral contribution to the setting/significance of this asset.

The submitted masterplan demonstrates that in accordance with the emerging policy, that the layout and design of the additional parcel of land can respond sensitively to the significance of the nearby heritage asset (Whitehouse Farm). This was the position of the applicant at the time that the planning application for 200 dwellings was first submitted to the Council prior to the reduction in scale of the scheme at the request of officers.

Landscape and Green Infrastructure

The potential allocation of this additional land should be considered in combination with allocation reference LW53, and as such, the visual change that would occur through the delivery of around 200 dwellings.

As set out in the submissions for LW53, the greatest level of visual change would relate to the site and the very localised area immediately adjacent to the site. The effect on potential receptor groups in the wider landscape context, including users of the wider PRoW network, would generally be very limited. The existing trees and hedgerows which surround the site would also help to soften the appearance of new built form where this is visible and the mitigation inherent in the design will help to assimilate the proposed development into the landscape in a manner which complements the character of the existing adjacent areas of the settlement (i.e. a strong framework of green infrastructure set across the upper slopes and topographical high ground).

Overall, the context provided by the existing settlement edge of Loggerheads and the combined screening effects of topography, existing vegetation and built form means that effects on landscape character and local visual amenity would be very limited in scale. In order to support this assessment, a briefing note on landscape and visual matters by Pegasus accompanies this submission and is provided at Appendix 4. The briefing note by Pegasus makes the following conclusions:

Overall, the proposed development of up to 200 dwellings across a site that includes the two agricultural fields north of Mucklestone Wood Lane would result in limited effects on landscape character and visual amenity, restricted to the site and its immediate environs, and experienced in the context of the existing settlement edge of Loggerheads.

A range of landscape and visual receptors have been assessed by the detailed LVIA that accompanied the original application for 200 dwellings under application reference 23/0002/OUT (which was subsequently amended and reduced to 150 dwellings at the request of officers), and the impacts subsequently identified for both landscape character and for visual receptors. This has been undertaken as part of an iterative process whereby potential impacts have informed the design of the proposed development and the associated landscape strategy. Mitigation has, therefore, become integral to the proposed development.

The residual impacts identified through this process highlight that the greatest level of effect would relate to the site and to a very localised area immediately adjacent to the site.

The effect on potential receptor groups in the wider landscape context, including users of the wider PRoW network, would be generally very limited.

The existing trees and hedgerows which surround much the site would also help to soften the appearance of new built form where this is visible and the mitigation inherent in the design will help to assimilate the proposed development into the landscape in a manner which complements the character of the existing adjacent areas of the settlement (i.e. a strong framework of green infrastructure set across the upper slopes and topographical high ground).

Overall, the context provided by the existing settlement edge of Loggerheads and the combined screening effects of topography, existing vegetation and built form means that effects on landscape character and local visual amenity would be very limited in scale.

Consequently, subject to mitigation, in themselves, the landscape and visual matters related to this part of the landscape would not preclude the additional field to the east of the site boundary of the current emerging allocation being included in the final allocation as part of the Local Plan.

The submitted masterplan otherwise demonstrates how the development can be successfully incorporated into the landscape and the allocation of the additional land is therefore considered to be acceptable in design terms.

Highways

A suitable access with appropriate visibility splays can be provided directly onto Mucklestone Wood Lane as part of allocation reference LW53 as shown on the masterplan that accompanies the representation by Shropshire Homes for LW53. The access shown on the masterplan that accompanies this submission for the omission site has been superseded and the masterplan provided is for illustrative purposes to demonstrate how the remainder of the site can be laid out to assimilate into the surroundings. This additional land would be accessed through LW53 and would not require the provision of an additional vehicular access. An emergency access can be provided onto this additional land from Mucklestone Wood Lane as required. In addition, a bus set down facility can be provided on the edge of the site curtilage for secondary school pupils using the secondary school bus service.

In addition to the above, off site highway improvement works can be undertaken along Mucklestone Wood Lane as per those submitted to the Council and endorsed by the Local Highway Authority as part of application reference 23/0002/OUT which include a series of kerb build outs and refuges to both control vehicle speeds as well as provide refuges for pedestrians to step off the road to avoid any oncoming traffic.

Sufficient levels of parking can be provided within the development, including the provision of electric vehicle charging infrastructure to each of the proposed dwellings.

Criteria 3 – Submission of a Heritage Impact Assessment

A heritage impact assessment was submitted with application reference 23/00002/OUT.

The proposal would result in some visual change to the setting of the nearby listed building (White House Farm), and this would result in less than substantial harm, albeit at the lower end of the spectrum of less than substantial harm. This harm can be further mitigated through the provision of an appropriate landscape scheme to the eastern boundary of the site as discussed earlier in this submission, in addition to the use of single storey dwellings to the east of the site to taper off the development to the east and avoid the creation of a hard edge to development.

	<p>Criteria 5 – Landscape Buffer to the East of the Site</p> <p>As discussed under other criteria, the submitted masterplan demonstrates the provision of a landscape buffer to the east of the site and that this can be achieved in a suitable manner which would help to preserve the setting of the nearby listed building, in addition to the provision of single storey housetypes.</p> <p>Other Considerations - Suitability of Loggerheads for Additional Housing Development</p> <p>Loggerheads is identified as a Rural Centre in the DLP. This status in the DLP settlement hierarchy is underpinned by the Rural Area Topic Paper that forms part of the Council's evidence base.</p> <p>The topic paper demonstrates that Loggerheads currently benefits from the following services and facilities:</p> <ul style="list-style-type: none"> (a) Co-operative foodstore (b) Post Office (c) Primary school (d) Library (e) Hairdressers (f) Restaurant (g) Public house (h) Places of worship (i) Butchers (j) Community meeting room at the Fire Station (k) Pharmacy (l) Bus service between Market Drayton and Newcastle-under-Lyme (service number 64) (m) Veterinary clinic <p>In addition, Loggerheads is located in close proximity to the settlements of Muckleston and Ashley, both of which fall within the Loggerheads Parish. Ashley contains a GP surgery and a restaurant and a village hall is located outside of the village boundary between Ashley and Loggerheads. Muckleston also contains a primary school, with parts of Loggerheads falling within the catchment area for this primary school, including proposed site allocation LW53.</p> <p>The three villages therefore provide a range of services where services in one village may support the residents of another village. In particular, residents of Ashley and Muckleston will rely on the Post Office and Co-Operative foodstore, and residents of Loggerheads will rely on the GP surgery in Ashley.</p> <p>Rural Centres are identified as providing "a significant role in service provision to the local population and must contain a number of essential services and facilities in order to meet the day to day needs of residents".</p> <p>The above demonstrates that Loggerheads is a sustainable location that is a suitable location for some additional residential development in planning policy terms, and that has been the consistent finding of both planning officers in determining planning applications, and planning inspectors at appeal.</p> <p>Further to the above, allowing some additional development around the larger rural centres would provide additional critical mass to provide additional residents to support existing services and facilities and provide some additional patronage to existing bus services so that such services continue to be viable. As such, there is no doubt that Loggerheads is a suitable and sustainable location for some additional residential development and the proposed allocation of LW53 and the additional parcel of land to the east to deliver a combined total of 200 dwellings is considered to be sound, supported by a robust evidence base and is therefore justified.</p> <p>This site is being promoted by Shropshire Homes who are committed to the delivery of this site for housing as a second phase of development to LW53.</p> <p>In terms of delivery, it is anticipated that the development of the site will follow as a second phase to LW53, with dwellings being delivered at a rate of around 25 – 35 homes per annum:</p> <p>The site would therefore be deliverable within the plan period and would be able to start delivering homes within the first 5 years of adoption.</p>

a) Quarry Bank Road Site Assessment

4.2 The Regulation 19 Plan does not identify Quarry Bank Road as a proposed allocation. In reviewing the evidence base, the following documents have been reviewed to critique how the Council has reached this conclusion:

- i. Site Selection Report and Assessments (2024) (underpinned by the 2024 SHELAA).
- ii. Green Belt Assessment (2024).
- i. Site Selection Report (2024)

4.3 Alongside the Regulation 19 Plan, the Council has published a Site Selection Report, which sets out the site selection process which has been applied to identify sites for development in the Local Plan; drawing on the assessment of sites undertaken in the SHELAA (2024). Land at Quarry Bank Road is identified as Site KL21 (Land South of A525 and either side of Quarry Bank Rd), with a capacity for 382 homes (using an applied density of 20dph).

4.4 Site KL21 is identified as being “available”, “achievable” and “viable”, but is summarised as being “unsuitable” for residential development. The summary comments for the site state that:

“The site makes a moderate contribution to Green Belt purposes, the site makes a strong contribution to preserving the setting of an historic town and a moderate contribution to preserving the countryside from encroachment. The Topography - land slopes upwards from Station Road and the A525. Impact on townscape of Keele 17

Village conservation area (site adjacent to CA) & setting of Grade II* listed building (St John the Baptist Church) and within the setting of Keele Registered Park and Garden. Limited part of site has Surface water flood risk (1 in 30 years). TPO on edge of site. The site is grade 3 agricultural land. The majority of the site is within minerals safeguarding area for brick clay. Some limited surface water flooding within site. The site is detached from the urban area / inset settlement.1”.

4.5 Beyond the above assessment, there is limited information as to why the site was not considered further. Persimmon would make the following comments on this assessment:

- The assessment does not consider in any detail how any impacts (such as heritage) can be mitigated. The Heritage Assessment detailed in the Development Statement provided at Appendix 1 demonstrates that the heritage impacts have been assessed and considered, and that in the context of adjoining development, the harm of developing the site would be less than substantial even before implementing any mitigation strategies, which would then further diminish the perceived harm. These strategies would include retaining views of the Church from the east, providing a buffer from the eastern parcel, and implementing considerate design techniques throughout.
- The Green Belt Assessment is fundamentally flawed in relation to its assessment of the, in line with our comments below.
- There are no definitive conclusions or reasons on why the site has not been selected, particularly when considered against other sites in the locality such as the Lyme Park / Former Keele Municipal Golf Course site (SP11) - the impact of which is considered later in this section.

ii. Green Belt Assessment (Part 4, 2024)

The Purposes of the Green Belt

4.6 In terms of an assessment of the site against the purposes of the Green Belt, it was considered in the Council's 2024 Part 4 Green Belt Assessment (site KL21). A summary of the assessment for site KL21 is as follows:

(Table available in attachment)

concludes that the site makes a “Moderate” contribution to the purposes of the Green Belt and summarises that2:

“The site makes a strong contribution to one purpose, a moderate contribution to two purposes, a weak contribution to one purpose and no contribution to one purpose. In line with the methodology, professional judgement has been applied to evaluate the overall contribution. The site has been judged to make a moderate overall contribution. Although the site makes a strong contribution to preserving the setting and special character of historic towns, the site makes a moderate contribution to safeguarding the countryside from encroachment as it has predominantly durable boundaries and a strong degree of openness. These predominantly durable boundaries mean that development would be contained and would not compromise the overall openness and permanence of the Green Belt. The site does not contribute to checking unrestricted sprawl, it makes a weak contribution to preventing neighbouring towns from merging and a moderate contribution to assisting in urban regeneration.”

2 Green Belt Assessment Part 4 (2024) – Assessment KL21A (pg.F.84)

19

4.8 Persimmon strongly objects to the assessment of Purpose 4 (preserving the setting and special character of towns). This should consider a more detailed assessment of the site's impact on the setting of the Keele Conservation Area. This has been undertaken by Persimmon as part of a Heritage Assessment and Landscape and Visual Assessment to underpin a review of the purposes of the Green Belt at the site, contained in its Development Statement at Appendix 1.

4.9 Our assessment of Purpose 4 considers the site to have a “moderate” impact on this purpose. A Heritage Assessment, undertaken by Pegasus, has considered the setting of the Conservation Area and the impact of the development of the site on other designated heritage assets. It summarises that the sensitive development and masterplanning of the site could retain key views to key features of the Conservation Area and would cause “less than substantial harm” to its setting. In addition, the modern development at the

	<p>Hawthorns and its inclusion within the Conservation Area boundary has introduced new development to the character of the Village and is particularly relevant to the character and interaction of the village to the North of Station Road / Keele Road, where the site sits.</p> <p>4.10 In addition, an arbitrary approach to Purpose 5 (assessing all sites as moderate) is flawed. The Council's urban capacity study and assessment of the exceptional circumstances for Green Belt release has demonstrated that the release of Green Belt land is not preventing urban regeneration. This purpose on all Green Belt sites should be "not applicable".</p> <p>4.11 The Councils Green Belt Assessment conclusions for site KL21 also go on to state [Asteer emphasis added]:</p> <p>"The site is not considered to be suitable as it does not promote sustainable growth. The site is completely detached from the Keele University inset settlement which is approximately 200m away and from the Newcastle-under-Lyme urban area which is approximately 610m away. The site is adjacent to the washed over village of Keele. The site is available as it was promoted by the owner and it is not in active use and could be developed now. The site is considered to be achievable as it is broadly viable and there are no known abnormal development costs. The site has existing durable boundaries with the open countryside3".</p> <p>3 Green Belt Assessment Part 4 (2024) – Assessment KL21A (pg.F.82) 20</p> <p>4.12 Keele and Keele University is now proposed to be a combined inset settlement (with the village of Keele no longer washed over by Green Belt). Therefore this assessment is fundamentally flawed and must be revisited by the Council to reassess the Green Belt impacts of site KL21 in this context. This issue was raised in our Regulation 18 representations in relation to the Part 2 and Part 3 Green Belt Assessment for site KL21, which has not been addressed, nor rectified in the Part 4 Assessment. The Green Belt Assessment in relation to Site KL21 is therefore fundamentally flawed and unsound.</p> <p>4.13 Our Development Statement at Appendix 1 provides an assessment of the purposes of the Green Belt in the context of Keele becoming an inset village. It concludes that the release of the site will create a logical, defensible and long term Green Belt boundary for a logically extended Keele Village and University hub, which does not have an adverse impact on the openness of the surrounding countryside and which is not required to meet the purposes of the Green Belt, as defined by the NPPF.</p> <p>Exceptional Circumstances for Green Belt Release</p> <p>4.14 Persimmon strongly supports the Council's Paper which sets out the Exceptional Circumstances for Green Belt Release (2023), which considers that there is a strategic case for release based on housing/employment needs, a lack of urban capacity and the need to promote sustainable patterns of development. We consider that it is clear that Green Belt release is required and that the site specific circumstances for release, including Green Belt impact should be a significant consideration in site selection.</p> <p>4.15 Quarry Bank Road is uniquely located to meet the needs of the Borough, within Newcastle's corridor of western expansion and within a settlement that includes Keele University. We consider that Quarry Bank Road can demonstrate the exceptional circumstances that exist at a site specific level, which should be considered alongside the strategic circumstances that support Green belt release, including (these are expanded upon in Appendix 1):</p> <ul style="list-style-type: none"> • Meeting the needs of the University Growth Corridor and delivering sustainable patterns of development – spatially, the site is in a unique location to support the exceptional growth potential of Keele University and SIP. • New community infrastructure – as set out in the Illustrative Masterplan for Quarry Bank Road, the site has the scale and potential to support Local Plan growth through both an extension to St John's CE Primary School (or other community infrastructure) and a new convenience retail offer that will support new residents and the existing village of Keele (which does not currently have provision). The site also has the scope <p>21</p> <p>to deliver other benefits where a need is established, such as an active travel hub to support Keele University.</p> <ul style="list-style-type: none"> • Defensible boundaries and lack of contribution to the purposes of the Green Belt – as set out above, the site is self-contained and would provide defensible and permanent boundaries to the wider Green Belt and open countryside as part of Keele Village. <p>(Comparative assessment of site 11 and KL21 available in attachment)</p>
Q7 Modification	<p>Please see attached representations</p> <p>The Council should fundamentally revisit its evidence base in relation to site selection, including its Green Belt Assessment and Site Selection Report in relation to Sites KL21 and SP11, in order to update these assessments, fully consider site constraints and to create transparency in the site selection process. The assessment process that has led to the allocation of site SP11 is contrived, lacks transparency and has no robust justification – which if carried through will require rigorous testing at Local Plan Examination.</p> <p>5. The Council should allocate Site KL21 at Quarry Bank Road, which offers an opportunity to bring forward a deliverable site early in the Plan Period that will support the growth of the University Growth Corridor and deliver a range of economic, social and environmental benefits on a site that will significantly contribute to meeting the needs of NUL. The site could provide 50% affordable housing, in line with emerging</p> <p>48</p>

	<p>national policy, that is aligned with the Borough's waiting lists in terms of product and tenure, providing the right times of homes for families, looked after children and older people.</p> <p>6. If Site KL21 is not allocated, as a minimum, the Council should consider safeguarding Site KL21, in line with the advice provided in the "Green Belt Safeguarded Land Advice Paper" to ensure that an adequate supply of market and affordable homes is held in reserve to meet the growth needs of the Borough and to be able to respond to the proposed fundamental shift in national policy.</p> <p>7.2 Persimmon would welcome ongoing engagement with the Council as a submission plan is prepared and has a team of technical and professional experts to underpin the merits of this site through to Local Plan examination. Any feedback, engagement or discussions in relation to this site can be arranged via Asteer, using the contact details below:</p>

Q4 Policy	Site Allocations (Omission Site)
Q6 Details	<p>Please see attached representations.</p> <p>Knights have been instructed by Frank and Jayne Speed to promote Land east of Main Road, Betley as a housing allocation in the emerging Local Plan 2020-2040. The site measures 2.1 hectares and forms part of the wider land holdings of Betley Court Farm, which spans both sides of Main Road (hereon referred to as 'Betley Court Farm East'). The site is shown in Appendix A (see attachment). The site is located on the edge of the settlement boundary for Betley and is located within the Green Belt and the Betley Conservation Area. The site is shown in context on the adopted Policy Map in Figure 1 (see attachment)</p> <p>The site has not previously been promoted during the Local Plan process, and therefore a Call for Sites nomination form has been submitted in tandem with this representation. The Regulation 19 Plan does not propose any new housing allocations within Betley. However, this site would make a logical extension to the village to provide new housing in a sustainable location at the heart of the village, and would enhance the viability of services and facilities within the village.</p> <p>As above, it is acknowledged that based upon the Reg19 Plan, this site would not be presented by the Council as until now, it has not been on their radar. However, it is presented at this stage to assist the Council should they, for whatever reason, consider there is a need to allocate additional or alternative sites. The site will also continue to be promoted in respect of any early / future review of the plan.</p> <p>The site is predominantly utilised as agricultural land, however it does contain an occasional football field. Our client's land wraps around Betley's cricket ground (to the east of the site) and it is proposed that the redevelopment of this site would enable a football pitch to be re-provided to the east of the cricket ground and could incorporate improved changing facilities for both the football and cricket ground.</p> <p>In preparing this representation, our clients have instructed Hub Transport to consider the potential access point to the site and it has been established that the most suitable means of access would be in the northwest corner of the site off Main Road as illustrated in Figure 2 (see attachment). Hub Transport have reviewed the access and have confirmed that the plan in Figure 2 showing the approximate location of the access is the most suitable for vehicle and pedestrian access to the site. The proposed access location lies just to the south of the existing southbound bus shelter on Main Road. The Google Streetview extract in Figure 3 indicates the view from the street into the site at this location. The footway and verge along the site frontage with Main Road provide ample space for visibility splays within the highway extents for the existing 30mph speed limit. Providing access at this location would minimise the need for any tree removal within the highway and any tree loss could be re-provided on site. A simple priority access could be provided suitable to allow for the largest vehicle typically expected to access the site, such as a refuge vehicle.</p> <p>The proposal site is located close to the village centre and its facilities which include Betley C of E Primary School, The Swan Public House, Pool Farm veterinary surgery, Betley Village Shop, Betley Post Office, Betley Reading Room, Betley Village Hall, and St Margarets Church, and a Methodist Chapel. The overall promotion site includes a football pitch and the Betley Cricket Club. The intended relocation of the sports facilities to the east as part of the proposals would allow dwellings to lie in closer proximity to the local facilities and public transport opportunities. It would also potentially enable an improved parking provision for the sports facilities which would in turn minimise on-street parking elsewhere within the village.</p> <p>Footway provision is in good repair and suitable to cater for the additional demand created by a housing proposal. The closest part of the National Cycle Network to Betley is Route 551 which lies some way to</p>

	<p>the north. However, the roads within Betley are subject to a 30mph speed limit and suitable for cycle use by even less confident riders.</p> <p>Bus services are available immediately adjacent to the proposed site access with a shelter available for southbound travellers. Service number 85 serves Betley, travelling between Nantwich and Newcastle via Crewe and Keele. The service provides an approximate hourly frequency including services suitable to reach and return from employment and retail opportunities in Newcastle, Crewe, and Nantwich.</p> <p>The site is located within Flood Zone 1 (low probability of flooding) and therefore is suitable for residential development from a housing perspective. Any scheme would Figure 3 - Google Streetview image of proposed access location include a detailed flood risk assessment and drainage scheme to ensure satisfactory surface water management.</p> <p>Whilst the site is located within the Betley Conservation Area (as is much of the village) the sensitive redevelopment of this site for residential development would not result in a policy conflict. The Betley Conservation Area Appraisal identifies several important views through the site from Main Road (including the location where the site is proposed to be accessed) and from the adjacent cricket ground. The site is located within Character Area 1 'Southern approaches – Betley Court Farm and Betley Court'. Through a carefully considered layout and design (with input from a heritage consultant from the early stages of the design process) it is considered that the site could be redeveloped whilst retaining the significance of this heritage asset (most importantly retaining views across from Main Road to St Margaret's Church), as well as the setting of the nearby listed and positive buildings that bound the site.</p> <p>Our client's site is currently not proposed to be taken out of the Green Belt as part of the draft Local Plan and it is therefore recommended that this site be allocated as a residential development. At the very least, it is recommended that this site be identified as a safeguarded housing allocation if other allocated sites are unable to be delivered during the plan period.</p>
Q7 Modification	Please see attached representations
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	Knights wish to participate at the hearing sessions for Policies PSD3, PSD4 and PSD5 so that we can demonstrate why the Betley Court Farm, land east of Main Road, Betley site should be included as a residential allocation in the Policies Map. (I reattach the representations document again for ease of reference).

Q4 Part of document	Policy
Q4 Policy	Site allocations (omission)
Q5 Legally compliant	Yes
Q5 Sound	Yes
Q5 DTC compliant	Yes
Q6 Details	<p>Please see supporting representation by Knights on behalf of Aspire. Aspire Housing are committed to the delivery of the above sites and can confirm that they would be deliverable early in the plan period, and certainly within the first 5 years of the plan period.</p> <p>In addition to the above sites, Aspire control some other urban sites which are not identified within the DLP which can make a meaningful contribution to affordable housing supply in the Borough. Some of these are regeneration opportunities in terms of replacing moribund accommodation with modern affordable homes that are fit for purpose and built to the latest standards:</p> <p>(a) Cross Street Phase 2 – this site has planning consent for 43 affordable homes and Aspire expect to start construction during October 2024.</p> <p>(b) Cross Street Phase 2 – a planning application for 71 supported living apartments under application reference 22/00653/FUL was withdrawn on 2 May 2023. Aspire recently gained planning permission for an alternative scheme of 39 affordable dwellings.</p> <p>(c) Gloucester Grange – this site comprises vacant moribund accommodation with prior approval for its demolition obtained from the Council. This site has recently been sold by Aspire and is currently being refurbished for private tenants.</p> <p>As demonstrated above, Aspire are committed to delivering their own affordable housing schemes in and around Newcastle-under-Lyme as well as being committed to taking on affordable housing delivered as part of open market schemes and are committed to assisting the Council deliver its minimum housing requirements as well as assisting with an uplift in the delivery of affordable housing across the Borough.</p>

	Aspire are open to holding further discussions with the Council to facilitate the delivery of the Local Plan and refining the policies and allocations within it in order to deliver a robust and achievable plan

Title	Site Allocations
Consultee Family Name	Ayling
Consultee Given Name	John Richard
Q4 Part of document	Policy
Q4 Policy	CH3
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>a. Legally compliant no ?</p> <p>6. POLTCIES CH3 / PSD1 / SE 9 AND 10 May Bank Allocation , Cross Heath (CH 3)</p> <p>Planning Permission 20IOL078,I OUT Granted on appeal to Staffordshire County Council subject to conditions including layout,access, drainage and reservation for heritage reasons. Because of uncertainty this site should not be included in the plans housing availability Proposals. (POLICY PSD1) see sheet 2.</p> <p>POLICY SE 9 and 10 list sites in the plan area which have special historical and /or landscape features which require protection . I propose that the views along Milehouse Road and Chapel Lane, ancient highways into the doomsday settlement of Wolstanton be included.</p> <p>ADDITIONAL INFORMATION MAY BANK, ALLOCATION , CROSS HEATH. This site ,referred to as Balls Yard is believed to have been given to the local Council, then Wolstanton United Urban District Council , then the Education Authority in the 1930s. Since then it has lain undeveloped . It has been shown on Heritage Maps as containing a Roman Aquifer and being on the line of the Roman Road between Chester and Uttoxeter.</p> <p>For these reasons the INSPECTOR at the Appeal placed a Planning condition on his decision that these restrictions on any development should be investigated by a desk study or Site investigation agreed with the Borough Council who opposed the application. Development should also preserve and enhance non- Designated heritage assets and their settings in accordance with POLICY SE9. and SE10</p> <p>Incorrect reasons were given by the Staffs C.C Planning Consultants to support the loss of open space . The 30 Acre Wolstanton Marsh has been owned by the Duchy of Lancaster since 1267 and no development can take place .</p> <p>This acreage cannot be used in the calculations of the adequacy of open space in other wards of the Borough.</p> <p>Staffordshire County Council as applicant , not the L.P.A carried out a consultation of the residents of the houses fronting Hoon Avenue and Milehouse Lane . The main Issues raised were the traffic generated by the 1200 Pupil Orme Academy and the additional generation from the proposed development. The County Council ,as Highway Authority were unable to to recommend satisfactory road access to the site for the Indicative layout for development</p> <p>The residents also considered that the part of the site Fronting Hoon Avenue was low lying and flooded. The I Main CROSS Borough Trunk Sewer also restricts building on the site. The Inspector attached a condition that a solution to the drainage issue must be approved by the L.P.A before the development takes place.It is understood that the Staffs County Council do not intend to develop this site themselves although they are a Housing and Heritage Authority. And may already have sold the site to a private housing developer to increase Their capital assets.</p> <p>There is a shortage of social and affordable housing in The Borough which could be met on this site. Housing to be provided by Aspire Housing or Housing Associations is governed by the availability of capital</p> <p>This site should be reserved in the Local Plan for Social and specialised housing . The design , layout and Landscaping of this site should take into account the Heritage Policies. Parking and traffic generation less. For the above reasons the site CH3 , although it has a a conditional permission should be excluded from the calculation of available sites.</p> <p>CH3 is one of several sites which passed into the Ownership of Staffordshire County Council in the Borough as Education Authority. and now have Planning Permission for private housing development, not through a development plan allocation. These Include St Wustans Estate and its extension in</p>

	<p>Wolstanton { playing fields for Ellison Street School }, Land north of Bradwell Hospital (former Bradwell Secondary School Playing Field) now under Construction but with road access and transport issues The Orme academy now has L200 pupils and hence provides the replacement playing field and creates increased traffic generation at peak times The Staffordshire County Council and private Consultatants carried out limited consultation on CH3 but as the highway authority should have consulted the school Academy and a wider area affected by the school traffic generation or waited for the local plan consultation.</p> <p>I am requesting that these observations be published on line and copied to Staffordshire County Concl. I am also requesting in relation to Policy Ch3 and PSDI that I Be invited to take part in the panel discussion at the Local Plan Enquiry into the allocation requirements for housing in he 2nd Draft Local Plan due to my local knowledge and Experience.</p> <p>Submitted as a resident of Wolstanton for 50 years, a member of the Electoral Role of St Margaret's Church, Wolstanton and voluntary groups.</p> <p>Responsible for the preparation of the former Draft Local Plan in 1995 as Deputy Planning and Development Offic. Currently a member of the West Midlands Advlsory Committee of the Royal Town Planning Institute.</p>
Q9 Hearing reasons	<p>I am also requesting in relation to Policy Ch3 and PSDI that I Be invited to take part in the panel discussion at the Local Plan Enquiry into the allocation requirements for housing in he 2nd Draft Local Plan due to my local knowledge and Experience.</p>

Title	Site Allocations
Consultee Given Name	Keepmoat Homes
Agent Company / Organisation	Pegasus Group
Agent Position	Associate Planner
Agent Family Name	Walker
Agent Given Name	Kerry
Q4 Part of document	Policy
Q4 Policy	Site Allocations (Omission Site)
Q5 Legally compliant	No
Q5 Sound	No
Q6 Details	<p>Please see attached representation. Keepmoat's Land Interest</p> <p>Keepmoat's site is on the western side of Moss Lane, just outside the village envelope of Madeley; however, it is well related to the village centre. Vehicular access is currently provided from both the garden of Rowley House and a gated access with Moss Lane.</p> <p>The site comprises of approximately 1.65ha of land bounded by the rear gardens of the residential properties of The Bridge Path along the north east. There is unmanaged vegetation defining the north west boundary, as well as the south west boundary along Bower End Lane. Moss Cottage and Rowley House sit directly to the east, as shown on the site location plan below (see attachment)</p> <p>The site is currently subject to a full a planning application (Ref: 24/00619/FUL) seeking planning permission for the construction of 37 dwellings along with associated access, open space, drainage basin and pumping station. The current layout plan for the application is enclosed at Appendix 1.</p> <p>The application was validated in September 2024 and in that time some progress has been made, although a number of consultee responses remain outstanding at the time of writing this representation.</p> <p>Conclusion</p> <p>Pegasus Group have prepared this representation to the Newcastle under Lyme Draft Local Plan (Regulation 19) Consultation, which ran until 7 October 2024 on behalf of Keepmoat.</p> <p>Keepmoat welcome the production of the Newcastle under Lyme Draft Local Plan and are keen to work with the Council to adopt a sound Plan.</p> <p>In order for the Plan to be positively prepared, additional site(s) should be identified in Madeley. Initial calculations based on the evidence supporting the plan and the single allocation is that site(s) need to be identified to deliver in the order of 50 dwellings. This would allow for some flexibility in the supply of sites and also to achieve the minimum housing requirements set out in Policy PSD1.</p> <p>Keepmoat trust that the Council will find these comments useful as it continues to progress its Local Plan towards submission and Examination.</p>

Q4 Part of document	Policy
Q4 Policy	Site Allocations (Omission Site) MD12
Q6 Details	<p>Dear Sir / Madam</p> <p>Newcastle under Lyme Regulation 19 Consultation Response</p> <p>We write on behalf of our client Madeley Heath Developmental Limited [MHDL] in response to the publication of the final draft Newcastle under Lyme Borough Council [the Council] Local Plan (Regulation 19). This response has been prepared in the context of our client's land interests in 'Land at Madeley Heath' [the Site].</p> <p>The site is not proposed to be allocated in the Regulation 19 Local Plan and is retained as Green Belt outside the settlement of Madeley/Madeley Heath as identified on the Policies Map. The consideration of these two distinct areas as a single settlement is supported. The Council has identified a site outside the settlement to meet housing needs in the settlement. However, it is considered that this site is divorced from the wider settlement and represents an inappropriate incursion into the wider open countryside which results in adverse impacts when compared to the reasonable alternatives. The allocation of the subject site to these representations is a reasonable alternative resulting in significantly reduced harm overall, particularly to the wider landscape and open countryside. The proximity of the subject site to the existing urban area and the proximity to the facilities and services it contains ensure that it would represent a more sustainable pattern of development. The development of our site also brings the opportunity to provide a significant benefit in terms of a site for a replacement primary school that can meet future academic needs of the wider area. The development would also deliver much-needed highway access improvements to the junction of Newcastle Road, Keele Road, and Crewe Road. In addition, it would deliver public open space for which there is a recognised deficiency in this area.</p> <p>In terms of the evidence base, this Site was identified as ref. MD12A detailed in the Council's Green Belt Assessment Part 4 2024, also known as 'Land Area 2 at Marley Eternit Tiles, Madeley Heath'.</p> <p>This Site is shown edged in red on the plan at Figure 1 below (in attachment)</p> <p>Summary</p> <p>Overall, the Site adjoins an existing residential area, is in single ownership, unimpacted by significant technical constraints which would prevent delivery and is available now. It is noted that the Council's own evidence base concludes that the Site is considered to be suitable, available and achievable. The site is capable of delivering c. 240 units within the next five years. Overall, the Site is considered to have excellent potential to deliver a substantial number of new homes and new school for Madeley Heath as well other significant planning benefits including much-needed highway improvements and public open space. We would therefore urge that the Council considers the reconsiders the Site for allocation to meet additional needs evidenced in our response to draft Policy PSD 1.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	<p>On behalf of our client, MHDL, we formally request to participate in hearing sessions associated with Draft Policy PSD 1, Draft Policy PSD 2, Draft Policy PSD 3, SA Section 5: Reasonable Alternatives, Draft Policy PSD 5 & Draft Policy MD29. We consider that our representation at the hearing sessions is necessary to ensure our representations above are taken into account for the draft Local Plan to be found sound.</p>

Title	Policy SA1: General Requirements
Consultee Company / Organisation	Araripe Limited
Agent Company / Organisation	Pegasus Group
Agent Position	Executive Director
Agent Family Name	Onions
Agent Given Name	David
Q4 Part of document	Policy
Q4 Policy	SA1
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>These representations are made in response to the Regulation 19 consultation on the final draft of the Newcastle-under-Lyme Local Plan 2020 – 2040. The representations are made by Pegasus Group on behalf of Araripe Limited and relate to their land interest at St Martins Road, Talke(hereafter referred to as the “Site”). The Site is greenfield land situated to the south of Talke. With regards to the Site, these representations should be read alongside the attachment.</p> <p>The requirements set out within the policy are broadly supported by Araripe Limited. However, it is unclear as to when the Council require the masterplan to be prepared and agreed (i.e. as part of the submission of a planning application or prior to this), thus this should be clarified within the policy or its supporting text. The remainder of Policy SA1 primarily links back to other policies within the Final Draft Local Plan, and also includes a requirement for Green Belt compensatory measures to be provided. There should be some flexibility in terms of how much compensation a site is required to provide, and this should be proportionate to its size and the quantum of development proposed.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	Sufficient land for housing should be planned for to meet the identified need for this within the Borough. Araripe Limited strongly support the allocation of Site TK17 for residential development, but several

	amendments are required to make Policy TK17 sound, as set out in paragraph 3.19 of the accompanying written representations. We would welcome the opportunity to participate in the hearing sessions to set these out, as well as to draw attention to the other matters which need to be addressed to ensure soundness elsewhere in the final draft plan, whilst emphasising site TK17's suitability, availability, and deliverability, being an optimum and sustainable location for high-quality residential development.

Q4 Part of document	Policy
Q4 Policy	SA1
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>Policy SA1: General Requirements</p> <p>4.2 We generally support Policy SA1 which provides a series of general requirements for the allocated sites. However, we set out a number of proposed modifications to the policy below, with reference to the subheadings in Table 6 of the plan. Master Plans</p> <p>4.3 Whilst the policy does not specify the mechanism for master plans, we would question whether masterplans are needed on all sites. This is particularly important for smaller sites without significant onsite infrastructure requirements (for example our client's site TK27, which is allocated for 90 dwellings). In such cases requiring a masterplan would unnecessarily delay delivery, when it may well be appropriate to move straight to a full application. As a minimum, we consider that Table 6 should be clear that an appropriate mechanism for approving master plans can be through the planning application process.</p> <p>Green Belt Compensatory Measures / Green Belt Boundaries</p> <p>4.4 This section of Table 6 largely reflects the guidance in paragraphs 64-002 and 64-003 of the PPG. However, the plan omits the section at paragraph 64-003 which states that: "Consideration will need to be given to:</p> <ul style="list-style-type: none"> • land ownership, in relation to both land that is proposed to be released for development and that which may be most suitable for compensatory improvements for which contributions may be sought; • the scope of works that would be needed to implement the identified improvements, such as new public rights of way, land remediation, natural capital enhancement or habitat creation and enhancement, and their implications for deliverability;" <p>4.5 The guidance is clear that land ownership and deliverability constraints in relation to compensatory improvements are not intended to prejudice the delivery of allocated sites. We therefore consider that, for the avoidance of doubt, the section in Table 6 should be revised to fully reflect the guidance in the PPG.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	We wish to attend the hearings and make oral submissions, respond to the Inspector's questions and to the Council's case. The issues are complex and there is a need for detailed examination of the evidence.

Consultee Given Name	McCarthy Stone
Agent Company / Organisation	Lichfields
Agent Family Name	Gavin
Agent Given Name	Alexandra
Q4 Part of document	Policy
Q4 Policy	SA1
Q6 Details	<p>McCarthy Stone acknowledge that draft Policy SA1 (General Requirements) sets out the strategic considerations for the proposed allocations. This includes the requirement for masterplans to be prepared by applicants and agreed with the Council to deliver high quality, sustainable and policy compliant developments. McCarthy Stone agree that sites allocated for development, especially those earmarked for a mix of uses, should come forward in a way that ensures their comprehensive delivery. Notwithstanding this, it is important for the Council to recognise that development parcels may need to be delivered independently of one another and therefore a degree of flexibility should be applied when determining relevant planning applications, by taking into account the need for a masterplan to evolve where necessary. It is important that the Council does not inadvertently preclude the delivery of earlier development on some parcels by imposing a requirement for a comprehensive masterplan to be approved (and therefore fixed) in order to determine any such planning application. A more pragmatic and market-facing approach would be to allow development to come forward that can demonstrate general conformance with a comprehensive masterplan for an allocated site, such that it would not prejudice the delivery of subsequent parcels. It is currently unclear if planning applications would be approved if a site-wide masterplan has not been agreed with the Council.</p>

Q7 Modification	There are no suggestions.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	In seeking the following modifications to the plan, I do consider it necessary to participate in examination hearing session(s) in order advise the inspector of my clients concerns and to respond to any questions that the inspector may have.

Q4 Part of document	Policy
Q4 Policy	SA1
Q6 Details	<p>Newcastle-Under-Lyme Local Plan Review - Regulation 19 Consultation (Final Draft)</p> <p>National Highways welcomes the opportunity to provide comments on the Final Draft Local Plan consultation (Regulation 19) prepared for Newcastle-Under-Lyme Borough Council, which is expected to cover the plan period up to 2040.</p> <p>National Highways has been appointed by the Secretary of State for Transport as a strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the Strategic Road Network (SRN). It is our role to maintain the safe and efficient operation of the SRN whilst acting as a delivery partner to national economic growth.</p> <p>In relation to this consultation, National Highways' principal interest is ensuring the safe and efficient operation of the SRN in the area, notably the M6, A50 and A500 network which routes through the Local Plan boundary.</p> <p>In responding to Local Plan consultations, we have regard to the Department of Transport's (DfT) revised Circular 01/2022 - Strategic Road Network and the delivery of sustainable development ('the Circular') which sets out how interactions with the SRN should be considered in the making of local plans. Paragraph 28 of the Circular sets out that:</p> <p>"The policies and allocations that result from plan-making must not compromise the SRN's prime function to enable the long-distance movement of people and goods. When the company assists local authorities in the development of their plans and strategies, the local authority should ensure that the SRN is not being relied upon for the transport accessibility of site allocations except where this relates to roadside facilities or SRN-dependent sectors (such as logistics and manufacturing). The company will also work with local authorities to explore opportunities to promote walking, wheeling, cycling, public transport and shared travel in plan-making, in line with the expectations set out in the NPPF and the Transport Decarbonisation Plan."</p> <p>In addition to the DfT Circular 01/2022, the response set out below is also in accordance with the National Planning Policy Framework (NPPF) and other relevant policies.</p> <p>Previous Consultations</p> <p>National Highways was consulted during the Regulation 18 consultation in August 2023. The Regulation 18 identified a minimum requirement of 7,160 dwellings (358 per year) and 69 hectares of employment land to be delivered during the plan period between 2020 and 2040. It also included potential sites for allocation, and we provided an indication of the potential sites that were expected to have traffic and boundary impacts on the SRN.</p> <p>In May 2024, National Highways was consulted to provide recommendations for the Infrastructure Delivery Plan preparation, where we provided comments on the infrastructure requirement.</p> <p>Final Draft Local Plan Regulation 19 Consultation</p> <p>The Final Draft Local Plan Regulation 19 includes locally specific policies and strategic / non-strategic site allocations to meet housing and employment needs across the Newcastle-Under-Lyme area for the plan period of up to 2040. Once adopted, this Local Plan will replace the policies in the Newcastle-Under-Lyme and Stoke-on-Trent Core Spatial Strategy (adopted 2009) and the saved policies of the Newcastle-Under-Lyme Local Plan (adopted 2003). Appendix 2 of the Local Plan consultation document outlines the list of previously adopted policies that will be retained or replaced.</p> <p>In principle, National Highways supports the vision and objectives set out in the Regulation 19 Draft Local Plan which aim to deliver the growth in a sustainable manner.</p> <p>Housing and employment requirements</p> <p>Based on our review of the Regulation 19 consultation, we note that the Final Draft Local Plan outlines a minimum requirement to deliver 63 hectares of employment land and 8,000 dwellings (400 dwellings per annum) over the plan period of up to 2040 as stated in the 'Policy PSD1: Overall Development Strategy'. We welcome that the housing and employment requirement have primarily been determined using a Housing and Economic Development Needs Assessment (HEDNA) in 2024, which in this case</p>

is expected to provide a higher housing demand when compared against the Government's standard method.

We acknowledge that a Sustainability Appraisal (SA) process has been undertaken to evaluate the different growth options considered, assess the impacts and identify the residual effects based on the social, economic and environmental parameters.

As outlined in Table 2 of the Final Draft a total of 8,663 dwellings are planned to be delivered over the plan period of up to 2040 to meet housing demands. This also includes a supply buffer of around 8.3% to address any potential delivery challenges. We acknowledge that the supply also factors in the windfall allowance estimated based on the Council's Strategic Housing Land Availability Assessment (SHLAA), historical trends, and future projections.

Policy SA1: Site Allocations indicates that a significant portion of the housing supply will be delivered through strategic allocations. When comparing the allocation sites included in the Regulation 19 consultation against those set out in the Regulation 18 consultation, we note some minor changes in the scale of growth at individual sites, with a few sites being removed and others added. However, the total housing growth from all strategic allocations remains at 4,512 dwellings. The table below outlines these changes (tables included in the attachment)

In the case of employment supply, we note that AB2 (Land at M6 Junction 16) and KL15 (Land at Barkers Wood, Keele) are key strategic sites contributing significantly to meet the employment needs.

Sustainable transport

We acknowledge that the Final Draft Local Plan has focussed on decarbonisation policies such as 'Policy CRE 1: Climate change' and 'Policy CRE 2: Renewable energy' to address climate change impacts by reducing carbon emissions. This also includes developing energy-efficient buildings, designing to BREEAM Excellent standards, optimising water use, adopting water conservation measures, and utilising renewable or low-carbon energy sources.

'Policy IN2: Transport and Accessibility' emphasises that new developments must provide access through sustainable transport modes to protect the integrity of the highway network. The Council will work with developers to ensure that the proposals contribute to a transport network that is accessible, efficient, and safe. We support this policy and acknowledge that developments likely to generate significant traffic will be required to produce Transport Assessments and Travel Plans, in accordance with the requirements set out. We appreciate that focus is also given to developments that facilitate sustainable movement of freight traffic.

'Policy IN4: Cycleways, Bridleways, and Public Rights of Way' highlights the importance of enhancing walking, cycling, and public transport facilities within the Borough.

We welcome these policies and note that these align with the expectations set out in the National Planning Policy Framework and National Highways' Net Zero Strategy.

Transport Evidence Base

Considering the scale and location of the allocations included in the Draft Final Local Plan, we expect impacts on the SRN in the area either independently or cumulatively.

Strategic Transport Assessment (document reference ED011)

We acknowledge that a Strategic Transport Assessment (STA) dated July 2024 has been prepared using the North Staffordshire Multi-Modal (NSMM) transport model to assess the likely traffic impacts of the site allocations proposed in the Regulation 19 consultation. We note that the model has been run for the following five scenarios in the forecast year of 2040.

Based on our review of the STA, we have the following comments to make:

Section 4.5 of the STA states that while the model emphasises the use of pre/post-COVID data, we note that accident data for the years 2018-2022 includes COVID data with relatively lower traffic flows and possibly fewer accidents. How has the impact of COVID been taken into account?

Section 5.3 of the STA states that the 2015 NSMM model is overestimating the flows by 26-28% when compared against 2022/23 observed WebTRIS data. It also notes that only 15-35% of counts pass in this validation exercise. Despite this shortcoming, model forecasts for 2040 were proposed to be used to inform future testing, which National Highways agreed to as it presents the worst-case scenario with overestimation of the traffic.

Section 7 provides details of the reference case model development, but note that finer details of the method applied are missing. We therefore have the following queries relating to this section:

- Does this scenario include constraining other local authorities to NTEM/TEMPro?
- Does this scenario include any committed and under-construction developments within the local plan area?
- What is the background growth percentage between the base year and the forecast year 2040?

Regarding Figure 7-1, we are unable to find the basis for changing the junction delay definitions for slight, moderate, and severe delays from what was mentioned in the minutes of the meeting dated 15th May 2024. At present, delays of up to 3 minutes at junctions are reported as slight which is arguable.

Based on the model outcomes, improvement measures to enhance public transport connectivity and infrastructure schemes on the local highway network are proposed in the STA. We also note that a detailed junction assessment will be undertaken for M6 J16 using a VISSIM model to accurately assess the traffic impacts of the AB2 allocation.

Regarding Section 8.3.2, bullet 1, we interpret that the new junction is the access to site AB2. Thus, we are surprised that the design of this new junction would still lead to 120-180 seconds of delays in the PM. A new access arrangement should work without that much stress.

We request that a summary table with delays (absolute numbers in seconds) at each of the approaches be prepared and shared with National Highways for M6 J16 and the new junction on A500 for site AM2. This is so we can understand the changes in delays between the base, reference case, and proposed scenarios.

We request that the basis for the 10% reduction in car users for the area around site AB2 set out within Section 8.6.6.1 be supported by further evidence.

We also request further details on how much total demand (in PCUs or vehicles) has been removed from the original matrix. Has a preliminary assessment been undertaken on the frequency of bus service that would be required to cater to that demand during peak hours to verify that this is a feasible option?

Regarding Section 8.6.3, while we do not have an issue with the bespoke approach to testing M6 J16 within VISSIM, considering that the NSMM is overestimating the traffic, the use of incremental addition of the difference from the NSMM may lead to an underestimation of traffic at this junction due to large delays in the NSMM reference case scenario. There is a possibility that any additional traffic from the AB2 site may divert to local or unrealistic routes within NSMM.

We therefore request that traffic flow distribution Select Link Analysis plots from site AB2 be shared with National Highways to verify that the routes assigned in the model are reasonable before being used for incremental addition for microsimulation assessment.

We also request that observed base and modelled reference case data be presented in a similar format as Table 8-6 for National Highways to understand the absolute traffic growth at each of the approaches.

National Highways Previous comments

While we are happy with the suggested incremental change in flow and delays analysis for 2040 forecast year models, we must establish a robust do – minimum reference case scenario developed using the base year model.

We note that our previous query dated May 2024 remains unanswered: “The further turning count comparison tables for the M6 J16 model are appreciated and provides comfort that many movements (particularly the A500 East approach) match the 2015 model. However the turning proportions provided for the M6 South to A500 East movement are of concern as these look significantly different to those that were modelled. National Highways would like to understand if there are any explanations of why these differences have occur and particularly why the model identifies such low percentage of car movements?”

STA Comments Summary

In summary, the modelling work to date is based on the NSMM model, which was previously approved by the DfT for other schemes. However, present-day validation using 2022/23 data shows that the model is overestimating traffic and not validating well. Hence, a bespoke approach is applied to assessing M6 J16, while the rest of the strategic assessment uses the forecast 2040 NSMM model which is still believed to be the best tool available. Analysis provided shows that parts of the A500 and junctions along it will be stressed by 2040 and that the level of stress will increase with the local plan. Strategic allocation sites tested will lead to some congestion but this would not lock out the network. The STA and IDP mention the possibility of developers’ contributions for various infrastructure schemes including a new bus service along site AB2 among others that could potentially bring congestion levels down to a more comparable level with the reference case scenario, which should be acceptable.

We request responses to our queries above but are hopeful that the Local Plan can work with some support from the developers to mitigate any impact on the SRN.

Infrastructure Delivery Plan (IDP)

A total of 28 transport development schemes are listed in Table A.1 of Appendix A of the IDP to enhance the transport network and promote sustainable transport. The schemes that are of interest to National Highways are:

1. T9 (improvements between M6 J13 and J15) - part of the RIS 2 scheme
2. T14 to T20 schemes

We note that the finalisation of these schemes is subject to undertaking detailed junction capacity assessments. We appreciate that the list of potential allocations that are likely to impact the SRN has been included.

T14 specifically mentions a “Potential mitigation scheme involving widening and an additional lane at the gyratory on M6 J16. VISSIM modelling work is currently ongoing, and the need for any potential mitigation measures can be confirmed after the completion of a detailed capacity assessment as part of the planning application stage.” It should be noted that there is no confirmed scheme from National Highways perspective at the moment, and we seek confirmation as to whether such a scheme is included in the Local Plan assessment within Scenario 5.

We note that the funding mechanism to implement these mitigation schemes including T14 will likely be through developer funded Section 278 agreements. Considering that there could be cumulative impacts from different allocations in the area, a Section 278 agreement is likely to result in a piecemeal approach to the delivery of the improvement works. We would welcome some clarity on why a Section 278 agreement is preferred over a Section 106 agreement for the funding mechanism in this case.

Duty to Cooperate

We note that a Duty to Cooperate Interim Statement of Compliance has been submitted as part of the evidence base alongside the Final Draft Local Plan. We commend the Council's approach to collaborating with neighbouring local authorities, stakeholders, and other bodies to address issues related to local authority boundaries. This collaborative effort will help ensure that all parties' interests are considered and that a comprehensive solution is developed.

National Highways is committed to working with Newcastle-Under-Lyme Council to develop and draft a Statement of Common Ground (SoCG) to address any strategic cross-boundary issues and reach an agreement on how the traffic impacts from the allocations identified in the Local Plan are to be dealt with. We understand that a final version of the Duty to Cooperate will be prepared to support the submission version by December 2024.

Once again, National Highways appreciates the opportunity to comment on the Final Draft Local Plan Regulation 19 consultation and looks forward to working collaboratively with the Council to support the development and adoption of the Local Plan for Newcastle-Under-Lyme.

Order	141
Title	Policy SA1: General Requirements
Consultee Company / Organisation	Natural England

Consultee Position	Senior Officer
Consultee Family Name	McLaughlin
Consultee Given Name	Sally
Q4 Part of document	Policy
Q4 Policy	PSD5
Q6 Details	<p>Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.</p> <p>Natural England welcomes the opportunity to comment at this stage of the Local Plan and particularly supports the inclusion of policies on green and blue infrastructure, biodiversity, health and wellbeing, trees hedgerows and woodlands. We have reviewed the consultation documents and provide comments that relate to the soundness of the Local Plan and that are most relevant to our interest in the Natural Environment.</p> <p>Natural England has adopted a robust precautionary approach within this plan response. Whilst we welcome the content of the Local Plan, Natural England advises that the plan is currently at risk of being unsound and/or not legally compliant due to the potential impacts on air quality in relation to internationally designated nature conservation sites and the justification for the potential loss of 263ha best and most versatile (BMV) agricultural land. Further detail is provided below.</p> <p>Natural England have also provided other advice within this submission relating to further improvements that could strengthen plan policies and specific strategic site options and related mitigation.</p> <p>Do you consider that the Newcastle Under Lyme Plan is Sound and Legally Compliant?</p> <p>Natural England notes that the plan is at the pre-submission stage and as such your authority is seeking confirmation on the soundness of the plan. Having reviewed the plan and supporting documents, Natural England considers the pre-submission plan in its current form is not sound or legally compliant, this is due to a lack of evidence with regards to air quality and the cumulative loss of BMV agricultural land both in a local and national context.</p> <p>Air quality</p> <p>Natural England notes that the Sustainability Appraisal states that “Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)</p> <p>As Natural England understands it the current evidence base used to conduct the HRA cannot rule out adverse impacts on designated sites. The HRA states at page 22 3.4.16 “At the time of writing, the traffic modelling run for the final suite of Regulation 19 allocations had not been undertaken.” Appendix A lists the local plans for neighbouring LPA’s concluding that ‘in combination’ with plans and projects (approved and those yet to be implemented) they may trigger in-combination effects on European sites as a result of air quality, particularly as we understand it in the key commuting areas.</p> <p>Natural England notes that Annual Average Daily Traffic (AADT) data and traffic modelling in the Strategic Transport Assessment (STA) concludes a potential reduction in travel and related air pollution at allocated sites as a result of a predicted preference in the use of public transport. We are surprised by this projected decrease in both traffic and related air pollution, particularly as one employment allocation site includes a 200-bay lorry park and increased congestion is predicted at junction 16 of the M6 where it joins the A500 in a rural location with no existing rural transport provision. The Sustainability Appraisal also notes that: “There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work”. (p 206)</p> <p>Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot therefore currently be ruled out at the following internationally designated sites:</p> <ul style="list-style-type: none"> •Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI •Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI <p>The HRA outlines that the main source of ammonia emissions is agricultural practice, and that material increases in NH3 emissions are unlikely to be associated with the proposed local plan. At Black Firs and Cranberry Bog and Oakhanger Moss, any increase in nitrogen deposition has the potential to exacerbate pollution levels and thereby undermine the reasons for notification of these sites as a Ramsar.</p> <p>Ammonia can be emitted from vehicle exhaust emissions as a by-product of the catalytic conversion process designed to reduce emissions of nitrogen oxide. As traffic composition transitions toward more petrol and electric cars (i.e., fewer diesel cars on the road), catalytic converters may aid in reducing NOx emissions but result in increased ammonia emissions. Ammonia emissions from road traffic therefore could make a significant difference to nitrogen deposition close to roads.</p> <p>Natural England therefore advise that ammonia sourced from traffic emissions should be included for assessment within the local plan HRA, as the impact from this source on designated sites is currently unclear. For further information please see this report from Air Quality Consultants (AQC) that looks at ammonia emissions from roads for assessing impacts on nitrogen-sensitive habitats. Whilst we are aware that the current CREAM model created by AQC used to assess ammonia emissions from road traffic has not been peer reviewed, at this time it has been recognised as a Best Available Tool and we deem it appropriate to be used where any caveats associated with this model are also considered within the assessment. An assessment based on the best available approach is necessary. The next stage of assessment can then consider uncertainties in the model and site specifics to decide if mitigation needs to be considered.</p> <p>Further work is therefore required to inform the Habitat Regulations Assessment. Natural England will engage with the Local Planning Authority in order to produce a Statement of Common Ground (SoCG) on this matter.</p> <p>‘Best and most versatile’ (BMV) agricultural land</p> <p>Natural England notes that “the proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land, A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of ‘best and most</p>

versatile' (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services". (page 74 Sustainability Appraisal).

Under the Town and Country Planning (Development Management Procedure) (England) Order 2015 (DMPO) Natural England is a statutory consultee on development that would lead to the loss of over 20ha of 'best and most versatile' (BMV) agricultural land (land graded as 1, 2 and 3a in the Agricultural Land Classification (ALC) system, where this is not in accordance with an approved plan.

Natural England would like to understand how the local planning authority have produced the evidence base and options assessment which informs the strategic site allocations.

Natural England will engage with the local planning authority to consider the cumulative impacts of the loss of BMV both in the local and national context and the challenges related to environmental impact, infrastructure, and the requirement to deliver a balance between the need for development and the potential urbanisation of the countryside including the potential mitigation measures that need to be considered.

NPPF paragraph 174e states:

Planning policies and decisions should contribute to and enhance the natural and local environment by:

... preventing new and existing development from contributing to, being put at unacceptable risk from, or being adversely affected by, unacceptable levels of soil, air, water or noise pollution or land instability. Development should, wherever possible, help to improve local environmental conditions such as air and water quality, taking into account relevant information such as river basin management plans.

Natural England provides guidance to inform further assessment of air quality and the loss of BMV agricultural land in our response to the content of the plans Strategic Policies as set out below.

Do you consider that the Newcastle-under-Lyme Borough Council Regulation 19 pre-submission draft Plan is compliant with Duty to Co-operate?

In terms of working with neighbouring authorities, Natural England notes that initially the plan was intended to be produced jointly with the City of Stoke-on-Trent, the plan does not however currently present an evidence base that demonstrates that a collaborative approach has been adopted and that the Duty to Co-operate has been fully complied with.

The Sustainability Appraisal states that: "Overall, there is potential for a cumulative adverse effect on biodiversity, owing to the fragmentation of the ecological network... Where a large amount of development is located on previously undeveloped land surrounding rural settlements, this is likely to produce a long-term irreversible negative cumulative effect regarding the urbanisation of the countryside" (p 71)

Natural England would therefore like to further understand how the areas identified to meet the City of Stoke-on-Trent's unmet employment needs are justified and appropriate and whether meeting some of the employment needs of the City of Stoke-on-Trent has led to the need to release or safeguard more land from the Green Belt in Newcastle under Lyme. If this is the case, what are the exceptional circumstances for doing this and how does this align with the allocated sites options assessment?

Recreational Pressure

In terms of the South Pennine Moors SAC and recreational impacts, the Local Plan does comply with the Duty to Co-operate. Natural England recommends that reference is made to the 'Recreation use of the South Pennine Moors and implications for strategic housing growth' report by Footprint Ecology Ref 778 date 27th March 2024. This report should both inform the evidence base and ensure that policies relating to open space/green infrastructure are as rigorous and robust as possible.

The report concludes that more data/evidence is required to determine if recreational use is causing an impact across to the South Pennine Moors and to get a better understanding of the scale and location of any impact. Natural England notes that the report records 7,000 additional dwellings in

Newcastle-under-Lyme over the plan period rather than the 8,000 included in this regulation 19 submission. Newcastle-under-Lyme Borough Council should therefore continue to work with local authority and other partners to ensure coordinated and continued cross boundary action.

Other matters

Natural England has specific concerns related to allocations in the Green Belt. Notwithstanding that, Natural England considers most of the policies within the plan to be sound and deliverable. The plan is consistent with national policy with regard to those policies that are within Natural England's remit. Further information on strengthening policies including but not limited to Soils and best and most versatile (BMV) agricultural land, preventing loss and fragmentation of habitats and supporting green infrastructure are provided below.

Vision and Strategy

Natural England notes that the Plan's vision and emerging development strategy set out a framework for the future development of Newcastle-under-Lyme and addresses the needs in relation to housing, the economy, community facilities and infrastructure, including specific reference to a proposed employment site allocation.

This vision and the related objectives should also set out the environmental ambition for the plan area and form the basis for nature recovery and enhancement, supported by the policies and proposals in the plan.

Natural England advises that the vision should also incorporate more on the local ecology and landscape features which underpin local distinctiveness such as the "strong rural character with long open views across the surrounding rural landscape, towards more distant hills often framed by trees" (p 69) Part 3 Site Specific Landscape & Visual Appraisal. "Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms" (p 187) Sustainability Appraisal.

Strategic Objectives

Natural England welcome strategic objective SO-4 relating to carbon reduction and climate change, however we do not feel that this group of thirteen strategic objectives value or reflect the Boroughs whole ecology and landscape including but not limited to the protection of soil and best and most versatile (BMV) agricultural land. We would suggest that additional objectives are added relating to: air quality, water quality and quantity, soils and landscape.

Natural England would also like to see stronger reference to the Nature Recovery Network which is one of the specific aims of the Environment Act 2021 and will underpin the approach to the enhancement of nature.

Air quality is a major threat to habitats and species. Many ecological sites are exceeding their critical loads and levels for ammonia, nitrogen deposition and acid deposition. The strengthening of the policies and the rationale behind site allocations within this plan will ensure that new development does not contribute to the further deterioration of habitats and species due to air pollution. Further advice on strengthening the plans evidence base with regards to air quality is provided in the links below:

Strategic Policies
5 Planning for Sustainable Development
Policy PSD5: Green Belt

Natural England notes that this policy "aims to protect the Borough's essential open spaces, prioritise the use of brownfield land, and guide potential future development in accordance with the National Planning Policy Framework (NPPF)".

Natural England however notes that amendments to the Green Belt boundary are proposed in the form of 14 site allocations to accommodate both the growth requirements of the borough and the employment requirements of wider Stoke-on-Trent conurbation. Natural England's has some site-specific concerns about the potential impacts of some of the green belt sites selected on the natural environment with regards to habitat loss, fragmentation and justification for the loss of BMV agricultural land.

We note the LPA's intention to release and compensate for the loss of green belt and prioritise the use of suitable brownfield land. However, the site allocations in the green belt would result in the potential loss of 263ha of Best and Most Versatile (BMV) agricultural land. The council should satisfy itself that it is making a balanced decision for sustainable development, the Sustainability Appraisal concludes that:

"The Green Belt Study assessed land parcels against the contribution they make to the five purposes of the Green Belt on a four-point scale...Three allocated sites (AB12, AB33 and TK10) are located in areas which make a 'strong' overall contribution to the purposes of the Green Belt where "the site contributes to the purpose in a strong and undeniable way, whereby removal of the site from the Green Belt will detrimentally undermine this purpose" (p101)

"Site allocations on previously undeveloped land or that would result in a net loss of GI / vegetation could result in a reduced capability of the environment to provide ecosystem services including carbon storage, the storage and filtration of water including natural flood protection, as well as reduced availability and connectivity of habitats within the green network enabling movement of species. (p 165)

Strategic Site Allocations

Natural England suggests that the HRA should include a "requirement for project-level/site specific HRA's and targeted ecological surveys".

The Sustainability Appraisal concludes that:

"Some 12 allocated sites partially coincide with priority habitats, where 3.43% of the total site allocation areas coinciding with priority habitats which include deciduous woodland, good quality semi-improved grassland and Site BL18 coincides with lowland fens which is a very high distinctiveness habitat in the BNG handbook (2024). These habitats can support a range of species of principal importance. Allocated Site KL15 is adjacent to 'The Butts and Hands Wood' ancient woodland, with a further 20 allocated sites located in close proximity to ancient woodlands. P158

"Six allocated sites (Sites CT20, HD10, KL13, RC8, SP11(2) and SP23) are located within areas of 'high' or 'very high' habitat distinctiveness that provide high biodiversity value. Whilst in many cases these habitats can be conserved alongside development, it is likely that in some cases fragmentation or loss of habitats and connections between habitats will occur"

"The majority of allocated sites are located on previously undeveloped land, which would result in the loss of soil resources and the ecosystem services they provide. (p 159) The development of new buildings on previously undeveloped land would be expected to result in a direct loss of soil resource, with little or no scope for mitigation" (p 216)

"The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution. (p 68)

For all sites, Natural England advises that the hydrological catchment within which the site sits is taken into consideration, with regards to the potential impact of the developments proposed on the adjoining watercourses and wider catchments, including but not limited to surface water runoff (including during construction), existing and required capacity of Waste Water Treatment Works (WwTW) and water supply and flooding issues. Each site will require site specific investigation, and the council should understand the impact of all the sites put forward individually and in combination.

Natural England has specific concerns and or requires further information about the following 'Strategic Site Allocations' which could potentially impact on designated sites as a result of air and water quality and/or lead to the loss and / or fragmentation of priority habitats and BMV agricultural land:

BL18 – Clough Hall Playing Fields, Talke

Natural England would like to further understand this larger residential development proposal with regards to the potential impacts on the lowland fen habitat.

KL13 & KL15 – Land South of A525 between Keele University and Newcastle

Natural England notes this proposal for Employment development is immediately adjacent to ancient woodland priority habitat.

HM28 – Land off East Lawns, Betley

Existing and projected water quality issues at Betley Mere will need to be considered with regards to this allocation.

LW53 – Loggerheads

Natural England notes this residential housing development proposal is located within the IRZ of protected sites (Burnt Wood SSSI) which states that development proposals of 50 or more homes outside existing settlements/urban areas in these zones should be consulted upon with Natural England.

SP11 – Former Keele Municipal Golf Course

This Larger residential development is categorised in the Landscape Assessment as having a Major adverse impact on the local Landscape.

AB2 – Land Adjoining Corner of A500 and M6 Southbound

Natural England notes this proposed employment allocation released entirely from the green belt, which comprises 70ha of grade 2 BMV agricultural land. The Landscape study concludes that the: "Proposed development scenario is likely to have a major adverse effect on the SA objective with no satisfactory mitigation possible" (p 15). With regards to potential Air Quality impacts on protected sites Natural England notes from the options analysis that "The loss or potential moving of a layby to enable access to the site could be problematic indicating potential issues with site access and traffic flow. An increase in HGV and personal vehicle traffic is anticipated, which could lead to potential congestion and air pollution in the area". Natural England would therefore also like to understand the evidence base further including the rationale for an alternative site TK30 @ Talke A34 / A500 roundabout being ruled out.

Policy PSD6: Health and Wellbeing

Natural England welcome this policy direction in terms of safeguarding health and amenity and supporting healthy communities, through the protection and provision of high-quality open spaces, including allotments and the promotion of active travel transport choices Further information on joining up Nature Recovery and Green Infrastructure (GI) with health priorities is set out below. If more cities and towns can be creatively designed and managed, with nature and communities at their heart, we will see nature and people thrive. This is something we set out to inspire at Natural England when developing the Green Infrastructure Framework and Design Guide. Natural England's People and Nature survey tells us that, for 82% of people 'being in nature makes me happy'. With the cost-of-living crisis, 'free' places like local parks and greenspace, have become even more important. The value of these spaces for the economy is estimated at £28.7 billion per year.

Green infrastructure in towns and cities provides places to relax, exercise, and spend time outdoors; cools urban areas; reduces flooding by allowing water to permeate the ground rather than overwhelm our drains; increases biodiversity and helps to reduce inequalities in access to nature. Options assessments for development sites and related green and blue Infrastructure within and between developments, green spaces and designated sites should; include soft transition and consider potential direct and indirect implications on sustainable use for example visitor pressure and transport / access options.

The natural environment affords the best 'natural' play opportunities for children while offering multifunctional nature-based solutions to climate change etc. These can be blended into wildlife rich green infrastructure and green open spaces that can act as destination play sites for local children (See best practice at Play England and Play Wales) that have proven health and wellbeing value.

Evidence for nature play and health:

Play, naturally: a review of children's natural play

Nature for health and wellbeing | The Wildlife Trusts

Good practice in social prescribing for mental health: the role of nature-based interventions - NECR228 (naturalengland.org.uk)

6 Climate and Renewable Energy

Whilst Natural England welcomes this group of policies we recommend including Policy CRE1: Climate Change and Policy CRE2: Renewable Energy within the Sustainable Environment (SE) group of policies to achieve a collective strategic focus on sustainable development and working toward achieving net zero alongside the SE policies relating to Pollution and Air Quality (SE1) and requirements for sustainable water management measures to reduce water use, natural flood protection features alongside the specific policies on Sustainable Drainage Systems (Policy SE4:)

Natural England continues to work with the LPAs across the region on understanding air pollution across area boundaries (see comments and links in objectives section.)

10 Infrastructure and Transport Policy.

Policy IN4 Cycleways, Bridleways and Public Rights of Way

Natural England welcomes the inclusion of this group of policies which seek to maintain and enhance the network of public rights of way that cross the borough. We note that the sustainability appraisal states that "the borough has relatively poor accessibility to the cycle network and is the lowest performing in the county for walking zones" (p 206) and that, "eight allocated sites (AB2, AB12, AB33, HD10, KL15, MD29, SP11(3) and TK10) do not currently have safe pedestrian or cycle access adjacent to the site, where site end users may be reliant upon less sustainable modes of transport including private car use". (p 180)

11 Sustainable Environment

Natural England welcomes this group of policies and has the following policy specific comments:

Policy SE1: Pollution and Air Pollution.

Natural England welcomes this policy that notes that development proposals which are likely to result in detrimental impacts on air quality, will not be permitted unless it can be demonstrated that mitigation measures effectively address these impacts. (Comments on Air Quality are also provided on page 2 and 4 of this letter). The promotion of sustainable and active travel options, low-emission technologies and enhancement of green infrastructure to absorb air pollution is also noted. (see comment above re integrating the group: 6 Policies Climate and Renewable Energy).

Policy SE7: Biodiversity Net Gain

Natural England supports the inclusion of a policy on BNG. We suggest the following minor amendments to further improve the plan policy.

The BNG policy should make it clear that biodiversity net gain is not applied to irreplaceable habitats, and that any mitigation and/or compensation requirements for Habitats sites should be dealt with separately from biodiversity net gain provision. The policy should also set out how biodiversity net gain will be delivered and managed through the lifetime of the scheme and including monitoring requirements. This should include indicators to demonstrate the amount and type of gain provided through development. The indicators should be as specific as possible to help build an evidence base to take forward for future reviews of the plan, for example the total number and type of biodiversity units created, the number of developments achieving biodiversity net gains and a record of on-site and off-site contributions.

Natural England notes that the Sustainability Appraisal states "Despite the BNG provisions at the site level, there remains potential for a cumulative adverse impact on biodiversity at the landscape scale, owing to incremental habitat losses. As a result of development within the Local Plan undeveloped land will be lost which will include the loss of soil resources, habitats recognised as being of 'high' and 'very high' distinctiveness, and potentially ecological links between biodiversity assets, whereby the policies will not be expected to fully mitigate the fragmentation of the ecological network. Fragmentation of the ecological network across Newcastle-under-Lyme is expected to be a long-term and permanent significant effect." (p 162)

Policy SE8: Biodiversity and Geodiversity

Natural England supports the inclusion of this policy to protect the Boroughs internationally, nationally and locally designated sites important for their biodiversity value and to enhance the natural environment and work with partners toward Nature Recovery.

We particularly welcome the plans recognition of the value of "wider ecological networks" stating that "Other sites, both individually and collectively, that are not designated can also contribute towards protecting and enhancing diversity of species locally".

Policy SE10: Landscape

Natural England welcomes this policy aimed at ensuring that "development proposals should protect and enhance the character, quality, beauty, and tranquillity of the Borough". We note from the sustainability appraisal that "The entirety of the south of the borough is identified as being high in relation to landscape sensitivity, which starts in Audley in the north and covers the southern area of the borough, including Loggerheads and Alington." We agree that "Alteration of the landscape character is a long-term and permanent significant effect... There is potential for a cumulative adverse effect on landscape character resulting from the development proposed in the Plan". (p193) SA.

Natural England has divided England into 159 distinct natural areas called National Character Areas (NCAs) Newcastle-under-Lyme falls within two NCAs: Shropshire, Cheshire and Staffordshire Plain: gently rolling plains dominated by intensive dairy farming, beef and arable production; The Potteries and Churnet Valley: strong contrast between the industrialised landscape of the Potteries and the pastoral, strongly dissected hills and small plateaux that flank the Churnet and Dove valleys.

Natural agrees with the following statement in the sustainability appraisal: "Although various policies aim to ensure that development conserves and enhances landscape character and distinctiveness, when combined with Local Plan policies that support infrastructural improvements such as for transportation, water, and waste, this is likely to lead to a long-term and irreversible cumulative adverse effect on landscape character and tranquillity and associated indicators such as dark skies." (p72)

Policy SE11: Trees, hedgerows, and woodland

Natural England welcomes this plans recognition that "Trees, hedgerows, and woodlands are integral to the distinctive character and ecological health of the Borough of Newcastle-under-Lyme, defining landscapes across both urban and rural settlements." And that "This policy prioritises the protection of existing natural assets, seeking to not only preserve, but actively enhance, these valuable features wherever possible".

Policy SE13: Soil and Agricultural Land

Natural England has concerns about the justification for the loss of BMV agricultural land within this plan. "The proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land, A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of 'best and most versatile' (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services." (page74) (SA)

Natural England notes that policy SE13 states: "Outside of sites allocated for development in the Local Plan, development proposals should avoid the loss of best and most versatile agricultural land (BMV) unless it can be demonstrated that the benefits of development clearly outweigh the loss of the land and every effort has been made to mitigate for the overall impact of the development on best and most versatile agricultural land."

With regards to Soil and Agricultural Land Quality, Natural England advises that The Local Plan should give appropriate weight to the roles performed by the area's soils. These should be valued as a finite multi-functional resource which underpin our wellbeing and prosperity. Decisions about development should take full account of the impact on soils, their intrinsic character and the sustainability of the many ecosystem services they deliver.

The 25 Year Environment Plan (25YEP) sets out government action to help the natural world regain and retain good health, including highlighting the need to:

- protect the best agricultural land
- put a value on natural capital, including healthy soil
- ensure all soils are managed sustainably by 2030

- restore and protect peatland

Soil is a finite resource which plays an essential role within sustainable ecosystems, performing an array of functions supporting a range of ecosystem services, including storage of carbon and water, the infiltration and transport of water, nutrient cycling, a buffer against pollution and provision of food. In order to safeguard soil resources as part of the overall sustainability of the development, it is important that the soil resource is able to retain as many of its important functions as possible. This can be achieved through careful soil management and appropriate, beneficial soil re-use, with consideration on how any adverse impacts on soils can be avoided or minimised.

The conservation and sustainable management of soils is reflected in the National Planning Policy Framework (NPPF), particularly in paragraph 180(a), 180(b) and 181 (footnote 62). When planning authorities are considering land use change, the permanency of the impact on soils is an important consideration. Particular care over planned changes to the most potentially productive soil is needed, for the ecosystem services it supports including its role in agriculture and food production.

Plan policies should therefore take account of the impact on land and soil resources and the wide range of vital functions (ecosystem services) they provide in line with paragraph 180(b) of the NPPF.

Soil Plan Policies

We strongly advise that at a minimum, the plan includes core policies for:

- the protection of best and most versatile (BMV) agricultural land (Grades 1, 2 and 3a in the Agricultural Land Classification (ALC)); and
- for the protection of and sustainable management of soils as a resource for the future.
- Areas of poorer quality land (ALC grades 3b, 4, 5) should be preferred to areas of higher quality land (grades 1, 2 and 3a).
- Recognise that development has an irreversible adverse impact on the finite national and local stock of BMV land.
- Conforms to NPPF and Planning Practice Guidance (Natural Environment and Minerals).
- Requires detailed ALC surveys to support plan allocations and for subsequent planning applications (for all sites larger than 5 ha). ALC surveys to support plan allocations and for subsequent planning applications for smaller sites (1 – 5 ha) would be welcomed.
- Recognise that development (soil sealing) has a major and usually irreversible adverse impact on soils.
- Soils of high environmental value (e.g., wetland and carbon stores such as peatland, low nutrient soils; or soils of high environmental value in the local context) should also be considered as part of ecological connectivity (Nature Recovery Network / Green Infrastructure).
- Requires soil handling and sustainable soil management strategies based on a detailed assessment of the soil resource based on best practice guidance (for all sites larger than 5 ha), ideally as part of the planning application process for major sites to help inform master-planning, and to safeguard the continued delivery of ecosystem services through careful soil management and appropriate, beneficial soil re-use. Soil handling and sustainable soil management strategies for smaller sites (1 – 5 ha) would be welcomed.
- Reference should be made to Defra's Construction Code of Practice for the Sustainable Use of Soils on Construction Sites
- In addition, for minerals and other temporary forms of development, plans for reinstatement, restoration and aftercare will be required (or for solar, a commitment to do so if the operational life is in decades); normally this will be return to the former land quality (ALC grade)
- Refers to soils issues within relevant policy areas such as renewable energy, climate change, green infrastructure and biodiversity net gain, flood schemes, managed realignment, development design and landscaping.

Policy SE14: Green and Blue Infrastructure

Natural England supports this policy. Well-designed cross boundary multi-functional green infrastructure contributes greatly to a number of benefits both for people and nature. Your green and blue (for example cross boundary canals) infrastructure should dovetail with your biodiversity net gain strategies to maximise benefits.

We would advise that the Local Authority also considers Natural England's Green Infrastructure Framework of Principles and Standards for England. As stated in our document, "Green infrastructure (GI) is part of the solution to many of the challenges we face; health inequalities, biodiversity crisis, climate change, nature recovery and levelling up. The GI framework supports local authorities, developers, parks and greenspace managers and local communities to enhance and create new good quality green infrastructure."

We would also suggest reference is made to the emerging Local Nature Recovery Strategy. Preparing Local Nature Recovery Strategies (LNRS) is a statutory requirement under the Environment Act 2021. LNRS are designed to work closely alongside other measures in the Act including supporting the delivery of mandatory biodiversity net gain and providing a focus for a strengthened duty on all public authorities to conserve and enhance biodiversity. They will also underpin the Nature Recovery Network, alongside work to develop partnerships and to integrate nature into our incentives and land management activities. Each LNRS will be specific and tailored to its area. The responsible authorities and people involved in preparing a strategy can choose how they want it to look, but every strategy must contain:

1. A local habitat map.
2. A written statement of biodiversity priorities. Statutory guidance for responsible authorities explains in detail what these 2 things should contain. Together they set out what the strategy is aiming to achieve and what practical actions will help do this. They will also propose where actions could be carried out for best effect and to connect and expand existing areas that are important for nature. We expect local nature recovery strategies to propose actions such as the:

- creation of wetlands
- restoration of peatlands
- planting of trees and hedgerows
- more sustainable management of existing woodlands and other habitats like grasslands These actions are intended to help nature itself and to also help improve the wider natural environment.

Whilst the Staffordshire Local Nature Recovery Strategy (LNRS) is currently a work in progress, Newcastle-under-Lyme Borough Council Regulation 19 pre-submission should still be consistent with NPPF Paragraph 185 in terms of setting out local habitat priorities and identifying potential measures

by which they can be achieved, alongside mapping areas that could become of particular importance in the future.

Natural England encourages Newcastle Under Lyme Borough Council via their Local Nature Recovery Strategy to actively develop cross border cooperation between other Local Planning Authorities (LPA) (for example Staffordshire Moorlands Borough Council) in coordinating land development projects that impact on local biodiversity sites to ensure that local biodiversity corridors are maintained and link up other local important sites for nature conservation.

This is a good way of achieving nature recovery and preparing to deliver the LNRS alongside enabling the local authority and its partners to identify, map and safeguard site areas, including green and blue infrastructure opportunities and interlinkages.

Habitats Regulations Assessment

Natural England notes that this Local Plan is not directly connected with or necessary to the management of any European site. A screening assessment has been undertaken which identified a number of Likely Significant Effects (LSE) associated with the Local Plan. Taking no account of mitigation measures, the HRA concludes that Local Plan has the potential to affect the following European sites:

- Cannock Chase SAC
- Humber Estuary SAC, SPA and Ramsar
- Mersey Estuary SPA and Ramsar
- Midland Meres and Mosses Phase 1 Ramsar
- Midland Meres and Mosses Phase 2 Ramsar
- Pasturefields Salt Marsh SAC
- Peak District Dales SAC
- Peak District Moors (South Pennine Moors Phase 1) SPA
- Severn Estuary SAC, SPA and Ramsar
- South Pennine Moors SAC
- West Midland Mosses SAC

We welcome that your HRA includes the Humber Estuary SAC, SPA and Ramsar site which is hydrologically connected to the river Trent. If the Local Plan resulted in significant water pollution, this European site could be affected and has therefore been screened in, in relation to water quality only, on a precautionary basis. Natural England however notes that the Sustainability Appraisal identifies "A long-term cumulative adverse effect ...in terms of water quality" (p 148) as a result of the plan, this is not fully reflected in the current HRA.

Natural England note that the Sustainability Appraisal states: that "the entirety of the borough falls within IRZs of one or more SSSIs. All five SSSIs within the borough are in 'unfavourable' condition: Burnt Wood SSSI, Maer Pool SSSI, Black Firs and Cranberry Bog SSSI (Midlands Meres and Mosses Phase 2 Ramsar), Betley Mere SSSI (Midlands Meres and Mosses Phase 1 Ramsar) and Metallic Tileries, Parkhouse SSSI."

Natural England are also aware of the extensive network of ancient woodland spread across the borough, totalling 707.60 hectares, as well as a large quantity of priority habitats, totalling 1,791 hectares.

Natural England agree that the following designated sites and related priority habitats in adjoining LPA areas may also be affected by development through several pathways, including fragmentation, recreational pressure and/or pollution (including Air and Water Quality). Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI, Wybunbury Moss SAC SSSI, Tyrley Canal Cutting SSSI, King's and Hargreaves Wood SSSI, Gannister Quarry SSSI, Roe Park Woods SSSI, Wetley Moore SSSI, Churnet Valley SSSI, Hatherton Flush SSSI, Sounds Heath SSSI, Ford Green Redebed SSSI, and Cop Mere SSSI.

It is noted that the Appropriate Assessment stage of the HRA assessed potential impacts by topic;

- Impacts on designated features affected by a possible deterioration in air quality
- Impacts on water quality and quantity associated with increased levels of built development.
- Impacts associated with increased recreational pressure at European sites; and
- Consideration of impacts at associated functionally linked land.

Natural England notes that the HRA also factored the following into the assessment process "the protective framework provided by the Local Plan and existing protection measures set out in high level strategic policy and existing planning policy frameworks that serve to help overcome the identified potential adverse effects" and that "taking into consideration these factors, it is concluded that the Local Plan would have no adverse impact on site integrity at any European site, either alone or in-combination.

Natural England disagree agree with this conclusion that for those Habitats sites in the area of search with features sensitive to air pollution, adverse effects on their integrity, alone or in-combination, can be ruled out for the reasons set out at the beginning of this letter on page 2 and repeated in part below:

Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot currently be ruled out at the following internationally designated sites:

- Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI
- Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI

Natural England are currently in discussion with a number of the Staffordshire and West Midlands LPA's with regards to the cumulative impacts of air quality. We advise that further work is required to inform the HRA. The HRA should demonstrate that there are no adverse effects on integrity of Habitat sites as a result of this Local Plan, alone and in combination with other plans and projects. With regards to allocated sites, it is unclear whether the individual sites put forward in the Local Plan have been assessed through the Habitat Regulations Assessment process and how mitigation will be applied here.

Sustainability Appraisal

Natural England has reviewed the Sustainability Appraisal (SA) and included comments taken from the document throughout our response.

The SA is a comprehensive document which should be reviewed in strengthening the HRA, particularly with regards to residual adverse effects that would be expected to remain in terms of wastewater following the implementation of the Local Plan policies. (p 141) Natural England notes that "Increased pressure on wastewater treatment has the potential to be a long term and potentially permanent significant effect" (p 142)

The SA recognises the local distinctiveness of the plan area;

	<p>“The Borough itself is largely rural in nature and supports some high-quality agricultural land, but is more heavily built up towards the north east surrounding Stoke-on-Trent. (p 8)</p> <p>Newcastle-under-Lyme has a strong rural character with a high-quality landscape and countryside, with some areas identified as being sensitive to change as a result of new development. (p 19)</p> <p>Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms make up the key features of some of these Landscape Character Types.” (p 20)</p> <p>Sets out the area specific barriers to achieving sustainable growth;</p> <p>“Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)</p> <p>Loss of tranquillity The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution.(p 68)</p> <p>“The pre-mitigation SA assessments identified negative impacts in relation to air quality due to the proximity of sites to major roads, landscape character due to the location of sites within areas of high landscape sensitivity, close proximity to the PRoW network and potential for coalescence and urban sprawl, habitat sites, priority habitats, habitat distinctiveness, loss of undeveloped land, ‘best and most versatile’ (BMV) agricultural land, coinciding with mineral safeguarding areas (MSAs) and areas of surface water flood risk (SWFR); and access to healthcare facilities, schools, the local cycle network and railway network. (p 40)</p> <p>There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work. (p 21)</p> <p>Trends in transport choice are unlikely to change significantly, and private car use would continue to increase as the selected method of transport to work, with potential adverse impacts on air quality in the borough.”(p 23)</p> <p>Considers the local and cumulative significance of soil loss alongside the ecological implications:</p> <p>“Loss of soil resources, BMV land and ecosystem services The proposed allocations would cumulatively result in the loss of up to approximately 342ha of previously undeveloped land, including up to 263ha of BMV agricultural land. The proposed development would be expected to reduce the ability of the local soil biome to effectively provide ecosystem services, to some extent. Additionally, the loss of permeable soils could potentially increase the risk of flooding and result in a loss of biodiversity across the Plan area. Loss of soil can also result in an increase in soil erosion and have subsequent impacts on agricultural yield.(p 68) The majority of the borough is ALC Grade 3 soil, with areas of ALC Grade 2 scattered across the borough. Grade 2 and potentially Grade 3 represents some of the borough’s BMV agricultural land and should be conserved wherever possible (p 21)</p> <p>A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of BMV land to be lost as a result of the development proposed in the Local Plan.” (p 59)’</p> <p>Other Advice</p> <p>Further general advice is provided within Natural England Advice Note – Local Plans February 2024, attached at (Appendix A) - see attachment</p>

Q6 Details	<p>We agree some housing needs to be built, but are the housing target needs accurate, is old information being used? The figures used predicted the population would increase, predictions were wrong – population levels have decreased. We DO NOT agree to large storage units being built, why is greenbelt land being suggested? when brownfield sites exist in the county. Is it because developers do not like to use brownfield sites due to the additional costs of preparing the land? greenbelt land is cheaper to build on – creating more profits. As you travel around there are many large empty storage units in and around the Newcastle/Stoke area. How many local people are expected to be employed by the proposed storage units or will the labour be from outside the parish? Greenbelt land is a carbon storage capture area and a O2 producer, soil and trees are the biggest collectors of carbon so concreting these areas will increase the carbon footprint. Where will the water go from millions of square meters of roofing, nature drains the land naturally. Areas in the Parish now flood which have never done in the past, due to changes in the global weather patterns. There will be disruption in the local area during and after construction with noise and light pollution also poor air quality due to the pollution created by more large vehicles.</p> <p>Audley Parish has contributed to the industrial past with sacrifices made by the land and its people. Audley Parish was built on a Victorian footprint to facilitate its industrial past, roads in the area were not designed to take the present traffic levels, so any increase in additional traffic would cause gridlock! Local services will not be able to cope with more people and utility services will be stretched to supply these new developments. Audley Parish would lose its identity, as a collection of small individual villages which have established over many centuries.</p> <p>The world is on a knife edge with climate change – lots of these little takes of greenbelt land are mounting up to be larger worldwide problems. These developments will lead to further climate change, thus changing the quality of our environment forever. Greenbelt land is there for everyone to enjoy when they want. Monitoring cameras were installed over one weekend to register the footfall using the public footpaths across the land. This small snapshot would not have given a true record of the usage and therefore should be dismissed as evidence when the developers present their case. Once greenbelt has been taken, there is no going back!</p> <p>If a small number of houses must be built then building affordable housing for local people is important, but developers don't like building these as there is very little profit to be made. Larger houses attract bigger profits for developers, but large housing attracts people from outside the area, who do not contribute to our local economy. They will use the easy access to the A500 and M6 to travel to work in the larger conurbation areas. If local people cannot afford the property being built, they will move away, thus destroying the future fabric of the local community.</p> <p>Remember: You don't want history saying you were the ones who destroyed the local area and left nothing for our children and grandchildren. Don't let your legacy be that you contributed to the increase of global warming!</p> <p>LIFE IS MORE IMPORTANT THAN PROFIT</p>

Q6 Details	<p>We would like to question the soundness and legality of the final draft local plan for Newcastle-under-Lyme with regards to the methodology used in assessing and decision making in the allocation of sites in Audley, specifically AB32/AB33 for much needed housing.</p> <p>We believe it is biased to remove AB32 from the local plan. Both AB33 and AB32 are greenfield sites. In the first draft local plan, both sites were assessed as a strong contribution to greenbelt purposes. In the final plan, AB33 has been reassessed as a moderate contribution to greenbelt purposes, but AB32 still a strong contribution. This was explained by the council in a meeting with ourselves on 2nd Sept, in that this is because the site size of AB33 had been reduced. We believe the methodology used in this reassessment is not sound. If AB33 is to be released for housing, AB32 will be surrounded on three sides by housing. How can that be assessed as greenbelt land when it will be surrounded by houses and essentially infill. We do not believe this can legally be allowed to surround greenbelt land in this way. Secondly, the grading of the land, both AB33 and AB32 are grade 3 agricultural land and both covered by a mineral safeguarded area.</p> <p>Thirdly, with regards to sewers running through the site, the sewers run through both AB33 and AB32. AB32 has been in our family for over 80 years now and has never flooded in that time. We are though aware of flooding/sewer issues on Alsager Road, but this is closer to the AB33 site.</p> <p>The point with regards to Audley being within 150m of AB32 is the same as AB33 and there are 3 listed buildings within 250m of AB33, whereas there are only 2 listed buildings within 250m of AB32.</p> <p>With regard to the availability of access to AB32, we do have legal access to the plot via Nursery Gardens. The first draft local plan stipulated "the site should be masterplan led with AB33 with access taken from the adjoining site" which would negate the need for access via Nursery Gardens, where is the evidence base for this being removed from the final local plan?</p> <p>We believe that if this final plan is adopted, our land will be locked in the middle of a housing estate on 3 sides and is most definitely NOT valuable greenbelt land for Audley. We are seeking legal advice as to our options if this plan is adopted as it is drafted.</p> <p>We were very much encouraged and supported to put our land forward in the plan by the local council in the call for sites as we are aware of the much needed local and affordable housing.</p> <p>We have had to endure over 2 years of the spreading of mis-information by some members of the local community and on social media, particularly the PAPG Protect Audley Parish Greenbelt facebook platform during the consultation processes and even a member of Audley Parish Council, and what is essentially bullying, character assassinations and the spreading of lies, and all this has achieved is to depreciate the value of our land, and that it will still be classed as greenbelt is now ludicrous!</p> <p>We would appreciate that our concerns are investigated/considered prior to the final local plan being adopted.</p>
Q7 Modification	<p>To include AB32 in the final draft local plan to release for affordable housing with access from AB33 site. If not included in the plan, the land needs to be reassessed as to its value as greenbelt land, as will be surrounded on 3 of the 4 boundaries by housing.</p>

Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>I am writing to express my strong objection to the proposed developments in Audley Parish of the due to the severe traffic, safety, and environmental issues it will create for the surrounding communities, as well as the strain it will place on essential services.</p> <p>Traffic and Road Safety Concerns:</p> <p>The A500 is already heavily congested, particularly during peak hours, and the addition of another estimated 400–500 vehicles will lead to frequent gridlock. This road is vital for local and regional travel, and the increased volume from the warehouse will have a detrimental effect on traffic flow, potentially leading to severe delays and accidents.</p> <p>There is no direct access from the A500 to Park Lane, meaning much of the new traffic will inevitably be diverted onto smaller, rural roads. These roads were originally constructed for farm use and remain</p>

narrow, single-track lanes without footpaths, which makes them unsuitable for the significant increase in vehicular traffic. The constant presence of agricultural vehicles already makes these roads hazardous for pedestrians and smaller vehicles, and an influx of over 400 vehicles will only exacerbate the danger. This situation presents a serious risk of accidents, particularly in the nearby villages such as Audley, Bignall End, Red Street, Chesterton, and Halmerend.

Environmental Impact:

The environmental implications of this project are concerning. The increase in traffic will lead to higher levels of air and noise pollution, affecting the quality of life for local residents and damaging the surrounding flora and fauna. Additionally, the construction of the warehouse itself, and the subsequent increase in traffic, will disturb natural habitats and contribute to the loss of biodiversity in the area. The environmental footprint of this development is not justified and must be carefully reconsidered.

Issues with AB15 and Access to Vernon Avenue:

The proposed AB15 development will also have a detrimental impact on traffic and road safety, particularly with the access onto Church Street from Vernon Avenue. This area is already prone to congestion, and the development will further strain the local road network, increasing the likelihood of serious road traffic accidents. The local infrastructure is simply not designed to handle such a significant increase in traffic volume.

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	Rowley
Consultee Given Name	Ian
Q4 Part of document	Policy
Q4 Policy	AB2
Q5 Sound	No
Q6 Details	<p>We agree some housing needs to be built, but are the housing target needs accurate, is old information being used? The figures used predicted the population would increase, predictions were wrong – population levels have decreased. We DO NOT agree to large storage units being built, why is greenbelt land being suggested? when brownfield sites exist in the county. Is it because developers do not like to use brownfield sites due to the additional costs of preparing the land? greenbelt land is cheaper to build on – creating more profits. As you travel around there are many large empty storage units in and around the Newcastle/Stoke area. How many local people are expected to be employed by the proposed storage units or will the labour be from outside the parish? Greenbelt land is a carbon storage capture area and a O2 producer, soil and trees are the biggest collectors of carbon so concreting these areas will increase the carbon footprint. Where will the water go from millions of square meters of roofing, nature drains the land naturally. Areas in the Parish now flood which have never done in the past, due to changes in the global weather patterns. There will be disruption in the local area during and after construction with noise and light pollution also poor air quality due to the pollution created by more large vehicles.</p> <p>Audley Parish has contributed to the industrial past with sacrifices made by the land and its people. Audley Parish was built on a Victorian footprint to facilitate its industrial past, roads in the area were not designed to take the present traffic levels, so any increase in additional traffic would cause gridlock! Local services will not be able to cope with more people and utility services will be stretched to supply these new developments. Audley Parish would lose its identity, as a collection of small individual villages which have established over many centuries.</p> <p>The world is on a knife edge with climate change – lots of these little takes of greenbelt land are mounting up to be larger worldwide problems. These developments will lead to further climate change, thus changing the quality of our environment forever. Greenbelt land is there for everyone to enjoy when they want. Monitoring cameras were installed over one weekend to register the footfall using the public footpaths across the land. This small snapshot would not have given a true record of the usage and therefore should be dismissed as evidence when the developers present their case. Once greenbelt has been taken, there is no going back!</p> <p>If a small number of houses must be built then building affordable housing for local people is important, but developers don't like building these as there is very little profit to be made. Larger houses attract bigger profits for developers, but large housing attracts people from outside the area, who do not contribute to our local economy. They will use the easy access to the A500 and M6 to travel to work in the larger conurbation areas. If local people cannot afford the property being built, they will move away, thus destroying the future fabric of the local community.</p> <p>Remember: You don't want history saying you were the ones who destroyed the local area and left nothing for our children and grandchildren. Don't let your legacy be that you contributed to the increase of global warming!</p> <p>LIFE IS MORE IMPORTANT THAN PROFIT</p>

Q4 Part of document	Policy
Q4 Policy	AB2
Q5 Sound	No
Q6 Details	<p>I recognise the need for the additional housing in the parish of Audley and have no objection to those proposals. My concern and objection lies with the AB2 warehousing proposals adjacent to the M6.</p> <p>In addition to taking valuable green space the increase in traffic in the area, particularly when the main arterial roads are blocked, which is frequent, is one of my reasons for objecting. The village roads and minor roads connecting the outlying areas are likely to be used both as a rat run and a relief road if the need arises.</p> <p>I am also concerned that Junction 16 of the M6, already extremely busy and congested at peak times, will become even more problematic with the increase in traffic from the proposed AB2 site. The provision of another entrance/exit to the junction should this be part of the plan, will only add to this.</p>
Q7 Modification	Remove size of AB2 plan or remove completely.
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	Parish Council
Consultee Given Name	Weston and Crewe Green
Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p>These are the representations of Weston & Crewe Green parish Council in respect of the Regulation 19 pre-submission version of the Local Plan. The boundary of Weston & Crewe Green Parish abuts that of Newcastle Borough.</p> <p>The Parish Council, together with others, have been consistent in their objection to the release of Green Belt land (Strategic Site AB2) adjacent to Junction 16 on the M6 for employment use.</p> <p>The reasons for objection include.</p> <p>The land is statutory Green Belt and not 'grey belt'; and forms a vital part of the Borough's landscape, protecting the character of the Borough and maintaining a distinct separation between urban and rural areas of both the Borough and Cheshire East. The Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence.</p> <p>The land is currently in agricultural use.</p> <p>The development will generate significant levels of traffic movement both of HGV's and cars around Junction 16 of the M6 which is already extremely busy and often congested. The proposed allocation will generate additional queues and delays around and through this junction which is a gateway to the Northwest, Cheshire East and Weston & Crewe Green Parish.</p> <p>The site could severely impact, dependent on design, the movement and traffic flows on the A500 and the first junction to the east of the motorway (Audley) along with the surrounding minor roads, where presumably all traffic coming to the site from the motorway will need to negotiate to join the west bound carriageway of the A 500 to enter the proposed site.</p> <p>The current congestion problems on the M6, which are of increasing concern to our Parish, have resulted in increased 'rat running' through our local area on the narrow country lanes to the extreme detriment of the amenities and quality of life of our residents. Many of the local roads are narrow and multi-functional - heavily used by walkers, cyclists, and horse riders along with large agricultural vehicles. These roads are becoming increasingly dangerous. A large car driven employment allocation such as that proposed will only exacerbate these issues.</p> <p>It is considered that there is a plentiful supply of Brownfield land more suitably located adjacent to the major settlements in both the plan area and the North Staffs Conurbation for employment purposes. The development will be a major source of light pollution in an otherwise rural landscape.</p> <p>It is quite clear from the plan that the site will be used for warehousing and distribution and will include very large and tall industrial buildings which will be likely to tower over and dominate the surrounding countryside.</p> <p>The allocation of this land for 'employment use' will create an irresistible precedent for the release of other land around this very important and congested motorway junction for similar uses causing further congestion, disruption and loss of Green Belt.</p>

	<p>Weston & Crewe Green Parish Council object to this allocation and would ask that it is removed from the Plan and that the Council review their employment land strategy looking at the use of brownfield land first within the Borough and retain the Green Belt particularly adjacent to Junction 16.</p> <p>If, however, the strategic site AB2 is agreed to be allocated for employment purposes (in particular logistics) by the Secretary of State, then before any application(s) are submitted the Council prepare a very detailed design /development brief for the site and agree the brief after consultation with all interested parties including all stakeholders, to include ALL the following.</p> <p>A comprehensive sub regional master plan for the whole of the A500 corridor in consultation with all interested stakeholders. This assumes that in the longer term this will become a growth corridor linking Crewe and the North Staffs Conurbation with Junction 16 at its hub. It will also inform future Local Plans including that of Cheshire East and prevent isolated piecemeal developments.</p> <p>Design – height, scale, form and grouping of all the proposed buildings on the site; materials and colour; massing of the development, green infrastructure and relationship to the wider area including views into and out of the site from the surrounding countryside. (proposed policy PSD7 Design). External lighting should also be considered as part of the overall design as logistic operations are 24-hour operations and lighting of a site as large as AB2 will have a significant impact on the motorway and the surrounding rural area.</p> <p>Climate and Renewable Energy Policy, include all the matters covered by proposed policy CRE1 including BREEM excellence for water efficiency, whole life carbon assessment and minimise energy use and promote the use of recovery and recycling of materials to reduce carbon.</p> <p>Renewable energy, including a renewable energy statement as set out in Policy CRE2.</p> <p>Access by sustainable modes of transport to protect the integrity of the highway network which will be particularly important at this site (AB2) as it is some way away from the centres of population, access will be difficult and currently no public transport runs past the site - Policy IN2</p> <p>Whilst there is a proposed policy for the site (AB2) in the draft plan, the Council would like to see this incorporated within a detailed design / development brief included as a policy in any adopted plan to ensure that, should the development go ahead the proposals will not adversely impact on the surrounding area and on Weston & Crewe Green Parish in particular.</p>

Q6 Details	<p>I strongly oppose to the inclusion of the AB2 employment site in Audley as it is not justified and is unsound for the following reasons;</p> <ol style="list-style-type: none"> 1 Inclusion of AB2 would allow major incursion and encroachment into the countryside and have a negative impact on the rural village of Audley.

	<p>2 The employment site is 40% bigger than Newcastle Borough actually require so the housing/employment land ratio will be out of balance and will add pressure for even more housing development of which Audley's road network and existing facilities ie. doctors, public services, schools etc cannot accommodate.</p> <p>3 The existing M6/A500 roundabout junction is not fit for purpose to accommodate thousands of extra vehicles on a daily basis. The A500 on the Staffordshire and East Cheshire sides is regularly bottle necked each day. Every morning and evening the tailback from the roundabout extends along the A500 past the A500 Audley sliproad which is around 1 mile away.</p> <p>4 There is currently no public transport to anywhere near the proposed site. Audley rural centre is the closest drop off point which has had many of its bus routes removed by local transport providers.</p> <p>5 The assumption that people will travel to the site on a bike is unjustified as there are many narrow and hilly roads leading back to Newcastle Under Lyme via Bignall Hill (B5500). Conversely, the road to Crewe via the B5500 is a national speed limit road and would be very dangerous to cycle along.</p> <p>6 The existing green belt farmland is prime agricultural land that is used to grow crops and rear beef cattle for the UK market. The proposal is to remove 80 hectares of prime agricultural, greenbelt land to replace with 22 hectares of employment land which would have a negative impact on food producing and also impact on local agricultural employment.</p> <p>7 The proposal is for two emergency site access points to Park Lane and Barthomley Road. I personally live along Nantwich Rd in Audley on the B5500 and the road traffic is extreme in the mornings and evenings during rush hour traffic. My road links both of these roads together. I am very concerned that any of the site 3000 employees travelling from the Newcastle Under Lyme Borough will use Audley as a cut through/drop off point at these two emergency site access points which will further increase road traffic through Audley. Both Barthomley Rd and Park Lane are narrow country lanes with no pedestrian footpaths which are difficult to navigate especially when passing vehicles coming from both directions, they can be dangerous roads to walk along regardless of time of day.</p> <p>8 The previous 'Strategic Employment Site Assessment Report 2023' highlighted that the AB2 proposed site is located within Flood Zones 2 and 3 which are at higher risk of flood.</p> <p>9 There will be a range of significant adverse effects including increased light pollution, noise pollution, air pollution and visual impact from the elevated position of Audley Rural town centre.</p> <p>10 The previous 'Strategic Employment Site Assessment Report 2023' suggest that the site would take approximately 5 years to complete noting that based upon a start date in 2024 it would reach practical completion by 2029. This would have a drawn-out negative impact on the surrounding area and its residents due to the construction process including dust, air pollution, noise pollution, increased traffic to name a few.</p> <p>1 The Table on page N37 identifies that site AB2 would have major negative impacts on: 'Natural Resources and Waste', 'Flooding' and also 'Landscape'. Minor negative impacts include: Air, Biodiversity, Flora and Fauna, Water, Health and Wellbeing and Transport and Accessibility. There is only one other site that scores so negatively, and this is not being taken forward.</p> <p>2 Tables N10 and N11 set out growth strategy options. I note that option 6D does not include site AB2 and delivers better scores/outcomes.</p> <p>3 The Strategic Housing & Employment Land Availability Assessment (SHELAA), Report September 2022 Appendix 4 (Sites not in Deliverable & Developable Supply) included Site AB2. The AB2 site assessment proforma recognised that the site was in the green belt and was isolated, disconnected from Audley and Bignall End, partly affected by flood zones, with access limitations and with poor access to a range of services and facilities. The site appears to be missing from the 2024 update report. There is still a big inconsistency between NUL Borough Council's position in September 2022 and the present. A site identified as not deliverable or developable is now suggested for allocation.</p> <p>4 Allocation of this site is not justified by the Economic Needs Assessment Newcastle-underLyme & Stoke-on-Trent June 2020 which stated, 'overall need implied under any of the aforementioned scenarios could be met through the current supply of circa 293ha of Urban Vision Enterprise comprises UVE Planning Limited (Company Number 15166024) and Urban Vision Enterprise CIC (Company No. 7690116). Registered address: Foxlowe Arts Centre (1st Floor), Stockwell Street, Leek, Staffordshire, ST13 6AD. Directors: Hannah Barter; Dave Chetwyn. employment land'. This further highlights how allocation of site AB2 would undermine regeneration elsewhere.</p> <p>5 Potential of 3000 employees - most travelling in via car, lorry park for 100 HGVs not to mention all the HGVs servicing the 1 million sq ft warehouse plus all the service vehicles - increase in traffic congestion, air pollution from CO2 and tyre particulate pollution as well as noise pollution.</p>
Q7 Modification	To make the plan sound AB2 must be removed from the plan with more emphasise to the use of brownfield sites in the borough. Allocation of site AB2/AB2A is in contradiction to the Local Plan's own evidence base and emerging policies and also inconsistent with national policy and guidance. It would cause substantial social, economic and environmental harm to the Parish, the Borough and the wider North Staffordshire areas.

Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p>Newcastle-under-Lyme Local Plan Regulation 19 pre-submission consultation Strategic Employment (logistics) site (AB2) on land adjacent to Junction 16 of the M6</p> <p>I'm a resident of (redacted by admin) Audley and am extremely concerned at this potential Strategic location site in the Local Plan. I made representations in July 2023 and maintain my strong objection to this allocation. The development of this site will dramatically and adversely affect the character of my local neighbourhood and my quality of life.</p> <p>.The site is within the North Staffs Green Belt (not a Grey Belt in this location) and its development will undermine this fundamental and well-established policy, particularly since there are alternative brown field locations close to the principal road / rail network within the North Staffs conurbation much more suited to employment use.</p> <p>• The land is in productive agricultural use.</p> <p>• Given the isolated location of this site its development would lack any sustainability — not served by any public transport: totally dependent for its operation on the motor vehicle creating additional congestion and pollution: remote from any community facility essential to sustain the requirements of everyday life.</p> <p>• We already experience severe congestion problems in relation to Junction 16. Such a proposal would only exacerbate this, given that the development would presumably be designed to feed out onto this junction. Major reconstruction works would be required in relation to this junction with all its associated disruption which would make the operation of everyday life and communication links intolerable.</p> <p>• The local lanes around my home are narrow and tortuous and already severely congested and dangerous - traffic attempting to circumnavigate Audley centre to try to reach Junction 16. This is in addition to local traffic and numerous heavy farm vehicles. Development of the scale proposed will overload even more the local road network.</p> <p>I urgently request the Borough to remove this allocation from the Local Plan and further investigate the potential of Brown Field Sites.</p> <p>I will be pleased if you will acknowledge this representation and keep me apprised of the next stages in the preparation of the Plan.</p>

Consultee Family Name	Moody
Consultee Given Name	Amanda
Q4 Part of document	Policy
Q4 Policy	AB2

Q6 Details	<p>Dear Sir/Madam</p> <p>I am writing to oppose the local plan for Audley with regard to development sites. Whilst some may deem it necessary to enlarge the footprint of the village I would personally disagree. If you lived here you would know that the proposed access routes to these areas are already overstretched with roads being too narrow and littered with parked vehicles that make it difficult and dangerous to see round to pull out of junctions.</p> <p>There is also the issue of facilities, these are already fully stretched in Audley, the doctors is full as is the dentist and schools. There is also the issue of parking in the village which at times is ridiculous. Many times I have tried to park and been unable to as everywhere was full so I've had to go elsewhere to shop. Also if there are problems on the motorway or A500 the village becomes a rat run for people trying to avoid hold ups so the added lorries and cars using the proposed development sites would only make it more difficult for the residents.</p> <p>Audley is full and doesn't have the infrastructure to support these planned developments we don't have enough facilities as it is so by building more houses people would just go further afield and the village would die anyway.</p> <p>Yours faithfully Amanda Moody</p>

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	Potts
Consultee Given Name	William
Q4 Part of document	Policy
Q4 Policy	AB2 & AB12
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>AB2:</p> <p>The development proposal for AB2 is not a sound proposal due to the significant additional traffic that will result from lorries, service vehicles and employee transport to and from the site. The junction of the A500 at Audley is already an accident black spot and without significant alterations to the junction and its approaches, there will inevitably be fatalities and serious injury from road traffic collisions.</p> <p>The local area is not well served by public transport. The hilly terrain in the locality and lack of cycle lanes on roads due to their narrow nature is not likely to make cycling to the site a realistic option. Therefore there will be significant additional traffic congestion along the A500, at the A500 Audley junction, the M6/A500 junction and along Ravens Lane which is used as a cut-through- especially when there are problems on the M6/A34. This happens already when there are lane closures on the M6 and the creation of factory/warehousing at the proposed site will add significantly more traffic.</p> <p>Lorries already use the B5500 on a daily basis and throughout the evening rather than taking the A34 & A500 which are more suitable for HGV traffic. The creation of the development AB2 does not indicate how lorry traffic will be restricted from using this route. It is likely, we will see such traffic 24 hrs a day.</p> <p>AB12: The development is not a sound proposal. The plans state that the B5500 Ravens Lane will be an emergency access point to the site, and access will be from Diglake Street. The proposal does not show a viable and realistic route that traffic will take to reach Diglake. The most likely route is to be from Albert Street and New Road or from the other direction- the B5500 Ravens Lane. This road is already a very congested route as vehicles are double parked along the road with large vehicles, buses etc finding it very difficult to pass. Without significant mitigation, the congestion along the adjoining roads to Diglake Street will be terrible.</p>
Q7 Modification	<p>AB2- For this proposal to be sound, there needs to be significant alteration to the A500/Audley junction to improve road safety, for example, the installation of rumble strips, a roundabout, speed cameras or traffic lights. There needs to be significant investment in public transport and provision of park and ride schemes. Cycle lane construction will require major road and cycle path development in between the site and local villages. In addition, enforced weight restrictions need to be put in place along New Rd and B5500 to prevent HGVs from using it.</p> <p>AB12- For this proposal to be sound, the existing parking issues along B5500/Ravens Lane need to be properly addressed. Car parking for residents in terraced housing along Ravens Lane needs to be fully included in the proposals for development. An access road could be built to service both AB12 and off-street car parking areas to the rear of terraced housing (on existing low quality agricultural land) to the rear of Ravens Lane. Double yellow lines should then be installed along Ravens Lane.</p>

Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p>OBJECTING TO REGULATION 19 – FINAL LOCAL PLAN.</p> <p>I can only imagine the mountain of paperwork you will have to peruse in relation to these proposed developments, but please spare a thought for those of us who are unable to respond in the well informed, articulated manner you would prefer, but nonetheless, as a resident of Bignall End for over 50 years, my concerns are real and I feel should be seriously considered when making your final decision – thank you.</p> <p>POLICY AB2 – LAND AT JUNCTION 16 OF THE M6</p> <p>My understanding is that the proposed site would be 4 x larger than the Council say the developers need, leading to an employment/housing ratio which may well leave the door open for even more future housing development.</p> <p>Looking into it a little further; with no transport links for employees other than cars, and excessive numbers of HGV's/vans to support the businesses visiting the site, surely this would culminate in added air/noise/light pollution and increased traffic through our villages. I don't pretend to understand the impact such a development will have on the sewer systems, the flood plains, natural habitats of the plants and animals nor the various Assessments that will need to be presented and scrutinised.</p> <p>But I do believe that the infrastructure needed is not there and I don't believe adequate contributions from the developers would be forthcoming – quite naturally it is taken as a given that the developers are profit driven – and I believe the funds needed to provide the necessary services and improve the roads, etc would simply not make it a viable project for them.</p> <p>Why cannot existing viable un-used or under-used sites located in commercial or neglected areas of the Potteries be utilised, where relevant road links already exist and where re-generation programmes could surely accommodate the developer's needs?</p>

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	Darlington
Consultee Given Name	Andrew
Q4 Part of document	Policy
Q4 Policy	Policy AB2 'Land at Junction 16 of the M6'
Q5 Legally compliant	No
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>Concerns over unsound policy for AB2</p> <p>Legality</p> <ul style="list-style-type: none"> The green belt site review consolidated report 16 July 2024 RECOMMENDS EXCLUSION OF THE SITE FROM PROCESS (table 17, page 28) In addition Staffs County Council in the "vision enterprise CIC Audley Parish Green Belt" judged that the Audley Green Belt contributed strongly in safeguarding the encroachment of urbanisation. (Green belt review V2.4 August 22) These findings have been ignored.

Proposed access to site AB2 is extremely problematical

- Option 1. Breaking into an already busy M6 junction 16 roundabout interchange will have a direct impact on the A500 and access on and off the M6. Daily traffic queues are already an issue at this junction.
- Option 2

Creating access to AB2 via the north bound carriageway of A500 where an existing lay-by is situated.

- This possible access point is cutting into the A500 where regularly traffic is queuing.
- It will force any southbound traffic to cross over the A500 carriageway via the Audley/Alsager interchange using a country road over a small bridge which is completely unsuitable for any large vehicles.
- M6 northbound commercial vehicles may be tempted to exit the motorway at junction 15 travelling north on the A500 to reach the site. This will add to already high congestion through the city of Stoke on Trent.
- Emergency access roads to AB2 site proposed off Park Lane. Is this feasible or Safe for such a narrow country lane since Park Lane is a single cars width lane with passing places and no pavement or street lighting. Widening would impact on a greater area outside the AB2 Site.
- Inevitable Park Lane would be used as access for workers to the site. If the lane became any busier than it already is it would become unsafe for residents, ramblers, dog walkers, local running club, horse riders (livery stables sited at Park End, Park Lane) , bird watchers, families with bikes and prams who use it regularly. Dairy cattle have to cross Park Lane from field to farm for milking as well.
- Regarding Accessibility for workers at AB2, there is currently no bus or rail link. The site is isolated from both transport and amenities ie shops. It is Impossible to walk or cycle there using the designated access off A500 (would mean walking/cycling along a very busy dual carriageway with no pavements) around junction 16. Comes back to using Park Lane as an access point for the site.

Economic concerns

- How much employment will 'big box' warehousing generate? Very little in ratio to the size of the development. It's also a majority of unskilled low pay work, so its capacity to generate wealth and income to the borough is low compared to its adverse effect which includes:-
- 1.Loss of prime agricultural land. 2.loss of hedgerows and manipulation of natural topography. 3.visual, noise, light, air pollution. 4.impact on residents living against the site. 5.flooding(AB2 is currently 100% fields this will be changed to hard surfaces causing run off) 6.loss of biodiversity
- 7.Economic impact on alternative development sites ie Chatterley Valley and Roadway Green which are currently already under construction. Investing in a rural green belt removes the investment/regeneration of the "Potteries" aged industry sites 8.impact on local/rural economy, food production and farm employment. 9.Net carbon claim does not allow for workers having to travel to site by car which is the only means of viable transport at present.
- 80 hectares of Green belt land to be lost to AB2 for only 22hectares of employment land. How can this ratio be justified when virgin farm land under green belt status is to be lost. There is a deficit in agricultural production compared to population and loosing more food production land only increases the problem. AB2 IS NOT A GREY FIELD SITE, it is top quality agricultural land.
- If the 80 hectare development goes ahead as planned at AB2 this will result in 40% over and above the required needs identified in the local plan for employment land within the borough. There are 4 farms involved in selling land for this site is this necessary?

Personal impact

- In particular there are 3 family homes (Lane, Park and Brook Cottages) which AB2 boundary directly abuts to on 3 sides, placing all the houses in a ransom strip. See below map. Also a proposed emergency access to AB2 lies immediately against these properties. I urge extra consideration in planning, even with natural screening these properties will be greatly affected and the residents should be given an option for compensation or compulsory purchase. It would not be unreasonable to ask any planning officer to visit this particular site.

Economic viability of developing AB2.

- The not insignificant cost of creating access to the site off the A500
- There is also a mains gas pipeline that crosses the site would this require moving before building went ahead? Also Fowl water Drainage/soak aways from lane,Brook and Park cottages exist on the site

Q7 Modification	site should be removed from local plan as totally not suitable
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	Barlow
Consultee Given Name	Karen
Q4 Part of document	Policy
Q4 Policy	AB2
Q5 Legally compliant	No
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>The withdrawal of 80 HA of Grade 3 Agricultural farmed land in the Local Plan is unjustified, excessive and unsupportable in this area for the 22 HA of employment land the Council states the Borough needs. The plan is not positively prepared and is ineffective as there are alternative sites available and one is standing empty ie; the warehouse site at Radway Green near Alsager. The area does not have sufficient existing infrastructure and in the current and future financial climate is unlikely to (money already spent on HS2, financial climate of Local/Central Government, Ukraine war etc)</p> <p>There are regularly problems on the M6 and A500 which the local authorities, business leaders, employers etc know about, both are heavily congested and the traffic uses this area as a way of bypassing these problems when they occur. I have personal experience of large heavy goods lorries unsuitable for the road network they are using and in some instances ignoring roads signed as unsuitable for the vehicle being driven altogether.</p> <p>There would be an increase in pollution and noise due to the increase in traffic and heavy goods vehicles in particular. The roads around this area are unsuitable for a large scale increase in traffic and the large size heavy goods lorries/vehicles which would cause further damage to roads which are already constantly in need of repair. It would also create the likely hood of more road traffic accidents involving pedestrians. Many of the roads around the AB2 site are country lanes often with no/inadequate footpaths and street lighting making it unsafe for pedestrians and cyclists, making these modes of 'sustainable' transport less likely.</p> <p>Audley and the surrounding villages are not well served by public transport, First Bus do not run a bus service to Audley, it terminates at the mini-roundabout at Waterhays Estate at Chesterton and the D&G Bus service is often unreliable (buses breaking down and not turning up)</p> <p>The prospect of people using public transport to commute to and from the site for work is not a realistic prospect.</p> <p>We are living in a climate crisis. The environmental impact and loss of habitat for the wildlife would be immense. How would the council mitigate for this? The site is completely out of proportion for the area. Audley has been and is a farming area and community. Why, when we need more than ever to be more self sufficient in being able to grow and produce our own food, are the County and Borough councils not promoting and encouraging first time/existing farmers to work this site for agricultural use?</p>
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)

Q4 Part of document	Policy
Q4 Policy	AB2
Q5 Legally compliant	No
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>I believe the plan is not well prepared. Looking at the figures, it seems that:</p> <p>Land Required: 22 ha needed 61.76 allocated</p> <p>However, the plan indicates that a total 80 ha would be withdrawn from the greenbelt, with 61.76 ha for employment use</p> <p>It seems that there is an extra 39.76 ha .. why?</p>

	<p>Assuming this went ahead, there are many issues which come into play, chiefly the likely congestion and associated air pollution. At present, the junction between the A500 and the M6 can become very congested, with slow traffic extending some distance from that junction. It is not clear in the plan how this might be mitigated, if it can be. There does not seem to be a clear access to the A500 from the AB2 site shown on the map.</p> <p>When there are issues occurring on the M6, which happens quite frequently, traffic will often make its way back up the A500 to Audley and then begin to fill up the roads here, again with extra air pollution.</p> <p>I feel that the bigger issue will be caused by workers making their way to the site. The local roads will struggle to accommodate them at certain times and extra lorries would be most unwelcome owing to the noise, damage to the roads and increased air pollution which they invariably cause.</p> <p>Finally, it seems foolish to remove good greenbelt land from our agricultural reservoir at a time when the country is going to need it far more than an "employment" site.</p>
Q7 Modification	AB2 is not inherently a bad idea, however there are other areas which could be used, for example there are empty warehouses near to the Radway Green site in Alsager.

Consultee Family Name	Lycett
Consultee Given Name	Lee
Q4 Part of document	Policy
Q4 Policy	AB2
Q5 Sound	No
Q6 Details	<p>I don't believe that this part of the plan is sound nor is it justified.</p> <p>This site is 4x larger than the Council say they need. The employment/housing ratio will become unbalanced which could well mean we will be faced with even more development.</p> <p>The site is convenient on the M6 and not too far away from major cities such as Manchester, Liverpool and Birmingham but with no transport links it will mean employees travelling in by car, van, HGV etc. This will have a huge impact on a village that does not have the infrastructure in place to cope with such an enormous increase in traffic.</p> <p>I live on (redacted by admin) where one of the proposed emergency exits will be - this is a single track, country lane without any footpaths. I have seen at first hand the volume of traffic on this road in particular when there are problems on the A500 & M6, people use this as a short cut causing mayhem, gridlock and most importantly major safety concerns. In addition there will be an increase in carbon monoxide, noise, tyre wear and other vehicle pollutants. This road simply isn't suitable for a significant increase in cars, the high number of HGV's visiting the site and additional work vans needed to support businesses.</p>

Q7 Modification	To make the Local Plan sound I strongly recommend the removal of site AB2.

Q4 Policy	AB2
Q6 Details	<p>Dear sir</p> <p>Far beit from me to deny people having their own homes. However I feel that there are a few things that need to be done first.For instance in Audley there is limited parking space even parking on the medical centre is difficult at times. No parking in Bignall End except on pavements. Streets such as Albert, Diglake, Hope and Tibb Streets plus all the way up Ravens Lane are all double parking making it difficult for all traffic and emergency vehicles to get through.In Bignall End where elderly people, mothers with prams and disabled people and children have to try and cross a very busy road therfore a very urgent need for a pedestrian crossing.Quite recently I went to catch a bus only to find 2 cars parked by the bus stop and I have a photo to prove it.So there needs to be a painted sign on the road as is on the other side.I do feel that there is a lot of things to consider before building 200 houses which equates to 400 people plus children plus cars and lighting the country side with warehouses which will only make the current situation worse.</p> <p>Looking forward to your reply</p> <p>Yours sincerely Roy Cooper (redacted by admin)</p>

Q4 Policy	AB2
Q6 Details	<p>Morning I am a local resident and would like to put my views across, don't know if i have come to the page or not but, I can not express enough how much Newcastle Under Broughy planning to building on houses, warehouses ect this is up setting and unsettling this is for our area! As me my family old generations and new generations have grown up around!</p> <p>2024 and 2025 and the furniture up and coming generations is a scary world to live in today. (Kinfe crime, bullying, break in ect...!)</p> <p>I get that you like to build to bright and beautiful future for people but come on the is a green environment area for people to enjoy! And your taking that all away form us.</p> <p>I am coming into my 50 and I listen to people talk about the younger generations dare not even come out there houses, the young generations moving, schools due to all of the above or even up rooting everything but sad to go (). Has the surroundings Audley, Wood Lane, Bignall end areas all been a safe place to live!</p> <p>The roads are compacted with congestion of cars, lorry's especially when the A500 is shut off due to accidents on the locale junctions from 18 right down to 15.</p> <p>We have now double parking no the main road in Bignall End predictions are unfortunately can not get passed on the pavements, parking on the bends an accident waiting to happen. It will only a child or animals to run out, as drives are unable to see around.</p> <p>Our local School have no wear to park their cars they take to the main roads too and you want to add more! Thanks.</p> <p>I myself is scared for my own safety growing old now around these araea as your will not listen to people, you will not listen to people, you will not even read this and take it into consideration. When Labour were voted in I listened, to what was said that you wanted to create job, home's ect. But nothing on people feelings. I heard on the radio the other day your building on green belt what have been build on before! What a load of(redacted by admin) excuses my language as these places your building on have never been build on before! Green belt stands for a reason why take it away from us.</p> <p>Any how I a normal person whome, enjoyed playing out around our local area day to day when I was younger Wood Lane, Bignall End and Audley.</p> <p>I've worked since age 14, age 18 driving to work and back, listening to people's concerns from friends and family. Watching the traffic as I go. Going into my 50s soon wanting to stay in this area old and safe. Contributing to this community and countryside when I old and retired.</p> <p>Witch I will not see future generations doing as they are to sacred to go out side in today's world. Please don't take this away from us.</p>

	<p>If you read this then thank you for listening like I said I just a normal person whome placed my vote, witch was not Labour by the the way as I knew what was coming our way if they got in. Not wrong hey! And I want to have my say!</p> <p>Kind Regards Lisa Owen</p>

Q4 Part of document	Policy
Q4 Policy	AB2
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>i am objecting the proposals to develop on sites AB2, AB33, AB15 and AB12 because I believe it is unsound. Firstly, the local area of which the proposed sites are located are specifically intended to be a rural area. For example, the parish council is titled Audley Rural Parish Council. On this note, the local schools, health centre and public services are only equipt to handle a small village population. The primary schools in particular are at capacity, and many residents struggle to get appointments at Audley Health Centre (myself and my family included). Secondly, the proposed sites are agricultural land which is of significant natural beauty. The residents surrondning the sites (Eg. Diglake Street, Ravens Lane etc.) overlook beautiful views, which largely contribute to their property values. If developement were to go ahead, the values of their properties would plummet, which would largely impact the lives of many long-term residents.</p> <p>Above all, it is not within my interests or any local residents interests to have houses built here. The AB2 industrial employment site exceeds the employment land target, which therefore means there will be a future demand for more housing when people move to work here. These are only a few points that I could make, but I think I have made my point clear and I hope many other local residents will share my deep concerns.</p>
Q7 Modification	<p>There would be a need for new schooling facilities, healthcare facilities, and public services to meet the demand of the new residents of the parish. This also means for parking and suitable roads. However, my primary suggestion is to not develop on these sites whatsoever. Make the AB2 site smaller as it currently exceeds employment land targets. Build elsewhere, outside of the area.</p>
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)

Q9 Hearing reasons	I hope many others will be able to attend this to speak on behalf of my views

Q4 Part of document	Policy
Q4 Policy	AB2
Q5 Sound	No
Q6 Details	<p>1) Size of the proposed AB2 site has now increased from the original by 40% *22 hectares to *80 hectares (198 acres) of good quality agricultural green belt, surely this can't be effective due to lack good green belt having an impact on farming, wildlife, natural habitat destroying nature, food production.</p> <p>2) Inadequate Access & Exit due to heavy traffic accessing the M6 Motorway network J16 via the A500 (Bottleneck) from both Cheshire and Staffordshire. How can this be realistic? The possibility of workers travelling from further afield via cars, extra HGV'S, service vehicles causing excessive congestion, air pollution, CO2, tyre particulate pollution, noise pollution, - 24/7. Light pollution.</p> <p>3) PROPOSED EMERGENCY POINTS *VIA PARK LANE, unsound planning as this is "narrow" country lane, poor lighting, visibility, overhead cables, no footpaths, very limited (unsuitable) for passing vehicles. Also this emergency exit point could be used as an alternative to queueing on the A500 by employees or even increased congestion through the rural village of Audley trying to get onto the A34*</p> <p>4)The nearest train station would be Alsager, no public services to get to site. If they cycled it would mean navigating once again along poorly lit and very narrow winding country lanes. Imagine that in winter months! Totally unsuitable.</p>
Q7 Modification	<p>1) "Removal of AB2" TOTALLY UNACCEPTABLE SITE OR REDUCE IN SIZE. LOOK FOR ALTERNATIVE SITE ON BROWN BELT</p> <p>2) TO ELIMINATE THE CONGESTION @ J16. NEW INTERSECTION BUILT TO ACCESS THE "PROPOSED" AB2 AT LEAST 3 MILE NORTH SOUTHBOUND ON "BROWN BELT" NOT GOOD QUALITY AGRICULTURAL GREENBELT. *REMOVE THE SITE*</p> <p>3) RECONSIDER EMERGENCY POINTS TO & FROM THE PROPOSED AB2 VIA PARK LANE & BARTHOMLEY ROAD - ALTERNATICE POINTS. 'REMOVE THE SITE'</p> <p>4) PUT ON PUBLIC TRANSPORT dedicated for workers/ employers to and from the proposed AB2 (using what route?)</p>

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	Austin
Consultee Given Name	Jim
Q4 Part of document	Policy
Q4 Policy	AB2
Q5 Sound	No
Q6 Details	<p>On the next two pages I address specific points from the local plan, which alone may render AB2 unsound.</p> <p>In item 2, dealing with the safety of any proposed junction near to junction 16 of the M6; the safety of such a junction is questionable given that, at the time of writing, there was a three vehicle accident on the A500 approximately four hours earlier (midday 20/09/2024). Incidents like this are a regular occurrence. Therefore, the new proposed junction will only elevate the accident risk, congestion and more pollution. Regarding pollution, Audley is already ranked 10th in the UK for respiratory diseases. Emergency access on Barthomley Road or Park Lane is also questionable given that they are accessed via a network of single track country roads.</p> <p>Item 7, addresses mitigation measures for adverse impacts on the M6 near junction 16. As mentioned on the previous page, Highways England is unlikely to have the funds available during the period of the plan to implement the necessary measures.</p> <p>Item 8 deals with noise and air quality mitigation measures. However, nothing specific is mentioned. Is there suitable, proven pollution absorption technology that can be installed at the site, which can mitigate against air quality that will certainly be degraded as a result of the employment site at AB2?</p> <p>Item 9 claims that the layout of the development will be "landscape led" with roads and buildings sympathetic to the existing green landscape. It is difficult to see how a one million sqft warehouse, roughly 20 meters high can be blended into a green landscape. I'm afraid such claims can only be described as complete nonsense.</p> <p>In item 10, the proposal is to retain much of the green features with retention of and enhancement of mature trees... For example, how do you enhance mature trees? If that means increasing their number, then they can only be grown from saplings hence they are not mature. Unless, of course they intend to transplant them from elsewhere.</p> <p>Item 13 deals with travel infrastructure. How will this be funded? Walking or cycling is only feasible for commuters from the local villages. More likely employees will commute from a distance. A special local bus service will only be funded for a limited time, if at all. This is neither sustainable nor deliverable. Therefore, it is not effective.</p> <p>Item 14 mentions enhancement of green infrastructure. While the establishment of green infrastructure is welcome, it can in no way replace the green landscape existing prior to the development. The loss of biomass including vegetation and top soil sustaining the areas food production capacity, carbon draw down and absorption of other pollutants, is never mentioned in proposals like this because it is irreversible. This is an example of 'greenwashing', which when highlighted, limits justification for this development.</p> <p>Paragraph 13.18 of the supporting information describes mitigations for loss of visual amenity for residents living adjacent to the site. Specifically mentioned is a natural buffer to hide the urban form of the development. However, any such buffer could itself be construed as an intrusion on the open landscape existing prior to the development.</p> <p>Paragraph 13.19 describes mitigations to the natural character of the site post development. However, given that 63 hectares is provision for employment and only 22 hectares is needed borough wide, this leaves another 41 hectares of natural farmland consumed by the development for no justifiable reason. Moreover, this is not including the loss of natural landscape required for the lorry park, substation and the drainage infrastructure.</p> <p>Paragraph 13.21 addresses climate change through a general policy CRE1. However, this can only make up for the loss of natural climate change mitigation if the development is to include an active atmospheric CO2 absorption plant. The only mention of CO2 sequestration is in the supporting information, paragraph 11.61 of policy SE11, which is by natural means. Therefore, this development is detrimental to the global climate crisis. which significantly limits its justification.</p>
Q7 Modification	In this draft local plan, the Borough are proposing an unprecedented transformation to the character of the Audley and Bignall End. One which is completely unjustified as far as local need is concerned. Due

to these considerations, and lack of effectiveness in some instances, especially the unjustified nature of AB2, the proposed sites AB2, AB12, AB15 and AB33 should be removed from the local plan.

Just as it is likely that an employment site at AB2 will create an employment/residential imbalance, it will boost the demand for further housing over and above what is already proposed. Conversely, it is also the case that the removal of AB2 from the plan would eliminate the need for housing at AB12, AB15 and AB33.

These proposals here go completely against the essence of paragraph 4.3 of the local plan, dealing with "The Strategic Objectives for the Borough" (page 10), which "...will have respected and improved the character and distinctiveness of our market towns, villages, and other rural areas with a particular focus on broadening our network of Neighbourhood Plans." On the contrary therefore, the proposals here will completely destroy the character of the Audley and Bignall End as rural villages; the entire surrounding area having been completely urbanised. On this point at least the local plan can be considered wholly inconsistent.

Many of the arguments against these proposals apply equally well to proposed green field developments elsewhere in the borough. It is hoped that the examiner will bare these in mind when considering other such proposals in this draft local plan.

I am not sure whether the examiner will consider these points legitimate as far as planning is concerned. Most of the residents have no knowledge or experience of planning law. However, he/she can be assured that the majority of the residents of Audley and Bignall End are desperate to see these wholly destructive proposals removed from the local plan. The points made in this representation should be sufficient to render AB2, AB12, AB15 and AB33 unsound due to not being justified or effective. Therefore, I ask that these proposals be removed entirely from the local plan.

Newcastle under Lyme draft local plan – regulation 18: Consultation response

Dear Sir/Madam,

The following is a robust objection to all developments on green field sites covering all the proposals within Audley Parish and many more elsewhere as recommended in the draft local plan. In writing this response, I am aware of the need to adopt a local plan in order for local authorities to maintain democratic control of development in the area. This requirement appears to be a symptom of the subsection in the NPPF titled “The presumption in favour of sustainable development” (paragraphs 11-14). However, from a resident’s point of view, this gives the impression that local authorities must demonstrate a willingness to develop a particular area in order to avoid it being developed. This is, in essence, a commitment to eventual development even if it is not needed. And this is a source of great anxiety amongst residents that undesirable development is out of control, a situation clearly being fuelled by the existence of paragraphs 11-14. On this basis therefore, this subsection of the NPPF needs to be challenged.

This response may differ from others in that it comments on local planning within a strategic context. As I see it, there are three main types of development, which are likely to blight the future generations in the UK: (i) infrastructure (example, HS2), (ii) commercial (examples, AB2 and TK30 in the NuLBC local plan) and (iii) residential (example, recent housing developments either side of the A513, Beaconside, Stafford). Infrastructure is within the remit of Westminster rather than local authorities, so that is not a particular concern here. My main focus is encroachment of developments, both residential and commercial, in green spaces allowed for in the draft local plan. And any new developments in rural areas will, at the very least, result in:

- Loss of light or overshadowing

- Increased risk of flooding due to ‘run-off’

- Loss of visual amenity

- Limitations to physical activity

- Generation of extra traffic, overloading already busy local roads

- Extra noise, pollution, disturbance and danger from increased traffic

- Loss of trees and other biodiversity – bats, lizards etc.

- Loss of natural carbon capture

- Decrease in food production capacity

Increased local population placing further pressure on local schools, GP’s surgeries and other services, which are already oversubscribed.

The United Kingdom as a whole is currently gripped by a pandemic of overdevelopment, which threatens nature and the already depleted biodiversity we see in this country. And it has now reached the stage where it should be considered a national emergency. I for one, do not feel that I have any influence over the shape of our surroundings. There are numerous drivers for this trend many of which are not being addressed by government at any level. At the heart of this is a significant disconnection between the opinions of politicians and public as to what is actually needed. There appears to be cross-party support for activities driving economic growth at all costs, irrespective of the consequences to the natural environment. Aggravating this divide is the aforementioned paragraphs 11-14 of the NPPF. At a local level, what is not in doubt, is that whenever there is land removed from the green belt there is rarely, if ever, an equivalent area so returned, so the process is irreversible. And in the absence of any agreed lower limit on the area of protected green spaces within the UK, no release of green belt land, or development on green spaces, can be considered sustainable. Unless, of course, the use of agricultural land for just that purpose is also considered “developed”, i.e. it has an economic and sustainable use. And the local plan does appear to acknowledge this¹, so why not include agricultural use into the local plan implying no change in particular areas? If this is not the case, we are committed to a process where the end point is a UK completely covered in tarmac and concrete. Anyone arguing against this interpretation needs to state and justify precisely where that end point is. If they cannot, this renders the term ‘sustainable development’ an oxymoron.

One particular trend of major concern is the growing UK population. At the time of writing this stands at just under 69 million, and is set to reach 74 million before 2050. Studies in the US (Pimental and Giampietro, 1994; Lal, 1989) suggest that comfortable/sustainable living requires 0.5 Ha (1.2 acres) per capita. If we are generous, sustainable living in the UK was possible with a population of 57 million, a figure I remember from the late 1960s. With a total area of the UK at just over 60 million acres, a land area of one acre per capita for sustainable living in the UK seems feasible. As we have seen, anything more puts a strain on the environment as a whole. On this basis therefore, the UK is currently overpopulated by about 15%, and there appears to be no initiatives to address this issue. On this point, Westminster appears to be in a state of denial, thus fuelling the current avalanche of overdevelopment nationwide. Residential developments have a knock on effect by requiring other types of development to provide infrastructure, services and employment. Notwithstanding overpopulation, this gives the impression that there is not enough housing stock to accommodate the current population. Recent data, in the form of an infographic (“Housing crisis fact check”) from the Community Planning Alliance², convincingly shows that this is far from the case. In short, what is perceived as the current “housing shortage” is little more than a myth propagated by the construction industry and related interests. This is justified by item 3 on the infographic stating that “there are 1.5 million more dwellings than households” in England and Wales alone^{3,4}. On this basis therefore, no further house building is needed in the UK subject to efforts addressing projected population growth. In other words, what we have at present is a substantial housing surplus. Therefore, locally there are strong grounds for objections to development of the sites

AB12(p74)

AB15(p75)

AB32(p75)

AB33(p75).

Ignoring the 1.5 million surplus dwellings nationwide, the current (regulation18) draft of the local plan quotes a minimum housing requirement of 7160 in the Borough over the period 2020-40, of which 1206 are already completed. Of these, only 40% are to be 'affordable' (1-2 bedroom dwellings). Therefore, of the minimum requirement, only 2864 dwellings will be affordable. If we assume that those already built are affordable (they probably aren't) then the borough will only need 1658 homes built between now and 2040. This is because, due to being beyond affordability, most locals will be unable to buy or rent the other 60%. Therefore, they are not needed, and the proposed mix is entirely incompatible with general affordability. Given the surplus dwellings throughout England and Wales however, it is likely that none will be needed, especially considering the imminent removal of mandatory housing targets by the DLUHC under Michael Gove MP, and any specific affordable housing needs can be catered for by using brownfield sites only. All of the green areas in the local plan could therefore be planned in for their present use.

Infographic from the Community Planning Alliance summarising UK housing stock in relation to the population.

Another statistic from the infographic is that nationwide we could build up to 1.2 million homes on brownfield sites (item 2)2,5. And like any other local authority, NuLBC is legally obliged to and does keep a register of its brownfield sites, although it is likely that some may slip through the net.

If there is an imperative, it is to increase further democratic control of the development process both locally and nationally. And both local and national authorities would do well to remember that they have a responsibility to the people they represent and not to the commercial viability of developers, the construction industry or overseas investors. In short, no new housing development is required, especially given that the borough has exceeded its housing targets in recent years. This calls into question the need for housing developments outside Audley Parish mentioned in the local plan. These include

BL18 (p75)

CT1 (p76, 750 dwellings)

RC8 (p76, 6 dwellings, potential flood risk.)

KS3 (p77)

LW53 (p77)

MD29 (p78, 150 dwellings, likely to conflict with HS2 construction?)

NC13 (p78)

NC77 (p78)

SP11 (p78, 900 dwellings, former Keele golf course)

SP12 (p79)

SP23 (p79)

TB19 (p79)

TB23 (p79, 124 dwellings, adjacent to Walley's Quarry.)

TK10 (p80)

TK17 (p80)

TK27 (p80).

Other sites which may also be questioned are

KS17 (p77, would include loss of playing fields and other village amenities. This may be classed as infill.)

KL13 (p77,93, part built already within the grounds of Keele University Campus).

The other class of developments locally is commercial. All too often we hear in the news from both local and Westminster sources, the mantra that economic growth is the imperative. But the actual imperative is stability, and we have reached the point where growth at any cost has become toxic, especially given the impossibility of unrestrained growth in a land of finite area. Have our political masters never heard of the circular economy?

Since the beginning of deindustrialisation in the 1980s, the diversity of employment opportunities has declined. We have seen an unhealthy move away from manufacturing/production of goods that we need as a nation, to one entirely reliant on trade with overseas partners, leaving us open to blackmail and the current spike of rampant imported inflation. Look what happened during lockdown. Over recent decades this has led to the demolition of old factories for residential developments and the rise of logistics centres (warehousing) for the temporary storage of imported goods, which will ultimately be operated by robots and AIs leading to even less employment. The problem with warehousing of course is its large consumption of land area. My question is, what is the driver for the proposed "big box" developments on AB2 and TK30 locally? Both of these proposals lie entirely within the greenbelt, although the TK30 land has already been quarried in parts. Neither of these proposals is either desirable or needed. However, if we are forced to accept one or the other then TK30, being about 5% smaller, is the lesser of two evils. With the green light given to the development of the 44 Ha Chatterley Valley site on Peacock Hay Road, and the numerous empty warehouses existing across the potteries, North Staffordshire and Cheshire East. It is dubious to say the least to claim that either AB2 or TK30 are needed. These sites are 70 Ha and 66 Ha respectively. However, in the recently published "Housing and Economic Needs Assessment Update", the borough as a whole only needs a maximum of 34 Ha6. So why are we saddled with 154 Ha total covered by AB2, TK30 and KL15?

If the local plan caters for agricultural developments, AB2 and TK30 could be planned for their existing use. The majority of the area covered by these sites is high grade (3a) agricultural land. In the case of TK30 the quarried areas could be reclaimed for agriculture or, if this proves difficult, used in other ways to enhance biodiversity. If the land in question is council owned, and the motivation is to sell off council assets, then once sold, they cannot be sold again, and any control is lost. Moreover, once farmland is developed for other purposes then it is near to impossible for it to be reclaimed later for that use – and so the ratchet inexorably turns. On this

basis therefore, I would urge the LPA to remove the warehousing proposals AB2 and TK30 from the local plan.

The purpose of this consultation is to supply feedback to the Borough Council. Another question is, does Westminster similarly consult with local authorities on planning issues, or is there any other mechanism where local councils can supply feedback to Westminster, providing a better feel for the mood of the nation? If so, why do we not see a root and branch reform of the NPPF rather than the tinkering around the edges approach seen in the July 2021 version? Most especially, there should be a removal of paragraphs 11-14 and its supporting statements elsewhere in the document, which is tantamount to a developer's charter. And there should be more flexibility within the NPPF allowing local plans to include parcels of land for their current purpose, given that there is almost none in this country that is not currently in use. As far as I can see this plan is nowhere near compatible with efforts required to address the current climate crisis. Moreover, given their scale, the proposed developments represent too greater shock to the environment and local communities over the short 20-year period suggested for their completion. And with the sufficient housing and unused commercial sites we already have, there is no need for any encroachment into our green spaces.

Yours sincerely
Jim Austin

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	Austin
Consultee Given Name	Jim
Q4 Part of document	Policy
Q4 Policy	AB2
Q5 Sound	No
Q6 Details	<p>This Part of the Local Plan is neither justified nor effective. In these two respects, it is unsound. The reason this proposal cannot be justified is because the Borough claims that it only requires an extra 22 Ha of employment land through to 2040. Why then do they propose to take 80 Ha of good quality (3a and 3b) productive farmland from the green belt? NuLBC say they are making provision for 63 Ha of employment land (Policy PSD1, item 2) leaving 17 Ha for mitigation, which may be needed for support services such as a lorry park, substation and SuDS. When questioned on this, no clear answers were forthcoming. They are proposing to take 41 Ha of green belt land for no conceivable reason. On page 28 of their green belt site assessment, ED008, planning consultants Arup's final recommendation is to "Exclude site from process", due to its excessive impact on the green belt.</p> <p>Apart from not being justified, it is also not effective. That is, it cannot be delivered during the period of the plan. Access via the M6 or the A500 will require either a major upgrade of junction 16 or an extra junction, possibly light controlled, on the A500 just east of the junction 16 roundabout. The alternative narrow country lanes are entirely unsuitable for the extra traffic consisting mainly of 44 tonne, three axle heavy goods vehicles. It may be possible for emergency vehicles to access the site via these country lanes, maybe via Barthomley Road or Park Lane, however they would still need to negotiate the already busy roads through Audley. Future local employees at the site will mostly commute through the villages of Audley and Bignall End whose roads are already beyond capacity during rush hour. The necessary upgrade to junction 16 is unlikely to materialise within the plan period, given the vanishingly low prospects of central funding from Highways England. This is due in no small part to the £22 billion shortfall in the nation's finances discovered by the new Labour administration. It is for these reasons that the proposed employment site at AB2 is unsound.</p> <p>All of the allocations mentioned in this representation form part of a high growth strategy for which the NuLBC have provided no evidence that it will materialize.</p>
Q7 Modification	<p>In this draft local plan, the Borough are proposing an unprecedented transformation to the character of the Audley and Bignall End. One which is completely unjustified as far as local need is concerned. Due to these considerations, and lack of effectiveness in some instances, especially the unjustified nature of AB2, the proposed sites AB2, AB12, AB15 and AB33 should be removed from the local plan.</p> <p>Just as it is likely that an employment site at AB2 will create an employment/residential imbalance, it will boost the demand for further housing over and above what is already proposed. Q4 Policy	AB2
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>The site of AB2 is located on greenbelt land. This land provides a natural break between Audley and the motorway and main highways to the north west. Building on such an extensive scale will destroy an area of natural beauty and decimate the area of wildlife.</p> <p>Whilst the planned entrance to the site from the motorway, any disruption due to an accident or other significant incident will result in increased traffic in Audley and the surrounding villages as drivers look for alternative routes. This will cause major problems as the infrastructure already struggles to cope with heavy traffic and the likely increase in large freight vehicles will cause havoc. This can already be witnessed when there are problems on the A500 or around junction 16 of the M6 motorway. I do not think that this has been taken into account. Additionally, the planned emergency access via Barthomley Road is unsuitable. The road is narrow with high hedgerows in places, making visibility for driver difficult. Any prolonged use of this access would cause major problems to Audley and the surrounding villages.</p> <p>There are already a number of warehousing units in Newcastle, Stoke-on-Trent and South Cheshire some of which are standing empty. I do not believe that there is sufficient evidence that further warehousing is required. Public transport to the planned site is virtually non-existent and so employees are almost certainly going to be traveling by car, putting a further burden on the A500 and other roads. Many of the roads close to the site are minor country lanes and it is likely that many drivers will be using these to bypass the major routes, causing significant problems to local residents within both Staffordshire and Cheshire.</p>
Q7 Modification	Remove the site from the Local Plan.
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)

Q6 Details	The strategic employment site at Junction 16 of the M6 is far out of town, inaccessible by public transport and built on a greenfield site. It would also increase traffic on the already crowded A500. This sort of development is clearly unsustainable and unsound.
Q7 Modification	Remove the Junction 16 strategic employment site from the local plan.

Q4 Part of document	Paragraph
Q4 Paragraph number	13.12
Q5 Legally compliant	No
Q5 Sound	No
Q6 Details	<p>The site AB2 is unsound - the site is on J16 of the M6 which is already a congested part of the road network. The A500 is frequently congested at peak times and whenever there is an incident on the M6. This also affects surrounding local roads through Audley. This junction cannot accommodate the extra traffic that would be generated by the massive industrial site. The emergency access that is planned for Barthomley Road is both unsound and unjustified. The road is a narrow and windy country lane used by many local residents for recreation including walking, cycling and horseriding. The dangerous conditions and damage to the countryside and wellbeing of nature and residents that an increase of traffic including heavy goods and service vehicles cannot be justified.</p> <p>The employment site is said to create thousands of jobs. Jobs in this type of warehousing facility are likely to be replaced by AI and robots in the coming years, therefore the statement that it will create this amount of jobs is also unsound and the irreversible damage this will do to the greenbelt for a short term investment in jobs cannot be justified. The jobs that are created in the short term will create thousands more cars travelling to the site as there are no public transport links. Personal car use will be the only viable way for workers to access the site.</p> <p>The site cannot be justified as the proposal is to remove 80 HA of good quality greenfield for 22HA of employment land. The site is unsound as it is four times larger than the council say that they need. This will lead to the employment / housing ratio becoming unbalanced and this rural community will be faced with more housing development than the infrastructure of the village can cope with. There will not be capacity for traffic, schools, health centres and dentists.</p> <p>This site is cannot be justified as there are already huge warehouse facilities a very short distance away in Alsager. These warehouses are largely empty. There is also the developopment at Radway Green. Whilst not in the Newcastle Borough, these industrial areas should be considered in conjunction with the local plan.</p> <p>The plans state that the height, scale and form of the development should reflect the character of the area. This excessively enormous industrial site cannot possibly be deemed to fit the character of this greenbelt rural land. The land is high quality agricultural land that can never be replaced. It supports wildlife and at a time when the world is in a climate crisis, the council should be protecting this land from excessive development. For these reasons, this site is unsound and unjustified.</p>
Q7 Modification	To make this local plan sound, the AB2 site should be removed from the plan as there are alternative sites that are more appropriate for the aims of the council. The size of the site, the irrecoverable damage it will do to the environment and nature , the increase in HGVs and cars that will congest both the A500, M6 and local roads cannot be justified and makes the plan dangerous, unjustified and unsound.

Q6 Details	<p>Newcastle under Lyme draft local plan – regulation 18: Consultation response</p> <p>Dear Sir/Madam,</p> <p>This is my objection to the proposed draft local plan for the area of Audley Parish and many more in surrounding areas. In writing this response, I am aware of the alleged need to adopt a local plan in order for local authorities to maintain democratic control of development in the area. In writing this I am indebted to the objection document submitted by Dr. J. C. Austin for his invaluable research and relevant information for an objection on a wider scale but nevertheless relevant to the local area. As he states the democratic control referred to by the council seems to be a “symptom of the subsection in the NPPF titled “The presumption in favour of sustainable development” (paragraphs 11-14)”, I totally agree with him that to residents it seems that “this gives the impression that local authorities must demonstrate a willingness to develop a particular area in order to avoid it being developed”, and “seems to be a commitment to eventual development even if it is not needed”, which is extremely worrying on many levels for the community. These proposed new developments would, in the view of many residents, have a devastating impact on our rural area, which is part of the Designated Conservation Area of Audley (1976, information listed on the Council's Local Plan 2011).</p> <p>In particular, I believe it would result in the following problems:</p> <ul style="list-style-type: none"> • Loss of light or overshadowing • Increased risk of flooding due to ‘run-off’ (there is already some flooding in the area) • Loss of visual amenity • Limitations to physical activity (There are many public footpaths in the area, cyclists, horseriders etc. all use the area on a regular basis) • Generation of extra traffic, overloading already busy local roads resulting in extra noise, pollution, disturbance and danger to humans, livestock and wildlife. • Loss of trees and other biodiversity – bats, lizards, newts etc. • Loss of natural carbon capture • Decrease in food production capacity, look at the current threat posed by the reduction of grain from Ukraine and the shortages created by the recent COVID Lockdown for example. We need to grow more of our own food, not destroy prime farmland and rely on imports. Sustainability here is the key message! • Increased local population placing further pressure on local schools, GP's surgeries (the one in Audley has already stated that it will be unable to cope), dentists and other services which are already oversubscribed. <p>As Dr. Austin has stated there appears to be an “overdevelopment which threatens nature and the already depleted biodiversity we see in this country”. This is true both nationally and locally and the local populous feel that their opinions are disregarded on all political levels and by politicians of any political persuasion. It has been stated on national television that a large proportion of younger people and children are very worried about the effects of climate change and identifying areas of green belt to be built on will only enhance the problem. Allowing developers to destroy existing farmland, green spaces and mature woodland is short-sighted to say the least, it takes decades for a habitat to establish itself and support wildlife and replacing these with saplings will not solve the problem, therefore these proposals cannot be regarded as sustainable development at all. Do we really need all these new houses to combat the so-called housing shortage or is it really, as Dr. Austin states, “little more than a myth propagated by the construction industry and related interests”?</p> <p>Therefore, I agree with his analysis that “locally there are strong grounds for objections to development of the sites”</p> <ul style="list-style-type: none"> • AB12(p74) • AB15(p75) • AB32(p75) • AB33(p75). <p>Furthermore, I agree with Dr. Austin when he says that “both local and national authorities would do well to remember that they have a responsibility to the people they represent and not to the commercial viability of developers, the construction industry or overseas investors”. As he has pointed out the commercial developments mooted for the AB2 and TK30 sites locally are not needed and I believe that the developers normal cry of “it will create jobs” is misleading to say the least and proposes far more land use than the councils own recently published assessment document of housing and economic needs suggests! Would the council please explain why they are intending to ignore their own document! Moreover, the proposal seems to be mainly for agricultural land, which once lost would be virtually impossible to recover. We need to be more sustainable in feeding ourselves and not relying on overseas imports whether they are from Europe or the wider world. It should also be noted that the country, as a whole, needs to stop foreign investing in building homes which the local populous can neither afford to buy or rent (there are countries in the world which will not allow non-native individuals/companies from buying/building houses – Thailand is a case in point). This would certainly enhance the prospects for affordable homes.</p> <p>In summary, I would like to ask the council, and the government would they really like to be remembered as the politicians who made the local area and the UK as a whole a ‘concrete wasteland’?</p>

Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p>The definition of health included in this document as a "state of complete physical, mental and social well being" WHO 1948 is outdated, absolute and medicalised.</p> <p>No one is ever able to achieve complete physical, mental and social well being and it is absurd to include it in the plan.</p> <p>In the face of an ageing global population with an increasing burden of chronic disease, it minimises the role of the human capacity to cope autonomously with life's ever changing physical, emotional, and social challenges and to function with fulfilment and a feeling of wellbeing with a chronic disease or disability.</p> <p>With this in mind, and the inclusion (vaguely) of the Determinants of Health (Dahlgren & Whithead 1992) The whole focus of the plan should change from a 'developer driven,' 'opportunistic,' 'unrealistic,' set of documents to consider Audley and the residents living within it, working, studying, playing, running, walking, horse riding, shopping, socialising, living with health and/or disease as a holistic entity.</p> <p>Words such as 'housing' instead of homes, 'developments' instead of communities. Make inference to 'the community' 'people or individuals' who live within Audley as lack of these details suggest that the authors are detached and lack humanism.</p> <p>Omission of the contents of the Neighbourhood Plan and people's views, suggests an undemocratic approach with little understanding of the impact of these 'developments' on the community in which the Borough Council is supposed to serve.</p> <p>The health and wellbeing of the community in Audley and surrounding villages will be affected by the construction of 'huge' warehousing and the destruction of a huge area of Green Belt land through increased traffic, noise, air pollution, for a long period of time (up to ten yeears) as quoted in the Plan. The effect on the Determinants of Health for the community cannot be measured but may constitute an increased need for health services.</p>
Q7 Modification	<p>Demonstrate through language that the Plan considers the effect of the AB2A site on the community/village.</p> <p>It is an easy point to make that it does not affect the 'openness' of the countryside and all the added 'benefits' to it's inclusion in the Local Plan. Actively listen to the people who live in the community and demonstrate this in the words used in the documents.</p> <p>Reflect on the enormity of the decisions that you are making and the long term effect of these for our future generation and include these points so that people know that you appreciate their concerns.</p> <p>Be brave and leave a legacy of positivity not destruction.</p> <p>Consider alternatives with an open mind and not just 'the easy option'</p> <p>Consider the long term health effects of this urban style monstrosity on the people who live in the community.</p>

Q4 Part of document	Policy
Q4 Policy	AB2
Q5 Sound	No
Q6 Details	<p><u>Policy AB2 Land at Junction 16 of the M6</u></p> <p>This policy is neither sound nor justified for the following reasons:</p> <p>The site is 40% bigger than required by Newcastle Borough meaning that the housing/employment ration will be out of balance. This will add pressure for even more housing development in the area.</p> <p>The A500 already suffers a bottleneck at busy time of day at Junction 16 of the M6. Junction 15 to 16 of the M6 is notorious for accidents causing traffic jams and bottlenecks in surrounding roads as traffic is redirected. This would be made even worse by developing land at this junction.</p> <p>There is no public transport to the site. It is highly unlikely that people will choose to cycle or use the proposed bus service so potentially 3000 employees will be travelling by road causing huge traffic congestion in and around Audley especially at busy times when people are going to work and taking their children to school.</p> <p>For these reasons I wish the Planning Inspector to remove Policy AB2 should be from the Local Plan.</p>

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	Wood
Consultee Given Name	Alma
Q4 Part of document	Policy
Q4 Policy	AB2
Q5 Sound	No
Q6 Details	<p>The plan is unjustified, ineffective and unsound. The borough previously claimed that it needed 22 hectares of land to comply with employment needs up to 2040 so does not need 80 hectares of good quality farmland (3a & 3b) within the greenbelt. Its development of 63 hectares into sites of employment (Policy PSD1, item 2) would create a further need of 17 hectares to provide services such as a lorry park, substation and SuDS. There was no clear answer from the borough council when they were questioned and this means that they propose to consume 41 hectares of green belt land which for no perceptible reason that can be ascertained. Their proposal has been assessed by the planning consultant ARUP (ED008, page 28) who recommend that the site is excluded from the process as it impacted too heavily on the greenbelt.</p> <p>The site is also ineffective as it cannot be delivered during the period of the plan. Access to the M6 or the A500 would be problematical and would require an upgrade of Junction 16 and also of the A500 which are frequently both closed due to accidents or heavy traffic putting immense pressure on the alternative narrow roads surrounding the area. The site would generate extra heavy goods traffic which would create further pressure on these alternative roads. Emergency vehicles would have to access the site via the country roads which can only be accessed through Audley or other surrounding villages where the roads are heavily congested at many times of the day. The necessary upgrade of junction 16 is unlikely to occur during the plan period and indeed may never come to fruition given the low prospects of funding from Highways England and the £22billion shortfall highlighted by the new Labour Government. I would state that on these grounds the proposed site at AB2 is unsound.</p> <p>All of the allocations mentioned in this representation form part of a high growth strategy for which the Borough have provided no evidence that it will materialize.</p>
Q7 Modification	<p>The draft local plan proposed as transformation of Audley and Bignall End which is unjustified by local need. The lack of effectiveness and unjustified nature of AB2 weakens the reason for house building on local green belt parcels. Therefore, the proposed sites of AB2, AB12, AB15 and AB33 should be removed from the local plan.</p> <p>These proposals seem to go against paragraph 4.3 of the local plan which states it "will have respected and improved the character and distinctiveness of our market towns, villages and other rural areas" On the contrary, these proposals will destroy the rural village character of Audley and Bignall End, completely urbanizing the entire surrounding area. The local plan is therefore inconsistent. The majority of residents of Audley and Bignall End are strongly against these proposals and wish to see them removed from the local plan. It is hoped that the points made will be sufficient to render AB2, AB12, AB15 and AB33 unsound as they are not justified or effective. I request that all the proposals should be removed from the local plan.</p>

Q4 Policy	AB2
Q5 Sound	No
Q6 Details	<p>Notes on AB2</p> <p>Item 2: Safety issues of the possible new junction near to junction 16 of the M6 has not been adequately addressed given that accidents occur on a regular basis and often lead to the A500 being congested</p>

	<p>and also at risk of accidents occurring. Emergency access to these accidents via Barthomley Road or Park Lane is not really viable as these are accessed via single track country roads.</p> <p>Item 8: The noise and air quality mitigation is not addressed and absorption technology has not been mentioned. Certainly both of the issues will be increased by implementing the employment proposal on AB2.</p> <p>Item 10: I am very suspicious of the claim that the mature trees will be retained and enhanced, how is this possible?</p> <p>Item 14: The loss of biomass which includes vegetation and topsoil which allows for food production, the drawdown of carbon and other pollutant absorption is not mentioned as it is irreversible and is an example of 'greenwashing'. This is reason enough to remove this allocation.</p>
Q7 Modification	<p>The draft local plan proposed as transformation of Audley and Bignall End which is unjustified by local need. The lack of effectiveness and unjustified nature of AB2 weakens the reason for house building on local green belt parcels. Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Company / Organisation	Audley Rural Neighbourhood Plan Steering Group
Consultee Position	Secretary
Consultee Family Name	ARNP
Consultee Given Name	AR
Q4 Part of document	Policy
Q4 Policy	AB2
Q5 Legally compliant	No
Q5 Sound	No
Q6 Details	<p>Sites AB2 and AB2A</p> <p>ARNP strongly objects to the proposed allocation of Site AB2/AB2A (A500/M6).</p> <p>The Green Belt Site Review Consolidated Report 16th July 2024 recommends exclusion of the site(s) from the process (Table 17, page 28). This issue was also considered in the Urban Vision Enterprise CIC Audley Parish Green Belt Review, V2.4, August 2022, commissioned by Staffordshire County Council, which found a strong contribution to green belt purposes, including safeguarding the countryside from encroachment and regeneration of urban land.</p> <p>These recent reports appear to have been ignored.</p> <p>Removal of the site(s) from the green belt would undermine the purposes for green belts set out in the NPPF, in particular by allowing major incursion and encroachment into the countryside and undermining of regeneration of the urban conurbation, by developing greenfield land in the countryside.</p> <p>The economic impact on the conurbation would be negative, due to:</p> <ul style="list-style-type: none"> the remoteness of the site(s); the impact on the viability of alternative urban sites in the conurbation. Harm to the rural economy, due to loss of the best and most versatile agricultural land and associated harm to local food growing capacity and agricultural employment. <p>The traffic impacts would be negative, including:</p> <ul style="list-style-type: none"> Generation of road-based traffic and lack of sustainable transport alternatives; Traffic impacts on the rural character of the area; Impacts on the amenity and safety of rural roads and lanes. <p>The development of this site would be unsustainable and environmentally harmful, due to:</p> <ul style="list-style-type: none"> biodiversity impacts on rural lanes, where they need to be widened, including destruction of adjoining landscapes; development of greenfield land in an unsustainable location, remote from the existing urban conurbation; a range of significant adverse impacts (visual, noise, light, disturbance, air quality). <p>The development would introduce a major urban employment site within a rural parish, near to small rural villages and remote from local services.</p>

The Strategic Employment Site Assessment - 2024 Update (Aspinall Verdi) has failed to deal with the previously highlighted contradiction with the ARUP and UVE green belt assessment reports.

The updated Sustainability Appraisal July 2024 highlights adverse impacts of developing the site AB2. Paragraph D.5.2.11 states "The introduction of new large-scale developments has potential to be discordant with the landscape features of the associated character areas as identified in the LSCA34, especially given the location of Sites AB2 and KL15 within areas of 'high' sensitivity to development ...".

The Table on page N37 identifies that site AB2 would have major negative impacts on:

'Natural Resources and Waste', 'Flooding' and also 'Landscape'. Minor negative impacts include: Air, Biodiversity, Flora and Fauna, Water, Health and Wellbeing and Transport and Accessibility. There is only one other site that scores so negatively, and this is not being taken forward.

We note that positive impacts are identified for 'Climate Change' and 'Economy'. We believe that this finding is perverse. It is difficult to see how the development of a remote site, well outside of the urban conurbation, involving the loss of agricultural land and relying on road based travel could contribute positively against climate change. In addition, the harm to the rural economy and to economic and physical regeneration in the urban conurbation has clearly not been taken into account.

Site variation AB2A is not mentioned so presumably has not been assessed.

Tables N10 and N11 set out growth strategy options. We note that option 6D does not include site AB2 and delivers better scores/outcomes.

The Newcastle-under-Lyme Landscape & Visual Appraisal March 2023 identifies the site as having a major adverse impact. Mitigation measures would not be effective given the scale of development.

The Audley Rural Civil Parish Natural Capital Assessment report (Staffordshire Wildlife Trust, June 2024) identifies ecological and wildlife features within the site, including a high distinctiveness wildlife corridor and Strategic Significance Areas within the Nature Recovery Network. A copy of this report is included.

The Strategic Housing & Employment Land Availability Assessment (SHELAA), Report September 2022 Appendix 4 (Sites not in Deliverable & Developable Supply) included Site AB2. The AB2 site assessment proforma recognised that the site was in the green belt and was isolated, disconnected from Audley and Bignall End, partly affected by flood zones, with access limitations and with poor access to a range of services and facilities. The site appears to be missing from the 2024 update report. There is still a big inconsistency between NUL Borough Council's position in September 2022 and the present. A site identified as not deliverable or developable is now suggested for allocation.

Allocation of this site is not justified by the Economic Needs Assessment Newcastle-under-Lyme & Stoke-on-Trent June 2020 which stated, 'overall need implied under any of the aforementioned scenarios could be met through the current supply of circa 293ha of employment land'. This further highlights how allocation of site AB2 would undermine regeneration elsewhere.

Development of AB2 would be harmful to the local economy, community and environment.

The site assessment is not supported by evidence and assessments (though we note the site has been deleted from updates of some of those assessments). Allocation of the site conflicts with several of the proposed policies of the Local Plan.

Q6 Details	<p>The housing numbers for the Parish of Audley fail to consider the rates of births and deaths in the 2021 census which clearly shows that the population is static. By implication there is no need for an expansion of housing in this area particularly on green belt. Surveys by the Neighbourhood Plan Steering Group on "Why residents in Audley live here" gave results that the residents found the rural nature of the parish very important, and also the availability of green spaces. The proposed developments would negate these findings and reduce the appeal of the parish to both current residents and potential buyers from other areas.</p> <p>Survey results were;</p> <p>Only 8% are looking to move to a bigger property and only 9% to downsize over the next 5 years. From 845 respondents there were 2404 responses about most liked factors. 51% felt community spirit and friendliness were one of the best things about living in Audley Rural Parish followed by 38% the facilities (including healthcare) and 33% the countryside.</p> <p>From 770 respondents there were 1910 responses about least liked factors. 48% felt that parking issues were one of the things least liked about living in Audley Rural Parish followed by 25% Anti-social behaviour/crime and 20% litter/untidy looking parish.</p> <p>From 668 respondents there were 1576 responses about what they would like to see changed. 38% cited improvements with parking, 24% policing/anti-social behaviour and 21% traffic calming measures. But only 11% of the respondents are considering leaving the parish.</p> <p>The sites chosen also show a distinct lack of consideration for the local infrastructure in terms of an increase in need of schools, dental and medical practices and transport links. There will also be a vast increase in the number of private vehicles that will eventually lead to traffic problems in all three areas. The parish currently has issues with parking at Alsagers Bank, Miles Green, Halmerend and Bignall End. That at the latter will grossly exasperate residents.</p> <p>For these reasons I consider the Local Plan to be unsound and failing to co-operate.</p>

Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p>I wish the Planning Inspectorate to consider my following representations in response to the Newcastle -Under-Lyme Borough Council – Final Draft Local Plan Consultation (Regulation 19)</p> <p>I wish the Planning Inspectorate to remove all policies from the plan which involve any development on Green Belt Land.</p> <p>The specific policies are: -</p> <ul style="list-style-type: none"> • AB2, AB33, AB15 & AB12 – Audley Ward • BW 1 – Bradwell Ward

	<ul style="list-style-type: none"> CT 1 – Crackley Bank & Red Street Ward KL13 & KL 15 -Keele Ward SP11(2) & SP11(3) – Silverdale Ward TK 10, TK 27 & BL18 – Talke & Butt Lane Ward <p>All of these developments impact green belt land, are unsound and should be removed from the plan.</p> <p>They will all have a negative effect on the Net Biodiversity gain of each local area. Which in turn has a knock-on effect across the Borough. Open spaces are essential for the environment by absorbing carbon dioxide from our atmosphere, which helps reduce climate control. They also provide habitats for a wide range of plants and animals. Open spaces are also important to human health as they can reduce stress, improve mental health, and assist in people sleeping better. They provide areas for physical activity which improve both physical and mental health. Removal of green belt will decrease the air quality within that area, increase respiratory issues for humans and wildlife, and also increase noise pollution.</p> <p>With specific reference to policies AB2, AB33, AB15 and AB12. I ask the Planning inspectorate to remove policies based on the following justifications:</p> <ul style="list-style-type: none"> AB2 - It is simply the case that the small village of Audley and its surrounding countryside lanes could not cope with the large increase of traffic caused by these policies. The large number of HGV's travelling to the proposed AB2 site would definitely increase the traffic within the Audley area due to the daily traffic jams along the A500 and at M6 Junction 16. Traffic will spill on to local roads e.g. A5500, increasing Noise and air pollution AB12 - Proposed access to site AB12 via Diglake Street is untenable. This street is small and it is already difficult to drive down due to parked cars on both sides of the terraced street. A new development of houses would make it virtually impassable causing gridlock, increased air pollution, increased noise pollution and limiting access for the emergency services. <p>The proposed new car park for resident's in Diglake Street due to the proposed AB12 policy would be detrimental to Blue badge Holders, People with mobility issues and Carers of babies and children.</p> <p>AB12 will not be close to any amenities with little or no access to a regular bus route.</p> <ul style="list-style-type: none"> AB33 – Primary Vehicular access to Park Lane is unsound. This is an already busy junction. AB33 will not be close to any amenities with little or no access to a regular bus route. Creating more traffic therefore noise pollution and air pollution. With an increased danger to pedestrians. <p>With poor access to health care and education.</p> <ul style="list-style-type: none"> AB15 – The proposed site at AB15 is unsound because of the poor access to health care, education, local amenities and public transport. <p>I therefore would like the Planning inspectorate to remove Policies AB2, AB12, AB33 & AB15 from the plan.</p>

Q4 Part of document	Policy
Q4 Policy	AB2
Q5 Sound	No
Q6 Details	<p>2.21</p> <p>"Safeguarding land is particularly significant for influencing the future pattern of development"</p> <p>"As part of the exceptional circumstances case, the council has explored all reasonable options before considering Green Belt land. At present there is a lack of suitable, available and achievable Brownfield sites"</p> <p>It is questionable whether the exceptionally circumstances applied to AB2 land is sufficiently robust.</p> <p>The Exceptional Circumstances listed in NPPF Gov.uk 154 lists the exceptional circumstances required to the construction of new buildings on Green Belt</p> <p>146. Make as much use possible of Brownfield land</p> <p>147. First consideration should be given to land which has previously been developed</p> <p>154 A local planning authority should regard the construction of new buildings as inappropriate in the Green Belt. The list progresses and does not support the local Plan to include AB2A</p>
Q7 Modification	<p>ARUP study is explicit in that it states (Purpose 3 NPPF)</p> <p>" the south eastern and southern boundaries consist of field boundaries which are less durable and would NOT PREVENT ENCROACHMENT if the site was developed"</p> <p>"overall the site makes a strong contribution to safeguarding from encroachment as it has a strong degree of openness, it is connected to the countryside and the south eastern and southern boudaries are leass durable"</p> <p>Aspinall and Verdi</p> <p>"Development would represent a SIGNIFICANT ENCROACHMENT into the countryside and therefore removal of the site from Green Belt could HARM the overall function and integrity of the Green Belt."</p> <p>Recommendation: EXCLUDE SITE FROM PROCESS</p>

	<p>This assessment should hold enough weight to stop this development! If it does not and is left to The Council to decide what is it's value?</p> <p>2.21 The plan suggests that there is a lack of "suitable, available and achievable Brownfield sites" This is questionable..... and should not be due to lack of economically viable sites.</p> <p>Aspinall Verdi p.13 para 2.30</p> <p>BW2 is an alternative site although it is listed as not being promoted</p> <p>This industrial estate (High Carr Buisness Park) is an established industrial/logistical location situated of Talke Road (A34) which is within close proximity to the A500 dual carriageway, approximately 1.3 miles, and 5 miles from Junction 16 of the M6 Motorway and other arterial roads in the area to include the A50 giving access to Derby and the M1 Motorway.</p> <p>There are approx 65 hectares of unused land adjacent to this site.</p> <p>Some of this land is undulated (as is AB2A) and contains overgrown braken, scrubland and weeds</p> <p>The land was considered for housing and determined as not viable but it could be considered for employment land. The land already holds much of the infrastructure required (which AB2A) does not have and would be viable as an alternative site.</p> <p>The site is close to public transport. Buses run regularly from the South of the City (Trentham) and the North e.g Crewe etc</p>

Q6 Details	<p>Ab2 Lorry Park</p> <p>a. Objection Page 109 (clause 3) : Existing full HGV overnight facilities and overnight parking are available at with direct access to the M6 at Sandbach Services (15 miles) and Keele Services (17 miles), on this basis this development is not needed and is therefore an unjustified development.</p> <p>The inclusion of this site in the local plan is therefore unsound.</p> <p>b. Objection Page 109 (clause 3) : The following statement "The management and operation arrangements for the lorry park provision to be agreed with National Highways in consultation with Staffordshire County Council" is questionable. The expectation that both of the of above organisations would be engaged in such an arrangement is unusual to say the least. HGV facilities such as suggested are best managed and operated by commercial organisations with the relevant skills, embedded industry knowledge and experience. This suggestion is without foundation or any evidence that is feasible. It is therefore unsound</p> <p>The inclusion of the arrangement Page 109 (3) in the local plan is therefore not sound.</p>

	<p>AB2 Objection Page 109 (opening paragraph) : The allocation of the 22 Hectare strategic employment site does not justify the release of Green belt land. There are suitable vacant units in the area for example: land adjacent to A500 , Alsager, Radway Green, Chatterley Valley and other locations. In particular research & development is better suited to areas local to universities e.g. Manchester , Birmingham, and Keele where the culture and environment is aligned with the expertise available. The release of Green belt for this 22 Hectare Strategic Employment site is not justified for reasons described above. The inclusion of the arrangement Page opening paragraph in the local plan is therefore not sound.</p> <p>AB2 Objection Page 109 (opening paragraph) : The remaining 80 Hectares of AB2 are unallocated in the local plan. The current use of this remaining 80 hectares has a history of successful agricultural use. The escalating loss of farmland in the UK for food production against the growing population will in future years become a serious problem. Release of the Green Belt Land for an unallocated use in unjustified and should be retained for agricultural use. Use of this land for housing was discounted by ARUP in supporting evidence as unsuitable for housing due to seasonal flooding. Release of the Green Belt Land for an unallocated use in not justified and should be retained for agricultural use.</p> <p>The inclusion of this 80 Hectare in AB2 with no allocated use is therefore not sound.</p> <p>AB2 Objection : Policy AB2 (clause 2.) Any new junction established on the A500 at the location would involve some form of traffic controls in either direction to permit safe access or exit from AB2. Solutions that involve halting traffic on the A500 to permit access to and from AB2 will cause a serious increase in congestion and encourage drivers including HGV “rat running” around the surrounding area In particular Audley & Bignall End Villages adding to an already increasing problem</p> <p>There is no demonstrable evidence to support that a new junction on the A500 is a feasible solution for access to AB2. The inclusion of this recommendation in the local plan is therefore not sound.</p>

Title	Policy AB2 ‘Land at Junction 16 of the M6’
Consultee Company / Organisation	The Barthomley Action Group
Consultee Position	Chairman
Consultee Family Name	PLATT
Consultee Given Name	DARREN
Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p>Newcastle under Lyme Local Plan – Regulation 19 pre-submission Representations of Barthomley Action Group These are the representations of Barthomley Action Group in respect of the Regulation 19 pre-submission version of the Local Plan.</p> <p>Barthomley Action Group , together with others, have been consistent in their objection to the release of Green Belt land (Strategic Site AB2) adjacent to Junction 16 on the M6 for employment use. The reasons for objection include.</p> <p>The land is statutory Green Belt and not ‘grey belt’; and forms a vital part of the Borough’s landscape, protecting the character of the Borough and maintaining a distinct separation between urban and rural areas of both the Borough and Cheshire East. The Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence.</p> <p>Many of the local roads are narrow and multi functional - heavily used by walkers, cyclists, and horse riders along with large agricultural vehicles. These roads are becoming increasingly dangerous. A large car driven employment allocation such as that proposed will only exacerbate these issues.</p> <p>It is considered that there is a plentiful supply of Brownfield land more suitably located adjacent to the major settlements in both the plan area and the North Staffs Conurbation for employment purposes. The development will be a major source of light pollution in an otherwise rural landscape.</p> <p>It is quite clear from the plan that the site will be used for warehousing and distribution and will include very large and tall industrial buildings which will be likely to tower over and dominate the surrounding countryside.</p> <p>The allocation of this land for ‘employment use’ will create an irresistible precedent for the release of other land around this very important and congested motorway junction for similar uses causing further congestion, disruption and loss of Green Belt.</p> <p>Barthomley Action Group object to this allocation and would ask that it is removed from the Plan and that the Council review their employment land strategy looking at the use of brownfield land first within the Borough and retain the Green Belt particularly adjacent to Junction 16.</p> <p>If, however, the strategic site AB2 is agreed to be allocated for employment purposes (in particular logistics) by the Secretary of State, then before any application(s) are submitted the Council prepare a very detailed design /development brief for the site and agree the brief after consultation with all interested parties including all stakeholders, to include ALL the following.</p> <p>A comprehensive sub regional master plan for the whole of the A500 corridor in consultation with all interested stakeholders. This assumes that in the longer term this will become a growth corridor linking Crewe and the North Staffs Conurbation with Junction 16 at its hub. It will also inform future Local Plans including that of Cheshire East and prevent isolated piecemeal developments.</p>

	<p>Climate and Renewable Energy Policy, include all the matters covered by proposed policy CRE1 including BREEM excellence for water efficiency, whole life carbon assessment and minimise energy use and promote the use of recovery and recycling of materials to reduce carbon.</p> <p>Renewable energy, including a renewable energy statement as set out in Policy CRE2.</p> <p>Design – height, scale, form and grouping of all the proposed buildings on the site; materials and colour; massing of the development, green infrastructure and relationship to the wider area including views into and out of the site from the surrounding countryside. (proposed policy PSD7 Design). External lighting should also be considered as part of the overall design as logistic operations are 24-hour operations and lighting of a site as large as AB2 will have a significant impact on the motorway and the surrounding rural area.</p> <p>Access by sustainable modes of transport to protect the integrity of the highway network which will be particularly important at this site (AB2) as it is some way away from the centres of population, access will be difficult and currently no public transport runs past the site - Policy IN2</p> <p>Whilst there is a proposed policy for the site (AB2) in the draft plan, Barthomley Action Group would like to see this incorporated within a detailed design / development brief included as a policy in any adopted plan to ensure that, should the development go ahead the proposals will not adversely impact on the surrounding area and on Barthomley Parish in particular.</p> <p>A500 Jct16- adding heavy commercial and car vehicle numbers in this area which even of a weekend gets congested now will degrade the attractiveness of industrial areas along the A500 Corridor towards Newcastle under Lyme and Stoke on Trent, possibly making them to move to more accessible locations out of the borough. Without major infrastructure investment if AB2 were to go ahead with its limited outlined design it would be detrimental to North Staffordshire businesses which use the A500 Jct16 to excess the M6 North and the A500 into Wales.</p>

Q6 Details	Concerns for AB2

	<p>Greenbelt land</p> <ul style="list-style-type: none"> The green belt site review consolidated report 16 July 2024 (table 17,page 28) recommends exclusion of this site. Staffs County Council the "vision enterprise CIC Audley Parish Green Belt" judged that the Audley Green Belt contributed strongly in safeguarding the encroachment of urbanisation. (Green belt review V2.4 August 22) <p>Employment</p> <ul style="list-style-type: none"> this site is prime agricultural land that employs a number of people, the farmers, the contractors who cut the hedges and do the silaging, vets, auctioneers, hauliers delivering corn and straw, the corn firms, the abattoir, etc. So this is already employment land. Employment land that helps to contribute to feeding out nation. There are vast areas of warehouses in the area, a lot that are empty, in staffordshire and across the boarder into cheshire, so I do not believe these are needed. Warehouse tend to employ low skilled, low paid people not the vast array of highly skilled jobs that agricultural land provides. Britain is running out of land for food and is already in a food and drink deficit. This makes agricultural land more valuable than ever. <p>Environmental</p> <ul style="list-style-type: none"> Loss of prime agricultural land. Loss of hedgerows and manipulation of natural topography. Loss of local wildlife Visual, noise, light, air pollution. Impact on residents living against the site. Flooding(AB2 is currently 100% fields this will be changed to hard surfaces causing run off) Loss of biodiversity <p>Road infrastructure</p> <ul style="list-style-type: none"> Option 1. Breaking into an already busy M6 junction 16 roundabout interchange will have a direct impact on the A500 and access on and off the M6. Daily traffic queues are already an issue at this junction. Option 2. Creating access to AB2 via the north bound carriageway of A500 where an existing lay-by is situated. Again every morning there are queues here, which get a mention on the local radio daily. Emergency access roads to AB2 site proposed off Park Lane. Is this feasible or Safe for such a narrow country lane since Park Lane is a single cars width lane with passing places and no pavement or street lighting. Widening would impact on a greater area outside the AB2 Site. A concern is Park Lane would be used as access for workers to the site. If the lane became any busier than it already is it would become unsafe for residents, ramblers, dog walkers, local running club, horse riders (livery stables sited at Park End, Park Lane) , bird watchers, families with bikes and prams who use it regularly. Dairy cattle have to cross Park Lane from field to farm for milking as well. Regarding Accessibility for workers at AB2, there is currently no bus or rail link. The site is isolated from both transport and amenities ie shops. It is impossible to walk or cycle there using the designated access off A500 (would mean walking/cycling along a very busy dual carriageway with no pavement) around junction 16. <p>Other concerns</p> <ul style="list-style-type: none"> The site has a number of footpaths, that are well used by residents of Audley, it became invaluable to peoples wellbeing and mental health during the covid epidemic. <p>Personal impact</p> <ul style="list-style-type: none"> In particular there are 3 family homes, [redacted by admin], which AB2 would surround 3 sides [redacted by admin]. As [redacted by admin], I have access along the side track to the rear of [redacted by admin] property . This has been earmarked as an emergency exit. [redacted by admin] access would need to remain at all times, In addition the 3 septic tanks at the rear of the properties are emptied annually, the tanker has access rights to use the field (part of AB2) to gain access to the septic tanks. The drainage is in these fields, so again that would be needed to be taken into account. The homes would require the developer to make alternative provision. I urge extra consideration in planning, even with natural screening these 3 properties will be greatly affected and the residents should be given an option for compensation or compulsory purchase. [redacted by admin]
Q7 Modification	This site is prime agricultural land that should be safeguarded. I recommend an alternative site is found and this site be removed from the local plan.

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	Page
Consultee Given Name	Richard

Consultee Given Name	Naomi
Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p>Hello, I am writing to object to the following proposed planning application.</p> <p>AB2 - approach to strategic allocations</p> <p>I am concerned as to how the traffic will get to and from this site? The site will have both warehouses and other industrial units. Whilst much of the logistics traffic might only use the M6 and A500 (when there are no blockages on those roads). but what about the employees, local service vehicles and vehicles going to and from the industrial units?</p> <p>All existing access to the A500 is by grade separated junctions (from the M6 junction 15 up to the M6 junction 16) or roundabouts (from the M6 junction 16 to Nantwich). Any other junction would not be safe. However, a roundabout so close to the M6 junction 16 would cause traffic problems (not to mention the loss of the well used layby).</p> <p>The traffic is already extremely dangerous especially at peak times, there are no traffic calming measures coming in and out of Audley village, and I have personally witnessed many near misses of people getting on and off the a500. There have been multiple collisions also.</p> <p>The already high levels of traffic at junction16 of the M6 and the surrounding villages means that the junction will require a major upgrade. The required funding from Highways England is unlikely to be forthcoming, due to the £22 billion shortfall in</p> <p>the nations finances. This is not deliverable before the end of the local plan period (2040), therefore it is ineffective hence unsound.</p> <p>It is also undeveloped land, a very good natural carbon storage area, whilst the development will increase carbon emissions.</p> <p>Many of the hedges are very old (appearing on Victorian maps) with a wide range of tree species in them. They are protected hedges, (redacted by admin) and we see lots of wildlife on this site. Hedgehogs live in these hedges, these are protected. We have seen birds such as swifts, swallows, house martins, rare lapwings amongst many others on this site. Alongside hares which are also protected, a wonderful sight to see! It would be terrible to see this habitat for local wildlife to be ripped up and built on. We also see bats around this site at dusk, another protected species.</p> <p>Our green spaces are of the utmost importance for so many reasons. I find the fresh air, and countryside vital to good mental health, and green belt land absolutely mandatory for the well-being of not only us to exercise and to teach (redacted by admin) about the importance of nature and it's purpose. But also for the animals living in these areas to live and to thrive which are already on the decline. It is our duty to protect them!</p> <p>I would also urge the council to think about the kind of jobs they would be bringing to the borough, warehousing would be low skilled, low paid jobs, high skilled, high paid jobs would be beneficial.</p> <p>The site is right on the edge of the Borough (and the West Midlands region), which means that economic impact on Newcastle Under Lyme is limited.</p> <p>The site is in the Green Belt, and it is isolated and disconnected from Audley and Bignal End settlements. It will mean a huge loss of open countryside (an area as big as the village of Audley and a considerable percentage of the parish).</p> <p>It is isolated from the main conurbations of Newcastle Under Lyme and Kidsgrove, creating an urban blot on the landscape.</p> <p>Due to its isolation, there are no local services nearby. It is distant from public transport links? And is too far to travel by bike from many local housing areas.</p> <p>There are numerous empty warehouses in and around Staffordshire, there is no need to build more without using the ones already built and not in use.</p> <p>I also find that our village is already overrun with too much traffic in general, without the added traffic that a large warehouse would bring. Church street in particular is already chaos with too much traffic, as is Chester road (redacted by admin). There are already signs saying that it is not suitable for HGV's - the signage is ignored and there are many near misses of traffic collisions when the trucks are blindly trying to turn at the bottom of the road, or travelling up the street when cars are parked either side. Our village really cannot take any more traffic.</p> <p>I fear that our village will become like alsager and will be too commercialised with all care for wildlife, residents, green spaces gone.</p> <p>I don't believe the proposed plan to be sound or justifiable for the above reasons, and would like to ask the planning inspector to remove this site from the local plan.</p>

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Company / Organisation	Staffordshire Police
Consultee Family Name	Elkington
Consultee Given Name	David
Q4 Part of document	Policy

Q4 Policy	AB2
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>Point 3 states - "Provision for secure, high quality Heavy Goods Vehicle lorry parking with ancillary welfare and amenity facilities of an appropriate scale to serve the site. The management and operation arrangements for the lorry park provision to be agreed with National Highways in consultation with Staffordshire County Council."</p> <p>While incorporation of the word 'secure' is undoubtedly welcomed, this is open to interpretation. HGV parking facilities such as those at Motorway Service Areas on the M6 (and elsewhere nationally, on the motorway network or otherwise) experience the theft of goods, loads, fuel etc perpetrated by highly Organised Criminal Gangs who travel the country. In the light of paragraph 135(f) of the NPPF, the Local Plan could and should seek to encourage/deliver HGV parking at the AB2 location which minimizes such criminal opportunity.</p> <p>Park Mark Freight (managed by the British Parking Association) is a comparatively new and comprehensive assessment/accreditation scheme specifically for lorry parks and truck stops, developed in response to the rise in cargo theft in recent years and the Department for Transport's policies for improving roadside facilities for drivers.</p>
Q7 Modification	<p>It is recommended that Point 3 is amended as follows:</p> <p>"Provision for secure, high quality Heavy Goods Vehicle lorry parking with ancillary welfare and amenity facilities of an appropriate scale to serve the site. The management and operation arrangements for the lorry park provision to be agreed with National Highways in consultation with Staffordshire County Council. To provide secure HGV lorry parking, the site should be designed and operate in accordance with Park Mark Freight scheme requirements and achieve Park Mark Freight accreditation."</p> <p>-----</p> <p>Under Supporting Information, the following is suggested:</p> <p>"Park Mark Freight (owned by the not-for-profit Police Crime Prevention Initiatives and managed on their behalf by the British Parking Association) is a comprehensive assessment/accreditation scheme specifically for lorry parks and truck stops, developed in response to the rise in cargo theft in recent years and the Department for Transport's policies for improving roadside facilities for drivers. Expectations for efficient, well managed and high quality lorry parks and truck stops are increasing the demand for services that are pleasant to use but secure enough to combat vehicle and cargo crime. Park Mark Freight informs current and potential customers of the highest standards in all aspects of the lorry parking or truck stop experience and enable operators and providers to show the value of their parking services."</p> <p>-----</p> <p>Under Related Documents</p> <p>Park Mark Freight - Police Crime Prevention Initiatives/British Parking Association</p>

Q6 Details	<p>I am writing to state my views on proposed development areas in the Audley Parish area.</p> <p><u>AB2:</u></p> <p>It is the enormity of what is proposed that is, I consider, irrational. The effective removal of 170 acres of good agricultural land to be replaced by vast warehouses will have a permanent destructive result on the entire area, including the ecology and wildlife. The effects on local traffic, and ensuing detrimental effects on the safety and health of those living in the area can only be imagined.</p> <p>As before, it is the scale rather than the principle of the development to which I most object. A substantially scaled down development might be more palatable to those affected, and limit the environmental damage which it would cause in its present form.</p> <p>As it stands, the scale of what is proposed is such that it will change the rural character of the entire area forever. This proposal requires significant rethinking and significant downsizing.</p>

Q4 Policy	AB2
Q6 Details	<p>Local Plan</p> <p>Policy AB2 Land adjacent to Junction 16 of the M6</p> <p>I consider the Local Plan to be unsound on this policy for the following reasons:</p> <p>Newcastle-under-Lyme Borough Council have stated that they require 22 hectares of strategic employment land, the proposed site at AB2 allocates 80 hectares on this one site alone. This cannot be justified. The level of traffic around Junction 16 and the surrounding village roads (especially during any closures of the M6 or A500) is already too high. There are no public transport links to the site and this, in addition to logistics vehicles would greatly increase the amount of traffic on the roads. The proposed development at AB2 would require a major upgrade to the Junction and surrounding roads. Given the £22 billion shortfall in the nation's finances it is unlikely that Highways England will be in a position to fund this before the end of the Local Plan in 2040. This renders the Plan ineffective. The access to the site is to be via one point off the M6/A500 Junction. There is also to be an 'escape road' via Park Lane. I can see no way that vehicles can be prevented from using this route at busy times, leading to unprecedented levels of traffic along Park Lane, an area popular with walkers and having no footpath for much of its length. Any traffic using this route would add to the existing congestion in the village.</p> <p>There are many other warehouse developments locally, many of which stand empty and many more already under construction. There are other, Brown Belt sites in the Borough which could provide the required 22 hectares and surely we should be encouraging other forms of employment besides warehouse work (which will all be automated in the near future anyway)?</p> <p>For the above reasons I believe the Local Plan to be unsound and I am asking that this site be removed from the Local Plan.</p>

Consultee Family Name	Stratton
Consultee Given Name	Catherine
Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p>Local Plan</p> <p>I believe the process of the local plan is generally unsound from an accessibility perspective. The plan was only available in braille from 25th September, giving little time for anyone who required braille to read through the whole plan. This documentation was only printed in braille following my request 8th August 2024 and no foresight had been made to make a copy generally available at the Newcastle library.</p>

At meetings, held by the council, there was no interpreter available, so anyone deaf would have had to rely on friends/family. The posters at the meeting used small fonts making it difficult to read the information.

There was also no provision for an easy-read translation, despite this being requested.

It was mentioned by Councillor Fear at a Council meeting that the local plan was accessible to all but as mentioned above, the reality shows that it wasn't.

I also put in a Freedom of Information request to Newcastle Borough Council on the number of people registered blind in the area. The response was that they didn't know. This would suggest that there was little consideration to how the Council were going to engage with members of the public who have a disability/learning difficulties so they could be included in responding to the plan.

Site AB2 'Land at Junction 16 of the M6'

I consider the local plan is unsound in proposing it.

The site put forward is significantly bigger than initially stated as required in the document. AB2 is 80 hectares of land but only 22 hectares of land is required for employment. The proportions would put the housing/employment land ratio out of balance and could result in further housing being required in the small village of Audley.

AB2 would sit on a heavy section of the M6 which is prone to high numbers of accidents. Typically the stretch between Junction 14 to Junction 18 bottlenecks frequently due to high numbers of traffic and high numbers of accidents occurring. Junction 16 roundabout and the approaches from the A500 are traffic-heavy and it can often take over 10 minutes to join the motorway from Audley (a distance of a mile).

There is no easy access to AB2 currently, except from Park Lane, a narrow single-track country road. In the plan, it mentions that this would still be used as an emergency exit/entrance, the road is unsuitable for multiple, large vehicles.

There is no public transport that goes near to AB2. There is limited public transport to Audley Village centre, a good mile or so from the site. This would mean increased traffic in the area, increasing CO emissions and noise pollution. AB2 is a strong green belt contender with established vegetation trapping CO emissions and noise pollution from the M6.

Less than a mile away from AB2, in a neighbouring council area (Cheshire East) are two large areas being made into warehouses. One is currently under construction (million square feet) and one was constructed with 5 warehouses currently sitting empty due to no electricity. Within Newcastle-under-Lyme warehouses are sitting empty, there was one in Talke that sat empty for over 10 years, it was taken on eventually by JCB but will now be empty again. Some other sites/locations would be less disruptive and retain this area of green belt.

Site AB15 'Land North of Vernon Avenue'

I consider the local plan is unsound in proposing it.

Vernon Avenue has already seen growth on the road with the addition of Barleyfields, planning permission granted for 2 additional buildings and then just off Vernon Avenue, 3 bungalows. All this has had a significant impact on an already busy road that provides access to Vernon Close, Meadowside Avenue and Westfield Avenue.

With cars parked on either side of the road, the road can at times be narrow to drive down and is often treated as a rat run. During 2021 a child was knocked down and injured and I am surprised the numbers aren't higher.

The site is proposed to have 33 homes built on it. That would mean a potential increase of at least 50 extra cars to an already busy housing estate. It is located at the bottom of a hill meaning there isn't easy access to the village. In the Sustainability Appraisal on page J9 it mentions site assessments presented in Appendix H indicate poor access across indicators for health and transport and accessibility.

In the Sustainability Appraisal, Page 120, it confirms that AB15 lies outside the 800m sustainable distance for access to primary school. This could result in increased traffic in the village with parents taking their children to school.

In the Sustainability Appraisal, page 19 it quotes "AB15 is situated within an area of 'high' sensitivity and has a 'moderate' overall contribution to the purposes of the Green Belt according to the LSCA and Green Belt assessment"

In the supporting evidence, Green Belt Assessment Part 4 Page D-3 it mentions that AB15 is a Moderate Contribution to Green Belt "The site falls within 250m of the Audley Conservation Area, therefore the site makes a moderate contribution to preserving the setting and special character of towns" On Page F-6 from the same report, there is a question regarding is the site in active use with a response of No. It is used every year from April to October housing 6 young cows. Local children love to come and see the cows.

I would like to ask why other weaker sites weren't put forward to the local plan,

Audley is a thriving busy village with schools and doctors at capacity. The local sewage works site is also at capacity. Adding 250 new homes to a small rural village would change the very nature and characteristics of the village. There are currently applications for other sites proposing 5-bedroom executive homes, these are neither affordable nor required housing for the housing needs of the village. Audley is an ex-mining village, with predominantly terraced houses. The elderly are requiring bungalows and the younger generation are requiring affordable housing (which does not include Shared Ownership). Sadly, the types of properties that could be built can't be defined.

Thank you for taking the time to read my comments, I urge the council to review the sites in question.

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	Horne
Consultee Given Name	Fiona
Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p>Policy AB2 Land at Junction 16 of the M6</p> <p>The site is 40% bigger than Newcastle Borough actually require. (22Ha has been stated as required whereas the proposed allocation is 80Ha at this site alone). This is not justified. Therefore housing/employment land ratio will be out of balance and will add pressure for even more housing development Junction 16 and A500 is extremely congested throughout the day/evening and ridiculously more so around commuting hours and causes a major bottleneck. In the event of an accident or issue on the M6 or A500 traffic diverts through the village of Audley causing major congestion and slow moving traffic issues and which our roads are unable to support. There is no public transport to the site, in fact the necessary bus service to Audley and surrounding villages has recently been drastically cut, people would unlikely use the proposed bus service or cycle to work due to longer journey times and difficult hills to navigate. As previously stated, Junction 16/A500 cannot support the existing volume of traffic so the junction will require major improvement requiring funding from Highways England which, due to the £22 billion shortfall in the nation's finances is undeliverable and will remain so for the Local Plan period. It is, therefore ineffective and hence unsound. Warehousing of this magnitude will potentially provide employment for 3000 - most travelling in via car. The increase in traffic congestion, air pollution from CO2 and tyre particulate pollution as well as noise pollution lorry park for 100 HGVs not to mention all the HGVs servicing the 1 million sq ft warehouse plus all the service vehicles is extremely concerning. The destruction of 170 acres of Green Belt land containing established trees and hedges will certainly negatively impact air quality leading to significant adverse effects on public health, both physical and mental. 2 x Emergency access points on Park Lane and Barthomley Road - these are narrow, winding country lanes without footpaths or street lighting. These lanes are enjoyed by dog walkers, horse riders and joggers, therefore such individuals' lives will be at risk as these lanes would very likely be used by employees as an alternative to queueing on the A500 I feel this proposal is unsound for the reasons stated above and wish for this site to be removed from the Local Plan</p>

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	Maddock
Consultee Given Name	Paul
Q4 Part of document	Policy
Q4 Policy	AB2
Q5 Sound	No
Q6 Details	<p>I would like to put forward a number of points as to why I believe the Local Plan is unsound, with the focus upon plans for the village of Audley, the proposed strategic employment site of AB2 and the proposed housing sites of AB12, AB15 and AB33, which are all on Green Belt land but do not meet the requirements of exceptional circumstances for the removal from the Green Belt.</p> <p>AB2</p> <p>This development removes a whopping 80 ha from the Green Belt for 22 ha of employment which Newcastle under Lyme Council claims is a shortfall across the Borough. How can this be justified? I live</p>

	<p>close to the location of the proposed site and access J16 of the M6 on a regular basis and it is abundantly clear that the junction is awful at rush hour in the mornings with traffic queuing back a mile from the junction and this site would only add to this massive disruption for motorists. Add to that, the people travelling to the employment site by car (there is very limited public transport for Audley and no buses have gone in the Crewe direction since the 1970s) Employees are unlikely to cycle to and from Audley after a long shift in the warehouse. Add to this, the employment site will generate a large amount of traffic in the form of heavy goods vehicles, service vehicles and employee's vehicles which will only exasperate the current junction queuing situation. An alternative drivers may take is to use Audley as a rat run. Currently, any issues arising on the M6 or the A500 result in Audley being used to bypass congested areas and this happens on a regular basis. Add to this the traffic to and from the employment site and the village of Audley runs the risk of being regularly gridlocked. Audley is a rural village and has horse riders and ramblers frequenting the roads (some with no pavements). I worry that it is only a matter of time that there is a fatal accident if this proposed site goes through. Therefore, on this basis, I feel the proposed employment site is unsound. In the case of AB2, there are multiple warehouse sites just outside the Borough, many standing empty. Why build another one, especially at the scale proposed? Warehouses do not bring mass employment, especially skilled employment to an area and even if this one did, there is no guarantee that the employment would benefit the residents of the village. AB2 will be an eyesore to every resident that walks the footpaths that surround the village. To remove this area from the Green Belt, does this represent exceptional circumstances? I feel it doesn't and that there are far more suitable sites within the Borough.</p> <p>AB12, AB15, AB33 and AB2 and the impact upon the village.</p> <p>The impact upon the village's infrastructure will be catastrophic. Building in these locations will, without doubt, bring in a serious amount of traffic to the village which will mean extensive development of new roads to be created to cope with inevitable traffic that will need to access the proposed developments. Audley village, with two small car parks, is already suffering the impact of increased car ownership by residents already living here, with many people forced to park on double yellow lines and in turn hampering safety. Audley has recently lost some of its bus service, which means more cars and taxis will be on the roads. Then there is the impact on the facilities like, the doctors' and dentists' surgeries etc. The primary and secondary schools are at full capacity. With the advent of the proposed 213 new houses to be built in the Audley Parish, where will the children of these new households go to school? The local schools are at full capacity. I am an ex school governor so I am aware of the situation locally. Will the newly refurbished sewage works be able to cope with the additional houses on the plan? I am reliably informed it will not.</p>
Q7 Modification	AB2 cannot be justified as removing 80ha from the Green Belt for 22ha of employment land seems excessive. The location will not be effective because the M5/A500 junction is inadequate and will not be able to support such a large site. It is on this basis that I propose the site, AB2, is unsound. It is for this reason I feel it should be removed from the Local Plan
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)

Consultee Family Name	Deacon
Consultee Given Name	Sarah
Q4 Part of document	Policy
Q4 Policy	AB2
Q5 Legally compliant	No
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>Objection to site AB2 on the map</p> <p>We consider that this part of the plan is</p> <p>NOT legally compliant</p> <p>NOT sound</p> <p>NOT compliant with Duty to Co-operate</p> <p>For the following reasons</p> <ul style="list-style-type: none"> • Undue consideration has been given to how traffic will reach the site. The main route to site will result in the loss of a layby from the A500, which is a safety concern. The section of the A500 between Audley and junction 16 comes to a standstill if there is an accident on the M6. Traffic often diverts through Audley in these cases which causes issues with traffic flow on the roads. This will be worse still if HGVs and 3000 employees are diverting through the village. • If people from the borough are employed on the site, this will increase traffic through the village and surrounding routes to reach the site (there is no public transport or cycle paths to the site). • The roads in the village are narrow Victorian roads with cars parked on road, it is often grid locked at rush hour. The roads will be unpassable if HGVs and 1000s of workers are also using the roads.

	<ul style="list-style-type: none"> • The emergency exits to the site are to be on Park Lane and Barthomley Road. Both single track roads with no pavements. How will they stop workers and others from using these roads which cannot cope with much traffic. An example of this is the service slip roads off the Knutsford M6 junction used extensively and unlawfully by residents. • Lack of consideration for the environment and climate change. The land being proposed is good quality agricultural land and wildlife habitat. The land is currently a good carbon store whilst the development will increase carbon emissions. • The employment created will be low skilled, low paid jobs, which will be under threat from future automation. High skilled, high paid jobs would be more beneficial to residents of the borough. • Jobs won't necessarily be for local people as the site is commutable from as far away as Manchester and Birmingham. • The site is in the green belt and will mean a huge loss of countryside. • The site is isolated and disconnected from the local villages and the towns of Newcastle and Kidsgrove creating an urban blot on the landscape.

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	Johnson
Consultee Given Name	Elizabeth
Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p>I wish for the Planning inspector to remove sites AB2, AB33, AB15 and AB12 from the plan for the following reasons:</p> <ol style="list-style-type: none"> 1 The extra number of cars that would be generated in the local area from sites AB12, AB15, AB33 alongside the larger development at Red Street would be completely unfeasible on our local inefficient roads. Employees travelling by vehicle to site AB2 would avoid the A500 and try to access the site via our local roads through Bignall End and Audley, along Alsager Road. This would be to avoid the traffic jams that accumulate due to consistent traffic issues on the M6 and at junction 16. This already happens when there are problems on the M6. This extra traffic travelling to and from site AB2, along with the potential minimum of 125-250 extra cars generated by site AB12 in our village, not to mention the extra cars from sites AB33 and AB15 and also cars from the huge development at red Street, which may use our local village roads for travel is absolutely untenable. This swathe of developments in such a small local area is unsound, greedy and completely impractical. 2 The proposed access to site AB12 via Diglake Street is a nonsense idea. To expect all residents of Diglake Street to park in a tiny car park at the bottom of the road is completely unfair. I cannot understand how a disabled person living at the top end of this street should be expected to park at the bottom and carry their shopping to the top. The amount of cars that would need to enter the very small street to access the existing and new homes, would make it impossible to cross the street safely and would be a complete noise and pollution nuisance in such a cramped area. The disruption to the local childrens' play area due to noise, construction and pollution would be completely unfair. The land which is proposed for development is productive farmland and it contributes highly to the greenbelt. It also supports the mental health and well-being of local residents, especially children, due to the beauty of the green space. I would no longer feel that I could take my child to play at the childrens' play area next to the building site, due to the traffic and pollution risks. It is completely unacceptable to place local residents in this position! This proposed access is NOT a result of sensible planning and forethought. Rather, it is a desperate attempt to shoe-horn as many council tax-generating properties as possible into a totally unsuitable area. 3 As a (redacted by admin) I am extremely concerned about my journey to work, having to navigate and mitigate the extreme volume of traffic that would be generated, in order to get out of my village to get to work. This is a local, rural village, not a town. It is untenable. In addition, the danger of crossing local roads will be seriously multiplied and I can envisage serious accidents taking place. The local Bignall End/Audley roads simply cannot take the proposals. 4 The developments in their entirety would completely alter the rural status of our local area. The proposals do not seek to support locals in finding suitable and well-placed starter/retirement accommodation that is in keeping with the village, but rather, they seek to generate as much income for the council as possible, without due regard to traffic and highways implications, as well as no real regard for increased school places, doctors and dentist provision, local roads or amenities. 5 As an example, I cannot see how the extra traffic that will appear on Ravens Lane Bignall End has been taken into consideration, in terms of how congested it already is at the best of times. Residents' cars are all parked on the main road, which makes it difficult to pass even now. How will this road cope with a possible 125-250 more cars from site AB12 and further traffic from the other local developments? 6 The pollution and noise generated by development AB12 would be dreadful for local residents. In addition to this, I would fear for (redacted by admin) accessing (redacted by admin) on foot, due to the huge increase in traffic. The congestion that would be caused at the entrance to Diglake Street and its surroundings from construction vehicles and the eventual extra cars/vans, would be unbearable. 7 I cannot see how selling off huge swathes of greenbelt for site AB2 is justified against the loss of wildlife, green space and the pollution that would be created. To remove so much greenbelt in one local area is a travesty to local residents and I do not feel like our feelings are being considered. As I have previously stated on the portal in the previous stage of the consultation, this is not about

	<p>providing small local developments for locals to be able to remain in their home village. It is about sheer greed. How can it be justified environmentally? Have we not already got enough warehousing space over the junction in Cheshire and close to Bathpool Park?</p> <p>I would urge the council to seriously consider the impact of these potential developments as a whole, against the extra development at Red Street. We, as residents, have some serious concerns about their impact on our villages and I sincerely hope that our concerns are going to be taken seriously, and that common sense will prevail over money.</p>

Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p>I strongly object to this proposed warehouse development. I believe this is a very unsafe and dangerous area to use as a development and access and exit would not be suitable and will only add to a very busy and congested area which regularly has a negative impact on the entire parish as well as Alsager and their local roads. There is no suitable area to use as an emergency exit if needed such as Park Lane as if haulage is using that very narrow Road emergency vehicles cannot access for any reason which could endanger local people and communities I also feel there are enough vacant warehouses in Staffordshire such as Alsager Peacocks Hay and many more which I'm sure you should already be aware of. Finally this is prime farming land and should be protected and encouraged to produce the food that we all need, especially to protect the environment and so we can lessen our dependency on foreign countries to provide food or meat we should be growing that would benefit the entire country and lessen the carbon footprint.</p> <p>I hope that you will take this opportunity to protect and help to provide communities with locally grown produce</p>

Consultee Company / Organisation	Cholmondeston and Wettenhall Parish Council
Consultee Position	Parish Clerk
Consultee Family Name	Bailey
Consultee Given Name	Mark
Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p>Barthomley Parish Council joins with Weston and Basford Parish Council in objecting strongly to the proposed Newcastle under Lyme Local Plan for a large strategic employment allocation on land abutting the SE side of junction 16 of the M6.</p> <p>It is the view of the Parish Council that without a strategy in place to cover the development of the A500 and its surrounding areas involving all major stakeholders, the proposals will be unsustainable and will create additional traffic thereby impacting negatively on the infrastructure of roads and other facilities in and around Barthomley as well as creating pollution and increases in the number of journeys undertaken in the area.</p> <p>The Parish Council notes that the area is within the North Staffordshire Green Belt and there is no justification for using it when there are many brownfield sites available which could be used instead. The Newcastle under Lyme Local Plan identifies (in section 5.13) that there is "potentially a sufficient amount of employment land to sustain the proposed growth in the plan period" and (in Sections 8.7 & 8.8) describes how the greenbelt will be protected. Section 11.8 identifies land/sites such as Chatterley Valley, Etruria Valley, Festival Park and Trentham Lakes which will all serve to provide sites to fulfil requirements, and conversely add to the traffic problems at Junction 16. Bearing this in mind it is not possible for all the exceptional circumstances to be met when considering development on greenbelt.</p> <p>Removal of green belt land for warehousing development would run counter to the UK's carbon net zero strategy. In the current Core Spatial Strategy for Newcastle under Lyme and Stoke on Trent, it states that 'the Council will take a positive approach towards rural enterprise relating to the availability of the local workforce. In particular opportunities will be sought to encourage:</p> <ul style="list-style-type: none"> • The sensitive and sustainable diversification of traditional rural economies • Positive contribution towards enhancing local landscape and biodiversity' <p>Releasing green belt land to be used for warehousing seems to run directly against these principles. Indeed, Newcastle under Lyme's own assessment of potential sites (page 2) says that the site could be considered for employment use, but that "development would however represent a significant encroachment into the countryside and therefore removal of the site from the Green Belt could harm the overall function and integrity of the Green Belt."</p> <p>To summarise, Barthomley Parish Council wholeheartedly supports both the submissions made by Audley Parish Council and Weston & Crewe Green Parish Council and makes the point made by these councils that the previous consultation exercise appears to have been completely ignored, rendering the exercise pointless.</p>

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	Cunningham
Consultee Given Name	Helena
Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p>F.A.O Planning Policy Team</p> <p>I write to strongly object to proposals within the Local Plan in particular the allocations for sites, AB2, AB2A, AB12, AB15 and AB33 and do not believe it has been completed in a lawful way.</p> <p>I do not believe the Borough Council have taken into account any feedback that they have been given since the first round of consultations and have ploughed ahead with a Local Plan that is not fit for purpose.</p> <p>The sites within this allocation fall within greenbelt land and the Council is yet to exhaust all brownfield sites and have vacant buildings within the borough that have stood empty for years.</p> <p>The release of greenbelt land for the sites AB2 and AB2A do not make strategic sense due to location and the impact that it will have on the rural parish of Audley. Again, there are vacant sites within the Newcastle under Lyme boundary that can be utilized without the need to release greenbelt land (e.g the old Makro site and other unit within the Chesterton/Waterhayes area)</p> <p>Whilst some housing may be needed, I do not believe that greenbelt land should be released for this within the parish as there are better options elsewhere within Newcastle under Lyme.</p> <p>My main objection with the housing developments is for site AB33, placing houses on this site will lead to further issues for the community. This site is agricultural land and is in use currently (see attached photo). You state the site is not in use, yet the photos contradict this, you also say that it is surface water flooding, yet the flood has been there for a significant length of time, which indicates it is more than</p>

	<p>surface water. I believe that the new housing would have a detrimental impact on local services, the roads/footpath infrastructure is already poor. There is double parking throughout the village, people with prams/wheelchairs are often forced into the roads and to suggest building further housing will only exacerbate the issues.</p> <p>To build an access road onto Nantwich Road is a huge cause for concern, this road is continually busy with traffic with users often travelling above the speed limit of the road. The road acts as a cut through from those heading both north and south for work etc. Park Road also does not have the infrastructure in place to do this.</p> <p>Newcastle under Lyme should be acting more strategically and resurrect a joint Local Plan with Stoke on Trent Council. The Councils should be working in partnership to develop a plan that will bring life back to the City and in turn make people want to visit and settle here. I do not believe that there is sound evidence the housing numbers or development numbers that you have put forward.</p> <p>I believe that the Local Plan is poor, is full of contradictions and does not adhere to local or national policy. It is simply not fit for purpose and should not be progressed in its current state when you have received so much negative feedback at all stages of the process.</p> <p>Regards</p>

Q4 Policy	Policy AB2
Q5 Legally compliant	No
Q5 Sound	No
Q6 Details	<p>If Strategic site AB2 goes ahead it would mean a massive loss of 80ha of Green Belt of which much is grade 3a agricultural land. This would also have a devastating effect on local wildlife by destruction of their habitat and hunting grounds. The area is disconnected from the village so it would mean a loss of open countryside and would also impact the surrounding land with light, noise and air pollution. <i>The Environment Act 2021</i> states that the government is required by law to halt the decline of wildlife by 2030.</p> <p>The land owner at AB2 has been receiving public funding to encourage wildlife friendly farming. The 3b land on the site also provides habitat for wildlife and if developed then this public investment will be lost. There are also many historic protected hedgerows (visible on Victorian maps). These hedgerows need to exist within the protection of greenbelt and not line car parks or housing estates as they will no longer provide safe habitats for wildlife. Full wildlife surveys should be undertaken before any development is permitted.</p> <p>Undeveloped land such as the proposed huge 80 hectares AB2 site is also crucial in its role as a natural carbon storage area vital for preventing climate change. The development of this site would also see a rise in noise, light and air pollution which would further affect local wildlife and the health and well-being of residents.</p> <p>The massive development proposed at AB2 would dramatically alter Audley Parish. <i>NPPF paragraph 22</i> states that, 'Where larger-scale developments such as new settlements or significant extensions to existing villages and towns form part of the strategy for the area, policies should be set within a vision that looks further ahead (at least 30 years), to take into account the likely timescale for delivery'. The strategic location proposed for Audley would justify a longer timescale</p>

for delivery as it is a significant size in relation to the village and would not be deliverable within the local plan and is therefore not sound.

The infrastructure in the area is insufficient to support AB2 – the plan is not positively prepared and therefore not sound. Strategic location AB2 alone is proposing 2-3k jobs which means 2-3k more cars. The proposed slip road off the A500 is in a section of road which is already frequently congested.

The plan proposes all logistics traffic will use the A500 but local workers may use the proposed emergency access roads which are narrow lanes or pass through Audley using the B5500. Due to the rural location of the AB2 site it is unlikely that employees will walk or cycle to work (especially with the hilly nature of the environment) and, with a lack of public transport, there will be a massive increase in traffic through the village. *The Levelling up bill Chapter 7 paragraph 3* seeks to promote development locations, and designs and layouts, that contribute to healthier lifestyles, energy and resource efficiency consumption, for example by reducing the need to travel, increasing public transport connectivity and accessibility and promoting active travel i.e. walking, wheeling and cycling; This could potentially lead to congestion on the main roads back into Newcastle as residents commute to employment sites.

B5500 Nantwich/Alsager Road is already used as a cut through to avoid the congestion on the A500 as there is frequently a queue on A500 back from J16 to Audley slip road in morning rush hour. The B5500 (New Road/Ravens Lane) through Bignall End would also see an increase in traffic from both AB2 and housing developments AB12, AB15 and AB33- the BB500 Ravens Lane is a residential area with terraced houses and a lot of on street parking which is already congested and frequently single file past parked cars (this is also school route). The proposed Emergency roads from AB2 are narrow country lanes with no pavements or street lighting.

Paragraph 3.17 states that unemployment in the borough is 2.9% which is lower than the regional average of 3.7% so that would raise the question of whether there is even a need for such large employment sites. The jobs provided by warehousing sites are also likely to be low paid jobs with only a few higher paid jobs which will attract commuters from further afield due to location near to M6 Junction 16. The total land being released from green belt across the borough for employment exceeds the recommendation. For example 80ha is being taken from Audley for 22ha requirement. If other developments in progress in neighbouring boroughs at Etruria, Radway Green and Crewe are considered then there is a potential for the massive site to be constructed and not fully utilised. This does not justify an exceptional circumstance for releasing Green Belt and the plan is not sound.

The plan for employment is not justified as it proposes more land to be used than recommended so will this just lead to calling for further housing development to rebalance employment/housing ratio.

Q7 Modification	Remove site AB2 from the local plan
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)

Q4 Policy	AB2
Q5 Sound	No
Q6 Details	<p>Agricultural land.</p> <p>We have a government that talks about nett zero and yet we import much of our food from overseas. The Draft Plan is at odds with government policy, which is, that the UK is most reliant on imports of fruit and vegetables, producing 17% and 55% respectively of supply. A significant proportion of UK fresh fruit and vegetable consumption is either exotic or out of season, and supply can be affected where imports are from countries vulnerable to climate change and extreme weather. With this in mind, the UK Government and devolved governments are supporting increased domestic production, particularly of UK fruit and vegetables, to strengthen our food security (Source: UK Food Security Index Updated 11th July 2024). The proposal would remove eighty hectares of of good quality agricultural, greenfield and Green Belt land for twenty-two hectares of low-wage employment land.</p> <p>Congestion.</p> <p>Traffic is already at near breaking point. Junctions 4 to19 are the the busiest of the M6. (Source: Wikipedia) The added complication of the horrendous traffic jams caused when frequent accidents occur between J14 and J16. It regularly affects the A500 and the A34 as well as other minor roads. Trafiic regularly tails back from J16 to beyond Peacock's Hay even on normal days, adding an additional access point will further exacerbate an already bad state of affairs.</p> <p>Unemployment.</p> <p>True full employment is an ideal, and probably unachievable, the liklihood in which anyone who is willing and able to work can find a job, and unemployment is zero. It is a theoretical goal for economic policymakers to aim for rather than an actually observed state of the economy. In practical terms, economists can define various levels of full employment that are associated with low, but not zero, rates of unemployment. Unemployment of 5% or lower is often considered full employment in a real-world context. (Source: Investopedia)</p> <p>The UK unemployment rate for the period May-July 2024 was 4.1% (Source: O.N.S.) Newcastle-u-Lyme unemployment rate was 3.1% Dec: 2023 and declining. (Source: O.N.S.). It follows that any increase in employment opportunities would require importing people into the area, thus further increasing traffic, since there is no available public transport. There is already unoccupied warehouse capacity in Alsager (five miles away) as well as Peacock's Hay and Tunstall. Warehouse work is notoriously poorly paid (minimum wage), and would do nothing to change our low-wage economy. Futher suffocating ambition amongst our youth. It is illogical to exacerbate this situation with yet more unnecessary speculative building.</p> <p>I want the Planning Inspector to remove the site from the Local Plan.</p>

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	Harrison
Consultee Given Name	Emma
Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p>Objection to allocation AB2</p> <p>This vast development is completely at odds with the look and make up of our village.</p> <p>It will decimate the local area and wipe out all species of wildlife not just in but around the site, there is a large number of hare's that live there, their numbers have decreased by 80% and developments like this are a contributing factor to that. Please don't let greed be the reason they decline even further. The removal of established trees and hedgerows flies in the face of all environmental policies when there is no proven need for the development within the local area.</p> <p>There are a multitude of very large empty warehouses locally, a lot of which were developed by the very people that wish to destroy even more greenbelt by building AB2 and they have not showed any evidence of a need for more. Even if companies moved to them all that would happen is they would leave yet more empty units elsewhere, this does not warrant the loss of greenbelt. The creation of employment is at best questionable, this would be made up of staff moved from elsewhere not actual creation. The warehouse sector also runs in a constant state of staff shortage, who exactly do they imagine will take these positions?</p> <p>The impact of the additional traffic on the village would be immense and dangerous. The notion that people working on the site would use the A500 is laughable, anyone who lives in areas of the Borough such as Silverdale, Chesterton, Madeley will be cutting through Audley and joining the A500 at the Audley</p>

junction. The sheer volume of traffic that uses the emergency entrance to both Keele and Sandbach Services proves that people will also use Park Lane as a shortcut. The lorries from the site will also use the village as an alternative whenever there is a problem on either the A500 and the M6, we have been told by highways that we cannot have traffic calming measures do to the fact that the B5500 is an OFFICIAL alternative so any assertion by the developers that this will not happen is blatantly incorrect.

The A500 at junction 16 is a real problem area, you don't need to travel this way to know that not a radio traffic report you hear whether in the morning or afternoon doesn't mention that it is an issue. Adding yet more congestion will impact not just Audley but anyone who commutes.

The site is currently not just greenbelt but good quality farmland which produces good quality food. The state of current world politics means that if anything we should be trying to increase our food security not destroying land and increasing our reliance upon imports.

The site is vastly larger that the Borough state they need, the inclusion of it will lead to an imbalance within the plan itself.

Conclusion

The above sites are simply the ones that I have the most knowledge of, there are so many proposed land grabs within this plan that our beautiful Borough is at risk of changing beyond recognition. The clear lack of local knowledge by the people who have selected these sites is evident. Despite the assertion that there has been a consultation it has been nothing more than a tick box exercise, all local knowledge has been ignored and legitimate concerns have been dismissed.

The whole plan seems to have been driven by profit for developers and the sale of council land in order to fill the 'Black Hole' in finances.

Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p>I object to the the following planning:</p> <p>> AB12, AB2, AB15 and AB33</p> <p>> 1. NuLBC are applying a high growth strategy. They present no evidence that this will transpire. In the village of audley and surrounds there are small pockets of land that are being developed appropriately and proportionately to the surrounds. Larger scale housing is not required, therefore I feel this is unjustified and unsound.</p> <p>> 2. AB2: NuLBC say they require 22 Ha of strategic employment land. However, they are allocating 80 Ha at the AB2 site alone. This is not justified therefore not sound. There are already huge warehousing within our vicinity, some laying empty and some already under development. There is no evidence to suggest this building is required.</p> <p>> 3. AB2: The already high levels of traffic at junction16 of the M6 and the surrounding villages means that the junction will require a major upgrade. The required funding from Highways England is unlikely to be forthcoming due to the £22 billion shortfall in the nations finances. This is not deliverable before the end of the local plan period (2040), therefore it is ineffective hence unsound. To add to this the A500 is already at capacity meaning that increased traffic would be detrimental to our local community. It's obscene to think that all increased traffic won't result in increased traffic on our rural roads. These roads being predominantly terraced streets, when built were not designed for multi car occupants or heavy traffic. Please do view in particular ravens lane and new road.</p> <p>> 4. AB12 (125 dwellings): This site has very limited accessibility. Proposed access points are at the bottom of Diglake Street and via the track adjacent to 104 Raven's Lane. These points are too narrow for long term access, especially given that local roads are beyond capacity at peak times. This is not deliverable making it ineffective. Therefore, it is unsound. Planning for this site proposes a car park which would not be appropriate of the residents who live here, particularly the elderly and disabled.</p> <p>> 5. AB12 represents a high quality contribution to the green belt. Building 125 homes here would exacerbate flooding into the nearby Brierley Brook. This would take away climate mitigation and contributions to our food security, not just from this site but also from neighbouring fields that will be affected by flooding. This site is therefore not justified and consequently unsound.</p> <p>> 6. AB15 (33 dwellings) and AB33 (55 dwellings): Similar arguments to item 5 above can be applied to these allocations also. Therefore, these allocations are similarly unsound.</p> <p>> 7. All allocations in the Audley and Bignall End area for housing are in the green belt. Moreover, as proposed developments they would increase traffic flow well beyond the capacity of the current road system as well as placing added pressure on local schools and GP's surgeries etc. These allocations are therefore not justified, hence unsound.</p> <p>> Solution: To render the local plan sound, remove these allocations from the local plan.</p>

	> I would further like to add a personal note. (redacted by admin), I want to stress the importance of our community here, our children “go outside to play” these green spaces are invaluable. At a time where mental health in young people is a pandemic problem let's not allow this to happen to our children, who won't be children forever. We want everyone to enjoy this wonderful village, this generation and many more to come. The wildlife in our village is amazing, from owls and bats to badgers and hedgehogs. We WANT to keep it this way. Trees are natures carbon catchers, it is vital that these green belt areas are protected and cherished. Staffordshire County council should be utilising brown field sites over green belt.

Q4 Policy	Policy AB2
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>Although the policy states a wide range of commercial activities for this site. Given its location and the history of the development similar local sites such as Trentham Lakes, Lymedale and Chatterley Valley, the economic reality of the situation is that this site would be developed for mainly warehousing and distribution facilities, not high tech facilities providing well paid employment.</p> <p>A survey by conducted by Glassdoor of 2,995 employees in August 2024 found that the average annual salary for a warehouse worker in the UK was just £20,295, According to Forbes based on ONS annual survey data, the average annual salary in the UK is £34,464.</p> <p>This site will provide low paid employment of a type which already provides a good proportion of the employment opportunities locally. This area needs better quality opportunities in order to build its economy, support its town centres and improve the quality of life of its residents.</p> <p>The consultation documentation has stated that between 2,700 and 3,300 jobs are expected to be created. A study by Prologis in 2018 found that on average warehousing creates 1 job per 95 square metres. Based on 220,000 sq metres of units that equates to around 2,300 jobs. So the likelihood is that it won't create the number of jobs that is being put forward to support the development.</p> <p>The necessity for this development is questionable. Lymedale, Chatterley Valley and Trentham Lakes are still not fully developed decades after the creation of these sites commenced.</p> <p>The viability and sustainability of this site also needs consideration. Lymedale, Chatterley Valley and Trentham Lakes all have population centres close by providing a pool of potential employees. This site is more remote, people will not be able to afford to travel for these poorly paid jobs. There is presently no public transport serving this location. Although the plan makes reference to a travel plan being required, the reality is that public transport provision in this area is declining rather than improving evidenced by the recent removal of the No.4 bus route.</p> <p>Once land is built upon, generally it remains built upon forever thereafter. Is it worth losing our green fields for good to create the type of jobs that the area doesn't need? I would challenge this policy on the basis that it is not justified.</p>
Q7 Modification	This policy should be removed and the land should remain agricultural

Q4 Policy	AB2
Q6 Details	<p>I am sending my objections to the B2 proposal. This area is on a daily basis at least twice a day has either very slow traffic or at a complete standstill which then results in utter chaos of cars in the parish trying to avoid that area in roads that have not got the Capacity to cope with the increase of traffic, this is at any time of the day not just peak times of the day I also believe that the access and exit proposed are not safe. In the event of an emergency, no emergency vehicle would find access to the area straight forward or safe to do so. Also there is no suitable emergency exit that would be safe to use, if using narrow country lanes to do so that would impede all emergency vehicles that would be needed possibly to save lives.</p> <p>This area is also prime farmland which we need to protect so we can continue to feed the nation from locally sourced produce and not import from over seas therefore lessening the carbon footprint and continue to grow food that is not modified to grow faster for profit. We need to be more efficient in producing food especially in a world that is very volatile and could lead to food shortages. Once lost our ability to farm good quality produce we will never regain that capability again as all prime agricultural land will be lost forever</p>

Q4 Policy	AB2
Q6 Details	<p>I wish to register my objection to the proposal of industrial building on the AB 2 final draft.</p> <p>This current area is already a heavily congested traffic hotspot, and I strongly urge this proposal to be dropped. Every day junction 16 is heavily congested, with many accidents, the AB2 proposal will only make this worse. I currently live on the (redacted by admin), this road has become the bypass with users cutting through Audley, to avoid heavy congestion. Alsager road is also affected. These roads were not meant to take this volume of traffic. Warehouse units will add to this problem, and HGV vehicles will also use Audley in the same manner</p>

	<p>There are industrial units only a stones throw away at high carr on the A34 on a site that could be further developed instead, and off Peacocks Hay road, adjacent to this on the other side of the A500.</p> <p>The area is outstanding in natural beauty, and the adjacent lanes are used by a large local population for walking and cycling and jogging, this proposal will have a big effect on the mental health of local residents. Green belt land should be protected, the site is huge and the wildlife in the area will be driven away. I cannot believe that this particular area is even being considered given the affect on traffic, Wildlife and the beautiful countryside, when there are more suitable sites so close. Employment at warehousing is low and disproportionate to the huge area that this proposal with effect. I urge anyone involved to walk Park Lane and moat lane. They will realise that this proposal should not have even advanced this far and should be scrapped.</p>

Q4 Policy	AB2
Q5 Sound	No
Q6 Details	<p>1 Noise:</p> <p>(redacted by admin) the warehouses themselves. Which when operational 24 hours a day will cause a hugely noticeable increase in noise pollution. Further helped by the area being so rural and quiet this will be amplified and cause distress and unwanted disturbance in our everyday lives, especially during evenings and weekends.</p> <p>1 Roads:</p> <p>Audley roads are village roads, already covered in pot holes and cracks. Barthomley Road is a narrow and hedgerow lined road, no suitable for excess traffic which is highly likely as people will use it to cut through or to enter or exit the back gates of the site. Barthomley Road is narrow with very small laybys to accommodate manoeuvres for passing cars both overall is extremely tight and is very much a single lane. It would be highly dangerous and would likely be the source of many accidents and possible injuries to residents (many are elderly), visitors and wildlife which habitat in the hedgerows and accompanying landscapes.</p> <p>There are no street lights and no public footpaths on Barthomley Road which is in the direct route of the proposed plans.</p> <p>1 Traffic:</p> <p>The site would be a cause of huge traffic congestion on the junction 16 roundabout which connects to the A500 and M6. With a potential 3500 employees and many visitors and deliveries to the site at the main entrance, traffic would be highly excessive and isolate many local people of Audley and surrounding areas and prevent the ability to commute and travel is a reasonable timely manor.</p> <p>1 Size of site:</p> <p>The site is too big and imposing to the village of Audley. The proposal is bigger than the village itself!</p> <p>5: Wildlife:</p> <p>The site is greenbelt land which is home to wildlife and nature, which need preserving. It is the reason we relocated and bought our house (redacted by admin) to reside in such a tranquil and peaceful village. Not to be destroyed by industry, commercial developments and unsightly and imposing structures, notice and pollution.</p> <p>6: Existing sites and buildings:</p> <p>There are numerous warehouses and commercial sites already built, stood empty and exist within a few miles of the proposed location. Why destroy green belt land.</p>
Q7 Modification	Stop proposed plans and find an alternative area.
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)
Q9 Hearing reasons	Our house is based just a few hundred yards from an exit onto the site and in close proximity of in Nov 2022, and spent our life savings only two years ago

Q4 Policy	AB2

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7105434/>). Government statistics also show that 17.9% of PM2.5 particles and 16.2% of PM10 particles are generated by road transport (<https://www.gov.uk/government/statistical-data-sets/env01-emissions-of-air-pollutants>). The “Green landscaping and planting” outlined in the plans proposed by the developer in no way mitigate the loss of carbon capture that will result from use of this site for industrial purposes. Audley already has the sixth highest prevalence of asthma in Staffordshire and the highest of any rural practice at 8.61 %, well above the England average of 6.52%. Audley also has the highest prevalence for chronic obstructive pulmonary disease of all rural practices at 2.77%, also well above the England average of 1.85%. This is not due to smoking, as the practice smoking prevalence is 12%, below the England average of 13.1% (Source: Midlands & Staffordshire Commissioning Support Unit). Increasing pollution with diesel exhaust fumes & microparticles is going to make the incidence of respiratory disease worse for Audley residents.

The site was noted in the West Midlands Strategic Employment Sites Study – Final Report May 2021 (Arcadis Avison Young). This report makes clear that this is an industry promoted site and their assessment of it is “off-policy”. The report also states that any final decisions on these sites needs to be in line with planning policy. The access to this site will be by Junction 16 of the M6. This is already a congested and difficult junction to use with frequent hold-ups to traffic in this area. Having a major industrial site here will cause significant traffic problems with consequent increased use of the roads through the village as drivers try to avoid the junction. There will also be an increase in traffic as employees at the site travel to work. As an employment site this far away from the rest of Newcastle under Lyme with poor road access and negligible provision of public transport to the village the likelihood is that employees are going to be travelling some distance by car to get to this site. It is more than likely that employees will not be from Newcastle or its surrounds, so benefit to the Borough will be reduced. This again will increase congestion and pollution within the village leading to further damage to the health & wellbeing of the residents. The site is proposed in the report as a potential “big box” site due to its size, although the developers state that they would be looking to develop more smaller units rather than less very large ones. Industrial warehousing of any sort does not fit with Audley being a rural centre and will substantially alter the character of the village. We also question the need for further industrial units of this sort when there are numerous units currently unoccupied in the near vicinity. Nothing in the plan will demonstrably enhance environmental quality or biodiversity, thus going against policies in place for use of green belt land.

As there do not appear to be any exceptional reasons as delineated in the National Planning Policy Framework to use this greenbelt land for this purpose, this site should therefore not be considered. The detail in the Local Plan for Employment land states that your own estimates are that you will need at most 66.8 hectares of employment land for the new plan period. You have already identified 49.9 hectares as available. This leaves 18.9 hectares to identify. As such, you already have proposed alternative sites that will give you this area and still allow mixed use of the sites. There is therefore no justification to destroy 78 hectares of prime agricultural land, well above the required amount in the plan on its own, and substantially alter the character of Audley village in the process.

Title	Policy AB2 ‘Land at Junction 16 of the M6’
Consultee Family Name	Johnson
Consultee Given Name	Michael
Q4 Part of document	Policy
Q4 Policy	AB2
Q5 Sound	No
Q6 Details	<p>At each stage in the consultation the area of green belt being released, known as AB2, has increased in size. AB2 now includes circa 80 hectares although the use of only 22 hectares has been identified at</p>

	<p>this stage. How is such a large allocation justifiable purely on a speculative basis? NB the nearest village Audley covers circa 144 hectares so this industrial area will have a definite impact on the character of the village.</p> <p>The developer in discussion with the council is prompting a <<Big Box>> approach to the warehousing and employment solution which directly challenges the requirement for any design structure to be unintrusive by the very nature/size of the structure.</p> <p>While the plan calls for <<appropriate measures>> to control the impact of noise, light, traffic, air pollution etc ... on the local area, which I applaud, the plan therefore acknowledges that there will be an unwanted impact.</p> <p>Evidence provided in the SWECO traffic assessment only looks at accidents in a 1.5Km radius of AB2 however, accidents circa 10 miles away on the M6 can severely impact local roads.</p> <p>within the evidence base SWECO's model has not been suitably validated and reasons have been given for this, but the model is both over and under predicting traffic volumes which I suggest is a concern. I would also question the premise that the model has only been run between 08.00 and 09.00 in the morning as west bound traffic is already queuing to access Junction 16 roundabout from 07.00 daily. I can see no indication within the traffic assessment regarding assumptions made for lorry traffic servicing the AB2 site so believe the evidence is flawed</p> <p>I have seen no evidence that this employment site is necessary, nor evidence that there will be a major benefit to Newcastle Area (other than a monetary boosting of the council purse), as the location will suit a mobile workforce using the road network (M6/A500) not people living in the local area. It must therefore be satisfying a wider perceived requirement which I believe is already addressed but not within the Newcastle - Staffs border.</p>
Q7 Modification	<p>Ideally reject the release of Green Belt Land for the employment purposes as the impact on the local area outweighs the benefit.</p> <p>As a minimum, question the scale of the proposed development and the suggested circa 80 hectare Green Belt release so close to a rural village with the view to reducing the amount of area released.</p> <p>Traffic assessment needs to state assumptions on vehicle movements and composition into and out of the proposed site and be clear on the effect this will have on the free flow of the A500. There is no comment on whether a new traffic light controlled junction on the A500 will have any impact on the J16 roundabout and explicitly traffic leaving the M6 to join the A500 east bound, nor how the new junction would back up the A500 west bound toward the Alsager Rd junction.</p>

Q4 Policy	AB2
Q6 Details	<p>AB2 - land at Junction 16, M6 - objection to warehouse - Appendix 7 - final draft Local Plan - Audley Local Parish</p> <p>Good afternoon,</p> <p>As a local resident living in Bignall End I wish to lodge my objections to the proposed warehouse project at J16 of the M6.</p> <p>I consider this proposal to be unsound & unjustified.</p> <p>I understand the size of the site to be out of proportion for the employment needs of the local area.</p> <p>I do not think it is practical to encourage thousands of people in cars to travel to the site for employment, from a volume of traffic perspective and an environment point of view.</p> <p>The local roads can barely cope with the level of traffic already on the roads, but bring thousands of additional cars in for work (& the proposed new houses) and it will be unbearable.</p> <p>Lorries and people already use Bignall End and Audley as a short cut to join the A500, for the north bound M6, because the queues for the Junction 16 of the M6 start well before the Audley/Alsager junctions, to cut part of the queue out.</p> <p>I know the traffic will be encouraged to use the junction off the M6, but, in all honesty who will sit in traffic, wasting their own time, pumping out fumes, when there is an service/emergency access route.</p> <p>The lanes will become rat runs.</p> <p>I know car sharing and cycling will be encouraged, but up and down this very hilly area, in the dark, on wet & cold mornings, people will use their cars, & will use the emergency access routes.</p> <p>Is this warehousing even needed?</p> <p>I doubt it. There is already an employment park in Newcastle under Lyme, (Lymedale), there is also the Park House drive estates, extensive & to both sides of the A34.</p> <p>There is also the Chatterley Whitefield and Peacock Hay Road development. Not in Newcastle under Lyme, but very close proximity is the huge development at Radway Green in Alsager (also using the Junction 16 on the M6) & the Crewe David Whitby Way, all of which will be using the M6.</p> <p>The screen shots below are the currently available industrial units to let on the Peacock Hay Road Industrial development (top) & the Radway Green development (bottom).</p> <p>These will be operational very shortly, and when occupied, will increase the heavy traffic on the already busy local roads, and the stretch of the A34, A500 & M6.</p> <p>When these sites are operational, the need for local employment will be reduced further, to what is already a low unemployment rate, reducing the 'need' of AB2 further.</p> <p>If the green belt is lost to a development it will never be greenbelt again.</p> <p>If it's lost to a development that isn't even necessary, that would be a crime against nature & the people of the borough.</p> <p>I also understand (BBC news 23/07/24) that the rail network won't be able to cope with the existing numbers of travellers now HS2 has been scrapped north of Birmingham on the North West line.</p> <p>HS2 trains won't be able to stop of Crewe now, as the funding has been pulled, Crewe train station is no longer getting an upgrade to extend the platforms (as the carriages are bigger, to accommodate the same number of passengers in the larger seats).</p> <p>The rail network were advising people either to travel at non-peak times, or use other methods of transport to travel between Birmingham & Manchester, because the number of people it can carry will be reduced.</p> <p>The rail network is pushing people back onto the roads on this stretch of motorway.</p> <p>If you want to see the effects of poor planning of a large industrial area, take a look at Middlewich & Winsford. Winsford has an enormous employment / industrial estate, yet the town is dead, despite all the jobs/employment.</p> <p>There is just traffic. Lots of traffic. Middlewich unfortunately bears the brunt of it, as the employees & the lorries struggle to get through a T junction set of lights when traveling towards Junction 18 of the M6.</p> <p>I consider the site to be unsuitable & the development to be unnecessary.</p> <p>Also to be considered is the loss of green belt land, food security, wildlife & accessible green spaces, effects of additional pollution to the area & the health of locals</p>

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	Ashmore

Consultee Given Name	Michelle
Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p>Dear Newcastle-under-Lyme Brough Council,</p> <p>I the undersigned, as residents of Audley, wish to object to the proposals of four housing sites and a large employment site in the council's draft local plan for Audley. My objections are about both the proposals for Audley in general and also specifically about site AB15 which is at the back of my home where I live and would significantly and detrimentally impact my life.</p> <p>My objections to the proposals for Audley in general are an additional 250-270 homes with a further 1000 residents and a large employment site of over 170 acres warehouses will destroy the character of our beautiful village. As I sit here writing this letter to you, I can hear birds singing and am looking out on a beautiful green field with cows grazing which is a very healthy way to live, considering the fact that where I live has been so important in restoring my mental health if your proposals go ahead that will totally damagingly affect my life, the downward spiral mental health of so many residents and the quaint, picturesque village of Audley.</p> <p>In this regard, if only or mostly green belt sites are available in the Audley area, the Council does not have to build the number of houses it says it must, because government figures are only advisory. It therefore seems that the Council is choosing to build on green belt sites when it doesn't have to.</p> <p>Furthermore, it also seems that the number of houses proposed to be built on AB15 and around Audley is excessively weighted to this area compared to the rest of the Borough as a whole and are mostly on green-belt sites. Why have you not planned to deliver housing in the urban centre with amenities and infrastructure of a town already. Instead, your plan overloads an already overloaded infrastructure area.</p> <p>The Junction with the A500 already has capacity constraints and development in this area could exacerbate this without appropriate justification. The proposed additional housing for the Audley area in general would cause already inadequate roads to become impossibly congested and to deteriorate even further. Connected to this, given that the current schooling and health facilities in the village are not enough to cope with a sudden increase in population, would further development and therefore more land be needed to build more schooling and medical facilities?</p>

The main route to site will result in the loss of a layby from the A500, which is a safety concern. The section of the A500 between Audley and junction 16 comes to a standstill if there is an accident on the M6. Traffic often diverts through Audley in these cases which causes issues with traffic flow on the roads. This will be worse still if HGVs and 3000 employees are diverting through the village. • If people from the borough are employed on the site, this will increase traffic through the village and surrounding routes to reach the site (there is no public transport or cycle paths to the site). • The roads in the village are narrow Victorian roads with cars parked on road, it is often grid locked at rush hour. The roads will be unpassable if HGVs and 1000s of workers are also using the roads. • The emergency exits to the site are to be on Park Lane and Barthomley Road. Both single track roads with no pavements. How will they stop workers and others from using these roads which cannot cope with much traffic. An example of this is the service slip roads off the Knutsford M6 junction used extensively and unlawfully by residents. • Lack of consideration for the environment and climate change. The land being proposed is good quality agricultural land and wildlife habitat. The land is currently a good carbon store whilst the development will increase carbon emissions. • The employment created will be low skilled, low paid jobs, which will be under threat from future automation. High skilled, high paid jobs would be more beneficial to residents of the borough. • Jobs won't necessarily be for local people as the site is commutable from as far away as Manchester and Birmingham. • The site is in the green belt and will mean a huge loss of countryside.

	<ul style="list-style-type: none"> The site is isolated and disconnected from the local villages and the towns of Newcastle and Kildgrove creating an urban blot on the landscape.

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	Gibson
Consultee Given Name	Catherine
Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p>I write to you in relation to the Newcastle Borough Council Local Plan – sites within Audley Rural Parish which includes AB2 – Employment Site, AB33 – Land off Nantwich Road/Park Lane, AB12 – Land east of Diglake Street and AB15 – Land north of Vernon Avenue.</p> <p>In essence I don't think any of the sites are justified or sound and should all be removed from the local plan.</p> <p>Reasons against all sites:</p> <ul style="list-style-type: none"> - More people into the area, with very little public transport there will be more cars on very small roads. - More cars is more pollution, we have enough air pollution coming into this area from Walleys Quarry landfill in Silverdale, the landfill air pollution is worse in the winter, which is also when traffic pollution would increase as well. - Parking is already a problem, there are local car parks in Audley itself but much of the surrounding area has cars parked on both sides of the road due to no off road parking. Visibility is non-existent much of

the time around Miles Green and Halmer End, you often proceed and hope nothing is coming in the opposite direction.

- We have narrow Victorian streets in much of the parish which were not designed for the number of cars already here. There are many accidents to both parked and moving cars because of the amount of traffic and the speed of traffic through the narrow roads. This is only going to get worse if more vehicles and quite possibly bigger vehicles are added into the area.
- Two of the sites are council owned farm facilities, there are young farmers wanting farms but unless you are from a farming family then this is not going to be possible with fewer/no farms to rent to get started in farming.
- There is a bigger and bigger national population and if farmland is going to be built on then how are we going to feed the bigger population? Farmland is being built on all across the country, not just the proposed in Staffordshire.
- Our local services such as schools, doctors and dentists are full. More housing is going to put more pressure on already stretched services.
- There are empty warehouses in the local area but they fall under different councils. Why can't the area work together and consider the land regionally for housing and warehousing rather than each council needing to have a certain amount? Some areas of land are going to be better suited to different developments and much of these proposed sites are greenbelt and good agricultural land. Therefore the sites are not justified.

Reasons against AB2:

- Site is a huge area, 198 acres of good agricultural land in the greenbelt, this site alone is four times bigger than NULBC have said is needed, and is a bigger area than all our villages.
- More jobs, more people into the area, no public transport so more cars on very small roads.
- Proposed new bus routes will not fit all shift patterns so people will more likely use their cars than buses increasing traffic on the narrow roads, and cycling is unlikely as the area is all hills. We do not cycle for this reason and we haven't just done a 12 hour warehouse shift.
- More jobs may well create pressure for more housing in the future, more loss of greenbelt near to the warehousing.
- There are always accidents on the M6 along this stretch, we never use between junction 15 and 16 for this reason and avoid the M6 if we can go another route. Accidents always put more pressure on the surrounding local roads, our area leads to the A34 as a parallel route to the M6.
- Emergency exits from the planned site are along single track roads with blind corners along them, not easy with current traffic, add any more along with people who don't know the roads and it is going to cause many more accidents.

Reasons against AB33:

- This site floods, ducks are seen on the water in the field.
- More traffic on roads that are narrow, often congested and with turns on difficult to see corners, such as turning in and out of Church Street Audley.

Reasons against AB12:

- Loss of currently productive farmland on greenbelt.
- Potential flood risks if developed, either on new development or passed further down, there are many big puddles on Bignall End Road after a bit of rain, if AB12 is developed this can only cause further floods on a much used local road to Talke and Kidsgrove.
- Access and more traffic past both a nursery and a primary school. I travel (redacted by admin) during the day and it is one way traffic between the parked cars then, further cars are not going to be safe in the middle of the day let alone at school drop off and collection times.
- Is this land being sold off by SCC being considered rather than more appropriate land?

Reasons against AB15:

- This site floods, ducks are seen on the water in the field.

So to conclude, I don't think any of the sites are justified or sound for the current residents, services or wildlife and should all be removed from the local plan.

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	Gilmour
Consultee Given Name	Jeanette
Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p>Policy AB2 :</p> <p>I oppose AB2 , for the following reasons, this is good agricultural, farmed greenbelt land. Newcastle under Lyme Borough Council (NULBC) are proposing to use 80 HA for employment purposes when only 22HA are required for a Strategic need. The Local Plan (LP) states:</p>

Employment will comprise offices, research and development, industrial processes, general industrial, storage and distribution and open storage. Yet the St Modwens document wants to build a 1 million sq ft warehouse.

How can NULBC propose taking this extra 60HA of greenbelt land for development of big box warehousing when the borough already has numerous empty warehouses, including big box warehousing and in neighbouring boroughs? Also this is not exceptional circumstances, to lose good quality farmed agricultural land and encroach on the village.

When other warehousing/units are available and not on farmed land, one particularly on Chatterley Valley that is over 300,000+ sq ft that was empty for 7 years previously when it was first built and now empty again. JCB the previous tenants moved because the logistics wasn't right for them.

It is not effective to lose an extra 60 HA of greenbelt for this potential migration. When the towns have many empty shops and many large and small empty warehouses. AB2 land is a pollution barrier for the village from M6 & A500, we are 6th in the country for respiratory illnesses and asthma, (see the evidence supplied by a local doctor with his response to this policy AB2) which will only get worse by losing the carbon soaking trees and green fields that act as a barrier to the village.

PAPG (Protect Audley Parish Greenbelt) did a traffic survey for a few days, which I was part of, the evidence in the LP says the B5500 is a quiet road, it is an old Victorian country road, that has already had an increase in traffic, using the road as a rat run to avoid Junction 16. I recorded between 1500 - 1700 vehicles in 2 hours x 4 times. Whilst standing outside my house recording this, the fumes really came apparent, I had a sore throat and headache following my times on this road.

As HS2 has now been cancelled for this area. Junction 16 upgrades have been cancelled, it already needs upgrading for the traffic that is there now. There is a single carriageway West of junction 16 and a dual carriage way East of junction 16, both have delays every single day.

In the evidence 8.7 Strategic Employment Site Assessment, this is an assumption at bullet point 5: *The land at J16 was not assessed as part of Arup's green belt report, AS SUCH, we believe it makes a weak contribution to Green belt purposes.* I most strongly disagree with this, it is good agricultural land, which is farmed. How can an assumption become fact, if it has not been considered? Appalling.

For all the above reasons, this is not exceptional circumstances and is not a sound plan.

As an alternative to AB2 there are other sites that were shown on the reports/evidence to be more sustainable than AB2 one of these is High Carr BW2 & BW3, which skirts the A500 and access to it directly and also Talke roundabout and A34 dual carriage, opposite an industrial site, being developed for warehouses. This area is more than 22HA but not the huge amount of extra greenbelt that would be lost from AB2. Therefore less traffic on A500 J16 M6 junction, than if 80HA taken up. BW1 BW2 is not farmed land, not adjacent to homes and was previously considered as a contender site for houses, why not for the strategic employment. This type of land should be used first.

AB2 is not for local jobs, no bus service to this area. St Modwens say within 1 hour 9000 potential people for employment? This would bring in additional cars along the M6 corridor, making it unsustainable.

Also the report states that a bus service will be provided and costed from charging for parking on the site of AB2. Low paid workers employed at warehouses will be expected to pay to park there to fund a bus service, what if many decide to bus in (how many buses will be needed for shift work and where are they going to be bused in from) then there isn't enough funding coming in from the parking charges? Also, the suggested lorry park on AB2 is proposed to be free of parking charges as the layby currently used is free, but on the lorry park the LP states there would be services, a toilet block, who will fund this if there isn't parking charges for the lorries. This is an unsound plan.

A bus service via A500, M6 wouldn't arrive on time, people would need to allow over an hour extra either side to ensure getting to work on time. Therefore it is not going to be sustainable or climate friendly. Extra cars travelling to this site would turn to the access roads to avoid the delays at this junction. The emergency access roads are single track small country lanes, that I bike regularly and if I meet a car or tractor, I need to move into the side of the hedge to allow these vehicles to pass. If access is used for AB2, it will become a main route into the development and will make it very unsafe for cyclist and walkers that used these lanes for exercise each day. **See photos attached of Moat Lane and Park Lane.**

I cannot see evidence based information for the need of these large warehouses on AB2 and a substantial lorry park. NULBC are planning for big growth migration, yet the warehouses we have are not filled. There are two empty warehouses in Newcastle under Lyme 300,000+ sq. ft. and 221,000 sq. ft. with numerous smaller units available in the borough. Others under development at Chatterley Valley site. Also outlining planning permission at Alsager Pannatonni Park, which is 4 minutes away from Junction 16, 1 mile, there will be 1.46 million sq ft of warehousing, with a 1 million sq ft single unit, which is also close to the railway line. Why then is AB2 even considered?

I do not believe the traffic reports for AB2/J16, when were these taken? There is already a demand for it to be upgraded way before any further development goes ahead, especially with a new development within 1 mile. How can the borough think of building even more of these big box warehouses next to Junction 16 without any upgrade and to lose this farmed good quality greenbelt land for the purpose of a potential development, with so many already empty around. **See our list of empty warehouses within 5-20 minutes' drive from Audley.**

J16: There is now no provision to improve the junction (J16) on M6, (government funding suspended) it already has a build-up of traffic in both directions of A34 every single day, but especially now HS2 has been cancelled. The west bound side is a single carriageway. Both sides build up each day especially at peak times, which then causes a rat run on the B5500 especially when issues on the A500 and M6, the B5500 is a cut through. Once there is an accident or breakdown on A500 or M6 it has an enormous effect on side roads and huge delays at Junction 16 (M6). I live on the B5500 and many articulated HGV vehicles use this road throughout the day to avoid J16.

Policy PSD6: *Health & Wellbeing*: d: The safe walking and cycling will be destroyed by AB2, the single track roads of Park Lane, Moat Lane and Barthomley road are used by many from the village especially

	<p>the young on bikes and the elderly as a circular walk. The possibility of an emergency access on Park Lane and Barthomley road will make this impossible for us to use. I cycle around this 3 miles route most days, seeing elderly ladies and gents doing their regular exercise walks. We are 6th in the country for respiratory illnesses, how will this development improve this situation, it will only make it worse.</p> <p>There is no mention of the Two Saints Way footpath (historic footpath that runs from Chester to Lichfield Cathedrals) that will become unsafe with AB2 as it runs on the Barthomley road.</p> <p>Also point 5.36: <i>the council is committed to promoting healthy communities</i> but the amount of pollution from all these extra vehicles is extremely unhealthy,</p> <p>5.39: A full screening HIA is required for this development. The villagers are not listened to by the council, we have had bus routes taken away, and now the countryside to walk safely in is proposed to be destroyed. The extra traffic and additional people to this areas infrastructure has not been considered. We can't just move to another surgery or dentist or chemist, we only have one in the village.</p> <p>The evidence in this Local Plan have many assumptions.</p> <p>4.2 Modelling in Strategic Transport Assessment. For instance adopting the 2011 census in their modelling, it states that 2011 used instead of 2021 but doesn't state what alterations have been made to account for this. States 7% uses buses, yet the buses have been suspended so this % should be reduced. The census talks about commuting trips to Hanley (4.2) , yet Audley has no direct bus route to Hanley anymore. But what about the additional warehouses and houses in Alsager, Crewe, again no bus service to those areas. The analysis is based on designations to Hanley, talking about Newcastle under Lyme & Stoke on Trent boroughs, but not Cheshire East and the new houses at Alsager these are not accounted for and are far closer than Hanley. This is old data.</p> <p>4.3 shows data Westbound (A34-M6) from 2015-2022 but Eastbound data from 2015-2023, why use different years unless it is to show it in a better light, does 2023 show higher traffic flow?</p> <p>The surveys for AB2 have many assumptions, see the evidence, this modelling is not allowing for all the other sites already ahead in planning in the surrounding boroughs. With all the extra houses and warehouses built to support this already at Crewe and Radway Green, Alsager, Chatterley Valley, Loomer road etc. makes this totally unjustified. For all these reasons it is not justified to remove 80 HA of greenbelt for 22 HA therefore it is unsound.</p> <p>There were 3 potential strategic sites AB2, KL15 and TK30. But at one of the drop in meetings at the Methodist church it was mentioned by a councillor that AB2 would be going ahead for the borough. This was Regulation 18. Also when the Audley Parish put in their Neighbourhood Plan they were told to include AB2, yet it was only a potential site, If NULBC wanted this including wasn't this predetermined!</p> <p>Also all the consultations have had issues with the responses and their portal. There were changes made to the rules of the responses to the consultations. Emails not allowed, then they were allowed. Letters sent in with individuals copying and signing, that they agreed with the details of the letter, only for it to be used as one response, yet 600 were handed into the council offices just from the Audley area. I have had to email without using the form as it wouldn't allow for additional sheets. I hope this will be accepted.</p> <p>Councillors were not given the relevant information/evidence in time to make a properly informed decision on the Local Plan, there were 9 documents out of 24 still not uploaded 2 days before the Full Council Meeting, 1 was uploaded the day before the meeting. This is not lawful because they didn't conduct it to the gunned principles.</p>

Q5 DTC compliant	No
Q6 Details	<p>Please note the contents of the attached letter which sets out the Council's comments in this regard. Please do not dilute the comments in any officer reports as the document needs to be read in context alongside the previous responses made.</p> <p>Sites AB2 and AB2A</p> <p>APC strongly objects to the proposed allocation of Site AB2/AB2A (A500/M6). The Green Belt Site Review Consolidated Report 16th July 2024 recommends exclusion of the site(s) from the process (Table 17, page 28). This issue was also considered in the Urban Vision Enterprise CIC Audley Parish Green Belt Review, V2.4, August 2022, commissioned by Staffordshire County Council, which found a strong contribution to green belt purposes, including safeguarding the countryside from encroachment and regeneration of urban land. These recent reports appear to have been ignored.</p> <p>Removal of the site(s) from the green belt would undermine the purposes for green belts set out in the NPPF, in particular by allowing major incursion and encroachment into the countryside and undermining of regeneration of the urban conurbation, by developing greenfield land in the countryside.</p> <p>The economic impact on the conurbation would be negative, due to:</p> <ul style="list-style-type: none"> • the remoteness of the site(s); • the impact on the viability of alternative urban sites in the conurbation. • Harm to the rural economy, due to loss of the best and most versatile agricultural land and associated harm to local food growing capacity and agricultural employment. The traffic impacts would be negative, including: <ul style="list-style-type: none"> • Generation of road-based traffic and lack of sustainable transport alternatives; • Traffic impacts on the rural character of the area; • Impacts on the amenity and safety of rural roads and lanes. <p>The development of this site would be unsustainable and environmentally harmful, due to:</p> <ul style="list-style-type: none"> • biodiversity impacts on rural lanes, where they need to be widened, including destruction of adjoining landscapes; • development of greenfield land in an unsustainable location, remote from the existing urban conurbation; • a range of significant adverse impacts (visual, noise, light, disturbance, air quality). The development would introduce a major urban employment site within a rural parish, near to small rural villages and remote from local services. The Strategic Employment Site Assessment - 2024 Update (Aspinall Verdi) has failed to deal with the previously highlighted contradiction with the ARUP and UVE green belt assessment reports. (Hectares) <p>The updated Sustainability Appraisal July 2024 highlights adverse impacts of developing the site AB2. Paragraph D.5.2.11 states "The introduction of new large-scale developments has potential to be discordant with the landscape features of the associated character areas as identified in the LSCA34, especially given the location of Sites AB2 and KL15 within areas of 'high' sensitivity to development ...".</p> <p>The Table on page N37 identifies that site AB2 would have major negative impacts on: 'Natural Resources and Waste', 'Flooding' and also 'Landscape'. Minor negative impacts include: Air, Biodiversity, Flora and Fauna, Water, Health and Wellbeing and Transport and Accessibility. There is only one other site that scores so negatively, and this is not being taken forward.</p> <p>We note that positive impacts are identified for 'Climate Change' and 'Economy'. We believe that this finding is perverse. It is difficult to see how the development of a remote site, well outside of the urban conurbation, involving the loss of agricultural land and relying on road-based travel could contribute positively against climate change. In addition, the harm to the rural economy and to economic and physical regeneration in the urban conurbation has clearly not been taken into account.</p> <p>Site variation AB2A is not mentioned so presumably has not been assessed. Tables N10 and N11 set out growth strategy options. We note that option 6D does not include site AB2 and delivers better scores/outcomes.</p> <p>The Newcastle-under-Lyme Landscape & Visual Appraisal March 2023 identifies the site as having a major adverse impact. Mitigation measures would not be effective given the scale of development.</p> <p>The Audley Rural Civil Parish Natural Capital Assessment report (Staffordshire Wildlife Trust, June 2024) identifies ecological and wildlife features within the site, including a high distinctiveness wildlife corridor and Strategic Significance Areas within the Nature Recovery Network. A copy of this report is included.</p> <p>The Strategic Housing & Employment Land Availability Assessment (SHELAA), Report September 2022 Appendix 4 (Sites not in Deliverable & Developable Supply) included Site AB2. The AB2 site assessment proforma recognised that the site was in the green belt and was isolated, disconnected from Audley and Bignall End, partly affected by flood zones, with access limitations and with poor access to a range of services and facilities. The site appears to be missing from the 2024 update report. There is still a big inconsistency between NUL Borough Council's position in September 2022 and the present. A site identified as not deliverable or developable is now suggested for allocation.</p>

	<p>Allocation of this site is not justified by the Economic Needs Assessment Newcastle-under-Lyme & Stoke-on-Trent June 2020 which stated, 'overall need implied under any of the aforementioned scenarios could be met through the current supply of circa 293ha of employment land'. This further highlights how allocation of site AB2 would undermine regeneration elsewhere.</p> <p>Development of AB2 would be harmful to the local economy, community and environment. The site assessment is not supported by evidence and assessments (though we note the site has been deleted from updates of some of those assessments). Allocation of the site conflicts with several of the proposed policies of the Local Plan.</p> <p>Conclusion</p> <p>APC believe that the Local Plan is fundamentally flawed. Allocation of site AB2/AB2A is in contradiction to the Local Plan's own evidence base and emerging policies and also inconsistent with national policy and guidance. It would cause substantial social, economic and environmental harm to the Parish, the Borough and the wider North Staffordshire conurbation.</p> <p>There are clear problems in terms of soundness, especially in terms of justification, effectiveness (including cross-boundary strategic considerations) and consistency with national policy.</p>
Q7 Modification	As above
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	As set out in this response and the previous 2 responses - the Parish Council has strong objections in particular to the inclusion of AB2.

Q6 Details	<p>These comments are in relation to the Audley Ward, which is my area of experience given that I live there.</p> <p><u>EMPLOYMENT</u></p> <p>Again, accept that employment is a key factor for the economic redevelopment of the country – however, the proposals at AB2 would be CATASTROPHIC for this area!!!</p> <p>As a resident, I do find it difficult to comprehend how this proposal has got to this stage of developed and made it onto 'the plan'. Can appreciate it must look good on paper i.e. built on land between a major arterial road and motorway interchange (A500 / M6 Junction 16), so good for a transport link? <u>No!</u></p> <p>Anyone who lives in Audley, or has to use the A500 / M6 around J16 will know this area is a complete environmental mess already – the congestion, pollution and anti-social behaviours exhibited here are atrocious (the amount of litter visible on the roadsides alone are an embarrassment to the city; goodness knows the effect this causes on the wildlife in the fields adjoining).</p> <p>At busy times, traffic including HGV's crawl through this area, sending pollution levels soaring - and that's if the motorway is running OK. If the motorway has any holdup or delay, the problems multiply massively. Congestion is huge, pollution levels go through the roof, and the roads through the village become 'rat-runs' for drivers looking for a way around the bottlenecks – very dangerous and damaging. Net result, all of the previously listed traffic related problems multiply several-fold.</p> <p>The thought of a long-term, large-scale development as proposed, at this location, is mind-blowing. It will be an ecological disaster, and bring stress, anxiety and associated health issue to the area for many years.</p> <p>So I therefore strongly object to the proposals for AB2, AB12, AB15 and AB33.</p>

Q4 Policy	AB2
Q5 Legally compliant	No

Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>Policy AB2 is unsound as the warehouses and employment site will never be used as is the case with large parts of Newcastle-under-lyme and recently Alsager, where warehouses and employment buildings stand empty. This is a purely an illogical approach as in the present and foreseeable future businesses are shutting down due to the economical recession. My suggestion would be to reduce AB2 considerably by not building an employment zone or warehouses.</p> <p>Policy AB15 is unsound as creating new unaffordable houses (government and many councils are delusional in thinking builders will sell their properties at anything less than the area asking prices) will create more traffic problems increase stress on the infrastructure ie schools, hospitals, power, sewage which are already overstretched. My suggestion would be to halve the amount of houses to 16.</p> <p>Policy AB33 the same comment as for policy AB15 with the same suggestion reducing the houses by half to 27.</p>
Q7 Modification	<p>AB2 just build the lorry park I guarantee the warehouses and employment buildings will remain empty for at least 10 to 20 years.</p> <p>AB15 reduce the houses by half to 16.</p> <p>AB33 reduce the houses by half to 27.</p>

Consultee Given Name	Sarah
Q4 Part of document	Policy
Q4 Policy	AB2
Q5 Sound	No
Q6 Details	<p>Policy AB2: Land at Junction 16 of the M6</p> <p>Removal of 80ha of Green Belt comprising a large greenfield area, in agricultural use, in open countryside, clearly separated from the urban area or other settlements area and for its proposed development.</p> <p>-</p> <p><u>National Policy</u></p> <p>National Planning Policy framework (December 2023) extracts (our underlining).</p> <p>Paragraph 142. The Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; <u>the essential characteristics of Green Belts are their openness and their permanence.</u></p> <p>Paragraph 143. Green Belt serves five purposes:</p> <ol style="list-style-type: none"> 1 a) to check the unrestricted sprawl of large built-up areas; 2 b) to prevent neighbouring towns merging into one another; 3 <u>c) to assist in safeguarding the countryside from encroachment;</u> 4 d) to preserve the setting and special character of historic towns; and 5 e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <p>We would suggest that c) is of greatest relevance to this representation although e) may also be relevant.</p> <ol style="list-style-type: none"> 1 Once established, there is no requirement for Green Belt boundaries to be reviewed or changed when plans are being prepared or updated. Authorities may choose to review and alter Green Belt boundaries <u>where exceptional circumstances are fully evidenced and justified</u>, in which case proposals for changes should be made only through the plan-making process. <u>Strategic policies should establish the need for any changes to Green Belt boundaries, having regard to their intended permanence in the long term, so they can endure beyond the plan period.</u> Where a need for changes to Green Belt boundaries has been established through strategic policies, detailed amendments to those boundaries may be made through non- strategic policies, including neighbourhood plans.

- 1 Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development. This will be assessed through the examination of its strategic policies, which will take into account the preceding paragraph, and whether the strategy:
- 2 a) makes as much use as possible of suitable brownfield sites and underutilised land;
- ...
- 1 c) has been informed by discussions with neighbouring authorities about whether they could accommodate some of the identified need for development, as demonstrated through the statement of common ground.

Put simply, we do not consider that exceptional circumstances have been evidenced and justified and we see no need for the removal of the site from the Green Belt.

We recognise that the new Government has made clear its intention to revise NPPF and has published its proposed NPPF for consultation (now concluded).

We acknowledge that the proposed changes to the NPPF in Paragraphs 145 (142 in the consultation document), Para 147 (144), Para 150 (147) and new Paragraph 152 in the consultation document are significant. However, we believe that our representations remain valid and relevant to both the existing NPPF and its anticipated replacement and we ask to be heard at the Examination in the context of either the current NPPF (December 2023), its replacement, or both documents.

In the context of the introduction of Grey Belt in the consultation document, we would wish to make it clear that we have no doubt that the site could not be considered to be Grey Belt under the definition given in Annex 1 of the NPPF consultation document:

Grey belt: For the purposes of plan-making and decision-making, 'grey belt' is defined as land in the green belt comprising Previously Developed Land and any other parcels and/or areas of Green Belt land that make a limited contribution to the five Green Belt purposes (as defined in para 140 of this Framework), but excluding those areas or assets of particular importance listed in footnote 7 of this Framework (other than land designated as Green Belt).

The land comprised in Policy AB2 is clearly not Previously Developed Land. As clearly stated above, the site makes a significant contribution to the Green Belt.

Other policies in the NPPF relevant to this proposal

The extracts are from the NPPF consultation.

Strike-through shows proposed deletions, underlining shows proposed text.

~~147.144~~the Green Belt or towards locations beyond the outer Green Belt boundary. Where ~~it has been concluded~~ that it is necessary to release Green Belt land for development, plans should give first consideration to previously-developed land in sustainable locations, then consider grey belt land in sustainable locations which is not already previously-developed, and only then consider other sustainable Green Belt locations. They should also set out ways in which the impact of removing land from the Green Belt can be offset through compensatory improvements to the environmental quality and accessibility of remaining Green Belt land.

~~150.147.~~ Once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land. Where Green Belt potential harm to the Green Belt by reason of inappropriateness, and any other harm resulting from the proposal, is clearly outweighed by other considerations land is released for development through plan preparation or review, development proposals on the land concerned should deliver the contributions set out in paragraph 155 below.

~~152.149.~~ Inappropriate development is, by definition, harmful to the Green Belt and should not be approved except in very special circumstances.

~~153.150.~~ When considering any planning application, local planning authorities should ensure that substantial weight is given to any harm to the Green Belt. 'Very special circumstances' will not exist unless the.

- The site is entirely Greenfield, in agricultural use, and could not reasonably be described as previously developed land or 'Grey Belt'.
- No evidence is presented in the plan sufficient to justify the removal of the 80 hectare site from Green Belt.

We suggest that the proposal conflicts with both the existing NPPF and policies under consideration by the Government and that Very Special Circumstances do not exist in this case.

The following representations give the reasoning for our not considering that there are very special circumstances in this case to overcome the presumption against inappropriate development. In the representations we refer to the evidence documents published by the Council, and others.

The Council's own strategy and policies

- We agree with the Council's statement that 'Development proposals should maximise the use of existing resources and infrastructure to allow jobs, homes and other facilities to be located close to each other and be accessible by public transport'. **The site fails on all these grounds. Policy PSD2.**
- We also agree that *The rural economy is a key asset of the Borough and will have grown stronger through the Plan period, based primarily on agriculture but supplemented by appropriate rural diversification, where justified...* **The site also fails on this criteria as it cannot reasonably be considered to be rural diversification (Policy PSD2).**
- The proposal fails to satisfactorily address the site allocation requirements set out in Policy SA1 (General Requirements).

The Location

- The site is some distance from population centres.
- The site is visually prominent and the proposed development would be highly intrusive in the landscape.
- The site is totally isolated from other development and completely free-standing in the countryside.
- The only means of access is from the A500, a high-speed dual carriageway.
- The A500 in the vicinity of the site has no facilities for pedestrians or cyclists.
- The A500 has no safe crossing points for pedestrians or cyclist near to the proposed site.
- The site is not served by public transport.

It is considered that these, and other factors raised by other representees, also mitigate against the allocation of the site.

The site is not required and is unjustified by the evidence.

Newcastle-under-Lyme Housing and Economic Needs Assessment Further Update April 2024

Authors: Turley

Executive Summary: (Extract)

Need for employment land

- 1 This report has also reconsidered the amount of employment land that could be needed in Newcastle-under-Lyme, factoring in the latest employment forecasts and the extra year of take-up data that has become available since the HENAU was produced.

17. It suggests that between 43.1ha and 83.0ha of employment land could be needed throughout the borough between 2023 and 2040, effectively reinforcing the range presented in the HENAU (36.5-68.8ha) – for a slightly different period (2022-40) – but markedly elevating its upper end.

- 1 In a technical sense, provision at the lower end of the range (43.1ha) would directly align with the standard method, accommodating the jobs that could be supported mainly through changing behaviours where this report's modelling suggests that this scenario would bring limited growth in the working age population. The forecasts introduced in section 5 suggest that more jobs could be reasonably expected, at an average rate of 237 jobs per annum, and this would not only require the provision of 400 dwellings per annum – to sufficiently grow the labour force – but could also require around 48.2ha of employment land. Either of these scenarios would though slow the recent rate of take-up, with provision towards the upper end of this range (63.3-83.0ha) more likely to mitigate this risk without necessarily creating more jobs.
- 1 While need has increased, the supply of employment land has contrastingly continued to reduce, standing at only 48.9ha as of March 2023. Much of this supply is also expected to be imminently lost, or not come forward according to Aspinall Verdi, such that as little as 18.1ha could be available in the coming years.

20. This suggests that there is likely to be a quantitative shortfall of employment land in Newcastle-under-Lyme, requiring the identification of new sites to clear it. There also continues to be an

issue with the quality of the remaining supply, with Aspinall Verdi having classified most sites as “average” based on criteria devised by the Council.

- 1 *The need for different types of employment land has also been reviewed, at a high level. This indicates that there is at least a quantitative or qualitative shortage of offices, industrial space and warehouses, requiring the Council to consider opportunities to add new sites to its existing supply.*
- 1 *This report has also briefly considered new sites that the Council believes could in future form part of its supply. Reference has been made to such sites in considering how they are positioned to potentially respond to evidenced need, but it is important to recognise that it is the role of policy – rather than this study – to allocate them. The Council is encouraged to remain positive in considering other sites, beyond those it has already identified, where they respond to the evidenced market need and demand.*

Potential impact of strategic sites

- 1 *While the above has effectively updated parts of the HENAU, this report has a slightly broader scope with the Council now requiring advice on how the allocation of a strategic site – still under consideration – could potentially impact upon the need for housing in Newcastle-under-Lyme.*
- 1 *This report’s modelling suggests that there is unlikely to be surplus labour to support job growth beyond the baseline forecast, if the Council either aligns with the outcome of the standard method (347dpa) or plans to support that forecast by providing 400 dwellings per annum.*
- 1 *It is nonetheless possible that the higher of these two options could result in there being sufficient labour to service a strategic site, albeit this is difficult to definitively prove and would require careful monitoring over the plan period. Jobs created on such a site may not be wholly additional to a baseline that itself allows for a marked improvement from past trends in sectors such as logistics, in a possible reflection of the borough’s ability to play a more strategic role. Such large sites – especially those suited to both local and strategic needs – may well be required for the borough to do even that, given that this is likely beyond the existing supply of employment land which is set to diminish further in the coming years.*
- 1 *Any shortfall that does arise would likely also appear gradually, in the final decade of the new plan period, as Aspinall Verdi believe that only one of the three sites under iv consideration could be building out by 2030. It is also notable that the promoters of all three expect most newly created jobs to be filled by people living outside of Newcastle-under-Lyme, lessening reliance on the borough’s resident labour force and thus reducing their impact on local housing need.*
- 1 *The Council is therefore not necessarily restricted from allocating a strategic site if it plans to provide 400 dwellings per annum, exceeding the minimum starting point set by the standard method as the NPPF explicitly allows when reflective of economic growth ambitions and infrastructure investment. It would though be important to closely monitor the availability of labour in such a scenario, and evaluate the approach accordingly within the review of the Local Plan.*

There is simply no justification for site AB2 in the light of the content of the Housing and Economic Needs Assessment report commissioned by the Council. (Detail in Chapters 6 and 7.)

It appears from the Summary – and the contents of the complete, detailed report – that there can be more than adequate existing and planned provision for additional employment development - without the development of the 80 hectares of site AB2.

The scale of the proposal and the use proposed is inappropriate

The proposal is for a site area of 80 hectares (197 acres).

More background detail is given in the Aspinall Verdi report published by the Council in its evidence documents.

We welcome the publication of the document by the Council. The report sets out, in summary form, a range of issues. We would ask that the Inspector considers the matters raised in the report before deciding whether to recommend modifications to the plan, including the deletion of AB2 in its entirety (as we are seeking).

In our representation we share the Concerns and Objections emboldened below.

Extracts:

Extracts:

“2.3 The proposed strategic employment site is situated in Audley, close to M6 Junction 16. Audley, identified as a Rural Centre in the Local Plan, is located approximately four (4 miles to the northwest of Newcastle-under-Lyme). The rural centre is located between Newcastle-under-Lyme and Crewe, with the latter around an 8-mile journey away.

2.4 Later in the report, we provide details of the extensive requirements for this area from the Big Box market

2.6 This extends to about 78ha of land controlled by SMD and is capable of accommodating approximately 2.35 million sq. ft of employment accommodation, including multiple buildings in excess of 300,000 sq. ft, other buildings of at least 100,000 sq ft, and a largest building size well in excess of this, plus ancillary accommodation.

2.7 This is mainly targeted at the ‘Big Box’ market and would largely target the major space requirements that are current for this part of the M6 Corridor. The site is promoted by St Modwen Developments, who have previously engaged with the local authority. The developer has undertaken extensive due diligence on the weaknesses identified in earlier assessments of the site.

2.8 There are mitigation measures being developed for issues concerning the lack of public transport serving the site, access into the business park, local amenities and workforce accessibility.

2.11 The planned warehouses will be built to St Modwen Logistics’ ‘Swan Standard’ for sustainable construction, meaning they will be highly energy efficient and have an EPC ‘A’+ rating. This is equivalent to BREEAM excellent”

4.2 As would be expected for a site of this scale, there are mixed opinions on the AB2 site, with a range of concerns related to environmental, infrastructure and employment considerations. We set out a summary of the views in support and concerns and objections below.

Concerns and Objections

4.7 Concerns have been raised regarding the infrastructure and access implications of the AB2 site. This includes concerns regarding the widening of the A500 and its potential impact on Junction 16, as well as broader issues such as congestion, the destruction of hedgerows and a lack of sustainable transport options.

4.8 Cheshire East Council expresses reservations, citing concerns about A500 capacity, roundabout junctions, transport assessments and impacts on the M6 junction. They stress the need for a comprehensive evaluation of potential impacts on highways.

4.9 Environmental and biodiversity concerns have also been raised by consultees, encompassing potential impacts on heritage assets, conservation areas and the loss of Greenbelt Land, which is highlighted as an area of landscape enhancement. Furthermore, concerns about pollution, particularly from warehouses and associated traffic, have been expressed, along with concerns about potential losses of semiimproved grassland and wildlife habitats.

4.10 Sustainability and the need for evidence have emerged as prominent issues in the discussions. Stakeholders question the lack of evidence for exceptional circumstances, raise doubts about the sustainability appraisal of the project, and question the necessity of the proposed development in light of existing warehouses in the vicinity.

4.11 Employment and economic impact considerations are prevalent, with a call for higher quality, well-paid jobs and scepticism about the longevity of the proposed employment opportunities, given potential automation. Doubts also surround local job creation and economic benefits, specifically for Newcastle-under-Lyme.

4.12 Planning and policy considerations add another layer of complexity, with stakeholders questioning changes in land designation and expressing opposition to the development of greenfield areas. There are concerns about the loss of topsoil and the potential undermining of urban regeneration objectives through the development of greenfield land.

4.13 Public and amenity concerns are evident, including concerns about the impact on public footpaths and recreational areas and the potential dangers posed by emergency access routes with reduced visibility. Noise, light and other pollution affecting the local community are also cited as concerns.

4.14 Regional impacts are discussed, with debates about the site's contribution to Cheshire instead of Newcastle-under-Lyme. Ongoing discussions with National Highways regarding potential improvements to M6 Junction 16 add a regulatory and technical dimension to the discourse, with technical documents and considerations submitted by the applicant to support the development.

Highway Issues

We recognise that there has been Highway Modelling carried on behalf of the council, but questions remain as to the way of achieving a satisfactory solution acceptable to the Highway Authority, Staffordshire County Council (re the A500) and Highways England (re the M6 and Junction 16).

We do not have evidence to demonstrate unsoundness. However, in the light of a recent planning appeal where permission was refused on appeal* on highway grounds relating to a site allocated in a Local Plan, we would ask that the Inspector at the Examination is satisfied at this stage as to the soundness of the allocation on highway grounds.

* Appeal Ref: APP/K0425/W/23/3332257

Land at Gomm Valley, Gomm Road, High Wycombe, Buckinghamshire HP10 8HB

Other matters

-
We have looked at the Council's Evidence Base, which seems to be thorough and comprehensive. However, we have failed to find reference to the agricultural land grading of the site, a Landscape Impact Assessment for the area that includes the site, a Site Assessment Proforma, an Ecological Assessment or a Green Belt Assessment including the site. This information may have been published but we have not found it. We cannot therefore say, without evidence, that the allocation has not taken these issues into account is sound, but equally we cannot demonstrate that they have not been considered.

We hope that the Inspector will consider the available evidence put forward by the Council in relation to these matters and consider whether they are material to the question of the soundness of the plan or to the inclusion of site AB2.

Matters of detail – which may be considered relevant only if the Inspector does not recommend the deletion of the allocation.

- 13.18 *The height, scale and form of development should reflect the character of the area. Greenspace and landscape buffers should be used to break up the urban form and contribute to separation between areas. The height of buildings should avoid breaking treed skylines.*

-
This is unjustifiably vague. 'Treed skylines' are not identified. The location of greenspace and landscape buffers are not identified.

- As a minimum it is considered that maximum building heights and massing must be included in policy from the outset. This should be set out as a part of the proposal in the plan and be considered at the Examination. Buildings of this scale on the proposed allocation would have a massive and detrimental impact on the landscape involving significant earth movement to provide platforms for the very large buildings.

- Clarification is sought on just what is intended by the phrase "Appropriate building materials and colours should be used to screen visually intrusive development."

- 13.23 *Allocation of a site establishes the principle of a particular use. Any future planning application(s) will be determined in accordance with the relevant policy criteria applicable to the site, other relevant policies in the Local Plan and any other material considerations. As such, the detail provided at the planning application stage may result in minor adjustments to the overall quantum of development achieved on the site.*

-

	<p>This is vague and unjustifiable. It is considered that it should at least define: a. the policy criteria referred to by cross referencing; b. what constitutes <u>minor adjustments</u> to the <u>overall quantum</u> of development. e.g. how is <i>minor</i> measured and just what is the <i>overall quantum</i> - the site area of 80 hectares or something else?</p> <p>The proposal refers to safe and convenient access into the development (including for HGVs) via a new junction established from the A500 with emergency access via Barthomley Road, both to be delivered in Phase 1 of the development - but not explicitly including proposals for pedestrians, cyclists and other users who, potentially, would not be able to safely use the new junction.</p> <p>No details of the proposed new junction are given e.g. only left in and out, a new traffic island, traffic lights, grade separated junction or something else. The proposed location in relation to the existing M6 junction and whether J16 requires modification is also unspecified.</p> <p>It is suggested that this information should be required to be provided, together with the responses of the relevant highway authorities before the Examination in Public.</p> <p>It appears that both the Highways Agency and East Cheshire Council have "concerns", but no detail is given of these – nor are the views of Staffordshire County Council referred to.</p> <ul style="list-style-type: none"> <i>Implementation of an agreed comprehensive travel plan incorporating measures to support travel to / from the development, particularly by sustainable modes. This <u>should</u> implement initiatives to support sustainable travel into the site, to include cycle links into the development with suitable cycle parking / amenities, bus routes and demand responsive travel schemes to support workers travelling to / from the site. The Travel Plan <u>should</u> consider routes connecting into Newcastle-under-Lyme, Stoke-on-Trent and Cheshire East.</i> <p>Unlike the requirements for access this is vague and not defined in terms of implementation e.g. to be agreed before first occupation by an employer and to be implemented within 3 months of the first occupation funded or subsidised by the developer and owners/occupiers.</p> <p>If the Inspector does not recommend deleting the proposal it is requested that as a recommended modification the word '<u>should</u>' ought to be replaced by a word such as '<u>must</u>'. The preparation and implementation of the Travel Plan must be secured through a S.106 agreement,</p> <ul style="list-style-type: none"> <i>(3.13 The allocation of the site would result in a loss of a layby by the A500. Consequently, secure and high-quality HGV parking should be provided as a replacement on the site. This should include an element of free short stay parking for all HGV vehicles.)</i> <p>The proposal refers to provision for secure, high-quality HGV lorry parking with ancillary welfare and amenity facilities of an appropriate scale to serve the site. However, the policy shows no indication of location, scale or justification for the inclusion of parking - beyond replacement of the existing lay-by on the A500.</p> <ul style="list-style-type: none"> It is unclear whether the Plan's requirements of Chapter 10, Infrastructure and Transport and Chapter 11, Sustainable Environment, can be met on the site. If Draft NPPF Paragraph 155 (or its equivalent) is included in a new NPPF it is requested that the Inspector should take this into account in the recommended modifications.
Q7 Modification	<p>The proposal is considered to be wholly unjustified and unsound.</p> <p>The Inspector is asked to recommend a Main Modification to delete the site.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	We would definitely wish to be invited as a participant in the hearing sessions in relation to this plan proposal to hear the discussion and to participate at the Inspector's invitation.

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	Poppleton
Consultee Given Name	Rebecca
Q4 Part of document	Policy
Q4 Policy	AB2
Q5 Sound	No
Q6 Details	<p>AB12 I believe that the plan for 125 houses will accessibility from Diglake Street to be unsound living on that street but also feel like much of the following applies to both AB12, AB33, AB15. The road is already congested and has very limited accessibility. At peak times it is hard to park cars and get cars and people safely down the street. The roads are too narrow and the junctions onto the main road are already extremely busy and dangerous without the additional traffic from 125 houses, utilising both Diglake Street and Albert Street and Chapel Street, with Ravensmead School just a few minutes down the road. The increase traffic would also cause more danger to those children travelling to school and living on the streets surrounding the new development.</p> <p>Pedestrian and cyclist access through the park is also a concern given that the majority of people down the street have families and small yards the park used by families in the area, taking parts of it away and again the increased traffic is a concern and unjust.</p> <p>A car park will not solve these issues and restricts residents on being able to park outside their houses to unload shopping, those with small children or with disabilities.</p> <p>The reason we chose this house was due to the views from our rear garden fields, the greenbelt and views to the monument with this development you are seriously affecting the views from our house and also potentially the sale value of our home. Given that we have had sheep in this field also I am concerned into yet more farmland being destroyed and the impact on our environment taking yet more of our greenbelt. Given the flooding in nearby Brierly Brook I feel that this development would also affect that as well as the surrounding fields and farmland.</p> <p>Traffic flow through Bignall End in general is already at a maximum increasing traffic both through AB33 and AB12 this would be further increase this beyond capacity. I also fear of the effect this will have on the GP, local schools etc. With all of this what is being proposed is just not justified or needed and is unsound and should not go ahead and should be removed from the local plan.</p> <p>In relation to AB2 there is no evidence that this will give people within the local area jobs and or attract people to the local area and again taking from our greenbelt. There are already significant levels of traffic at the M6 junc 16 and accidents at that junction regularly and already heavy impact on the A500 this is just going to exasperate this further and there is no evidence to say it will do what the council are saying.</p>
Q7 Modification	The best way to modify this is to remove AB12, AB33, AB15 AB2 they are unsound and unjustified.
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)

Q4 Part of document	Policy
Q4 Policy	Policy AB2 'Land at Junction 16 of the M6'
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>While Policy AB2 outlines the development of a strategic employment site at Junction 16 of the M6, there are serious concerns regarding its justification, feasibility, and long-term viability:</p> <ol style="list-style-type: none"> Unjustified High-Growth Strategy Newcastle-under-Lyme Borough Council (NuLBC) is applying an ambitious high-growth strategy without presenting any substantial evidence to suggest that this

	<p>level of growth will transpire. The council's projection of high demand for employment land seems speculative, especially given the uncertainty in economic conditions. The absence of clear, data-driven justification renders the strategy neither realistic nor deliverable, calling into question the soundness of the policy. Without solid evidence to support such growth predictions, this approach is overly optimistic and not grounded in the current economic climate.</p> <p>2 Over-Allocation of Strategic Employment Land NuLBC claims they require 22 hectares of strategic employment land, but they are allocating a significantly larger area—80 hectares—at the AB2 site alone. This allocation is disproportionate to the demonstrated need and raises concerns about the unnecessary overdevelopment of land. Such an over-allocation is not justified by existing demand or future projections, making the policy unsound. It also risks unnecessary environmental degradation and misuse of land that could be preserved for more appropriate uses.</p> <p>3 Inadequate Traffic and Infrastructure Planning The existing high traffic volumes at Junction 16 of the M6 and the surrounding villages already cause significant congestion. The development would substantially increase traffic, especially from Heavy Goods Vehicles (HGVs), exacerbating these issues. The proposed upgrades to the junction and surrounding infrastructure are heavily reliant on funding from Highways England, which, given the £22 billion shortfall in the national finances, is unlikely to materialize within the timeframe of the local plan (before 2040). This makes the infrastructure improvements undeliverable, thus rendering the policy ineffective and unsound. Without these crucial upgrades, the development would significantly impact road safety, traffic flow, and local quality of life.</p> <p>4 Environmental Impact and Sustainability While the policy highlights sustainable energy strategies, including solar technology and reduced grid reliance, these initiatives are not clearly defined, and their feasibility remains questionable. Given the scale of the development, the environmental impact on biodiversity, local ecosystems, and air quality could be severe. The reliance on BREEAM standards and landscape buffers may not fully mitigate these effects, especially if enforcement is weak. Without clear, enforceable sustainability measures, the policy risks failing to deliver on its environmental promises.</p> <p>5 Questionable Economic Viability Despite the policy's focus on creating employment opportunities, the assumption that such development will generate significant local jobs is debatable, especially as industrial processes become more automated. The overestimation of employment growth could lead to an underutilized site, particularly if job creation does not match the scale of the land allocated. Furthermore, if the required skills are not aligned with the local workforce, the benefits of job creation may be limited, further diminishing the policy's economic justification.</p> <p>6 Lack of Long-Term Management Strategy The policy touches on the need for long-term maintenance and management but lacks concrete details on how these responsibilities will be enforced after the initial development phase. Without a clear strategy, there is a risk that the infrastructure, public spaces, and amenities will deteriorate, leaving local authorities and residents burdened with maintenance costs. A well-structured management plan should be included to ensure the sustainability and upkeep of the development.</p> <p>7 Heritage and Cultural Assets at Risk Although the policy mentions a Heritage Impact Assessment, it may not adequately protect less-documented heritage assets that could be uncovered during development. The vague requirement for mitigation "where retention is not possible" could lead to the destruction of historical sites. A more cautious approach should prioritize preservation, ensuring that the area's cultural and historical significance is not lost due to development pressures.</p> <p>On top of these points, at no part has anyone been to visit the local community that will be effected by this policy. On the map there is a cut out for 3 cottages, these cottages will be surrounded by the site and the impact this will have on those home owners.</p>
Q7 Modification	<p>Policy AB2, while ambitious in its vision for a high-quality strategic employment site, raises several critical concerns. The lack of robust environmental safeguards, questionable job creation potential, inadequate traffic and infrastructure planning, and the vague long-term management strategy suggest that the development could have lasting negative effects on the local community and environment. A more cautious, community-focused approach, with stronger enforcement mechanisms and clearer economic and environmental commitments, is needed to ensure that the benefits of the development outweigh its potential harms.</p> <p>I would advise the planning inspector to actually visit the site location, in particular, visit the location of the 3 cottages and see what impact this would have on them. If the plan is to go ahead I would advise that these 3 cottages to be purchased as part of the plan and square AB2 site off to stop other complaints. Noise, light, mental wellbeing etc.</p>

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	Ritchie
Consultee Given Name	Peter
Q4 Part of document	Policy

Q4 Policy	AB2
Q5 Sound	No
Q6 Details	<p>This land consists of approx 80hectars of good quality agreultural land within the green belt. The proposal is to take this from greenbelt and develop it for industrial use supposedly providing in excess of 3000 jobs</p> <p>The first, obvious, question is from were will these positions be funished from? Certainly not from the surrounding villages. we do not have the unemployed population. Therefor, these positions will realisticly be filled from the larger surrounding area. That will mean placing more pressure from the, allready at best, barley adequate transport infrastructure. In reality it will mean our country lanes that are used for recreational and farming activities and often not wide enough for 2 vehicles to pass will become a rat race for those late for work, in a hurry to get home or just avoiding the inevitable traffic snarl ups created by RTi's causing a life threatening hazard to local community road users.</p> <p>Junction 16 of the M6 with the A500 is already a well known hot spot for RTi's and it would seem that only a passing consideration has been given to the potential problems that adding more pressure by the need for hundreds of large comercial vehicles needing to exit and enter the motorway system at this junction due to the addition of an 80+hecter industrial site.</p> <p>Add to this the 1000's of extra domestic vehicles in the area and it is easy to see why this preposturous proposal is both unrealistic and unsound</p> <p>The second most obvious question is WHY!?</p> <p>Why, when there is ample vacent warehousing and other industrial premisses in the imediate surrounding area</p> <p>We are not talking a little industrial estate here we are talking about an area that could swallow both Audley and Bignall End probably with room to spare.</p> <p>Furthermore, little or no considerations appears to have been given to the health hazard to local residents and only a passing consideration to the green issues. We, as a nation, are supposed to be decreasing our carbon footprint not increasing it. If this development is allowed to go ahead, who is NuL Council going to persuade to by the excess inorder to make them look good in the public eye?</p> <p>This propasal is unneccessary, ill thought out, under researched and would devistate the local area and, therefor, unsound</p>
Q7 Modification	<p>I don't think that this plan in it's entirety could be made sound</p> <p>There are to many anomillies</p> <p>Too many poorly prepared proposals</p> <p>Too many ommisions</p> <p>Too much abuse and missuse of data</p> <p>I could go on</p> <p>Certainly, the proposal for AB2 needs nothing less than scrapping</p> <p>I came to this table late as I was unaware of the existance of the proposed plan but I am horrified!</p> <p>Having been involved with a number of local councils and heavily involved (local Leader) in a prominent political party in the past, this is the worst pile of garbage I have ever seen.</p> <p>I have picked on 2 major issues directly related to my local parish but this whole document is questionable to say the least</p> <p>Further industrial development is unnecessary while there are more than enough vacent properties in the area</p> <p>I am not privy to the housing figures but I strongly suspect that the number of vacent, unused and under developed properties in the area would go a long way to filling the requirements in the near future. I shall now make it a mission to furnish myself with these figures</p> <p>There is only a passing mention to infrastuctures like education and health let alone other facilities</p> <p>This council would be better employed looking at ways to regenerate existing assets in the area rather than waisting their time and tax payers money coming up with harebrained scemes that are unrealistic and unsustainable. Designed to devistate local comunities that are, themselves dedicated to the communities in which they reside providing usefull services and produce which our local, esteemed, council enjoy along with the larger surrounding communities</p> <p>Someone needs to wake up and smell the coffee</p> <p>On a 'GREEN' note: from this document, our council needs to think again about development plans and come up with something that will eventually help the local society not make things harder for generations to come. Start thinking about long term impact not short term gain</p>

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	Humphreys
Consultee Given Name	Julia
Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p>These comments are in relation to Audley, as I'm a (REDACTED BY OFFICERS) <u>EMPLOYMENT</u></p> <p>I understand that employment is a key factor for the economic redevelopment of the country – however, the proposals at AB2 would be CATASTROPHIC for this area!!!</p> <p>As a resident, I do find it difficult to comprehend how this proposal has got to this stage of developed and made it onto 'the plan'. Can appreciate it must look good on paper i.e. built on land between a major arterial road and motorway interchange (A500 / M6 Junction 16), so good for a transport link? <u>No!</u></p> <p>Anyone who lives in Audley, or has to use the A500 / M6 around J16 will know this area is a complete environmental mess already – the congestion, pollution and anti-social behaviours exhibited here are atrocious (the amount of litter visible on the roadsides alone are an embarrassment to the city; goodness knows the effect this causes on the wildlife in the fields adjoining).</p> <p>At busy times, traffic including HGV's crawl through this area, sending pollution levels soaring - and that's if the motorway is running OK. If the motorway has any holdup or delay, the problems multiply massively. Congestion is huge, pollution levels go through the roof, and the roads through the village become 'rat-runs' for drivers looking for a way around the bottlenecks – very dangerous and damaging. Net result, all of the previously listed traffic related problems multiply several-fold.</p> <p>The thought of a long-term, large-scale development as proposed, at this location, is mind-blowing. It will be an ecological disaster, and bring stress, anxiety and associated health issue to the area for many years.</p> <p>So I therefore strongly object to the proposals for AB2, AB12, AB15 and AB33.</p>

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Company / Organisation	Keele Parish Council
Consultee Position	Parish Clerk
Consultee Family Name	Powell
Consultee Given Name	Debra
Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p>Keele Parish Council recognise that developing national policy with regard to the NPPF means that, in order for the plan to be considered under the existing regulations, the amount of housing delivered per annum must come within 200 of the proposed nationally set target. The proposed new algorithm is 593 per annum. Whilst we do not accept the proposed target of 400 houses per annum is robustly supported by the evidence provided, we recognise that, were the plan to fail at inspection, that this already inflated target would, in all likelihood, be subject to a mandatory increase. Thus we have no choice other than to support this target in the hope that the plan will pass.</p> <p>Our comments will thus address aspects of the plan which we judge are weak and require further thought in order for the plan to pass.</p> <p>Comments on Audley AB2</p> <p>We are concerned that this proposal is weak in the following areas. The development of this strategic employment site is neither based on robust and credible evidence nor is it the most appropriate strategy when compared with alternatives. This site is in Greenbelt and requires that exceptional need be demonstrated for its release. We made the following comment in our submission on the previous draft: The Turley report does not clearly evidence a lack of land for such development but merely suggests it may be the case. Employment in logistics is relatively low paid and the need for physical labour in this sector is being greatly reduced by robotics. The vision of the area as an ever-growing logistics hub lacks vision and will not create a high skilled, prosperous future for the Borough. Increasingly, green field sites outside of urban areas is favoured for the development of such sites. The release of this site impacts significantly on the protection offered by the green belt to communities such as Talke and Audley.</p> <p>Our view on this matter has not changed.</p> <p>In addition, given the need to provide a new junction onto the A500, we also question its deliverability. As a substantial element of the site will be given over to logistics, this will involve considerable movement of heavy traffic and it is difficult to imagine what mitigation measures might be put in place with regard to junction 16 of the M6, nor indeed with regard to congestion on the already busy A500. This also applies to measures to mitigate the environmental impact of the development. In addition, further detail would be welcome about the 'emergency access onto Barthomley Road. How would this be controlled and what is meant by 'emergency access?'. In terms of deliverability, it is also unclear how the site might be accessed by sustainable travel, apart from buses in the absence of any mapped access for pedestrians or bicycles.</p> <p>We judge that this proposal risks rejection at Inspection for the reason we have outlined. If it is included, at the very least, this proposal needs much more detail concerning access and egress to the site and proposed mitigation measures.</p>

Consultee Family Name	Webb
Consultee Given Name	Daniel
Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p>In respect of the above I have the following comments as to why the proposed sites within the Audley Rural Parish are not viable, and please note this is a rural parish, which would not be the case anymore if any of the proposed sites are allowed!!</p> <p>AB2</p> <p>This site is now increased from the initial 69 acres, an increase despite of mass local opposition! How can this be justified? The proposed 80 hectare site is as big as the Audley and Bignall End and would have a huge impact on the local area. Apparently within the Local Plan the Borough Council have stated that they require are area the equivalent 20 hectares of strategic employment land, and there must be other sites within the borough that offer this, and so my question is why are they looking at 80 hectares here? Four times that which they state is required!! Furthermore what consideration has been given to the existing warehousing facilities within the local area, some of which is no doubt unoccupied. The development at AB 2 if allowed would surely mean some of the already built and occupied units would lost their tenants and people move and relocate to new premises, leaving current warehousing empty, potentially causing hardship for owners of those warehouses.</p> <p>Then we have to consider the access to the site and the mass increase in traffic that a site of that size would bring. Not all of the traffic heading to the site would be approaching it from the A500 and M6, there are many roads around the area, mostly country lanes and they are not equipped for any more traffic than currently uses them. I understand that the Borough Council would need assistance from Highways England, however this can be said of any Local Authority in the country and with the National Government currently stating that there is a £22 billion shortfall then assistance would not be forthcoming, especially given that this is an area that has been overlooked massively by the National Government and so our local authority cannot realistically believe that they would get some form of national assistance for roads and improvements that would be needed for such a massive project.</p> <p>Finally the decision to abandon HS2 will have had an impact on this as potential industry that would have considered relocating due to new and improved rail links is not happening any more.</p> <p>I would question the Councils decision making if they consider any of the above sites to be justifiable and all of them to be unsound with very little consideration given to the community and residents of Audley and Bignall End. Whilst I accept that there has to be a need for housing and industry they need to be built in areas that can cope with all that they bring with infrastructure already in place, the infrastructure is not something that can be added at a later date! At the start of my email I mentioned this is a Rural Parish, and that is what it should remain. The surrounding country side and the sites themselves are of benefit to the local ecology and as such is as valuable as any housing or warehousing would be.</p>

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Company / Organisation	United Utilities
Consultee Family Name	Leyssens

Consultee Given Name	Andrew
Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p>AB2 Land at Junction 16 of M6</p> <p>Within our initial assessment of sites at the First Draft stage of the local plan, UU identified a number of sites which are on the periphery of the area of operation of United Utilities, i.e., they are at a location which is in between the area operated by United Utilities and another water company. These sites are large sites where further clarity on the point of connection will be required to determine if the applicant will connect to infrastructure owned and operated by United Utilities or Severn Trent. We highlighted concerns in respect of Site AB2. It is imperative that site promoters ensure that the points of connection for wastewater and clean water supply are agreed and to ensure that any necessary upgrades to infrastructure are coordinated with the delivery of development. We request that this is addressed in your site-specific requirements. As a result, we request that you amend criterion 19 as follows:</p> <p>19. An allocation wide utilities masterplan being prepared for the site which details matters including foul, and surface water drainage, and public water supply. It may be necessary to co-ordinate the delivery of the development with the timing for delivery of appropriate infrastructure.</p> <p>We also suggest the following explanatory text:</p> <p>This site is located adjacent to the motorway, away from existing utilities and on the periphery of operation of different water and wastewater undertakers. As such, early dialogue is required to prepare a site wide utilities masterplan, which is critical to ensure a co-ordinated approach to the delivery of development with necessary utilities infrastructure.</p>

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	Nix
Consultee Given Name	Ruth
Q4 Part of document	Policy
Q4 Policy	AB2
Q5 Sound	No
Q6 Details	<p>I consider this part to be unsound (AB2) as the traffic levels are already high around Junction 16 near Audley. If there is a problem on the M6, traffic comes through Audley Village to avoid it already. This amount of warehousing will increase the traffic considerable. It would need a massive restructuring of the area around Junction 16. The amount of finance needed will not be forthcoming from Highways England due to shortfall in the national finances, during the end of the plan in 2040, which makes it unsound.</p> <p>There was an accident on the stretch of the A500 Friday 30th October 2024 (causing a fatality) near Audley- This caused chaos and traffic jams right back into Audley.</p> <p>The high growth strategy applied by Newcastle ULBC has no evidence to support it, therefore it is unsound. The amount of jobs created by this warehousing may or may not be correct, but will cause a lot more traffic, more residents, need for parking. We have little space to park in Audley now, and it is often 'jam packed' in the village, so it is unsound as there is no space for more car parks.</p> <p>The amount of warehousing required is said to be 22Ha of strategic employment, by NULBC. However, they are planning to allocate 80Ha at this site alone (AB2). We would also lose valuable greenbelt on the edge of our village, which is much needed for health and wellbeing, so environmentally it is not sound.</p> <p>The lanes near this site are very narrow and unsuitable for extra traffic, which this development would generate, even if there was better access from the A500/M6. Unsound due to traffic blockages, danger to local residents and pedestrians.</p>
Q7 Modification	To render the local plan sound, remove this large warehousing plan from it. There are nearby warehousing not being utilised.

Q6 Details	Re: Formal Objection to Proposed AB2 Site Allocation in the Local Plan

F.A.O: Planning Department

Dear Sir/Madam,

I am writing to submit my formal objection to the proposed industrial development at site AB2, located near Junction 16 of the M6. This site is currently designated as Greenbelt land and its release for industrial development is both unjustified and undeliverable, rendering the proposal unsound. The failure to adequately demonstrate the need for this scale of development, alongside concerns about the deliverability of necessary infrastructure improvements, further undermines the viability of the proposal.

1 High Growth Strategy: Lack of Justification

Newcastle-under-Lyme Borough Council (NuLBC) has adopted a high growth strategy to justify significant land allocations, including the AB2 site. However, there is no robust evidence to support the assumption that such growth will materialise. The local economy does not show the kind of expansion that would warrant the allocation of 80 hectares of land for industrial use, particularly in an area already well-served by existing and upcoming developments in nearby Stoke-on-Trent and Cheshire East. The assumption that the borough will require such vast strategic employment land is neither justified nor proportionate to the actual needs of the community. Without solid evidence of this projected growth, the strategy is unsound.

1 Oversupply of Employment Land at AB2

The council's Local Plan states that 22 hectares of strategic employment land are required to meet future needs, yet 80 hectares are being allocated at the AB2 site alone. This gross oversupply is not only excessive but also lacks justification. Such an inflated allocation of land cannot be deemed sound when it far exceeds the strategic employment needs outlined by the council itself. Moreover, with other developments underway in the region, there is no clear or pressing need to release Greenbelt land on this scale. The failure to balance supply with actual demand makes this proposal unjustified and unsound.

1 Unsustainable Traffic and Infrastructure Impact

The current infrastructure surrounding the AB2 site, particularly at Junction 16 of the M6, is already strained by high levels of traffic. The proposed development would exacerbate congestion, particularly on local roads, which are ill-equipped to handle a significant increase in heavy goods vehicles (HGVs). NuLBC has not provided any evidence that the necessary funding for major upgrades to Junction 16 will be secured, especially in light of the national £22 billion shortfall in infrastructure finances. It is highly unlikely that the required investment from Highways England will be delivered before the end of the local plan period (2040), meaning that the infrastructure improvements needed to support this development are not deliverable. As a result, the proposal is ineffective and therefore unsound.

1 Greenbelt Release: Lack of Exceptional Circumstances

The NPPF stipulates that Greenbelt land should only be released in 'exceptional circumstances', a threshold that this proposal fails to meet. There is no evidence that releasing Greenbelt land for industrial use is necessary when there are alternative sites available both locally and regionally that are better suited to development. The Greenbelt serves an essential purpose in preventing urban sprawl, protecting the countryside, and preserving the rural character of villages like Audley. The absence of compelling reasons for Greenbelt release renders this proposal unjustified and in violation of the principles of sustainable development outlined in both the NPPF and local planning policy.

1 Inadequate Infrastructure and Deliverability Concerns

The infrastructure required to support this development—including roads, utilities, and public services—will not be in place within a reasonable timeframe. In addition to the lack of funding for essential road upgrades, the development will place unsustainable pressure on local services such as health care, education, and emergency services. The long timeline for delivering such infrastructure improvements, if they can be delivered at all, compromises the effectiveness of the entire development plan. This failure to ensure deliverability further underscores the unsoundness of the proposal.

1 Impact on Air Quality, Environment, and Local Amenity

Beyond the issues of justification and deliverability, the proposed development will cause irreparable damage to the environment and local community. The grasslands at the AB2 site play a crucial role in maintaining air quality by absorbing pollutants from the nearby M6 and A500 corridors. Their removal would increase the level of harmful emissions in the area, worsening air quality and posing health risks to local residents, particularly those most vulnerable, such as children and the elderly.

Additionally, the loss of wildlife habitats, the increase in light and noise pollution, and the disruption to local amenity spaces would significantly diminish the quality of life for residents in nearby villages. The lanes surrounding the proposed site—Park Lane, Moat Lane, and Barthomley Road—are frequently used by walkers, cyclists, and horse riders who will lose access to these cherished rural spaces. The rural identity and character of the area will be eroded, further contributing to the unsoundness of the plan, which does not take the long-term social and environmental consequences into account.

Conclusion: Unsound and Undeliverable Proposal

In conclusion, the proposed AB2 development is both unjustified and undeliverable. The inflated allocation of employment land, lack of evidence for high growth, insufficient infrastructure, and absence of exceptional circumstances for Greenbelt release render this proposal unsound. The negative impacts on traffic, air quality, wildlife, and local amenity make this development not only harmful to the community but also ineffective in achieving the strategic objectives of the local plan. I urge Newcastle-under-Lyme Borough Council to reconsider this development and retain the Greenbelt protections that are essential for preserving our rural environment and community well-being.

I trust that my concerns will be given due consideration during the Regulation 19 consultation and urge the council to reject the AB2 site allocation as part of the Local Plan.

Consultee Family Name	Riley
Consultee Given Name	Belinda
Q4 Part of document	Policy
Q4 Policy	AB2
Q5 Sound	No
Q6 Details	<p>The site AB2 is 80 hectares of greenbelt land removed for 22 hectares of required employment land needed. This increased size would need even more housing. The site has only transport links via the A500; there would be more congestion on this already busy road and more pollution & noise an increased CO2 & tyre pollution + extra traffic through our villages, Traffic levels are already high with long queues from Junction 16 to & from A500 (queues regularly back up onto M6 to get off at Junction 16)</p> <p>The area around AB2 is used by many people for walking, cycling & jogging and it will be dangerous with more cars going along the lanes to access the site when they can't get to it via the A500</p>
Q7 Modification	<p>I would suggest that AB2 is removed from the Local Plan</p> <p>There are already warehouses in Alsager (other side of A500) and these are still unoccupied so use these first. This area is greenbelt and should stay as greenbelt</p>
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	Slaney
Consultee Given Name	Sarah
Q4 Part of document	Policy
Q5 Legally compliant	No
Q5 Sound	No

Q6 Details	<p><u>1. LAND</u></p> <p>a) Originally Newcastle-u-Lyme B Council stated they needed 22 hectares of land adjacent to the Jct 16 of the M6 for warehouse/ employment development, which included a Lorry Park and Power Plant. This has now been increased to 80 hectares! The Council have not given any <u>sound</u> justification for this increase.</p> <p>b) N-U-L B Council have not shown any exceptional circumstances for the removal of 22 (or even 80) hectares of land from the Green Belt when there are alternatives available:- PARKHOUSE INDUSTRIAL SITE - 3x empty warehouses. Not West Bank vacated site. International Decorative Surfaces premises to be vacated CHATTERLEY VALLEY SITE - 2x COMPANIES have pulled out of this site. JCB are vacating their warehouse adjacent to this site RADWAY GREEN - Various empty warehouses. AREAS- BW2+BW3 AREA TK30 has better road access to A500 and A34</p> <p>N-U-L B. Council have not shown an attempt to use up existing Brown Field sites before using Green Belt land so not a justified use of Green Belt land - Legally compliant?</p> <p><u>2. JUNCTION 16 - ACCESS + EMERGENCY ACCESS</u></p> <p>a) This junction is inadequate for such a large site with daily traffic jams of a mile without any accidents. This junction of the M6 and the A500 are notorious black spots for the traffic accidents. The government have recently advised that there will be no more available funds for road improvement making an access point here unrealistic and so not a sound proposition.</p> <p>b) The proposition of emergency access in Phase 1 onto Barthomley Road is not sound. This is a single track lane only access by other single track lanes</p> <p><u>3. Employment</u></p> <p>N-U-L B Councils statement that this site will bring employment to the area is not backed up by any evidence. This numbers stated cannot be proven as they do not know who or what companies will be on this site. This area has only 2% unemployment so there is no justification for such a site to be built. Low paid employment will not come from Audley or Bignall End or Newcastle 5 miles away. It is more likely to attract from Cheshire East. High paid employment can come from anywhere as its sited on the M6</p> <p><u>4. TRANSPORT / BUS SERVICE TO THE SITE</u></p> <p>N-U-L B Council suggested that a Bus Service would be set up to service the site. A bus service to this site is not deliverable or even sustainable in the long term. The council quoted 10% of the workforce would use it. However the figure is more likely to be 3% due to the fact that there are no other transport connections (nearest station is 5 miles away and local bus service is heavily subsidised and virtually non-existent) A Bus Service would also have to run 24 hours a day to be useful for shift work and this would not be cost effective so is not a viable solution.</p> <p>N-U-L B Council suggested a cycle park. This is not viable. Access routes are single track lanes making this dangerous - especially at night as these lanes are not lit so not viable for night shift workers. The cost would be prohibitive to built cycle lanes as the site is miles from anywhere - except from Audley + Bignall End!</p> <p><u>5. LORRY PARK</u></p> <p>N-U-L B Council suggested to offset the huge cots of the Lorry Park they would charge workers for the car park. Surely this is unsustainable and not a sound proposition.</p> <p><u>6. LAND USE + POLLUTION</u></p> <p>a) N-U-L B Council have stated that the land is not used. This is not proven as cattle graze on the majority of this land. I don't believe that the Council have done the <u>required</u> Agricultural Grading of this land. There is no proof that this land should be removed from farming use.</p> <p>b) Biodiversity Net Gain of 10% - NUL B Council have not addressed how this would be achieved when they are removing existing Agricultural Land from the Green Belt for (unnecessary) employment land.</p> <p>c) NUL B Council have made sweeping statements without facts or factual proposals about new footpaths (footpaths exist and are used), enhancement of native trees (a statement which doesn't even make sense!) and woodland (which again already exists).</p> <p><u>7. POLLUTION</u></p> <p>a) This proposed site will bring 24 hours of noise, light and air pollution to the people of Audley / Bignall End and the natural environment. N-U-L B Council suggest that the site will be landscaped and invisible but without any structure to how this will be done. The topography of the area would make it impossible. Audley + Bignall End are built on high land and hills. The AB2 site is on low lying land which can be seen from above be everyone in both of these villages.</p> <p>b) The land allocated for AB2 is surely there to protect teh villages of Audley & Bignall End from the existing Air, Noise + Light pollution from both the M6 and the A500, which are both only 1 mile away on the North and West sides of the villages. The removal of this Green Belt Land for the building of warehousing would vastly increase all 3 types of pollution, from the site itself and from the increase in local traffic, to the people of these villages. Surely this cannot be right!</p>

Title	Policy AB2 'Land at Junction 16 of the M6'

Consultee Family Name	Moreau
Consultee Given Name	Jan
Q4 Part of document	Policy
Q4 Policy	AB2
Q5 Sound	No
Q6 Details	<p>I wish to register my objection to this site being included in NULBC Final Draft Local Plan for the following reasons:-</p> <p>The proposed site is 80 hectares of good quality, agricultural land in the green belt and NULBC are proposing to take the whole site out of the green belt although they only have a need for just 22 hectares of employment land. This in itself makes this unjustified and therefore unsound.</p> <p>The site is said to be only accessible by the A500, although there are two emergency exits proposed, one off Park Lane and the other off Barthomley Road. The country lanes adjoining this site are single track, high hedged, winding lanes which are utilised for recreational use and connect to the various PROWs in the area – they are used by walkers, cyclists, dog walkers, the local walking club and the local running club and horse riders. There are businesses in the area that also utilise these lanes – a dog kennels and several livery yards. See Photos showing our country lanes (see attachment)</p> <p>This site is enormous – nearby villages of Audley and Bignall End would fit into the footprint. St Modwen, the developer in their Regulation 18 response stated that there would be several warehouses, ranging from 300K sq ft to one of 1 M sq ft with heights up to 24 m (approx. 79 ft) just at the eaves 24 m this is higher than many of our native trees - Ash takes 20 yrs to reach 18 metres, an Oak takes 20 yrs to reach 18 m and an Ash 25 yrs to reach 12 m. It would be an eyesore from many miles around and please bear in mind that many of the Audley Parish villages are actually on higher ground and actually look down upon the proposed site.</p> <p>The Green belt “NPPF Paragraph 142. The government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence. This ensures that while limited development is allowed, the strategic function of Green Belts as a buffer against urban sprawl and a space for recreation and environmental preservation is maintained.” There have been several reports written determining whether AB2 is strong, moderate or weak for green belt principles and I believe it to be “strong”. The recent ARUP Green Belt Site report (16th July 2024) recommended the site be excluded because “Development would however represent a significant encroachment into the countryside and therefore removal of the site from the Green Belt could harm the overall function and integrity of the Green Belt” (pages 28 F2 and F4)” In a previous report commissioned by Staffordshire County Council the site was found to have made a strong contribution to the greenbelt, yet NULBC have not taken this into consideration and not included it in their evidence. Why might this be? Predetermination?</p> <p>Warehousing There is no evidence that we require more warehousing in the area. I support Audley Community Action Group who are challenging the inclusion of this site and a recent quick survey showed the following table of warehouses on the market for lease in the surrounding area.</p> <p>This doesn't take into account those that are being built just down the road at Chatterley Valley off Peacocks Hay Road/the A34 and other warehousing sites in the planning process in nearby Crewe (as detailed in Audley Community Action Group in their response).</p> <p>Why was AB2 chosen over other contender sites in the Borough which are more sustainable already having access to the road system and are in industrial areas rather than open country side? Why was TK30 not chosen or the two sites at High Carr BW2 AND BW3 which are in an industrialised area already and are in close proximity to the Chatterley Valley site and have easy access to the A34.</p> <p>Increase in traffic St Modwen say that the site will employ around 3000 people and there will be a high quality resting area with amenities for 100 HGVs and then there will be all the delivery & service vehicles to the site on a 24/7 basis all year round. An enormous increase in traffic on our local roads.</p> <p>Junction 16 is already a hot spot for accidents and there is traffic congestion from both directions on the A500 on a daily basis, not only at peak periods. These queues regularly back up way passed the Alsager Road bridge which is over 1.5 miles away from J16 itself. See attached Photo of this regular occurrence and info relating to an accident which happened just last night 4th October 2024</p> <p>Audley Community Action Group carried out a traffic survey on the B5500 on a few days wc 20th September 2024 and the traffic counted going through the mini roundabout on Nantwich Road/Alsager Road was between 1350-1750 vehicles over a 2 hr period on three days – these were normal days with no reported accidents. Anyhow, going back to AB2 The majority of this site's potential employees will travel by car to reach the site vastly increasing the amount of traffic not only on the A500 and M6 motorway but through our villages – using it as a “rat run” to save queuing on the A500 – they will use our narrow country roads and lanes, endangering our residents and wrecking our roads which are already full of pot holes and damaged kerbs from HGVs trying to navigate tiny roundabouts.</p> <p>Who will “police” the proposed emergency exits which come out directly on to single track, winding, high hedged country lanes which are used by walkers, cyclists and horse riders on a daily basis. These lanes have no footpaths and no lighting and form part of the Two Saints Way, an ancient route from Lichfield to Chester. The lanes also form part of the PROWs that cross AB2,. This site is not sustainable if people are travelling in by car or motorbike. St Modwen say that they will fund a bus service for a number of years but is there any evidence that this is going to happen and why do St Modwen say that 10% of motorists will give up their cars to choose travelling by bus. I don't think so, would you walk to a bus station to catch a bus that will probably take you 3x as long to get to work. Audley Community Action Group has employed a traffic expert who says that a more</p>

	<p>realistic figure for travelling by bus would be 3% of the workforce so where is St Modwen's evidence. It is unrealistic, therefore, unjustified and unsound. Audley's own reduced bus service is currently heavily subsidised and I expect many bus services are also subsidised so after the honeymoon period, St Modwen & NULBC reckon that by actually charging employees to park on AB2 will subsidise the bus service but how do they work that out – if employees refuse to pay the charges and go on the bus in droves, then how will that work?</p> <p>Alternatively, St Modwen suggest cycling to work and say they will improve the cycle pathways. They have not taken into consideration the topography of our area – will cyclists really want to negotiate the likes of Bignall Hill on B5500 and Alsagers Bank after a 12 hr. warehouse shift nor have they considered the reality of improving the B5500 for cyclists. The road is hardly wide enough for footpaths in some lengths, let alone have room for cycle ways. Then we come to the matter of increased traffic and increased pollution be it CO2 emissions or tyre particulates - tyres produce 36 milligrams of particles each kilometre, 1,850 times higher than the 0.02 mg/km average from exhausts https://www.theguardian.com/environment/2022/jun/03/car-tyres-produce-moreparticle-pollution-than-exhausts-tests-show</p> <p>Are you aware that Audley has a high respiratory rate – in 2023, we were 10th in the UK – this year we are 6th highest. See Dr Richard Page, Audley GP responses from the last consultation, Regulation 18 – Appendix "A" attached. Dr Page will also be providing his own response to this consultation. What affect will this have on the residents of Audley Parish – if this site goes ahead, it will remove the carbon catching green fields which probably protect us to some degree from pollution emanating from the adjoining M6 and A500 and replace it with increased pollutants for us all to breathe in. Funding for the alterations to Junction 16 St Modwen's previous response for Regulation 18 was based on the assumption that HS2 would go ahead and money would be made available from the Government for the necessary alterations to Junction 16. HS2 is now defunct and these funds have been allocated elsewhere so where is the funding coming from for this – without funding this is another reason why this site is unrealistic, unjustified and therefore not sound.</p>
Q7 Modification	<p>The Final Local Plan is based on a High Growth Scenario yet there is no justification of why this might be.</p> <p>The last census showed a reduction in population, our birth rate is lower than our death rate, our unemployment is low – Newcastle under Lyme does not follow the rest of the UK so I feel we do have exceptional circumstances to justify a reduction in NULBC housing targets but they have not listened. Can you also refer to Pages 4 & 9 of Appendix B which was my response to Regulation 18 for more figures to back this point up.</p> <p>I honestly believe this Local Plan is not sound – the housing figures are still too high. The previous consultation (Regulation 18) didn't follow the Gunning Principles – see Audley Rural Parish response and this consultation has had various set-backs including mis communication with the public – we were initially informed that email submissions would not be allowed but then after several weeks, we were informed that emails were allowed. See official notice from NULBC below</p> <p>The Portal for both consultations has caused much frustration amongst residents. There were complaints about the Portal during Regulation 18 yet the same problems of not being able to access it, not being able to add comments continues. NULBC did not listen to residents and improve the Portal At the Audley consultation event for Regulation 18, Cllr McEmeny was heard to say that this AB2 WILL be going ahead – this is gross predetermination. For Regulation 19 several evidential reports were not made available in time for either the Special meeting of the Economy & Place Scrutiny Committee on 11th July 2024 nor the Full Council Meeting on 24th July 2024 – certain councillors actually lied at the Full Council and said that they were available – they were not! We have the proof that they weren't – see below</p> <p>How do councillors make crucial decisions as to whether the draft Local Plan should be progressed without having the opportunity to view and digest information? In any event, in order to make this Final Local Plan sound you need to remove the following sites from this the Final Local Plan AB2/AB2a AB12, AB15 & AB33</p>
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)
Q9 Hearing reasons	Although I do not wish to speak at the public hearing – I would like to be in the public gallery if at all possible. I am unsure whether this will be possible.

Consultee Family Name	Gilmour
Consultee Given Name	John
Q4 Part of document	Policy
Q4 Policy	AB2
Q5 Sound	No
Q6 Details	<p>Policy: AB2 :</p> <p>This is not justified losing 80HA of greenbelt agricultural farmed land, when only 22HA required on this local plan, even this is an over estimated amount, when we have so many empty warehouses already</p>

	<p>in this area, large warehousing over 300,000 sq ft, with others in the surrounding boroughs already getting built and others have planning permission. Junction 16 has many holdups everyday already and needs extensive upgrading now. There has been many units built for HS2 that has now been cancelled, therefore too many units/warehouses in this area. No upgrade of junction 16, makes this plan unsound.</p> <p>There are the country lanes around Audley Parish that are used as a cut through to avoid junction 16. On B5500, this needs addressing, and measures put in place, not by putting up signs as is suggested in the Local Plan, it needs to have something to stop the large vehicles on this rat run. The roads can't be widened. A mini roundabout was added to this road but it hasn't deterred these vehicles at all and have damaged the roundabout roads extensively.</p> <p>This has not been thought through and is in justified and completely unsound.</p>

Q4 Part of document	Policy
Q4 Policy	AB2
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>2. Infrastructure and Transport Issues</p> <p>The plan lacks a thorough consideration of infrastructure, particularly transport. Public transport provisions are unclear, and existing cuts to bus services, especially in Audley, make the council's assumption of a 10% uptake unsound. Studies suggest a 3% uptake is more realistic, especially with no train stations nearby. Furthermore, the transport modelling for site AB2 doesn't appear to align with M6 Junction 16 plans, and consultation with Highways England and neighbouring authorities appears insufficient.</p> <p>4. AB2 Green Belt and Brownfield Land</p> <p>The plan allocates 80 hectares to site AB2, exceeding the 22 hectares required by 58 hectares. Using this Green Belt land, while 22 hectares of brownfield sites are available, is unjustified and inflates housing needs.</p> <p>5. Uncertainty with HS2 Funding and St Modwen's Involvement Assumptions about HS2 funding for the M6 are speculative, and the council is relying on technical support which is based upon unconfirmed assumptions provided by St Modwen. I was also contacted by St Modwen, raising concerns about the integrity of the process and whether proper planning regulations are being followed.</p> <p>6. Lack of Employment Site Development</p>

	The exclusion of the Peacocks Hay development is concerning, especially as no employment sites have been delivered, which undermines the Borough's economic sustainability. This site would need to have consideration taken towards the housing needs.

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	Hopkins
Consultee Given Name	Sheila
Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p>I am responding to the following site plans.</p> <p>Plan: AB2 I OBJECT TO THIS PLAN. This junction is already at capacity & can't cope with the sheer weight of traffic. If a massive warehouse is built, which incidentally is on good farming greenbelt land providing milk/beef etc and giving jobs to locals, the environmental impact will be catastrophic. We should be producing food IN this country rather than creating air miles by importing food/drink/fuel etc. It is already a bottle neck at Junction 16, M6 & A500, causing many accidents. This results in vehicles, many of which are HGV's, causing them to congest country lanes around Audley & surrounding villages. These narrow roads are not built to withstand this amount of heavy traffic. The proposed Emergency exits onto Park Lane & Barthomley Road are very narrow one car width lanes without footpaths or street lighting. These lanes could equally be used by employees of the proposed factory to avoid queuing on the A500 & making it a 'ratrun' adding to noise pollution.</p> <p>Plan: AB12 I OBJECT TO THIS PLAN. The access point to this site is proposed to be on Diglake Street. Have any of the planners ever been up this street? It is lined with terraced houses with all the residents parking on both sides of the road which leaves only room for one vehicle to navigate the street at a time. The idea of having a carpark for these residents is ludicrous, is someone seriously asking them to park away from their house & bring shopping/carry children etc back to their house so these new homes can have the luxury of parking on their drive? If any of the residents are disabled will they expected to be wheelchaired back from the carpark in the rain/ice? There will be an additional 250 extra cars pulling out of/into Diglake Street & Albert Street via Ravens Lane which is the main Nursery & Primary School route. There is a children's play area at the end of Albert Street which would be become dangerous</p>

	<p>with the proposed amount of traffic passing it. . It is already a dangerous junction without all this extra traffic. The Site AB12 is prime agricultural valued greenbelt land & should remain as this, we need to be using this land to feed our country & not polluting the atmosphere by importing food stuffs. If this land is developed it will have a high potential to flood making it unsound. The flood water run off will end up in Brierly Brook with the potential of flooding the surrounding agricultural fields. This land belongs to Staffordshire County Council, it is currently in use & being farmed.</p> <p>Plan: AB33. I OBJECT TO THIS PLAN. The proposal to build 55 houses on this site is unviable firstly because of the access onto Park Lane which is as it says is a 'lane' so very narrow and single track. Two HGV's would be unable to pass anywhere & there's limited passing places for cars. There is no footpath so walking down there when this site is built would be impossible as it would be too dangerous. The proposed field is a flood area, so building on it will push the water on to neighbouring properties causing them to flood.</p>

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	Thorrington Wright
Consultee Given Name	Teresa
Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p>Re: Policy AB2 Land at Junction 16 of M6</p> <p>When considering the 1 million square metres allocated for a proposed warehouse site, our objections are several;</p> <ul style="list-style-type: none"> • The access is said to be from a new road leading from the A500 just next to the roundabout at Junction 16. However, as local residents are aware, this section of road is more often than not, at a standstill due to traffic volume at most times of the day. At peak times or if there are accidents or breakdowns on the M6, A500 or other adjoining roads, this then becomes lengthy, and this is not uncommon. This will inevitably lead to extra pollution around this area, at a time when most cities are considering traffic reducing measures to reduce pollution due to the affects on health and wellbeing and on local wildlife. Inevitably there will be increased village traffic from local workers travelling from other local villages, and cars trying to avoid being caught up in heavy or stationary traffic at the main junction 16. • It is said to be likely to create jobs for the area, but this would seem to be flawed logic when taking into account that large businesses such as Amazon, are reducing their work forces due to ever increasing mechanisation and the use of artificial intelligence. Also there are still empty warehouses on developments nearby, such as Radway Green, Alsager and Crewe. • Green belt land should not be used and impacted for such a large structure, with the consequences of loss of habitat for wildlife, including buzzards, owls, bats, badgers & foxes which are all regular inhabitants of our locality, to name just a few. The 'Staffordshire wildlife' report submitted on behalf of the local council, reveals this impact in much more detail. • The impact of loss of green spaces, wildlife habitat and the natural environment on our wellbeing and mental health, are all likely to be significant for Audley residents and visitors, who have grown up or even moved here because of these aspects. The green belt land and environment is also there for visitors to our local community, who live in the nearby towns and cities so that they may also enjoy and benefit from the rich and diverse habitat

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	Ford
Consultee Given Name	Linda
Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p>Policy AB2 'Land at Junction 16 of the M6'</p> <p>The site extends to circa 80 hectares and is allocated for uses including 22 hectares (circa 220,000 sqm of floorspace) of employment land. Removing 80 ha of land from the green belt for 22 ha of employment land cannot be justified.</p> <p>There are alternative sites within the Borough and surrounding area as can be evidenced from the table below which was produced late September 2024. All of these units arc within a 10 mile radius of Audley. We are aware Chatterley Valley has been incorporated into the employment land provision but Radway Green should be seriously considered as a viable alternative to AB2.</p>

(table available in attachment)

2. Safe and convenient access into the development (including for Heavy Goods Vehicles) via a new junction established from the A500 with emergency access via Barthomley Road, both to be delivered in Phase 1 of the development. The developer St. Modwen Developments Limited, produced a report in January 2022 on 'Comments on Strategic Employment Land /issues' to Newcastle Under Lyme Council and

employed the services of PJA based in Birmingham for their professional analysis. We have extracted comments which are relevant to the potential emergency access issues. 2.3.2 Park Lane and Moat Lane at the southern boundary of the site are minor rural lanes listed as advisory cycle routes in SCC's cycle maps. As indicated in Figure 2.2 the advisory routes continue to the east through Audley and Bignall End and to the west through Barthomley.

3.4.1 In addition to the vehicular access from A16 J16, **two emergency vehicle access points would be provided from Park Lane and Moat Lane on the eastern and southern boundaries of the site respectively. Whilst these are not required from a policy or operational point of view, it is considered prudent to retain alternative temporary access arrangement**, in the unlikely event that the primary access be wholly blocked and an emergency occurs on site, which necessitates access for the emergency services 6.1.5 Park Lane/Moat Lane - 'A'quiet lane' treatment, offering improved surfacing and signage to encourage cycle usage along a very lightly trafficked route.

Please Note: At some point between this report being submitted and the final draft Local Plan the emergency access route has been changed from **Moat Lane to Barthomley Road** without any explanation.

The issues of concern to us with this emergency access are that:

1. Given the highlighted section above as provided to NUL by St Modwen's the emergency accesses are not required from a policy or operational point of view yet it seems that two are still required.
2. All local roads leading to the access are minor/quiet rural lanes listed as advisory cycle routes, they also are used recreationally for horse riding, dog walking, and both Audley Striders Walking and Running Club use these lanes regularly.
3. Barthomley Road emergency access is to be developed in Phase 1, this leads to really worrying concerns as the main access to AB2 from the A500 will take a considerable length of time to build, yet the local access will not require the same level of development so it will become the likely first access into the site. Will this mean that all the heavy machinery will be using this access as it will seem incredible if the developer waits until the main access is available and lose precious time and money in the process.
4. How is the access going to be managed so it is not misused? There has not been anything documented as to how it will be implemented. Any delays or blockages on the A500 could send vehicles to use this access as an alternative route.
5. The lanes are single track with a few passing places and there are some blind bends. Locals on Barthomley Road have limited access to their driveways and visibility is poor for some of them.

(Diagram available in attachment)

3. Provision for secure, high quality Heavy Goods Vehicle lorry parking with ancillary welfare and amenity facilities of an appropriate scale to serve the site. The management and operation arrangements for the lorry park provision to be agreed with National Highways in consultation with Staffordshire County Council

13.13 The allocation of the site would result in a loss of a lay-by by the A500. Consequently, secure and high-quality HGV parking should be provided as a replacement on the site. This should include an element of free short stay parking for all HGV vehicles agreed following appropriate engagement with Staffordshire County Council and National Highways.

Newcastle-under-Lyme Strategic Employment Site Assessment Report (2024) Evidence Base

4 Review of Local Plan 2020 - 2040 Public Consultation

4.16 This includes a 200-space lorry park to take vehicles off the A500. This is supported by the Road Haulage Association. Currently the A500 has the capacity in its lay-bys to cater for approximately 20 HGV lorries. If the

lorry park goes ahead then this will increase the flow of HGV's ten fold and the only thing it will have achieved is to create an extra traffic lane where the lay-by once stood and encourage lots more lorries to come to Audley via the A500. This will have a knock-on effect of increasing air pollution, noise pollution and adding more traffic to an already very busy road. There are two service stations either side of Junction 16 in a North and South direction. Keele is less than 9 miles away and Sandbach is 8 miles away. Both have free short stay parking for HGV vehicles.

13. Implementation of an agreed comprehensive travel plan incorporating measures to support travel to / from the development, particularly by sustainable modes. This should implement initiatives to support sustainable travel into the site, to include cycle links into the development with suitable cycle parking / amenities, bus routes and demand responsive travel schemes to support workers travelling to / from the site. The Travel Plan should consider routes connecting into Newcastle-under-Lyme, Stoke-on-Trent and Cheshire East

Supporting Information

13.14 A comprehensive travel plan will be required for the site. The travel plan should consider bus / demand services on the site to cater for shift patterns. The travel plan should establish targets, linked to the outcomes of a transport assessment and monitored via traffic counts and surveys. The travel plan should also consider initiatives including charging for car parking on site to fund, through revenue raised, bus services in the medium to longer term.

. Extracts from the Strategic Transport Assessment: 4.6 Site AB2 is located on a dual carriageway with currently no footpath or nearby bus stop, therefore, no public transport was accessible within the catchment times. It should be noted that the developer has indicated that, following conversations with local bus operators and Staffordshire County Council, the development of this site would include a funded bus route to improve the public transport provision to the area and the site.

4.6.2 Site AB2 has poor accessibility scores for both walking and cycling.

Extract from Newcastle-under-Lyme Borough Issues and Strategic Options Paper (2021):

Issues:

- . The workforce is not within immediate proximity, and the site is removed from current public transport routes and local service centres, which could necessitate the creation of Sustainable Travel Plans.
- . The loss or potential moving of a lay-by to enable access to the site could be problematic indicating potential issues with site access and traffic flow.
- . An increase in HGV and personal vehicle traffic is anticipated, which could lead to potential congestion and air pollution in the area.
- . The site's strategic location on the M6 provides good accessibility to a large proportion of the UK's population and key markets, but this also means that the impact on the transport network needs careful consideration.

8.6.1.1 Model Identified Mitigations

The final selection of mitigation measures is as follows, . AB2 - Bus provision connecting employees within Stoke-on-Trent, Newcastle-under-Lyme and Crewe with AB2 employment. It is assumed the service is timed to meet the needs of any shift patterns and enable some connection with other existing public transport services. This is expected to be a replacement for 10% of car trips originating in nearby zones that could use this and other existing public transport services to access AB2 within 1 hour.

9.1 Summary

Accessibility Data Analysis

- . All strategic sites show an accessibility extent that is focussed towards The Potteries
- . MG Junction 16 site has poor public transport connectivity

Existing traffic conditions on the strategic road network: . M16 J16 - Observed data shows traffic congestion along the 4500 eastbound approach with decreased speeds (0-10mph AM, 10-0mph PM),

Newcastle-under-Lyme Strategic Employment Site Assessment Report (2023) Evidence Base

2. Land at J16 of the M6 (ref: AB2): There is a lack of public transport serving the site, which could limit access for employees without private vehicles. Amenities and Workforce: The site's location, while excellent for logistics due to proximity to the M6, may lack local amenities and have issues related to the availability of local workforce. Mitigation Measures: The developer, St Modwen Developments, is working on mitigation measures for the identified transport issues, including improving access to the business park.

Appendix B - Steering Group Minutes

Subject of meeting: Newcastle-under-Lyme Local Plan - Strategic Transport Assessment

AB2: ' PG: Concerned about baseline public transport access . PT Agreed. Needs access by sustainable means. . PG: **Where developers agree to fund an enhanced bus service, there is a risk of it being discontinued once the funding period concludes leaving a site with no public transport access . JK: Mitigation is needed for J16 sites. We need to understand how the buses will operate outside of working hours. Operators need to be willing to run those and understand what they are going to do with the vehicles for the rest of the day.**

To summarise it is clear access issues are the prevalent theme given the location in such close proximity to the M6 and the potential to cause traffic delays at Junction 16 and the A500. Lack of public transport and other means of accessing the site apart from vehicles. It has been reported that AB2 could create up to 3000 jobs, although the figure has not been substantiated. Given that only buses could provide a public service to the site (no nearby rail station), would they invest in creating a new bus route until a demand has been identified? What about shift workers, would they provide a night time service? Would employees be happy to pay car parking charges at their place of work so the bus provision can be subsidised which has been suggested and noted in this report? What about the points raised above at the Steering Group meeting highlighted in bold.

Another issue has to be the increase in traffic if AB2 is built. Currently the local "Protect Audley Parish Greenbelt" group are carrying out traffic surveys on the A500 and roads leading into the village as during peak times u/e see a massive increase in road users. These figures will be made available in their submission to the Planning Inspector but we know from being local how busy the roads are even though they are 'B' roads. With the impending building of new housing in Audley as well the village will not be able to cope. The infrastructure is already at breaking point with schools, dentists, doctors etc and there has been no mitigation for improvement that we are aware of in Audley. Audley a/so has a higher rate than the national average of breathing ailments and the increase in air pollution from CO2 and tyre particulate pollution as well as noise pollution.

IN CONCLUSION

- There are other alternative sites to AB2 as listed in the chart on Pg 1 that could be considered as alternative employment land for 'Big Box' developments within a 10 mile radius of Audley.
- A huge lorry park will only increase HGV's on the 4500, that is without consideration for the vehicles that will be employed by AB2. The 4500 at Audley is already a very busy network with regular hold-ups leading up to the motorway, not only at peak times.
- The access to the site from the A500 will be a huge undertaking and disrupt traffic flows whilst under construction. It will likely impact the slip road off J16 on the MG and the roundabout.
- Increase in vehicles in the area can only have a detrimental affect on people living in Audley, both for ease of access into the village and air and noise pollution and will certainly increase the carbon footprint.
- Emergency accesses from Park Lane and Barthomley Road are likely to be used in the event of blockages on the A500. They might also be used by contractors to start work on the site with heavy machinery as there is every likelihood the A500 entrance will take a long time to complete. These are quiet country single track lanes not designed for large vehicles or an increase in traffic. Local people on Barthomley Road already have access issues. A recent planning application 'A824' for new housing on Barthomley Road was rejected because "Barthomley Road is a single lane and could present access issues to the southern dwellings". These lanes are used by local people for recreational purposes.

	<p>- Accessibility to the site is poor in terms of public transport, cycling or walking.</p> <p>- Removing agricultural land and green spaces which cannot be returned will affect the wildlife, will increase our carbon footprint, will be a blight on the countryside. There are in the areas surrounding AB2 a massive amount of industrial units and warehouses, one former local MP was quoted as saying he did not want his area to become known as 'the capital of warehouses'. They can be seen all around from any high ground like the Wedgewood Monument, or Apedale Country Park, JCB has a big presence too. We understand the need for employment land but there are plenty out there lying empty and unused</p> <p>- PLEASE REMOVE AB2 FROM THE LOCAL PLAN AS IT IS NOT SOUND</p>
Q7 Modification	PLEASE REMOVE AB2 FROM THE LOCAL PLAN AS IT IS NOT SOUND

The economic forecast identifies jobs growth of approximately 237 per annum over the plan period. To meet projected growth in the Borough there is a need to provide for a minimum of 63 hectares of employment land. The Local Plan allocates strategic sites AB2 (Land at Junction 16) and KL15 (Land at Barkers Wood, Keele) to provide Etc .</p> <p><i>The area required for AB2/AB2A is therefore over and above what is required for the area by a significant amount and is therefore not required (see other notes on sites and employment/ transport in more detail below below.)</i></p> <p>Related Documents Sustainability Appraisal (Lepus Consulting, 2024) Habitats Regulations Assessment (Lepus Consulting, 2024) ED001 Housing and Economic Needs Assessment (Turleys, 2024) ED001 a & b Housing and Economic Needs Assessment (Turleys, 2020 & 2023 respectively) ED002 Strategic Employment Site Assessment Report (Aspinall Verdi, 2024) ED002a Strategic Employment Site Assessment Report (Aspinall Verdi, 2023) ED031 & ED032 Plan Strategy Topic Papers (NUL, 2024) ED033 Housing Supply and Delivery Position Statement (NUL, 2024)</p> <p><i>As Above note</i></p> <p>5.20 The Rural Service Centres in the Borough provide a range of essential services and facilities</p> <p><i>Ref AB2/AB2A & Land at J16 inc ref to other sites selections. The above statement justification has not been met. As the village of Audley and surrounding area is not commensurate with their role as a rural setting. See below other supporting documents comments as it is all green belt land.</i></p> <p>5.29 The Local Plan allocates strategic employment sites AB2 'Land adjoining corner of A500 and M6 Southbound' and KL15 'Land South of A525 between Keele University and Newcastle'. Development will come forward</p> <p><i>Note as below</i></p> <p>5.30 Development proposals should also seek to limit the loss of best and most versatile agricultural land in line with the policy approach set out in SE13 'Soil and Agricultural Land'</p>

Ref AB2/AB2A & Land at J16 including ref to other sites selections. The above statement does not really tally with SE13 and other supporting documents as it is all green belt land selected. The only difference between sites is location and geography/topography for development see other more detailed sections below to support this view

Policy PSD5: Green B & Related Documents ED008 Green Belt Study (Ove Arup, 2019, 2017, 2020, 2023, 2024) ED009 Green Belt Village Study (Ove Arup, 2024)

Ref AB2/AB2A & Land at J16 inc. ref to other sites selections The above statement does not really tally with PDS5/SE13 and related documents above and other supporting documents as it is all green belt land selected. The only difference between sites is location and geography/topography for development. Therefore unjustified. See other more detailed sections below to support this view

8 Employment

Policy 3. High quality sustainabletransport connections should be provided as part of employment proposals.

- 1 Development should address

EMP1: Employment.....

- 1 Proposals that support home working

Supporting Information 8.1 & 8.2

8.2 PDS1 choice of sites appear to just favour AB2/AB2 and dismiss details for other sites such as TK30 that could make it an attractive option long term with a bit of forward investment as this is unlikely to produce a good business base short term.

8.3 The plan recognises the importance of

8.3 Adequate lorry parking space could easily be provided with a bit of imaginative though at the other locations, through careful design

Supporting Information 8.8 Employment areas play an important role in ensuring that there is a range of employment land.....

Ref AB2/AB2A & Land at J16 inc. ref to other sites selections In relation to above sections in 8 Employment, points 4,6, Supporting Information 8.1-3 ,8.8. The employment sites and the amount of future housing are tied together. NUL has a small population growth, good employment levels, requires upskilling work force. Development sites need high quality well paid jobs, large warehousing does not provide this. If built then most workers will come by car from other areas. Housing will increase and most likely not be at the right affordability level for most workers to live locally. Most, projections are assumptions for growth and economic conditions have changed. Please see supporting information above in Employment and Transport below and also evidence documents responses. Selection not justified. Sites on Green belt such as TK30 are in an area already close by other industrial developments and indeed have in some cases been used for such Eg. mining, therefore providing a good reason for use as the land is already Greenbelt, Also such sites are much nearer existing conurbations for housing and employment, workforce. The only issue is it would take 3 minutes extra to get to J16 and the M6

8.2 PDS1 choice of sites appear to just favour AB2/AB2 and dismiss details for other sites such as TK30 that could make it an attractive option long term with a bit of forward investment as this is unlikely to produce a good business base short term.

8.3 Adequate lorry parking space could easily be provided with a bit of imaginative though at the other locations, through careful design

10 Infrastructure and Transport

Policy IN1: Infrastructure

- 1 The Council will support water and wastewater infrastructure investment.....

10.2 Funding for infrastructure will usually need to be secured from a range of sources, but developers will be expected to contribute.....

10.5 Policy IN1 establishes a framework.....

Ref AB2/AB2A & Land at J16 inc ref to other sites selections In relation to above sections in 10 Infrastructure and transport points 4. & 10.1, 10.2 & 10.5 . The employment sites and the amount of future housing are tied together. The proposed ideas on funding existing and new infrastructure are quite vague with regard to funding arrangements and S106 guarantees. They do not deliver certainty about infrastructure being built or even provided by who, when? Therefore possible great cost to taxpayer if the money is not sourced from the developer leading to a financial burden on the area at no cost to other parties. Also if these phased developments happen what hard guarantee is provided that services will match the required development in time?? In Evidence documents supporting Local plan Reg19 and supporting relevant evidence documents see comments here and below. Therefore AB2/AB2a cannot be justified on evidence currently supplied.

Policy IN2: Transport and Accessibility

- 1 New development should make appropriate provision for access a. Be located where travel can be minimised and are not car dependent, and the use of sustainable transport and active travel modes maximised.
- 2 Minimise
- 3 Provide the necessary infrastructure to support.....
- 4 Protect and, where possible,.....
- 5 Not cause unacceptable highway safety problems in relation to local traffic circulation and existing parking and servicing arrangements.
- 6 Not cause severe residual impacts on the road network.....
- 7 Not cause an unacceptable impact of development.....

- 8 All applications likely to generate significant travel movements should.....
- 9 Show how the proposed development.....
- 0 Encourage and enable sustainable and active travel alternatives
- 1 Travel Plans prepared for major developments will be required to monitor the effectiveness of the mitigation measures being delivered.

Supporting Information

10.8 IN2prioritises the need for sustainable transport infrastructure.....

10.9 Reducing the reliance on the private car

10.10. New developments that are predicted to have an adverse impact on the transport network will be expected to contribute towards capacity and mitigation measures. Proposals that require new projects will be required to make a proportionate financial contribution.

Policy IN2: a, b, c, d, e, f, g & 2 b,c,d + supporting information 10.8 & 10.9, 10, 10 AB2/AB2a will increase traffic, as do all options. The mitigation to reduce traffic (cars) would be to build them nearer the centres of population and provide cycle and bus routes. This would also help to reduce the carbon foot print. Traffic flow through the A500/M6 corridor can be controlled/reduced through exit junctions at Chatterley and TK30.

Traffic through the villages with AB2 would also massively contribute to traffic flow that already happens in local villages when vehicles take shortcut through them due to traffic problems. Also future development of housing to support AB2 would increase traffic flow too as would outside employment at AB2. Public transport is a problem (see below comments in evidence responses also, relating to viability and funding of transport services)

Policy AB2 'Land at Junction 16 of the M6'

Land atJunction16 of the M6 is allocated as a high-quality strategic employment site.

Policy AB2 Land at J16 of M6 1. To 15

We cannot be sure of the types of development but looking at other Motorway Junction sites they appear to be generally warehousing and not high tech sites (impact on types and value of jobs). Can a more up to date and detail estimate be given on proportion of industry to site?

J16 The new junction appears to be either a slip road or a simple traffic light (3 way). There is already congestion and the Highways no money. So there is a high likely hood of a temporary measure (traffic lights) and then many years later a multi- million pound scheme to address it at great cost to the tax payer (eg Talke to Eturia road widening and bridge scheme A500)

3 on open Greenbelt ??????

- 1 *Employment units to achieve at least BREEAM excellent standard. This is expected on any modern site*
- 2 *Contributions towards or direct provision of suitable on and off-site mitigation measures for any adverse impacts on theM6 (Junction16) or other parts of the highway network. These are not clearly defined as to the exact level of commitment to contribute guaranteed. Therefore a risk to long term viability of funding costs.*
- 3 *13 & 109Site Allocations, 13.14,13.15 :See comments in evidence sections for transport below also.*
- 4 *The development being subject to an agreed Employment and Skills Plan secured through a S.106 agreement, The development plan seems to favour only AB2/AB2A employment numbers model. That may not be achieved. How much of S106 money will be provided and through what plans?*
- 5 *Could not find these plans???*
- 6 *Does this mean we have an idea for a AB2 of a site layout and therefore idea of types of buildings and employment for public and independent inspection.*

20 AB2 will require significant water and gas services. It is not clear what damage this will do?

13.22 *Currently when reading have found little evidence of employment and skills plan that reflects the combined effects of AB2 and all other sites in Staffordshire on the employment number and any regular monitoring triggers*

- 1 Satisfactorily addressing the site allocation requirements set out in Policy SA1 (General Requirements),
- 2 Safe and convenient access,
- 3 Provision for secure, high quality Heavy Goods Vehicle.....
- 4 Provision
- 5 Employment units to achieve at least BREEAM excellent standard
- 6 Contributions towards or direct provision of suitable on and off-site mitigation measures for.....,
- 7 Appropriate measures to control impact of increased traffic and mitigation strategy, ...
- 8 The layout and development of the site will be landscape led, with roads, buildings or structures.....
- 9 Implementation of an agreed comprehensive travel plain

109Site Allocations.....

- 1 Provision of strategic.....
- 2 Provide for an integrated surface water drainage.....,
- 3 The development being subject to an agreed Employment and Skills Plan secured through a S.106 agreement,
- 4 The development including clear maintenance and management proposals to ensure the ongoing maintenance of the public realm and the environment of the site,
- 5 A utilities masterplan being prepared for the site
- 6 Development being located an appropriate distance.....

Supporting Information 13.13 The allocation of the site would result in a loss of a layby.....

13.14 A comprehensive travel plan.....

13.15 The travel plan should support sustainable travel.....

13.16 Development proposals for the site should enhance ...

13.17 A full

13.18 The height, scale and form of development

13.19 A high-quality landscape will provide

110Site Allocations.....

13.21 In line with policy CRE 1 (Climate Change).....

13.22 An employment and skills plan should be prepared.....

13.23 Allocation of a site establishes

Policy IN2: Transport and Accessibility

Ref AB2/AB2A & Land at J16 inc ref to other sites selections in relation to above sections in 10 Infrastructure and transport points 4. & 10.1, 10.2 & 10.5 . + above section 1 to 13.1 to 13.23 The employment sites and the amount of future housing are tied together. The proposed ideas on funding existing and new infrastructure are quite vague with regard to funding arrangements and S106 guarantees. They do not deliver certainty about infrastructure being built or even provided by who, when? Therefore possible great cost to taxpayer if the money is not sourced from the developer leading to a financial burden on the area at no cost to other parties. Also if these phased developments happen what hard guarantee is provided that services will match the required development in time?? In Evidence documents supporting Local plan Reg19 and supporting relevant evidence documents see comments here and below. Therefore AB2/AB2a. Cannot be justified on evidence currently supplied.

NOTES AND COMMENTS FROM SUPPORTING EVIDENCE DOCUMENTS IN REGARD TO AB2/AB2a Below

ED008 Green Belt Review

Green belt assessed list AB 2/2A excluded from list 2020

Tables D0 state site AB2 & AB2A does not contribute to Local plan for regeneration and is a strong contributor to the green belt

BW1 & 2 ,TK 30 has a stronger case for use?

Document shows AB2/2A was not considered as a local site a site, but retained as an option although well outside of the local employment area for travel?

Green belt site proforma P F1 to F5

Red site is greenfield

Grade 1,2,&3 agricultural land

Site is completely detached from the existing urban area / inset settlement – the site is approximately 800m away from the nearest inset settlement of Audley.

Access: Site is more than 800m away from a bus stop – 1km to Westfield Avenue bus stop or station

RECOMMENDATION: EXCLUDE SITE FROM PROCESS P F-5

Clear recommendation of removal of AB2 on this document. No services or local transport means

BW1 although appears excluded, is suitable according to other data in this table, Pf-30-31

Reason for rejection could be developer reluctance to prepare land rather than have an easy open green belt site with minimal problems.

Employment

Green belt assessment States p45 Could neighbouring authorities accommodate some of the identified needs?

Where is the evidence this has regularly occurred given the proposals for developments at Crewe, Alsager (Radway, Panitoni and other sites nearby). That will impact on the variability of AB2. With regard to the West Midlands Strategic Plan this would also include the impact from / on Stone and Stafford warehouse sites (see my section below, site assessment report section)

Related Documents: ED001 Housing and Economic Assessment (Turleys, 2024) ED001a Housing and Economic Needs Assessment (Turleys,2024) Employment and Skills Plan Framework (Staffordshire County Council, 2024)

Documents within the planning Reg19 document and related supporting evidence point out low unemployment, a need for apprentice jobs, but does not discriminate between types eg low end service with poor pay and retention or high value tech/ engineering jobs and good retention. This means we do not know what potential proportion of types we will have trained. AB2 has a high chance of providing only a few high value posts and many low value which may be a drain on services such as welfare due to low pay or high turnover of jobs due to poor job security. Also the plan does not appear mitigate for other sites and completion from outside sources. It is also highly dependent on mobility of the workforce. It is noted in ED011 Transport the bus and vehicle problems (see also related comments below). Also doc ED011 appears to show within the maps job figures max and min and table only the maximum number of jobs therefore a possible bias towards AB2 base on this assumption.

ED029 Site Assessment report

8.15. Alongside the identification of sites for housing, it is also important to consider employment requirements. As outlined earlier in the report, it has been necessary to look at employment sites on an opportunity basis. Alongside the site selection report, consultants Aspinall Verdi have considered the role of strategic employment sites in the borough (sites AB2, KL15 and TK30). Site AB2 has been considered through the site selection report to determine its suitability to help meet the Council's identified employment needs. Table 30 below, sets out the conclusions from the site selection assessment of site AB2:- Mitigation measures reqd P39

Table in Appedix: Planning & Sustainability table for AB2 table extract : The exceptional circumstances required to release this area of land from the Green Belt arise from the exceptional circumstances set out in general terms in the Plan Strategy Paper(s). The strategic employment site at Junction 16 of the M6 (currently Green Belt) provides a sub-regional logistics focused employment park to accommodate employment development to meet a sub-regionally identified logistics need and provide for alternative HGV parking, in line with evidenced requirements demonstrating the need for such provision. There is a strategic need for employment land in this location, close to the M6 and strategic road network, as well as a general lack of other suitable sites to meet the overall scale of new employment land needed in the borough. Therefore, there are site level exceptional circumstances to amend the Green Belt to accommodate this strategic employment site.

This site was not originally in the employment land requirements and is over and above land required for employment in the area of the local plan, and appears to have been added as an afterthought based on ease of developer/ investor construction and location (grade 3 agricultural land also flooding is an issue). The sub regional employment argument can be used on any other contender sites to recommend for use. The Plan strategy papers do not state it has to be at that location at all.

Extract form table AB2 : allocated site in the Local Plan subject to appropriate policy wording.

Nice tidy wording is capable of hiding or re- packaging a message to sell a point that may not give all the details clearly, so why use it? Also was any consideration given to check if all the information given was read and digested and understood by the interested parties is there a record to check?

Extract form table AB2 : The exceptional circumstances required to release this area of land from the Green Belt arise from the exceptional circumstances set out in general terms in the Plan Strategy Paper(s). The strategic employment site at Junction 16 of the M6 (currently Green Belt) provides a sub-regional logistics focused employment park to accommodate employment development to meet a sub-regionally identified logistics need and provide for alternative HGV parking, in line with evidenced requirements demonstrating the need for such provision. There is a strategic need for employment land in this location, close to the M6 and strategic road network, as well as a general lack of other suitable sites to meet the overall scale of new employment land needed in the borough. Therefore, there are site level exceptional circumstances to amend the *Green Belt to accommodate this strategic employment site.*

Right along the M6 corridor this argument could be used. Indeed has any thought been given to over exposure of similar developments along the M6. Crewe, & Alsager already have plans to develop warehouses within 1 to 10 miles of this area, and also the current warehouse/industrial developments along the A500 corridor (Chatterly Valley). This will create over capacity within the area for similar structures rendering the sites as unviable. Not to mention Stone and Stafford (part of the Plan for the West Midlands too).

10 infrastructure Transport P64 On

10.2 Funding for infrastructure will usually need to be secured from a range of sources, but developers will be expected to contribute towards all or part of the cost of providing relevant infrastructure that is directly related to the development or adds to the cumulative impact on strategic infrastructure. Pressure on infrastructure caused by new developments should therefore be offset by infrastructure investment funded by that development. Additional and improved infrastructure may also be provided on site by the developer. It is often the case, however, that for development to integrate into existing patterns of infrastructure, a developer will make a financial contribution towards the upgrade of existing infrastructure or provision of new infrastructure by the infrastructure provider.

Also

10.5

10.6 The Council will work etc

Regarding funding provided by a developer (S106). This in many cases is downgraded, reduced, changed or takes years to recover and sometimes only in part. This is a considerable amount of money and I see little evidence in the plan and supporting document to protect the NULBC and residents from a significant financial loss over time. As the rules appear to allow it use to be minimised to suit the developed.

Policy IN2: Transport and Accessibility

10.8 IN2 prioritises the need for sustainable transport infrastructure etc

10.9 Reducing the reliance on the private car

10.10 New developments will need to provide, as appropriate, Transport Statements, Transport Assessments and Travel Plans to ensure the delivery of travel choices and sustainable opportunities for travel in line with the latest government guidance and best practice. New developments that are predicted to have an adverse impact on the transport network will be expected to contribute towards capacity and mitigation measures. Proposals that require new projects will be required to make a proportionate financial contribution.

10.12 Specific thresholds / circumstances that trigger when travel assessments are needed are set by Staffordshire County Council, who as the Local Highway Authority has an obligation to assess the transportation impact of all development proposals in order to make sure that they can be satisfactorily included into the transport network.

10.13 In setting the approach, regard in particular should be had to any relevant aspects of the etc

10.14 On sites proposed for allocation in the Local Plan etc

10.15 Robust datasets which show the effect of including sustainable transport networks and local facilities into new developments should be collated and presented etc.

10.16 The Local Transport Plan, prepared by the County Council provides for an important reference etc

10.25 Proper integration of routes within development sites will provide safe,

ED011 Strategic Transport Assessment

Page29 Site AB2 (M6 Junction 16) has poor accessibility etc

See above sections as to reasons for not being a justified choice.

ED011 4.7 Air Quality

The report on pollution suggest the harm and cost of poor health with relation to traffic. Has a detailed study of options other than AB 2 been fully considered as these may well have less long term impact

5.4 2023 Model Validation (Page 40- On)

See below note

8.1 Scenario Development (page 47 -on)

See below note

8.3 Model Run 2 – Core and AB2

With regard to all developments the model validations do not to me appear to have taken into account the traffic growth from neighbouring developments along the A500 M6 corridor. Where is the evidence of co-operation between authorities recently to mitigate problems caused by overdevelopment and cancellation of the HS2 northern section? This does have an impact on all the figures.

TRAFFIC DATA ED011 8.3.1

8.6.3 M6 Junction 16 (AB2) Forecast Turn Flows As was noted in section 5.4, following the reduction in anticipated traffic growth after COVID-19, the NSMM transport model is over-predicting forecast traffic and in addition, the AB2 site lies towards the edge of the NSMM transport model internal area. Therefore, a different approach to presenting traffic growth around M6 Junction 16 will be utilised. 2022/23 post-COVID-19 NSMM transport model validation: • Overall, the model is overestimating flow in the base year compared to the 2023 data. This is more pronounced in the WebTRIS data where traffic flows the model shows an overestimation of around 26-28% • In total terms the model does not validate well against the 2023 WebTRIS data with only around 15-35% of counts passing.

NSMM Model Runs (p76) • Site AB2 showed improvements to junction delays as a result of testing proposed enhanced public transport connectivity.

Site AB2 - Land southeast of Junction 16: (Page 81)

Issues:

- The workforce is not within immediate proximity, Etc and the site is removed from current public transport routes and local service centres, which could necessitate the creation of Sustainable Travel Plans. Etc but this also means that the impact on the transport network needs careful consideration.

For both sites, NULBC intends to consider any impact on the transport network when undertaking the site selection process and to work with neighbouring councils to model the impact of proposed sites on the wider transport network to determine what mitigation may be required. Additionally, there is an intention to investigate the potential for all new developments to contain electric charging points to support new forms of transport such as electric cars.

While both sites have potential for development, there are transport-related issues that would need to be carefully planned for and mitigated to ensure sustainable and efficient access and to minimise negative impacts on the existing transport network and local communities. The STA will provide evidence on the transport-related impact on the network and provide recommendations.

Minutes 18/03/24 2040 Reference Case (Sweco).

o Slight to Serious traffic delays are forecasted on the A500 EB approach to the M6/A500. o

(Page 91)M6 Jct 16: o The NSMM is adjusted and now modelling additional AB2 traffic flow similar to the approved Jct 16 Visim model. The NSMM is a strategic model and doesn't have the same level of detail as the Jct 16 microscopic Visim model.

(minutes Page 85) From the validation analysis, NSMM over-forecasts in some areas. We can apply an incremental approach for key junctions. For example, we could utilise the Vissim model that exists for M6 J16 to provide more detail. • Sensitivity testing will be undertaken. •

Assessment methodology (including strategy for scoring junction delays): presenting three approached for scoring junction delays. Previously used a RAG rating for SoTCC (20 S

40 secs, 40-60 secs >60 secs). However, another approach has been utilised by SoTCC (12 mins, >2 mins). • Alternative approach: Highway capacity manual - American manual though sometimes used in UK, requires categorisation of signalised/non-signalised junctions.

Minutes of 19/06/2024 (page 91-on)

- M6 Jct 16: o The NSMM is adjusted and now modelling additional AB2 traffic flow similar to the approved Jct 16 Visim model. The NSMM is a strategic model and doesn't have the same level of detail as the Jct 16 microscopic Visim model. The NSMM has some disadvantages with Jct 16 being on the edge of the fully modelled area, indicated by lower-than-expected turn proportions

from M6 NB to A500 WB when compared to available MCC turn data. This movement has a small absolute number of car movements (approx. 50) in the MCC data. This movement is shown to not be impacted by LP trips in the NSMM model. o Our current approach for Jct 16 is to present the change in trips (Final Scenario - RC) on top of observed turn counts factored to future year. o Both Jct 16 Visim and NSMM models give confidence that they show similar flow patterns. o Further testing our final scenario will be testing a combination of core and strategic sites providing confidence against the schemes going forward for the Local Plan. •

(minutes p91) Sweco | Strategic Transport Assessment Newcastle-under-Lyme Borough Council Project Number 65212118 Date 2024-07-18 Ver 3 Document reference NuL LP STA Final Report.docx 92/103

o The NSMM has some disadvantages with Jct 16 being on the edge of the fully modelled area, indicated by lower-than-expected turn proportions from M6 NB to A500 WB when compared to available MCC turn data. This movement has a small absolute number of car movements (approx. 50) in the MCC data. This movement is shown to not be impacted by LP trips in the NSMM model. o Our current approach for Jct 16 is to present the change in trips (Final Scenario - RC) on top of observed turn counts factored to future year. o Both Jct 16 Visim and NSMM models give confidence that they show similar flow patterns. o Further testing our final scenario will be testing a combination of core and strategic sites providing confidence against the schemes going forward for the Local Plan.

This set comments on above sections for: all above information in Transport ED011 8.3.1 (and relevant sections in Reg. 19 that it supports) & data VISIM & NSMIM are data across two boundaries (Midlands and the Northwest) and appear to be combined assumptions . Where is an independent validation of these figures as

- *The do not appear to include or discuss the expanded traffic numbers from other developments in Crewe, Weston, Alsager, Radway, Panatoni , Stoke , A500 Chatterley Valley and this will have a significant impact on the capacity of J16 M6 and the outcome of the local plan impact and viability*
- *Has the impact of potential other sites been discussed and modelled with other neighbouring authorities as no evidence appears in the documents read.*
- *It has been acknowledged that the M6 is a national transport corridor (see page 81). It is not clear how much of the extra flow through of the traffic will affect AB2 and J16 (see2)*
- *The statements clearly demonstrate disadvantages of the modelling provided for the local plan which present a risk to the whole project as they are assumptions and the impact could easily be far greater potentially than is currently anticipated*
- *It must also be noted that in the event of a closure of one of the main highways (M6/A500) the impact on surrounding roads and communities would be very significant due to people being re-routed. This does not seem to have been taken into account this been taken into account?*
- *Has the recent cancelation of the northern leg of the HS2 line been accounted for and the impact it will have Strategic plans (Midlands & North west) on transport figures*

Section4 Page 92-0n

Final Scenario (Sweco) Uncertainty Log for Final Scenario:

o No changes to employment allocation • Strategic Sites – we are going forward with two strategic sites, and we will have a final scenario based on those

- Strategic Sites – we are going forward with two strategic sites, and we will have a final scenario based on those o AB2 o KL15

o AB2

o KL15 • Mitigations

o TBC

o Likely to include Keele

From this section of the document (minutes) What are the TBC for AB2? Considering date of mins? Regarding AB2/AB2a

Air Quality ED011

Local AQ Management: overview of nearby Air Quality Management Areas (AQMA)s of NULBC and SoTCC. Discussion on the North Staffordshire Local Air Quality Plan under ministerial direction. Discussion of the link between poor air quality and respiratory illnesses. Local hospital admissions for respiratory conditions exceeds national average.

(minutes Page 84) Overview of AQ Constraints: maps illustrating the 2022 Annual Mean NO2 around the three strategic sites. M6 likely to present main constraint and will be significant source of air pollutant emissions near to each site. Monitoring in proximity to each site suggests existing levels of NO2 are below national standard (40µg/m3). There are some potentially sensitive designated sites nearby that might be sensitive to changes in nitrogen such as Ancient Woodland and SSSIs.

The increase of further pollution is confirmed by the rise in future transport growth. No apparent correlation of the increase in pollution if all the ware house/industrial sites from Crewe ,Alsager, Radway Green Stoke A500 corridor + general M6 through Traffic increases happen. Local plan does not appear to have modelled this important point. Only concentrating on AB2?

TRANSPORT/CAR/BUS ED011

1 Land at J16 of the M6 (ref: AB2): Page 7

o Public Transport: There is a lack of public transport serving the site, which could limit access for employees without private vehicles. Etc.

Site AB2 - Land southeast of Junction 16: (Page 81)

Issues:

- The workforce is not within immediate proximity, and the site is removed from current public transport routes and local service centres, which could necessitate the creation of Sustainable Travel Plans.

(page 86) Minutes 18/03/24 AB2:

- PG: Concerned about baseline public transport access • PT: Agreed. Needs access by sustainable means. • PG: Where developers agree to fund an enhanced bus service, there is a risk of it being discontinued once the funding period concludes leaving a site with no public transport access • JK: Mitigation is needed for J16 sites. We need to understand how the buses will operate outside of working hours. Operators need to be willing to run those and understand what they are going to do with the vehicles for the rest of the day.

8.6.1.1• (page 66)

AB2 o Bus provision connecting employees within Stoke-on-Trent, Newcastle-under-Lyme and Crewe with AB2 employment. It is assumed the service is timed to meet the needs of any shift patterns and enable some connection with other existing public transport services. This is expected to be a replacement for 10% of car trips originating in nearby zones that could use this

Comments

Assumed service only? 10% by bus is a high estimate as it is more likely to be around 3%

Other documents clearly state that public transport is not a given and once funding is withdrawn could /will be a draw on public funds to upkeep. Especially as the 10% uptake is a rather high estimate See also 8.6.1.1• (page 66) comments.

The potential workforce for AB2 will be mainly by car with all the associated problems with traffic jams and people taking short cuts through the residential areas.

Viability ED004

Industrial / Warehouse Spaces Market Overview

5.29 Before the global pandemic, most new builds focussed on Etc.

5.30 Owing to the focus of the industrial market on large units Etc

5.31 What is now being experienced is a slight cooling of the strategic warehouse market as online sales are not growing to the same extent

Slide P32 Occupiers now require smaller but higher quality space

Slide P33 In recent years we have seen strong demand for strategic warehousing • Drive by growth in online sales • Requirements from retailers and third party logistics

Currently there are a great deal of empty warehouses and spare capacity within 10miles of AB2, such as JCB site, also the Chatterly site has experienced financial turbulence and pull out as well as developer problems, the Alsager warehouses (empty for 4yrs) just to mention a few.

Slide P32 make the point that we need smaller high quality space, no mention of massive warehouses.

Note slide p 33 presented in the Presentation at the end quotes a 'Strong demand' with no points being made of a slowing market which is a risk to Reg19 (given current world situation too)

SUSTAINABILITY APPRISAL Vol 1,2,3 of 3 in support of Reg19

5.4.9 (p34) The three reasonable alternative options for the quantum of employment growth identified by NuLBC at this stage of the plan making process, etc + table

The population growth as suggested in the Census 2021 would not produce the required trained workforce for the area in the Higher Growth section. This means not so much land is required.

Table 5.11 & 5.12

Option 6a or 6b

These appears to be a good option that retains potential for sustained economic growth based upon population figures and potential jobs at various level of value. And have occupied buildings

5.6.6 Although Option 6c has the potential to deliver the highest quantum of employment floorspace, Options 6b and 6d will support development within the University of Keele Growth Corridor, with associated benefits for employment skills and training opportunities. As such, Options 6b and 6d were identified as the best performing overall.

The choice of 6c is hard to justify as due to automation and low skill jobs it would produce the least benefit for the local population. Does the highest quantum of employment floor space mean largest number of low paid employment in a given area? High quality Tech jobs at Keele would deliver a better long term choice and attract high value investment and Tech expertise.

Employment

13.1.7 According to the HEDNA (2024)127, there is a need of between 43.1ha and 83.0ha of employment land between 2023 and 2040

13.1.8 The objectives include improvements to the education system to increase the skill levels of both children and adults, as well as improved productivity and innovation, particularly with regards to technology.

13.1.9 The percentage of people who are economically active in Newcastle-under-Lyme is higher than average.

	<p><i>Above points of suggest that the population mainly employed and slow growing, needs training to a higher level of aspiration. Which currently suggests the assumption of 83 Ha of employment land is not required, especial as a fair number of higher educated people would move (if they could not jobs at Keele Tech site KL15). To increase the land required to 80Ha would require a substantial increase in housing and unrequired or sustainable economic development.</i></p> <p>13.1.15 Bus service and section 13.2</p> <p><i>As suggested in the transport document services are dismal and uneconomical for the population and securing funding by any means is limited (AB2 low paid workers transport?)</i></p> <p>Soil section 14</p> <p>14.1.5</p> <p><i>AB 2 is on prime grade agricultural land and flies in the face of this sections recommendations, other green field sites nearer local conurbations could be used such as TK30 that hat previous mine workings and a scrapyard.</i></p> <p>TK30 (page121)The site is currently non preferred as it is a greenfield site. It is the Green Belt and makes a moderate contribution to Green Belt purposes. The site is adjacent to Bignall End Coal Yards Local Wildlife Site. The site consists of Grade 3 agricultural land. The site contains areas of potential contamination and mining history that would require mitigation / further assessment. The site is in close proximity to Grade II listed Wedgewood Monument. The site has been assessed through the Strategic Employment Sites Assessment which has indicated that there are potential issues to overcome including highways, historic land contamination / mining activity, ecology, topography, and impacts on the setting of the Wedgewood Monument. The site has poor access to a range of services and facilities.</p> <p>AB2 (page11) The site is a preferred site in the Local Plan. The site is a strategic employment site with locational advantages for logistics use to meet local / regional employment land requirements. The site will also include a lorry park for Heavy Good Vehicles.</p> <p><i>From selected /rejected sites above Tables (559) It appears that land that may have a some issue that needs addressing such as pylons, coalyard, Old mining, hills etc. and is in the green belt , but much closer to housing, transport and services is rejected. But the wide open Greenspaces such as AB2 has been selected this can be construed as selecting the most easy cost effective option for the developers and council There is a risk that Group think may be at work here to obtain the answer required and interpreting the data really needs to be checked again by a third party to confirm findings</i></p> <p><i>Additional notes Regarding AB2/AB2a</i></p> <p><i>Reading through all the documents including supporting evidence documents has taken a great deal of time by any individual. Few people including councillors would have a full understanding of all the points contained let alone a non- expert. I believe these documents became available for the full council on July16th 2024, ready to be passed for scrutiny on the 24th July 2024.</i></p> <p><i>Having some experience of technical documents in industry the following is of concern.</i></p> <ul style="list-style-type: none"> <i>• The time scale given between release and scrutiny as many people involve would not have been aware of all the details from all parts of the final document/s even those who would have been involved in aspects of it. The time scale to fully check (1000,s of pages across numerous documents) given that councillors have other tasks and duties in my view is insufficient to arrive at a full rounded decision based on evidence.</i> <i>• Many of the supporting evidence documents are produced by consultants. What assurance do we have to confirm they are fully independent from development involvement bias?</i> <i>• Do we have full information in the public domain of consultations with any developers and council? To gain an informed view of the economics (min and max projections) and its effect on the final cost to the tax payer as value for money (now till 2040)?</i> <i>• The public consultations I have attended have only provided very vague answers. To find more out you have to dig much deeper, hence above notes). Within the consultation timescale many members of the public wish to respond but find the task very confusing, intimidating and with day to day lives hard to complete or do simple not have the skills or equipment to respond. Reg. 18 for me was extremely difficult to complete online despite phone calls, but I did manage it (Ithink!). So how accurate is the consultation?</i> <p><i>I am not sure currently given the information seen that the selection of AB2/AB2a and the Local Plan (reg19) clearly demonstrates Legal compliance and soundness in this regard due to the issues noted in all above sections (Continue on a separate sheet /expand box if necessary)</i></p>
Q7 Modification	<p>Reference to site AB2/2a and related issues that arise including interface with other development in the Local Plan REG19 and associated Evidence documents</p> <p><i>In regard to the Local Plan Reg19 (all of document and supporting evidence) and selection of site AB2/AB2a</i></p> <p><i>To hold review of the facts surround AB2/AB2a and indeed the whole of the local plan Reg19. It may on the surface appear expensive and unnecessary as the outcome has been assessed and reviewed all questions answered. However a pause and independent review would be much cheaper in the long run and potentially save millions not to mention good green belt. This review would also allow other authorities (Cheshire east, Staffordshire, Northwest etc. and relevant strategic plans) to review any overlaps of economic , employment and transport assets rather than all going for a theoretical maximum growth scenario which will not exist.</i></p> <p><i>I am not sure currently given the information seen that the selection of AB2/AB2a and the Local Plan (reg19) clearly demonstrates Legal compliance and soundness in this regard due to the issues noted in all above sections</i></p>

Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	To gain an understanding of the processes involve in coming to a final decision based upon the technical evidence.
Comment ID	NULLP1290
Order	147
Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	Adams
Consultee Given Name	Sarah
Q4 Part of document	Policy
Q4 Policy	AB2
Q5 Sound	No
Q6 Details	<p>I object to the the following planning: AB12, AB2, AB15 and AB33</p> <ol style="list-style-type: none"> 1 NuLBC are applying a high growth strategy. They present no evidence that this will transpire. In the village of audley and surrounds there are small pockets of land that are being developed appropriately and proportionately to the surrounds. Larger scale housing is not required, therefore I feel this is unjustified and unsound. 2 AB2: NuLBC say they require 22 Ha of strategic employment land. However, they are allocating 80 Ha at the AB2 site alone. This is not justified therefore not sound. There are already huge warehousing within our vicinity, some laying empty and some already under development. There is no evidence to suggest this building is required. 3 AB2: The already high levels of traffic at junction16 of the M6 and the surrounding villages means that the junction will require a major upgrade. The required funding from Highways England is unlikely to be forthcoming due to the £22 billion shortfall in the nations finances. This is not deliverable before the end of the local plan period (2040), therefore it is ineffective hence unsound. To add to this the A500 is already at capacity meaning that increased traffic would be detrimental to our local community. It's obscene to think that all increased traffic won't result in increased traffic on our rural roads. These roads being predominantly terraced streets, when built were not designed for multi car occupants or heavy traffic. Please do view in particular ravens lane and new road. <p>1 All allocations in the Audley and Bignall End area for housing are in the green belt.</p> <p>Moreover, as proposed developments they would increase traffic flow well beyond the capacity of the current road system as well as placing added pressure on local schools and GP's surgeries etc. These allocations are therefore not justified, hence unsound.</p> <p>I would further like to add a personal note. Being a mother (REDACTED BY OFFICERS), I want to stress the importance of our community here, our children "go outside to play" these green spaces are invaluable. At a time where mental health in young people is a pandemic problem let's not allow this to happen to our children, who won't be children forever. We want everyone to enjoy this wonderful village, this generation and many more to come. The wildlife in our village is amazing, from owls and bats to badgers and hedgehogs. We WANT to keep it this way. Trees are natures carbon catchers, it is vital that these green belt areas are protected and cherished. Staffordshire County council should be utilising brown field sites over green belt.</p>
Q7 Modification	To render the local plan sound, remove these allocations from the local plan.
Comment ID	NULLP1109
Order	147
Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	Clewes
Consultee Given Name	Martine
Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p>To whom it may concern I wish to lodge the following objections around the Newcastle Under Lyme Local Plan with particular reference to the site allocations in Audley Parish. I feel that these elements of the local plan are not justifiable and are not sound.</p> <p>These are:</p> <p>Site AB12 – Land east of Diglake Street</p> <p>Site AB15 – Land north of Vernon Avenue</p> <p>Site AB 33 land off Nantwich Road/Park Lane, Audley</p> <p>Site AB 2 – Land at junction 16 of the M6, Proposed strategic employment site.</p> <p><u>Objections to AB2, Land at J16</u></p>

This site is four times larger than the council say they need, therefore making this a flawed development at the start. Why take large swathes of green belt land when by the councils' own surveys, they do not need this much warehousing. The council 22 HA of land should be for strategic employment yet are looking to allocate 80HA at AB2. The funding for the conversion of the junction to accommodate this, I believe will need to come from Highways England, and there is no recommendation I can see that says this funding will be available thus making the proposal ineffective and unsound.

Whilst the site is convenient to the M6, there no transport hubs in the proximity thus more cars will be travelling in to the proposed site thus increasing pollution in the area that is already high due to the closeness of the M6/A500 which are extremely busy through routes and already have a significant amount of traffic utilising them. When accidents occur, the area becomes congested and dangerous with access and egress points having poor visibility. All the surrounding roads are narrow and will not sustain vehicles of larges sizes like vans/lorries etc.

The proposed emergency exit for the site will not sustain heavy vehicles and limited width will create more hazard and pollution. The addition of a lorry park due to the removal of a present lay by will again be detrimental to the area and will, at times of heavy flow, deliver more pollutants and health damage to local residents.

The proposed bus/cycle routes for I assume, employees on the site, if they are travelling from far afiel will not be used and most people will travel by car, again bringing traffic back log and pollutions to the area. With a shift pattern being considered, this would indicate there will be a lot of noise and traffic for 24-hour periods, on a site that is larger than required, a fact that cannot be ignored by the council.

There is mention of a local employment and skills plan being prepared, the Audley area as far as I am aware, is not one where unemployment is high so if local people are not going to be working on the site, this would indicate people travelling into the area and aforementioned concerns around this.

There will be an increase in all manner of pollutions and an increase in traffic through the village, all for a site that is not needed within the area. There are many outlying sites in both Cheshire East and Stoke on Trent that are more viable and contain much unused warehousing at this time.

The proposed size of this site is in itself unjust as it is not needed. Should this site go through it will put even more pressure onto the need for housing in a small village with limited infrastructure.

I strongly believe that this site needs to be removed from the local plan as it is not a justifiable development and goes against what the council themselves say is needed for employment in the local area.

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	Halsall
Consultee Given Name	Colin
Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p>Policy AB2 'Land at Junction 16 of the M6'</p> <p>The site extends to circa 80 hectares and is allocated for uses including 22 hectares (circa 220,000 sqm of floorspace) of employment land. Removing 80 ha of land from the green belt for 22 ha of employment land cannot be justified.</p> <p>There are alternative sites within the Borough and surrounding area as can be evidenced from the table below which was produced late September 2024. All of these units arc within a 10 mile radius of Audley. We are aware Chatterley Valley has been incorporated into the employment land provision but Radway Green should be seriously considered as a viable alternative to AB2. <i>(table available in attachment)</i></p> <p>2. Safe and convenient access into the development (including for Heavy Goods Vehicles) via a new junction established from the A500 with emergency access via Barthomley Road, both to be delivered in Phase 1 of the development. The developer St. Modwen Developments Limited, produced a report in January 2022 on 'Comments on Strategic Employment Land /ssues' to Newcastle Under Lyme Council and employed fhe services of PJA based in Birmingham for their professional analysis. We have extracted comments which are relevant to the potential emergency access issues.</p> <p>2.3.2 Park Lane and Moat Lane at the southern boundary of the site are minor rural lanes listed as advisory cycle routes in SCC's cycle maps. As indicated in Figure 2.2 the advisory routes continue to the east through Audley and Bignall End and to the west through Barthomley.</p> <p>3.4.1 In addition to the vehicular access from A16 J16, two emergency vehicle access points would be provided from Park Lane and Moat Lane on the eastern and southern boundaries of the site respectively. Whilst these are not required from a policy or operational point of view, it is considered prudent to retain alternative temporary access arrangement, in the unlikely event that the primary access be wholly blocked and an emergency occurs on site, which necessitates access for the emergency services.</p> <p>6.1.5 Park Lane/Moat Lane - A 'quiet lane' treatment, offering improved surfacing and signage to encourage cycle usage along a very lightly trafficked route.</p> <p>Please Note: At some point between this report being submitted and the final draft Local Plan the emergency access route has been changed from Moat Lane to Barthomley Road without any explanation.</p> <p>The issues of concern to us with this emergency access are that:</p> <p>1. Given the highlighted section above as provided to NUL by St Modwen's the emergency accesses are not required from a policy or operational point of view yet it seems that two are still required.</p>

2. All local roads leading to the access are minor/quiet rural lanes listed as advisory cycle routes, they also are used recreationally for horse riding, dog walking, and both Audley Striders Walking and Running Club use these lanes regularly.
3. Barthomley Road emergency access is to be developed in Phase 1, this leads to really worrying concerns as the main access to AB2 from the A500 will take a considerable length of time to build, yet the local access will not require the same level of development so it will become the likely first access into the site. Will this mean that all the heavy machinery will be using this access as it will seem incredible if the developer waits until the main access is available and lose precious time and money in the process.
4. How is the access going to be managed so it is not misused? There has not been anything documented as to how it will be implemented. Any delays or blockages on the A500 could send vehicles to use this access as an alternative route.
5. The lanes are single track with a few passing places and there are some blind bends. Locals on Barthomley Road have limited access to their driveways and visibility is poor for some of them.

(Diagram available in attachment)

3. Provision for secure, high quality Heavy Goods Vehicle lorry parking with ancillary welfare and amenity facilities of an appropriate scale to serve the site. The management and operation arrangements for the lorry park provision to be agreed with National Highways in consultation with Staffordshire County Council

13.13 The allocation of the site would result in a loss of a lay-by by the A500. Consequently, secure and high-quality HGV parking should be provided as a replacement on the site. This should include an element of free short stay parking for all HGV vehicles agreed following appropriate engagement with Staffordshire County Council and National Highways.

Newcastle-under-Lyme Strategic Employment Site Assessment Report (2024) Evidence Base

4 Review of Local Plan 2020 - 2040 Public Consultation

4.16 This includes a 200-space lorry park to take vehicles off the A500. This is supported by the Road Haulage Association

Currently the A500 has the capacity in its lay-by's to cater for approximately 20 HGV lorries. If the lorry park goes ahead then this will increase the flow of HGV's ten fold and the only thing it will have achieved is to create an extra traffic lane where the lay-by once stood and encourage lots more lorries to come to Audley via the A500. This will have a knock-on effect of increasing air pollution, noise pollution and adding more traffic to an already very busy road. There are two service stations either side of Junction 16 in a North and South direction. Keele is less than 9 miles away and Sandbach is 8 miles away Both have free short stay parking for HGV vehicles.

13. Implementation of an agreed comprehensive travel plan incorporating measures to support travel to / from the development, particularly by sustainable modes. This should implement initiatives to support sustainable travel into the site, to include cycle links into the development with suitable cycle parking / amenities, bus routes and demand responsive travel schemes to support workers travelling to / from the site. The Travel Plan should consider routes connecting into Newcastle-under-Lyme, Stoke-on-Trent and Cheshire East

Supporting Information

13.14 A comprehensive travel plan will be required for the site. The travel plan should consider bus / demand services on the site to cater for shift patterns. The travel plan should establish targets, linked to the outcomes of a transport assessment and monitored via traffic counts and surveys. The travel plan should also consider initiatives including charging for car parking on site to fund, through revenue raised, bus services in the medium to longer term.

. **Extracts from the Strategic Transport Assessment:** 4.6 Site AB2 is located on a dual carriageway with currently no footpath or nearby bus stop, therefore, no public transport was accessible within the catchment times. It should be noted that the developer has indicated that, following conversations with local bus operators and Staffordshire County Council, the development of this site would include a funded bus route to improve the public transport provision to the area and the site.

4.6.2 Site AB2 has poor accessibility scores for both walking and cycling.

Extract from Newcastle-under-Lyme Borough Issues and Strategic Options Paper (2021):

Issues:

- . The workforce is not within immediate proximity, and the site is removed from current public transport routes and local service centres, which could necessitate the creation of Sustainable Travel Plans.
- . The loss or potential moving of a lay-by to enable access to the site could be problematic indicating potential issues with site access and traffic flow.
- . An increase in HGV and personal vehicle traffic is anticipated, which could lead to potential congestion and air pollution in the area.
- . The site's strategic location on the M6 provides good accessibility to a large proportion of the UK's population and key markets, but this also means that the impact on the transport network needs careful consideration.

8.6.1.1 Model Identified Mitigations

The final selection of mitigation measures is as follows, . AB2 - Bus provision connecting employees within Stoke-on-Trent, Newcastle-under-Lyme and Crewe with AB2 employment. It is assumed the service is timed to meet the needs of any shift patterns and enable some connection with other existing public transport services. This is expected to be a replacement for 10% of car trips originating in nearby zones that could use this and other existing public transport services to access AB2 within 1 hour.

9.1 Summary

Accessibility Data Analysis

- . All strategic sites show an accessibility extent that is focussed towards The Potteries
- . MG Junction 16 site has poor public transport connectivity

Existing traffic conditions on the strategic road network: . M16 J16 - Observed data shows traffic congestion along the 4500 eastbound approach with decreased speeds (0-10mph AM, 10-0mph PM),

	<p>Newcastle-under-Lyme Strategic Employment Site Assessment Report (2023) Evidence Base</p> <p>2. Land at J16 of the M6 (ref: AB2): There is a lack of public transport serving the site, which could limit access for employees without private vehicles. Amenities and Workforce: The site's location, while excellent for logistics due to proximity to the M6, may lack local amenities and have issues related to the availability of local workforce. Mitigation Measures: The developer, St Modwen Developments, is working on mitigation measures for the identified transport issues, including improving access to the business park.</p> <p>Appendix B - Steering Group Minutes</p> <p>Subject of meeting: Newcastle-under-Lyme Local Plan - Strategic Transport Assessment</p> <p>AB2: ' PG: Concerned about baseline public transport access . PT Agreed. Needs access by sustainable means. . PG: Where developers agree to fund an enhanced bus service, there is a risk of it being discontinued once the funding period concludes leaving a site with no public transport access . JK: Mitigation is needed for J16 sites. We need to understand how the buses will operate outside of working hours. Operators need to be willing to run those and understand what they are going to do with the vehicles for the rest of the day.</p> <p>To summarise it is clear access issues are the prevalent theme given the location in such close proximity to the M6 and the potential to cause traffic delays at Junction 16 and the A500. Lack of public transport and other means of accessing the site apart from vehicles. It has been reported that AB2 could create up to 3000 jobs, although the figure has not been substantiated. Given that only buses could provide a public service to the site (no nearby rail station), would they invest in creating a new bus route until a demand has been identified? What about shift workers, would they provide a night time service? Would employees be happy to pay car parking charges at their place of work so the bus provision can be subsidised which has been suggested and noted in this report? What about the points raised above at the Steering Group meeting highlighted in bold.</p> <p>Another issue has to be the increase in traffic if AB2 is built. Currently the local "Protect Audley Parish Greenbelt" group are carrying out traffic surveys on the A500 and roads leading into the village as during peak times u/e see a massive increase in road users. These figures will be made available in their submission to the Planning Inspector but we know from being local how busy the roads are even though they are 'B' roads. With the impending building of new housing in Audley as well the village will not be able to cope. The infrastructure is already at breaking point with schools, dentists, doctors etc and there has been no mitigation for improvement that we are aware of in Audley. Audley a/so has a higher rate than the national average of breathing ailments and the increase in air pollution from CO2 and tyre particulate pollution as well as noise pollution.</p> <p>IN CONCLUSION</p> <ul style="list-style-type: none"> - There are other alternative sites to AB2 as listed in the chart on Pg 1 that could be considered as alternative employment land for 'Big Box' developments within a 10 mile radius of Audley. - A huge lorry park will only increase HGV's on the A500, that is without consideration for the vehicles that will be employed by AB2. The A500 at Audley is already a very busy network with regular hold-ups leading up to the motorway, not only at peak times. - The access to the site from the A500 will be a huge undertaking and disrupt traffic flows whilst under construction. It will likely impact the slip road off J16 on the MG and the roundabout. - Increase in vehicles in the area can only have a detrimental affect on people living in Audley, both for ease of access into the village and air and noise pollution and will certainly increase the carbon footprint. - Emergency accesses from Park Lane and Barthomley Road are likely to be used in the event of blockages on the A500. They might also be used by contractors to start work on the site with heavy machinery as there is every likelihood the A500 entrance will take a long time to complete. These are quiet country single track lanes not designed for large vehicles or an increase in traffic. Local people on Barthomley Road already have access issues. A recent planning application 'A824' for new housing on Barthomley Road was rejected because "Barthomley Road is a single lane and could present access issues to the southern dwellings". These lanes are used by local people for recreational purposes. - Accessibility to the site is poor in terms of public transport, cycling or walking. - Removing agricultural land and green spaces which cannot be returned will affect the wildlife, will increase our carbon footprint, will be a blight on the countryside. There are in the areas surrounding AB2 a massive amount of industrial units and warehouses, one former local MP was quoted as saying he did not want his area to become known as 'the capital of warehouses'. They can be seen all around from any high ground like the Wedgewood Monument, or Apedale Country Park, JCB has a big presence too. We understand the need for employment land but there are plenty out there lying empty and unused <p>- PLEASE REMOVE AB2 FROM THE LOCAL PLAN AS IT IS NOT SOUND</p>

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	King

Consultee Given Name	Rob
Q4 Part of document	Policy
Q4 Policy	AB2
Q5 Sound	No
Q6 Details	<p>Basically we cannot see that the proposals are sound for a number of reasons, these mainly relate to access to the site and the current proposals.</p> <ul style="list-style-type: none"> - The lorry park will cater for 200 lorries which means there is the potential for 400 HGV vehicles per day accessing the site as they arrive and leave. - The site could have up to 3,300 employees so they will arrive and leave depending on shift patterns but potentially 6,600 vehicles per day arriving at and leaving the site. It is acknowledged that the developer funded public transport option, if it is ever implemented, may reduce these figures by 10% but that's insignificant. - In addition there will be actual deliveries to the distribution centre and vans then collecting items for onward distribution, I cannot see any numbers advised relating to this. <p>It is not clear of the frontage of the proposed site along the A500 and how many metres the entrance is from the junction 16 roundabout, but it would seem up to 300 metres. The proposal seems to be for some traffic lights at the new junction and the eastbound carriageway will include a break in the central reservation and the ability for eastbound traffic to cross the westbound carriageway. This seems inadequate for such a quantity of vehicles and will result in the following: - Eastbound traffic will back up to the M6 roundabout and cause gridlock.</p> <ul style="list-style-type: none"> - Westbound traffic already backs up to the Audley exit and beyond and currently can cause a 15 minutes delay and not the 1-2 minutes that the report seems to suggest. - Vehicles will use the Audley/Alsager bridge to access the westbound carriageway rather than use the new junction. - Local non site traffic will travel through Audley to avoid this congested area of the A500. This will severely affect air quality and traffic flows, cyclist, pedestrians and the ability to even cross the road. The observations that traffic flows have not increased from 2015 to 2022 is incorrect, it seems that as the survey was done in the pandemic so 2011 census figures have been used which is clearly not sound. <p>The proposed access area to the site already seems to be a problem based on the accident heat map and this will only increase.</p> <p>There does not appear to be any proposals in place to 'police' the proposed emergency site access route via Barthomley Road, this needs to have cameras and unauthorised traffic will need to be prosecuted.</p> <p>There seems to be a proposal to increase signage at junction 15 to encourage traffic to take alternative routes and discourage the use of junction 16 but in reality drivers will follow their satnav</p>
Q7 Modification	<p>We understand the needs for the site and employment it will bring to the area but the access proposals are clearly not sound, as such we would like the following to be considered.</p> <ul style="list-style-type: none"> - An M6 access to the site, the land frontage along the M6 is significant compared to the A500 access, this should include both northbound and southbound access and a bridge over the M6. - Alternatively, significant road widening on both sides of the A500 for a distance up to 500 metres where possible in both directions to provide an extra lane purely for access and exit to the site. That a bridge access is put in place so that A500 eastbound traffic can access and leave the site rather than traffic lights and a break in the westbound carriageway. - Camera footage policing of the Barthomley Road emergency access route and fines to enforce and ensure it is only used for emergency access. <p>Our view is that the traffic calming measures should be avoided, whilst they will deter traffic from using the village, they will affect people in the village more. They will cause gridlock at peak times, we already have significant problems in some areas with parked cars so further obstacles, priority lanes, road narrowing and speed humps would clearly be detrimental in other respects. In an ideal world cycle lanes would be great, but the village roads are just not wide enough and these sorts of measures significantly increase pollution.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	Someone from the local community which is being impacted needs to have input and a say

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	Spode
Consultee Given Name	Pamela
Q4 Part of document	Policy
Q4 Policy	AB2
Q5 Sound	No

Q6 Details	<p>Barthomley Road, Audley LOCAL P1AN . POLICY . AB2. NOT SOUND</p> <p>We feel the policy is not sound with regards to AB2 for the following reasons</p> <p>1. Emergency access on Barthomley Road:</p> <p>a) Single country lanes lead to this point that have blind bends</p> <p>b) Not suitable or designed for large vehicles or increase in volume of traffic</p> <p>c) Local housing on Barthomley Road near to the proposed access already have limited views to exit driveways so more potential for accidents</p> <p>d) Local lanes used for recreational purposes i.e. horse riding (several livery's in the immediate vicinity), cycling, dog walking. Audley has a running club and a walking group who regularly use these lanes. Extra traffic could endanger all these activities</p> <p>e) At the T junction between old Nantwich Road and Barthomley Road there are old stone walls surrounding the junction and is an extremely tight bend for large vehicles to negotiate. We have witnessed a large lorry being stuck at this junction</p> <p>0 We have concerns about how the emergency access will be controlled. If any vehicles are allowed to enter or exit at any time it would more than likely be used as a shortcut to avoid traffic congestion on the A500 which does happen frequently</p> <p>Why do we need massive warehouses taking up valuable greenbelt and good agricultural land when there are plenty of large empty available warehouses within a 10 mile radius that have much better transport links? Why are the Council satisfied that an additional 40 hectares of greenbelt land should be earmarked for this development when they have stipulated a much lower figure for employment land? This development will add to a very congested and busy A500 along with the additional air pollution and increase the risk of vehicle accidents both on this road and potentially on the M6 too if traffic is backed up.</p>
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	Timms
Consultee Given Name	Andrew
Q4 Part of document	Policy
Q4 Policy	AB2
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>I am writing to register my firm objection to the proposed industrial development at site AB2, located next to Junction 16 of the M6. This site, currently designated as Greenbelt land, should retain its protected status due to the multitude of negative impacts the development would have on both the local environment and the surrounding rural community. I urge the council to reject this proposal based on its direct contravention of the Local Planning Policy and the National Planning Policy Framework (NPPF), which prioritise the protection of Greenbelt land and rural amenities.</p> <p>The site in question was previously deemed unsuitable for development in the former Joint Plan with Stoke-on-Trent Council. The decision by Newcastle Borough Council to pursue the development of this site, after unilaterally withdrawing from the Joint Plan, raises serious concerns about the justification for Greenbelt release. The 'exceptional circumstances' claimed by the council to support the Greenbelt allocation appear unjustified and disproportionate, especially when comparable industrial developments are already underway in nearby Stoke-on-Trent and Cheshire East. Furthermore, the benefits promised by the development are not aligned with the needs of our rural community and do not outweigh the extensive harm it will cause.</p> <p>1 Inappropriate Greenbelt Release</p> <p>The primary function of Greenbelt land is to prevent urban sprawl, safeguard the countryside from encroachment, and preserve the setting and character of rural communities. The proposed AB2 site serves as a vital buffer between Audley and nearby urban areas, and its development risks irreversible harm to the rural identity of our village. Allowing the removal of Greenbelt status for this development would set a dangerous precedent for further encroachment, contributing to the unchecked spread of industrial development in an otherwise protected area.</p> <p>The NPPF is clear that Greenbelt land should only be released in 'exceptional circumstances,' and I contend that no such circumstances exist here. There is ample evidence that industrial capacity already exists in nearby areas, such as the substantial development at Radway Green, meaning there is no demonstrable need to release Greenbelt land for additional development in Audley.</p> <p>1 Environmental and Wildlife Harm</p> <p>The environmental impact of this proposed development is extensive and would cause significant harm to local wildlife habitats, air quality, and biodiversity. The AB2 site currently supports a diverse range of flora and fauna, including protected species such as bats, badgers, barn owls, and pollinators like bees and hoverflies. The destruction of this habitat would have a detrimental ripple effect on the wider ecosystem, disrupting food chains and reducing biodiversity.</p> <p>The site's grasslands also play an important role in carbon sequestration, absorbing hundreds of tonnes of carbon dioxide annually. Replacing these grasslands with warehouses and hardstanding would increase</p>

	<p>carbon emissions and undermine efforts to combat climate change, contradicting both local and national sustainability goals.</p> <p>1 Loss of Rural Amenity and Character</p> <p>The rural lanes surrounding the proposed site—Park Lane, Moat Lane, and Barthomley Road—are cherished by local residents for walking, cycling, and horse riding. These lanes offer a peaceful escape from urban life and are a crucial part of the area's rural identity. The introduction of a large industrial development would drastically alter the landscape and reduce the quality of life for those living nearby. The scale of the development is disproportionate to the needs of our rural community and would significantly diminish the amenity value of the surrounding countryside.</p> <p>1 Increased Traffic and Safety Risks</p> <p>The proposed industrial development would lead to a substantial increase in traffic on narrow, single-track lanes that are already ill-suited to handling large volumes of vehicles. Even though the existing lanes, Park Lane, Moat Lane and Barthomley Road are not proposed as official access routes, an increase in unintended vehicle activity, particularly heavy goods vehicles (HGVs) would pose serious safety risks to residents, walkers, cyclists, and horse riders, and create dangerous conditions on local roads. The current road infrastructure is inadequate to support the scale of traffic that this development would generate.</p> <p>1 Negative Impact on Air Quality</p> <p>The existing grasslands of the AB2 site serve as a natural filter for air pollutants, particularly harmful emissions from the nearby M6 and A500. Replacing this green space with industrial buildings would reduce air quality and pose health risks to local residents, particularly vulnerable groups such as children and the elderly. The potential increase in nitrogen dioxide and PM2.5 particulates from construction and operational traffic is particularly concerning in a rural area that currently enjoys relatively clean air.</p> <p>1 Light, Noise, and Dust Pollution</p> <p>The industrial development would bring increased levels of light, noise, and dust pollution to the area. This would have a disruptive effect on local wildlife, particularly nocturnal species, and would detract from the rural tranquillity that residents currently enjoy. The prolonged construction period, coupled with ongoing operational noise, would create further disturbances for both residents and wildlife. Dust pollution, in particular, poses a health hazard, as it can exacerbate respiratory conditions such as asthma.</p> <p>1 Flood Risk</p> <p>The site's natural grasslands currently act as a flood management system, allowing rainwater to disperse and absorb naturally. Paving over this land with industrial units and hardstanding would increase surface water runoff, heightening the risk of localised flooding, particularly on Moat Lane, which already experiences regular flooding. This would place additional strain on local drainage systems and could lead to more severe flooding in the future.</p> <p>Conclusion</p> <p>In light of the significant environmental, social, and economic harm that this development would cause, I respectfully request that Newcastle Borough Council reject the AB2 site allocation and uphold the Greenbelt protection that is so vital to our community. The proposed development contradicts both the principles of sustainable development outlined in the NPPF and the specific strategic objectives of the local planning policy. It is essential that we prioritise the preservation of our rural character, environmental integrity, and community well-being over short-term financial gains.</p>
Q7 Modification	Dramatic reduction in site allocation size from approx 76 hectares to a shared percentage of the 22 hectares required. The use of brownfield sites and redevelopment of existing unused or under-used industrial sites.

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	Harrison
Consultee Given Name	Melanie
Q4 Part of document	Policy
Q4 Policy	AB2
Q5 Sound	No
Q6 Details	<p>1. Noise: [redacted by admin] based just a few hundred yards from an exit onto the site and in close proximity of the warehouses themselves. Which when operational 24 hours a day will cause a hugely noticeable increase in noise pollution. Further helped by the area being so rural and quiet this will be amplified and cause distress and unwanted disturbance in our everyday lives, especially during evenings and weekends.</p> <p>2. Roads: Audley roads are village roads, already covered in pot holes and cracks. Barthomley Road is a narrow and hedgerow lined road, no suitable for excess traffic which is highly likely as people will use it to cut through or to enter or exit the back gates of the site. Barthomley Road is narrow with very small laybys to accommodate manoeuvres for passing cars both overall is extremely tight and is very much a single lane. It would be highly dangerous and would likely be the source of many accidents and possible injuries to residents (many are elderly), visitors and wildlife which habitat in the hedgerows and accompanying landscapes. There are no street lights and no public footpaths on Barthomley Road which is in the direct route of the proposed plans.</p> <p>3. Traffic: The site would be a cause of huge traffic congestion on the junction 16 roundabout which connects to the A500 and M6. With a potential 3500 employees and many visitors and deliveries to the site at the main entrance, traffic would be highly excessive and isolate many local people of Audley and surrounding areas and prevent the ability to commute and travel is a reasonable timely manor.</p> <p>4. Size of site: The site is too big and imposing to the village of Audley. The proposal is bigger than the village itself!</p> <p>5. Wildlife: The site is greenbelt land which is home to wildlife and nature, which need preserving. It is the reason we relocated and bought our house in Nov 2022, [redacted by admin] only two years ago to reside in such a tranquil and peaceful village. Not to be destroyed by industry, commercial developments and unsightly and imposing structures, notice and pollution.</p> <p>6. Existing sites and buildings: There are numerous warehouses and commercial sites already built, stood empty and exist within a few miles of the proposed location. Why destroy green belt land.</p>

Q4 Part of document	Policy
Q4 Policy	AB2
Q5 Sound	No
Q6 Details	<p>Newcastle Council claims that the borough is short of 22Ha of employment land, based on a 'high growth scenario'. However, they are withdrawing 80Ha of land from the green-belt to achieve this goal. The Site can accommodate 61.76Ha of employment land - far more than they say they need - and 18.24Ha of non-employment land. Although, the developers have noted that they will only actually require 1.88Ha for the lorry park and 3.6Ha proposed strategic open space. This means that the site will lead to an imbalanced local plan with 39.76Ha of employment land in excess of that needed, and therefore cannot be justified and is hence unsound.</p> <p>The site will generate huge amounts of traffic, including large delivery vehicles, employee's vehicles, and service vehicles, which could be 24hrs a day. There are already high levels of traffic at Junction 16 of the M6 and on the A500 and this is likely to increase as a result of the Proposed Development. It may also result in increased amounts of traffic using local village routes to avoid queues and congestion on the main roads. The site is far from public transport, which means most staff will need to travel by car. In view of this, this part of the plan is unsound.</p> <p>My understanding is that, at the present time, the council do not have a proposed buyer or occupant for the proposed warehousing and therefore the council's 'high growth scenario' may not be deliverable and is not justified. It is therefore unsound.</p>

	Unemployment rates in the local area are very low. The Newcastle Council have identified that there are about 9 million people within one hour's journey of the site. However, employees traveling such a distance to work will undoubtedly cause even more increased traffic, or alternatively put more pressure on the local housing market. In this respect it is not justified and is therefore unsound.
Q7 Modification	To render the Local Plan sound, remove the plan for AB2 from the Local Plan.

Q6 Details	<p>To whom it may concern,</p> <p>As with all previous responses I sincerely hope that all comments are read in full, and are truly taken into consideration in respect of proposed plans. I fear this is just a tick box exercise and that decisions have already been made.</p> <p>What makes this more difficult is, I like many people who have responded numerous times just wonder is there any point.</p> <p>Unlike the last response I sent I have not had the time to view the full and extensive document, therefore, this will be bullet points of objections/concerns and suggestions of how we can better make use of this land if it needs to be 'developed' at all.</p> <p>These proposed residential sites are in greenbelt, rather than destroying these areas we should be encouraging open spaces for wildlife and the health and wellbeing of existing residents.</p> <p>These sites especially AB12 will only put more pressure on the small main road (Ravens lane) that is already populated with too many cars-now parked on both sides of the road as the elderly members of the community move (varied reasons) from terraced houses to be replaced by families with as many as 3 or 4 cars-making it difficult for large farm machinery and HGV to pass, destroying roads which are rarely repaired.</p> <p>This will alter the very fabric of our community putting extra pressures on already stretched local services: doctors, dentists, village parking, schools and public transport- NB a major link route being discontinued only in the last couple of years - reducing the access to wider services for many.</p> <p>Whilst I understand and appreciate there is a need for more housing as the population rises, however, maybe we need to consider as a country better management of our borders and who we accept into the country - possibly using a well structured and practiced method such as Australia.</p> <p>Also when building new houses anywhere there needs to be more thought and space allocated to off road parking.</p> <p>There are many brownfields sites around Newcastle & Stoke that could be effectively utilised if only councils worked together.</p> <p>A suggestion of how we as a community could instead work towards being fit for the future and carbon neutral; these identified resident areas could instead be large charging parks for electric vehicles that could be accessed and used by all local residents to conform with government plans moving forward.</p> <p>There are so many terraced houses it will be impossible to manage this locally in the future if solutions are not considered now!</p> <p>In respect of AB2 surely there can be no further requirement for 'warehousing' - just look around the area.</p> <p>This would destroy access to the country side, significant wildlife areas and turn Stoke into warehouse central.</p> <p>Instead; wind turbines or solar fields would mean that the area could still be used but would benefit the national grid.</p>

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	Johnson
Consultee Given Name	Philip
Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p>The site AB2 is unsound - the site is on J16 of the M6 which is already a congested part of the road network. The A500 is frequently congested at peak times and whenever there is an incident on the M6. This also affects surrounding local roads through Audley.</p> <p>When a traffic count on the roundabout on B5500/Alsager road was carried out for 2 hours the amount of vehicles counted ranged from 1350-1750. This increased significantly on when there was an accident on the A500. If another 200+ houses are built and the AB2 development, this would increase the amount</p>

	<p>of vehicles using the local roads to unsafe levels. These roads are not built for this amount plus many hgv's and service vehicles, this makes the plan unsound.</p> <p>The M6 Junction 16 cannot accommodate the extra traffic that would be generated by the massive industrial site. The emergency access that is planned for Barthomley Road is both unsound and unjustified. The road is a narrow and windy country lane used by many local residents as a rural walk. The dangerous conditions and damage to the countryside and wellbeing of nature and residents that an increase of traffic including heavy goods and service vehicles cannot be justified.</p> <p>The employment site is said to create thousands of jobs. Jobs in this type of warehousing facility are likely to be replaced by AI and robots in the coming years, therefore the statement that it will create this amount of jobs is also unsound and the irreversible damage this will do to the greenbelt for a short term investment in jobs cannot be justified. The jobs that are created in the short term will create thousands more cars travelling to the site as there are no public transport links. Personal car use will be the only viable way for workers to access the site.</p> <p>The site cannot be justified as the proposal is to remove 80 HA of good quality greenfield for 22HA of employment land. The site is unsound as it is four times larger than the council say that they need. This will lead to the employment / housing ratio becoming unbalanced and this rural community will be faced with more housing development that the infrastructure of the village cannot cope with. There will not be capacity for traffic, schools, health centres and dentists.</p> <p>The plans state that the height, scale and form of the development should reflect the character of the area. This excessively enormous industrial site cannot possibly be deemed to fit the character of this greenbelt rural land. The land is high quality agricultural land that can never be replaced. It supports wildlife and at a time when the world is in a climate crisis, the council should be protecting this land from excessive development. For these reasons, this site is unsound and unjustified.</p> <p>This site is cannot be justified as there are already huge warehouse facilities a very short distance away in Alsager. These warehouses are largely empty. There is also the developpment at Radway Green. Whilst not in the Newcastle Borough, these industrial areas should be considered in conjunction with the local plan.</p>
Q7 Modification	To make this local plan sound, the AB2 site should be removed from the plan as there are alternative sites that are more appropriate for the aims of the council. The size of the site, the irrecoverable damage it will do to the environment and nature , the increase in HGVs and cars that will congest both the A500, M6 and local roads cannot be justified and makes the plan dangerous, unjustified and unsound.

Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p>The proposals AB12, AB2 and AB33 sites are unsound and should not be included in the local plan.</p> <p>Plan: AB2 I OBJECT TO THIS PLAN. The AB2 proposal raises many concerns for me as a local resident and a person who enjoys the countryside afforded to us in the Audley Parish. My partner and I use the local roads in this area for walks, runs and cycles. One of the greatest assets in this area is the long sprawl of countryside, creating the rural landscape we all love. This development alone would rob our area of the title 'rural' as the stolen greenbelt land would be lost forever to the needless development of even more industrial units, which if the sites in Alsager and Tunstall are anything to go by, will remain unoccupied for years. We regularly drive past empty, derelict brownfield sites on the A500. How can the local council consider tearing up greenbelt land when there are acres and acres of already developed, ready to change brownfield sites? By developing on this site, currently undeveloped land which is an extremely valuable natural carbon store, there will be an increase in carbon emissions. Many of the hedgerows that will be removed in this plan are protected on the government website, due to the range of tree species.</p> <p>From the local plan the increase in local employment and boost to the local economy has been noted as a reason for this proposal. Knowing the local area well, I cannot state strongly enough that this will not be the case. Local services will not be used by the workers on this site, as the local shops and amenities are too far away to walk to. There are no longer any bus regular bus routes that connect Audley and Newcastle, so there will be no increase in public transport use. Due to the challenging terrain, steep banks and tough climbs on the roads from Newcastle, cycle users will not commute to the site. As someone who has cycled and ran on every road in the parish and wider borough, this is not a viable benefit. Therefore, the only way the site will be accessed is by car, increasing the traffic through old, pot-holed and already busy roads in the local villages. The roads through the village, particularly in Audley, have been riddled with pot holes for years. If the council cannot look after the road surface now, with the current level of road use, how can they guarantee a good quality of road surface with increased traffic from all sorts of vehicles if these plans go ahead?</p> <p>The jobs offered by this site will not go to our local residents. As the site is right on the edge of the borough, and the St Modwen website notes that jobs can be accessed one hour commuter distance, the jobs will be open to an estimated population of 9 million people, a small percentage of those coming under the umbrella and of Newcastle-under-Lyme. So, the suggestion that this site will aid the employment and economy of the local area is just not true.</p>

	I wish the local councillor to remove sites AB12, AB2 and AB33 from the local plan.

Q6 Details	<p>Re: Final Draft Local Plan – representation</p> <p>I am submitting my representation to the Final Draft Local Plan consultation via email as I experienced a delay in receiving an activation code when trying to register to use the online portal.</p> <p>My representation relates to the proposed AB2 development of the Local Plan and compliance with the duty to co-operate.</p>

	<p>Details of why I consider the plan is not legally compliant with the duty to co-operate and the modifications I would like to see made</p> <p><i>AB2 and Stoke-on-Trent City Council</i></p> <p>In line with national policy, all parts of the public sector are moving to a larger planning footprint. For example, with the passing into law of the Health and Care Act 2022, the local health service is now planning on a footprint the size of Staffordshire and Stoke-on-Trent.</p> <p>At a local plan consultation event, I asked about the co-operation with Stoke-on-Trent City Council. I was told there was an agreement that planning targets would not be shared. I believe Staffordshire and Stoke-on-Trent should be considered one place when it comes to identifying land for housing and employment. This would bring into scope brownfield opportunities within the city boundaries.</p> <p>The three images below show the view of the proposed AB2 development site from Moat Lane, the view of a recent warehousing development from Apedale Country Park (at a much greater distance than AB2 will be from Moat Lane) and the view that visitors have from the A500. Derelict warehousing reinforces the view that Stoke-on-Trent is impoverished and does nothing to improve the reputation and standing of the city.</p> <p>I believe brownfield sites should be brought back into use before any Green Belt is developed.</p>

Q4 Part of document	Policy
Q4 Policy	AB2
Q5 Sound	No
Q6 Details	<p>I wish to object to the above policy as it is unsound for the following reasons:</p> <p>Firstly the amount of land which is being earmarked for warehousing is not justified for the area. This build is not for local good but to bring in more people/vehicles from outside the area. Commuting on the M6 and A500 is already busy enough without this addition, encouraging more outside area travel. This is an already very busy stretch of road which unfortunately has been seen to have a number of vehicle accident/incidents even deaths.</p> <p>When this occurs it then adds pressure to the local roads which are at present experiencing a high volume of traffic.</p> <p>This vast amount of greenbelt which AB2 proposes to accomodate is outrageous and environmentally unsound. The loss of habitat and wildlife in the area in exchange for pollution, noise, and an accident waiting to happen is incomprehensible.</p>
Q7 Modification	The above site (AB2) needs to be removed to make the Local Plan sound.

Q4 Part of document	Policy
Q4 Policy	AB2
Q5 Sound	No
Q6 Details	<p>Representations in relation to draft Policy AB2 are set out in the Statement submitted alongside this form. That Statement lists and is accompanied by a series of 10 Appendices.</p> <p>1.1 Indurent Strategic Land ("Indurent") have instructed Planning Prospects Ltd ("PPL") to prepare and submit these representations to the Final Draft Local Plan (Regulation 19</p>

stage) Consultation for the Newcastle-under-Lyme Local Plan. The representations are informed by extensive supporting technical work which is set out where relevant in a series of appendices to this document.

Indurent is a recently launched developer and operator of industrial and logistics space, bringing together the specialist multi-let industrial property company, Industrials REIT, and logistics developer and manager, St. Modwen Logistics. St. Modwen, as was, engaged very extensively throughout the emerging plan process to date, and that engagement is continued here under the Indurent banner.

St. Modwen had extensive land ownership and development interests across the Staffordshire area and a longstanding and extensive record in successfully bringing forward major schemes in this part of the West Midlands, with a particular emphasis upon economic development and regeneration projects. That mantle has now been taken up by Indurent. These representations support and promote aspects of those interests in the manner explained below.

In particular, a specific requirement for large scale, logistics focused, employment development with immediate access to the Strategic Road Network has been identified within the District. This is now recognised in the Regulation 19 Plan through draft allocation Policy AB2 which identifies land at Junction 16 (J16) of the M6 for employment development. The representations set out here are prepared in that context, focusing on draft Policy AB2.

PURPOSE OF REPRESENTATIONS

Fundamentally, Indurent support strongly draft Policy AB2 and the allocation of land at J16 for employment development.

The most suitable direction and option for growth if the clearly identified need for large scale, logistics focused, employment development with immediate access to the Strategic Road Network is to be met, has been addressed at length through previous Local Plan consultation events. Specifically, this comprises development to the south east of J16, extending to almost 80ha of land controlled by Indurent, and capable of accommodating approximately 220,000 sq m of employment accommodation, including multiple buildings in excess of 30,000 sq m, an individual building significantly larger than 30,000 sq m, alongside other buildings of at least 10,000 sq m, plus ancillary accommodation. This is now allowed for by draft Policy AB2 and Indurent support that.

However, the soundness of the emerging Plan that is being considered at this (Regulation 19) stage relies on tests including whether it is "Positively Prepared", "Justified", "Effective", and "Consistent with National Policy". It is considered that there are elements of draft Policy AB2 which in their current form undermine these requirements. So, and again notwithstanding the strong and overarching support for draft Policy AB2, it is considered that changes to this part of the Plan are needed to make it sound. This matter is addressed in this report.

Previous responses to consultation events should be read alongside the submissions made in this report to gain a full understanding of Indurent's overall position.

See attached representations.

SUPPORT FOR POLICY AB2 IN PRINCIPLE

CONTEXT

The case for the allocation of land at J16 for to meet a requirement for strategic employment development has been advanced over an extended period through the plan making process. The evidence assembled through that period up to and including the Regulation 18 stage is extensive and convincing.

An overview of the need to provide strategic employment land was set out in the representations made by St. Modwen (as was) to the Regulation 18 consultation. An extract from those representations addressing this point is provided here at Appendix 1.

The St. Modwen evidence at Regulation 18 stage included a "Big Box Market Statement" prepared by JLL focusing on the need for sites to accommodate the largest employment requirements. That was first prepared in February 2018 and updated in May 2019 and again in December 2021; the 2021 update is provided here at Appendix 2. The evidence also included a further exercise undertaken by Savills in August 2023 provided here at Appendix 3. JLL and Savills are both leading international real estate advisors.

The JLL and Savills reports are complementary exercises representing a well-considered and extensive evidence base which alongside the Council's evidence base is strongly in support of development of the type anticipated at J16.

The Regulation 18 representations also dealt with "exceptional circumstances" and the justification for removing the land from the Green Belt. A note of St. Modwen's position on this was submitted alongside those representations and is also provided here, at Appendix 4. This observes that if this matter is not properly dealt with the emerging Plan may be found to be "unsound". Councils should act to identify and then meet development needs. In this case the evidence identifies a specific and increasingly acute need and that this can only be met through the release of Green Belt land. The "exceptional circumstances" lie within, and the matter goes to the ability of the emerging Plan to be found "sound"

This extensive effort has now yielded a position whereby the "Vision for the Borough" in the Regulation 19 document appropriately includes (paragraph 4.1) that; "By 2040... We will have delivered or on the journey to delivering a sub-regional exemplar business park at Junction 16 of the M6 Motorway to support sustainable economic growth and take advantage of the accessibility of the Borough to the wider strategic transport network." The associated "Strategic Objectives for the Borough" include (paragraph 4.5, emphasis added) to; "Diversify the Borough's employment base and deliver employment sites which will benefit economic growth for the region focusing on sectors: advanced manufacturing, distribution and logistics, supporting technology, and the green economy to generate more skilled jobs for local people." In seeking to deliver this Vision and Objectives site AB2 "Land at Junction 16 of the M6" is allocated, "as a strategic employment site serving the employment needs of the Borough and wider sub-region" (paragraph 13.12). This allocation is supported by Indurent. The most recent evidence around employment land and the requirement for the allocation is discussed below. Draft Policy AB2 provides a series of criteria that proposals for the site must attend to. These are also considered below.

THE NEED FOR EMPLOYMENT LAND

The most recent documents added to the Council's evidence base dealing with the need for employment land include the Housing and Economic Needs Assessment Further Update ("HENAFU") (Turley, April 2024), and Strategic Employment Sites Assessment Update ("SESA") (Aspinall Verdi, June 2024).

Indurent have also instructed Savills to update the work they prepared in 2023 to support the Regulation 18 representations. This update is provided in the Industrial & Logistics ("I & L") Needs Assessment Addendum ("ILNAA") (Savills, October 2024) attached here at Appendix 8.

The ILNAA sets out a review of the evidence base, including the HENAFU and SESA. It explains why growth in the Industrial and Logistics Sector is important, and provides an update in terms of market dynamics in that sector. It places the requirement for employment land arrived at through the Council's evidence base in the context of an alternative assessment prepared by Savills which seeks to overcome some of the methodological shortcomings in that work. It assesses the economic benefits and social value expected to be generated by the development of the site.

Bringing these strands together the ILNAA concludes:

It is important that the I&L sector's growth is facilitated. It provides better paid jobs compared to the national average across a diverse range of professions. The diversity of occupations has been increasing which will enable the sector to play a key role in re-employing people that have lost jobs in other sectors of the economy.

Savills estimate the FEMA's I&L demand to be 22.3 ha per annum, rising to 24.8 ha per annum including an e-commerce uplift. This is higher than the combined total of the Newcastle-under-Lyme HENAFU and Stoke-on-Trent HENAU, which produce a range of between 6.0 to 18.0 ha per annum. Savills' demand estimates take a market signals approach, and supplement the econometric approaches undertaken by the evidence base to provide a complete picture of future demand.

Consistent with Savills' analysis, the review of market indicators in the SESA also indicates a supply-constrained market, evidencing low availability rates, rental growth, and demand exceeding supply.

The SESA points to the immediate market demand for well-located, high-quality sites along the M6 Corridor between Warrington and the Black Country. The Newcastleunder- Lyme and Stoke-on-Trent FEMA is competing with locations in the North West and West Midlands for this investment, and therefore the Council needs to make sure that they have a pipeline of new, well-located developments coming forward, otherwise occupiers will go elsewhere.

Savills conclude that the site is ideally placed to help cater for the strong, unmet demand in the sub-region, in a prime location adjacent to the nationally significant M6 and A500. This is consistent with the findings of the SESA, which also concludes that there is a need for two Strategic Sites in the new Plan, inclusive of the subject site.

Key benefits arising from development of the site include approximately 2,690 – 3,720 on-site (gross, direct) operational jobs, between £104.3 - £211.4 million in GVA, and an estimated £21.1 million of social value.

A further point on the interpretation of the requirement for employment land also arises from the Savills report (paragraph 3.4.25 et seq.). The Council's evidence base uses a plot ratio of 40%, meaning the 220,000 sq m of floorspace identified for site AB2 equates to 55ha of land allocated to accommodate the buildings plus access, drainage, yard space, Green Infrastructure and so on. Savills consider a plot ratio of 35% is more realistic and using that figure 220,000 sq m of floorspace would equate to a requirement for about 63ha of land.

Site AB2 extends to 78.31ha, but this should not be understood as equivalent to that amount of employment land in Plan terms. As above, in the approach taken by the Council the 220,000 sq m of floorspace identified in the policy reflects an employment land provision of 55ha. It is instructive, though, to consider the plot ratio that would be achieved on site AB2. With 220,000 sq m delivered on 78.31ha of land this would equate to a coverage of 28%. This is markedly lower than the ratio assumption made through the Council's evidence, and also lower than the ratio assumption considered more appropriate by Savills. Essentially this means that considerably more of this site (some 15 – 23ha more depending on the assumption made) will be free from buildings than is typically the case for major I & L schemes, and left available for extensive Green Infrastructure. This is considered appropriate given the countryside and Green Belt setting of the site.

In terms of the relevance for the emerging Plan and draft Policy AB2 the ILNAA offers very clear, additional, evidence that this allocation is needed, specifically to meet a particular requirement for strategic Industrial and Logistics land and more generally to contribute towards a requirement for employment land in Newcastle-under-Lyme and the wider FEMA. If the allocation is not made the need will not be met and the Plan will be unsound.

POLICY AB2 CRITERIA

Over a period of years the (now) Indurent team have comprehensively assessed site AB2 to understand how strategic employment development can be delivered there successfully, engaging extensively with consultees where appropriate. Drawing on that experience, and generally, having regard to the site specific criteria provided by draft Policy AB2 the following observations are made. Highways and Access Criterion 2 requires safe and convenient access to be formed onto the A500. An update on progress with this (and a range of other highways points) was provided to the Council in a Technical Note dated 24th May 2024. That Note (provided here at Appendix 5) shows the preferred access design which has been subject to safety assessment (shown to be acceptable) and modelling (shown significantly to reduce queuing and delay as a benefit of development). The safety assessment and modelling have been approved by National Highways.

2.18 Criterion 2 also requires an emergency access from Barthomley Road to be delivered in Phase 1 of the development. This is considered further in Section 3 below.

2.19 The requirement for off-site highways mitigation is set out in criterion 7. The Note (Appendix 5) explains the agreement reached with the national and local highway authorities that assessment need deal only with the site access and J16. As discussed above, the proposed design in this regard has been found to be acceptable (indeed beneficial).

Sustainable travel is considered in criterion 13 of the draft policy, to be secured via a travel plan. The Note (Appendix 5) explains how amendments to bus services and use of Demand Responsive Transport will provide a public transport solution for the site, and gives examples of where such measures have successfully been used elsewhere. Meetings have been held with both local bus companies in the area

(D&G and First Group). Both companies expressed their enthusiasm in directing their existing bus services to the site, through extension or partial diversion. The Note also summarises the solution anticipated in terms of supporting active travel through the provision of cycling infrastructure and other interventions.

It should also be noted in this regard that the evidence base published alongside the Regulation 19 Plan includes a Strategic Transport Assessment. The outcome of that assessment includes the conclusion that the only mitigation needed for the development of site AB2 is enhanced bus services. As above, the provision of such services has already been anticipated and allowed for by Indurent.

HGV Parking

Criterion 3 sets out the requirement for secure, high quality HGV parking with associated facilities. The existing A500 lay-bys across the site frontage are well used by HGVs for overnight parking. However, the layout of the lay-bys on both sides of the A500 is significantly below the required standards with no welfare facilities for users and no security.

There is also a critical and well evidenced shortage of lorry parking in the area. In considering a lengthy "London to Scotland West" route along the M40, around Birmingham and up the M6 the September 2023 Lorry Parking Demand Assessment prepared by AECOM for National Highways identifies

Newcastle-under-Lyme as the worst area in terms of unmet demand for lorry parking. Lorry parking issues in this Authority are regarded as "severe", meaning National Highways' position is that the Local Plan must acknowledge and address this issue.

The allocation of the Site presents an obvious opportunity to provide a secure, high-quality lorry park off the A500 as part of a development. Design work completed to date identifies a plot of nearly 3ha for this purpose at the northern end of the site next to the entrance, capable of accommodating 200 HGVs. This would be a further important benefit of development here, meeting a clear need. Such a lorry park would provide some free short stay parking for all vehicles, to compensate the loss of non-emergency stopping provision offered by the existing lay-bys, and would offer driver welfare facilities. A lorry park of this nature would be an important benefit from development of the site, also noting the wellpublicised difficulties in HGV driver recruitment and retention caused in part by a lack of good quality secure and well serviced facilities. This is an important point, and one that is recognised in National Policy. The NPPF states (paragraph 113) that; "Planning policies and decisions should recognise the importance of providing adequate overnight lorry parking facilities, taking into account any local shortages, to reduce the risk of parking in locations that lack proper facilities or could cause a nuisance. Proposals for new or expanded distribution centres should make provision for sufficient lorry parking to cater for their anticipated use." There is a need significantly to upgrade the existing lay-by provision on the A500, better serve an area along the M6 corridor where the shortage of HGV parking is severe, and deliver this in a secure, high-quality manner with good facilities. The provision of this as required by draft Policy AB2 and as anticipated by the Indurent proposals for the site represents a key benefit of the allocation here.

Sustainable Development and Energy

Draft Policy AB2 includes requirements around the inclusion of a primary sub-station and provision of a sustainable energy strategy (criterion 4), provision for solar technology and the potential for a "smart grid" (criterion 5), and achieving a rating of at least BREEAM Excellent (criterion 6).

The approach to these criteria will evolve as any scheme is finalised but in terms of activity to date substantial progress has been made to secure the required power to service the site. In late 2023 St Modwen (now Indurent) signed an order with National Grid Electrical Distribution to secure the required import capacity. Initial payments were made and substantial further payments to NGED are scheduled to support this.

Further to Indurent's acceptance of this power provision order NGED have been engaged in relation to the scheme's effect on the "upstream" National Grid Transmission network. Indurent has paid fees associated with being integrated in the National Grid Transmission Network Review. Work is also being progressed around the detail of routing power from the relevant NGED primary substation.

The current indicative layout for the site includes land earmarked for the required primary and secondary substations. Land is also identified for a foul pumping station and a hub building providing ancillary accommodation for the main employment function of the wider development.

Indurent also commissioned an industry leading expert in solar provision to complete a feasibility exercise on establishing the site as a truly integrated 'SMART Grid' with enhanced solar offering above their base specifications. The outcome of this exercise was positive and so further work is now under way to understand delivery and how reduced reliance on the national grid and maximised onsite solar power generation can best be achieved.

As a matter of course Indurent's base specification for strategic employment development of this type includes achieving BREEAM Excellent. Indurent also commissioned the preparation of a strategy to understand how an uplift of BREEAM rating from Excellent towards Outstanding can be achieved. This highlights a number of areas where credits could be obtained to enhance development beyond the Excellent threshold, including for example in relation to construction, handover, aftercare, energy and water use and monitoring, material sourcing and waste management.

Amenity

The extent of any requirement to control noise and traffic impacts identified by criterion 8 is reduced by the existing background conditions created by the M6 and A500, and also the limited number of dwellings in close proximity to the site. That said, the approach taken to landscaping (discussed below) includes extensive landscaped areas around the edge of the site to separate noise sources from sensitive receptors. Moreover, the main estate road is planned to run down the western side of the site, so alongside the M6.

The single main point of vehicular access anticipated from the north means that traffic will use the A500 and M6 and not the local road network. That said, the Note provided at Appendix 5 identifies the potential for implementing a "Traffic in Villages" approach, combined with the speed reduction and advanced signage measures to be delivered as part of the active travel strategy, further to robustly deter scheme traffic using local roads.

Landscaping and Open Space
A landscape led approach to the development of the site is required (criterion 9), with the retention and enhancement of tree and hedgerow provision also sought (criterion 10). The approach as currently envisaged in this regard is illustrated in the Green Infrastructure Strategy included here at Appendix 9.

The Strategy is informed by a suite of appraisals including landscape, ecology, arboriculture, design, heritage, transport and drainage. It arrives at an approach based upon an extensive, integrated and connected network of high quality and thoughtfully designed strategic open space through multiple Green Infrastructure corridors.

The Strategy assesses the current indicative layout to calculate that there would be 3.75km of retained and enhanced hedgerows and tree belts on site, 12Ha of proposed woodland and scrub, and 5.8km of proposed hedgerow. Further enhancements and new provision are also identified off-site.

Criterion 15 seeks the provision of strategic open space within the northern centre of the site, including the whole of the area in between Public Footpaths Audley 9 and Audley 22. This is considered further in Section 3 below. Public Rights of Way

Criterion 14 calls for the enhancement of Public Rights of Way (PROW) and Green Infrastructure Network alongside new walking and cycling routes on the site. The Green Infrastructure Strategy (Appendix 9) notes that the PROW in the southern part of the site are better used and more accessible; they will be retained and enhanced within strong green corridors. Those in the northern part of the site are much less well used but will be enhanced and either retained (PROW Audley 9) or diverted (Audley 8) through a further green corridor.

The current indicative layout also shows a network of additional potential pedestrian and cycle ways throughout the site further enhancing the ability to move across and within the site and linking up the formal PROWs. The Green Infrastructure Strategy states that as currently drawn these proposed recreational routes would extend to 4.8km, with 1.5km of existing PROW within the site retained and enhanced.

This should also be understood alongside previous analysis prepared and submitted as part of the Regulation 18 consultation, and provided again here (Appendix 6), to consider how Green Belt mitigation can be achieved. This identifies a series of mitigation measures that could be achieved through a well-planned and comprehensive green infrastructure framework within and around the Site, but it also reports on an audit undertaken to identify opportunities to improve pedestrian access into the surrounding area. Locations within and beyond the site are identified where enhancements secured through planning can be made.

Heritage

Criteria 11 and 12 are concerned with heritage, seeking a sensitive response to the setting of nearby assets, consideration of the HIA for the site prepared by the Council, and the retention or evaluation of assets within the site as appropriate.

An archaeological and heritage overview was undertaken of the Site to identify historic environment assets, assess their significance and to determine whether development would result in unacceptable harm to the heritage assets. This is attached to the Technical Note provided here at Appendix 7, which summarises matters from a heritage perspective.

This material was also submitted at the Regulation 18 stage.

From this work, any buried assets are considered to be of low local significance and do not comprise an impediment to the development of the site.

In terms of built heritage, Brook Farm within the site is of local significance. It is assessed in the further report attached to the Technical Note at Appendix 7. The observations therein include that the Brook Farm farmhouse and associated outbuildings are of low local value. Designated built heritage assets within the vicinity of the site are separated from it and are not considered to be an impediment to development. Overall, there are no known archaeological constraints within the site which would make development unacceptable as a matter of principle and which could not be mitigated. The loss of Brook Farm, an unlisted farmstead is considered to be of only local significance. Visual effects to the significance of the designated assets through changes to their setting are considered to be on the whole low and would not result in an unacceptable level of harm.

The Council published a Heritage Site Assessments document as part of their evidence base for the Regulation 19 consultation. The conclusions of this work overall point to the site having medium sensitivity. Recommendations are made in terms of mitigating the effect of development on heritage in a straightforward manner, and with no suggestion that the site cannot be developed appropriately from a heritage perspective.

Drainage

The open space strategy and indicative layout proposals discussed above recognise and incorporate the water course running through the centre of the site, and anticipate extensive surface level surface water storage throughout as part of a sustainable drainage system. This in turn provides opportunities for the landscape, amenity and biodiversity enhancements sought by criterion 16.

Utilities

Criterion 19 is concerned with utilities (principally drainage). It is expected that the site will be drained following sustainable principles relying extensively on surface level storage for surface water drainage. From engineering work to date the proposed levels across the site have been designed to ensure exceedance flood flows are directed away from buildings. Any flooding in the roads will be conveyed within the carriageway where it will either flow within the channels, re-entering the system at a downstream gully or ponding in low points until capacity becomes available in the downstream network. In some places exceedance flows will be conveyed overland across soft landscaping towards the proposed attenuation features or watercourse. A foul pumping station will be required to discharge foul flows from the site to the public foul sewer network; as discussed above space for this has been allowed for in the emerging design.

Criterion 20 requires that development is kept an appropriate distance from the gas distribution pipeline crossing the site and any other infrastructure. The Indurent team have a full understanding of all such infrastructure and the indicative proposals are designed to take it into account.

Other

Draft Policy AB2 also seeks to secure an Employment and Skills Plan (criterion 17) and management and maintenance measures (criterion 18). These provisions can be secured in a very straightforward manner through the development management process. Indeed, in terms of criterion 17 a Framework

Employment & Skills Plan has already been prepared and shared with the Council (Appendix 10) to explain the approach that could be applied in this regard. As such, it is considered that there is a clear route for the matters raised in the draft Policy AB2 criteria to be addressed through the development of the site.

SUMMARY

The case for the allocation of land at J16 for to meet a requirement for strategic employment development has been advanced over an extended period. The evidence assembled in that regard up to and including the Regulation 18 stage is extensive and convincing. A clear case has also been made to justify removing the land from the Green Belt. The position arrived at now where the Vision, Strategic Objectives and Policy of the plan support an allocation at J16 is an appropriate one.

The need for employment land to support an allocation has been revisited here in the context of the Council's latest evidence and updated work undertaken on behalf of Indurent. This finds that the need is greater than that suggested by the Council's evidence base, and that the site is ideally placed to help cater for the strong, unmet demand in the sub-region, in a prime location adjacent to the nationally significant M6 and A500.

The draft allocation Policy AB2 includes a range of site specific criteria to be satisfied, concerned with highways and access, HGV parking, sustainable development and energy, amenity, landscape and open space, public rights of way, heritage, drainage, utilities, and other matters. Design work undertaken over an extended period shows that each of these can be addressed satisfactorily such that a successful scheme can be delivered here.

REASONS FOR UNSOUNDNESS

Section 2, above, explains why, fundamentally, Indurent support strongly draft Policy AB2 and the allocation of land at J16 for employment development. In most respects the policy is sound. However, there are a small number of points it is considered should be addressed to ensure it is fully sound. Those points are identified here. The changes then suggested to remedy the issues identified and make this part of the plan sound are set out in Section 4, below.

REASONS

i) Opening Text

The opening text of the policy includes, "The site extends to circa 80 hectares and is allocated for uses including 22 hectares (circa 220,000 sqm of floorspace) of employment land." For this part of the Plan to be positively prepared it must convey effectively how it will meet the identified need. It is considered that to be effective this wording as currently framed – with the allocated floorspace first expressed unconventionally in hectares – should be rephrased, ensuring its intention is entirely clear.

ii) Criterion 2

There is a requirement in Criterion 2 for an emergency access via Barthomley Road to be delivered as part of phase 1 of the development. Barthomley Road is at the southern end of the site, and it is likely that the development will proceed from north (where the main vehicular access is required) to south. An emergency access here would not serve any useful purpose as part of any first phase; it is not justified. It is considered that this criterion should be amended to make reference to the provision of an emergency access in accordance with phasing to be agreed.

iii) Criterion 9

Criterion 9 includes the requirement for, "buildings or structures designed to ensure they are not intrusive in significant views from the surrounding area." Recognising that the proposed allocation is for strategic employment land to include very large buildings it is likely that, to some degree, the buildings will be visually intrusive where they are seen. The wording as currently framed undermines the deliverability and hence effectiveness of the allocation. The requirement should not be to avoid intrusiveness, but rather that any such effect should not be mitigated and not then be unacceptable, and the wording should be amended accordingly.

iv) Criterion 15

There is a requirement (criterion 15) for, "Provision of strategic open space within the northern centre of the site, including the whole of the area in between Public Footpaths Audley 9 and Audley 22 to be delivered as part of development Phase 1." It is understood that this requirement stems from the Council's desire to mitigate the impacts of the development of the site. Indurent share the Council's view that mitigation should be pursued. However, it is considered that this very specific policy requirement is not justified. It does not represent the most appropriate strategy for the site and is inconsistent with delivering the best outcome here, which might be achieved through the provision of open space in other ways. It does not appear that the preservation of this area is based on any particular evidence as to why this specific parcel should not be developed. Rather, it seems to stem from a general sense that provision of appropriate open space is necessary – a view which is shared by Indurent. The better approach is that the detail of how that is achieved should be based on careful and thoughtful analysis of the site. To that end the Green Infrastructure Strategy (Appendix 9) explains that there is no discernible logic to the restriction proposed for this land. Development here would sit on low-lying land that is not widely visible from the surrounding landscape, and would be well contained by proposed GI. The M6 is a significant intrusive feature running alongside this area and it already contains built development. The majority of the area is of limited nature conservation value; existing field hedgerows present here are also of low quality. Notable features of value are restricted to tree belt along the brook and vegetation by the escarpment, and these are retained by the Green Infrastructure Strategy. Leaving it entirely as open space would risk creating a disjointed development.

The Green Infrastructure Strategy explains that the preferred approach would be to provide open space on part of this land as part of a high quality and extensive approach to distributing GI across the site as a whole. Substantial corridors of open space, broadly centred upon the brook by Public Footpath Audley 9 and the escarpment by Public Footpath Audley 22 would create opportunities for a range of environmental enhancements as envisaged within the Strategy.

The proposed strategy is explained in section 4 of the document. A comprehensive, sitewide approach to open space provision is offered, with a multi-functional Green Infrastructure framework to provide a wide range of environmental enhancements. Proposed Green Infrastructure would create broad swathes

	<p>of open space, wrapping around development and permeating through central parts of the site. This is expressed primarily through a series of five “GI Corridors.”</p> <p>As envisaged in the Strategy an extensive strategic Green Infrastructure offer would encompass approximately 29Ha which equates to 37% of the total site area. With on-plot provision as anticipated in the current indicative layout that would increase to approximately 42%. The Green Infrastructure Strategy also explains how the site will provide in the order of 15 – 23Ha of landscaping in excess of that which might routinely be associated with employment development at this scale.</p> <p>The Green Infrastructure Strategy represents an appropriate response in mitigating the impacts of development and offering very considerable enhancement. In this context, to ensure that the best possible solution is achieved criterion 15 should be expressed more generally in terms of what it is seeking to achieve across the site, rather than limiting itself to one area.</p> <p>v) Criterion 17</p> <p>The requirement in criterion 17 is for an Employment and Skills Plan to be secured, specifically, through a S.106 agreement. The national policy position (NPPF paragraph 55) is one where matters capable of being dealt with via condition, rather than obligation, should be so addressed. To avoid inconsistency with national policy it should not be specified that this requirement is dealt with via S.106. There might be reasons why an obligation is necessary to deal with the point, but equally it might be dealt with via condition. There is no need for the policy to dictate the mechanism.</p> <p>SUMMARY</p> <p>Indurent support strongly draft Policy AB2 and the allocation of land at J16 for employment development. However, there are a small number of points it is considered should be addressed to ensure it is sound. These relate to the opening text of the policy and then its criteria 2, 9, 15 and 17.</p>
Q7 Modification	<p>Section 3, above, identifies a small number of points to be addressed in relation to draftPolicy AB2 to ensure it is sound. The changes suggested to remedy the issues identifiedand make this part of the plan sound are set out here.</p> <p>MODIFICATIONS</p> <p>i) Opening Text</p> <p>To clarify the opening text to Policy AB2 in terms of the effect the allocation is intended tohave it is suggested it is amended to include, “...allocated for uses including circa 220,000sq m of floorspace for employment use. Employment will...”ii) Criterion 2</p> <p>The main access to the site should be provided within the first phase of development, andthe emergency access should be provided to suit the phasing of the development of thesite as a whole. Criterion 2 should be amended to read, “Safe and convenient access intothe development (including for Heavy Goods Vehicles) via a new junction established fromthe A500 to be delivered in Phase 1 of the development, with emergency access viaBarthomley Road to be delivered in accordance with phasing arrangements for thedevelopment of the site as a whole to be agreed with the Council.”</p> <p>iii) Criterion 9</p> <p>For clarity and effectiveness Criterion 9 should be amended to include, “designed toensure they are not unacceptably intrusive in significant views...”.</p> <p>iv) Criterion 15</p> <p>To secure the most appropriate strategy for the site and the most successful outcome forthe allocation, the area currently specified by criterion 15 should not be excluded fromdevelopment. This criterion should be amended to read, “Provision of strategic openspace within the northern centre of the site, including a green corridor encompassingPublic Footpath Audley 9 and the adjacent watercourse to be delivered as part ofdevelopment Phase 1, and also as part of a comprehensive site wide phased approach tohigh quality open space and Green Infrastructure provision.”</p> <p>v) Criterion 17</p> <p>To ensure compliance with national policy criterion 17 should not specify the mechanismthrough which the Employment and Skills Plan is to be secured. The concluding words ofthe criterion (“secured through a S.106 agreement”) should be deleted.</p> <p>SUMMARY</p> <p>Modest changes are suggested in relation to the opening text of Policy AB2 and thencriteria 2, 9, 15 and 17. The implementation of these changes will ensure this part of thePlan is sound.</p> <p>SUMMARY</p> <p>Indurent have instructed Planning Prospects to prepare and submit these representationsto the Final Draft Local Plan (Regulation 19 stage) Consultation for the Newcastle-under-Lyme Local Plan. The representations are informed by extensive supporting technicalwork which is set out where relevant in a series of appendices to this document. Thisdocument deals solely with Indurent’s response to draft Policy AB2. Indurent’s comments on other parts of the Regulation 19 Plan are set out separately.</p> <p>The case for the allocation of land at J16 for to meet a requirement for strategicemployment development has been advanced over an extended period. The evidenceassembled in that regard up to and including the Regulation 18 stage is extensive andconvincing. A clear case has also been made to justify removing the land from the GreenBelt. Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	Johnson
Consultee Given Name	Jennifer Jean
Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p>The site AB2 is unsound - the site is on J16 of the M6 which is already a congested part of the road network. The A500 is frequently congested at peak times and whenever there is an incident on the M6. This also affects surrounding local roads through Audley.</p> <p>When a traffic count on the roundabout on B5500/Alsager road was carried out for 2 hours the amount of vehicles counted ranged from 1350-1750. This increased significantly on when there was an accident on the A500. If another 200+ houses are built and the AB2 development, this would increase the amount of vehicles using the local roads to unsafe levels. These roads are not built for this amount plus many hgv's and service vehicles, this makes the plan unsound.</p> <p>The M6 Junction 16 cannot accommodate the extra traffic that would be generated by the massive industrial site. The emergency access that is planned for Barthomley Road is both unsound and unjustified. The road is a narrow and windy country lane used by many local residents as a rural walk. The dangerous conditions and damage to the countryside and wellbeing of nature and residents that an increase of traffic including heavy goods and service vehicles cannot be justified.</p> <p>The employment site is said to create thousands of jobs. Jobs in this type of warehousing facility are likely to be replaced by AI and robots in the coming years, therefore the statement that it will create this amount of jobs is also unsound and the irreversible damage this will do to the greenbelt for a short term investment in jobs cannot be justified. The jobs that are created in the short term will create thousands more cars travelling to the site as there are no public transport links. Personal car use will be the only viable way for workers to access the site.</p> <p>The site cannot be justified as the proposal is to remove 80 HA of good quality greenfield for 22HA of employment land. The site is unsound as it is four times larger than the council say that they need. This will lead to the employment / housing ratio becoming unbalanced and this rural community will be faced with more housing development that the infrastructure of the village cannot cope with. There will not be capacity for traffic, schools, health centres and dentists.</p> <p>The plans state that the height, scale and form of the development should reflect the character of the area. This excessively enormous industrial site cannot possibly be deemed to fit the character of this greenbelt rural land. The land is high quality agricultural land that can never be replaced. It supports wildlife and at a time when the world is in a climate crisis, the council should be protecting this land from excessive development. For these reasons, this site is unsound and unjustified.</p> <p>This site is cannot be justified as there are already huge warehouse facilities a very short distance away in Alsager. These warehouses are largely empty. There is also the development at Radway Green. Whilst not in the Newcastle Borough, these industrial areas should be considered in conjunction with the local plan.</p>
Q7 Modification	To make this local plan sound, the AB2 site should be removed from the plan as there are alternative sites that are more appropriate for the aims of the council. The size of the site, the irrecoverable damage it will do to the environment and nature, the increase in HGVs and cars that will congest both the A500, M6 and local roads cannot be justified and makes the plan dangerous, unjustified and unsound.

Q4 Part of document	Paragraph

Q4 Paragraph number	13.8
Q5 Legally compliant	No
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>This policy relating to 13.8 re land AB2 is unsound. It cannot justify removing 80ha of good arable greenfield land in a Green Belt for 22ha of employment land. The site is 4 times the size the Council says it needs it is unrealistic and would lead to more houses being required.</p> <p>The only transport links to the site are roads so it would lead to extra car journeys by employees and extra HGV & Van journeys to the sites. This means extra noise and air pollution along with increased CO2 emissions. Also more traffic through our village which already gets very busy.</p> <p>Traffic levels on the M6 and A500 are already high it is unrealistic to think that AB2 will have little effect on this. Queues are about 2 miles long southbound on M6 to junction 16 at times and not always rush hour (I've seen it at 10am on a Wednesday) Also queues can be found from the A34 roundabout to Junction 16 on the A500.</p> <p>Even more traffic and another junction on the A500 would make the A500 and surrounding minor roads very congested. The B5500 is already a 'rat run' to Newcastle and the M6. This would make it worse.</p> <p>AB2 should be scrapped altogether. It is more accessible to Crewe than Newcastle and therefore more likely to benefit people from Crewe.</p>
Q7 Modification	AB2 should be scrapped.

Q4 Policy	AB2
Q6 Details	<p>I am writing to object to the above planned policy. My reasons are the infrastructure of the surrounding villages will be very badly effected with the added traffic, noise and pollution. Also our wildlife will suffer as a result of this proposal. Our green areas will be depleted meaning loss of oxygen from trees, pollination of plants for food and crops. We need to keep our rural areas rural or we risk being a concrete jungle with nothing but factories spewing out more toxins and pollution.</p>

Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p>Please take this email as my representation against the continuation of the development policy AB2.</p> <p>My overriding view is that the plan for Audley does not respect the nature of the area, the biodiversity and does not justify the encroachment into green areas. There are a large number of brownfield sites around the area that could provide appropriate stock for development.</p> <p>To the key points:</p> <ul style="list-style-type: none"> Is the plan positively prepared? - based on evidence, this does not appear to be the case. The area has Victorian roads and placing additional HGV traffic seems like a risk increasing measure. It would appear that concessions to business demands / requirements has superseded that of locals (see points below). Is the plan justified? - there is significant warehousing in the area already, with significant developments in Stoke-on-Trent, Crewe and other nearby locations. A large number of these are looking for occupants, so on the basis of demand, these plans do not form an appropriate strategy. When there is oversupply, the likelihood is that these units will also remain empty. Is the plan effective? - it is hard to gauge whether the plan will be effective over the delivery period. With the specific points I raise below, it is unclear whether combining commercial and residential developments will deliver the required benefits in the timescales. Consistent with National Policy? - it is clear that there are reviews relating to the planning laws forthcoming, and it would appear that this development is attempting to preempt any changes. It does not appear consistent with our environmental and biodiversity goals, and seeks to increase the carbon footprint of the area against the backdrop of "potential" employment.

	<p>The key challenge in the local plan is that it is not clear that it benefits the local populace. It is clear that the consideration of wellbeing, health and entitlement to peaceful enjoyment of property has not been fully impact assessed.</p> <p>In closing, I have summarised the areas where I believe the plan is deficient and should therefore be withdrawn. Each of these areas should have been addressed ahead of any plan submission such that residents and business could make a fully informed judgement on the impact:</p>

Q6 Details	<p>Dear Inspector,</p> <p>Newcastle Under Lyme needs a local plan, to allow structured development of housing across the Borough and secure sites that are in green belt land.</p> <p>However, I feel that the local plan we see being put forward has sites in , that are not just unpopular but also have real infrastructure concerns and based on assumptions that I feel cannot be substantiated.</p> <p>Having attended various resident group meetings , I have found that they are very knowledgeable and who knows better than local residents , the problems that they face now and how the new developments will affect them and not against a local plan but sites that are in the plan.</p> <p>The main sites that I have concern over AB2, AB33,AB12,AB15, CT1, BL8,BL18,BL32, TK6,Tk17 and TK27.</p> <p>These are in Audley , Red Street and Butt Lane /Talke , areas that I have links with and know well.</p> <p>Documents are now accessible, but residents and councillors have by timings of release , which in some cases have not allowed proper time for scrutiny and meaningful consultation.</p> <p>All these sites have traffic issues already and note recommendations regarding A500 , Talke Interchange, A34 ,A527 , which will need major financial assistance .</p> <p>I believe all the sites listed have questions about infrastructure and would question how sound the reasoning and financial constraints of the projects to be deliverable.</p> <p>I would like to mention two sites in particular , which are AB2 and CT1.</p> <p>AB2 is a 80-hectare project for warehousing /factory that is not in keeping with the rural area , with only 22 hectares needed for warehouse , the rest is for lorry car park and substation.</p> <p>Having experienced problems in my Ward , Holditch and Chesterton , with warehouse now occupied by Boughey Distribution I believe this is not a sound proposal.</p> <p>Residents constantly complain about traffic and noise , plus air quality.</p> <p>When it was built people complained , before it was even occupied residents about construction, and we also had problems concerning getting Road adopted by Staffordshire County Council .</p> <p>Without this happening , warehouse contract would not have been signed , and quite possibly would still be empty now .</p> <p>AB2 in Audley , is potentially 3 times bigger than Chesterton warehouse , and have grave reservations regarding the soundness of this development plus I believe that there may be another more appropriate alternative.</p> <p>CT1 Red Street has been scaled down but worth noting , that area has a history of being used for mining , as well as this mentioned in the report doctors which closed and now a dentist.</p> <p>Due to the problems with documentation being available for consultation , and real reservations about infrastructure and financial viability , I would ask you to consider if this plan is sound and complaint.</p>

Q4 Part of document	Policy
Q4 Policy	AB2
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>The policy AB2 proposes redevelopment of agricultural land to the South East of junction 16 of the M6 as an industrial site which I consider to be completely flawed for many reasons which I will outline below.</p> <p>1) Traffic congestion. The proposed development relies on its main access to be off the A500 to the East of the junction 16 on the M6. Whether this will involve another roundabout or traffic lights is not clear, but in the proposal it has been suggested that there is "no traffic problem in the area" which I strongly refute and can be prove otherwise.</p> <p>On the 23rd, 25th and 27th September, a group of local residents carried out a traffic count and survey of the A500 the results of which confirmed that there are major congestion hold ups on this road in the vicinity of junction 16. The first is West bound traffic builds up for over a mile before junction 16 between 07:00 and 08:45 each morning. The second hold up is where the A500 meets the A531/A5020 on a roundabout at Meremore Moss and again, its the westbound traffic that backs up towards junction 16 between 07:00 and 08:30. It should be noted that the A500 is only single carriageway here and was</p>

	<p>seen to carry over 1,500 vehicles per hour in each direction at peak periods. All these figures are available if proof is required.</p> <p>During the traffic count on Wednesday 25th, an accident on the M6 Northbound at around 17:00 meant that junction 16 virtually came to a standstill as did the traffic on the A500 in both directions so no meaningful results were measured but it was observed that two fire appliances trying to attend the accident were held up by the traffic stopped on the single carriageway and had to slowly force their way through down the centre of the road. The accident then resulted in traffic diverting along the B5500 as this is a well known (and used) way to divert around any problems at junction 16. On Friday 4th October, the A500 was closed in both directions from 22:00 until 11:00 the next day due to a fatal accident at the very site of this AB2 proposal resulting in traffic on the B5500 again.</p> <p>It has been noted that two "Emergency access points" have been suggested for AB2 using narrow single lane roads to the South of the site. There are difficult to traverse even in a car so use for Emergency vehicles in a hurry beggers belief. They are farm access roads used by tractors and associated heavy machinery and if you meet one, it is a question of finding the nearest gateway or grass verge to get out of the way, not a very sensible "Emergency" route.</p> <p>Requirement for AB2</p> <p>The NULBC state that this is a "strategic employment site serving the employment needs of the Borough and wider sub-region". They state that they require 22 hectares but the plan now shows a requirement for 80 hectares, that is 4 times as much as they said they needed originally so how is this justified? What they choose to ignore is the fact that there are several "strategic sites" in the area that have buildings empty and have so for the last few years. There is a major industrial development at Radway Green that is only 1.5miles as the crow flies from junction 16 that is desperate to find clients to take on their empty buildings so I cannot understand the logic of the Borough Council. This proposed site will sacrifice good agricultural farm land and replace it with tones of concrete and tarmacadam, how can that fit in with our Carbon reduction/ Climate Change policy. It would also increase the chances of local flooding and pollution from vehicle movements into the streams and waterways, add to noise and light pollution, contribute to air pollution and generally have a detrimental affect on the local population. I note that the report raised by the Urban Vision Enterprise on behalf of the Audley Parish Council raised many concerns about the lack of clarity and answers provided by the NULBC and even considered part of the consultation under Regulation 18 unlawful?? In conclusion, I see no positives whatsoever for this proposed AB2 site and hopefully, the planning inspectorate will see the folly of it all.</p>
Q7 Modification	I consider AB2 to be unsound and should not be considered as a viable prospect. It will cause significant damage to the environment and result in considerably more traffic congestion for the whole area.
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	The information regarding traffic flow along the A500 given in the proposal are incorrect and misleading but I have actual traffic count figures taken at the end of September 2024

Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p>I wish to lodge the objections listed below. They are relative to the Newcastle Under Lyme Local Plan with particular reference to the site allocations in Audley Parish. I feel that the local plan in these areas is not justifiable and is not sound.</p> <p><u>Site AB 2 – Land at junction 16 of the M6, Proposed strategic employment site.</u></p> <p>This site is proposed at 80HA – the local plan says the council are looking to allocate 22HA so why is this quadruple the size needed and all in one area and all on high quality green belt land. To allocate something that is four times what is needed, makes this element not justifiable.</p> <p>There will be a lot of work required around a new junction should this site be granted, where is the funding to come from for this? I cannot see any reference to the funding for this so feel this in itself is unsound.</p> <p>I expect there will be an increase in volume of traffic in the local area should this site be allowed, increasing air and noise pollution is not in the best interests of people living in the area and causing greater traffic volume on already busy local roads. I cannot see any justification for this development at all given that there is much warehousing lying empty in other parts of the county.</p> <p>The council appear to be adopting a high growth strategy and I would like to know where the evidence for this strategy is? I think this approach without evidence makes the plan unsound.</p> <p>I strongly believe that this site needs to be removed from the local plan as it is not a justifiable development and goes against what the council themselves say is needed for employment in the local area.</p> <p><u>Site AB12 – Land east of Diglake Street</u></p> <p><u>Site AB15 – Land north of Vernon Avenue</u></p> <p><u>Site AB 33 land off Nantwich Road/Park Lane, Audley</u></p> <p>I believe all these sites should be removed from the local plan as they are unjustifiable and unsound for the following reasons.</p>

	<p>AB12 – Access and egress on narrow roads that are already congested and not sustainable over time</p> <p>AB12 Areas prone to flooding and not sustaining climate control</p> <p>All areas on high quality green belt land</p> <p>Audley and Bignall End are small rural villages – losing the identity of both areas is unsound</p> <p>Additional 200 to 400 cars on the roads that are already congested, where parking problems are a major concern</p> <p>The pressure on local services that cannot manage now, I cannot get an appointment to see my GP due to demand and yet nothing presented on how this will be addressed</p> <p>Small local school, over capacity would then lead to more people travelling out of the area for school and creating further congestion</p> <p>All the suggested allocations for the area are on the green belt and would change the landscape of the local area for ever. More sustainable sites should be found and all the above should be removed from the local plan as unjustifiable and unsound.</p>

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Company / Organisation	National Highways
Consultee Position	Assistant Spatial Planner
Consultee Family Name	Pyner
Consultee Given Name	David
Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p>Newcastle-Under-Lyme Local Plan Review - Regulation 19 Consultation (Final Draft)</p> <p>National Highways welcomes the opportunity to provide comments on the Final Draft Local Plan consultation (Regulation 19) prepared for Newcastle-Under-Lyme Borough Council, which is expected to cover the plan period up to 2040.</p> <p>National Highways has been appointed by the Secretary of State for Transport as a strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the Strategic Road Network (SRN). It is our role to maintain the safe and efficient operation of the SRN whilst acting as a delivery partner to national economic growth.</p> <p>In relation to this consultation, National Highways' principal interest is ensuring the safe and efficient operation of the SRN in the area, notably the M6, A50 and A500 network which routes through the Local Plan boundary.</p> <p>In responding to Local Plan consultations, we have regard to the Department of Transport's (DfT) revised Circular 01/2022 - Strategic Road Network and the delivery of sustainable development ('the Circular') which sets out how interactions with the SRN should be considered in the making of local plans. Paragraph 28 of the Circular sets out that:</p> <p>"The policies and allocations that result from plan-making must not compromise the SRN's prime function to enable the long-distance movement of people and goods. When the company assists local authorities in the development of their plans and strategies, the local authority should ensure that the SRN is not being relied upon for the transport accessibility of site allocations except where this relates to roadside facilities or SRN-dependent sectors (such as logistics and manufacturing). The company will also work with local authorities to explore opportunities to promote walking, wheeling, cycling, public transport and shared travel in plan-making, in line with the expectations set out in the NPPF and the Transport Decarbonisation Plan."</p> <p>In addition to the DfT Circular 01/2022, the response set out below is also in accordance with the National Planning Policy Framework (NPPF) and other relevant policies.</p> <p>Previous Consultations</p> <p>National Highways was consulted during the Regulation 18 consultation in August 2023. The Regulation 18 identified a minimum requirement of 7,160 dwellings (358 per year) and 69 hectares of employment land to be delivered during the plan period between 2020 and 2040. It also included potential sites for allocation, and we provided an indication of the potential sites that were expected to have traffic and boundary impacts on the SRN.</p> <p>In May 2024, National Highways was consulted to provide recommendations for the Infrastructure Delivery Plan preparation, where we provided comments on the infrastructure requirement.</p> <p>Final Draft Local Plan Regulation 19 Consultation</p> <p>The Final Draft Local Plan Regulation 19 includes locally specific policies and strategic / non-strategic site allocations to meet housing and employment needs across the Newcastle-Under-Lyme area for the plan period of up to 2040. Once adopted, this Local Plan will replace the policies in the Newcastle-Under-Lyme and Stoke-on-Trent Core Spatial Strategy (adopted 2009) and the saved policies of the Newcastle-Under-Lyme Local Plan (adopted 2003). Appendix 2 of the Local Plan consultation document outlines the list of previously adopted policies that will be retained or replaced.</p> <p>In principle, National Highways supports the vision and objectives set out in the Regulation 19 Draft Local Plan which aim to deliver the growth in a sustainable manner.</p> <p>Housing and employment requirements</p> <p>Based on our review of the Regulation 19 consultation, we note that the Final Draft Local Plan outlines a minimum requirement to deliver 63 hectares of employment land and 8,000 dwellings (400 dwellings per annum) over the plan period of up to 2040 as stated in the 'Policy PSD1: Overall Development Strategy'. We welcome that the housing and employment requirement have primarily been determined</p>

using a Housing and Economic Development Needs Assessment (HEDNA) in 2024, which in this case is expected to provide a higher housing demand when compared against the Government's standard method.

We acknowledge that a Sustainability Appraisal (SA) process has been undertaken to evaluate the different growth options considered, assess the impacts and identify the residual effects based on the social, economic and environmental parameters.

As outlined in Table 2 of the Final Draft a total of 8,663 dwellings are planned to be delivered over the plan period of up to 2040 to meet housing demands. This also includes a supply buffer of around 8.3% to address any potential delivery challenges. We acknowledge that the supply also factors in the windfall allowance estimated based on the Council's Strategic Housing Land Availability Assessment (SHLAA), historical trends, and future projections.

Policy SA1: Site Allocations indicates that a significant portion of the housing supply will be delivered through strategic allocations. When comparing the allocation sites included in the Regulation 19 consultation against those set out in the Regulation 18 consultation, we note some minor changes in the scale of growth at individual sites, with a few sites being removed and others added. However, the total housing growth from all strategic allocations remains at 4,512 dwellings. The table below outlines these changes (tables included in the attachment)

In the case of employment supply, we note that AB2 (Land at M6 Junction 16) and KL15 (Land at Barkers Wood, Keele) are key strategic sites contributing significantly to meet the employment needs.

Sustainable transport

We acknowledge that the Final Draft Local Plan has focussed on decarbonisation policies such as 'Policy CRE 1: Climate change' and 'Policy CRE 2: Renewable energy' to address climate change impacts by reducing carbon emissions. This also includes developing energy-efficient buildings, designing to BREEAM Excellent standards, optimising water use, adopting water conservation measures, and utilising renewable or low-carbon energy sources.

'Policy IN2: Transport and Accessibility' emphasises that new developments must provide access through sustainable transport modes to protect the integrity of the highway network. The Council will work with developers to ensure that the proposals contribute to a transport network that is accessible, efficient, and safe. We support this policy and acknowledge that developments likely to generate significant traffic will be required to produce Transport Assessments and Travel Plans, in accordance with the requirements set out. We appreciate that focus is also given to developments that facilitate sustainable movement of freight traffic.

'Policy IN4: Cycleways, Bridleways, and Public Rights of Way' highlights the importance of enhancing walking, cycling, and public transport facilities within the Borough.

We welcome these policies and note that these align with the expectations set out in the National Planning Policy Framework and National Highways' Net Zero Strategy.

Transport Evidence Base

Considering the scale and location of the allocations included in the Draft Final Local Plan, we expect impacts on the SRN in the area either independently or cumulatively.

Strategic Transport Assessment (document reference ED011)

We acknowledge that a Strategic Transport Assessment (STA) dated July 2024 has been prepared using the North Staffordshire Multi-Modal (NSMM) transport model to assess the likely traffic impacts of the site allocations proposed in the Regulation 19 consultation. We note that the model has been run for the following five scenarios in the forecast year of 2040.

Based on our review of the STA, we have the following comments to make:

Section 4.5 of the STA states that while the model emphasises the use of pre/post-COVID data, we note that accident data for the years 2018-2022 includes COVID data with relatively lower traffic flows and possibly fewer accidents. How has the impact of COVID been taken into account?

Section 5.3 of the STA states that the 2015 NSMM model is overestimating the flows by 26-28% when compared against 2022/23 observed WebTRIS data. It also notes that only 15-35% of counts pass in this validation exercise. Despite this shortcoming, model forecasts for 2040 were proposed to be used to inform future testing, which National Highways agreed to as it presents the worst-case scenario with overestimation of the traffic.

Section 7 provides details of the reference case model development, but note that finer details of the method applied are missing. We therefore have the following queries relating to this section:

- Does this scenario include constraining other local authorities to NTEM/TEMPPro?
- Does this scenario include any committed and under-construction developments within the local plan area?
- What is the background growth percentage between the base year and the forecast year 2040?

Regarding Figure 7-1, we are unable to find the basis for changing the junction delay definitions for slight, moderate, and severe delays from what was mentioned in the minutes of the meeting dated 15th May 2024. At present, delays of up to 3 minutes at junctions are reported as slight which is arguable. Based on the model outcomes, improvement measures to enhance public transport connectivity and infrastructure schemes on the local highway network are proposed in the STA. We also note that a detailed junction assessment will be undertaken for M6 J16 using a VISSIM model to accurately assess the traffic impacts of the AB2 allocation.

Regarding Section 8.3.2, bullet 1, we interpret that the new junction is the access to site AB2. Thus, we are surprised that the design of this new junction would still lead to 120-180 seconds of delays in the PM. A new access arrangement should work without that much stress.

We request that a summary table with delays (absolute numbers in seconds) at each of the approaches be prepared and shared with National Highways for M6 J16 and the new junction on A500 for site AM2. This is so we can understand the changes in delays between the base, reference case, and proposed scenarios.

We request that the basis for the 10% reduction in car users for the area around site AB2 set out within Section 8.6.6.1 be supported by further evidence.

We also request further details on how much total demand (in PCUs or vehicles) has been removed from the original matrix. Has a preliminary assessment been undertaken on the frequency of bus service that would be required to cater to that demand during peak hours to verify that this is a feasible option?

Regarding Section 8.6.3, while we do not have an issue with the bespoke approach to testing M6 J16 within VISSIM, considering that the NSMM is overestimating the traffic, the use of incremental addition of the difference from the NSMM may lead to an underestimation of traffic at this junction due to large delays in the NSMM reference case scenario. There is a possibility that any additional traffic from the AB2 site may divert to local or unrealistic routes within NSMM.

We therefore request that traffic flow distribution Select Link Analysis plots from site AB2 be shared with National Highways to verify that the routes assigned in the model are reasonable before being used for incremental addition for microsimulation assessment.

We also request that observed base and modelled reference case data be presented in a similar format as Table 8-6 for National Highways to understand the absolute traffic growth at each of the approaches.

National Highways Previous comments

While we are happy with the suggested incremental change in flow and delays analysis for 2040 forecast year models, we must establish a robust do – minimum reference case scenario developed using the base year model.

We note that our previous query dated May 2024 remains unanswered: “The further turning count comparison tables for the M6 J16 model are appreciated and provides comfort that many movements (particularly the A500 East approach) match the 2015 model. However the turning proportions provided for the M6 South to A500 East movement are of concern as these look significantly different to those that were modelled. National Highways would like to understand if there are any explanations of why these differences have occur and particularly why the model identifies such low percentage of car movements?”

STA Comments Summary

In summary, the modelling work to date is based on the NSMM model, which was previously approved by the DfT for other schemes. However, present-day validation using 2022/23 data shows that the model is overestimating traffic and not validating well. Hence, a bespoke approach is applied to assessing M6 J16, while the rest of the strategic assessment uses the forecast 2040 NSMM model which is still believed to be the best tool available. Analysis provided shows that parts of the A500 and junctions along it will be stressed by 2040 and that the level of stress will increase with the local plan. Strategic allocation sites tested will lead to some congestion but this would not lock out the network. The STA and IDP mention the possibility of developers’ contributions for various infrastructure schemes including a new bus service along site AB2 among others that could potentially bring congestion levels down to a more comparable level with the reference case scenario, which should be acceptable.

We request responses to our queries above but are hopeful that the Local Plan can work with some support from the developers to mitigate any impact on the SRN.

Infrastructure Delivery Plan (IDP)

A total of 28 transport development schemes are listed in Table A.1 of Appendix A of the IDP to enhance the transport network and promote sustainable transport. The schemes that are of interest to National Highways are:

1. T9 (improvements between M6 J13 and J15) - part of the RIS 2 scheme
2. T14 to T20 schemes

We note that the finalisation of these schemes is subject to undertaking detailed junction capacity assessments. We appreciate that the list of potential allocations that are likely to impact the SRN has been included.

T14 specifically mentions a “Potential mitigation scheme involving widening and an additional lane at the gyratory on M6 J16. VISSIM modelling work is currently ongoing, and the need for any potential mitigation measures can be confirmed after the completion of a detailed capacity assessment as part of the planning application stage.” It should be noted that there is no confirmed scheme from National Highways perspective at the moment, and we seek confirmation as to whether such a scheme is included in the Local Plan assessment within Scenario 5.

We note that the funding mechanism to implement these mitigation schemes including T14 will likely be through developer funded Section 278 agreements. Considering that there could be cumulative impacts from different allocations in the area, a Section 278 agreement is likely to result in a piecemeal approach to the delivery of the improvement works. We would welcome some clarity on why a Section 278 agreement is preferred over a Section 106 agreement for the funding mechanism in this case.

Duty to Cooperate

We note that a Duty to Cooperate Interim Statement of Compliance has been submitted as part of the evidence base alongside the Final Draft Local Plan. We commend the Council's approach to collaborating with neighbouring local authorities, stakeholders, and other bodies to address issues related to local authority boundaries. This collaborative effort will help ensure that all parties' interests are considered and that a comprehensive solution is developed.

National Highways is committed to working with Newcastle-Under-Lyme Council to develop and draft a Statement of Common Ground (SoCG) to address any strategic cross-boundary issues and reach an agreement on how the traffic impacts from the allocations identified in the Local Plan are to be dealt with. We understand that a final version of the Duty to Cooperate will be prepared to support the submission version by December 2024.

Once again, National Highways appreciates the opportunity to comment on the Final Draft Local Plan Regulation 19 consultation and looks forward to working collaboratively with the Council to support the development and adoption of the Local Plan for Newcastle-Under-Lyme.

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Company / Organisation	Audley Community Action Group

Consultee Family Name	Roberts
Consultee Given Name	Gary
Q4 Part of document	Policy
Q4 Policy	AB2
Q5 Sound	No
Q6 Details	<p>1.1 Audley Community Action Group (PAPG) is a community interest company. The CIC exists to protect and enhance the Green Belt in the civil parish of Audley, with over 1,300 supporters.</p> <p>1.2 We strongly object to the site AB2/AB2A being included in the Local Plan on the grounds that it is not sound, it can neither be justified nor is it likely to be effective. The grounds for the exceptional case for removing the land from the Green Belt have not been met.</p> <p>1.3 Consequently, AB2/AB2A should be removed from the Local Plan.</p> <p>2.0 ECONOMY</p> <p>2.1 The Newcastle Under Lyme Housing and Economic Needs Assessment Further Update of April 2024 (Turley) stated, at 8.15, that “between 43.1 ha and 83.0 ha of employment land could be needed throughout the borough between 2023 and 2040.” This is based on an ambitious growth scenario significantly higher than the 63 ha upper limit indicated by the earlier HEDNA. It is noted that the Local Plan has stated in PSD1 that a minimum of 63 hectares of employment land is needed (turning the HEDNA maximum requirement to a minimum requirement).</p> <p>2.2 It further stated by Turley, at 8.22, that “This report’s modelling suggests that there is unlikely to be surplus labour to support job growth beyond the baseline forecast.”</p> <p>2.3 Yet the Local Plan is proposing 104.6 ha of employment land BW1 (6.499 ha), CT20 (7.51 ha), KL13 (11 ha), TC45 (0.29 ha), TC7 (1.63), KL15 (13 ha) and AB2 (22 ha), as outlined in Table N10 of the Regulation 19 Sustainability Appraisal Report of July 2024.</p> <p>2.4 What is more, the LP proposes to remove 80 ha from the Green Belt at AB2. Both the SHELAA and Reg 18 documents stated that the 70 ha site can accommodate 54.38 ha of employment land (with 15.62 ha for mitigation, etc). Since then, the site has been increased to 80 ha (AB2A). On the same proportions as at the Reg 18, the site has 61.76 ha of employment land and 18.24 ha of non-employment land for roads, lorry park and mitigation (the developers have noted that the lorry park will be 1.8 ha and the proposed strategic open space will be about 3.6 ha, both easily accommodated in the 18.24 ha).</p> <p>2.5 This means that the site will lead to an imbalanced Local Plan with 39.76 ha of employment land in excess of the 104.6 ha identified in the Local Plan and 61.36 ha above the highest figure that Turley’s identified as needed in its April 2024 report.</p> <p>2.6 The Local Plan makes vague references to a sub-regional employment site but does not back this up with any details. Given that there are high employment rates in both the borough and adjacent authorities, and given that Turley has noted that “there is unlikely to be surplus labour to support job growth beyond the baseline forecast”, any such site would need to draw employees from a far wider area (as the site promoter’s agents, Hatch Regeneris, have stated “At a distance of one hour’s commute by road, a Junction 16 location has access to an estimated population of 9 million spanning the southern side of Greater Manchester, Cheshire, the northern area of the Birmingham city region and the Black Country, the wider Potteries area and Derby.”). This is not sustainable and will create more disbenefits to the borough than any benefits.</p> <p>2.7 Competing and underused employment sites in the area do underline how ambitious the 83 ha figure is (let alone 104.6 ha or the reality of 144.36 ha that includes the extra 39.76 ha of employment land on site AB2/AB2A). Neighbouring LPA employment sites that are nearby include Radway Green Brownfield (10 ha), Radway Green Extension (25 ha), Radway Green North (12 ha), Basford West (22ha) and Basford East (19 ha). Many of these sites are not yet fully developed or are vacant (see attachment)</p> <p>2.8 Indeed, a brief survey of empty employment sites within 10 miles of AB2/AB2A site show high vacancy rates (see attachment)</p> <p>2.9 In addition, there are potential small sites not included in the Local Plan, which raises the question of the efficacy of the site selection process. An example being this site (see attachment)</p> <p>3.0 GREEN BELT</p> <p>3.1The ARUP Green Belt Site Review dated 16th July 2024 recommended excluding the sites from the process on the grounds that “Development would however represent a significant encroachment into the countryside and therefore removal of the site from the Green Belt could harm the overall function and integrity of the Green Belt” (pages 28 F2 and F4), yet the Borough Council has ignored this recommendation. As can be seen from the maps below, in terms of its importance to the integrity of the Green Belt, this site is in a strategically important gap between the urban areas of southern Cheshire East and the urban areas of north Staffordshire (see attachment)</p> <p>3.2 This site has been found to make a strong contribution to the Green Belt in a previous review (Staffordshire County Council commissioned Audley Parish Green Belt Review V 2.4 conducted by Urban Vision Enterprise CIC in August 2022). This review has not been considered by the LPA.</p> <p>3.3 AB2/AB2A will have a major adverse impact on the landscape according to the Newcastle under Lyme Landscape & Visual Appraisal of March 2023. The conditions in proposed Policy AB2: 9) “with roads, buildings or structures designed to ensure they are not intrusive in significant views from the surrounding area” and 13.19 “The height, scale and form of the development should reflect the character of the area ... The height of buildings should avoid breaking treed skylines” are not realistic and effective. The character of the area consists of small agricultural buildings and dwellings which are incompatible with industrial units and HGV parking. The promoter of the site has stated that it will include a 1m square feet big box warehouse, which will tower above trees. It also ignores the reality that many of the villages in the parish of Audley are on higher ground, looking down to the site. It is not possible to mitigate such a large site.</p> <p>4.0 SUSTAINABILITY & IMPACT ON LOCALITY</p> <p>4.1 Table N10 of the Regulation 19 Sustainability Appraisal Report of July 2024 gives a higher score to an alternative growth scenario (option 6d), which did not include AB2/AB2A. This considered option 6b (the one chosen by the LPA) at 104.6 ha, yet the reality is that it provides 144.36 ha of employment land.</p>

Therefore, its negative impact will be greater than that envisaged in that report. When one looks at the negative impact the site will have on both the borough and neighbouring settlements, it cannot be regarded as sustainable development

4.2 The following issues raised by Natural England in response to Reg18 have not been adequately addressed:

"If this site is considered for release and allocation the following should be taken into account: Our mapping system shows that some of the site is priority habitat- Good quality semi-improved grassland. We refer you to paragraph 179 of the National Planning Policy Framework (NPPF<https://www.gov.uk/government/publications/national-planning-policy-framework--2>). Some of the site is best and most versatile land. See ALC report: <http://publications.naturalengland.org.uk/publication/4792819662192640>. We refer you to paragraph 174b) National Planning Policy Framework (NPPF<https://www.gov.uk/government/publications/national-planning-policy-framework--2>). Potential for air quality impacts on designated sites. For example Midland Meres & mosses Phase 2 RAMSAR/ Oakhanger Moss SSSI. This site is 2.6km away and within 200m of the M6 and is one of the many sites that could be impacted by development at this location. We refer you to paragraph 175 National Planning Policy Framework (NPPF<https://www.gov.uk/government/publications/national-planning-policy-framework--2>)" [summarised in the First Draft Local Plan Regulation 18 Consultation Report 2024 pg 142]

4.3 AB2/AB2A sites are working farms with grade 3a and 3b land. Much of the 3b land has been used to encourage greater biodiversity with the landowner receiving Government funds (map of schemes on this site below). This site goes against proposed policy SE13 to protect the best and most versatile land. There are sites with lower quality land in the other identified growth scenario options. It also goes against proposed policies SE7 biodiversity net gain and SE8 protection of specific species (which the schemes above are designed to protect) and still does not address the potential impact on Oakhangar Moss (see attachment)

4.4 The Regulation 19 Sustainability Appraisal Report of July 2024 (Pg N37) identifies major impacts on flooding and natural resources & waste. This conflicts with proposed policy SE3 flood risk management. The September 2022 SHELAA noted that the flood zones on site contributed to the site not being deliverable or developable.

4.5 There are very high levels of asthma and high blood pressure in Audley, well above both borough and national levels. The M6, A500 and rat running traffic through Audley and Signal End are highly likely to be strong factors here, particularly as traffic on the A500 is idling at peak times. As noted in proposed policy SE1 there is a "cumulative effect" on pollution, including air quality and noise. Whilst proposed policy PSD 6 will require a health impact assessment, it is felt that this should be undertaken before such a large amount of greenfield is taken out of the Green Belt and significantly higher traffic generated. After all, if the assessment shows that proposed uses on the site will result in unacceptably high adverse impacts, we will have lost 80 ha of Green Belt for no good reason.

4.6 Despite the proposed policy SE9 Historic Environment, the following issues raised by Historic England at Regulation 18 have not been adequately addressed: a need to "consider the impacts to nearby heritage assets including Audley Mill Grade II, Audley Conservation Area and heritage assets within." [First Draft Local Plan Regulation 18 Consultation Report 2024 pg 138] The high level of rat running at present, including unsuitable HGVs, is having a detrimental impact on the Conservation Area. Photos below illustrate the damage done by HGVs. This will be exacerbated if AB2/AB2A goes ahead, displacing more traffic onto the local roads (see attachment)

4.7 The inclusion of emergency access points and pedestrian access points on the narrow country lanes surrounding the AB2/AB2A site will have a detrimental impact on those lanes. Designating an access for emergency use only is very difficult to enforce (witness the large number of vehicles that illegally use the Sandbach Services service roads to access the A533). Also, people will use these roads to drop employees off at the pedestrian access points and some employees may, if running late, park up on the verges of these lanes to walk in. This will conflict with proposed policy IN4 Cycleways, Bridleways and Public Rights of Way as these lanes connect many Public Rights of Way (see map below). These lanes are also widely used by walkers, cyclists and horse riders (there being only one Bridleway in the parish) for leisure and exercise (see attachment)

4.8 Indeed, many businesses benefit from these rural lanes as visitors who use these lanes go onto local pubs and restaurants. There is a B&B and a dog "hotel" on these lanes, with horse riding establishments nearby. Proposed policy RUR1 rural economy seeks to protect and promote these businesses and conflicts with AB2/AB2A.

4.9 Residents regularly experience long queues on the A500 at peak times. These queues often tailback to the Audley junction and, at times, have tailed back beyond the Talke junction (see attachment) Traffic regularly backs up beyond the Audley/Alsager A500 junction (often beyond the Cross Lane bridge) at peak times (see attachment)

There are times when traffic backs up all the way from junction 16 of the M6 to the Talke junction A500/A34. Photographs taken from the Talke Road bridge.

4.10 National Highways have stated that they recognise the problems but have not undertaken studies to ascertain the severity and thus the remedies: "We are aware of peak hour queueing on the A500(T). However, as there was a pinchpoint scheme in 2014/15 it has not reached the top of the priority list for further study." [in FOI response in attachment)

4.11 The congestion at this junction was raised as a concern by Cheshire East Council, Audley Rural Parish Council, Alsager Town Council, Balterly, Betley and Wrinehill Parish Council and Barthomley Parish Council at Regulation 18. 4.12 Cheshire East Council identified the need to improve this junction in its Local Plan. However, due to the cancellation of HS2 amongst other things, it has now suspended plans to dual carriage the A500 west of the junction (see attachment)

4.13 LUC's Infrastructure Delivery Plan of July 2024 recognises the problems at this junction: "3.34 The most immediate priorities (within the next 10 years, aligning with the third and fourth roads investment period (RIS3 and RIS4) identified are: Strategic improvements to M6 J15 to resolve congestion, improve safety and facilitate better flow of traffic on M6 and A500. This has been suggested for submission to RIS3." [pg 50]

	<p>4.14 Aspinall Verdi's Strategic Employment Sites Assessment 2024 Update makes an assumption that there will be funds for junction 16 as a result of the cancellation of HS2: "6.9 The UK government has hinted that the £4.7bn earmarked for HS2 projects in Manchester and Leeds will now be redirected to transport initiatives in smaller towns and cities across the North of England and Midlands."</p> <p>4.15 It is clear from statements made by the Treasury that the Government's finances are in a poor state with many capital projects being cancelled. There is no HS2 pot of gold.</p> <p>4.16 National Highways has no current plans to improve junction 16 (Midlands capital projects below) (see attachment)</p> <p>4.17 As a result of the problems on the A500, many vehicles rat run through the villages in the parish. This will increase if AB2/AB2A goes ahead. The Ab2/AB2A site conflicts with the proposed policy IN2 where sites should a) "be located where travel can be minimised and are not car dependent ...e) Not cause unacceptable highway safety problems in relation to local traffic circulation ... f) not cause severe residual impacts on the road network, either direct and/or cumulative."</p> <p>4.18 From observation by residents, the following rat running routes have been identified (see attachment)</p> <p>4.18 We have commissioned a review of the Strategic Transport Assessment which follows and forms part of our representation on the Local Plan (see attachment)</p>
Q7 Modification	See attached representations
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)
Q9 Hearing reasons	To illuminate the issues raised by further explaining our concerns, the reasons for them and what we would like changed.

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	Mason
Consultee Given Name	Julie
Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p><u>Alsager Town Council's objections to the Emerging Newcastle-under-Lyme local Plan</u></p> <p>The strategic Employment site causing most concern for us is "AB2 - Land at J16 of the M6" in the Parish of Audley.</p> <p>Neither the local plan nor the strategic employment sites assessment document indicate the reasoning behind the location of the employment site nor the justification or factual evidence for the claimed number of jobs.</p> <p>An extract from Gov.uk on greenbelt land: "Once Green Belts have been defined, local planning authorities should plan positively to enhance their beneficial use, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land. Once established, Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, through the preparation or updating of plans. Strategic policies should establish the need for any changes to Green Belt boundaries, " https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/661636/2020-2021-local-authority-green-belt-strategy-and-2021-2026-local-authority-green-belt-strategy.pdf</p> <p>In our opinion the local plan does not set out the reasons for exceptional circumstances nor does it give full evidence of the need for the siting of this strategic employment site on 80 Ha (approx) of green belt land.</p> <p>It is also currently farmland with the potential to produce food. Preserving food security for UK should be the main priority.</p> <p>What the commercial business case for this location? No evidence has been provided to show that it is economically viable. If it is a trans-shipment centre, or a distribution centre, no case has been made to show it is located close to customers on a gravity led or hub and spoke principle. More evidence is needed.</p> <p>In addition, the employment site is located away from public transport and easy transport links other than the A500 and M6. There is a clear loss of hedgerows, biodiversity and habitat for many species of animals, insects and birds. This is a massive loss balanced against the siting of this strategic employment site. There doesn't seem to be any justification for choosing the location of this site other than its proximity to J16. It is simply identified as one of the strategic employment sites in the plan.</p> <p>Several public rights of way (Audley 8 and Audley 22) will be affected by this proposed site. Which is contrary to the statement above from gov.uk A clear map needs to be shown of how they will be re-routed for all walkers and ramblers to use safely.</p> <p>Refencing statements from the local plan: So, 80 HA land take for only 22HA of employment which seems very inefficient And contradicts: SE1 1d 1st bullet point: "Sustainable and active transport options: This includes promoting walking, cycling, public transport, and reducing the need for travel"</p>

AB2 has no present access via public transport, or easy access via cycling. It is also too far away from any settlements to encourage workers to walk to work.

SE1 1d 3rd bullet point "Enhancement of green infrastructure: This includes utilising natural solutions like green spaces and vegetation to absorb air pollutants."

AB2 Removes 80 HA of green spaces and vegetation set alongside the M6 – a large source of air pollution. Moreover, AB2 would actively encourage further air pollution along the A500 and M6 – both attracting in more large scale traffic, and in use of cars for worker to attend this out of town site.

SE1 2a "Reducing emissions derived from vehicular travel by minimising the need to travel and maximising opportunities for more sustainable modes of travel including walking, cycling and public transport. As above, AB2 would have the opposite effect.

SE1 2c "Identifying opportunities to protect and enhance ecosystems and the green infrastructure network to assist in the absorption of air pollutants"

As above, AB2 would seriously undermine this Sustainable Environment Policy.

As can be seen from the accompanying diagram (at the end of this document), AB2 is clearly not "grey-belt" land; but rather, productive, good farmland. Last year, the UK lost 1% of its arable land. This was on top of the 1.1% that it lost the previous year*. This, at a time when the UK produces only 40% of its own food. Losing good quality land such as this is surely is surely bad for UK food security.

AB2 removes 80 HA of Green belt land, but only delivers 22HA of employment land, being far less efficient than other proposals in the study – and this, only IF the warehousing space is taken up by businesses.

The documentation suggesting AB2 relies heavily upon advice from "SMD" - St Modwen Developments, one of the two development groups attempting to secure the area.

SMD suggest that the AB2 site is a "weak" contributor to the Green Belt, and that if the land were built upon, it would somehow act to protect more sensitive Green Belt areas, and even goes so far as to suggest that there are "opportunities for Green Belt compensatory improvements in accordance with national policy". However, the working for this is not shown in any way. The thinking involved belongs to SMD apparently, and not to Newcastle-Under-Lyme Council. The reasons for the site to be "weak" are not given, and neither are the "compensatory improvements" which have been suggested as feasible, nor the identity of the body which would be making those "improvements".

Is this pie in the Sky?

Surely these important details should be shared with the population before making such a devastating and unpopular decision. The draft report also suggests that development would "...not represent unrestricted sprawl, and it would have no impact on ... preserving the setting and character of a historic town". However, as can be seen from the diagram, the AB2 site dwarfs Audley itself, and especially combined with two further developments in Audley itself, and housing along Park Lane – this rather certainly WOULD, in our view, constitute significant urban sprawl for the population of Audley.

AB2 on its own will dominate the view to the West of the town. The site is at the same elevation as Audley, to which several metres will be added by the size of the sheds – which are what warehouse are – lacking in architectural design features to make them pleasing to the eye.

Alsager has recently also had warehousing built on its periphery, against the wishes of Alsager Town Council, but presumably after similar recommendations (possibly from the same sources?). To date, after forcing a year of very bad traffic interruptions and congestion, the Warehouses have remained unused for the last 2 years. Apparently, they were not really so desired, after all.

The AB2 site also suffers from the same problem as the site for warehousing in Alsager. Whenever the M6 has a bad accident, traffic flees the M6 to the A500 and the surrounding roads. This causes huge congestions in and around Alsager approx. 3 times per year. Such blockages would undoubtedly be something that large warehouse businesses would like to avoid. The AB2 sites access appear to be from the A500, or from the B5500 (not connected to the M6) or from Park Lane via Audley – which will also have congestion as houses are built, and then congestion due to increased local car driving. Local roads which are not the A500 or the M6 are also too narrow and possibly not structurally capable of bearing the weight of large trucks – something highlighted recently when the B5078 was closed for weeks when work at Radway Green was undertaken.

*<https://www.gov.uk/government/statistics/agricultural-land-use-in-england/agricultural-land-use-in-england-at-1-june-2024>

*<https://www.gov.uk/government/statistics/agricultural-land-use-in-the-united-kingdom/agricultural-land-use-in-united-kingdom-at-1-june-2023>

So, our objections are;

- Loss of green belt land (80 Ha approx) for no justifiable reason or explanation of the exceptional circumstance that justify it, other than this is one of the stated strategic economic employment sites
- Inefficient use: 80 Ha identified but only 22Ha for employment.
- It is currently farmland with the potential to food for the UK
- No commercial case has been made for this location. No evidence presented to show that this location is economically viable or will provide the desired service for customers.
- Lack of public transport links, making it an Inappropriate location
- lack of justification for its siting
- Lack of evidence or justification for the claimed number of created jobs
- Added air pollution
- Impact on an already over-busy and potentially dangerous roundabout at Junction 16. No planning is shown of how this roundabout will be modified to cope with the large volume of traffic that already uses this roundabout and the increase that would result should this employment site be developed.

- The impact this development will have on the parish of Audley in terms of noise, loss of amenity for local residents and an increase of traffic on already small and busy roads
- No obvious map of the re-routing of the affected public rights of way.

In terms of relevance to Alsager (in other words - why are we objecting?)

1 A very large scale warehousing development is already planned at Radway South on the B5078 - why is more needed at AB2 by J16 which is only a short distance away?

2 there is warehousing left empty in Alsager - what evidence is there to justify the claims made for the AB2 employment site in terms of take up and employment?

3 no traffic projections at J16 have been done or the impact the dualling of the A500 will have on J16. This will lead to an adverse experience of the motorists of Alsager who wish to access the M6 or A500 at J16.

4 Whilst it could be argued that it could provide employment for the people of Alsager, there is no guarantee that those jobs will be created. The same employment claim was made for the warehouses which are currently standing empty at Radway Green on the B5077

5 A Brownfield site should have been chosen of the AB2 strategic economic employment site rather than the green belt farmland, which once lost will never be recovered.

For the above reasons we wish to object to this local plan. In particular, we object to strategic employment site AB2

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	Reynolds
Consultee Given Name	Jacqueline
Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p>- I think AB2 has not been thought through short term and definitely not long term</p> <p>- Beginning with 4.5 accident data analysis. It shows accident roadmaps breakdown being a greater total of collisions for AB2 plus higher being serious one also. These figures will be higher with volume of traffic increasing in particular within the vicinity of AB2 and HGV's increasing</p> <p>- To remove 80 hectares of good agricultural land/ greenbelt is so short sighted. We need to encourage home grown produce for the future which will bring employment and job satisfaction constructing warehousing which is becoming more automated as we speak will not increase employment long term. Encouraging business opportunities with companies to bring growth involving technology, apprenticeships, engineering is where we need to aspire in a world market. We need to be encouraging entrepreneurs not half empty warehouses for goods brought from abroad.</p> <p>- The developer has indicated the development site would include a funded bus route. How long would the developer continue funded such an enterprise. It would not continue for the foreseeable future no matter what is said Therefore increasing private cars for said workforce. There is already heavy congestion on the M6 around Junction 16 which impacts on the A500 This development would increase congestion even more impacting on site access on and off road an traffic flow.</p> <p>- Observed date shows traffic congestion along the A500 eastbound approach (M6 J16) with decreased speeds (0-10mph AM) (10 mph PM)</p> <p>-Access proposals with (emergency) via Barthomley Rd is totally <u>unfeasible</u> Anyone familiar with Barthomley Rd understands majority of the road is one track or small vehicles can just about pass through. Living on said road delivery vehicles (not large) block the road and oncoming traffic are unable to pass. Large vehicles find it difficult as the narrowness and oncoming traffic is hazardous at any time with a bend in the road is <u>most</u> unwise, with HGVs impossible. I'm sure an alternate plan will be forthcoming once a site visit by all involved will be done</p> <p>- AB2 I have already mentioned previously present site sites around the area. In particular Radway Green which still has vacant units with access to the M6 from J16</p>

Q7 Modification	Remove AB2
Comment ID	NULLP1427
Order	147
Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Family Name	Kerr
Consultee Given Name	Martyn
Q4 Part of document	Policy
Q4 Policy	AB2
Q5 Sound	No
Q6 Details	<p>The proposals AB12, AB2 and AB33 sites are unsound and should not be included in the local plan.</p> <p>Plan: AB2 I OBJECT TO THIS PLAN. The AB2 proposal raises many concerns for me as a local resident and a person who enjoys the countryside afforded to us in the Audley Parish. My partner and I use the local roads in this area for walks, runs and cycles. One of the greatest assets in this area is the long sprawl of countryside, creating the rural landscape we all love. This development alone would rob our area of the title 'rural' as the stolen greenbelt land would be lost forever to the needless development of even more industrial units, which if the sites in Alsager and Tunstall are anything to go by, will remain unoccupied for years. We regularly drive past empty, derelict brownfield sites on the A500. How can the local council consider tearing up greenbelt land when there are acres and acres of already developed, ready to change brownfield sites? By developing on this site, currently undeveloped land which is an extremely valuable natural carbon store, there will be an increase in carbon emissions. Many of the hedgerows that will be removed in this plan are protected on the government website, due to the range of tree species.</p> <p>From the local plan, the increase in local employment and boost to the local economy has been noted as a reason for this proposal. Knowing the local area well, I cannot state strongly enough that this will not be the case. Local services will not be used by the workers on this site, as the local shops and amenities are too far away to walk to. There are no longer any bus regular bus routes that connect Audley and Newcastle, so there will be no increase in public transport use. Due to the challenging terrain, steep banks and tough climbs on the roads from Newcastle, cycle users will not commute to the site. As someone who has cycled and ran on every road in the parish and wider borough, this is not a viable benefit. Therefore, the only way the site will be accessed is by car, increasing the traffic through old, pot-holed and already busy roads in the local villages. The roads through the village, particularly in Audley, have been riddled with pot holes for years. If the council cannot look after the road surface now, with the current level of road use, how can they guarantee a good quality of road surface with increased traffic from all sorts of vehicles if these plans go ahead?</p> <p>The jobs offered by this site will not go to our local residents. As the site is right on the edge of the borough, and the St Modwen website notes that jobs can be accessed one hour commuter distance, the jobs will be open to an estimated population of 9 million people, a small percentage of those coming under the umbrella and of Newcastle-under-Lyme. So, the suggestion that this site will aid the employment and economy of the local area is just not true.</p>
Q7 Modification	I wish the local councillor to remove sites AB12, AB2 and AB33 from the local plan.

Title	Policy AB2 'Land at Junction 16 of the M6'
Consultee Company / Organisation	Natural England
Consultee Position	Senior Officer
Consultee Family Name	McLaughlin
Consultee Given Name	Sally
Q4 Part of document	Policy
Q4 Policy	AB2
Q6 Details	<p>Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.</p> <p>Natural England welcomes the opportunity to comment at this stage of the Local Plan and particularly supports the inclusion of policies on green and blue infrastructure, biodiversity, health and wellbeing, trees hedgerows and woodlands. We have reviewed the consultation documents and provide comments that relate to the soundness of the Local Plan and that are most relevant to our interest in the Natural Environment.</p> <p>Natural England has adopted a robust precautionary approach within this plan response. Whilst we welcome the content of the Local Plan, Natural England advises that the plan is currently at risk of being unsound and/or not legally compliant due to the potential impacts on air quality in relation to internationally</p>

designated nature conservation sites and the justification for the potential loss of 263ha best and most versatile (BMV) agricultural land. Further detail is provided below.

Natural England have also provided other advice within this submission relating to further improvements that could strengthen plan policies and specific strategic site options and related mitigation.

Do you consider that the Newcastle Under Lyme Plan is Sound and Legally Compliant?

Natural England notes that the plan is at the pre-submission stage and as such your authority is seeking confirmation on the soundness of the plan. Having reviewed the plan and supporting documents, Natural England considers the pre-submission plan in its current form is not sound or legally compliant, this is due to a lack of evidence with regards to air quality and the cumulative loss of BMV agricultural land both in a local and national context.

Air quality

Natural England notes that the Sustainability Appraisal states that "Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)

As Natural England understands it the current evidence base used to conduct the HRA cannot rule out adverse impacts on designated sites. The HRA states at page 22 3.4.16 "At the time of writing, the traffic modelling run for the final suite of Regulation 19 allocations had not been undertaken." Appendix A lists the local plans for neighbouring LPA's concluding that 'in combination' with plans and projects (approved and those yet to be implemented) they may trigger in-combination effects on European sites as a result of air quality, particularly as we understand it in the key commuting areas.

Natural England notes that Annual Average Daily Traffic (AADT) data and traffic modelling in the Strategic Transport Assessment (STA) concludes a potential reduction in travel and related air pollution at allocated sites as a result of a predicted preference in the use of public transport. We are surprised by this projected decrease in both traffic and related air pollution, particularly as one employment allocation site includes a 200-bay lorry park and increased congestion is predicted at junction 16 of the M6 where it joins the A500 in a rural location with no existing rural transport provision. The Sustainability Appraisal also notes that: "There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work". (p 206)

Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot therefore currently be ruled out at the following internationally designated sites:

- Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI
- Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI

The HRA outlines that the main source of ammonia emissions is agricultural practice, and that material increases in NH3 emissions are unlikely to be associated with the proposed local plan. At Black Firs and Cranberry Bog and Oakhanger Moss, any increase in nitrogen deposition has the potential to exacerbate pollution levels and thereby undermine the reasons for notification of these sites as a Ramsar.

Ammonia can be emitted from vehicle exhaust emissions as a by-product of the catalytic conversion process designed to reduce emissions of nitrogen oxide. As traffic composition transitions toward more petrol and electric cars (i.e., fewer diesel cars on the road), catalytic converters may aid in reducing NOx emissions but result in increased ammonia emissions. Ammonia emissions from road traffic therefore could make a significant difference to nitrogen deposition close to roads.

Natural England therefore advise that ammonia sourced from traffic emissions should be included for assessment within the local plan HRA, as the impact from this source on designated sites is currently unclear. For further information please see this report from Air Quality Consultants (AQC) that looks at ammonia emissions from roads for assessing impacts on nitrogen-sensitive habitats. Whilst we are aware that the current CREAM model created by AQC used to assess ammonia emissions from road traffic has not been peer reviewed, at this time it has been recognised as a Best Available Tool and we deem it appropriate to be used where any caveats associated with this model are also considered within the assessment. An assessment based on the best available approach is necessary. The next stage of assessment can then consider uncertainties in the model and site specifics to decide if mitigation needs to be considered.

Further work is therefore required to inform the Habitat Regulations Assessment. Natural England will engage with the Local Planning Authority in order to produce a Statement of Common Ground (SoCG) on this matter.

'Best and most versatile' (BMV) agricultural land

Natural England notes that "the proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land, A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of 'best and most versatile' (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services". (page 74 Sustainability Appraisal).

Under the Town and Country Planning (Development Management Procedure) (England) Order 2015 (DMPO) Natural England is a statutory consultee on development that would lead to the loss of over 20ha of 'best and most versatile' (BMV) agricultural land (land graded as 1, 2 and 3a in the Agricultural Land Classification (ALC) system, where this is not in accordance with an approved plan.

Natural England would like to understand how the local planning authority have produced the evidence base and options assessment which informs the strategic site allocations.

Natural England will engage with the local planning authority to consider the cumulative impacts of the loss of BMV both in the local and national context and the challenges related to environmental impact, infrastructure, and the requirement to deliver a balance between the need for development and the potential urbanisation of the countryside including the potential mitigation measures that need to be considered.

NPPF paragraph 174e states:

Planning policies and decisions should contribute to and enhance the natural and local environment by:

- ... preventing new and existing development from contributing to, being put at unacceptable risk from, or being adversely affected by, unacceptable levels of soil, air, water or noise pollution or land instability.

Development should, wherever possible, help to improve local environmental conditions such as air and water quality, taking into account relevant information such as river basin management plans.

Natural England provides guidance to inform further assessment of air quality and the loss of BMV agricultural land in our response to the content of the plans Strategic Policies as set out below.

Do you consider that the Newcastle-under-Lyme Borough Council Regulation 19 pre-submission draft Plan is compliant with Duty to Co-operate?

In terms of working with neighbouring authorities, Natural England notes that initially the plan was intended to be produced jointly with the City of Stoke-on-Trent, the plan does not however currently present an evidence base that demonstrates that a collaborative approach has been adopted and that the Duty to Co-operate has been fully complied with.

The Sustainability Appraisal states that: "Overall, there is potential for a cumulative adverse effect on biodiversity, owing to the fragmentation of the ecological network... Where a large amount of development is located on previously undeveloped land surrounding rural settlements, this is likely to produce a long-term irreversible negative cumulative effect regarding the urbanisation of the countryside" (p 71)

Natural England would therefore like to further understand how the areas identified to meet the City of Stoke-on-Trent's unmet employment needs are justified and appropriate and whether meeting some of the employment needs of the City of Stoke-on-Trent has led to the need to release or safeguard more land from the Green Belt in Newcastle under Lyme. If this is the case, what are the exceptional circumstances for doing this and how does this align with the allocated sites options assessment?

Recreational Pressure

In terms of the South Pennine Moors SAC and recreational impacts, the Local Plan does comply with the Duty to Co-operate. Natural England recommends that reference is made to the 'Recreation use of the South Pennine Moors and implications for strategic housing growth' report by Footprint Ecology Ref 778 date 27th March 2024. This report should both inform the evidence base and ensure that policies relating to open space/green infrastructure are as rigorous and robust as possible.

The report concludes that more data/evidence is required to determine if recreational use is causing an impact across to the South Pennine Moors and to get a better understanding of the scale and location of any impact. Natural England notes that the report records 7,000 additional dwellings in Newcastle-under-Lyme over the plan period rather than the 8,000 included in this regulation 19 submission. Newcastle-under-Lyme Borough Council should therefore continue to work with local authority and other partners to ensure coordinated and continued cross boundary action.

Other matters

Natural England has specific concerns related to allocations in the Green Belt. Notwithstanding that, Natural England considers most of the policies within the plan to be sound and deliverable. The plan is consistent with national policy with regard to those policies that are within Natural England's remit. Further information on strengthening policies including but not limited to Soils and best and most versatile (BMV) agricultural land, preventing loss and fragmentation of habitats and supporting green infrastructure are provided below.

Vision and Strategy

Natural England notes that the Plan's vision and emerging development strategy set out a framework for the future development of Newcastle-under-Lyme and addresses the needs in relation to housing, the economy, community facilities and infrastructure, including specific reference to a proposed employment site allocation.

This vision and the related objectives should also set out the environmental ambition for the plan area and form the basis for nature recovery and enhancement, supported by the policies and proposals in the plan.

Natural England advises that the vision should also incorporate more on the local ecology and landscape features which underpin local distinctiveness such as the "strong rural character with long open views across the surrounding rural landscape, towards more distant hills often framed by trees" (p 69) Part 3 Site Specific Landscape & Visual Appraisal. "Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms" (p 187) Sustainability Appraisal.

Strategic Objectives

Natural England welcome strategic objective SO-4 relating to carbon reduction and climate change, however we do not feel that this group of thirteen strategic objectives value or reflect the Boroughs whole ecology and landscape including but not limited to the protection of soil and best and most versatile (BMV) agricultural land. We would suggest that additional objectives are added relating to: air quality, water quality and quantity, soils and landscape.

Natural England would also like to see stronger reference to the Nature Recovery Network which is one of the specific aims of the Environment Act 2021 and will underpin the approach to the enhancement of nature.

Air quality is a major threat to habitats and species. Many ecological sites are exceeding their critical loads and levels for ammonia, nitrogen deposition and acid deposition. The strengthening of the policies and the rationale behind site allocations within this plan will ensure that new development does not contribute to the further deterioration of habitats and species due to air pollution. Further advice on strengthening the plans evidence base with regards to air quality is provided in the links below:

 Strategic Policies
 5 Planning for Sustainable Development
 Policy PSD5: Green Belt
 Natural England notes that this policy “aims to protect the Borough’s essential open spaces, prioritise the use of brownfield land, and guide potential future development in accordance with the National Planning Policy Framework (NPPF)”.
 Natural England however notes that amendments to the Green Belt boundary are proposed in the form of 14 site allocations to accommodate both the growth requirements of the borough and the employment requirements of wider Stoke-on-Trent conurbation. Natural England’s has some site-specific concerns about the potential impacts of some of the green belt sites selected on the natural environment with regards to habitat loss, fragmentation and justification for the loss of BMV agricultural land.
 We note the LPA’s intention to release and compensate for the loss of green belt and prioritise the use of suitable brownfield land. However, the site allocations in the green belt would result in the potential loss of 263ha of Best and Most Versatile (BMV) agricultural land. The council should satisfy itself that it is making a balanced decision for sustainable development, the Sustainability Appraisal concludes that: “The Green Belt Study assessed land parcels against the contribution they make to the five purposes of the Green Belt on a four-point scale...Three allocated sites (AB12, AB33 and TK10) are located in areas which make a ‘strong’ overall contribution to the purposes of the Green Belt where “the site contributes to the purpose in a strong and undeniable way, whereby removal of the site from the Green Belt will detrimentally undermine this purpose” (p101)
 “Site allocations on previously undeveloped land or that would result in a net loss of GI / vegetation could result in a reduced capability of the environment to provide ecosystem services including carbon storage, the storage and filtration of water including natural flood protection, as well as reduced availability and connectivity of habitats within the green network enabling movement of species. (p 165)
 Strategic Site Allocations
 Natural England suggests that the HRA should include a “requirement for project-level/site specific HRA’s and targeted ecological surveys”.
 The Sustainability Appraisal concludes that:
 “Some 12 allocated sites partially coincide with priority habitats, where 3.43% of the total site allocation areas coinciding with priority habitats which include deciduous woodland, good quality semi-improved grassland and Site BL18 coincides with lowland fens which is a very high distinctiveness habitat in the BNG handbook (2024). These habitats can support a range of species of principal importance. Allocated Site KL15 is adjacent to ‘The Butts and Hands Wood’ ancient woodland, with a further 20 allocated sites located in close proximity to ancient woodlands. P158
 “Six allocated sites (Sites CT20, HD10, KL13, RC8, SP11(2) and SP23) are located within areas of ‘high’ or ‘very high’ habitat distinctiveness that provide high biodiversity value. Whilst in many cases these habitats can be conserved alongside development, it is likely that in some cases fragmentation or loss of habitats and connections between habitats will occur”
 “The majority of allocated sites are located on previously undeveloped land, which would result in the loss of soil resources and the ecosystem services they provide. (p 159) The development of new buildings on previously undeveloped land would be expected to result in a direct loss of soil resource, with little or no scope for mitigation” (p 216)
 “The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution. (p 68)
 For all sites, Natural England advises that the hydrological catchment within which the site sits is taken into consideration, with regards to the potential impact of the developments proposed on the adjoining watercourses and wider catchments, including but not limited to surface water runoff (including during construction), existing and required capacity of Waste Water Treatment Works (WwTW) and water supply and flooding issues. Each site will require site specific investigation, and the council should understand the impact of all the sites put forward individually and in combination.
 Natural England has specific concerns and or requires further information about the following ‘Strategic Site Allocations’ which could potentially impact on designated sites as a result of air and water quality and/or lead to the loss and / or fragmentation of priority habitats and BMV agricultural land:
 BL18 – Clough Hall Playing Fields, Talke
 Natural England would like to further understand this larger residential development proposal with regards to the potential impacts on the lowland fen habitat.
 KL13 & KL15 – Land South of A525 between Keele University and Newcastle
 Natural England notes this proposal for Employment development is immediately adjacent to ancient woodland priority habitat.
 HM28 – Land off East Lawns, Betley
 Existing and projected water quality issues at Betley Mere will need to be considered with regards to this allocation.
 LW53 – Loggerheads
 Natural England notes this residential housing development proposal is located within the IRZ of protected sites (Burnt Wood SSSI) which states that development proposals of 50 or more homes outside existing settlements/urban areas in these zones should be consulted upon with Natural England.
 SP11 – Former Keele Municipal Golf Course
 This Larger residential development is categorised in the Landscape Assessment as having a Major adverse impact on the local Landscape.
 AB2 – Land Adjoining Corner of A500 and M6 Southbound
 Natural England notes this proposed employment allocation released entirely from the green belt, which comprises 70ha of grade 2 BMV agricultural land. The Landscape study concludes that the: “Proposed

development scenario is likely to have a major adverse effect on the SA objective with no satisfactory mitigation possible" (p 15). With regards to potential Air Quality impacts on protected sites Natural England notes from the options analysis that "The loss or potential moving of a layby to enable access to the site could be problematic indicating potential issues with site access and traffic flow. An increase in HGV and personal vehicle traffic is anticipated, which could lead to potential congestion and air pollution in the area". Natural England would therefore also like to understand the evidence base further including the rationale for an alternative site TK30 @ Talke A34 / A500 roundabout being ruled out.

Policy PSD6: Health and Wellbeing

Natural England welcome this policy direction in terms of safeguarding health and amenity and supporting healthy communities, through the protection and provision of high-quality open spaces, including allotments and the promotion of active travel transport choices Further information on joining up Nature Recovery and Green Infrastructure (GI) with health priorities is set out below. If more cities and towns can be creatively designed and managed, with nature and communities at their heart, we will see nature and people thrive. This is something we set out to inspire at Natural England when developing the Green Infrastructure Framework and Design Guide. Natural England's People and Nature survey tells us that, for 82% of people 'being in nature makes me happy'. With the cost-of-living crisis, 'free' places like local parks and greenspace, have become even more important. The value of these spaces for the economy is estimated at £28.7 billion per year.

Green infrastructure in towns and cities provides places to relax, exercise, and spend time outdoors; cools urban areas; reduces flooding by allowing water to permeate the ground rather than overwhelm our drains; increases biodiversity and helps to reduce inequalities in access to nature. Options assessments for development sites and related green and blue Infrastructure within and between developments, green spaces and designated sites should; include soft transition and consider potential direct and indirect implications on sustainable use for example visitor pressure and transport / access options.

The natural environment affords the best 'natural' play opportunities for children while offering multifunctional nature-based solutions to climate change etc. These can be blended into wildlife rich green infrastructure and green open spaces that can act as destination play sites for local children (See best practice at Play England and Play Wales) that have proven health and wellbeing value.

Evidence for nature play and health:

Play, naturally: a review of children's natural play

Nature for health and wellbeing | The Wildlife Trusts

Good practice in social prescribing for mental health: the role of nature-based interventions - NECR228 (naturalengland.org.uk)

6 Climate and Renewable Energy

Whilst Natural England welcomes this group of policies we recommend including Policy CRE1: Climate Change and Policy CRE2: Renewable Energy within the Sustainable Environment (SE) group of policies to achieve a collective strategic focus on sustainable development and working toward achieving net zero alongside the SE policies relating to Pollution and Air Quality (SE1) and requirements for sustainable water management measures to reduce water use, natural flood protection features alongside the specific policies on Sustainable Drainage Systems (Policy SE4:)

Natural England continues to work with the LPAs across the region on understanding air pollution across area boundaries (see comments and links in objectives section.)

10 Infrastructure and Transport Policy.

Policy IN4 Cycleways, Bridleways and Public Rights of Way

Natural England welcomes the inclusion of this group of policies which seek to maintain and enhance the network of public rights of way that cross the borough. We note that the sustainability appraisal states that "the borough has relatively poor accessibility to the cycle network and is the lowest performing in the county for walking zones" (p 206) and that, "eight allocated sites (AB2, AB12, AB33, HD10, KL15, MD29, SP11(3) and TK10) do not currently have safe pedestrian or cycle access adjacent to the site, where site end users may reliant upon less sustainable modes of transport including private car use". (p 180)

11 Sustainable Environment

Natural England welcomes this group of policies and has the following policy specific comments:

Policy SE1: Pollution and Air Pollution.

Natural England welcomes this policy that notes that development proposals which are likely to result in detrimental impacts on air quality, will not be permitted unless it can be demonstrated that mitigation measures effectively address these impacts. (Comments on Air Quality are also provided on page 2 and 4 of this letter). The promotion of sustainable and active travel options, low-emission technologies and enhancement of green infrastructure to absorb air pollution is also noted. (see comment above re integrating the group: 6 Policies Climate and Renewable Energy).

Policy SE7: Biodiversity Net Gain

Natural England supports the inclusion of a policy on BNG. We suggest the following minor amendments to further improve the plan policy.

The BNG policy should make it clear that biodiversity net gain is not applied to irreplaceable habitats, and that any mitigation and/or compensation requirements for Habitats sites should be dealt with separately from biodiversity net gain provision. The policy should also set out how biodiversity net gain will be delivered and managed through the lifetime of the scheme and including monitoring requirements. This should include indicators to demonstrate the amount and type of gain provided through development. The indicators should be as specific as possible to help build an evidence base to take forward for future reviews of the plan, for example the total number and type of biodiversity units created, the number of developments achieving biodiversity net gains and a record of on-site and off-site contributions.

Natural England notes that the Sustainability Appraisal states "Despite the BNG provisions at the site level, there remains potential for a cumulative adverse impact on biodiversity at the landscape scale, owing to incremental habitat losses. As a result of development within the Local Plan undeveloped land will be lost which will include the loss of soil resources, habitats recognised as being of 'high' and 'very high' distinctiveness, and potentially ecological links between biodiversity assets, whereby the policies will not be expected to fully mitigate the fragmentation of the ecological network. Fragmentation of the

ecological network across Newcastle-under-Lyme is expected to be a long-term and permanent significant effect.” (p 162)

Policy SE8: Biodiversity and Geodiversity

Natural England supports the inclusion of this policy to protect the Boroughs internationally, nationally and locally designated sites important for their biodiversity value and to enhance the natural environment and work with partners toward Nature Recovery.

We particularly welcome the plans recognition of the value of “wider ecological networks” stating that “Other sites, both individually and collectively, that are not designated can also contribute towards protecting and enhancing diversity of species locally”.

Policy SE10: Landscape

Natural England welcomes this policy aimed at ensuring that “development proposals should protect and enhance the character, quality, beauty, and tranquillity of the Borough”. We note from the sustainability appraisal that “The entirety of the south of the borough is identified as being high in relation to landscape sensitivity, which starts in Audley in the north and covers the southern area of the borough, including Loggerheads and Almington.” We agree that “Alteration of the landscape character is a long-term and permanent significant effect... There is potential for a cumulative adverse effect on landscape character resulting from the development proposed in the Plan”. (p193) SA.

Natural England has divided England into 159 distinct natural areas called National Character Areas (NCAs) Newcastle-under-Lyme falls within two NCAs: Shropshire, Cheshire and Staffordshire Plain: gently rolling plains dominated by intensive dairy farming, beef and arable production; The Potteries and Churnet Valley: strong contrast between the industrialised landscape of the Potteries and the pastoral, strongly dissected hills and small plateaux that flank the Churnet and Dove valleys.

Natural agrees with the following statement in the sustainability appraisal: “Although various policies aim to ensure that development conserves and enhances landscape character and distinctiveness, when combined with Local Plan policies that support infrastructural improvements such as for transportation, water, and waste, this is likely to lead to a long-term and irreversible cumulative adverse effect on landscape character and tranquillity and associated indicators such as dark skies.” (p72)

Policy SE11: Trees, hedgerows, and woodland

Natural England welcomes this plans recognition that “Trees, hedgerows, and woodlands are integral to the distinctive character and ecological health of the Borough of Newcastle-under-Lyme, defining landscapes across both urban and rural settlements.” And that “This policy prioritises the protection of existing natural assets, seeking to not only preserve, but actively enhance, these valuable features wherever possible”.

Policy SE13: Soil and Agricultural Land

Natural England has concerns about the justification for the loss of BMV agricultural land within this plan.

“The proposed site allocations in this Local Plan are likely to cumulatively result in the loss of up to 342ha of previously undeveloped land, A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of ‘best and most versatile’ (BMV) agricultural land, which is likely to result in a long-term, irreversible cumulative adverse effect on ecosystem services.” (page74) (SA)

Natural England notes that policy SE13 states: “Outside of sites allocated for development in the Local Plan, development proposals should avoid the loss of best and most versatile agricultural land (BMV) unless it can be demonstrated that the benefits of development clearly outweigh the loss of the land and every effort has been made to mitigate for the overall impact of the development on best and most versatile agricultural land.”

With regards to Soil and Agricultural Land Quality, Natural England advises that The Local Plan should give appropriate weight to the roles performed by the area’s soils. These should be valued as a finite multi-functional resource which underpin our wellbeing and prosperity. Decisions about development should take full account of the impact on soils, their intrinsic character and the sustainability of the many ecosystem services they deliver.

The 25 Year Environment Plan (25YEP) sets out government action to help the natural world regain and retain good health, including highlighting the need to:

- protect the best agricultural land
- put a value on natural capital, including healthy soil
- ensure all soils are managed sustainably by 2030
- restore and protect peatland

Soil is a finite resource which plays an essential role within sustainable ecosystems, performing an array of functions supporting a range of ecosystem services, including storage of carbon and water, the infiltration and transport of water, nutrient cycling, a buffer against pollution and provision of food. In order to safeguard soil resources as part of the overall sustainability of the development, it is important that the soil resource is able to retain as many of its important functions as possible. This can be achieved through careful soil management and appropriate, beneficial soil re-use, with consideration on how any adverse impacts on soils can be avoided or minimised.

The conservation and sustainable management of soils is reflected in the National Planning Policy Framework (NPPF), particularly in paragraph 180(a), 180(b) and 181 (footnote 62). When planning authorities are considering land use change, the permanency of the impact on soils is an important consideration. Particular care over planned changes to the most potentially productive soil is needed, for the ecosystem services it supports including its role in agriculture and food production.

Plan policies should therefore take account of the impact on land and soil resources and the wide range of vital functions (ecosystem services) they provide in line with paragraph 180(b) of the NPPF.

Soil Plan Policies

We strongly advise that at a minimum, the plan includes core policies for:

- the protection of best and most versatile (BMV) agricultural land (Grades 1, 2 and 3a in the Agricultural Land Classification (ALC)); and
- for the protection of and sustainable management of soils as a resource for the future.
- Areas of poorer quality land (ALC grades 3b, 4, 5) should be preferred to areas of higher quality land (grades 1, 2 and 3a).

-Recognise that development has an irreversible adverse impact on the finite national and local stock of BMV land.

-Conforms to NPPF and Planning Practice Guidance (Natural Environment and Minerals).

-Requires detailed ALC surveys to support plan allocations and for subsequent planning applications (for all sites larger than 5 ha). ALC surveys to support plan allocations and for subsequent planning applications for smaller sites (1 – 5 ha) would be welcomed.

-Recognise that development (soil sealing) has a major and usually irreversible adverse impact on soils.

-Soils of high environmental value (e.g., wetland and carbon stores such as peatland, low nutrient soils; or soils of high environmental value in the local context) should also be considered as part of ecological connectivity (Nature Recovery Network / Green Infrastructure).

-Requires soil handling and sustainable soil management strategies based on a detailed assessment of the soil resource based on best practice guidance (for all sites larger than 5 ha), ideally as part of the planning application process for major sites to help inform master-planning, and to safeguard the continued delivery of ecosystem services through careful soil management and appropriate, beneficial soil re-use. Soil handling and sustainable soil management strategies for smaller sites (1 – 5 ha) would be welcomed.

-Reference should be made to Defra's Construction Code of Practice for the Sustainable Use of Soils on Construction Sites

-In addition, for minerals and other temporary forms of development, plans for reinstatement, restoration and aftercare will be required (or for solar, a commitment to do so if the operational life is in decades); normally this will be return to the former land quality (ALC grade)

-Refers to soils issues within relevant policy areas such as renewable energy, climate change, green infrastructure and biodiversity net gain, flood schemes, managed realignment, development design and landscaping.

Policy SE14: Green and Blue Infrastructure

Natural England supports this policy. Well-designed cross boundary multi-functional green infrastructure contributes greatly to a number of benefits both for people and nature. Your green and blue (for example cross boundary canals) infrastructure should dovetail with your biodiversity net gain strategies to maximise benefits.

We would advise that the Local Authority also considers Natural England's Green Infrastructure Framework of Principles and Standards for England. As stated in our document, "Green infrastructure (GI) is part of the solution to many of the challenges we face; health inequalities, biodiversity crisis, climate change, nature recovery and levelling up. The GI framework supports local authorities, developers, parks and greenspace managers and local communities to enhance and create new good quality green infrastructure."

We would also suggest reference is made to the emerging Local Nature Recovery Strategy. Preparing Local Nature Recovery Strategies (LNRS) is a statutory requirement under the Environment Act 2021. LNRS are designed to work closely alongside other measures in the Act including supporting the delivery of mandatory biodiversity net gain and providing a focus for a strengthened duty on all public authorities to conserve and enhance biodiversity. They will also underpin the Nature Recovery Network, alongside work to develop partnerships and to integrate nature into our incentives and land management activities. Each LNRS will be specific and tailored to its area. The responsible authorities and people involved in preparing a strategy can choose how they want it to look, but every strategy must contain:

1. A local habitat map.
2. A written statement of biodiversity priorities. Statutory guidance for responsible authorities explains in detail what these 2 things should contain. Together they set out what the strategy is aiming to achieve and what practical actions will help do this. They will also propose where actions could be carried out for best effect and to connect and expand existing areas that are important for nature. We expect local nature recovery strategies to propose actions such as the:
 - creation of wetlands
 - restoration of peatlands
 - planting of trees and hedgerows
 - more sustainable management of existing woodlands and other habitats like grasslands
 These actions are intended to help nature itself and to also help improve the wider natural environment.

Whilst the Staffordshire Local Nature Recovery Strategy (LNRS) is currently a work in progress, Newcastle-under-Lyme Borough Council Regulation 19 pre-submission should still be consistent with NPPF Paragraph 185 in terms of setting out local habitat priorities and identifying potential measures by which they can be achieved, alongside mapping areas that could become of particular importance in the future.

Natural England encourages Newcastle Under Lyme Borough Council via their Local Nature Recovery Strategy to actively develop cross border cooperation between other Local Planning Authorities (LPA) (for example Staffordshire Moorlands Borough Council) in coordinating land development projects that impact on local biodiversity sites to ensure that local biodiversity corridors are maintained and link up other local important sites for nature conservation.

This is a good way of achieving nature recovery and preparing to deliver the LNRS alongside enabling the local authority and its partners to identify, map and safeguard site areas, including green and blue infrastructure opportunities and interlinkages.

Habitats Regulations Assessment

Natural England notes that this Local Plan is not directly connected with or necessary to the management of any European site. A screening assessment has been undertaken which identified a number of Likely Significant Effects (LSE) associated with the Local Plan. Taking no account of mitigation measures, the HRA concludes that Local Plan has the potential to affect the following European sites:

- Cannock Chase SAC
- Humber Estuary SAC, SPA and Ramsar
- Mersey Estuary SPA and Ramsar
- Midland Meres and Mosses Phase 1 Ramsar
- Midland Meres and Mosses Phase 2 Ramsar
- Pasturefields Salt Marsh SAC
- Peak District Dales SAC

-Peak District Moors (South Pennine Moors Phase 1) SPA

-Severn Estuary SAC, SPA and Ramsar

-South Pennine Moors SAC

-West Midland Mosses SAC

We welcome that your HRA includes the Humber Estuary SAC, SPA and Ramsar site which is hydrologically connected to the river Trent. If the Local Plan resulted in significant water pollution, this European site could be affected and has therefore been screened in, in relation to water quality only, on a precautionary basis. Natural England however notes that the Sustainability Appraisal identifies "A long-term cumulative adverse effect ...in terms of water quality" (p 148) as a result of the plan, this is not fully reflected in the current HRA.

Natural England note that the Sustainability Appraisal states: that "the entirety of the borough falls within IRZs of one or more SSSIs. All five SSSIs within the borough are in 'unfavourable' condition: Burnt Wood SSSI, Maer Pool SSSI, Black Firs and Cranberry Bog SSSI (Midlands Meres and Mosses Phase 2 Ramsar), Betley Mere SSSI (Midlands Meres and Mosses Phase 1 Ramsar) and Metallic Tileries, Parkhouse SSSI."

Natural England are also aware of the extensive network of ancient woodland spread across the borough, totalling 707.60 hectares, as well as a large quantity of priority habitats, totalling 1,791 hectares.

Natural England agree that the following designated sites and related priority habitats in adjoining LPA areas may also be affected by development through several pathways, including fragmentation, recreational pressure and/or pollution (including Air and Water Quality). Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI, Wyburnbury Moss SAC SSSI, Tyrley Canal Cutting SSSI, King's and Hargreaves Wood SSSI, Gannister Quarry SSSI, Roe Park Woods SSSI, Wetley Moore SSSI, Churnet Valley SSSI, Hatherton Flush SSSI, Sounds Heath SSSI, Ford Green Redebed SSSI, and Cop Mere SSSI.

It is noted that the Appropriate Assessment stage of the HRA assessed potential impacts by topic;

-Impacts on designated features affected by a possible deterioration in air quality

-Impacts on water quality and quantity associated with increased levels of built development.

-Impacts associated with increased recreational pressure at European sites; and

-Consideration of impacts at associated functionally linked land.

Natural England notes that the HRA also factored the following into the assessment process "the protective framework provided by the Local Plan and existing protection measures set out in high level strategic policy and existing planning policy frameworks that serve to help overcome the identified potential adverse effects" and that "taking into consideration these factors, it is concluded that the Local Plan would have no adverse impact on site integrity at any European site, either alone or in-combination.

Natural England disagree agree with this conclusion that for those Habitats sites in the area of search with features sensitive to air pollution, adverse effects on their integrity, alone or in-combination, can be ruled out for the reasons set out at the beginning of this letter on page 2 and repeated in part below:

Cumulative adverse effects on integrity in relation to air quality as a result of this plan and neighbouring LPAs plans cannot currently be ruled out at the following internationally designated sites:

•Midlands Meres and Mosses Phase 2 Ramsar - Black Firs and Cranberry Bog SSSI

•Midlands Meres and Mosses Phase 2 Ramsar - Oakhanger Moss SSSI

Natural England are currently in discussion with a number of the Staffordshire and West Midlands LPA's with regards to the cumulative impacts of air quality. We advise that further work is required to inform the HRA. The HRA should demonstrate that there are no adverse effects on integrity of Habitat sites as a result of this Local Plan, alone and in combination with other plans and projects. With regards to allocated sites, it is unclear whether the individual sites put forward in the Local Plan have been assessed through the Habitat Regulations Assessment process and how mitigation will be applied here.

Sustainability Appraisal

Natural England has reviewed the Sustainability Appraisal (SA) and included comments taken from the document throughout our response.

The SA is a comprehensive document which should be reviewed in strengthening the HRA, particularly with regards to residual adverse effects that would be expected to remain in terms of wastewater following the implementation of the Local Plan policies. (p 141) Natural England notes that "Increased pressure on wastewater treatment has the potential to be a long term and potentially permanent significant effect" (p 142)

The SA recognises the local distinctiveness of the plan area;

"The Borough itself is largely rural in nature and supports some high-quality agricultural land, but is more heavily built up towards the north east surrounding Stoke-on-Trent. (p 8)

Newcastle-under-Lyme has a strong rural character with a high-quality landscape and countryside, with some areas identified as being sensitive to change as a result of new development. (p 19)

Tranquillity, ancient woodland, deciduous woodland, and strong undulating landforms make up the key features of some of these Landscape Character Types." (p 20)

Sets out the area specific barriers to achieving sustainable growth;

"Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and 63ha of employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. (p 67)

Loss of tranquillity The proposed development of 8,000 new dwellings and 63ha of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution.(p 68)

"The pre-mitigation SA assessments identified negative impacts in relation to air quality due to the proximity of sites to major roads, landscape character due to the location of sites within areas of high landscape sensitivity, close proximity to the PRoW network and potential for coalescence and urban sprawl, habitat sites, priority habitats, habitat distinctiveness, loss of undeveloped land, 'best and most versatile' (BMV) agricultural land, coinciding with mineral safeguarding areas (MSAs) and areas of surface water flood risk (SWFR); and access to healthcare facilities, schools, the local cycle network and railway network. (p 40)

	<p>There is a low uptake of sustainable modes of transport in the borough, with private car use being the most popular method of travel when commuting to work. (p 21)</p> <p>Trends in transport choice are unlikely to change significantly, and private car use would continue to increase as the selected method of transport to work, with potential adverse impacts on air quality in the borough.”(p 23)</p> <p>Considers the local and cumulative significance of soil loss alongside the ecological implications: “Loss of soil resources, BMV land and ecosystem services The proposed allocations would cumulatively result in the loss of up to approximately 342ha of previously undeveloped land, including up to 263ha of BMV agricultural land. The proposed development would be expected to reduce the ability of the local soil biome to effectively provide ecosystem services, to some extent. Additionally, the loss of permeable soils could potentially increase the risk of flooding and result in a loss of biodiversity across the Plan area. Loss of soil can also result in an increase in soil erosion and have subsequent impacts on agricultural yield.(p 68) The majority of the borough is ALC Grade 3 soil, with areas of ALC Grade 2 scattered across the borough. Grade 2 and potentially Grade 3 represents some of the borough’s BMV agricultural land and should be conserved wherever possible (p 21)</p> <p>A total of 20 of the allocated sites contain areas of ALC Grades 1, 2 or 3 within the site area, leading to potential for up to 263ha of BMV land to be lost as a result of the development proposed in the Local Plan.” (p 59)’</p> <p>Other Advice</p> <p>Further general advice is provided within Natural England Advice Note – Local Plans February 2024, attached at (Appendix A) - see attachment</p>

Q6 Details	<p>Comments by Cheshire East Council on Newcastle-under-Lyme Borough Council – Final Draft Local Plan Consultation (Regulation 19)</p> <p>Cheshire East Council objects to Policy AB2 which proposes to allocate a strategic employment site on “Land at Junction 16 of the M6” and is seeking to have this allocation removed from the Local Plan. The council considers that the evidence base presented does not support the allocation of this site. In addition, it is concerned that, whilst the site is located close to the boundary with Cheshire East, its implications for Crewe and the wider area within the south of Cheshire East area have not been sufficiently explored or understood.</p> <p>In particular, the council is concerned that there appears to be a misalignment between the housing and economic strategies of the draft plan, the consequences of which may not have been fully considered through the plan or its evidence base, and which could potentially have impacts on Cheshire East, for example in terms of commuting patterns, housing demand, and infrastructure requirements.</p> <p>The council’s concerns are detailed below:</p> <p>Housing and economic needs</p> <p>The Housing and Economic Needs Assessment [ED001] uses a blended approach of economic forecasts, which suggests that the borough is capable of creating an average of +237 jobs per year and that the working age population of the borough would need to increase by +2% to support this level of job creation. To support the +2% increase in the working age population, 400 new homes per year would be required; and to enable +237 new jobs per year, a range of between 43.1ha and 83.0ha of employment land between 2023-2040 would be required (and this range includes a buffer of 12.5ha to allow for choice and flexibility).</p> <p>The overall strategy for development is set out in Policy PSD1: Overall Development Strategy. The plan strategy seeks to deliver a minimum of 8,000 homes over the plan period (2020-2040) and makes provision for a minimum of 63ha of employment land over the same period. These overall levels of development set out in the plan strategy (minimum 8,000 new homes and minimum 63ha employment land) seem to be supported by the evidence set out in the Housing and Economic Needs Assessment. Policy PSD1 also sets out that, to deliver these levels of development, the plan will make sufficient provision for housing, employment and other uses by supporting the development of sites allocated in the plan (including two strategic employment land sites) as well as through windfall development.</p> <p>Housing provision</p> <p>The Plan Strategy Housing Topic Paper [ED031] sets out (at Table 3) the sources of housing land supply, including proposed site allocations, the existing supply, and a windfall allowance. The total proposed housing supply amounts to 8,663 new homes, which provides a flexibility factor of 8.3% above the minimum 8,000 required under Policy PSD1.</p> <p>Economic provision</p>

The Plan Strategy Employment Topic Paper [ED032] sets out (at Table 3) the sources of employment land supply, including proposed site allocations, proposed strategic allocations, and (it is assumed but not clear from the table) the existing employment land supply. The total proposed employment land supply amounts to 104.6ha, which provides a flexibility factor of 66% above the minimum 63ha required under Policy PSD1.

However, we question some of the figures set out in the proposed employment land supply. In particular, the figure of 22ha of employment land at site AB2 does not appear to reflect the reality of the proposed allocation. The policy for Site AB2 states that the site extends to circa 80 hectares and is allocated for uses including 22ha of employment land (220,000 sq.m of floorspace). The Strategic Employment Sites Assessment includes similar figures, and notes that the site is around 78ha and could accommodate approximately 2.35 million sq.ft employment accommodation (218,322 sq.m).

A normal rule of thumb for industrial and warehousing development is to assume a 40% plot-floorspace ratio, and this 40% ratio is used in the Housing and Economic Needs Assessment to provide evidence for the minimum 63ha employment land in the plan strategy. Therefore, we question whether the 22ha identified for employment land could deliver 220,000 sq.m floorspace (a 100% plot-floorspace ratio) and note that the evidence does not appear to demonstrate that this is achievable. The plan does not appear to set out what is intended for the remaining 58ha of the site. Other than provision of lorry parking, the requirements of the site policy all seem to relate to the type of things that would normally be expected on a large employment site. Given the gross size of the site and the level of employment floorspace envisaged under the policy, it is not clear why only 22ha is included in the employment land supply and it does seem that the full site size of 80ha should be included instead.

Site BW1 Chatterley Valley and Site CT20 Rowhurst Close contribute 6.5ha and 7.5ha respectively to the supply in the Plan Strategy Employment Topic Paper, but are proposed for allocation for 6.4ha and 8.88ha of employment land in the plan.

Therefore, if using the full site size for Site AB2 (80ha) and the employment land figures set out in the plan itself for sites BW1 (7.4ha), and CT20 (8.88ha), the proposed employment land supply would amount to 163.88ha, which provides a flexibility factor of 160% above the minimum 63ha required under Policy PSD1.

Case for strategic employment sites

The Strategic Employment Sites Assessment [ED002] considers the market demand for life sciences and regional logistics development and much of the evidence base appears to promote a case for a large scale logistics development at Site AB2 (e.g. Strategic Employment Sites Assessment para 3.74), but the proposed site allocation is for general employment use and makes no mention of large scale logistics. The mix of employment uses set out in the site policy (employment will comprise offices, research and development, industrial processes, general industrial, storage and distribution and open storage) are exactly the same as the mix of employment uses set out for Site BW1 and Site CT20.

Consequently, it is unclear why the evidence base advances the case for a regional logistics development, but the proposed allocation is for general employment use.

The Housing and Economic Needs Assessment (Chapter 7) also promotes some reasoning for including strategic employment sites, including:

- Strategic sites are unlikely to increase to number of jobs above the baseline (+237 per year) level;
- Some jobs on strategic sites are already included in the baseline;
- There is a long timeline for developing strategic sites; and
- The use of a wider labour market.

If strategic sites are unlikely to increase the number of jobs above the baseline level (+237 per year), then it is not clear why such a large supply of employment land is needed, when the evidence base shows that a minimum of 63ha is needed to deliver this level of jobs growth. Furthermore, the Strategic Transport Assessment [ED011] considers that the proposed strategic employment sites may enable the delivery of 4,578 jobs during the plan period. These new jobs on the strategic sites alone could therefore average 229 per year over the 20 year plan period, so would clearly enable an increase in jobs above the baseline (+237 per year) level across the whole borough.

Whilst large sites may take longer to develop than smaller ones, we understand that they are capable of being developed in full during the plan period, creating the number of jobs envisaged. The argument around the use of a wider labour market effectively says that the sites would be dependent on a high level of in-commuting.

Link between the housing and economic strategies

As set out in the plan strategy (and supported by the evidence), the creation of +237 jobs per year requires a minimum of 63ha employment land and an increase in the working age population of 2%, which in turn requires 400 new homes per year.

The level of housing provision (8,663 new homes) is in line with the plan strategy of a minimum of 8,000, with a flexibility factor of 8.3%. However, the level of employment land provision (163.88 ha) appears to be excessive to deliver the plan strategy, giving a flexibility factor of +160% above the plan strategy requirement of a minimum of 63ha.

It is not clear why such an excessive amount of employment land is required to deliver the plan strategy of +237 jobs per year, and it appears that the proposed level of employment land provision would enable significantly in excess of +237 jobs per year to be created. If the plan seeks to increase the number of jobs above the baseline (+237), then this increased number of jobs should be quantified, and considered through the evidence base to inform the required increase in working age population, the resulting number of new homes needed, and any resulting infrastructure requirements. This updated evidence on the number of homes and infrastructure requirements should then be reflected in the plan strategy.

Our comments concerning the case for the strategic employment sites and its link to the housing strategy (as detailed above), raises serious questions about whether the exceptional circumstances needed to remove Site AB2 from the Green Belt have been justified.

Site AB2 – Site Specific Matters

In the event that the Inspector is minded to retain this site, the Council makes the following comments around how the policy should be modified.

	<p>Notwithstanding the concerns over the overall amount of employment land provision, the site policy for AB2 only requires the Travel Plan to “consider routes connecting into Newcastle-under-Lyme, Stoke-on-Trent and Cheshire East”.</p> <p>Given the existing lack of access by sustainable transport modes, it is considered that the site policy should include a much stronger policy hook such as “Funding towards (or direct provision of) public transport (including demand responsive) should be agreed between the Local Transport Authorities of Cheshire East and Staffordshire County Council to minimise the number of private vehicle trips to the development”. This funding also needs to be sustainable into the longer term.</p> <p>The traffic modelling undertaken so far is strategic in nature, although we are aware that National Highways have been involved in a more detailed review which is appropriate given the potential impacts on the motorway slip roads. Cheshire East Council is keen to understand what the impacts would be on the A500 in Cheshire East, and the policy should also require that mitigation measures also need to be agreed with Cheshire East Council.</p> <p>The site is close to the Barthomley Conservation Area, which includes a number of listed buildings both within the area and its immediate vicinity. The council notes both that the policy requires an HIA to be undertaken and that the supporting information refers to the need to assess the effects on landscape and visual receptors in Cheshire East at the planning application stage. The council considers that there is scope for this assessment over the wider area to be included as a requirement in the policy itself. This could also include the need for a site development brief to be developed and consulted upon which will detail how wider impacts can be minimised.</p> <p>Impacts on Cheshire East</p> <p>Without the evidence that the level of housing proposed is broadly in line with the level of jobs that could be created, it is not clear where the additional jobholders would live and it is not clear that the plan proposals would promote sustainable patterns of development.</p> <p>In particular, Site AB2 is adjacent to the borough boundary and is slightly closer to the centre of Crewe than it is to the centre of Newcastle-under-Lyme (and much closer to the centre of Alsager). There are concerns over the impacts that the plan may have on Cheshire East, for example in terms of housing demand, infrastructure requirements and travel patterns.</p>

Q6 Details

Introduction

The Labour group on Newcastle-under-Lyme Borough council represents the authority's principal opposition group. The group comprises of 18 of the 44 total council members on the authority. Throughout the local plan process, the Labour group has scrutinised the plan, when afforded opportunity to do so, during scrutiny committee, planning committee and full council. Though several recommendations have been proposed, these have not been taken into account by the administration, and therefore the final version of the plan (at Regulation 19 stage) has not taken account of opposition suggestions. This response outlines several concerns that we feel critical to the success of the plan, and pertinent to the planning inspector during official examination of the plan.

Overview

The Labour group acknowledges the significant amount of work put into preparation of the regulation 19 pre-submission draft local plan. The Labour group acknowledges the need for a functional and sustainable local plan to ensure development within the borough is guided towards areas of unmet need, or suitability. We wish to be clear that there are many areas of the proposed plan that we agree with and support. However, there are areas of the plan where we have concerns. Whilst these concerns make up most of our comments, they are presented with due respect to several areas of the plan where we agree. We are committed to getting good value for money on behalf of our residents and delivering economic growth, but also protecting green spaces. Therefore, we are unable to support the plan in its current form, where the plans aspirations are unlikely to be matched by realised commitments. Our specific concerns, and proposals to help alleviate these are as follows:

Housing Targets

During Regulation 18 examination of the local plan the Labour group raised concerns over the adoption of a housing target of a minimum of 8,000 dwellings from 2020-40 equating to 400 dwellings per annum. Our objections to this housing target were based on a national minimum housing target calculation of 330 p.a. We further note that the housing and economic needs assessment commissioned by the council models a housing need of 347 p.a.1. In providing evidence for the adopted housing target of 400 dwellings p.a. the council relies on modelling provided by the housing and economic needs assessment update that suggests a forecast job creation of at mid-point between modelling forecasts 207 p.a.1, with a blended approach suggesting 237 p.a.

The Labour group notes the concern raised over available modelling data in the Turley Report:

"These are though becoming dated, with each provider having released new forecasts in the last year which envisage the creation of between 194 and 364 new jobs per annum between 2023 and 2040. Either would represent an improvement on the past trend, with Newcastle-under-Lyme having created only 20 jobs per annum on average since 2009, but the higher forecast – from Cambridge Econometrics – appears particularly optimistic given that it adds 100 jobs per year to its previous forecast, presented in the HENAU. This appears due to an unexplained upgrading of the growth prospects of three sectors that have not actually created any jobs in Newcastle-under-Lyme over the past five years, suggesting a need for caution before assuming that these sectors will indeed create far more jobs than forecast only a year ago."

Turley (March 2024) Housing and Economic Needs Assessment Update: Newcastle-under-Lyme

Based on these job growth forecasts, the report recommends a housing need of 400 dwellings p.a. The Labour group notes that the Regulation 19 Draft Plan identifies a housing need of 400 dwellings p.a. Consistent with this assumed significant growth forecast in jobs p.a., whilst noting that such housing numbers would be dependant on a 1085% increase in job creation p.a. The Labour group has significant concerns that the level of house building will not match job growth, and thus raises objection to the sustainability of these developments.

Delivering Affordable and Social Housing

The Regulation 19 Draft Plan does not set specific targets for delivery of affordable or social housing. With no clear target on delivery, the Labour group has significant concerns that over the lifetime of the plan limited development of these much-needed dwellings will occur.

The Turley report identifies a calculated need of 278 affordable homes p.a. Whilst challenged on this number, the report does highlight the growing demand on the housing register but assumes that this growth will be met through rising earnings and private sector offerings. The Labour group challenges this assertion, given that wage growth has vastly tracked behind house price, and average rental costs, growth; and that mortgage affordability has been impacted by a significant rise in the Bank of England base rates. The Labour group has concerns that such assumptions will lead to an under-delivery of affordable homes.

The Regulation 19 Draft Plan recommends a number of policies for delivery of affordable and social housing. These are formed under Policy HOU1 Affordable Housing and include:

"On-site affordable housing provision will be required on sites of 10 dwellings or more, or sites of 0.5ha or more at the following percentages:

- a. 30% of all units on greenfield sites.*
- b. 15% of all units on brownfield sites within the 'low value zone' as shown on the policies map.*
- c. 25% of units on brownfield sites within the 'high value zone' as shown on the policies map."*

"Given the acute need for social rented accommodation, the HNA Update (2024) recommends the tenure split of affordable homes to be 65% social rented, 10% other affordable housing product and 25% affordable home ownership through First Homes. Opportunities should also be taken to include a proportion of affordable older persons accommodation as part of the affordable housing provision, particularly involving care provision. Planning permission may be granted for an alternative tenure split provided that robust evidence demonstrates that a different split is more suitable. This will be informed by market conditions and local housing need at the time"

Unfortunately, at the time of writing we have not been able to locate within the Policies Map document any reference to distribution of sites across 'low vale' and 'high value' zones. However, on the assumption that delivery across non-greenfield sites will amount to 20% of dwellings in developments of 10 dwellings

or more, or 0.5ha in size. On this assumption of the 400 dwellings-built p.a, only 80 p.a will be affordable or social housing. This is dramatically below the number of affordable of social rent dwellings needed. Whilst the plan mentions delivering affordable housing, the Labour Group finds no tangible commitments that provide reassurance of its delivery. Current housing policy has largely failed to produce affordable housing due to systemic issues affecting supply, demand, and financing. The introduction of 'Right to Buy' has seen local authorities struggle to replace housing stock, while lengthy approval processes, excessive regulations, and permitting delays have hindered new builds. Rising construction costs, driven by increased material prices, labour shortages, and supply chain issues, have pushed developers towards high-end housing. Limited government support, insufficient subsidies, and poorly targeted incentives have compounded the problem, with the previous government (2010-2024) failing to allocate adequate funding or attract developers. Housing is increasingly treated as an investment asset, with speculative bubbles inflating prices and reducing affordability. Ineffective policies, such as underfunded public housing and rent controls, exacerbate these challenges. In areas like Newcastle-under-Lyme and wider North Staffordshire, wages lag behind housing costs, leading to an affordability gap. Existing rental assistance schemes are often inadequate, failing to cover the full rent cost, and there is a failure to address the needs of the homeless and vulnerable populations, leaving affordable housing out of reach for those who need it most.

The Labour group believes the policies within the Regulation 19 Local Plan will not lead to the delivery of 278 affordable homes p.a. That whilst the commitment to secure between 15-30% of dwellings as affordable homes is a good first step. To meet the demand required, the policy would need to see 70% of new developments as affordable or socially rented. Whilst the Labour group accepts that this percentage would potentially deter developers, we have significant concern that the current 15-30% range will not be met. Rising construction costs has seen a significant number of developments across the borough seek to vary their social housing contributions under 106 agreements. This has led to significant under delivery of these much-needed homes across the borough. The Labour group proposes a recommendation to improve the deliverability of affordable and social housing.

Labour group proposal

That for developments on public owned land, the minimum percentage of dwellings allocated for affordable and social rented homes is increased to 50%. Given that several large housing developments will occur on either Borough or County Council owned land, and increased allocation in these areas, where land purchase is not necessary will address significant shortfall between anticipated built and need. Further, whilst outside of the material considerations for the local plan, the Labour group proposes that the Council explore alternative options for delivery of affordable and social housing, including the reintroduction of council stock should delivery continue to be deficient.

The Council generally works with housing developers and other stakeholders to facilitate affordable housing projects – but these have not and will not meet the demand or provide the foundations required for the next twenty years. The argument for our council returning to build council houses revolves around several key points, emphasising the need for more affordable housing, the limitations of private market solutions, and the role of public investment in addressing the housing crisis.

If council builds and retains its housing stock, we create long-term assets that generate rental income and remain under public control. This is a sustainable approach to housing provision, as opposed to relying solely on private developers who may prioritise short-term profit over community needs.

Our proposal to return to council housebuilding is seen by our group as a crucial solution to the affordable housing crisis. By taking control of housing supply, council can directly address the needs of vulnerable residents, provide stability, and counter the failures of market-driven housing policies. Investing in council housing is also a long-term, sustainable approach that can contribute to the overall health and well-being of communities within the Borough.

Transport

It is important for local planning authorities to undertake an assessment of the transport implications in developing or reviewing their Local Plan so that a robust transport evidence base may be developed to support the preparation and/or review of that Plan.

Bus services connect the main towns in Staffordshire & Stoke-on-Trent and provide cross boundary links with neighbouring authorities and towns. Whilst bus services have declined in recent years, they continue to provide vital connections between people, services and places of work and enable people to make more sustainable travel choices.

Staffordshire & Stoke-on-Trent's bus network is operated by several private operators including Arriva Midlands, First Potteries (operating 70% of services in Stoke-on-Trent), D & G, and National Express West Midlands who are significantly increasing their presence in the county. Diamond Bus, Stagecoach and Select Buses also operate services on selected routes.

Key public transport issues include congestion and unreliable journey times, limited frequency of services and falling bus patronage levels affecting commercial viability. To reduce per capita road transport emissions, Staffordshire County Council wish to improve walking, cycling and bus facilities, and are promoting their use to encourage a modal shift away from car use.

Rail connectivity in Staffordshire is currently delivered through a comprehensive rail network and several different franchises. The West Coast Main Line is 700 miles in length from London Euston to Glasgow via Birmingham providing fast services from several Staffordshire stations to London. It is one of the busiest freight routes in Europe and part of the Trans-European Transport Network (TEN-T) route, carrying 40% of all UK rail freight traffic. There are at least 14 train operator companies using this line. Cross Country operate services from the South Coast, Reading, and Birmingham to Manchester calling at Stafford and Stoke-on-Trent. The Crewe to Derby Line which runs via Stoke-on-Trent and Uttoxeter currently suffers from overcrowding.

The local plan makes no proposals to address these issues other than a reference to:

High Speed Two (HS2) services will pass through Staffordshire when Phase 1 is operational. HS2 services will stop at Stafford Station and will improve journey times and connectivity to London and Birmingham. Phase 2b will provide further improvements in journey times and capacity from Stafford to London, Birmingham and the North West, while 27 releasing capacity on West Coast Main Line services for other Staffordshire & Stoke-on Trent stations."

Since the publication of the draft plan the HS2 project has been scrapped by the previous Conservative government.

"The need for a link between the M54 and the M6 was identified in the 2014 Road Investment Strategy (RIS) to relieve congestion on the A460, A449 and A5. The preferred option was announced in 2018 (and a planning application submitted in 2020) which includes a dual carriageway link between M54 J1 and M6 J11 and associated improvements. 6.9. The Midlands Connect studies for the A50 / A500 and A5 have already begun to consider how congestion issues can be addressed and growth supported along these key corridors. The case for investment and opportunities to deliver transport interventions to accelerate growth in the region are being explored. This will lead to preferred investment priorities along these routes which will likely need to be delivered to fully realise the growth potential of Staffordshire & Stoke-on-Trent."

No further announcements on this road infrastructure have been announced.

Critically however, there is no mention of improved transport links to the Town centre or the Royal Stoke Hospital or the new planned Integrated Care Hub at Bradwell or a plan to improve connection to the rural areas of the borough.

As part of the evidence base for the local plan the Council commissioned a Strategic Transport Assessment by Sweco UK Limited. The SWECO report outlines the existing pressures on the highways network throughout the borough, including the following locations:

- *"Slow moving traffic observed in and around Newcastle-under-Lyme centre,*
- *Some limited speed reductions in southern areas of Newcastle-under-Lyme Borough, Madeley and Audley,*
- *Slow moving traffic on the A34 Newcastle Road from the A500 to north of Clough Hall Drive though largely no queuing. Some traffic congestion on signalised roundabout"*

SWECO (July 2024) Strategic Transport Assessment

The draft local plan makes no reference to these existing pressures, nor does it provide any solutions to these pressures.

The SWECO report also notes the existing pressures on links to the strategic road network, notably the M6 and A500.

"• M16 J16 - Observed data shows traffic congestion along the A500 eastbound approach with decreased speeds (0-10mph AM, 10-0mph PM)

- *M6 J15 - The speed data indicates that queued traffic (speed 1-10mph) is observed along the A500 approach to the A500 Queensway\ Newcastle Road roundabout in the PM peak,*
- *A500\Alsager Road – Can be inferred from data to be operating without any capacity related congestion,*
- *Talke Interchange - Some relatively slow-moving traffic, along the section between the Newcastle Road\Talke Road roundabout. However, the data indicates that this is slow moving traffic, but in general the data does not show any large reductions in speed due to queuing,*
- *A500/A527 - Data indicates that traffic is operating without the presence of queues long term queues during the peak hour,*
- *A500/A34 -In the AM peak observed speeds of around 20-30mph are in line with the speed limits in place on the A34. This is with the exception of the A34 northbound approach to the gyratory which shows lower observed speeds of around 10-20mph. In the PM peak lower speeds of 10-20mph are also observed on the southbound approach to the gyratory."*

SWECO (July 2024) Strategic Transport Assessment

Again, there are no proposals within the local plan to address these existing pressures on connectivity to the wider strategic road network.

The SWECO report modelled the impact of housing and strategic site developments on traffic flow and made the following conclusions.

Keele:

"It can be seen that there is a further worsening from the core-only scenario with now severe congestion forecast in both directions of Keele Road between the University and Gallowstree Lane roundabout. Evidence of re-routing is seen with increases in V/C forecast for Mill Street in Silverdale. Moderate junction delay issues begin to become apparent at the signalised junction of Cemetery Road/Church Lane/B5044. These patterns are also visible in the difference plots (Figure 8-15 and Figure 8-16) where volume has increased around the B5044 (Silverdale), A525 (Keele Road) and A53. It should be noted that the NSMM model is developed within the CUBE modelling software application. A limitation of the CUBE software is that it does not model blocking back (traffic queuing back to previous road links with potential to impact other links and junctions). Therefore, there is the possibility of additional related impacts to queuing traffic on Keele Road, for example to the Keele University roundabout."

SWECO (July 2024) Strategic Transport Assessment

The report recommends mitigations at Keele:

"A new link road running between University Avenue/Barkers Wood Road to Whitmore Road. The link road will be a 30mph 7.3m wide road connecting the A525 with the A53 to provide an additional route to distribute trips and relieve pressure on the A525.

A new circular bus service serving Newcastle-under-Lyme bus station, Keele University, KL15, KL13, TB19, and SP11 sites via Keele Road, the new link road and Whitmore Road."

The report notes the impact of these mitigation measures:

For Keele, the mitigation measure of a new link road added between the University and Whitmore Road is seen to have a positive impact on the reduction of traffic on Keele Road between the University Roundabout and Gallowstree Lane.

It can be seen that during the AM period, westbound traffic is most improved whilst in the PM period, eastbound traffic is most improved. This is likely to be of significant improvement for University traffic and related bus services.

It can also be seen that the mitigation brings volume back or nearly back to capacity for each direction and period. There is potential for additional improvements to be made with high impact travel plans and other local bus service improvements."

SWECO (July 2024) Strategic Transport Assessment

The Labour group notes that this report only mitigates the impact of the proposed developments, and in doing so “brings volume back or nearly back to capacity for each direction and period”. The Labour group has significant concerns that the mitigation measures proposed in the report are not sufficient to provide long-term sustainable traffic flow in the area.

The report recommends the following mitigations at Audley:

“Bus provision connecting employees within Stoke-on-Trent, Newcastle-under-Lyme and Crewe with AB2 employment. It is assumed the service is timed to meet the needs of any shift patterns and enable some connection with other existing public transport services. This is expected to be a replacement for 10% of car trips originating in nearby zones that could use this and other existing public transport services to access AB2 within 1 hour.”

SWECO (July 2024) Strategic Transport Assessment

The report recommends the following mitigation measures in Talke:

“Extension of the NW-bound Newcastle Road two-lane approach to the signalised junction at Newcastle Road/Coalpit Hill. This will give additional space for right-turning traffic that is leading to junction delay issues in scenario 2 – core local plan sites.

Cedar Avenue – Community improvements to Cedar Avenue to increase attractiveness of walking, wheeling, and cycling (not able to model in the strategic NSMM transport model).”

SWECO (July 2024) Strategic Transport Assessment

The Labour group notes the Local plan has identified mitigation measures at Keele and Talke:

“13. Transport infrastructure identified through the Strategic Transport Assessment will be supported. This is to include: - a. a link road between A525 Keele Road and Whitmore Road. b. Improvements to Talke Signals (A34 Newcastle Road / Congleton Road / Coalpit Hill)”

SWECO (July 2024) Strategic Transport Assessment

Labour group notes that funding for these mitigation measures will be identified via 106 funding levied on developments in the area. The Labour group has significant concerns that mitigating the impact of these developments will require 106 funding, and that given the impact of rising cost of living, several developments have proceeded following waiver of the 106 funding requirements. We note within the councils own Infrastructure Baseline Report the following:

“At the same time, it is critical that any infrastructure expectations do not disincentivise development to such an extent that it becomes unviable, thus inhibiting Newcastle-under-Lyme’s growth opportunities. This challenge is particularly acute in those parts of Newcastle-under-Lyme where land and property values are low and profit margins on development are small or even non-existent. In some parts of the Borough, the private sector will not be able to meet all of the infrastructure/policy requirements which are ultimately set out in the Local Plan. In such cases, an appropriate balance will need to be struck between competing interests and demands.”

NBC (July 2024) Infrastructure Baseline Report

The Labour group also notes the Strategic Transport Assessment provided by the SWECO report does not include assessment of the impact of public transport, outside of assumed reductions in car usage. The borough of Newcastle-under-Lyme, like many other post-industrial non-metropolitan districts, can be considered as a deprived public transport area. Within the borough, public transport is provided via the bus network, and thus subject to the impact of increased traffic and lack of mitigation. At present, travel from Newcastle to connecting rail network stations at Stoke is a 40-minute bus journey outside of periods of high traffic congestion, with a 1 hour journey to Crewe. The Labour group has concerns that the local plan, whilst referring to increased walking and cycling, has no reference to improving the outdated, inefficient, and poor provision of existing public transport across the borough.

Labour group proposal

The Labour group wants to see the local plan have firm detailed and costed plans for a fully integrated transport plan that serves the current and proposed needs of our communities. That such integrated transport plan involves the combining of different modes of transport to maximise ease and efficiency for the user in terms of time, cost, comfort, safety, accessibility and convenience. We are aware that the cuts to bus routes and times across the borough are leading to difficulties in accessing employment, education and health services. We also know that lack of connectivity leads to social isolation.

The Labour group expects to see how the borough plans to address the needs of residents within the borough, demonstrate how it supports the proposed growth in development and population in the plan by working with bus operators, planners and other local authorities such as Staffordshire County Council and Stoke on Trent City Council to get Newcastle moving and growing.

Education

The Borough of Newcastle is divided into two distinct areas for the purpose of school place planning: 1) Newcastle and 2) Kidsgrove. These areas are further broken down into smaller planning areas, which are used to determine the number of school places required. These smaller planning areas have been grouped based on the geographical location of schools and by analysing pupil movement between schools and catchment areas.

A two-tier education system, consisting of Primary (ages 4-11) and Secondary (ages 11-16/18) schools, operates across the Borough. Sixth form provision is available on-site at two secondary schools within the district and is mainly accessible at Newcastle College, with The King’s Church of England School, Kidsgrove, also providing this provision. As of September 2020, Newcastle has 30 primary schools, 1 infant school, 1 junior school, and 7 secondary schools, while Kidsgrove has 9 primary schools and 2 secondary schools.

The Infrastructure Baseline Report provided by the Council within the local plan evidence base identifies most areas of the borough have existing capacity within local primary schools to satisfy the proposed developments within the local plan. It is noted however that Newcastle region 5 covering the villages of Silverdale and Knutton would have insufficient school places for the proposed developments on the former municipal golf course.

In the infrastructure delivery plan, the local plan proposes the development of a new primary school on the former municipal golf course:

"The relatively large amount of development set out in the plan for the Keele University corridor (with the inclusion of development site SP11) means there is an identified need for a new 1 Form of Entry (FE) primary school."

Infrastructure delivery plan

The Labour group notes that the infrastructure baseline report does not include St John's primary school in Keele in meeting the numbers required by this development. Evidence from the school demonstrates the high number of pupils registered at the school from the villages of Silverdale and Knutton. Further, concerns have been raised by members of the governing bodies of the four existing catchment primary schools; St John's Keele, St Luke's Silverdale, The Racecourse Silverdale and St Mary's Knutton regarding the impact of a new primary school on pupil numbers. More alarmingly, neither Staffordshire County Council, nor the Borough council have communicated with the existing primary schools, including discussions over expansion. The Labour group notes that the Borough council has held conversations with St Chads Kidsgrove, Sir John Offley Madeley and Baldwins Gate primary schools over expansions to their existing estate to sustain development, and therefore raises concerns over the unequitable approach to the schools in the Keele, Knutton and Silverdale area.

Labour group proposal

The Labour group proposes that the prior to adoption of the local plan, that the Council undertakes a consultation with existing primary schools in the Keele, Knutton and Silverdale area to determine if existing capacity can be increased through expansion of the existing estate.

Health & Social Care

Health services in England are overseen by NHS England, which operates five regional teams to commission healthcare services. NHS Midlands and East support the commissioning of services in the West Midlands in partnership with Clinical Commissioning Groups (CCGs) and Acute Trusts.

Clinical Commissioning Groups, established by the Health and Social Care Act 2012, changed how primary care services are planned. They commission most NHS hospital and community services, including hospital care, rehabilitative care, urgent care, community health services, and mental health and learning disability services.

The six Clinical Commissioning Groups serving Staffordshire and Stoke-on-Trent are:

- Cannock Chase CCG
- East Staffordshire CCG
- North Staffordshire CCG
- South East Staffordshire and Seisdon Peninsula CCG
- Stafford and Surrounds CCG
- Stoke-on-Trent CCG

The focus for health and social care is on prevention and providing care outside hospitals where possible.

'Together We're Better' is the Sustainability and Transformation Partnership (STP) for Staffordshire and Stoke-on-Trent. The Staffordshire and Stoke Sustainability Transformation Plan (2016) identifies key challenges, including:

- High rates of obesity, diabetes, and smoking in certain areas.
- An ageing and growing population driving up demand.
- Frequent A&E attendance and a risk-averse staff culture.
- A notable proportion of patients with common mental health conditions.
- Higher than average urgent care activity at acute trusts due to poor primary and community infrastructure and citizen behaviours.

In January 2019, NHS England published The NHS Long Term Plan (LTP) and the Five-Year Framework for GP contract reform, setting out ambitions for the next ten years to improve patient care, health outcomes, and to deliver more coordinated primary and community care. The Five-Year Framework introduced Primary Care Networks (PCNs) as the foundation of Integrated Care Systems (ICSs).

Now established, PCNs are groups of one or more GP practices serving populations of 30,000 to 50,000 patients, providing a strategic view of primary care delivery and identifying estate requirements. ICSs, set to replace STPs in April 2021, will offer strategic oversight at the regional level, identifying opportunities for integrated working across health and social care partners. By April 2022, ICSs will become statutory bodies.

The infrastructure delivery plan notes the following:

"There are three Primary Care Networks (PCNs) in Newcastle-under-Lyme (Newcastle North, Newcastle Central and Newcastle South PCNs) that serve the residents of Newcastle-under-Lyme. These comprise 17 general practices. Of the practices in Newcastle-under-Lyme, only Silverdale Medical Centre is reported to have surplus capacity to accommodate patients with all other practices reporting insufficient capacity. In summation, there are capacity issues at many locations in Newcastle-under-Lyme with some of this attributed to the level of growth experienced by the borough in recent years and a historic lack of funding for the estate via mechanisms such as the planning system"

Infrastructure delivery plan

The Labour group notes all GP practices, outside of the practice in Silverdale, which must be noted is twinned with the Town Centre practice at Ryecroft, are currently at patient capacity. The Labour group further notes that the only proposal within the Local plan is for a new GP practice on the former Golf course, though we also note that this is a relocation of an existing local practice.

Social care

The Department of Health and Social Care oversees adult social care policy in England, with the Care Quality Commission acting as the independent regulator to ensure care services are safe, effective, compassionate, and high-quality.

In England, adult social care can be publicly or privately funded or provided voluntarily. Local authorities are responsible for publicly funded care and have a legal duty to provide care for those who meet nationally set needs and means tests, either by commissioning or directly delivering services.

Pressures on adult social care budgets have risen in recent years due to increasing demand (from a growing, ageing population with more long-term and multiple health conditions), reduced local government funding, and higher care costs.

Consequently, the adult social care sector is facing growing challenges, including a fragile provider market, increasing unmet needs, more strain on informal carers, reduced investment in prevention, pressure on an already overstretched care workforce, and a diminished capacity to help ease demand on the NHS.

In the infrastructure baseline report the following is noted:

"It should be noted that local demand for care services will vary based on the overall size of the population and specific population care needs, the affordability, quality and location of existing services. This is covered in more detail within Staffordshire County Council's market position statements and associated intelligence documents. Newcastle-under-Lyme currently has significant provision for extra care facilities, residential care homes & nursing homes, but it is anticipated that during the Local Plan period additional units within each of these sectors will be required."

Infrastructure baseline report

The Labour group notes that requirement of additional adult social care facilities during the local plan period. The Labour group further notes the lack of identified development within the local plan to meet the rising demands for adult social care.

Labour group proposals

The Labour group proposes that before adoption of the local plan:

I. The Council work with Staffordshire County Council to identify suitable portions of developments sites within the local plan to meet the rising demand for adult social care provision.

II. The council work with Primary care networks to increase GP capacity across the whole of the borough.

Strategic Employment Sites – the case against AB2 and the case for Chatterley Valley

The Labour group is opposed to the proposals for the AB2 employment site in Audley. Taking 80 hectares of land in the rural village of Audley out of the green belt and designating it as high-quality strategic employment site without the evidence base to do so and considering the significant recorded public opposition to the proposal appears to be flawed. The removal of green belt, the increase in traffic, noise and pollution combined with the lack of adequate local infrastructure across the locality is inappropriate, especially so when we already have Chatterley Valley strategic employment site that barely features in the Local Plan at all.

This is quite incredible considering Chatterley Valley has seen £3.5 Million investment from Staffordshire County Council into the site, alongside the £3.7 Million the borough council secured as part of the Kidsgrove Town Deal, and has seen infrastructure, utilities and access upgraded.

The Labour group further notes that under the duty to co-operate the Council did not approach Stoke-on-Trent Council, or Staffordshire County Council overuse of the Chatterley Valley development site in the local plan to meet the need for strategic employment sites. The Labour group is concerned that in the doing so, the Council has not legally satisfied the test within the Localism Act and therefore questions the proposal to meet the need for strategic employment sites through removal of land from the green belt.

Labour group proposals

Designating Chatterley Valley as a strategic enterprise zone would bring substantial economic, social, and environmental benefits to Newcastle-under-Lyme. It would unlock the area's potential for attracting investment, creating jobs, and fostering innovation while aligning with national strategies for regional development and sustainability. With its strong transport links and potential for brownfield redevelopment, Chatterley Valley is ideally positioned to become a thriving hub of economic activity.

Chatterley Valley is positioned near key transport links, making it ideal for a strategic enterprise zone. It lies close to the M6 motorway, the A500 (a key artery linking Stoke-on-Trent and Crewe), and major rail links, offering excellent access to the Northwest, the Midlands, and beyond. This location provides businesses with opportunities to easily transport goods and services across the UK, potentially reducing logistics costs and improving connectivity. The North Staffordshire region, including Newcastle-under-Lyme, has a long industrial heritage, particularly in ceramics, manufacturing, and logistics. This history has cultivated a skilled workforce that can readily adapt to new industries such as advanced manufacturing, logistics, and digital services. The creation of a strategic enterprise zone in Chatterley Valley would capitalize on this local expertise, attracting investment and providing job opportunities for the region.

Brownfield Redevelopment Potential

Chatterley Valley has a significant amount of underutilized and brownfield land, which presents a perfect opportunity for redevelopment without impacting greenfield sites. Developing this area would contribute to urban regeneration, transforming it into a hub for industries like green technology, logistics, or advanced manufacturing. Redeveloping brownfield sites aligns with sustainable development goals, boosting the region's environmental credentials.

Potential for Attracting Investment

Enterprise zones offer businesses tax incentives, simplified planning, and infrastructure support, all of which would make Chatterley Valley an attractive destination for both national and international investors. By designating it a strategic enterprise zone, the area could attract new companies and startups, as well as encourage the growth of existing businesses. This could significantly boost the local economy, creating jobs and increasing regional prosperity.

Locally, this would support Newcastle-under-Lyme Borough Council's economic plans, which focus on regeneration and business growth. The Labour Group want to see a borough strategy aimed at stimulating economic growth in the Midlands and the North to reduce regional disparities. Chatterley Valley could serve as a platform for innovation and the digital economy. With the rise of Industry 4.0, the area has potential to become a centre for businesses involved in automation, artificial intelligence, and digital services. The location could also foster collaboration with nearby Keele and North Staffordshire Universities, known for its research and innovation. Such collaborations could encourage knowledge transfer and innovation-led business growth.

Sustainability and Green Energy Opportunities

Given the global focus on sustainability and green energy, Chatterley Valley offers an opportunity for eco-friendly development. The site could house businesses focused on renewable energy, energy-efficient

technologies, and sustainability initiatives. This would not only contribute to the Councils net-zero goals but also attract companies prioritising sustainable operations, helping to future-proof the local economy.

Adherence to genuine consultation and due process

The Council is well aware of the large number of complaints and concerns raised at the first consultation stage of the draft plan (1st November 2021 - 13th December 2021), these were largely but not confined to, complaints around lack of face-to-face briefings, forms not being made available as stated, and technical issues and failures of the on line portal. It was clear at that time that the consultation was targeted at highly competent, computer literate regular laptop users, who could cross reference up to 200 public documents through the portal avenue to answer 37 planning specific questions. The readability of the document was poor and out of line with good practise.

https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/100807/file47158.pdf,

Labour Councillors raised concerns that the consultation was too focused on the on-line portal and digital access, which we believed would lead to exclusion for thousands of elderly residents, as well as those who did not or could not afford their own laptops, tablets or computers. We felt this approach was contrary to the community engagement and digital exclusion policies previously agreed by the Council.

The Labour welcomed the fact that these issues were focussed on in the second stage consultation and in the main remedied.

However, the Labour group raised a serious issue at a meeting of full council on 24-07-24, where Council was to approve that the plan be agreed and put forward to regulation 19 stage, that critical evidence based documents were still not available to members of council or the public.

The motion highlighting this failure is attached here:

Labour Group Amendments to the Report Titled;

Newcastle-under-Lyme Borough Local Plan 2040 of the 24-07-24

Background

The Newcastle Labour group of councillors met on Monday 22nd July to review the agenda for the meeting of full council taking place on 24-07-24. The agenda contained at item 5 - Newcastle-under-Lyme Borough Local Plan 2024. The item contains the paper which asks members and council to approve four recommendations as follows;

That Council: .

- 1. Approves the Final Draft Newcastle-under-Lyme Borough Local Plan 2040 (at Regulation 19 stage), the Sustainability Appraisal, Habitats Regulations Assessment and supporting documentation for public consultation in line with the approved Local Development Scheme;*
- 2. Authorises the Service Director (Planning), in consultation with the Strategic Planning Portfolio Holder to make any necessary minor typographical changes and modifications to the Final Draft Newcastle-under-Lyme Borough Local Plan 2040, Sustainability Appraisal and Habitat Regulations Assessment prior to consultation;*
- 3. Subject to the outcome of consultation, and if no matters are raised that materially impact upon the Plan strategy, authorises the Deputy Chief Executive in consultation with the Strategic Planning Portfolio Holder to submit the Final Draft Newcastle-under-Lyme Borough Local Plan 2040 and supporting documents to the Secretary of State for formal examination by the end of 2024;*
- 4. Authorises the Service Director (Planning) to write to the appointed Inspector(s) at the start of the examination of the Final Draft Newcastle under-Lyme Borough Local Plan 2040 requesting them, under section 20(7C) of the Planning and Compulsory Purchase Act 2004, to recommend any main modifications necessary to ensure the Plan sound and legally compliant.*

Issues identified

In relation to recommendation 1

When the Labour group met on the 22-07-24, some 48 hours before the meeting to consider the recommendations we observed that the following supporting documents (none exhaustive) were not available;

1. Infrastructure Delivery Plan
2. Infrastructure Delivery Schedule
3. Strategic Housing and Employment land availability assessment 2024
4. Site assessments
5. Green Belt Assessment
6. Strategic transport assessment
7. Water cycle study
8. Gypsy and traveller site selection report
9. Duty to co-operate statement of compliance
10. Housing supply and delivery position statement

Clearly, the expectation that members approve a local plan through to the regulation 19 representation period, which is the last stage of public engagement before submitting the draft plan to the Inspectorate for examination, is unreasonable and does not adhere to sound governance of the council.

This is a formal process that requires comments on the soundness and legal compliance of the plan.

Members wish to be in a fully informed position in order to move the plan through its statutory process.

In relation to recommendation 3

Consultation is technically any activity that gives people a voice, in this context it is an exercise to provide local residents, businesses and stakeholders a voice and an opportunity to influence important decisions relating to the Borough's local plan.

Consultation requires listening to local people and learning from affected people before decisions are made or priorities are set.

Councils have a statutory requirement to consult their residents, this is especially true for planning or redevelopments. There are strict rules surrounding how consultations are conducted, and a failure to adhere to this could render the council liable for a judicial review.

It is in this regard that recommendation 3 is manifestly problematic – to agree to submit the Final Draft Newcastle-under-Lyme Borough Local Plan 2040 and supporting documents to the Secretary of State

for formal examination by the end of 2024, without affording council the time and space to review the consultation, in full, and to take account of residents, business and stakeholders views in our plan before submitting to the Secretary of State, does not accord with the fundamental principles of consultation compliance. A failure to demonstrate that council has undertaken meaningful consultation could leave council open to complaints of pre-determination.

The most common failures of local authority plans are due to inconsistencies with National Planning Policy, lack of evidence base and inadequate engagement. The amendments below seek to remedy any possible flaws in the plan and process. It is our view that a failure to do so would open the authority to the risk of litigation, reputational damage, and a loss of trust and confidence by those engaging with the process.

Proposed amendments

Replace recommendation(s) 1 and 3 with the following;

1. Council agrees to bring the final draft plan, and supporting documents to the September 2024 full council meeting seeking councils approval of the Final Draft Newcastle-under-Lyme Borough Local Plan 2040 (at Regulation 19 stage), the Sustainability Appraisal, Habitats Regulations Assessment and supporting documentation for public consultation in line with the approved Local Development Scheme.

3. Following completion of the consultation, council will meet to receive and consider the responses. If council agrees that no amendments to the plan are required and no matters are raised that materially impact upon the Plan strategy, council authorises the Deputy Chief Executive in consultation with the Strategic Planning Portfolio Holder to submit the Final Draft Newcastle-under-Lyme Borough Local Plan 2040 and supporting documents to the Secretary of State for formal examination at the earliest opportunity.

ENDS

Amendment Proposer

Cllr Dave Jones

Amendment Seconder

Cllr Andrew Fox-Hewitt

In response to this motion highlighting critical failures of due process, the Conservative group voted to dismiss the recommendations and voted to proceed to approve the plan through to regulation 19 stage. The Leader of the Council, Cllr Simon Tagg stated at this meeting that it was not true that documents were unavailable prior to group meetings on the 22nd July,

Subsequently to the council meeting however, a complaint and request under the Freedom of Information Act was made to provide details of when documents were made available. The Council response is here; (Table available in attachment)

As can be seen from the response, a total of 9 documents were in fact unavailable. The Labour Group therefore has serious concerns with the adherence to due process the probity of the Leaders actions in response to these issues being identified.

Conclusion

In summary whilst there is much within the Local Plan the Labour group can support, there are several weaknesses that we feel need to be addressed before the Local Plan can be adopted. These include:

I. Clear targets and delivery plan to ensure the ever-increasing demand for affordable and social housing is met over the lifetime of this Local plan.

II. Development of an integrated transport plan, including costings and delivery plan that is not subject solely to 106 contributions.

III. Work with existing primary schools in Knutton, Silverdale and Keele to explore potential expansion of their existing estate to increase pupil capacity.

IV. Work with Staffordshire County Council to identify capacity within proposed developments for provision of adult social care facilities.

V. Work with Primary Care Networks to identify mechanisms to increase GP capacity across the borough.

VI. Work with Staffordshire County Council and Stoke-on-Trent City Council to identify capacity within the Chatterley Valley site to accommodate the need for employment sites.

Further, the failure to co-operate on sharing of a major strategic employment site at Chatterley Valley, and concerns raised over the consultation process and availability of essential documents; further questions the plans compliance with the Localism Act.

Q4 Part of document	Policy
Q4 Policy	AB12
Q6 Details	<p>Further qualifying objections regarding the suggested/proposed (Housing) development Diglake Street/Ravens Lane, Bignall End AB12</p> <p>Dear Cllr Andrew Fear (Planning Policy Manager).</p> <p>Further to my earlier report (dated 16th August 2024), outlining my objections regarding the suggested/proposed (Housing) development Diglake Street/Ravens Lane, Bignall End (AB12), I wish to add further concerns/ objections which appear to be borne out by an 'independent' Consulting Company by the name of:</p> <p>LEPUS Consulting Landscape, Ecology, Planning & Urban Sustainability</p> <p>I have since read the following reports by themselves entitled: Newcastle-under-Lyme Publication Draft Local Plan 2020-2040 Regulation 19 Habitats Regulations Assessment and Sustainability Appraisal of the Newcastle-under-Lyme Local Plan 2020-2040 Reports Dated July 2024</p> <p>Amongst the many pages of plans, tables, reports etc, I have 'sorted' out the 'wheat from the chaff' having decided, without too much partiality in this case, and my objections, and the rationale behind my reasoning, are extremely important in this case.</p> <p>I bring to everyone's attention the following:</p> <p>Air pollution:</p> <p>Land use planning has the potential to increase atmospheric emissions of pollutants to the air. These can result in adverse effects at European sites such as eutrophication (nitrogen), acidification (nitrogen and sulphur) and direct toxicity (ozone, ammonia and nitrogen oxides).</p> <p>Does the Local Plan give rise to emissions which are likely to reach a European site?</p> <p>The Local Plan will trigger housing and employment development and as such increase traffic related emissions. Air quality impacts have been shown to typically affect European sites within 10km of a plan boundary. Campman and Kite (2021) note that 'this zone is based on professional judgment recognising that the effects of growth from development beyond 10km will have been accounted for in the Nitrogen Futures modelling work business as usual scenario'. This 10km distance threshold can be a useful guide to identify the broad areas that may be impacted by air quality. However, it is acknowledged that consideration should also be given to larger residential or commercial allocations and their wider potential for air quality impacts in the context of the local and regional road network.</p> <p>Are the qualifying features of sites within 200m of a road sensitive to air pollution?</p> <p>It is widely accepted that air quality impacts are greatest within 200m of a road source, decreasing with distance.</p> <p>Habitat Regulations Assessment (HRA)</p> <p>The Precautionary Principle</p> <p>The HRA process is characterised by the Precautionary Principle. This is described by the European Commission: "If a preliminary scientific evaluation shows that there are reasonable grounds for concern that a particular activity might lead to damaging effects on the environment, or on human, animal or plant health, which would be inconsistent with protection normally afforded to these within the European Community, the Precautionary Principle is triggered". The Precautionary Principle is embedded in the Integrity Test.</p> <p>Summary of potential impacts of the Local Plan</p> <p>Increased carbon emissions — The proposed development of 8,000 dwellings (125 dwellings re AB12) and employment floorspace within the Local Plan will be likely to increase to some extent local carbon emissions through energy demand associated with the occupation of new dwellings and employment premises, transport-related emissions and the production and use of materials during construction. This impact will be expected to contribute towards the causes of climate change and secondary effects like sea level rise and extreme weather events.</p> <p>Exposure to air / noise pollution (from AQMAs / main roads)</p> <p>The long-term health of residents, in particular vulnerable groups including children and the elderly can be affected by local reductions in air quality. Development within 200m of an AQMA or main road may expose site end users to increased levels of traffic related air pollution or noise impacts, with adverse implications for health. (Although Bignall End is not an AQMA I have already pointed out the potential of a substantial increase in NO2, within the Albert Street/Edward Street/Diglake Street 'Micro-Climate, due the increase in vehicular traffic should the development proceed in this case).</p> <p>Loss of tranquillity</p> <p>Rural landscapes are typically tranquil, a valuable attribute that once lost is often irreversible. Darkness at night is one of the key characteristics of rural areas and it represents a major difference between what is rural and what is urban. The introduction of both noise and night-time lighting through new development is likely to reduce tranquillity in some locations. (As detailed. Offsite issues will need to be addressed and one 'suggestion' has been to provide a parking area for local residents' in the NorthWest corner of the site. So ultimately the current residents' would be expected to live next door to a 24/7 car park and put up with the continual slamming of doors at all times of the day and night? I would suggest that this</p>

would ultimately cause severe mental illness due to the loss of tranquillity and inability to receive a good night's rest and sleep). PLUS. Has consideration been made as to how much land would be required to provide the residents' parking? A minimum of 40 spaces (individually numbered) would not, in my view, be an excessive number as most homes have 2 vehicles. Electrical charging points? Room for vehicles to enter and leave the parking area along with space to manoeuvre in and out of the parking spaces safely? And how many houses would the developer lose due to this loss of land? It would certainly require a minimum of 10,000 square feet for 40 vehicles. Is the developer willing to pay for it?). This residents' car park will still not, in my view, alleviate, or address, the offsite access issues that will need to be fully addressed with regard to on street parking on Diglake street and the intensification of use of the Diglake St/B5500 junction. Please refer to the attached plan showing the potential for severe noise issues for residents. (Page 6 refers).

Increased pressure on local services and facilities

The proposed development within the Local Plan is expected to increase population density across Newcastle-under-Lyme. This will be likely to apply greater pressures on the capacity of services within the Plan area, including schools, GP surgeries, leisure centres and open spaces.

Summary of residual adverse effects

Reduction in air quality and increased pollutant emissions

Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. The policies would be expected to prevent unacceptable impacts on human health associated with air pollution, but in-combination with the volume of development proposed, there is likely to be a cumulative adverse effect of air quality as a whole. Over time, this adverse impact is likely to be reduced should there (It might as well say that I could end up being rich if I won the lottery! !) be an increase in sustainable transport methods and a phasing out of petrol and diesel-powered cars, alongside other advances in technology. (Unless we all walk everywhere I cannot see this happening).

Loss of tranquility

The proposed development of 8,000 new dwellings (125 dwellings re AB12) and 63 of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquility of the rural landscape as a consequence of increases in noise and light pollution.

Increased demand for water and wastewater management

The increased population within the Plan area would be expected to increase demand on water infrastructure. Although the WCS indicated that Seven Trent Water does not expect water supply infrastructure to be a constraint to development, there is potential for a residual adverse effect in regard to wastewater infrastructure when planned growth is considered in-combination with an increase in sewage production and potential for storm overflow events. It is likely that further monitoring and investment to wastewater infrastructure will be required to accommodate development.

Identified cumulative effect

Reduction in air quality • Increased pollutant emissions

The introduction of 8,000 dwellings (125 dwellings re AB12) and employment floorspace under the Local Plan is likely to increase energy demands, congestion and traffic flows with population growth, increasing pollutant emissions, with implications for air quality, residents and biodiversity particularly within proximity to main roads. Overall, the Plan will likely result in a long-term but 'potentially temporary' significant cumulative adverse effect on air quality, which resulting in secondary effects such as the health of residents.

Q6 Details	<p>I feel the need to express my concerns, frustration and anger over the building of 125 houses on the plot AB 12 Diglake Street.</p> <p>Firstly, Green belt land is green belt to protect it.</p> <p>Diglake street is also a very small street of terraced houses, barely wide enough to get one car down at a time, how do you imagine extra traffic for 125 extra houses to enter and exit from here? Many families now owning 2 cars or more, an extra 250 cars in a very small street. This really hasn't been thought about.</p> <p>Also, the main Road Ravens Lane has cars double parked either side of the road now, allowing only one car at a time though at a time and that's a main road!</p> <p>Maybe a solution being double yellow lines but this just moves the problem, people need to park, it's the extra volume of traffic!</p> <p>Has anybody actually been to see the proposed site? Surely, they can see it's just not easily possible.</p> <p>We also have an issue with infrastructure, if we can't get a dentist or doctor's appointment now, how does building further homes in the area help this?</p>

	Not to mention the loss of wildlife, the homes of birds of prey also living in the area. You really should be ashamed of yourselves.

Q4 Policy	AB12
Q6 Details	<p>Further (hopefully the last) qualifying objections regarding the suggested/proposed (Housing) development Diglake Street/Ravens Lane, Bignall End AB12</p> <p>Dear Cllr Andrew Fear (Planning Policy Manager).</p> <p>Further to my most recent report (dated 21st August 2024), outlining my objections regarding the suggested/proposed (Housing) development Diglake Street/Ravens Lane, Bignall End (AB12), I wish to add further concerns/ objections as detailed below:</p> <p>Parking suggestions to attempt to 'alleviate' the blatantly problematic offsite access issues regarding the Diglake Street/B5500 (Ravens Lane) Junction.</p> <p>I have also realised that I probably under estimated the square footage required for satisfactory residents' parking should any development proceed. It is more likely to be up to, and possibly in excess of, 15,000 square feet.</p> <p>I am basing this upon APPENDIX 3: Parking Standards detailed within the paragraphs 3.1 to 3.14 refer and primarily pointing out paragraph 3.9 as follows:</p> <p>Parking bays to be 5 metres x 2.5 metres with a manoeuvring aisle of minimum of minimum width 6 metres unless echelon parking is proposed. Accessible (disability) parking bays should be a minimum of 3.6 metres wide or 2.4 metres wide with a 1.2 metres wide access / transfer area on at least one side of each parking space and at the same level as the space (or 6.6 metres long and at least 2.4 metres wide if in line spaces are provided).</p> <p>As I have previously stated parking will be required for 40+ vehicles plus disability parking spaces. This car park will also require 3 manoeuvring lanes along with access onto the same. (Please refer to the below picture (Tesco), taken google, showing what is the minimum requirement for residents' parking).</p> <p>I would also expect this car park to be build to exacting standards and not a simple hard core base of 3 inches followed by 3 inches of tarmac. (The residents' car park should certainly be of a standard to last 20+ years).As the Final Draft Report has detailed this would need to be paid for by the developer and therefore costed by themselves accordingly. (Would they be willing to pay for something that they will never receive any income on and lose land for houses?).</p> <p>(Map Attachment)</p> <p>Would it ultimately be cost effective for the developer? And would it really mitigate the offsite issues and intensification of the use of the Diglake Street/B5500 junction?</p> <p>Policy SE3: Flood Risk Management Final Draft Local Plan</p> <p>All development should follow the sequential approach to determining the suitability of land for development, direct new development to areas at lowest risk of flooding and where necessary apply the exception test, taking account of all sources of flooding identified in the Strategic Flood Risk Assessment. (Flood Zone 1 — Apparently Low Risk).</p> <p>'Potential' of flooding</p> <p>From what I understand, therefore, is that a Flood Risk Assessment (FRA) is required for all development proposals located in Flood Zone 1 on sites of 1 hectare or more. There is obviously a potential of reclassification, from Flood Zone 1, as the North West corner of the proposed development land has already been identified by Utilities Water as susceptible to groundwater flooding. This is borne out by the fact that a resident, who has only built two new homes (backing onto the proposed development) was required, at great cost, to ensure that two holding tanks were also incorporated into their drainage system to prevent damage caused by flash floods running into the fields from his new properties. If this is required for two homes then what will be required for a development of 125 (minus the properties not built due to the 'car park') before United Utilities certify the same?</p> <p>Loss of tranquillity (Other points that I omitted to mention on my previous reports).</p> <p>There have been numerous cases, throughout the UK, of individuals purchasing expensive properties, within a village location, which were next to, or nearby to, local churches and village halls. These individuals then went on to complain about their loss of tranquillity due to the church campanologists' practicing too much along with the noise generated from the Scouts/Girl Guides who used the village halls even though the noise was an acceptable, and understandable, consequence of living in the locale. They won their case as their own peace and tranquillity took precedence.</p> <p>So although peace and tranquillity currently reign within the area of the suggested residents' car parking it would be OK to introduce excessive noise, from the noise generated by revving engines and the slamming of car doors 24/7?</p> <p>There would also no doubt be a large increase in anti-social behaviour due to non-residents' using the car park as a meeting place to play loud music and deal drugs. (It would seem that this is rather outlandish comment to make but am I wrong?).</p> <p>Hopefully this will be the last report I make regarding my objections in this case. For your information.</p>

Q6 Details	<p>Further qualifying objections regarding the suggested/proposed (Housing) development Diglake Street/Ravens Lane, Bignall End AB12 Dear Cllr Andrew Fear (Planning Policy Manager). Further to my earlier report (dated 16th August 2024), outlining my objections regarding the suggested/proposed (Housing) development Diglake Street/Ravens Lane, Bignall End (AB12), I wish to add further concerns/ objections which appear to be borne out by an 'independent' Consulting Company by the name of: LEPUS Consulting Landscape, Ecology, Planning & Urban Sustainability I have since read the following reports by themselves entitled: Newcastle-under-Lyme Publication Draft Local Plan 2020-2040 Regulation 19 Habitats Regulations Assessment and Sustainability Appraisal of the Newcastle-under-Lyme Local Plan 2020-2040 Reports Dated July 2024 Amongst the many pages of plans, tables, reports etc, I have 'sorted' out the 'wheat from the chaff' having decided, without too much partiality in this case, and my objections, and the rationale behind my reasoning, are extremely important in this case. I bring to everyone's attention the following: <u>Air pollution:</u> Land use planning has the potential to increase atmospheric emissions of pollutants to the air. These can result in adverse effects at European sites such as eutrophication (nitrogen), acidification (nitrogen and sulphur) and direct toxicity (ozone, ammonia and nitrogen oxides). Does the Local Plan give rise to emissions which are likely to reach a European site? The Local Plan will trigger housing and employment development and as such increase traffic related emissions. Air quality impacts have been shown to typically affect European sites within 10km of a plan boundary. Campman and Kite (2021) note that 'this zone is based on professional judgment recognising that the effects of growth from development beyond 10km will have been accounted for in the Nitrogen Futures modelling work business as usual scenario'. This 10km distance threshold can be a useful guide to identify the broad areas that may be impacted by air quality. However, it is acknowledged that consideration should also be given to larger residential or commercial allocations and their wider potential for air quality impacts in the context of the local and regional road network. Are the qualifying features of sites within 200m of a road sensitive to air pollution? It is widely accepted that air quality impacts are greatest within 200m of a road source, decreasing with distance. Habitat Regulations Assessment (HRA) <u>The Precautionary Principle</u></p>

The HRA process is characterised by the Precautionary Principle. This is described by the European Commission: "If a preliminary scientific evaluation shows that there are reasonable grounds for concern that a particular activity might lead to damaging effects on the environment, or on human, animal or plant health, which would be inconsistent with protection normally afforded to these within the European Community, the Precautionary Principle is triggered". The Precautionary Principle is embedded in the Integrity Test.

Summary of potential impacts of the Local Plan

Increased carbon emissions — The proposed development of 8,000 dwellings (125 dwellings re AB12) and employment floorspace within the Local Plan will be likely to increase to some extent local carbon emissions through energy demand associated with the occupation of new dwellings and employment premises, transport-related emissions and the production and use of materials during construction. This impact will be expected to contribute towards the causes of climate change and secondary effects like sea level rise and extreme weather events.

Exposure to air / noise pollution (from AQMAs / main roads)

The long-term health of residents, in particular vulnerable groups including children and the elderly can be affected by local reductions in air quality. Development within 200m of an AQMA or main road may expose site end users to increased levels of traffic related air pollution or noise impacts, with adverse implications for health. (Although Bignall End is not an AQMA I have already pointed out the potential of a substantial increase in NO₂, within the Albert Street/Edward Street/Diglake Street 'Micro-Climate, due the increase in vehicular traffic should the development proceed in this case).

Loss of tranquillity

Rural landscapes are typically tranquil, a valuable attribute that once lost is often irreversible. Darkness at night is one of the key characteristics of rural areas and it represents a major difference between what is rural and what is urban. The introduction of both noise and night-time lighting through new development is likely to reduce tranquillity in some locations. (As detailed. Offsite issues will need to be addressed and one 'suggestion' has been to provide a parking area for local residents' in the NorthWest corner of the site. So ultimately the current residents' would be expected to live next door to a 24/7 car park and put up with the continual slamming of doors at all times of the day and night? I would suggest that this would ultimately cause severe mental illness due to the loss of tranquillity and inability to receive a good night's rest and sleep). PLUS. Has consideration been made as to how much land would be required to provide the residents' parking? A minimum of 40 spaces (individually numbered) would not, in my view, be an excessive number as most homes have 2 vehicles. Electrical charging points? Room for vehicles to enter and leave the parking area along with space to manoeuvre in and out of the parking spaces safely? And how many houses would the developer lose due to this loss of land? It would certainly require a minimum of 10,000 square feet for 40 vehicles. Is the developer willing to pay for it?). This residents' car park will still not, in my view, alleviate, or address, the offsite access issues that will need to be fully addressed with regard to on street parking on Diglake street and the intensification of use of the Diglake St/B5500 junction. Please refer to the attached plan showing the potential for severe noise issues for residents. (Page 6 refers).

Increased pressure on local services and facilities

The proposed development within the Local Plan is expected to increase population density across Newcastle-under-Lyme. This will be likely to apply greater pressures on the capacity of services within the Plan area, including schools, GP surgeries, leisure centres and open spaces.

Summary of residual adverse effects

Reduction in air quality and increased pollutant emissions

Although various Local Plan policies aim to reduce air pollution and promote sustainable modes of transport, the introduction of 8,000 dwellings and employment floorspace is expected to increase vehicle emissions in the Plan area and result in an overall reduction in air quality. The policies would be expected to prevent unacceptable impacts on human health associated with air pollution, but in-combination with the volume of development proposed, there is likely to be a cumulative adverse effect of air quality as a whole. Over time, this adverse impact is likely to be reduced should there (It might as well say that I could end up being rich if I won the lottery! !) be an increase in sustainable transport methods and a phasing out of petrol and diesel-powered cars, alongside other advances in technology. (Unless we all walk everywhere I cannot see this happening).

Loss of tranquillity

The proposed development of 8,000 new dwellings (125 dwellings re AB12) and 63 of new employment land across the borough, with a number of development sites located within more rural areas, is likely to result in a loss of tranquillity of the rural landscape as a consequence of increases in noise and light pollution.

Increased demand for water and wastewater management

The increased population within the Plan area would be expected to increase demand on water infrastructure. Although the WCS indicated that Seven Trent Water does not expect water supply infrastructure to be a constraint to development, there is potential for a residual adverse effect in regard to wastewater infrastructure when planned growth is considered in-combination with an increase in sewage production and potential for storm overflow events. It is likely that further monitoring and investment to wastewater infrastructure will be required to accommodate development.

Identified cumulative effect

Reduction in air quality • Increased pollutant emissions

The introduction of 8,000 dwellings (125 dwellings re AB12) and employment floorspace under the Local Plan is likely to increase energy demands, congestion and traffic flows with population growth, increasing pollutant emissions, with implications for air quality, residents and biodiversity particularly within proximity to main roads. Overall, the Plan will likely result in a long-term but 'potentially temporary' significant

	cumulative adverse effect on air quality, which resulting in secondary effects such as the health of residents.

Consultee Family Name	Rowley
Consultee Given Name	Ian
Q4 Part of document	Policy
Q4 Policy	AB12
Q5 Sound	No
Q6 Details	<p>We agree some housing needs to be built, but are the housing target needs accurate, is old information being used? The figures used predicted the population would increase, predictions were wrong – population levels have decreased. We DO NOT agree to large storage units being built, why is greenbelt land being suggested? when brownfield sites exist in the county. Is it because developers do not like to use brownfield sites due to the additional costs of preparing the land? greenbelt land is cheaper to build on – creating more profits. As you travel around there are many large empty storage units in and around the Newcastle/Stoke area. How many local people are expected to be employed by the proposed storage units or will the labour be from outside the parish? Greenbelt land is a carbon storage capture area and a O2 producer, soil and trees are the biggest collectors of carbon so concreting these areas will increase the carbon footprint. Where will the water go from millions of square meters of roofing, nature drains the land naturally. Areas in the Parish now flood which have never done in the past, due to changes in the global weather patterns. There will be disruption in the local area during and after construction with noise and light pollution also poor air quality due to the pollution created by more large vehicles. Audley Parish has contributed to the industrial past with sacrifices made by the land and its people. Audley Parish was built on a Victorian footprint to facilitate its industrial past, roads in the area were not designed to take the present traffic levels, so any increase in additional traffic would cause gridlock! Local services will not be able to cope with more people and utility services will be stretched to supply these new developments. Audley Parish would lose its identity, as a collection of small individual villages which have established over many centuries.</p> <p>The world is on a knife edge with climate change – lots of these little takes of greenbelt land are mounting up to be larger worldwide problems. These developments will lead to further climate change, thus changing the quality of our environment forever. Greenbelt land is there for everyone to enjoy when they want. Monitoring cameras were installed over one weekend to register the footfall using the public footpaths across the land. This small snapshot would not have given a true record of the usage and therefore should be dismissed as evidence when the developers present their case. Once greenbelt has been taken, there is no going back!</p> <p>If a small number of houses must be built then building affordable housing for local people is important, but developers don't like building these as there is very little profit to be made. Larger houses attract bigger profits for developers, but large housing attracts people from outside the area, who do not contribute to our local economy. They will use the easy access to the A500 and M6 to travel to work in the larger conurbation areas. If local people cannot afford the property being built, they will move away, thus destroying the future fabric of the local community.</p> <p>Remember: You don't want history saying you were the ones who destroyed the local area and left nothing for our children and grandchildren. Don't let your legacy be that you contributed to the increase of global warming!</p> <p>LIFE IS MORE IMPORTANT THAN PROFIT</p>

Q4 Part of document	Policy
Q4 Policy	AB12
Q6 Details	<p>Objections regarding the suggested/proposed (Housing) development Diglake Street/Ravens Lane, Bignall End AB12</p> <p>Dear Cllr Andrew Fear (Planning Policy Manager). (I consign the following report to yourself).</p> <p>I have recently had occasion (concentrating primarily on the Diglake Street AB12 proposal) to peruse, commended by yourself, the following: Newcastle-under-Lyme Local Plan 2020-2040 July 2024 Final Draft Newcastle-under-Lyme Borough Council Local Plan (Regulation 19). Having done so I am, even more so, of the opinion that the proposal for the land to be developed will have a most severe detrimental effect upon the mental and physical health of the residents who currently reside in a small side street</p>

community. I base my opinions on the following detailed within the 'Final Draft' Report and my observations on the same:

Sustainable Environment

Policy SE1): Pollution and Air Quality

Paragraphs 1a, 1b, 1c & 1d detail that:

Development proposals that are likely to result in detrimental impacts on pollution, including on air quality, will not be permitted unless it can be demonstrated that mitigation measures effectively address these impacts. Development proposals should incorporate strategies that prevent or minimise pollution.

Development proposals should not lead to significant adverse effects on public health, the environment, or amenity from polluting emissions or odours.

Development proposals should not result in negative impacts on air quality within areas designated as Air Quality Management Areas (AQMA), the designation of a new AQMA, or compromise the implementation of the North Staffordshire Local Air Quality Plan and Newcastle-under-Lyme Air Quality Action Plan. (It is accepted that the Diglake Street area is not an AQMA per se).

Development proposals should consider the cumulative effects of emissions from proposed development alongside other and existing sources of air pollution in the vicinity.

Development proposals should demonstrate that mitigation measures can be achieved to reduce pollution, both during construction and operational phases of development. Measures should prioritise those that directly address air quality concerns, such as: Sustainable and active transport options: This includes promoting walking, cycling, public transport, and reducing the need for travel.

Site Allocations

Policy AB12 Land East of Diglake Street

Land East of Diglake Street is allocated for residential development for 125 dwellings. Development proposals will be permitted subject to:

Access to the development being via Diglake Street (with emergency access via Raven's Lane / B5500) and pedestrian access provided via Raven's Lane / B5500, Diglake Street and the Albert Street play area.

Provision of a parking area for local residents' in the northwest corner of the site and contributions towards off-site highway improvements necessary to support the development (if required).

Supporting Information. (From the Council's Final Draft Report).

Paragraph 13.26

Primary access to the development should be via Diglake Street and emergency site access provided from Ravens Lane. Pedestrian and cycle access to the site will be via Diglake Street, Ravens Lane and Albert Street Play Area. The development will need to address off-site issues relating to on-street parking along Diglake Street and intensification of the use of the junction of Diglake Street and Raven's Lane.

Off-site junction improvements may be required, which will be secured through financial contributions.

(As mentioned within the paragraph relating to 'local residents parking area' above. How many parking spaces will be provided? Will they be individually numbered? As most of the homes in Diglake Street have two vehicles, and also works vehicles, any 'local residents parking area' would need an extremely large area, reducing the amount of homes that could be built, to alleviate any on-street parking. But this will STILL NOT alleviate the extra vehicular traffic at the Diglake Street/B5500 junction NOR prevent the increase of NO2 emissions).

Paragraph 13.27

The site is located within the Audley Ancient Clay Farmlands Landscape Character Area, which is designated as a high sensitivity landscape. Given the high sensitivity of the landscape, a landscape-led approach to development will be required, to ensure that the layout and design of buildings and structures are appropriate to the landscape setting and a Landscape and Visual Impact Assessment will also be required. (As detailed below).

Paragraph 13.28

Within this area thick, mixed species hedgerows are identified as significant landscape features. There are hedgerows along the north and northwest boundaries of the site, as well as a strong hedgerow that dissects the site in a north-south direction just to the west of its centre. The existing hedgerows will be retained and enhanced. Hedgerow boundaries on the north and north-west of the site will be strengthened and a landscape buffer provided. (Really? It would be naïve in the extreme to believe that any builder would comply with the above. The first thing to go would be the devastation of any hedgerows and other significant landscape feature. By accident of course")

Paragraph 13.32

The site is located within Flood Zone 1 but some areas within the site are affected by surface water flooding. Two sewers also run through the site adjacent to its western boundary. This will need careful assessment and consideration in the detailed design, master planning and drainage details for the site. Applicants should engage with the relevant provider to consider the detailed design of the site and drainage details. Applicants should consider site topography and any exceedance flow paths. Resultant layouts and levels should take account of such existing circumstances. In accordance with national and local plan policy, an effective drainage strategy will be established, and a sequential approach applied within the site directing development to areas of lowest flood risk. (Has anyone, who doesn't reside in the area, actually witnessed the occasional flooding, due the drainage being unable to cope, at the bottom of Diglake Street/Edward Street?).

Summary of, and rationale, behind my objections.

The following are, I believe, reasonable comments/objections and my own observations to the proposed development. I therefore report as follows:

Summary of Main Issues Raised (Access)

There are serious concerns over the proposed access arrangements as the secondary access is not appropriate (including concerns over visibility - DANGEROUS).

Highly likely to increase traffic volume in and around Diglake Street. On street car parking is an obvious, as pointed out by the draft report, a severe issue.

The condition of the local road network is an issue.

Staffordshire County Council - The Highway Authority have already raised concerns (First Draft Local Plan Regulation Consultation Report 2024 refers) with the outlined access strategy. They confirm that

the site has sufficient road frontage on Diglake Street to create an access however there are offsite access issues that will need to be fully addressed with regard to on street parking on Diglake street and intensification of use of the Diglake St/B5500 junction. Access to the field is presently taken from the (higher order road) B5500, however it is of insufficient width in its current form to serve the proposed development unless it can be improved. Preference would be for the development to be served via the higher order road (B5500). (Due to the current parking issues within Diglake Street the actual width of this road is actually no wider than the Ravens Lane access!).

The council, in replying to these concerns, went on to state that they published a site selection report alongside the First Draft Local Plan. The site selection report detailed the methodology used to select draft allocations in the Plan. The site selection methodology will continue to be used in the selection of sites in the final draft Local Plan (at Regulation 19 stage). The council will (and has now done so) also reflect on the comments made to the First Draft Local Plan and any changes in national planning policy. The council concluded with the following: Likely to increase traffic volume around the site and through the village. On street car parking is an issue The condition of the local road network is an issue. (Reiterated as per Paragraph 13.26 - Supporting Information Final Draft Plan).

So even by their own admission the council have acknowledged the offsite access issues, as detailed by The Highway Authority, that will need to be fully addressed with regard to the on street parking on Diglake street and intensification of use of the Diglake St/B5500 junction.

The offsite issues that need, as obviously pointed out by The Highways Authority, to be FULLY ADDRESSED are, I think that any right minded and competent person would wholeheartedly agree, TOTALLY UNACHIEVABLE in this instance.

Summary of Main Issues Raised (Health Issues)

Should the development proceed (with the access being in Diglake Street) then the residents (even those without current ongoing health problems) will eventually suffer with significant adverse effects with their health due to the increase in vehicular traffic up and down the side street. The cumulative effects of emissions from an increase in Nitrogen Dioxide (NO2), which is associated with vehicle exhaust fumes, will be a 'ticking time bomb' and as previous reports have stated, Road traffic is the most significant source of pollution within the Borough of Newcastle-under-Lyme. The area of Albert Street, Edward Street, and Diglake Street, would then become nothing more than a 'micro-climate' of extra NO2 fumes. (Please refer to Map 'V'). How much will it actually cost the Borough, in compensation payments, when future health problems become apparent and claims are made by the various sufferers?

The intensification of vehicular traffic following the increase in traffic at the Diglake St/B5500 junction, at stated by The Highways Authority, will NEVER be alleviated and the only way to minimise the potential health problems of residents in the street would be to 'share' the increase in vehicular traffic going to and from the suggested development. (The intensification of vehicular, and pedestrian, traffic, especially during the 'school run times', would create 'general mayhem' at the junctions of Diglake Street/B5500 and Church Street/Albert Street with the potential for serious RTC's to occur).

At the very least a would need to be introduced (Please refer to Map 13') which incorporates Albert Street, Edward Street, then into Diglake Street. (Although this would still have severe detrimental effects upon the health of residents already suffering with breathing problems as there will be a serious 'choke point' at the junction of Diglake Street/B5500 causing further exhaust fumes from extra stationary vehicles waiting to leave the street due to the intensification of vehicular traffic).

16 August 2024

Nuclear Option.

The only way to ever alleviate the above access and egress problems, and I am in no way advocating this course of action, would be a "nuclear Option. of compulsory purchasing a small pocket of land to enlarge the access via Ravens Lane. (Please refer again to Map 'B').

AB32 withdrawn.

It also appears that the proposed development (AB32) is no longer being proceeded with. Any particular reason? Access problems? Increase of NO2 near to houses on the access road? It would be nice to be informed of the reason(s) in this case.

Q6 Details	<p>OBJECTING TO REGULATION 19 – FINAL LOCAL PLAN.</p> <p>I can only imagine the mountain of paperwork you will have to peruse in relation to these proposed developments, but please spare a thought for those of us who are unable to respond in the well informed, articulated manner you would prefer, but nonetheless, as a resident of Bignall End for over 50 years, my concerns are real and I feel should be seriously considered when making your final decision – thank you.</p> <p>POLICY AB12 – LAND EAST OF DIGLAKE STREET</p> <p>I cannot argue against the fact that AFFORDABLE new dwellings are needed; this is a countrywide problem!</p> <p>However, I believe that this proposed site is an affront to the hard-working residents of Bignall End who have invested in their homes and who could now face traffic congestion the likes of which is incomprehensible and exceedingly dangerous. To me, it comes across as a total lack of consideration for the needs of existing residents, and is purely profit driven.</p> <p>Bignall End is a village, it was built as a village and has been added to with respect for its village status.</p> <p>The immediate area is question consists of terraced houses located on narrow angled roads. Resident parking has been an issue for many years.</p> <p>There is a nursery located at the top of one of the roads, and an integrated school for nursery children/infants/junior school children within 5 minutes of the proposed development.</p> <p>It is beyond my comprehension that in addition to the above, it is proposed to allow either access/egress via Ravens Lane. Putting aside the chronic parking issue, it's on a bad bend in the road – you can neither see traffic coming up or down until you are on the bend.</p> <p>Ravens Lane – the main through road for Bignall End and surrounding areas – simply cannot take more traffic, of any description.</p> <p>Even without the addition of further development, the current parking situation is quite frankly dangerous, as it leaves a narrow corridor for all traffic, with not everyone willing to give way; and unfortunately anyone with the use of a drive, has to take a leap of faith when leaving their drive as both ways are evidently obstructed with parked vehicles; and when entering their drive find it a necessity to use their hazard lights (and obviously their indicator) in an attempt to forewarn drivers following them of their intentions.</p> <p>I don't pretend to understand the impact such a development will have on the sewer systems, the flood plains, natural habitats of the plants</p>

My point being that suitable land is available, but it just doesn't make sense, on any level, to propose this particular site – it simply isn't a viable option.

Q6 Details	<p>Dear Sir/Madam</p> <p>I am writing to oppose the local plan for Audley with regard to development sites. Whilst some may deem it necessary to enlarge the footprint of the village I would personally disagree. If you lived here you would know that the proposed access routes to these areas are already overstretched with roads being too narrow and littered with parked vehicles that make it difficult and dangerous to see round to pull out of junctions.</p> <p>There is also the issue of facilities, these are already fully stretched in Audley, the doctors is full as is the dentist and schools. There is also the issue of parking in the village which at times is ridiculous. Many times I have tried to park and been unable to as everywhere was full so I've had to go elsewhere to shop. Also if there are problems on the motorway or A500 the village becomes a rat run for people trying to avoid hold ups so the added lorries and cars using the proposed development sites would only make it more difficult for the residents.</p> <p>Audley is full and doesn't have the infrastructure to support these planned developments we don't have enough facilities as it is so by building more houses people would just go further afield and the village would die anyway.</p> <p>Yours faithfully Amanda Moody</p>

Title	Policy AB12 Land East of Diglake Street
Consultee Family Name	Potts
Consultee Given Name	William
Q4 Part of document	Policy
Q4 Policy	AB2 & AB12
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	Yes
Q6 Details	<p>AB2:</p> <p>The development proposal for AB2 is not a sound proposal due to the significant additional traffic that will result from lorries, service vehicles and employee transport to and from the site. The junction of the A500 at Audley is already an accident black spot and without significant alterations to the junction and its approaches, there will inevitably be fatalities and serious injury from road traffic collisions.</p> <p>The local area is not well served by public transport. The hilly terrain in the locality and lack of cycle lanes on roads due to their narrow nature is not likely to make cycling to the site a realistic option. Therefore there will be significant additional traffic congestion along the A500, at the A500 Audley junction, the M6/A500 junction and along Ravens Lane which is used as a cut-through- especially when there are problems on the M6/A34. This happens already when there are lane closures on the M6 and the creation of factory/warehousing at the proposed site will add significantly more traffic.</p> <p>Lorries already use the B5500 on a daily basis and throughout the evening rather than taking the A34 & A500 which are more suitable for HGV traffic. The creation of the development AB2 does not indicate how lorry traffic will be restricted from using this route. It is likely, we will see such traffic 24 hrs a day.</p> <p>AB12: The development is not a sound proposal. The plans state that the B5500 Ravens Lane will be an emergency access point to the site, and access will be from Diglake Street. The proposal does not</p>

	show a viable and realistic route that traffic will take to reach Diglake. The most likely route is to be from Albert Street and New Road or from the other direction- the B5500 Ravens Lane . This road is already a very congested route as vehicles are double parked along the road with large vehicles, buses etc finding it very difficult to pass. Without significant mitigation, the congestion along the adjoining roads to Diglake Street will be terrible.
Q7 Modification	<p>AB2- For this proposal to be sound, there needs to be significant alteration to the A500/Audley junction to improve road safety, for example, the installation of rumble strips, a roundabout, speed cameras or traffic lights. There needs to be significant investment in public transport and provision of park and ride schemes. Cycle lane construction will require major road and cycle path development in between the site and local villages. In addition, enforced weight restrictions need to be put in place along New Rd and B5500 to prevent HGVs from using it.</p> <p>AB12- For this proposal to be sound, the existing parking issues along B5500/Ravens Lane need to be properly addressed. Car parking for residents in terraced housing along Ravens Lane needs to be fully included in the proposals for development. An access road could be built to service both AB12 and off-street car parking areas to the rear of terraced housing (on existing low quality agricultural land) to the rear of Ravens Lane. Double yellow lines should then be installed along Ravens Lane.</p>
Q8 Hearing attendance	Yes, I wish to participate in hearing session(s)

Consultee Family Name	Barnish
Consultee Given Name	William
Q4 Part of document	Policy
Q4 Policy	AB12
Q5 Legally compliant	Yes
Q5 Sound	No
Q5 DTC compliant	No
Q6 Details	<p>i am objecting the proposals to develop on sites AB2, AB33, AB15 and AB12 because I believe it is unsound. Firstly, the local area of which the proposed sites are located are specifically intended to be a rural area. For example, the parish council is titled Audley Rural Parish Council.</p> <p>On this note, the local schools, health centre and public services are only equipt to handle a small village population. The primary schools in particular are at capacity, and many residents struggle to get appointments at Audley Health Centre (myself and my family included).</p> <p>Secondly, the proposed sites are agricultural land which is of significant natural beauty. The residents surrrounding the sites (Eg. Diglake Street, Ravens Lane etc.) overlook beautiful views, which largely contribute to their property values. If developement were to go ahead, the values of their properties would plummet, which would largely impact the lives of many long-term residents.</p> <p>Above all, it is not within my interests or any local residents interests to have houses built here. The AB2 industrial employment site exceeds the employment land target, which therefore means there will be a future demand for more housing when people move to work here. These are only a few points that I could make, but I think I have made my point clear and I hope many other local residents will share my deep concerns.</p>
Q7 Modification	There would be a need for new schooling facilities, healthcare facilities, and public services to meet the demand of the new residents of the parish. This also means for parking and suitable roads. However, my primary suggestion is to not develop on these sites whatsoever. Make the AB2 site smaller as it currently exceeds employment land targets. Build elsewhere, outside of the area.
Q8 Hearing attendance	No, I do not wish to participate in hearing session(s)
Q9 Hearing reasons	I hope many others will be able to attend this to speak on behalf of my views

Q6 Details	<p>Dear sir</p> <p>Far beit from me to deny people having their own homes. However I feel that there are a few things that need to be done first.For instance in Audley there is limited parking space even parking on the medical centre is difficult at times. No parking in Bignall End except on pavements. Streets such as Albert, Diglake, Hope and Tibb Streets plus all the way up Ravens Lane are all double parking making it difficult for all traffic and emergency vehicles to get through.In Bignall End where elderly people, mothers with prams and disabled people and children have to try and cross a very busy road therefore a very urgent need for a pedestrian crossing.Quite recently I went to catch a bus only to find 2 cars parked by the bus stop and I have a photo to prove it.So there needs to be a painted sign on the road as is on the other side.I do feel that there is a lot of things to consider before building 200 houses which equates to 400 people plus children plus cars and lighting the country side with warehouses which will only make the current situation worse.</p> <p>Looking forward to your reply</p>

	Yours sincerely Roy Cooper (redacted by admin)

Title	Policy AB12 Land East of Diglake Street
Consultee Family Name	Austin
Consultee Given Name	Jim
Q4 Part of document	Policy
Q4 Policy	AB12
Q5 Sound	No
Q6 Details	<p>On this page I consider reasons why AB12 is unsound due to it being not effective. This has to do with the limited access to the site, especially for larger construction vehicles. As it stands there is no access from Great Oak Road. The only remotely feasible access points are at the bottom of Diglake Street and a farm track adjacent to 104 Ravens Lane.</p> <p>At its narrowest point, the track from Ravens Lane is 4.3 meters wide, delimited by sharp corners in the boundary walls of properties either side. This would make it impractical for the large vehicles required for construction on the site and for large emergency fire appliances.</p> <p>The potential access point at the bottom of Diglake Street is approximately 20 meters wide. However, the narrowness of Diglake Street and the adjacent Albert Street (around 5.2 meters) coupled with the</p>

	<p>fact that residents are forced to park their cars either side of these streets makes access next to impossible, especially for heavy vehicles required for the construction of a new estate.</p> <p>In order for effective access to the site it may be necessary to consider the demolition of existing properties if access is sought via Diglake Street, or the acquisition of land from properties either side of the track off Ravens Lane. It must also be born in mind that Ravens Lane itself has a high traffic flow and in places it is necessary for residents to park their vehicles both sides of the road along stretches where there are terraced houses. On this basis therefore, AB12 is not deliverable and therefore not effective.</p>
Q7 Modification	<p>In this draft local plan, the Borough are proposing an unprecedented transformation to the character of the Audley and Bignall End. One which is completely unjustified as far as local need is concerned. Due to these considerations, and lack of effectiveness in some instances, especially the unjustified nature of AB2, the proposed sites AB2, AB12, AB15 and AB33 should be removed from the local plan.</p> <p>Just as it is likely that an employment site at AB2 will create an employment/residential imbalance, it will boost the demand for further housing over and above what is already proposed. Conversely, it is also the case that the removal of AB2 from the plan would eliminate the need for housing at AB12, AB15 and AB33.</p> <p>These proposals here go completely against the essence of paragraph 4.3 of the local plan, dealing with "The Strategic Objectives for the Borough" (page 10), which "...will have respected and improved the character and distinctiveness of our market towns, villages, and other rural areas with a particular focus on broadening our network of Neighbourhood Plans." On the contrary therefore, the proposals here will completely destroy the character of the Audley and Bignall End as rural villages; the entire surrounding area having been completely urbanised. On this point at least the local plan can be considered wholly inconsistent.</p> <p>Many of the arguments against these proposals apply equally well to proposed green field developments elsewhere in the borough. It is hoped that the examiner will bare these in mind when considering other such proposals in this draft local plan.</p> <p>I am not sure whether the examiner will consider these points legitimate as far is planning is concerned. Most of the residents have no knowledge or experience of planning law. However, he/she can be assured that the majority of the residents of Audley and Bignall End are desperate to see these wholly destructive proposals removed from the local plan. The points made in this representation should be sufficient to render AB2, AB12, AB15 and AB33 unsound due to not being justified or effective. Therefore, I ask that these proposals be removed entirely from the local plan.</p>

Newcastle under Lyme draft local plan – regulation 18: Consultation response

Dear Sir/Madam,

The following is a robust objection to all developments on green field sites covering all the proposals within Audley Parish and many more elsewhere as recommended in the draft local plan. In writing this response, I am aware of the need to adopt a local plan in order for local authorities to maintain democratic control of development in the area. This requirement appears to be a symptom of the subsection in the NPPF titled “The presumption in favour of sustainable development” (paragraphs 11-14). However, from a resident’s point of view, this gives the impression that local authorities must demonstrate a willingness to develop a particular area in order to avoid it being developed. This is, in essence, a commitment to eventual development even if it is not needed. And this is a source of great anxiety amongst residents that undesirable development is out of control, a situation clearly being fuelled by the existence of paragraphs 11-14. On this basis therefore, this subsection of the NPPF needs to be challenged.

This response may differ from others in that it comments on local planning within a strategic context. As I see it, there are three main types of development, which are likely to blight the future generations in the UK: (i) infrastructure (example, HS2), (ii) commercial (examples, AB2 and TK30 in the NuLBC local plan) and (iii) residential (example, recent housing developments either side of the A513, Beaconside, Stafford). Infrastructure is within the remit of Westminster rather than local authorities, so that is not a particular concern here. My main focus is encroachment of developments, both residential and commercial, in green spaces allowed for in the draft local plan. And any new developments in rural areas will, at the very least, result in:

- Loss of light or overshadowing

- Increased risk of flooding due to ‘run-off’

- Loss of visual amenity

- Limitations to physical activity

- Generation of extra traffic, overloading already busy local roads

- Extra noise, pollution, disturbance and danger from increased traffic

- Loss of trees and other biodiversity – bats, lizards etc.

- Loss of natural carbon capture

- Decrease in food production capacity

Increased local population placing further pressure on local schools, GP’s surgeries and other services, which are already oversubscribed.

The United Kingdom as a whole is currently gripped by a pandemic of overdevelopment, which threatens nature and the already depleted biodiversity we see in this country. And it has now reached the stage where it should be considered a national emergency. I for one, do not feel that I have any influence over the shape of our surroundings. There are numerous drivers for this trend many of which are not being addressed by government at any level. At the heart of this is a significant disconnection between the opinions of politicians and public as to what is actually needed. There appears to be cross-party support for activities driving economic growth at all costs, irrespective of the consequences to the natural environment. Aggravating this divide is the aforementioned paragraphs 11-14 of the NPPF. At a local level, what is not in doubt, is that whenever there is land removed from the green belt there is rarely, if ever, an equivalent area so returned, so the process is irreversible. And in the absence of any agreed lower limit on the area of protected green spaces within the UK, no release of green belt land, or development on green spaces, can be considered sustainable. Unless, of course, the use of agricultural land for just that purpose is also considered “developed”, i.e. it has an economic and sustainable use. And the local plan does appear to acknowledge this¹, so why not include agricultural use into the local plan implying no change in particular areas? If this is not the case, we are committed to a process where the end point is a UK completely covered in tarmac and concrete. Anyone arguing against this interpretation needs to state and justify precisely where that end point is. If they cannot, this renders the term ‘sustainable development’ an oxymoron.

One particular trend of major concern is the growing UK population. At the time of writing this stands at just under 69 million, and is set to reach 74 million before 2050. Studies in the US (Pimental and Giampietro, 1994; Lal, 1989) suggest that comfortable/sustainable living requires 0.5 Ha (1.2 acres) per capita. If we are generous, sustainable living in the UK was possible with a population of 57 million, a figure I remember from the late 1960s. With a total area of the UK at just over 60 million acres, a land area of one acre per capita for sustainable living in the UK seems feasible. As we have seen, anything more puts a strain on the environment as a whole. On this basis therefore, the UK is currently overpopulated by about 15%, and there appears to be no initiatives to address this issue. On this point, Westminster appears to be in a state of denial, thus fuelling the current avalanche of overdevelopment nationwide. Residential developments have a knock on effect by requiring other types of development to provide infrastructure, services and employment. Notwithstanding overpopulation, this gives the impression that there is not enough housing stock to accommodate the current population. Recent data, in the form of an infographic (“Housing crisis fact check”) from the Community Planning Alliance², convincingly shows that this is far from the case. In short, what is perceived as the current “housing shortage” is little more than a myth propagated by the construction industry and related interests. This is justified by item 3 on the infographic stating that “there are 1.5 million more dwellings than households” in England and Wales alone^{3,4}. On this basis therefore, no further house building is needed in the UK subject to efforts addressing projected population growth. In other words, what we have at present is a substantial housing surplus. Therefore, locally there are strong grounds for objections to development of the sites

AB12(p74)

AB15(p75)

AB32(p75)

AB33(p75).

Ignoring the 1.5 million surplus dwellings nationwide, the current (regulation18) draft of the local plan quotes a minimum housing requirement of 7160 in the Borough over the period 2020-40, of which 1206 are already completed. Of these, only 40% are to be 'affordable' (1-2 bedroom dwellings). Therefore, of the minimum requirement, only 2864 dwellings will be affordable. If we assume that those already built are affordable (they probably aren't) then the borough will only need 1658 homes built between now and 2040. This is because, due to being beyond affordability, most locals will be unable to buy or rent the other 60%. Therefore, they are not needed, and the proposed mix is entirely incompatible with general affordability. Given the surplus dwellings throughout England and Wales however, it is likely that none will be needed, especially considering the imminent removal of mandatory housing targets by the DLUHC under Michael Gove MP, and any specific affordable housing needs can be catered for by using brownfield sites only. All of the green areas in the local plan could therefore be planned in for their present use.

Infographic from the Community Planning Alliance summarising UK housing stock in relation to the population.

Another statistic from the infographic is that nationwide we could build up to 1.2 million homes on brownfield sites (item 2)2,5. And like any other local authority, NuLBC is legally obliged to and does keep a register of its brownfield sites, although it is likely that some may slip through the net.

If there is an imperative, it is to increase further democratic control of the development process both locally and nationally. And both local and national authorities would do well to remember that they have a responsibility to the people they represent and not to the commercial viability of developers, the construction industry or overseas investors. In short, no new housing development is required, especially given that the borough has exceeded its housing targets in recent years. This calls into question the need for housing developments outside Audley Parish mentioned in the local plan. These include

BL18 (p75)

CT1 (p76, 750 dwellings)

RC8 (p76, 6 dwellings, potential flood risk.)

KS3 (p77)

LW53 (p77)

MD29 (p78, 150 dwellings, likely to conflict with HS2 construction?)

NC13 (p78)

NC77 (p78)

SP11 (p78, 900 dwellings, former Keele golf course)

SP12 (p79)

SP23 (p79)

TB19 (p79)

TB23 (p79, 124 dwellings, adjacent to Walley's Quarry.)

TK10 (p80)

TK17 (p80)

TK27 (p80).

Other sites which may also be questioned are

KS17 (p77, would include loss of playing fields and other village amenities. This may be classed as infill.)

KL13 (p77,93, part built already within the grounds of Keele University Campus).

The other class of developments locally is commercial. All too often we hear in the news from both local and Westminster sources, the mantra that economic growth is the imperative. But the actual imperative is stability, and we have reached the point where growth at any cost has become toxic, especially given the impossibility of unrestrained growth in a land of finite area. Have our political masters never heard of the circular economy?

Since the beginning of deindustrialisation in the 1980s, the diversity of employment opportunities has declined. We have seen an unhealthy move away from manufacturing/production of goods that we need as a nation, to one entirely reliant on trade with overseas partners, leaving us open to blackmail and the current spike of rampant imported inflation. Look what happened during lockdown. Over recent decades this has led to the demolition of old factories for residential developments and the rise of logistics centres (warehousing) for the temporary storage of imported goods, which will ultimately be operated by robots and AIs leading to even less employment. The problem with warehousing of course is its large consumption of land area. My question is, what is the driver for the proposed "big box" developments on AB2 and TK30 locally? Both of these proposals lie entirely within the greenbelt, although the TK30 land has already been quarried in parts. Neither of these proposals is either desirable or needed. However, if we are forced to accept one or the other then TK30, being about 5% smaller, is the lesser of two evils. With the green light given to the development of the 44 Ha Chatterley Valley site on Peacock Hay Road, and the numerous empty warehouses existing across the potteries, North Staffordshire and Cheshire East. It is dubious to say the least to claim that either AB2 or TK30 are needed. These sites are 70 Ha and 66 Ha respectively. However, in the recently published "Housing and Economic Needs Assessment Update", the borough as a whole only needs a maximum of 34 Ha6. So why are we saddled with 154 Ha total covered by AB2, TK30 and KL15?

If the local plan caters for agricultural developments, AB2 and TK30 could be planned for their existing use. The majority of the area covered by these sites is high grade (3a) agricultural land. In the case of TK30 the quarried areas could be reclaimed for agriculture or, if this proves difficult, used in other ways to enhance biodiversity. If the land in question is council owned, and the motivation is to sell off council assets, then once sold, they cannot be sold again, and any control is lost. Moreover, once farmland is developed for other purposes then it is near to impossible for it to be reclaimed later for that use – and so the ratchet inexorably turns. On this

basis therefore, I would urge the LPA to remove the warehousing proposals AB2 and TK30 from the local plan.

The purpose of this consultation is to supply feedback to the Borough Council. Another question is, does Westminster similarly consult with local authorities on planning issues, or is there any other mechanism where local councils can supply feedback to Westminster, providing a better feel for the mood of the nation? If so, why do we not see a root and branch reform of the NPPF rather than the tinkering around the edges approach seen in the July 2021 version? Most especially, there should be a removal of paragraphs 11-14 and its supporting statements elsewhere in the document, which is tantamount to a developer's charter. And there should be more flexibility within the NPPF allowing local plans to include parcels of land for their current purpose, given that there is almost none in this country that is not currently in use. As far as I can see this plan is nowhere near compatible with efforts required to address the current climate crisis. Moreover, given their scale, the proposed developments represent too greater shock to the environment and local communities over the short 20-year period suggested for their completion. And with the sufficient housing and unused commercial sites we already have, there is no need for any encroachment into our green spaces.

Yours sincerely
Jim Austin

Title	Policy AB12 Land East of Diglake Street
Consultee Family Name	Austin
Consultee Given Name	Jim
Q4 Part of document	Policy
Q4 Policy	AB12
Q5 Sound	No
Q6 Details	<p>Paragraph 13.32 highlight potential flooding issues associated with this site, some of which have been discussed on the previous page. The site in its existing form presents an effective barrier, soaking up and temporarily retaining a large volume of water during periods of intense rainfall. If this development goes ahead, then this barrier will be compromised. It is likely Brierly Brook would become blocked by top soil washed off the field north of the site, leading to an even greater flood risk.</p> <p>In paragraph 13.36, required contributions to the Newcastle North Primary Care Network are identified. But there is no clear plan as to how the resulting increased population will benefit. Will some residents need to be registered with a GP's surgery elsewhere in the borough? If so, then this will lead to more traffic on already congested roads. This therefore is not sustainable.</p> <p>In paragraph 13.37 it is stated that any future planning applications will be decided on the basis of details therein. Many of the points raised in the supporting information appear to stress reasons why development on this site is inappropriate. Moreover, if it is retained in the local plan, developers always have the option of appeal to Westminster, which under the current Labour administration would likely be granted leading to the risk of an inappropriate development. This proposal is certainly not justified and there are many obstacles to its deliverability. It should therefore be removed from the local plan.</p>

Q7 Modification	<p>In this draft local plan, the Borough are proposing an unprecedented transformation to the character of the Audley and Bignall End. One which is completely unjustified as far as local need is concerned. Due to these considerations, and lack of effectiveness in some instances, especially the unjustified nature of AB2, the proposed sites AB2, AB12, AB15 and AB33 should be removed from the local plan.</p> <p>Just as it is likely that an employment site at AB2 will create an employment/residential imbalance, it will boost the demand for further housing over and above what is already proposed. Conversely, it is also the case that the removal of AB2 from the plan would eliminate the need for housing at AB12, AB15 and AB33.</p> <p>These proposals here go completely against the essence of paragraph 4.3 of the local plan, dealing with "The Strategic Objectives for the Borough" (page 10), which "...will have respected and improved the character and distinctiveness of our market towns, villages, and other rural areas with a particular focus on broadening our network of Neighbourhood Plans." On the contrary therefore, the proposals here will completely destroy the character of the Audley and Bignall End as rural villages; the entire surrounding area having been completely urbanised. On this point at least the local plan can be considered wholly inconsistent.</p> <p>Many of the arguments against these proposals apply equally well to proposed green field developments elsewhere in the borough. It is hoped that the examiner will bare these in mind when considering other such proposals in this draft local plan.</p> <p>I am not sure whether the examiner will consider these points legitimate as far as planning is concerned. Most of the residents have no knowledge or experience of planning law. However, he/she can be assured that the majority of the residents of Audley and Bignall End are desperate to see these wholly destructive proposals removed from the local plan. The points made in this representation should be sufficient to render AB2, AB12, AB15 and AB33 unsound due to not being justified or effective. Therefore, I ask that these proposals be removed entirely from the local plan.</p>

Q4 Part of document	Policy
Q4 Policy	AB12
Q5 Sound	No
Q6 Details	<p>On this page I consider factors that limit the justification of AB12, rendering this site as unsound as far as the Local Plan is concerned. These considerations also apply to the two other neighbouring sites AB15 and AB33.</p> <p>In paragraph 6 of the Housing and Economic Needs Assessment Update (ED001, April, 2024), modelling for population growth in the borough suggests an increase of 5460 during the period 2023-40. Using the national average household size of 2.4, this can be accommodated by 2275 new dwellings. Over the same period this translates to 134 dwellings/annum.</p> <p>It is quoted that the 'standard method' yields a requirement of 347 dwellings/annum, nearly 2.6 times the estimate above. But this depends on a base need derived from the 2014 population projections, a point which is within the period of the 2011-21 census. However, during this period the population of the borough actually fell by 0.5%. The projected housing need of 347 dwellings/annum is therefore out of date. There will also be downward pressure on further population growth nationally, given that this was an election pledge of the new Labour administration. Any post COVID spike in population growth within the borough is likely due to an influx of Keele University students, mainly from overseas, an increase which is likely to be temporary, especially given that demand for student places is falling.</p> <p>Considering a working age (16-64) population, and assuming an average life expectancy of 81 (79 for men and 83 for women), the working age population would increase by 3236. This would translate to 190 new jobs created per annum. This is very close to the lower estimate (194) modelled in paragraph 8 of ED001. And yet the Borough are claiming that this warrants an increase in the number of new dwellings per year of 15% to 400. It is easily seen that this translates to 6800 new dwellings within the borough (8000 if we use the period 2020-40). So why do we need 6800 new dwellings to accommodate 5460 individuals? Even with the standard method, the minimum housing needed for in the borough is 5899, still greater than the margin of population increase. This makes no sense. Where a modest growth in the borough is called for, the Borough should consider brown field sites first along with land banked sites including those where the footings are already in place. Coupled with the unsoundness of AB2, this would negate the requirement for housing at AB12 and other similar green belt/green field sites.</p>
Q7 Modification	<p>In this draft local plan, the Borough are proposing an unprecedented transformation to the character of the Audley and Bignall End. One which is completely unjustified as far as local need is concerned. Due to these considerations, and lack of effectiveness in some instances, especially the unjustified nature of AB2, the proposed sites AB2, AB12, AB15 and AB33 should be removed from the local plan.</p> <p>Just as it is likely that an employment site at AB2 will create an employment/residential imbalance, it will boost the demand for further housing over and above what is already proposed. Conversely, it is also the case that the removal of AB2 from the plan would eliminate the need for housing at AB12, AB15 and AB33.</p>

	<p>These proposals here go completely against the essence of paragraph 4.3 of the local plan, dealing with "The Strategic Objectives for the Borough" (page 10), which "...will have respected and improved the character and distinctiveness of our market towns, villages, and other rural areas with a particular focus on broadening our network of Neighbourhood Plans." On the contrary therefore, the proposals here will completely destroy the character of the Audley and Bignall End as rural villages; the entire surrounding area having been completely urbanised. On this point at least the local plan can be considered wholly inconsistent.</p> <p>Many of the arguments against these proposals apply equally well to proposed green field developments elsewhere in the borough. Title	Policy AB12 Land East of Diglake Street
Consultee Family Name	Austin
Consultee Given Name	Jim
Q4 Part of document	Policy
Q4 Policy	AB12
Q5 Sound	No
Q6 Details	<p>On the next two pages I address specific points which may further render the proposed development of AB12 unsound.</p> <p>Item 2 relates to access, particularly vehicular access via Diglake Street. This has already been considered on the first page dealing with AB12. Essentially, construction heavy vehicles will not be able to negotiate Diglake Street or Albert Street. The traffic density on these streets post development will more than double, which poses difficulties for emergency vehicles especially. The proposed emergency access on Ravens Lane is only 4.3 meters wide at its narrowest point. See paragraph 13.26 of supporting information. This renders the whole development effectively undeliverable.</p> <p>Item 4 addresses the visual amenity for residents adjacent to the site. The construction and completion will certainly constitute an intrusion onto the visual landscape. Therefore, the related statements in the local plan are false.</p> <p>Item 7 relates to retention of existing trees and hedgerows. While welcome, there can be no compensation for the loss of the soil leading a reduction of food production capacity and climate mitigation.</p> <p>Item 10 relates mainly to any flooding risk. Run-off from the developed site will be towards Brierly Brook to the north. This will compromise the agricultural quality of the field immediately north of the site. Brierly Brook is the lowest boundary descending gently to the west, delivering flood water eventually to the treatment plant on Alsager Road. Whether the brook has the capacity to cope with potential flash floods off AB12 remains to be seen. Moreover, any flash flooding will wash away high quality top soil of the adjacent field in the long term, which will compromise food production capacity and climate change mitigation.</p> <p>Item 12 deals with financial contributions for increased capacity of schools and health facilities. These costs are likely to consume much of the anticipated revenue that NuLBC hopes to gain from such developments. Knock on effects such as extra traffic will also contribute to already congested roads as well as increased noise and pollution.</p>
Q7 Modification	<p>In this draft local plan, the Borough are proposing an unprecedented transformation to the character of the Audley and Bignall End. One which is completely unjustified as far as local need is concerned. Due to these considerations, and lack of effectiveness in some instances, especially the unjustified nature of AB2, the proposed sites AB2, AB12, AB15 and AB33 should be removed from the local plan.</p> <p>Just as it is likely that an employment site at AB2 will create an employment/residential imbalance, it will boost the demand for further housing over and above what is already proposed. Title	Policy AB12 Land East of Diglake Street
Consultee Family Name	Edge
Consultee Given Name	Katie
Q4 Part of document	Policy
Q4 Policy	Policy AB12 Land East of Diglake Street
Q5 Legally compliant	No
Q5 Sound	No
Q6 Details	<p>The <i>NPPF paragraph 146</i> asserts that the strategic policy-making authority should first fully examine all other reasonable options for meeting development need before using Green Belt land including making ‘as much use as possible of suitable brownfield sites and underutilised land;’. The <i>Campaign to Protect Rural England State of Brownfield Report 2022</i> states: ‘the availability of previously developed land continues to grow across England’ and found that ‘over 1.2 million homes could be built on 23,000 sites covering more than 27,000 hectares of brownfield’. Building on Green Belt land cannot be justified with so many brownfield sites available nationally.</p> <p>We should also be focused on making sure that developments that have already been granted permission are completed promptly rather than starting more and eating into Green Belt land. It is estimated that there are currently 1 million houses with planning permission but remain unbuilt. <u><i>National Empty Homes Week 2023 sees call for action on One Million homes nobody lives in</i></u></p>

How can there be 'exceptional circumstances' for developing on Green Belt land when there are so many other sites available nationally? This is not justified.

All other possibilities should be explored before encroaching on Green Belt land in order to be able to meet requirements for exceptional circumstances to release Green Belt. However if there is a shortage of brownfield sites then the Green Belt assessment should be used to identify the sites with weaker Green Belt contribution and use them first. The *Green belt assessment part 2* graded the contender sites and identified weak and moderate sites. It should only have been these sites that were taken through to the next stage; however proposed local housing sites AB12, AB33 and TK10 were all assessed as having a strong contribution to the Green Belt but are now included in the local plan. Whereas there are examples of 'moderate contribution' sites that were not taken further e.g. AB22 Wall Farm. Wall Farm was also previously advertised for development under the RENEW scheme and has good road access. AB78/79 was also rejected from the contender sites but land included in that site has now been submitted as a planning application for 39 houses (NEW FARM, Cross Lane) yet this land is not listed as a preferred site. It is also worth noting that, if this planning permission were to be granted, then the properties at Cross Lane would extend almost up to the AB12 site and therefore would join up to form a much larger encroachment on the countryside. The process of site allocation is not consistent and therefore not sound. This land is owned by Staffordshire County Council: did the ownership of the land have a bearing on the decision? If so then this would be an unethical bias within the selection process.

Paragraph 20 National Planning Policy Framework states that Strategic policies should make sufficient provision for: infrastructure (including for transport) and for community facilities such as health and education. These extra dwellings in Bignall End, along with AB33 and AB15 would have a very detrimental effect on the infrastructure of the local area and for this reason they are not positively prepared. With the national average household in the UK at 2.4 people in the UK, this means that the 213 extra dwellings planned in Audley Parish means 500+ extra people.

As there is only one GP surgery and dental practice in the area, it is to be expected that healthcare provision will suffer due to more demand. If the extra residents are unable to register for local health care then more travel is required to access services further away.

The *Local Plan* states that educational attainment for the area is below national average (*Paragraph 3.19*) and the additional students from proposed housing in Audley and neighbouring Red Street will put additional pressure on educational infrastructure. The previous document released at the Consultation 2023 '*Draft Infrastructure Delivery Plan*' stated that none of the three schools in this rural area can be expanded and that 'To fully mitigate the proposed new housing, it is predicted that further educational infrastructure would be required' (paragraph 3.106). It also stated that nearby sites TK30 and CT1 would trigger the requirement for a new primary school (paragraph 3.104). These findings have now been removed from the final Infrastructure

Delivery plan but no new schools have been provided in the area? Extending the current primary school (Ravensmead) would mean encroaching further into the greenbelt. There is no provision of land set aside for this in the plan.
